difficult and important work of reviewing the whole body of statutes, dating originally from the foundation of the cathedral by Remigius shortly after the conquest, and reducing the confused mass of conflicting uses and customs which had grown up into an orderly and harmonious code, entitled the 'Novum Registrum.' This laborious work was finished by the Michaelmas of the following year, 1440. Its result was less happy. The dean obstinately refused to accept a new code of statutes, tending, as he asserted, to derogate from the dignity of his office. The bishop as resolutely insisted on his acceptance of them. The strife waxed warmer and warmer; one commission of inquiry succeeded another; inhibition followed inhibition; but all to no purpose. Two years after the date of the last inhibition—17 March 1447—Alnwick died, 5 Dec. 1449, leaving Dean Mackworth, who survived him two years, practically master of the situation. 'Alnwick's register reveals some impatience and infirmities of temper, which was indeed sorely tried. But his "Laudum" and "Novum Registrum" are worthy monuments of his zeal, industry, and learning.' (Bp. WORDSWORTH, *Twelve Addresses*, 1873, pp. 1-40; *Lincoln Cathedral Chapter Acts*; *Quarterly Review*, 'Cathedral Life,' No. 259).

To pass to another important work in which he was largely concerned, which is still bearing good fruit after the lapse of more than four centuries, Alnwick, both in his capacity of the king's spiritual adviser, and as bishop of the diocese in which the royal school was situated, took an influential part in Henry VI's foundations of Eton School and King's College, Cambridge, which, following the model first laid down by William of Wykeham in his allied foundations of Winchester School and New College, Oxford, he had resolved upon at the commencement of his personal rule 'as the first pledge of his devotion to God' ('*primas nostræ in Deum devotionis arhas*,' Henry VI's letter to Pope Eugenius IV, 13 May 1443, apud BEKYNTON'S *Correspondence*, i. 231). Alnwick entered warmly into his royal patron's scheme, and applauded his goodness towards 'our holy mother the church of England, which in these last days the sons of Belial would have destroyed,' had it not been for the royal protection vouchsafed to it. To facilitate the completion of the plan, Alnwick appointed commissaries to act on his behalf (29 Sept. 1440) (including Ayscough, bishop of Salisbury, in whose diocese Windsor was then situated, Lyndwood the canonist, keeper of the privy seal, and Bekynton, the king's secretary, archdeacon of Bucks), in converting the parish

church of Eton into a collegiate church to be governed by a provost and fellows (BEKYNTON'S *Corresp.* ii. 274 ff.). The charter of foundation bears date 11 Oct. 1440. Three years later (13 Nov. 1443), when Bekynton, as a reward for his services in the establishment of the college, had been elevated to the see of Bath and Wells, his consecration was performed by Bishop Alnwick at Eton (STRUBBS, *Episcopal Succession*, p. 67).

Bishop Alnwick had a fondness for architectural works. He is commemorated in the roll of benefactors to the university of Cambridge as having contributed to the southern wing ('*pars meridionalis*') of the schools, including the law schools and the old library above, facing the magnificent chapel of his royal master. During his tenure of the see of Norwich he commenced the alteration of the west front of the cathedral by the erection of the great portal, the design being completed by his executors after his death, in accordance with the terms of his will, by a new large west window ('*unam magnam fenestram ad decorationem et illuminationem ejusdem ecclesiæ*'). During his episcopate the cloisters of that cathedral were also completed, and the chief gateway of the bishop's palace, afterwards finished by Bishop Lyhart, was begun. At Lincoln his architectural taste was exhibited in large additions to the episcopal palace, where he erected an extensive eastern wing, including a chapel with a dining parlour under it (both now destroyed), and a noble gateway tower, recently restored by Bishop Wordsworth. The west windows of the minster, usually attributed to him on the authority of an erroneous statement of Leland (*Collectan.* i. 95), are more than fifty years earlier. Enough, however, remains which is certainly his to warrant the description of his epitaph, '*pretiosarum domuum ædificator*.' Alnwick died on 5 Dec. 1449, and was buried hard by the west door of Lincoln Cathedral, with a lengthy epitaph, preserved by Sanderson, recording his career and many virtues, and apostrophising the vanity of human life. By his will, proved at Lambeth on 10 Dec. 1449, he bequeathed 10*l.* for the walls of his native town, and the same sum for the restoration of its church. The year before his death he had been appointed one of the feoffees of 'a charity founded in the church of St. Michael Alnwick' (*Pat. Roll.* 26 Hen. VI, p. 2, m. 8).

**ALPHAGE**, or **ALPHEGE**, St. [See **ÆLFHEAH**.]

**ALPHERY**, **NIKEPHOR** (d. 1618-1660), was one of the dispossessed clergy in the time of the great rebellion. The only authority for the particulars of his ejection is Walker's 'Sufferings of the Clergy,' where the author is not sure of the Christian name, and calls him Mikefer, but says he was descended from a branch of the imperial line of Russia, and was sent to England by Mr. Joseph Bidell, a Russian merchant, to be educated at Oxford, when his and his two brothers' lives were in danger from a powerful faction in Russia. In an article in the 'S. D. U. K. Dictionary,' Mr. Thomas Watts is unable to connect this story definitely with any records in Russian historians. He became rector of Woolley, in Huntingdonshire, in 1618, and was ejected in or about 1643. It appears that the 'fifths' were duly paid to him by his successor. At the Restoration in 1660 he was reinstated, but after some time retired to his son's house at Hammersmith, where he died. The particular hardships he endured are narrated by Walker, but they are not worth recording, as they are given upon mere hearsay, derived from a letter from Peter Phelps, minister of Woolley, to Mr. Clavel. He was twice invited back to Russia, but preferred remaining in England to the chance of regaining a doubtful position in his native country. [Walker's Sufferings of the Clergy.] N. P.

**ALSOP**, **ANTHONY** (d. 1726), poetical writer, was educated at Westminster and Christ Church, Oxford, where he took his M.A. degree 23 March 1696, and became B.D. 12 Dec. 1706. He was a favourite with Aldrich, Dean of Christ Church, became censor of the college, and was tutor to the 'principal noblemen and gentlemen' belonging to it. Aldrich entrusted him with the publication of a selection from *Æsop*, entitled 'Fabularum *Æsopicarum* Delectus,' Oxon. 1698, as one of the series of classical works which the dean printed for new-year presents to his students. It contains 237 fables in Latin verse, with the original Greek of the first 158, the Hebrew of the next 10, the Arabic of the next 8, whilst the other 60 are in Latin only. The previous publication of Boyle's 'Phalaris' in the same series had just given the occasion of the famous controversy with Bentley. In the preface to his '*Æsop*' Alsop refers to Bentley as a man 'in volvendis lexicis satis diligentem,' and gives an elegant version of

the fable of the dog in the manger, with an intimation, in the phrase 'singularis humanitas,' of its applicability to Bentley. (The fable is given in MONK'S *Bentley*, i. 97.) This was followed up by the combined assault of the Christ Church wits upon Bentley, who refers contemptuously to Alsop. Warton, in his essay on Pope (ii. 320), speaks of the sixty fables as 'exquisitely written.' Bishop Trelawny afterwards gave Alsop a prebend in Winchester, with the rectory of Brightwell in Berkshire. In 1717 an action was brought against him for breach of promise of marriage, and a verdict for 2,000*l.* damages was given against him. He had to leave the country in consequence, but returned after a time, and on 16 June 1726 a bank gave way as he was walking in his garden, when he fell into the river and was drowned. He left many Latin odes in manuscript. In 1748 a proposal for publishing them was issued by Mr. (afterwards Sir) Francis Bernard [see **BERNARD**, **SIR FRANCIS**], who says that he has been 'not unjustly esteemed inferior only to his master Horace.' They were published in 1752, with a dedication to the Duke of Newcastle. The classical taste which they display seems to have been combined with the facetious qualities of a college don, not too rigidly decorous, and as fond of smoking as his patron Aldrich, one of the odes being composed, as he intimates, with a pipe in his mouth. He is mentioned in the fourth book of the '*Dunciad*,' v. 224—

Let Freind affect to speak as Terence spoke,

And Alsop never but like Horace joke—

lines which, as Pope told Spence, are intended to have in them more satire than compliment. Some of his poems are in the 'Gentleman's Magazine,' vols. v. viii. ix., and in Dodsley's collection.

[Nichols's Anecdotes, ii. 233; Notes and Queries, 1st series, i. 249.] L. S.

**ALSOP**, **VINCENT** (d. 1703), a celebrated nonconformist divine, was 'a Northamptonshire man' (**CALAMY**). He proceeded in early youth to St. John's College, Cambridge, where he took his degree of M.A. He received deacon's orders from a bishop, whereupon he settled as assistant master in the free school of Oakham, Rutland. As a young man, Alsop was fond of gay and even convivial society. There is a tradition that his wit, while brilliant, was sufficiently broad. But Benjamin King, a 'painful' minister of the Gospel in Oakham, by his monitions and friendly interest, reclaimed him from his idle and frivolous and 'wild' ways. He subsequently married King's daughter, and, Dr. Calamy informs us, 'becoming a convert to

Mr. King's principles, received ordination in the presbyterian way, not being satisfied with that which he had from the bishop.' Everybody knows that presbyterians and all religionists who were loyal to the ruling powers and of good character and ability, were then 'presented' and admitted as clergymen in the national church. He was 'presented' to Wilby in his native Northamptonshire. But the Act of Uniformity found him prepared to adhere to the two thousand 'ejected' of 1662. After the ejection he preached semi-privately at Oakham and Wellingborough, undergoing the usual pains and penalties of nonconformists, e.g. he was once imprisoned for six months for praying with a sick person. A book by him against Sherlock, called 'Antisozzo' [= against Socinus] (1675)—written in the manner rendered famous by Andrew Marvell in his 'Rehearsal Transposed'—brought him fame as a wit and humourist. Like Sydney Smith of our own generation, Alsoop's natural wit and fun and swift spontaneity in seeing and hitting off the absurd and ridiculous were irrepressible. Even Dr. Robert South—no friend to nonconformists—publicly avowed that he had the advantage of Sherlock every way. Besides fame 'Antisozzo' procured for its author an invitation to succeed the venerable Mr. Cawton in a large nonconformist congregation in Westminster. He accepted the 'call,' and at a bound stood at the head of the nonconformists. He continued to write books, and took a foremost part in the ecclesiastical rather than theological controversies of the day. They were all marked by the same fecundity and vividness of wit as 'Antisozzo.' His reasoning is strong, but takes the guise of playfulness. He confutes high-church claims with poignant and exasperating nimbleness of raillery. His 'Mischief of Impositions' (1680) not only replies to, but answers, the 'Mischief of Separation,' and, together with 'Melius Inquirendum' (1679) against the 'Compassionate Inquiry,' remains an historical landmark in nonconformist history.

Placed as his church was in the shadow of the court, he yet escaped fines and imprisonment, and when toward the evening of his life he was entangled by a son in certain 'treasonable practices,' both were 'freely pardoned' by James II. Afterwards he appeared frequently at court. He is credited with having drawn up 'The Humble Address of the Presbyterians' for the 'General Indulgence.' This address is printed *in extenso* in Kippis's 'Biographia Britannica,' with the royal answer. His sense of the king's clemency to his son made him feel kindly towards James II. But it must be conceded his inter-

course with the politicians who surrounded the throne warranted some suspicion. To the end he 'gave himself' to his pulpit and pastoral duties with inexhaustible fervour and success. He preached when 'a very old man' once every Lord's day, and was one of the lecturers at Pinners' Hall. He preserved his 'spirits and smartness' to the last. He died on 8 May 1708, and his funeral sermon was preached to an immense concourse by Slater.

Alsoop put his intellect and wit into his most fugitive tractate; and the reader of to-day will find himself rewarded by studying his 'Duty and Interest united in Praise and Prayer for Kings' (1695), and 'God in the Mount: a Sermon on the wonderful deliverance of his Majesty from Assassination and the Nation from Invasion;' whilst there is extraordinary vigour in his 'Faithful Reproof to a False Report, with reference to the Differences among the United Ministers in London.' Even in the sermons of the 'Morning Exercise' there are flashes of fine wit.

ALSTON, CHARLES (1683-1760), scientific writer, was born at Eddlewood, and educated at Glasgow. On his father's death the Duchess of Hamilton took him under her patronage, and wished him to study law; but he preferred to turn his attention to medicine. He went to Leyden to study under Boerhaave, where he made the acquaintance of Dr. Alexander Monro. On the return of the two to Edinburgh, they revived the medical lectures in the university, Alston being appointed lecturer in botany and materia medica, and also (1716) superintendent of the botanical gardens: these posts he held until his death, which took place 22 Nov. 1760. He was the author of various medical papers, as well as of an index of the plants in the Edinburgh garden (1740), which is preceded by a Latin introduction to botany, and of 'Tirocinium Botanicum Edinburgense' (1753), in which he attacked the Linnæan system of classification. His lectures on materia medica were prepared for publication after his death by his friend and successor, Dr. J. Hope, and appeared in two 4to volumes in 1770. Robert Brown dedicated to him the apocynous genus 'Alstonia.'

[Pulteney's Sketches of Progress of Botany (1790), ii. 9-16; Rees's Cyclopædia.] J. B.

**ALSTON, SIR EDWARD** (1595-1669), president of the College of Physicians, was born in Suffolk, and was educated at St. John's College, Cambridge. He graduated B.A. 1615, M.D. 1626. In 1631 he was elected a fellow of the College of Physicians, and was president from 1655 until 1666. At the Restoration he was knighted (3 Sept. 1660). He increased the power of the college by a judicious inclusion of physicians who during the rebellion had practised without the college license. Thus seventy honorary fellows were created at once. Their diploma fees filled the almost empty college chest, but while the college was unguarded during the plague, thieves carried off the money. When in the following year the fire inflicted a still more serious loss on the society, Sir E. Alston promised money to rebuild the college, but a quarrel arose as to the site, and at the annual election he was not again chosen president. He withdrew his promise of money and never renewed it. He published in quarto 'A Collection of Grants to the College of Physicians,' London, 1660. He lived in Great St. Helens, Bishopsgate, and died very rich 24 Dec. 1669.

[Munk's College of Physicians (1878), i. 202.]  
N. M.

**ALSTON, EDWARD RICHARD** (1845-1881), zoologist, was born at Stockbriggs, near Lesmahagow, 1 Dec. 1845, and, being delicate in youth, was chiefly self-educated at home. He very early contributed to the 'Zoologist' and various Scottish magazines, and ultimately became an acknowledged authority on mammalia and birds. His principal papers in the 'Proceedings of the Zoological Society' (1874-80) are upon rodents, especially American squirrels (1878 and 1879). The division Mammalia in Salvin and Godman's 'Biologia Centrali-Americana' was written by him, though its publication was incomplete at his death. In 1880 he was elected zoological secretary of the Linnean Society, which office he held till his death from acute phthisis on 7 March 1881. In 1874 he largely assisted Prof. T. Bell in the second edition of 'British Quadrupeds.' All his papers are valuable, and remarkable for conciseness and lucidity.

[Obituary Notice, Proc. Linn. Soc. 1880-81, p. 16.]  
G. T. B.

**ALTEN, SIR CHARLES** von, Count, G.C.B. (1764-1840), major-general in the British army, and lieutenant-general in the Hanoverian army, performed eminent services at the head of the famous light division of the British army in the Peninsular

campaigns. He was youngest son of Aug. Eberhardt, Baron Alten, of an ancient protestant family in Hanover, and was born on 12 Oct. 1764. At the age of twelve he became a page of honour in the electoral household, and in 1781 received a commission in the Hanoverian foot guards. As a captain in the Hanoverian service he made the campaigns of 1793-4-5, in Flanders and Holland, under the Duke of York; and it was while detached in charge of an important line of posts on the Lys, betwixt Poperinghe and Wervicq, in 1794, that he first displayed those abilities as a light-infantry officer for which he was afterwards so celebrated. In 1803, when the Hanoverian army was wholly disbanded in accordance with the convention of Lauenburg, Alten was one of the first to quit his country and enrol himself in the force then collecting at Lymington, Hants, which some months later was embodied in the British army under the style of the King's German Legion. In command of the light battalions of the legion, Alten served in the expedition to Hanover under Lord Cathcart, in 1805; at Copenhagen in 1807; with Sir John Moore, in Sweden and Spain, in 1808; and in the Walcheren expedition of 1809. Subsequently he joined the army in the Peninsula, and commanded a British brigade at the battle of Albuera. In April, 1812, Lord Wellington, then preparing his final stroke, placed Alten at the head of the light division, composed of the British 43rd, 52nd, and 95th Rifles, with some Portuguese troops, and light cavalry and artillery attached, in command of which he fought at Vittoria, the battles on the Nivelle and Nive, Orthez and Toulouse. When the peninsular army was broken up, Alten was presented with a sword of honour by the British officers under his command, in token of the respect and esteem in which he was held. In 1815, he commanded the third division of the British army at Quatre-Bras and Waterloo, and was very severely wounded on the latter occasion. In acknowledgment of his services at Waterloo he was honoured with the title of count. The King's German Legion was disbanded in 1816, and Count Alten, who was then placed on half-pay, was appointed to command the contingent of the reorganised Hanoverian army, serving with the allied army of occupation in France. After his return to Hanover in 1818, he became minister of war and of foreign affairs and inspector-general of the Hanoverian army, posts which he held up to his decease. He rose to the rank of field-marshal in the Hanoverian service, retaining his major-general's rank on the British half-pay list. He died at

Botzen, in the Tyrol, on 20 April, 1840, and his remains, which were interred at his seat near Hanover, were honoured with a public funeral.

[Hannover.-u. Braunsch.-Lunenb. Staats-Kalender; Army Lists (British) from 1815 to 1846; Beamish's History King's German Legion (London, 1834-37); Napier's Hist. Peninsular War; Wellington Despatches, vols. iii.-v.; Gent. Mag. 1840.] H. M. C.

**ALTHAM, SIR JAMES** (*d.* 1617), judge, descended from Christopher Altham of Gillington, in the West Riding of Yorkshire, was the third son of James Altham, Esq., of Mark Hall, Latton, in Essex, sheriff of London in 1557, and of Essex in 1570, by Elizabeth Blancke, daughter of Thomas Blancke of London, haberdasher, and sister of Sir Thomas Blancke, who was lord mayor of London in 1583, was a lawyer and a member of Gray's Inn. He is mentioned in Croke's reports for the first time as arguing a case in the Queen's Bench in 1587. In 1589 he was elected M.P. for Bramber in Sussex. He was appointed reader at Gray's Inn in 1600, and in 1603 double reader (*duplex lector*) in the barbarous jargon then in vogue. In the same year he was made serjeant-at-law. In 1606 he was appointed one of the barons of the exchequer, in succession to Sir J. Savile, and knighted. In 1610, a question having arisen concerning the power of the crown to impose restrictions on trade and industry by proclamation, the two chief justices, the chief baron, and Baron Altham were appointed to consider the matter. The result of their consultation was that they unanimously resolved 'that the king by his proclamation cannot create any offence which was not an offence before. . . . That the king hath no prerogative but that which the law of the land allows him . . . and lastly, that if an offence be not punishable in the Star Chamber, the prohibition of it by proclamation cannot make it punishable there.' Altham was one of the judges whose opinion was taken in 1611 by Lord Chancellor Ellesmere upon the case of 'two blasphemous heretics,' Legate and Wightman, whom Archbishop Abbot was desirous of burning. The selection of Altham for this business was much approved by the archbishop because of his reputed antipathy to Lord Coke, who was not consulted 'least by his singularity of opinion he should give stay to the business.' Probably Altham concurred with his brother Williams, who, Abbot wrote, 'maketh no doubt but that the law is cleere to burne them,' for eventually the two heretics were burned, one at Smithfield, the

other at Burton-upon-Trent. Altham's signature, together with those of the other twelve judges, is appended to the celebrated letter to the king relative to his action in the commendam case, in which the power of the crown to stay proceedings in the courts of justice in matters affecting its prerogative is denied. A serjeant-at-law, in arguing a case involving the right of the crown to grant commendams, i.e. licenses to hold benefices which otherwise would be vacated, had in the performance of his duty disputed, first, the existence of any such prerogative except in cases of necessity; secondly, the possibility of any such case arising. The king thereupon wrote by his attorney-general, Francis Bacon, a letter addressed to Lord Coke requiring that all proceedings in the cause should be stayed. This letter having been communicated to the judges, they assembled, and after consultation the letter already mentioned was sent to the king. The king replied by convening a council and summoning the judges to attend thereat. They attended, and, having been admonished by the king and the attorney-general, all, with the exception of Coke, fell upon their knees, acknowledged their error, and promised amendment. Altham died on 21 Feb. 1617, and the lord keeper, Sir Francis Bacon, in appointing his successor, characterised the late baron as 'one of the gravest and most reverend of the judges of this kingdom.' He was buried in a chapel built by himself on his estate at Oxhey in Hertfordshire, where a monument still preserves his memory and that of his third wife, who died on 21 April 1638. By his first wife, Margaret, daughter of Oliver Skinner, Altham had issue one child only, a son James, afterwards Sir James Altham of Oxhey, knight. This Sir James Altham married Elizabeth, daughter of Sir Richard Sutton of London, and had issue a boy, who died in infancy, and two daughters, Elizabeth and Frances. Elizabeth married Arthur Annesley, second Viscount Valentia and first Earl of Anglesey, whose second son, Altham Annesley, was created in 1680 Baron Altham of Altham, with limitation in default of male issue to his younger brothers. His only son dying in infancy, the title devolved upon the younger branch of the Annesley family, who subsequently succeeded to the earldom of Anglesey. The earldom lapsed in 1771, when the English House of Lords decided against the legitimacy of the last claimant. Frances, the second daughter of Sir James Altham of Oxhey, married the second Earl of Carberry. The title lapsed in 1713. By his second wife, Mary, daughter of Richard Stapers, Esq.,

Altham had three children, a son Richard, who died without issue; two daughters, Elizabeth and Mary. Elizabeth married first Sir Francis Astley of Hill Morton and Melton, knight, then Robert Baron Digby (Irish peerage), and lastly Sir John Bernard, knight and baronet, serjeant-at-law. By his third wife Altham had no children.

**ALTHORP, VISCOUNT.** [See SPENCER, JOHN CHARLES, 1782-1845.]

**ALVANLEY, BARON.** [See ARDEN.]

**ALVES, ROBERT** (1745-94), Scotch poet and prose writer, was born at Elgin on 11 Dec. 1745. His father's circumstances were humble, but as a boy of promise he was placed at the Elgin grammar school, where he made such good use of his opportunities that when sent to Aberdeen he took at Marischal College the highest bursary of the year in which he competed. An 'Elegy on Time,' written while he was at Aberdeen, procured him the friendship of Dr. Beattie, then one of the professors of Marischal College. On leaving Aberdeen Alves was successively master of a Banffshire parish school and tutor in the family of a gentleman who offered him a living in the Kirk of Scotland. But he preferred the head-mastership, with a lower stipend, of the Banff grammar school, which he held from 1773 until 1779, when, on the failure of his suit to a young lady of beauty and fortune, he migrated to Edinburgh. There he taught the classics and several modern languages, occasionally translating and compiling for the Edinburgh booksellers. In 1780 appeared his 'Ode to Britannia . . . on occasion of our late successes,' in which the gallantry of Scotch officers during the campaign in the Carolinas against the revolted American colonists was sung with patriotic enthusiasm. In 1782 he published a volume of 'Poems,' and in 1789

'Edinburgh, a poem in two parts,' a lively performance describing the topography and social aspects of the Scottish capital, together with the 'Weeping Bard, a poem in sixteen cantos,' much of which is plaintively autobiographical. Alves died suddenly on 1 June 1794, while seeing through the press the work which appeared in the same year as 'Sketches of the History of Literature, containing Lives and Characters of the most eminent Writers in different languages, ancient and modern, and critical remarks on their works. Together with several Literary Essays.' The volume displays acuteness and a reading creditably wide, but neither the powers nor the attainments of the writer were sufficient for the task which he had undertaken. Lord Gardenstone, a literary Scotch judge, seems to have superintended its issue from the press, and he contributed to it several critical observations.

[Memoir prefixed to the *Sketches of the History of Literature*; Alexander Campbell's Introduction to the *History of Poetry in Scotland* (1798), pp. 305-6.] F. E.

**ALVEY, RICHARD** (d. 1584), master of the Temple, received his education at Cambridge, where he graduated B.A. in 1529-30, and M.A. in 1533. He was admitted a fellow of St. John's College in 1537 or 1538 during the prefecture of Dr. George Day. On 24 Feb. 1539-40 he was presented by his college to the rectory of Thorington in Essex. He proceeded B.D. in 1543, was admitted to the rectory of Grinstead, near Colchester, on the king's presentation, 11 May 1546, and to the rectory of Sandon, also in Essex, on the presentation of Sir John Gate, 13 Nov. 1548. On 11 Dec. 1552 he was installed canon of Westminster.

Early in the reign of Queen Mary he was deprived of all his preferments, whereupon he went into exile, residing at Frankfort till after the accession of Queen Elizabeth, when he returned to England and was restored to the rectory of Thorington. By letters-patent dated 13 Feb. 1559-60 he was appointed master of the Temple, and he was again constituted one of the canons of the church of Westminster by the charter of refoundation, 21 June 1560. In 1565 he resigned the rectory of Thorington. Dr. Sandys, Bishop of London, collated him to the rectory of Burstled Parva, Essex, on 10 April 1571. He resigned his canonry at Westminster in 1575, and the rectory of Burstled Parva in the following year. His death occurred about August 1584.

Isaak Walton (*Life of Hooker*, 1665, p. 45) describes him as 'a man of a strict life, of

great learning, and of so venerable behaviour as to gain such a degree of love and reverence from all men that he was generally known as Father Alvie.' Moreover, he informs us that at the reading in the Temple following his death, Dr. Sandys, Archbishop of York, being at dinner with the judges, the reader and the benchers of the society 'met with a condolment for the death of Father Alvie, an high commendation of his saint-like life and of his great merit both to God and man: and as they bewailed his death, so they wished for a like pattern of virtue and learning to succeed him.' His successor was the famous and 'judicious' Richard Hooker.

**ALVEY, THOMAS, M.D. (1645-1704)**, physician, son of Thomas Alvey, merchant-taylor, of London, was born in St. Faith's parish, 4 May 1645, and educated at Merchant Taylors' School and at Merton College, Oxford (B.A. 1662, M.A. 1667, M.B. 1669, M.D. 1671). He became a fellow of the College of Physicians of London in 1676; censor in 1683; Harveian orator in 1684; was appointed an elect in January 1703-4; and died in 1704. Dr. Alvey wrote 'Dissertatiuncula Epistolaris, unde pateat urinæ materiam potius è sero sanguinis quam è sero (quod succo alibili in nervis superest), ad renes transmitti,' London, 1680, 4to.

**AMBERLEY, VISCOUNT.** [See RUSSELL.]

**AMBROSE, ISAAC (1604-1662-3)**, a Lancashire divine whose works were long held in esteem, was descended from the Ambroses of Lowick, Furness, and was baptised 29 May 1604 at Ormskirk, where his father was vicar. He entered Brasenose College, Oxford, 1621, in 1624 he proceeded B.A., and having been ordained was presented by Bishop Morton to the 'little cure' of Castleton, Derbyshire, 1627. Ambrose attracted the notice of William Russell, afterwards earl of Bedford, and was by the king's influence incorporated at Cambridge University 1631-2. Having resigned his small living in 1631, he was made one of the king's four preachers in Lancashire, and took up his residence at Garstang. About the year 1640 the interest of the religious Lady Margaret Hoghton obtained for him the vicarage of the corporate

town of Preston in Amounderness. In November 1642 he was for a time taken prisoner by the king's commissioners of array, and he was again arrested 20 March 1643; but in both cases was released by the influence of neighbouring gentlemen. On the taking of Bolton, May 1644, he took refuge at Leeds. He associated himself with the establishment of presbyterianism in the county, and held important positions by the favour of the House of Commons or his neighbouring brethren. Having set his hand to the 'Agreement of the People' taken into consideration, the committee of plundered ministers ordered him to be sent a prisoner to London (April and May 1649), where he made the acquaintance of Lady Mary Vere and other persons, who, with the Earl of Bedford, relieved his necessities. He was still the 'painful' minister of Preston in 1650. The prominent connection of this town with the war, and the strong party feelings of the inhabitants, led him to remove to Garstang in 1654; and thence, in 1662, he was ejected for nonconformity. Having retired to Preston, he died suddenly of apoplexy in 1663-4, and was buried 25 Jan.

He wrote 'Prima, Media, and Ultima,' 4to, 1650, 1659; funeral sermon on 'Redeeming the Time' (on Lady Hoghton), 1658, 4to; 'Looking unto Jesus,' 1658, 4to; 'War with Devils—Ministration of Angels,' 1661, 4to. These were reprinted in folio, with a portrait, 1674, 1682, 1689; and the smaller treatises have frequently been reprinted. He has letters prefixed to some of the works of his friend Henry Newcome.

'Ambrose,' says Calamy, 'was a man of that substantial worth, that eminent piety, and that exemplary life, both as a minister and a christian, that it is to be lamented the world should not have the benefit of particular memoirs of him.' His character has been misrepresented by Wood. He was of a peaceful disposition; and though he put his name to the fierce 'Harmonious Consent,' he was not naturally a partisan. He evaded the political controversies of the time. His gentleness of character and earnest presentation of the gospel attached him to his people. He was much given to secluding himself, retiring every May into the woods of Hoghton Tower and remaining there a month. Dr. Halley justly characterises him as the most meditative puritan of Lancashire. This quality pervades his writings, which abound, besides, in deep feeling and earnest piety. Mr. Hunter has called attention to his recommendation of diaries as a means of advancing personal piety, and has remarked, in reference to the fragments from Ambrose's

diary quoted in the 'Media,' that 'with such passages before us we cannot but lament that the carelessness of later times should have suffered such a curious and valuable document to perish; for perished it is to be feared it has.'

Nonconformity, i. 194 seq.; Chetnam's Ch. Libraries, p. 170; Fishwick's Hist. of Garstang, 161 seq.; Cox's Derbyshire Churches, iv. 499.] J. E. B.

**AMBROSE, JOHN** (*d.* 1771), captain in the navy, was promoted to that rank in March 1734, and appointed to the Greyhound, in which ship he was employed in the Channel and Mediterranean till September 1740, when he was transferred to the Rupert of 60 guns. In this ship he continued for the next eighteen months, cruising with good success against the enemy's privateers on the north coast of Spain, and on the coast of Portugal. He was then sent out to join the Mediterranean fleet, and was present in the action off Toulon on 11 Feb. 1744. Captain Ambrose was afterwards charged before a court-martial with having neglected his duty on that occasion; with firing and continuing to fire on the enemy whilst altogether out of range, with not having assisted the Marlborough when in extreme danger, with not having covered and protected the fire-ship when he might and should have done so, and finally with 'disobedience to his majesty's instructions and the signals and commands of the admiral, neglect of naval discipline, and being one of the principal causes of the miscarriage of his majesty's fleet.' The court held these charges to be proved in the principal part; but considering that he had always borne the character of a vigilant and diligent officer, and that his failure in the action was apparently due to a mistake in judgment, his judges sentenced him to be only cashiered during his majesty's pleasure and to be fined one year's pay, to be given to the chest at Chatham. In 1748 he was restored to his rank and half-pay, and in April 1750 was advanced to be a rear-admiral on the retired list. He died 25 March 1771.

**AMBROSE, MISS.** [See **PALMER, LADY.**]

**AMBROSIUS AURELIANUS** (*A.* 440), called **EMERY** by Welsh writers, was a leader

of the Britons in the fifth century, about whose history little that is certain can be extracted from the mass of legend that has gathered about his name. Our earliest authority, Gildas, speaks of him with enthusiasm, but with little definiteness, as the leader who checked the victorious advance of the Saxon invaders. He describes Ambrosius as 'courageous, faithful, valiant, and true; a man of Roman birth who had alone survived the conflict, his kindred, who had worn the purple, having perished in the struggle; his descendants, greatly degenerated in these days from the excellence of their ancestors, still provoke their conquerors to battle, and by the grace of God their prayers for victory are heard.' Geoffrey of Monmouth and other later writers represent Ambrosius as the son of Constantine, who was elected emperor in Britain, Gaul, and Spain during the reign of the Emperor Honorius; but their accounts of Constantine's life and death are so utterly irreconcilable with known facts that no reliance can be placed on their statements. Geoffrey's account is shortly as follows: Aurelius, Ambrosius, and Uther Pendragon were the sons, by a Roman wife, of Constantine the Tyrant, who was murdered by Vortigern after a reign of ten years. On their father's death Constantine's two sons fled to the king of Armorica, but returned after some years, during which Vortigern, as king of Britain, had been forced to rely upon the aid of the Jutes, under Hengist and Horsa, for protection against the Picts. On his return Ambrosius was anointed king, and proceeded to attack Vortigern, whom he defeated and killed at Genoreu. Ambrosius was then opposed by Hengist, whom he defeated with great slaughter at Maisbeli. Hengist was soon afterwards put to death. Ambrosius reigned as king for some years longer, and was poisoned at Winchester, where he lay sick, by a Saxon named Copa, disguised as a physician.

What may be looked upon as ascertained is that Ambrosius was of Roman origin, and probably descended from Constantine; that his birth attached to him Romans or Romanised Britons; and that he was a successful opponent of the advance of the Saxon invaders, whom he drove back and confined within the limits of the isle of Thanet. The Welsh writers give Ambrosius the title of 'Gwledig,' applied by them to those who occupied the place of Dux Britanniae and Comes Litoris Saxonici; it is the epithet given to Maximus and Constantine, who had both borne the title of emperor.

[Gildas, *De Excidio Britanniae*; Geoffrey of Monmouth, *Historia Britonum*.] A. M.

AMELIA (1783-1810), princess, youngest daughter, and last and fifteenth child of George III, was born 7 Aug. 1783. Always delicate, and the successor of two delicate little brothers who died shortly before her birth, this princess was the object of most careful and affectionate concern to all around her, and was especially the pet and companion of her father (MME. D'ARBLAY'S *Diary*, iii. 25). The child understood the dignity of her position even at three years old (*ibid.* iii. 51, iv. 3, &c.); she would remember her sick friends in her prayers (*ibid.* iii. 202); yet she was childlike enough to refuse to go to bed unless Miss Burney undressed her (*ibid.* pp. 172 and 185), and to insist on Miss Burney and Mr. Smelt playing at phaeton-driving with her, with all the fun of a frisky horse (*ibid.* p. 178). The delicacy of the princess's health continuing as she grew up, she did not become so proficient in accomplishments as her sisters, though her skill at the piano was considerable, and she was comely and graceful, full of all a girl's attractiveness and charm. She was warmly disposed to be charitable, and imposed upon herself the expense of three little girls, chosen from necessitous homes, whom she educated and brought up to trade, and who were allowed, upon occasions, to visit her. One of these, Mary, the princess apprenticed to her own dressmaker, Mrs. Bingley, of Piccadilly; and on Mrs. Bingley having to inform her royal highness of the unhappy fall of the girl, the princess wrote a touching letter to her, exhorting her to consider her position and return to a virtuous life (HONE'S *Every-Day Book*, i. 1074). As early as 1798, when the princess was only fifteen years old, she suffered from painful lameness in her knee, and her health began to break up. She went to Worthing for sea-bathing (MME. D'ARBLAY'S *Diary*, 1 Dec. 1798, vi. 178), which gave much benefit, and on a return of the malady from time to time the same remedy was tried again. In 1808, however, all means began to fail, and the princess had to pass most of her hours amidst all the restraints of an invalid. In 1809 she could occasionally take short walks in the garden. This improvement was but temporary, however, and in August 1810 her sufferings grew sharper, whilst in the October of that year she was seized with St. Anthony's fire (erysipelas), which cut off all hope, confined her to her bed on the 25th, when all the world was celebrating her father's jubilee (*Annual Register*, 1810, appendix, p. 406), and made it manifest that her death was rapidly approaching. The king's distress was intense. Himself part-blind then, and having

only intervals of sanity, he summoned his daughter's physicians to him at seven o'clock every morning, and three or four other times during the day, questioning them minutely as to her condition. The dying princess had a mourning ring made for the king, composed of a lock of her hair, under crystal, set round with diamonds; and saying to him, 'Remember me,' she herself pressed it on his finger, thereby throwing him into such poignant grief that he passed into that last sad condition of madness from which he was never restored. Mercifully the princess was never informed of this terrible effect of her gift (*Gent. Mag.* lxxx. part ii. p. 487); and lingering a few days more, waited upon to the last by her favourite and devoted sister, the Princess Mary, she died, at Augusta Lodge, Windsor, on 2 Nov. 1810, aged 27; and was buried at Windsor, Tuesday evening, 13 Nov. 1810, with full pageantry of pages, ushers, knights, equerries, and grooms (see *State Ceremonial*). Her royal highness left the Prince of Wales her residuary legatee, desiring him to sell her jewels to pay her debts and realise enough for a few small legacies; but the prince gave the jewels to the Princess Mary, and took upon himself all the other charges.

The untimely death of the Princess Amelia evoked warm sympathy throughout the country, many sermons and elegies being published on the occasion, and the incident of her gift of the ring was commemorated in verse by Peter Pindar and others. The stanzas beginning 'Unthinking, idle, wild, and young,' were attributed to the Princess Amelia, and appeared in most publications of the day as her undoubted composition. The authorship has been questioned, however (see *George III, his Court, &c.*, ii. 357, where the stanzas are given in full; also *Gent. Mag.* for 1810, and the monthly magazines).

[*Gent. Mag. Supplement* to, 1810, 646; *ibid.* 1810, 565; *European Magazine*, iv. part ii. p. 159; *Annual Register*.] J. H.

AMES, JOSEPH (1619-1695), naval commander under the Commonwealth, was descended from an ancient Norfolk family and was born at Great Yarmouth on 5 March 1619. Brought up as a sailor from his youth, he was one of the commanders of a small channel fleet watching the Dutch coast in 1641 (THURLOE'S *State Papers*, i. 117). In January 1653 he returned to Plymouth from Barbadoes, with a large consignment of sugar, which had only recently been planted in the island, and in July of the same year he was present at the engagement with the Dutch, in which Van Tromp was killed. 'For emi-

nent service in saving y<sup>e</sup> Triumph fired in fight with the Dutch' on that occasion, a gold medal was awarded him by parliament (*Commons' Journals*, vii. 296). In succeeding years Ames was in command of several ships of war, and made repeated voyages to America and the West Indies. Under his care many royalist prisoners were transported to the colonies, and on 8 Oct. 1655 he was the bearer of a young deer as a present to Cromwell from the president of the Providence plantation in New England. He withdrew from active service, according to his grandson, the bibliographer, about 1673, and retired to Yarmouth, where he died in December 1695. He was a member of the presbyterian congregation of his native town. Several of his letters, addressed to the admiralty commissioners under the Commonwealth, are preserved among the State papers of the time.

[*Memoir* in *Ames's Typographical Antiquities* (ed. Herbert and Dibdin), i. 22 et seq.; *State Paper Calendars*, 1652-3, 1654, 1655; *S.D.U.K. Biographical Dictionary*.] S. L.

AMES, JOSEPH (1689-1759), bibliographer and antiquary, was descended from the old Norfolk family of that name, and was the eldest child of John, a master in the merchant service, the latter being the sixth son of the Captain Joseph Ames, R.N., whose life is recorded above. Joseph Ames was born at Yarmouth 23 Jan. 1688-9, and was educated at a small grammar school in Wapping. He lost his father when twelve years old, and three years later was apprenticed to a plane maker in King Street or Queen Street, near the Guildhall, in the city of London. He is said to have served his time in a creditable manner, but does not appear to have taken up his freedom. He moved to Wapping near the Hermitage, where his father had previously settled, and where he entered into business either as a shipchandler, according to Walpole (*Cat. of Engravers*, p. 3), as a plane-iron maker (MORES, *Diss. upon English Typogr. Founders*, p. 85), a patten maker (*Cole's MSS.* vol. xxx.), or an ironmonger (see letters so addressed in NICHOLS's *Illustrations*, iv.). He continued the business, which must have been of a lucrative character, until his death. In 1712 his mother died, and was buried in Wapping church near her husband. Two years later Ames married Mary, daughter of William Wrayford, a merchant in Bow Lane. She died in 1734, after bearing six children, of whom only a daughter survived her.

Ames owed his taste for learned studies to the Rev. John Russel of St. John's, Wapping,

and the Rev. John Lewis of Margate, the well-known antiquary, to whom he was introduced by Mr. Russel. At some period before 1720 Ames made the acquaintance, while attending Dr. Desaguliers's lectures, of Mr. (afterwards Sir) Peter Thompson, a Hamburg merchant and member for St. Albans, and a man of marked character and considerable acquirements. The three friends exercised much influence upon the bookish career of Ames. Lewis had long been making collections for a history of printing in this country, and at least as early as 1730 suggested to Ames that he should undertake the work and make use of his notes. These appear to have been sent to Ames from time to time, and were carefully preserved and bound into a volume, which may now be seen in the British Museum (*Add. MS.* 20035). They include lists of printers and facsimiles of their marks, copies of title-pages, extracts, &c. The national collection also contains another volume of original papers used by Ames (*Add. MS.* 5151). Ames at first declined the offer, as a printer of the name of Samuel Palmer was then passing a similar work through the press. This appeared in 1732 under the title of 'The General History of Printing . . . particularly its introduction, rise, and progress here in England,' London, 1732, 4to. Palmer died before the publication of his work, which was then completed by the industrious pen of the impostor, George Psalmanazar. A continuation in manuscript by Palmer, devoted to the practical part of the art, was sold among Ames's collections. The book proved so poor a performance that Ames decided at last to undertake the great work by which his name will always be held in honour among bibliographers, and which was to form the chief object of his life. In the year 1739-40 he circulated a preliminary list of English printers from 1471 to 1600, which included 215 names, most of them being those of London men, with the announcement: 'As the history and progress of printing in England, from 1474 to 1600, is in good forwardness for the press; if any gentleman please to send the publisher, Jos. Ames in Wapping, some account of these printers, or add others to them, or oblige him with what may be useful in this undertaking, the favour will be gratefully acknowledged.'

The fine volume of engravings descriptive of the cabinet of coins belonging to the Earl of Pembroke, and known as the 'Numismata Antiqua,' was brought out in 1746 without a syllable of letterpress. To remedy the defect, Ames printed for private distribution an index of four leaves, which he said 'may be put into the book altho' it is bound.' It con-

sists merely of a transcript of the names of the coins as shown upon the plates. In 1748[7] he printed a 'Catalogue of English Heads,' being an index to the collection of 2,000 prints, bound in ten volumes, belonging to Mr. John Nicholls or Nickolls, F.R.S., a quaker antiquary of Ware in Hertfordshire. It forms the first attempt at a general description of English engraved portraits, a work resumed by Granger twenty years later. The arrangement is alphabetical, but is wanting in method, the same individuals appearing in different parts, and titled persons being entered sometimes under titles and sometimes under family names. The Rev. William Cole has left in manuscript (see his *Papers*, vol. xxx., in British Museum) an amended alphabetical index.

A few years later Ames distributed a prospectus and specimen, the price to subscribers being fixed at a guinea; and at last, in 1749, the 'Typographical Antiquities' appeared, a handsome quarto of over 600 pages, dedicated to Lord Chancellor Hardwicke. The original proposals contemplated only 200 copies, but 301 were subscribed for, and the list shows that the book was supported by the leading antiquaries and printers of the day. It was warmly received, and the entire edition appears to have been soon sold off. However imperfect Ames's work may be considered in the light of modern criticism, it is undoubtedly the foundation of English bibliography. An eloquent testimony to its merit lies in the fact that it was used as the basis of the more elaborate histories of Herbert and of Dibdin, the latter of whom says (see his ed. i. 15): 'Every impartial living antiquary, whatever may be his opinion of the literary attainments of the author, must cheerfully acknowledge his obligation to Ames's work.' One cause for the excellency of the 'Typographical Antiquities' may be found in the statement of the preface: 'I did not chuse to copy into my book from catalogues, but from the books themselves.' Ames owed much to the investigations of other students, and acknowledges (*Preface*) his 'obligations to most of [his] subscribers who, besides their subscriptions, have kindly assisted [him] with their manuscripts and observations.' A portion of his extensive bibliographical correspondence with Ducarel, Antist, Lewis, Bishop Lyttleton, Rawlinson, &c., is given by Nichols. The libraries of Lord Orford, Sir Hans Sloane, Mr. Antist, and other friends, were always open for his researches. Oldys's 'Diary' supplies many proofs of Ames's ardour in searching for rare English books. His last undertaking was to edit, or perhaps to compile entirely, the 'Parentalia, or Memoirs of

the Family of the Wrens,' which appeared in 1750. It is now a rare and costly volume.

Ames was elected a fellow of the Society of Antiquaries in 1736, and was appointed secretary five years later; he held the function until his death, the Rev. William Norris being associated with him in 1754. Ames appears to have been an active official, as is shown by the numerous letters preserved by Nichols. A copy of the minutes of the meetings of the society (1717-51) in Ames's handwriting is in the British Museum (*Egerton MSS.* 1041-2). He was elected F.R.S. in 1743. It may be mentioned, as an instance of the esteem in which he was held by the president, Sir Hans Sloane, that he was one of the trustees under the will of the latter. The solitary contribution of Ames to the 'Philosophical Transactions' consists of a letter relating to a case of 'plica polonica' in 1747. Ames made no pretence to literary merit, but he was an excellent antiquary according to the lights of the day. His position in the Society of Antiquaries made him some enemies. The caustic Mores describes him (*op. cit.* p. 85) as 'an arrant blunderer . . . a plane-maker and lived at the Hermitage. . . . He was unlearned but useful; he collected antiquities, and particularly old title-pages and the heads of authors, which he tore out and maimed the books: for the first of these crimes he made some amends by his "Typographical Antiquities," and for the second by his "Catalogue of English Heads." The accusation of tearing out title-pages was well deserved. In the sale of Ames's effects appeared a collection ranging between 1474 and 1700 in three folio volumes, besides several bundles and two more folios of title-pages alphabetically arranged according to places of printing. Other personal details of an equally ill-natured kind have been left by Grose (see *Olio*, 1796, pp. 133-5): 'He was a very little man, of mean aspect and still meaner abilities. The history of printing published under his name was really written by Dr. Ward, professor of Gresham College, though perhaps the materials were collected by Ames.' Cole accused him of being 'as illiterate as one can conceive. I have received many letters from him which are not English, and are full of false spelling, yet he was a very curious and ingenious person, and to his dying day kept a sort of patten or hardware shop at Wapping, where I have often called upon him to look over his old books and prints, and have bought many pounds' worth of English heads of him, for he would sell anything. He was an independent by profession, or anabaptist, but a deist by conversation' (in NICHOLS, *Illustrations*, viii. 581). Oldys

(*British Librarian*, p. 374) acknowledges his obligations to Ames, whom he styles 'a worthy preserver of antiquities.' Ames made a large collection of portraits, especially those of printers, although many were of doubtful authenticity. He also collected coins, 'natural curiosities,' inscriptions, and antiquities, which were sold after his death by Langford, 20 and 21 Feb. 1760. The rare English books and manuscripts were disposed of by the same auctioneer between 5 and 12 May at good prices for the time. Many of the books were annotated by their former owner, and the manuscripts included a number of valuable historical transcripts. In the library was an interleaved copy of the 'Typographical Antiquities' in two volumes, with a great quantity of manuscript additions by the author. The lot, which included plates, blocks, and copyright, was purchased by Sir Peter Thompson for 9*l.*, and afterwards sold by him to Herbert, who made use of it for his edition. Dibdin states (see his ed. i. 46): 'This book is now in my collection, although considerably shorn of its former honours. . . . It is no doubt a very curious and valuable interleaved copy, although  $\frac{3}{4}$  parts of it have been published.' Dibdin paid 50*l.* for the copy, which is now in the British Museum.

After dining with his old friend, Sir Peter Thompson, from whose materials Gough compiled the memoir of the typo-historiographer, the latter was seized with an attack which caused his death the same evening, 7 Oct. 1759, in the seventy-first year of his life. He was buried in the churchyard of St. George-in-the-East.

His works are: 1. 'A Catalogue of English Printers, from the year 1471 to 1600, most of them at London, 4to (without date or place), 4 pp.; the copy in the Society of Antiquaries Library is inscribed, 'Presented by Mr. Ames, 20 March 1739-40.' 2. 'An Index to the Pembroke Coins and Medals' (without date or place, ? 1746), 4to, 8 pp., with device. 3. 'A Catalogue of English Heads, or an account of about two thousand prints describing what is particular on each; as the name, title, or office of the person, the habit, posture, age or time when done, the name of the painter, graver, scraper, &c., and some remarkable particulars relating to their lives,' London, 1748, 8vo; the Soc. of Antiqu. copy dated by Ames '15 Oct. 1747.' 4. 'Typographical Antiquities, being an historical account of printing in England, with some memoirs of our ancient printers, and a register of the books printed by them, from the year 1471 to 1600, with an appendix concerning printing in Scotland and Ireland to the same time,' London, 1749, 4to. The next edition was

'considerably augmented, both in the memoirs and number of books, by William Herbert, of Cheshunt, Herts,' London, 1785-6-90, 3 vols. 4to. Dr. T. F. Dibdin commenced another edition 'greatly enlarged, with copious notes, and illustrated with appropriate engravings, London, 1810-12-16-19, 4 vols., 4to. As the latter was never finished, it does not entirely supersede Herbert's edition. 5. 'Parentalia, or Memoirs of the Family of the Wrens, viz. of Matthew, bishop of Ely, Christopher, dean of Windsor, &c., but chiefly of Sir Christopher Wren, late surveyor-general of the royal buildings, P.R.S. &c., in which is contained, besides his works, a great number of original papers and records on religion, politics, anatomy, mathematics, architecture, antiquities, and most branches of polite literature, compiled by his son Christopher; now published by his grandson, Stephen Wren, Esq., with the care of Joseph Ames,' London, 1750, folio.

[Gough's Memoir of Ames in the editions of the Typogr. Antiquities by Herbert and Dibdin; Nichols's Literary Anecdotes and Illustrations; Farmer's Essay on Learning of Shakespeare; Oldys's Memoirs and Diary by W. J. Thoms; Bigmore and Wyman's Bibliography of Printing; Notes and Queries, 1st ser. vol. i., 2nd ser. vol. xi., 4th ser. vol. iv., 5th ser. vol. iv.] H. R. T.

AMES, WILLIAM (d. 1662), joined the Quakers in 1655 at Dublin, having been a baptist minister in Somersetshire, and afterwards an officer in the parliamentary army. He settled at Amsterdam in 1657, where he was tolerated, though once confined for a short time as a lunatic. He travelled in Germany, and was favourably received by the Palatine elector. He returned to England in 1662, was sent to Bridewell for attending a quaker meeting, and died before the end of the year. He wrote a large number of tracts in Dutch, the titles of which are given in Smith's 'Catalogue of Friends' Books.'

[Take's Biographical Notices, ii. 129; Sewall's History of Quakers; Smith's Catalogue.]

AMES, WILLIAM (1576-1633), puritan divine and casuist, was of an ancient family in the county of Norfolk, branches of which still exist in that county and in Somersetshire. He was educated at Christ's College, Cambridge, where he had for his tutor the celebrated William Perkins, a theologian of moderate puritan tendencies, by whose teaching and example his own career was greatly influenced. After his tutor's death in 1602, his zeal led him into indiscretions which rendered him obnoxious to the master of his college, Valentine Cary; he refused to wear the surplice in the college chapel, and in a

sermon preached in the university church (1609) attacked the prevalent diversion of card-playing as an offence against the rules of christian life no less censurable than open profanity. For this language he was suspended by the vice-chancellor 'from the exercise of his ecclesiastical function, and from all degrees taken or to be taken' (*Letter to the Author of a Further Enquiry into the Right of Appeal*, p. 32). According to the statement of Nethenus, Ames, who had been elected fellow, would have been chosen master instead of Cary (elected 1610) had he been more conformable to the established discipline. This would sufficiently account for the unfriendly feeling between the two, and for the fact that Ames shortly afterwards quitted the college and the university, persuaded so to do, says Nethenus, by Cary himself, who dared not expel him (*Præf. Introd.* in edition of Latin Works by Nethenus). On leaving Cambridge Ames sought to settle at Colchester as pastor of the congregation there, but was forbidden to preach by the Bishop of London. Under these circumstances he seems to have gained the sympathy of some opulent English merchants, to whom he was recommended by his doctrinal views, and at their expense was sent, together with one Parker, to Leyden, for the purpose of engaging in controversy with the supporters of the English church. According to one account (see life in CHALMERS'S *Dict.*) he was compelled to leave England by the hostility of Archbishop Bancroft; this statement, however, Nethenus (*ut supra*) declares to have taken its origin in certain misrepresentations of Episcopius. About the year 1613 he became involved in a controversy with Grevinchovius, the minister of the church of the Remonstrants (or Arminians) at Rotterdam; and, according to the assertion of his biographer, obtained so signal an advantage over his antagonist, that the latter became a laughing-stock even to the youngest theological students in the city. About this time Ames married the daughter of Dr. Burgess, chaplain to Sir Horace Vere, the English governor of Brill in Holland, and, on Dr. Burgess resigning his chaplaincy, succeeded to his post. Vere, however, was prevailed upon by the authorities in England to dismiss Ames; and we next hear of the latter as employed by the Calvinistic party, at a salary of four florins a day, to watch the proceedings of the synod of Dort (1618-19), giving his opinion and advice when required. Some theological theses which Ames put forth at this time were severely criticised, owing apparently to their being treated in too scholastic a manner Macko-

vius, professor of theology at the university of Franeker, came forward in Ames's defence, and was himself attacked; but after a lengthened controversy, which stirred all theological Friesland, a formal decision (preserved by Nethenus) was eventually given by the recognised authorities in theological doctrine in favour of both. The conclusions of the synod of Dort favoured the Calvinistic party, and when the delegates from Dort repaired to England to present the acts of the synod to King James, occasion was taken to request Abbot, the archbishop, to give his assent to the appointment of Ames as head of a small theological college at Leyden, to which office he had already been nominated. Abbot replied that he was glad to hear that any countryman of his was held worthy of the post of professor in such a distinguished seat of learning, but added that Ames was no obedient son of the church, being a rebel against her authority (*Præf. Introd.*). An invitation to the theological chair at Franeker now appeared to offer the exiled scholar a permanent retreat; but here again his appointment would have been set aside by the exertions of his enemies, had it not been for the good offices of one Herwood, a military officer, with Prince Maurice. Ames entered upon his duties at Franeker in May 1622, and delivered on the occasion an oration on Urim and Thummim. He was subsequently chosen rector of the university, and his inaugural address on assuming the office (1626), and also that on his retirement from it, are still preserved (*Latin Works*, ed. Nethenus, v. 48, ii. 407). His tenure of his professorship, which lasted upwards of ten years, must be looked upon as the most important period of his life, his reputation as a theologian and his ability as a teacher attracting students, not only from all parts of the United Provinces, but also from Hungary, Poland, and Russia (*Præf. Introd.*). The air of Franeker, however, being found unsuited to his health, owing to an asthma from which he suffered, he removed to Rotterdam, with the twofold object of filling the post of pastor to the English church in that city, and of presiding over an English college which it was proposed to found there. Shortly after his arrival Rotterdam was visited by an inundation, and Ames, in effecting his escape from his house by night, contracted an illness through exposure, which resulted in his death in the month of November 1633, in his fifty-eighth year.

By his first wife Ames had no family; but by his second marriage with the daughter of a gentleman named Sletcher he had a son and a daughter. He appears to have died in

necessitous circumstances, for his family received assistance from the town council at Rotterdam, and eventually sailed for New England, taking with them his library, which was hailed as an acquisition of great value by the theological students of the youthful colony.

In the opinion of his contemporaries his genius was better adapted for the professor's chair than for the pulpit. In controversy he was distinguished as a champion of Calvinistic views in opposition to the Arminian doctrines which, during the latter part of his life, began to gain ground both in England and abroad; and his '*Medulla Theologiæ*,' a system of Calvinistic theology, has been frequently reprinted. His '*Fresh Suit against Roman Ceremonies*,' which was passing through the press at the time of his death, is highly praised by Orme (*Life of Baxter*, p. 19) as an able exposition from the presbyterian standpoint of the chief points of difference between the puritans and the school of theology represented by Richard Hooker. The work, however, by which Ames chiefly merits to be remembered by posterity is his treatise '*De Conscientia, ejus Jure et Casibus*,' first published in the year preceding his death. It was an elaborate attempt to make the application of the general principles of christian morality more certain and clear in relation to particular cases, and served to make the name of 'Amesius' classical in the schools of moral philosophy. His biographer speaks of it as removing a reproach from the learning of protestantism, and relieving its teachers from the necessity of resorting to 'the Philistines' for assistance in the determination of nice points in cases of conscience. Among Ames's other works the chief are his '*Bellarminus enervatus*,' often reprinted at Amsterdam, London, and Oxford; his '*Córonis ad Collationem Hagiensem*' (12mo), a confutation of the Arminian arguments against the Calvinistic clergy of the United Provinces; his '*Antisynodalia*' (Franker, 12mo, 1629)—against the Remonstrants; and his '*Demonstratio Logicæ Veræ*' (Leyden, 12mo, 1632). The '*Puritanismus Anglicanus*' (1610), an exposition of the views of the English puritans, is a Latin version by Ames of an English original by another writer, W. Bradshaw, of which latter no edition appeared until the year 1641. His Latin works were collected and published at Amsterdam in five volumes, 16mo (1658), by his admirer and biographer Nethenus.

AMESBURY, EARL OF. [See DUNDAS, CHARLES.]

AMHERST, FRANCIS KERRIL (1819-1883), catholic prelate, was the son of Mr. Amherst, of Kenilworth, Warwickshire, and brother of the Rev. William Amherst, S.J. He was born in London 21 March 1819, and educated at St. Mary's College, Oscott, where, after his ordination in 1846, he became a professor. Subsequently he resided for some time in a Dominican monastery at Leicester, and in 1856 he was appointed missionary rector of the church of St. Augustin, at Stafford. He was consecrated bishop of Northampton, in succession to Dr. William Wareing, the first bishop, on 4 July 1858. He was compelled, however, by the painful maladies under which he laboured, to resign his see in 1879, and was preconised to the titular see of Sozusa in 1880. He passed the last years of his suffering life at the home of his family, Fieldgate House, Kenilworth, where he died 21 Aug. 1883. Bishop Amherst published '*Lenten Thoughts*, drawn from the Gospel for each day of Lent,' London, 1873; 4th edition, 1880.

[Catholic Directory (1883), 184; Men of the Time, 11th ed., 31; Times, 22 Aug. 1883; Tablet, 25 Aug. 1883, pp. 300, 311, 1 Sept. 1883, p. 339, 5 Jan. 1884, p. 27; Cat. of Printed Books in Brit. Museum.] T. C.

AMHERST, JEFFREY, BARON AMHERST (1717-1797), field-marshal, was the second son of Jeffrey Amherst, of Riverhead, Kent, and was born on 29 Jan. 1717. The Duke of Dorset, who was his father's neighbour at Knole in Kent, took him, when a boy, into his service as a page, and procured him an ensigncy in the Guards in 1731. When he went on service his patron recommended him as a young man of uncommon ability to General Ligonier, then commanding in Germany, who made him his aide-de-camp. He gave great satisfaction, and served on Ligonier's staff at Roucoux, Dettingen, and Fontenoy, and was then passed on to the Duke of Cumberland's staff, with which he was present at Lauffeld and Hastenbeck. These generals did not neglect their protégé, and he was rapidly promoted till he became lieutenant-colonel of the 15th regiment in 1756. But a greater and more deserving patron now perceived his merits, and in 1758 Pitt, who was on the look-out

for young men who would not mind responsibility, had him promoted major-general, and gave him command of the expedition fitting out at Portsmouth and destined for North America.

On this expedition was based Pitt's great hope for making North America wholly English. He had perceived with alarm Montcalm's plan for hemming in the progress of the English towards the west, and for uniting the French colonies of Canada and Louisiana. He chose his officers with great care; most of them were young men burning for distinction, of whom Wolfe was the type, but over them he set Amherst, who, though very young, was chiefly distinguished for his absolute self-control. Wolfe, Pitt knew, was half-mad with enthusiasm, and might, in a fit of enthusiasm run his army into a very perilous position.

The expedition which sailed from Portsmouth in May 1758 under the command of General Amherst was 14,000 strong, and was embarked on 151 ships under the command of Admiral Boscawen. Its first destination was Louisburg on the island of Cape Breton, which was immensely strong, and important from its closing the mouth of the St. Lawrence, and giving the French a base from which to annoy English communications with America and the Newfoundland fisheries. On reaching the island, the English troops effected their disembarkation after a gallant lead had been shown them by Wolfe, who plunged into the sea at the head of his grenadiers, and the fortress surrendered on 26 July. Wolfe was sent home with dispatches, and in September Amherst was, as a reward, appointed commander-in-chief of the forces in the place of James Abercromby, and proceeded to Albany to assume his command. He in November took Fort Du Quesne, and waited for further instructions.

In those further instructions Pitt's great plan for the conquest of French North America was displayed. He recognised that Montreal was the real centre of the French power, which could not be directly attacked. To isolate it three distinct series of operations must be undertaken. The first was the capture of Fort Niagara, and the rupture at that point of Montcalm's line of communication with Louisiana; this task was assigned to General Prideaux. Sir William Johnson, the best manager of Indian auxiliaries, was attached to him as second in command. The most difficult task was, however, the occupation of Quebec; this desperate enterprise was given to Wolfe. The third operation was the reduction of Ticonderoga, and

the forts on Lake Champlain which threatened most dangerously the States of America. This operation had not the intrinsic difficulty of the other two, but the disastrous failure of James Abercromby the year before had dispirited both the English soldiery and the New England militia. To Amherst Pitt assigned the third operation, having learned his power of disregarding the influence of former failure from his success at Louisburg. Each operation succeeded. Though Prideaux was killed on the march, Johnson took Niagara in July 1759, Amherst took Ticonderoga in July and Crown Point in August, and in September Wolfe took Quebec. Critics since have said Amherst ought to have at once advanced on Montreal, but such rapid movements were not in accordance with his nature, which always inclined him to wait for certain success, or with Pitt's instructions. In 1760, however, three armies from Quebec, Niagara, and Crown Point advanced on the capital, and joined forces before Montreal, which surrendered without striking a blow in September 1760. Amherst was at once appointed governor-general of British North America, and in 1761 received the thanks of parliament, and was made a knight of the Bath. His campaigns with a civilised enemy were now at an end, but he was soon involved in difficulties with the Indians. The history of this episode of the rebellion of Pontiac has been ably described by an American historian, and is known as the conspiracy of Pontiac. Pontiac was an Indian chief of uncommon ability, who on the advice of French officers determined that the conquest of the French did not mean the conquest of their Indian allies, and that the English had no claims to the Indians' forests. He succeeded in cutting off detached English posts and taking small forts. Amherst proved unfit to deal with him; he would not have recourse to the American militia, and both despised and hated his enemy. His contempt prevented his taking adequate steps to conquer Pontiac, and his indignation at the torture inflicted on his officers made him devise most disgraceful means of revenge. He seriously advised the dissemination of small-pox among the Indians, and the use of bloodhounds to track them down. His failure no doubt was a chief cause of his return to England in 1763. There Pontiac's conspiracy was unknown, and Sir Jeffrey Amherst was received as the conqueror of Canada. He was afterwards made governor of Virginia in Sept. 1768, and colonel of the 60th or American regiment. In 1768 he had a serious quarrel with the king, and on the suggestion that he should

resign his absentee government in favour of an impecunious nobleman, Lord Bottetourt, and take a pension instead, at once threw up all his offices and commands. Then his popularity became manifest, and Horace Walpole writes that 'between the King of Denmark and Sir Jeffrey Amherst, poor Wilkes is completely forgotten.' The king saw his mistake, and at once became reconciled to Amherst by giving him the colonelcy of the 3rd as well as of the 60th regiment. In 1770 he became governor of Guernsey, and in 1772 a privy councillor, lieutenant-general of the Ordnance, and, though only a lieutenant-general, officiating commander-in-chief of the forces. His steady support of the American war and the value of his popularity to the government endeared him to the king, who made him in 1776 Lord Amherst, in 1778 a general, and in April 1779 colonel of the 2nd Horse Grenadiers, transferring him to the colonelcy of the 2nd Horse Guards in 1782. His chief services were as adviser to the government on the American war, and in suppressing the Gordon riots in 1780. In 1782 he had to leave office on the formation of the Rockingham cabinet, but in 1783 became again officiating commander-in-chief. In 1787 he was recreated Lord Amherst with remainder to his nephew, and in 1793, though too old to perform his duties efficiently, commander-in-chief. In 1795 he was induced to resign in favour of the Duke of York, and refused an earldom, but in 1796 the king insisted on making him a field-marshal. He died at Montreal, his seat in Kent, on 3 Aug. 1797.

Lord Amherst's great military services were all performed in the years 1758, 1759, and 1760, when he proved himself worthy of high command by his quiet self-control and skilful combinations. His failure with the Indians was not strange, for he committed the great fault of despising his enemy. Of his later life in office little need be said. He was by no means a good commander-in-chief, and allowed innumerable abuses to grow up in the army. He kept his command till almost in his dotage with a tenacity which cannot be too much censured. Yet, though not a great man, he deserves a very honourable position amongst English soldiers and statesmen of the last century. His personal good qualities were undeniable, and he could not have been an ordinary man to have risen from page to the Duke of Dorset to be field-marshal commanding-in-chief. His greatest glory is to have conquered Canada; and if much of that glory belongs to Pitt and Wolfe, neither Pitt's

combinations nor Wolfe's valour would have been effectual without Amherst's steady purpose and unflinching determination.

[There is no published life of Lord Amherst, but fair notices in the biographical dictionaries and encyclopædias; see also the *Gentleman's Magazine* for Sept. 1797; for his campaigns in Canada consult Mahon's *History of England*, vol. iv., and Bancroft's *History of the United States of America*, vol. iii.; for the capture of Louisbourg see *Prise de la Forteresse de Louisbourg en Canada par les Anglais aux ordres du General-Major Amherst et de l'Amiral Boscawen le 26 Juillet 1758*, published at Strasburg; for the capture of Ticonderoga see the very interesting *Orderly Book of Commissary Wilson* during the Expedition of the British and Provincial Army under Major-General Jeffrey Amherst against Ticonderoga and Crown Point, 1759, published at Albany, N. Y., 1857; for allusions to his later life see Horace Walpole's *Letters*, *passim*. There is a fine portrait of Lord Amherst, by Gainsborough, in the National Portrait Gallery.] H. M. S.

**AMHERST, JOHN** (1718?–1778), admiral, younger brother of Jeffery, first Lord Amherst, after serving as midshipman and lieutenant in the Mediterranean fleet, under the command of Admirals Haddock and Matthews, was promoted to the rank of captain in December 1744. He afterwards served as flag-captain to Rear-Admiral Griffin, on board the *Princess Mary*, in the East Indies; and in 1753 commissioned the *Mars*, of 64 guns, as guard-ship at Portsmouth, which, on the threatening of war in 1755, formed part of the fleet sent into North American waters under Vice-Admiral Boscawen. In going into Halifax harbour, then but little known, the *Mars* took the ground, and was totally lost, though her stores were saved. By the court martial which inquired into the circumstance, Captain Amherst was acquitted of all blame; and, on his return to England, was appointed to the *Deptford*, of 50 guns, which sailed with Admiral John Byng to the Mediterranean in March 1756. In the action off Cape Mola on 20 May, the admiral ordered the *Deptford* to quit the line of battle, and be ready to assist any ship, as she might be directed: Amherst's part was thus rather that of an onlooker, till, late in the day, he was signalled to support the *Intrepid*, then much disabled. In the following year he commanded the *Captain*, of 64 guns, at Louisbourg, under Holburne and Boscawen; and in 1761 commanded the 74-gun ship *Arrogant* at the capture of Belle-Isle, and afterwards, in 1762, as senior officer at Gibraltar, with a broad pennant. In 1765 he was advanced to flag rank, and in 1776 was appointed

commander-in-chief at Plymouth: he was still holding this command, when he died suddenly at Gosport, on 14 Feb. 1778, in his 59th year. He was buried in the parish church of Sevenoaks, where there is a tablet erected to his memory by his brother, Lord Amherst.

[Charnock's *Biographia Navalis*, v. 275; Official Letters, &c., in the Public Record Office.]  
J. K. L.

**AMHERST, WILLIAM PITT, EARL** AMHERST of Arracan (1773-1857), diplomatist and statesman, was the son of Lieutenant-general William Amherst; was born in January 1773, and succeeded as second baron on the decease of his uncle, the late commander-in-chief in Great Britain, on 3 Aug. 1797. Being the son and nephew of officers who had held high positions in the colonies and elsewhere, he at all times took a keen interest in foreign affairs; and when, after the peace of 1815, the English government turned their attention to the complaints of injustice and exactions on the part of the Chinese mandarins which reached them from time to time from the English merchants at Canton, Lord Amherst was chosen to proceed to Peking as British envoy, to represent to the Emperor Kea K'ing the wrongs which British subjects were suffering under his rule. In February 1816 Lord Amherst sailed from Spithead, and after a voyage of no unusual length in those days arrived off Canton in the beginning of July. There he was met by mandarins of an inferior grade, who had been appointed to receive him, and with whom he very properly declined to communicate except through his secretaries. After considerable delay, permission was given him to proceed to Tientsin, by sea, on his way to the capital, and at that city he was again met by imperial commissioners. Being far removed from all semblance of English power, the commissioners, who, like all Asiatics, bow only when conscious of weakness, assumed an arrogant tone in their dealings with the envoy. The presents he brought from the prince regent for the emperor they described as articles of 'tribute,' and with more persistence than diplomatic skill they urged him to promise to perform the 'k'otow,' or nine striking of the forehead on the ground, on being admitted into the presence of the emperor. They even went the length of asserting, though falsely, that Lord Macartney, when granted audiences by the preceding emperor, K'een-lung, had gone through this degrading ceremony. But to all solicitations on this point Lord Amherst turned a deaf

ear, and declared his intention of yielding only so far as to bow, instead of prostrating himself, nine times. So anxious were the commissioners to see for themselves what this concession amounted to, that, at a dinner which they gave in honour of the envoy, some imperial insignia were introduced before which they 'k'otow'-ed, while Lord Amherst and his staff made the promised number of bows. After much time had been consumed in these profitless discussions, the commissioners, finding Lord Amherst firm, arranged that he should leave Tientsin for the capital on 14 Aug. After a tedious journey by river the embassy reached Tung-chow, and from thence were carried on to the palace of Yuen-ming-yuen, where they arrived on the evening of the 29th. Worn out with fatigue, Lord Amherst was about to retire for the night, when he was peremptorily invited into the presence of the emperor. Though such a breach of the commonest diplomatic courtesy might have been overlooked on the plea of ignorance, Lord Amherst, deeming it probable, from the hasty rudeness of the message and the insolent manner of the messengers, that an attempt would be made in the hurry of the moment to force him to perform an unbecoming ceremony, positively refused to obey the command. The result was that without further parley he was sent back the same evening to Tung-chow, on his way to Tientsin. From this point, instead of returning as he came by sea, he was conducted down the Grand Canal, and over the celebrated Meling Pass, to Canton, where, on 20 Jan. 1817, he re-embarked for England.

Although he had thus failed in carrying out the object of his mission, the true cause of his want of success was duly recognised by his countrymen; and when, in 1823, the Marquis of Hastings retired from the governor-generalship of India, Lord Amherst was appointed by the directors to succeed him. On landing at Calcutta (1 Aug. 1823) he found the local politics much disturbed in consequence of the prosecution of Mr. Buckingham, a newspaper editor, by order of John Adam [see ADAM, JOHN, 1779-1825], who had held temporary office during the interval between the departure of Lord Hastings and Lord Amherst's arrival. By judicious firmness and conciliation, Lord Amherst succeeded in throwing oil upon the troubled waters on the spot, though Mr. Buckingham subsequently carried on the contention in England. But far more important matters demanded the immediate attention of the viceroy. The pretensions of the king of Burmah had for some time

been giving rise to uneasiness, and when Lord Amherst assumed the governor-generalship he was met by a demand from that sovereign for the cession of the whole of Eastern Bengal. Not satisfied with making this bold request, the king drove out by force of numbers the English garrison on the island of Shapporee at the mouth of the Naef river, and despatched General Máha Bundoola to conquer Bengal. So full was he of arrogant confidence as to the result of the campaign that he ordered this general, after vanquishing the English troops, to bring Lord Amherst, bound in golden fetters, into his presence. This presumptuous conduct made a continuance of peace impossible, and on 24 Feb. 1824 Lord Amherst issued a proclamation of war. Although our successes during the operations which followed were by no means unchequered by misfortune, the net result of the various campaigns was that Rangoon, Martaban on the Tenasserim coast, and Promé, the capital of Lower Burmah, were captured by our troops. Having by these reverses had his eyes opened to the real strength of the British power in India, and fearing lest further disasters should overtake him, the king proposed terms of peace, and eventually agreed to cede to the English Tenasserim, Arracan, and Assam, and to pay the expenses of the war. No sooner had Lord Amherst thus succeeded in securing peace with Burmah than a case of disputed succession at Bhurtpore again taxed his statesmanship. The circumstances of this affair were of a kind well understood by students of Oriental history. A youthful heir had succeeded to the rajahship, and had been deposed by an ambitious cousin, Doorjun Sál by name. As the young rajah had been recognised by the government of India, Sir David Ochterlony, the English political agent in Northern India, at once ordered a force to march on Bhurtpore to support his claims. At the moment this policy was disapproved of by Lord Amherst, who recalled the troops. Subsequent events, however, proved that Sir David Ochterlony's policy was the true one, and Lord Combermere was despatched with a force of 20,000 troops of all arms and 100 guns to reinstate the rightful rajah on his throne. After a short campaign, in which Bhurtpore was captured by assault, Doorjun Sál was deposed, and the young rajah was left in undisputed possession of his heritage. For his services in this matter and in the general conduct of affairs in India, Lord Amherst was created an earl, and received at the same time the thanks of the directors and proprietors of the East India Company. Towards the close of the same year (1826),

he made a politically successful tour through the north-west provinces, and in the following summer he inaugurated Simla as a vice-regal sanatorium. For some time previously his health had been uncertain, and in February 1828 he embarked for England, having already sent in his resignation as viceroy. He was gazetted governor-general of Canada on 1 April 1835 on the nomination of Peel, but on the immediate change of ministry he gave up the appointment. For the rest of his life he lived comparatively retired from public affairs, and died in 1857, aged 84. Lord Amherst was twice married, first, on 24 July 1800, to Sarah, countess dowager of Plymouth, relict of Other Hickman, fifth earl of Plymouth, by whom he had issue William Pitt, Viscount Holmesdale, and Sarah Elizabeth, who married Sir John Hay Williams; and secondly, on 25 May 1839, to Mary, relict of Other Archer, sixth earl of Plymouth.

[Ellis's Journal of the late Embassy to China, 1817; Taylor's History of India, 1870; Burke's Peerage.] R. K. D.

AMHURST, NICHOLAS (1697-1742), poet and political writer, born at Marden in Kent 16 Oct. 1697 (ROBINSON'S *Merchant Taylors' School*, ii. 22), was educated at Merchant Taylors' School, and on 16 June 1716 became scholar of St. John's College, Oxford. He published, whilst at Oxford, an 'Epistle from a Student at Oxford to the Chevalier,' a 'Congratulatory Epistle to Addison on his being made Secretary of State,' and a translation of Addison's poem on the resurrection; but on 29 June 1719, when he would have proceeded in due course to a fellowship, he was expelled from the university, on account, it was alleged, of his libertinism and misconduct. According, however, to Amhurst's own account of the affair, the action of the authorities was prompted solely by their dislike of his persistent whig principles, and of his openly expressed hatred of toriyism and of the extreme high-church party. In the ironical dedication to Dr. Delaune prefixed to his poems, he gives the following reasons why 'one Nicholas Amhurst of St. John's College was expelled. *Imprimis*, for loving foreign turnips and presbyterian bishops. *Item*, for ingratitude to his benefactor, that spotless martyr, William Laud. *Item*, for believing that steeples and organs are not necessary to salvation. *Item*, for preaching without orders and praying without a commission. *Item*, for lampooning priestcraft and petticoat-craft. *Item*, for not lampooning the government and the revolution. *Item*, for prying into secret history.' It is impossible to say how much truth there

is in this and other narratives of the transaction given by Amhurst; but it is tolerably certain that he was an enthusiastic whig at Oxford and a member of the Constitution Club, which was in much disfavour with the heads of colleges and leading members of the university, who were nearly all violent tories. This, and a faculty for detecting and satirising the abuses which were rife in the university, might have been sufficient in themselves to cause the authorities of St. John's to grasp eagerly at an opportunity of getting rid of him. In 1718 he had published a poem in five cantos, called 'Protestant Popery; or the Convocation' (printed by Curll, without the author's name), in which Bishop Hoadly is eulogised, and the extreme high-churchmen attacked; and the same year he wrote a shorter poem called 'Strephon's Revenge; a Satire on the Oxford Toasts,' which deals severely with the license and profligacy prevailing in the university town. He was also the author (in all probability) of a poem called 'The Protestant Session. . . . By a member of the Constitution Club at Oxford,' printed by Curll in 1719, in which Stanhope is addressed in a strain of excessive adulation. On his expulsion from Oxford in June 1719, Amhurst seems to have settled in London, and to have adopted literature as his profession. In 1721 he began a series of fifty periodical papers, called 'Terræ Filius,' which appeared every Wednesday and Saturday from 11 January to 6 July. The 'Terræ Filius' was Amhurst's revenge on the university, which it satirises very severely. It is written with much liveliness, and occasionally with a good deal of humour, and though no doubt greatly exaggerated it is of considerable value owing to the ample description it gives of life at Oxford in the first quarter of the eighteenth century. No. 45 of the series contains the narrative of Amhurst's expulsion from the university, and No. 50 an account of the Oxford Constitution Club. A second edition, with a letter to the vice-chancellor, appeared in 1726. In 1720 Amhurst published a small volume of 'Poems on Several Occasions,' which include paraphrases of the first chapter of Genesis and the fourteenth chapter of Exodus; a number of imitations of Catullus; several epigrams on the author's Oxford enemies; and an account of the invention of the cork-screw. Without displaying any high poetical power, Amhurst knew how to turn out smooth and fluent verses, not deficient in a certain wit and liveliness, although occasionally disfigured by a good deal of coarseness. The 'Poems' were successful enough to call for a second edition in 1723, to which was added

'The Test of Love.' In 1722 Amhurst published 'The British General, a Poem sacred to the memory of John Duke of Marlborough,' in 1722 'The Conspiracy,' inscribed to Lord Cadogan, and in 1724 'Oculus Britannia,' a satirical poem on his old enemy the university of Oxford. Of his subsequent literary career we have few particulars. He contributed largely to a periodical called 'Common Sense,' and gradually became prominent among the group of pamphleteers and journalists who assailed the government of Sir Robert Walpole. On 5 Dec. 1726 he issued, under the pseudonym of 'Caleb D'Anvers of Gray's Inn,' the first number of the famous 'Craftsman,' the most successful of all the political journals of this age. Bolingbroke and Pulteney contributed very largely to the pages of the 'Craftsman,' and it was to them (and to the former in particular) that it chiefly owed both its literary merit and its great reputation; Amhurst, however, appears to have had from the beginning the editorial conduct of the paper, and to have managed it with much ability. Its success was remarkable. It was said to have attracted more attention than any periodical of the kind hitherto published in Great Britain, and as many as ten thousand copies were sold in one day. On 2 July 1737 there appeared in the 'Craftsman' an ironical letter purporting to come from Colley Cibber, the poet laureate, in which it was suggested that the new act for licensing plays should be extended to old as well as new works, and pointed out that there was a good deal which might be construed as seditious in the works of Shakespeare and other writers. The letter concludes by suggesting that the ostensible writer, Cibber, should be made licenser and corrector of old plays. For this 'suspected libel,' as it was called, the printer of the 'Craftsman' was arrested by a warrant from the secretary of state; but Amhurst surrendered himself in his stead, and was kept in custody some days. He only obtained his release on suing out his Habeas Corpus before the judges; and the matter was then dropped by the government. Two pamphlets against the excise were reprinted from the 'Craftsman' in 1733, and are ascribed to Amhurst. The last years of Amhurst's life were unfortunate. When Pulteney and his friends made their peace with the government, they did nothing for their useful associate; and the closing portion of his life appears to have been spent in much poverty and distress. He died at Twickenham, 12 April 1742, of a broken heart, it is said, and according to one account was indebted to the charity of his printer, Richard Franklin, for a tomb.

**AMMONIO, ANDREA** (1477–1517), Latin secretary to Henry VIII, was born at Lucca in Italy, and lived during his early years in Rome, where he acquired a great reputation as a classical student. He was sent to England as apostolic notary and collector for the pope, and became the friend of the eminent English scholars, John Colet and William Grocyn, and of Erasmus, then residing in this country. For some time he lodged with the celebrated Sir Thomas More, and suffered great misery, as he says in one of his letters to Erasmus (*ERASM. Epist.* 125), where he expresses his regret at having left Rome. In 1512 the king gave him a canonry and a prebendal stall in the cathedral of Westminster, and the following year he was appointed Latin secretary to Henry VIII, and was made prebendary of Compton-Dundon and Writhlington in Somersetshire, as well as prebendary of Fordington in the diocese of Salisbury. The same year he accompanied the king during his campaign in France, and is said to have celebrated the Battle of the Spurs, the taking of Tournay and Terouenne, as well as the victory obtained in Scotland over James IV, in a Latin poem called *Panegyricus*, which seems never to have been printed, but was highly extolled by Erasmus. In 1514 he became naturalised by letters patent, and it is said that shortly afterwards Leo X appointed him his nuncio at the English court. But, according to the 'Calendar of State Papers' (ii. par. 774), Ammonio was still secretary to the king in 1516, whilst the pope's nuncio was Cardinal Chieregato. Sir Thomas More in a letter to Erasmus, dated 19 Aug. 1517, bewails the loss of Andrea Ammonio, who died, probably the day before, of the sweating sickness, when he had not yet reached his fortieth year. This sickness seems to have attacked him suddenly, for on 14 July he wrote to the Marquis of Mantua, professing his devotion (*Calendar of Venetian State Papers*, ii. par. 906). Eleven of his letters are found among those of Erasmus, and three holograph letters are in the manuscript department of the British Museum. In one of these three he raises Wolsey's suspicion against the Bishop of Worcester; in the second he exposes to the cardinal the dangers threatening Italy from the Turks and the Swiss, and in the third he expresses his apprehension that the pope will join France unless Henry VIII can bring the Swiss to

assist him. In the 'Scriptorum illustrium Majoris Brytanniæ Catalogus,' Bâle, 1559 (cent. xiii. num. 45), it is mentioned that Ammonio wrote several eclogues, bucolic and other poems and epigrams, a history of the war in Scotland, and a 'De Rebus Nihili,' all in Latin. These seem to have been lost, or perhaps were never published. A clever Latin eclogue, however, between Ammon and Lycas, was printed in the 'Bucolicorum Auctores,' Bâle, 1546, and a poem entitled 'Lucensis, carmen Asclepiadeum et alia carmina,' attributed to Ammonio, is said to have been, in 1784, in the Royal Library of Paris.

**AMNER, JOHN** (d. 1641), was appointed organist of Ely Cathedral and master of the choristers in 1610. He took the degree of Mus. Bac. at Oxford in 1613, and seems to have been in holy orders. He composed several services and anthems, the autographs of which are preserved in the cathedral library at Ely, and other manuscript compositions by him are in the British Museum, and the collections at Peterhouse, Cambridge, and Christ Church, Oxford. In 1615 he published a collection of 'Sacred Hymns . . . for Voices and Viols.' He died at Ely in 1641.

**AMNER, RALPH** (d. 1664), a relation of John Amner, was admitted a lay clerk of Ely Cathedral in 1604, and retained the post until 1609, when he was succeeded by Michael Este. He seems to have been in holy orders, for he was soon after this appointed to a minor canonry at St. George's Chapel, Windsor. On the death of John Amery in 1623 Amner was sworn in as gentleman of the Chapel Royal, where he sang bass. On this his canonry at Windsor was declared vacant; but on the mediation of Charles I (then Prince of Wales) he was allowed by the dean and chapter to retain it. He was present at the coronation of Charles II, and died at Windsor 3 March 1663–4. In Hilton's 'Catch that Catch Can' (1667) there is a 'catch instead of an epitaph upon Mr. Ralph Amner of Windsor (commonly called the Bull-Speaker),' the music of which is by Dr. Child.

W. B. S.

**AMNER, RICHARD** (1736-1803), a presbyterian (otherwise unitarian) divine, and born in 1736, was one of several children of Richard and Anne Amner, of Hinckley, Leicestershire, his baptism, in the register of the presbyterian (otherwise unitarian) meeting-house there, being set down for 26 April 1737. He entered the Daventry Academy, to prepare for a dissenting pulpit, in 1755; he stayed there seven years, accepting the charge of the unitarian chapel in Middlegate Street, Yarmouth, 21 July 1762 (BROWNE'S *Congregationalism in Norfolk and Suffolk*). Here his theology did not prove to be in harmony with the theology of his congregation; and, preaching to them for the last time on 5 March 1764, he moved to Hampstead, London, where he commenced duty the following year, 1765. He published three books whilst at Hampstead: 1. 'A Dissertation on the Weekly Festival of the Christian Church' (anonymous), 1768. 2. 'An Account of the Positive Institutions of Christianity,' 1774. 3. 'An Essay towards the Interpretation of the Prophecies of Daniel,' 1776. In 1777 he left to be pastor at Coseley, Staffordshire; he retained this charge till the end of 1794, when, retiring from the ministry to devote himself entirely to study in Hinckley, his native town, he became one of the contributors to the 'Gentleman's Magazine' (NICHOLS'S *Preface to General Index to Gent. Mag.* from 1787 to 1818). He published his fourth, and last, volume there, 'Considerations on the Doctrines of a Future State,' in 1797, and died 8 June 1803, aged 67.

George Steevens lived at Hampstead during the twelve years that Amner preached there; and in 1798 (Amner having removed in 1777, sixteen years before), when Steevens brought out his renowned edition of Shakespeare, it was found that he had put Amner's name to gross notes to which he was ashamed to put his own. Allibone gives an erroneous account of this literary scandal, which procured much sympathy for Amner in its day.

**AMORY, THOMAS, D.D.** (1701-1774), dissenting tutor, was born at Taunton on 28 Jan. 1701. His father was a grocer and his mother a sister of the Rev. Henry Grove. He was at school under Chadwick, a local dissenting minister, and learned French at Exeter under Majendie, a refugee minister. On 25 March 1717 he entered, as a divinity student, the Taunton Academy, then the chief seat of culture for the dissenters of the west, under Stephen James of Fullwood, who taught theology, and Henry Grove, who taught philosophy. He received his testimonials for the ministry in 1722, and then went to London to study experimental physics in the academy of the Rev. John Eames, F.R.S., Moorfields. In 1725, on Stephen James's death and before his own ordination, he acted as assistant in the ministry to Robert Darch, at Hull Bishops, who died 31 Jan. 1737-8, aged 65, and in the Taunton Academy to Grove. He was ordained 3 Oct. 1730 as colleague to Edmund Batson at Paul's Meeting, Taunton. Batson was more conservative in theology than Amory, and besides was unwilling to divide the stipend; hence, in 1732, Amory's friends seceded and built him a new meeting-house in Tancred Street. On Grove's death in 1738 Amory was placed at the head of the academy. A list of his students is given in the 'Monthly Repository,' 1818; there were more men of mark under Grove; Amory's best pupils were Thomas and John Wright of Bristol. In 1741 he married Mary, daughter of the Rev. S. Baker of Southwark. By her he had five children, four of whom survived him. He removed to London in October 1759 to become afternoon preacher at the Old Jewry, and in 1766 succeeded Dr. S. Chandler as co-pastor of the congregation with Nathaniel White. He was elected one of Dr. Williams's trustees in 1767 (his portrait is in the Williams Library). He received the degree of D.D. Edin. in 1768, and was Tuesday lecturer at Salters' Hall from 1768, and morning preacher at Newington Green, as colleague with Dr. Richard Price, from 1770, in addition to his other duties. Though thus full of preaching engagements, he was not so popular in London as he had been in Taunton. His theology, of the Clarkeian type, was not conservative enough for the bulk of the London presbyterians of that day. His style was dry and disquisitional; his manner wanting in animation. But he was a leader of the dissenting liberals, and in 1772 a strenuous supporter of the agi-

tation for a removal of the subscription to the doctrinal articles of the established church, till 1779 demanded of all dissenting ministers by the Toleration Act. Amory, like many others, had in point of fact never subscribed, and he had to combat the opposition of his friends, who thought, with Priestley, that a subscription not rigidly enforced was better than a new declaration (that they received the Scriptures as containing a divine revelation), which might be pressed in the interests of intolerance. Amory did not live to see the bill for this new declaration pass, after being twice rejected by the lords. He died on 24 June 1774, and was buried in the hallowed ground of dissent at Bunhill Fields. The inscription on his tomb speaks of him as 'having been employed for more than fifty years in humbly endeavouring to discover [i.e. unveil] the religion of Jesus Christ in its origin and purity.' Kippis gives a list of his twenty-seven publications, including prefaces and single sermons. His maiden effort was a 'Poem on Taunton,' 1724. He wrote the life and edited the works of Grove, 1745; prefixed a memoir of the author to Dr. George Benson's 'Life of Jesus Christ,' 1764; and edited Chandler's posthumous sermons, with memoir, 1768. In all his literary work he was an honest, dull, serviceable man.

[Funeral Sermon by Roger Flexman, D.D., 1774; Biog. Brit. (art. by Kippis, his close friend); Murch's Hist. of Presb. and Gen. Bapt. Churches in the West of England, 1835, p. 208; Strong's Funeral Sermon for H. Grove.] A. G.

AMORY, THOMAS (1691?–1788), eccentric writer, was the son of Councillor Amory, who accompanied William III to Ireland, was made secretary for the forfeited estates, and possessed a considerable property in county Clare. It appears from a confused statement of the younger Amory's son (*Gent. Mag.* lviii. 1062, lix. 106), that Councillor Amory was a Thomas Amory of Bunratty, son of another Thomas Amory by his wife Elizabeth, daughter to the nineteenth Lord Kerry (Lopez's *Peerage of Ireland*, by Archdall, ii. 199). Though Irish by descent, Amory was not born in Ireland, but from some of his writings it may be gathered that he had lived in Dublin, where he says that he knew Swift. In 1751 he advertised a letter to Lord Orrery, intended to prove that Swift's sermon upon the Trinity, far from deserving Orrery's praises, was really 'the most senseless and despicable performance ever produced by orthodoxy to corrupt the divine religion of the blessed Jesus.' In London he had seen something of Toland and of the notorious Curll. About 1757 he was living in Westminster,

with a small country retreat near Hounslow. He was married and had one son, Dr. Robert Amory, who was in practice for many years at Wakefield. Amory lived a secluded life, had a 'very peculiar look and aspect' with the manners of a gentleman, and scarcely ever stirred abroad except 'like a bat in the dusk of the evening,' wandering in abstract meditation through the crowded streets. He died 25 Nov. 1788, at the age of 97 (*Gent. Mag.* lix. 572).

Amory published, in 1755, 'Memoirs containing the Lives of several Ladies of Great Britain. A History of Antiquities, Productions of Nature and Monuments of Art. Observations on the Christian Religion as professed by the Established Church and Dissenters of every Denomination. Remarks on the Writings of the greatest English Divines: with a Variety of Disquisitions and Opinions relative to Criticism and Manners and many extraordinary Actions.' 2 vols. 8vo. The same year appeared an anonymous pamphlet, presumably by Amory, called 'A Letter to the Reviewers occasioned by their Account of a Book called "Memoirs, &c."'. In 1756 he published the first, and in 1766 the second, volume of 'The Life of John Buncle, Esq.: containing various observations and reflections made in several parts of the world and many extraordinary relations,' 8vo. Both books have been reprinted in 12mo. 'John Buncle' is virtually a continuation of the memoirs. The book is a literary curiosity, containing an extraordinary medley of religious and sentimental rhapsodies, descriptions of scenery, and occasional fragments of apparently genuine autobiography. 'The soul of Rabelais,' says Hazlitt, 'passed into John (Thomas) Amory.' The phrase is suggested by Amory's rollicking love adventures. He marries seven wives in the two volumes of Buncle, generally after a day's acquaintance, and buries them as rapidly. They are all of superlative beauty, virtue, and genius, and, in particular, sound unitarians. A great part of the work is devoted to theological disquisition, showing considerable reading, in defence of 'Christian deism.' Much of his love-making and religious discussion takes place in the north of England, and there is some interest in his references to the beauty of the lake scenery. His impassable crags, fathomless lakes, and secluded valleys, containing imaginary convents of unitarian monks and nuns, suggest the light-headed ramblings of delirium. Amory was clearly disordered in his intellect, though a writer in the 'Retrospective Review' is scandalised at the imputation and admires him without qualification. A promise at the end of the

memoirs to give some recollections of Swift and of Mrs. Grierson was never fulfilled.

[Life in General Biog. Dict. 1798, slightly compressed in Chalmers's Biog. Dict.; Hazlitt's Round Table, essay 18; Retrospective Review (1st series), vi. 100; Notes and Queries (1st series), xi. 58; Gent. Mag. lviii. 1062, lix. 107, 322, 372; Saturday Review, 12 May 1877.] L. S.

**AMOS, ANDREW** (1791-1860), lawyer and professor of law, was born in 1791 in India, where his father, James Amos, Russian merchant, of Devonshire Square, London, who had travelled there, had married Cornelia Bonté, daughter of a Swiss general officer in the Dutch service. The family was Scotch, and took its name in the time of the Covenanters. Andrew Amos was educated at Eton and at Trinity College, Cambridge, of which he became a fellow, after graduating as fifth wrangler in 1813. He was called to the bar by the Middle Temple and joined the Midland circuit, where he soon acquired a reputation for rare legal learning, and his personal character secured him a large arbitration practice. He married, 1 Aug. 1826, Margaret, daughter of the Rev. William Lax, Lowndean professor of astronomy at Cambridge.

Within the next eight years he became auditor of Trinity College, Cambridge; recorder of Oxford, Nottingham, and Banbury; fellow of the new London University; and criminal law commissioner.

The first criminal law commission on which Amos sat consisted of Mr. Thomas (afterwards Professor) Starkie, Mr. Henry Bellenden Ker, Mr. William (afterwards Mr. Justice) Wightman, Mr. John Austin, and himself. The commission was renewed at intervals between 1834 and 1843, Mr. Amos being always a member of it. Seven reports were issued, the seventh report, of 1843, containing a complete criminal code, systematically arranged into chapters, sections, and articles. The historical and constitutional aspects of the subject received minute attention at every point, and the perplexed topic of criminal punishments was considered in all its relations. Amos's correspondence with the chief justice of Australia in reference to the transportation system partially appears in the report, and he was consulted by the chief justice as to the extension of trial by jury under the peculiar circumstances of the settlement.

On the foundation of the University of London, afterwards called University College, Amos was first professor of English law, with Mr. Austin, professor of jurisprudence, as his colleague. Between the years 1829

and 1837 Amos's lectures attained great celebrity. It was the first time that lectures on law at convenient hours had been made accessible to both branches of the profession, and Amos's class sometimes included as many as 150 students. Amos encouraged his classes by propounding subjects for essays, by free and informal conversation, by repeated examinations, and by giving prizes for special studies, as, for instance, for the study of Coke's writings. He repeatedly received testimonials from his pupils, and his bust was presented to University College.

In 1837 Amos was appointed 'fourth member' of the governor-general's council in India, in succession to Lord Macaulay, and for the next five years he took an active part in rendering the code sketched out by his predecessor practically workable. He also took a part as a member of the 'law commission' in drafting the report on slavery in India which resulted in the adoption of measures for its gradual extinction. The commissioners were unanimous on the leading recommendation that 'it would be more beneficial for the slaves themselves, as well as a wiser and safer course, to direct immediate attention to the removal of the abuses of slavery than to recommend its sudden and abrupt abolition.' Amos, with two commissioners, differed from the remaining two as to the remedies to be proposed. The majority inclined to leave untouched the lawful status of slavery, and with it the lawful power of the master to punish and restrain. They thought this power necessary as a check to the propensity to idleness which the situation of the slave naturally produces.

At the close of Amos's term in India, he was forced into an official controversy with Lord Ellenborough, the governor-general, as to the right of the 'fourth member' to sit at all meetings of the council in a political as well as a legislative capacity. When Lord Ellenborough's general official conduct was brought under the notice of the House of Commons, his alleged discourtesy to Amos was used as an argument in the debate by Lord John Russell, but this controversy was closed by the production by Sir Robert Peel of a private letter given to him without authorisation in which Amos incidentally spoke of his social relations in his usual way. By this misadventure Amos's political adversaries won the day in a debate of the first importance.

On Amos's return to England in 1843 he was nominated one of the first county-court judges, his circuit being that of Marylebone, Brentford, and Brompton. He served from 1847 to 1852. In May 1849 he was

elected Downing professor of laws at Cambridge, an office he held till his death in 1860.

Amos was throughout life a persistent student, and published various books of importance on legal, constitutional, and literary subjects.

His first book was an examination into certain trials in the courts in Canada relative to the destruction of the Earl of Selkirk's settlement on the Red River. It had been alleged that in June 1816 the servants of the North-West Company had destroyed that settlement and murdered Governor Temple and twenty of his people. A few accused persons were brought to trial before the courts of law in Upper Canada, and they were all acquitted. Amos reproduced and criticised the proceedings at some of these trials, and denounced the state of things as one 'to which no British colony had hitherto afforded a parallel, private vengeance arrogating the functions of public law; murder justified in a British court of judicature, on the plea of exasperation commencing years before the sanguinary act; the spirit of monopoly raging in all the terrors of power, in all the force of organisation, in all the insolence of impunity.'

In 1825 Amos edited for the syndics of the university of Cambridge Fortescue's '*De Laudibus Legum Angliæ*,' appending the English translation of 1775, and original notes, or rather dissertations, by himself. These notes are full of antiquarian research into the history of English law. His name is familiar in the legal world through the treatise on the law of fixtures, which he published, in concert with Mr. Ferrard, in 1827, when the law on the subject was wholly unsettled, never having been treated systematically. He found a congenial part of his task to consist in the examination of the legal history of heirlooms, charters, crown jewels, deer, fish, and 'things' annexed to the freehold of the church, such as mourning hung in the church, tombstones, pews, organs, and bells.

He had shared with Mr. March Phillipps the task of bringing out a treatise on the law of evidence, and had taken upon himself the whole charge of the preparation of the eighth edition, published in 1838; when, in 1837, he went to India, he had not quite finished the work.

In 1846 he wrote '*The Great Oyer of Poisoning*,' an account of the trial of the Earl of Somerset for poisoning Sir Thomas Overbury, a subject important for its bearing on the constitutional aspects of state trials. In the same year he dedicated to his lifelong friend, Dr. Whewell, four '*Lectures on the*

*Advantages of a Classical Education as auxiliary to a Commercial Education.*'

Among his purely constitutional treatises may be mentioned '*The Ruins of Time exemplified in Sir Matthew Hale's Pleas of the Crown*' (1856). The object of this was to advocate the adoption of a code of criminal law. In 1857 followed '*The English Constitution in the reign of Charles II.*' and in 1858 '*Observations on the Statutes of the Reformation Parliament in the reign of Henry VIII.*' in which he presented a different view of the subject from that of the corresponding chapters of Mr. Froude's *History* which had then lately appeared.

Among his purely literary works may be mentioned '*Gems of Latin Poetry*' (1851), a collection, with notes, of choice Latin verses of all periods, and illustrating remarkable actions and occurrences, 'biography, places, and natural phenomena, the arts, and inscriptions.' In 1858 he published '*Martial and the Moderns*,' a translation into English prose of select epigrams of Martial arranged under heads with examples of the uses to which they had been applied.

He published various introductory lectures on diverse parts of the laws of England, and pamphlets on various subjects, such as the constitution of the new county courts, the expediency of admitting the testimony of parties to suits, and other measures of legal reform.

Amos's political and philosophical convictions were those of an advanced liberalism qualified by a profound knowledge of the constitutional development of the country and of the sole conditions under which the public improvements for which he longed and lived could alone be hopefully attempted. Though he was in constant communication with the leading reformers of his day, and was a candidate for Hull on the passing of the Reform Bill in 1832 (not going to the poll), he concerned himself little with strictly party politics. He died 18 April 1860.

[Personal information.]

S. A.

AMPHLETT, SIR RICHARD PAUL (1809-1883), judge, was the eldest son of the Rev. Richard Holmden Amphlett, lord of the manor and rector of Hadsor in Worcestershire. (The pedigree of the family from William Amphlett, lord of the manor in the time of James I, will be found in Nash's *Worcestershire*, i. 481.) By birth he was a native of Shropshire. He was educated at the grammar school of Brewood in Staffordshire, on leaving which he went to Cambridge, entering St. Peter's College; and in the mathematical tripos of 1831 he was placed

sixth wrangler. Declining a tutorship at Jesus College, he went to the bar, and was called by the society of Lincoln's Inn in Trinity term, 1834. He read with Tyrrell, the conveyancer, who was then placing his great knowledge of law at the service of the Real Property Commission, and afterwards with Turner, the future lord justice; and for some years he went the Oxford circuit, though he proposed to practise as an equity lawyer. Success came to him slowly, and it was not till 1858, during Lord Chelmsford's chancellorship, that he took silk. From that time he gradually rose to be one of the leaders in the vice-chancellor's court in which he settled, and over which in his time presided successively Page Wood, afterwards Lord Hatherley, Giffard, James, and Bacon. During his whole career the equity bar was peculiarly rich in men of distinguished talent, and among them he gained the reputation, not indeed of a great, but of a courteous and able, advocate. Meanwhile he had a brief period of political life. In 1859 he had unsuccessfully contested Lewes, but in 1868 he was returned for East Worcestershire, and sat as a liberal conservative. In the House of Commons he never spoke except on legal questions. During the important debates, however, which ended in the greatest legal change of modern times, he took a chief and useful part. 'The suggestions of the hon. and learned member,' on one occasion said Sir G. Jessel, the solicitor-general, 'were always made for the purpose of advancing measures.' He entered with especial interest into the subject of legal education, a new scheme of which was then in preparation, and was chosen in 1873 to fill Lord Selborne's place as president of the Legal Education Association.

In 1874, on the resignation of Sir Samuel Martin, Amphlett was raised to the bench by Lord Selborne as a baron of the exchequer. The appointment may be regarded as the first actual step taken towards the fusion of law and equity declared by the Judicature Act of 1873. In the times when the Court of Exchequer exercised a separate equity jurisdiction, there were precedents for choosing its barons from among Lincoln's Inn lawyers, the last case being that of Rolfe (afterwards Lord Cranworth), in whose time the equity jurisdiction of the court was abolished; and, indeed, a similar reason existed in 1874, for it was intended, though in fact the intention was abandoned, that the new exchequer division should deal with bankruptcy. Amphlett hesitated to accept the position, knowing its peculiar difficulties. For more than a year the unfamiliar common law procedure would

still be in force; several of the judges who would be his colleagues were known to be bitterly opposed to the fusion; and he feared that they would give only a cold welcome to himself, whose appointment was its first manifestation. These fears, however, proved groundless, and both at Westminster and on circuit he was acknowledged to be a successful judge. In 1876 Lord Cairns promoted him to the Court of Appeal, where he sat for only a year. A stroke of paralysis compelled him to retire, and he lived with broken health till 7 Dec. 1883.

His more important judgments will be found in the 'Law Reports' from 9 Exchequer to 2 Exchequer Division, and in the 'Law Journal' from vol. xliii. to vol. xlv. He took part in the famous *Franconia* case, *The Queen v. Keyn* (*L.R.* 2 Ex. D. 63; 46 *L.J. Magistrates' Cases*, 17), when a full court sat to decide whether the Central Criminal Court had jurisdiction to try a foreigner for an offence committed on board a foreign ship within three miles of the English shore. Amphlett held, with the minority of the court, that there was jurisdiction, on the ground that the sea within three miles of the English shore is English territory.

Amphlett was married in 1840 to Frances, daughter of Mr. Edward Ferrand of St. Ives, near Bingley, Yorkshire, and in 1880 to Sarah Amelia, daughter of Mr. C. Martin of Belvedere, Hampshire. He left no children.

[Times, 10 Dec. 1883; Law Journal, Solicitors' Journal, and Law Times, 15 Dec. 1883; Hansard; Burke's Landed Gentry.] G. P. M.

AMPTHILL, LORD. [See RUSSELL.]

AMYOT, THOMAS (1775-1850), antiquary, was born at Norwich on 7 Jan. 1775, and was descended from one of the Huguenot families settled in that city. Intended for the profession of a country attorney, he was articled to a Norwich firm, and eventually spent a year in London before entering into the full practice of his profession. Having made the acquaintance of Mr. Windham, he became that gentleman's agent during the election contest which followed the dissolution of parliament in 1802, and a permanent friendship was established between them. In 1806, upon Windham becoming war and colonial minister, he appointed Amyot his private secretary, who thereupon threw up his Norwich practice, and came to London. On the death of Windham in 1810, Amyot collected his parliamentary speeches; and they were published, preceded by a memoir, in 1812, in octavo, three volumes.

By the influence of his political connec-

tions and the unbroken friendship of Windham, he obtained in succession several valuable appointments in the colonial department; he thus acquired a position of independence, and he devoted the rest of his life to the illustration of English history through the medium of archaeology. He soon joined the Royal Society and the Society of Antiquaries, and, as treasurer of the latter society from 1823 to 1847, he very actively promoted its interests. He contributed fifteen valuable papers to the Transactions, which will be found in vols. xix., xx., xxi., xxii., xxiii., xxv.; and some time before his death he was appointed a vice-president of the society.

Amyot assisted in founding the Camden Society, and was one of its directors from 1839 until his death. He also largely aided the Percy, the Shakespeare, and other literary societies.

Besides those above mentioned, his writings include a description of Tewkesbury Abbey contributed to 'Vetusta Monumenta' (vol. v.), and an edition of 'The Old Taming of a Shrew, upon which Shakespeare founded his Comedy,' for the Shakespeare Society, printed in 1844.

Amyot was a favourite with all who knew him, well informed, accomplished, amiable, industrious. He collected a very fine library, and was always ready to give literary assistance. He died on 28 Sept. 1850.

Amyot married, about the year 1806, Miss Colman of Norwich, who bore him eight children. She died in 1848.

[Gent. Mag., N.S., xxxv.; Literary Gazette, 5 Oct. 1850; Athenæum, 5 Oct. 1850.] E. S.

**AMYRAUT, or AMAROTT, PAUL** (*n.* 1636–1662), divine, of German birth, was ejected in 1662 from the living of Munsley, in Norfolk. His name is first found at Ermington, in Norfolk. Here he was an early sufferer for his nonconformity. Of the Lutherans, he was pronouncedly 'evangelical' and anti-ritual. In 1636 he was cited before Wren, bishop of Norwich—a Laud in miniature—and 'suspended' for not 'bowing at the name of Jesus.' That was the bishop's answer to Amyraut's argument that Philippians ii. 10 gave no warrant for such 'bowing.' He was somewhat later of Wolterton, also in Norfolk, where also he was 'deprived,' as appears from the following entry in the register of the diocese of Norwich in the year 1638: 'Decimo tertio die Julii anno Domini pred. Thomas Wolsey Clicus in Artibus Magër institutus fuit in Rectoriam pred. p. deprivacõem Pauli Amarott Clici ult. incumbent.' Thereupon he passed into Essex,

but where has not been traced. He is next heard of in the House of Commons. When Captain Henrie Bell translated Martin Luther's 'Table Talk,' Laud refused him a license for its publication (1644). The House of Commons, having been informed of this, summoned Bell before them, 'and did appoint a committee to see it and the translation, and diligently to make enquire whether the translation did agree with the original or no.' 'Whereupon,' Bell narrates, 'they desired me to bring the same before them, sitting then in the treasure chamber. And Sir Edward Dearing [Deering], being chairman, said unto mee that he was acquainted with a learned minister benefited in Essex, who had long lived in England, but was born in High Germanie, in the palatinate, Mr. Paul Amiraute, whom the committee sending for, desired him to take both the original and my translation into his custodie, and diligently to compare them together, and to make report unto the said committee whether he found that I had rightly and truly translated it according to the original; which report he made accordingly.' The book was then 'licensed,' and Amyraut's 'report' was prefixed to it. The great folio translation has an important place in English literary history.

In 1648 Amyraut had returned to Norfolk, and was then vicar of East Dereham, a living which, according to Walker's 'Sufferings,' had been 'sequestered' from a John Bretten. While at East Dereham he published 'The Triumph of a Good Conscience' (Rev. ii. 10), one of the rarest of later puritan books. From thence he was transferred to Munsley, in the same county, which had been 'sequestered' from John Tenison, father of the more famous archbishop of that name. It would seem that Amyraut was resolute in his nonconformity, and took no time to delay the sacrifice. Calamy and Palmer range him under 1662; but it is probable that he was 'ejected' under the act of 1660, as a few of the 'two thousand' were. He was 'an old man' at the time of his ejection, and he afterwards silently disappears. Christopher Amyraut, ejected from Buckenham (New), was it believed, his son. In his later days he was pastor of an 'independent' church at South Reppe, where he died. He was author of 'Sacramental Discourses upon several subjects' and 'A Discourse on the Life of Faith.'

[Calamy and Palmer's Nonconf. Mem. iii. 7; David's Annals of Evangelical Nonconformity in Essex, pp. 526–8; Sir Edward Deering's Notes, 25 Nov. 1644; Proceedings principally in the county of Kent (Camden Society, 1862); Col-

loquia . . . or the Familiar Discourses of . . . Luther (1652); Blomefield's Norfolk, iii. 330.]  
A. B. G.

**ANARAWD** (d. 915?), a Welsh prince of the ninth century, was the son of Rhodri Mawr, or Roderick the Great, King of Gwynedd, or North Wales, who, having succeeded to the sovereignty of South Wales in right of his wife, became the supreme sovereign of all Wales. Rhodri was killed in battle A.D. 877, fighting against the Saxon invaders of Anglesea, and in accordance with his directions his dominions were divided among his three sons, Anarawd, Cadell, and Mervyn, Anarawd succeeding to Gwynedd, with authority over his brothers, and bearing the title of 'Brenin Cymru oll,' or king of all Wales. Cadell and Mervyn obtained respectively South Wales and Powys; Powys being a district corresponding roughly with Montgomeryshire and Herefordshire. Rhodri's conflict with the Saxons was continued by Anarawd, who completely defeated them at Cymryd, near Conway, in the year 880. This battle was called 'Dial Rhodri,' or the avenging of Rhodri. Subsequently the Britons of Strathclyde, being hard pressed by the Saxons, were received into Wales by Anarawd, who granted them the land between the Dee and the Conway, on condition of their expelling the Saxons. In 894 according to the 'Annales Cambriae,' or 893 according to the 'Brut,' Anarawd 'cum Anglis' devastated Cardigan, that is, the territory of his brother Cadell, for the purpose, probably, of enforcing payment of tribute due from the younger to the elder. The 'Annales Cambriae' record Mervyn's death in the year 903, Cadell's in 909, and Anarawd's in 915. The 'Brut' assigns Anarawd's death to the year 913. Anarawd was succeeded as king of Gwynedd by his son Idwal Foel, or 'the Bald,' but the dignity of 'Brenin Cymru oll' devolved upon his nephew Hywel, son of Cadell, famous in Welsh history as the great lawgiver, Hywel Dda.

One of the Triads (*Myv. Arch.*, Gee's ed., p. 405, No. 43) speaks of Anarawd and his brothers as 'Tri theyrn taleithiog Ynys Prydain,' or 'Tri thywysog taleithiog,' 'the three diademed princes of the Isle of Britain.'

[Brut y Tywysogion and Annales Cambriae, both published in the Rolls Series.] A. M.

**ANCELL, SAMUEL** (d. 1802), military writer, entered the army at an early age, and served with the 58th regiment when besieged in Gibraltar from 1779 to 1783. In 1784 he published at Liverpool 'A Circumstantial Journal of the long and tedious Blockade and Siege of Gibraltar from the 12th of

September 1779 (the day the garrison opened their batteries against the Spaniards) to the 23rd day of February 1783.' The book, which is in the form of letters to a brother of the author, passed through five editions. Ansell apparently retired from active service soon after his return home, and opened a military commission agency at Dublin. In October 1801 he produced there the first part of a monthly military magazine, called the 'Monthly Military Companion.' The periodical was continued until Ansell's death on 19 Oct. 1802. To it he contributed not only articles on fortifications, military history, and tactics, but songs set to music of his own composition.

**ANCRUM, EARL OF.** [See KERR.]

**ANDERDON, JOHN LAVICOUNT** (1792-1874), the third son of John Proctor Anderdon, was born at Bristol 5 April 1792. After passing some time in the preparatory school of Dr. Nicholas at Ealing, he was removed to Harrow, but was taken from that establishment at a comparatively early age for office life in the business of Manning & Anderdon, in which firm he became a partner about 1816 on his marriage with Anna Maria, the second daughter of Wm. Manning, M.P. At the general election of 1818 he contested the borough of Penryn, in Cornwall, but was defeated, probably more to the regret of his friends than of himself. Mr. Anderdon was an enthusiastic fisherman, and a walking tour through Dovedale, the country of Charles Cotton, one of the earliest professors of the art of angling, suggested the compilation of a volume (printed at first in 1845 for private circulation, but subsequently in 1847 for sale) on 'The River Dove: with some quiet Thoughts on the happy Practice of Angling.' Written in the orthodox dialogue of fishing literature, it contained many anecdotes of Cotton and his country life, with hints on the best mode of following his favourite pursuit. A series of views of Cotton's seat and the river Dove were taken under Anderdon's instructions and issued with a preface by his brother-in-law, Mr. F. Manning, in 1866. His next work was a sympathetic life of Bishop Ken, which was published under the pseudonym of 'A Layman' in 1851, and reprinted in 1854. He followed up this memoir of the saintly Ken with a selection, entitled 'Approach to the Holy Altar' (1852), from Ken's two devotional works, and a reprint (1852) of his 'Exposition of the Apostles' Creed.' For many years he was engaged in preparing, with copious

extracts from divines of all kinds, a narrative of the life of our Lord. It was published anonymously in 1861 under the title of 'The Messiah,' and the substance of the work was reissued in 1866 in 'The Devout Christian's Help to Meditation on the Life of our Lord Jesus Christ.' Mr. Anderson died 8 March 1874. A posthumous work ('Geron, the Old Man in Search of Paradise'), a collection of short discourses on a holy life, was published in 1877, with a biographical notice by Rev. George Williams.

[Memoir prefixed to Geron; Works of J. L. Anderson; Westwood & Satchell's Bibl. Piscatoria, pp. 1 and 66.] W. P. C.

ANDERSON, ADAM (1692?-1765), the historian of commerce, was probably a native of Aberdeen, and born about 1692. He was for forty years, if not longer, a clerk in the South Sea House. In a letter from him (*Add. MS.* 6860, fol. 4), dated 1 Feb. 1769, to his friend Andrew Mitchell, an Aberdeen man, afterwards English resident at Berlin, he complains of inadequate promotion in the South Sea House, and expresses a desire to obtain 'a small sinecure or place which might be supplied by deputation to enable me to wear out my few years to come with a little more comfort.' It is, however, stated in the 'Gentleman's Magazine' (liii. 41), with reference to his position in the South Sea House, that he 'at length arrived to his acme there, being appointed chief clerk of the Stock and New Annuities there till his death.' According to the same authority he was one of the trustees for establishing the colony of Georgia, and a member of the court of assistants of the Scottish Corporation of London. His name also appears (*Nichols's Literary Anecdotes*, ii. 119) in the list of trustees to carry out an act of Queen Anne's for the establishment of parochial libraries at home and in the colonies. In person he is described as having been 'tall and graceful,' and he was twice married. He died at Clerkenwell 10 Jan. 1765.

In the year preceding his death appeared his great and only work, bearing the title, 'An Historical and Chronological Deduction of the Origin of Commerce from the earliest accounts to the present time, containing an History of the great Commercial Interests of the British Empire. To which is prefixed an Introduction exhibiting a View of the ancient and modern State of Europe; of the Importance of our Colonies and of the Commerce, Shipping, Manufactures, Fisheries, &c., of Great Britain and Ireland, and their influence on the Landed Interest, with an Appendix containing the Modern Politico-

Commercial Geography of the several Countries of Europe' (London, 2 vols., fol. 1764). Coming down from the earliest times to the year 1762, Anderson's work is a monument of stupendous industry. Composed in the form of annals, it is not merely a record of commercial progress and colonial enterprise, but a history of the political, industrial, and social development of all civilised countries, and especially of Great Britain and Ireland. Abstracts of all treaties, acts of parliament, and pamphlets in any way bearing on commerce or kindred matters, are added, together with statistical accounts of the national finances, of prices, currency, and population. The early portions of the work are untrustworthy, but Macpherson attached sufficient value to its chapters from 1492 onwards to reproduce them in his 'Annals of Commerce.' In the introduction to his work Anderson showed himself in advance of his time, and exposed several of the fallacies of the mercantile system. He condemned industrial monopolies, and advocated the naturalisation of foreign protestants, and a uniformity of weights, measures, and coinage for all the nations of Christendom.

[Notice in *Gentleman's Magazine*, liii. 41-2 (reproduced in *Nichols's Literary Anecdotes*, ix. 491); Anderson's work, editions of 1764 and 1787; Preface to Macpherson's *Annals of Commerce* (1805).] F. E.

ANDERSON, ADAM, LL.D. (d. 1846), writer on physics, sometime rector of the Perth Academy, afterwards professor of natural philosophy at St. Andrew's University, died 5 Dec. 1846. He contributed original papers on the measurement of the heights of mountains by the barometer, the hygrometric state of the atmosphere, the dew point, and the illuminating power of coal gas, to *Nicholson's 'Journal'*, vol. xxx. 1812, to Thomson's 'Annals of Philosophy', vol. ix. 1817, and to the 'Edinburgh Philosophical Journal', vols. ii, iv, xi, xii, xiii, &c. The Perth gasworks were originally constructed under his superintendence, and he introduced many improvements leading to the economical production of gas. He wrote the articles 'Barometer,' 'Cold,' 'Dyeing,' 'Fermentation,' 'Evaporation,' 'Hygrometry,' 'Navigation,' and 'Physical Geography,' in Brewster's 'Edinburgh Encyclopædia' (completed 1830), and the article 'Gaslight' in the 'Encyclopædia Britannica.'

[*Gent. Mag.* 1847, xxvii. 221; Royal Soc. Cat. Sci. Papers, vol. i.] G. T. B.

ANDERSON, ALEXANDER (1582-1619?), mathematician, was a native of Aberdeen. Little is certainly known about him:

but the year 1582 is assigned as that of his birth on the authority of a print representing him in 1617 as of the age of thirty-five. He taught mathematics in Paris early in the seventeenth century, and appears to have been a friend of Vieta, who died in 1603, and whose posthumous writings he edited with great ability, developing much that was only indicated, and demonstrating much that was barely stated. He alludes more than once to the poverty of his circumstances; abstruse studies and the neglect of common and easy life brought him, he tells us, more wisdom than riches (*Vindiciæ Archimedis*, Dedication). He is not heard of after 1619, the date of his last publication, and is accordingly believed to have died about that time. The celebrated James Gregory was, on the mother's side, connected with his family. His works are as follows:—

1. 'Supplementum Apollonii Redivivi,' Paris, 1612, in which he displays a remarkable command of the ancient analysis, and supplies the deficiencies in Ghetaldi's attempted restoration of the lost book of Apollonius *Περὶ νεύσεων*. 2. 'Αἰτιολογία pro Zeteticis Apolloniani Problematis à se jam pridem edito in supplemento Apollonii Redivivi,' Paris, 1615, an addition to the preceding. 3. 'Francisci Viætæ de Equationum recognitione et emendatione tractatus duo,' Paris, 1615, contain Vieta's improvements in the transformation and reduction of algebraical equations, with an appendix by Anderson, showing that the solution of cubic equations can be made to depend upon the trisection of an angle. 4. 'Ad Angularium Sectionum Analyticarum Theoremata καθολικότερα,' Paris, 1615, dedicated to Charles, Prince of Wales, adds to Vieta's theorems on angular sections demonstrations subsequently incorporated in the edition of the French algebraist's works published by Schooten, at Leyden, in 1646. 5. 'Vindiciæ Archimedis,' Paris, 1616, refutes the claim of Lansberg, a Belgian astronomer, to have solved the problem of the quadrature of the circle, and criticises Kepler's 'Stereometria.' 6. 'Animadversionis in Franciscum Viætam à Clemente Cyriaco nuper editæ brevis Δάκρισις,' Paris, 1617. 7. 'Exercitationum Mathematicarum Decas Prima,' Paris, 1619. Two works of Anderson on stereometry seem to have perished. One is mentioned by himself (*Ex. Math.*), and copies of both (the second entitled 'Stereometria Triangulorum Sphæricorum') were in possession of Sir Alexander Hume until long after the middle of the seventeenth century.

[Correspondence of Scientific Men (Rigaud), ii. 178, 515; Montucla, Hist. d. Math. (1799-

1802), i. 606, ii. 5; Hutton, Phil. and Math. Dict. (1815), i. 90, 115; De Morgan in S.D.U.K. Dictionary (1842-4), ii. 577; Abstract of Geom. Writings of A. A. (T. S. Davies), App. to Ladies' Diary, 1840.] A. M. C.

ANDERSON, ALEXANDER (d. 1811), botanist, was appointed in 1785 superintendent of the government botanic garden at St. Vincent, where he showed much activity. He was a correspondent of Sir Joseph Banks, through whom he contributed to the Royal Society in 1789 an account of a bituminous lake in St. Vincent, which was afterwards published in the Philosophical Transactions for that year. In 1791 he went into Guiana on a botanising expedition; the plants he obtained being sent to Banks, are now in the herbarium of the British Museum. The Society of Arts voted him a silver medal in 1793 for a paper upon the plants in the garden at St. Vincent. He contemplated the production of a flora of the Caribbee islands, some sheets of which he sent to Banks; but this project was never carried out. He resigned his post in July 1811, and died on 8 Sept. in the same year.

[London's Gardener's Mag. i. 194 (1826); Banks, Correspondence (MS.), 3 May 1789, and 30 March 1796.] J. B.

ANDERSON, ANDREW (d. 1861), the 'champion draught-player of Scotland,' was a stocking weaver by trade, and continued to work at his business until within a short period of his death, which occurred at Braidwood, near Carlisle, Lanarkshire, 1 March, 1861. He published 'The Game of Draughts simplified and illustrated with practical diagrams,' Lanark, 1848; second edition, Glasgow, 1852—a work which is regarded as an authority on the subject of which it treats. A third edition, revised and extended by Robert McCulloch, was published at Glasgow and New York in 1878.

[Gent. Mag. ccx. 472; Introduction to third edition of the Game of Draughts.] T. C.

ANDERSON, ANTHONY (d. 1593), theological writer and preacher, was, according to Tanner, a native of Lancashire, and was for many years rector of Medbourne, in Leicestershire. According to the parish register he was presented to the benefice in 1573, and held it until 1593, the date of his death. Early in 1587 Anderson was appointed to the vicarage of Stepney near London, and to the rectory of Denge in Essex, both of which he appears to have held in conjunction with his living in Leicestershire (Newcourt, *Repertorium* (1708), i. 740, ii. 212).

In July 1592 he was promoted to the office of subdean of the Chapel Royal, after having held for some years previously the post of 'gospeller' there; and his name is found appended to many documents, relating to the management of the Chapel Royal, still preserved among its archives. Anderson died on 10 Oct. 1593. His published works, which are of a puritanic character, consist of sermons, prayers, and expositions of scriptural passages. From the fact that he dedicated one of his publications to 'Edmund Anderson, Esq., sergeant-at-law to the queen' [see ANDERSON, SIR EDMUND], it is possible that he was related to the lord chief justice of that name. The following is a list of his writings: 1. 'An Exposition of the Hymne commonly called Benedictus, with an ample and comfortable application of the same to our age and people, by Anthony Anderson, preacher.' A dedication to the Bishop of Lincoln is dated from Medbourne, 15 Jan. 1573-4. 2. 'A Godlie Sermon, preached on New Yeares Day last before Sir William Fitzwilliam, Knt., late Deputie of Ireland, at Burghley. Hereto is added a very profitable Forme of Prayer, good for all such as passe the Seas,' London, 1576, 8vo. 3. 'A Sermon of Sure Comfort preached at the Funerall off Master Robert Keylwey, Esq., at Exton, in Rutland, the 18th of March 1580-1,' London, 1581, 12mo. 4. 'A Sermon preached at Pauls Crosse, the 23rd of Aprile, being the Lords Day, called Sunday,' London, 1581. This sermon is again dedicated to Sergeant Anderson. 5. 'The Shield of oure Safetie, set foorth by the Faythfull Preacher of Gods holye Worde, Anthony Anderson, upon Symeons sight in hys Nunc Dimittis,' 1581. It is dedicated to the Bishop of London. 6. 'Godlye Prayers made by Anthonie Anderson.' License to print this work, under the hand of the Bishop of London, was granted to John Wolfe 3 Aug. 1591 (*ARBER'S Transcript of the Stationers' Company Register*, ii. 592).

[Tanner's *Bibliotheca Britannico-Hibernica*, pp. 40-1; Nichols's *History of the County of Leicester*, ii. part 1. 721, 723; Old Cheque Book of the Chapel Royal (Camden Soc.), pp. 5, 33, 62, et seq.; Watt's *Bibliotheca Britannica*, i. 29 h; Maitland's *Index of English Books in Lambeth Library*, p. 4; Brit. Museum Catal.] S. L.

ANDERSON, CHRISTOPHER (1782-1852), theological writer and preacher, was born at Edinburgh, 19 Feb. 1782, and was the son of William Anderson, a respectable merchant. Christopher began life in an insurance office, but being much interested in missions, and having resolved to become a

foreign missionary, he gave up his secular work, and studied for the ministry. His family and friends were deeply imbued with the spirit of Robert and James Haldane, and Anderson's lot was thrown among this class. It was found, however, that his health did not justify his accepting a missionary appointment, and he therefore became minister of a small congregation in Edinburgh, known as 'English Baptists.' To this congregation, gathered through his own exertions, Anderson ministered till within a very short period of his death.

Anderson was much interested in the Scottish Highlands, and was a founder of the Gaelic School Society. To him was similarly due the establishment of the Edinburgh Bible Society—an independent association, not a mere branch of the British and Foreign Society. He was a very cordial supporter of the Serampore mission in India, a friend of the missionaries, and undertook many a journey to explain its objects and collect funds in its behalf. He published two memorials on the diffusion of the Scriptures in the Celtic dialects; and, in 1828, a volume of 'Historical Sketches of the Native Irish.' His chief work was the 'Annals of the English Bible.' On 4 Oct. 1835, being the tercentary of the publication of the first complete English Bible by Coverdale, Anderson published a sermon on 'The English Scriptures, their first reception and effects, including Memorials of Tyndale, Frith, Coverdale, and Rogers.' He then undertook his more elaborate 'Annals,' and laboured upon it from 1837 to 1845, when it was published in two volumes. The publication of this work brought its author into contact with many new friends, and gave him a leading position in this branch of literature. Another of Anderson's publications was entitled 'The Domestic Constitution,' intended to show that the christian home was the main school where the christian character might be expected to be formed and developed. This book was acknowledged to be the work of a devout and powerful mind, and in many quarters exercised a considerable influence. Anderson died on 18 Feb. 1852. He never received any public recognition of his labours. The university of New York would have sent him a diploma, had he not expressed his unwillingness to receive it. At his death he left a considerable collection of early English bibles, including several rare editions.

[Life, by his nephew, Edinburgh, 1853.]

W. G. B.

ANDERSON, SIR EDMUND (1530-1605), lord chief justice of the court of Common Pleas, was descended from a Scotch

family which, after a long settlement in Northumberland, migrated to Lincolnshire, and was born in 1530 at Flixborough or Broughton, in the latter county. After spending a short time at Lincoln College, Oxford, Anderson became in June 1550 a student of the Inner Temple, and 'by indefatigable study,' says Anthony à Wood, 'obtained great knowledge of laws.' In 1567 he was appointed both Lent and Summer 'reader' at his inn of court, and a reference to him in Plowden's reports of the chief contemporary cases proves him to have acquired a considerable practice before 1571. Three years later he was nominated 'double reader' at the Inner Temple, and in Michaelmas term, 1577, he became a serjeant-at-law. In 1579 he was advanced to the highest dignity attainable at the bar, that of serjeant-at-law to the queen.

As an assistant judge on circuit, Anderson began to exercise judicial functions soon after this promotion, and in 1581 he conducted cases of importance in both the eastern and western counties. At Bury, in the Norfolk circuit, Robert Brown, the founder of the sect of Brownists, or Independents, was brought before him on a charge of nonconformity, and in sentencing him to a term of imprisonment Anderson emphatically expressed his intention, fully carried out in his subsequent judicial career, of upholding the Establishment against puritan dissent by every means in his power. On the western circuit, in November of the same year, Anderson presided at the trial of Campion and other seminary priests, charged with 'compassing and imagining the queen's death,' and here, as in many similar cases with which he was connected, he assumed an attitude of personal hostility to the prisoners. The evidence adduced against Campion and his followers was somewhat slender, but the judge in an introductory speech 'with grave and austere countenance dismayed the prisoners,' and secured their conviction by his rhetorical invective.

Anderson's vigorous support of the crown's authority against its various opponents did not go unrewarded. The Bishop of Norwich requested Lord Burghley to call the queen's attention to his energy in the conviction of Brown, and the government showed themselves grateful for his action towards the catholic conspirators. Soon after the death of Sir James Dyer, the lord chief justice of the Common Pleas, Anderson was promoted to the vacant office, and he took his seat on the bench on 2 May 1582, receiving at the same time the honour of knighthood. Fleetwood, the recorder of London, in a letter to

Lord Burghley describing his investiture, writes in the highest terms of the learning and facility he displayed on that occasion in arguing some very difficult points of law, which were proposed for his decision by leading members of the bar. 'And this one thing, the recorder proceeds, 'was noted in him, that he despatched more orders and answered more difficult cases in that one forenoon than were despatched in a whole week in the time of his predecessors.'

As lord chief justice of the Common Pleas, Anderson took part in all the famous state trials that kept England in a frenzy of excitement during the last years of Elizabeth's reign. In September 1586 he was a member of the commission appointed to try Babington and his associates, and in very aggressive language he interrogated the prisoners, and 'spoke their condemnation.' A month later he proceeded to Fotheringhay Castle to assist at the arraignment of the Queen of Scots, and he took a very prominent part in the trial of Secretary Davison on the charge of improperly carrying out the order for Mary Stuart's execution. When pronouncing sentence in the case, Anderson made a subtle distinction between the act and its performance, acquitting the prisoner, as Fuller states, of malice, but censuring him for indiscretion. In 1588 he was chosen to proceed to Ireland on judicial business, and remained there from 25 July to 1 Oct. (*Lansd. MS. 57, f. 15*). In the following year Anderson took part in the trial of the Earl of Arundel; and at the trials of Sir John Perrot, lord deputy of Ireland, on 17 April 1590, of the Earl of Essex on 19 Feb. 1600-1, and of Sir Walter Raleigh in 1603, Anderson made himself notorious by his harsh bearing towards the prisoners. In the case of Cuffe, who was charged with abetting Essex in his conspiracy, the lord chief justice treated Coke, the attorney-general, who conducted the prosecution, with the same bluntness as the prisoner. They were both, he said, indifferent disputants, and, addressing himself to Coke, reminded him that he sat on the bench to judge of law and not of logic (*CAMDEN, Annales*, iii. 866, ed. Hearne).

Anderson's conduct towards the puritans was marked by excessive severity, and in 1596, in a charge to the jury on the northern circuit, he attempted to justify his attitude by declaring that all those who opposed the established church opposed her majesty's authority, were enemies to the state and disturbers of the public peace. But no general statement of this kind can excuse Anderson for his action in the case of John Udall, a puritan minister, charged, before

himself and other judges, with libelling the bishops and with being concerned in the authorship of the Martin Marprelate pamphlets. By a series of brutal interrogations Anderson successfully endeavoured to trap Udall into a confession of guilt, 'as to which,' writes Hallam (*Const. Hist.* i. 206), 'the proof was deficient,' and to another judge, who urged some milder treatment of the prisoner, he replied, 'I pray you let us make short work with him.' The chief justice's speeches throughout the trial seem to justify the charge made against him by a nonconformist writer, that he 'desired to trick the poor man out of his life' (PEIRCE, *Vindication of the Dissenters* (1717), part i. pp. 129-131). Nor was Udall's case the only one in which Anderson allowed his personal feelings to get the better of his judgment. According to Strype, he frequently used 'many oaths and reproachful revilings on the bench' against the protestant sectarians, and at the trial of a clergyman charged at Lincoln in 1596 with omitting some prayers in the liturgy, he is described as standing up, bending himself towards the prisoner 'with a strange fierceness of countenance,' and calling 'him "knave" oftentimes, and "rebellious knave" with manifold reproaches besides.'

But, in spite of his habitual harshness and impatience, Anderson had many of the qualities of a great judge. Although his treatment of catholics and nonconformists was in strict accordance with the policy of Elizabeth's ministers, a spirit of sturdy independence marked his relations with the court. In April 1587, when the Earl of Leicester had procured from the queen letters-patent granting a subordinate office in the court of Common Pleas to one of his creatures, Anderson, with his brother judges, refused to ratify the appointment on the ground that the sovereign could not by any exercise of prerogative dispose of the office. Similarly, in Easter term 1592, Anderson drew up a protest in behalf of the judges against the frequent imprisonment of 'her highness's subjects . . . by commandment of any nobleman or counsellor,' and urged the lord chancellor and lord treasurer to secure for every suspected person a fair trial in a court of law (ANDERSON'S *Reports*, i. 297; HALLAM'S *History*, i. 234-6, 387). The protest, which is somewhat obscurely worded so far as it limits the personal power of the crown itself, has an interesting history. Its meaning was much debated by lawyers and politicians in 1627. The attorney-general, Sir Robert Heath, on the part of the king, quoted it in a mangled form to support the arbitrary imprisonment by Charles I of the five knights

who had refused to contribute to the loan of that year; but Coke produced Anderson's own manuscript in the House of Commons on 1 April 1628, and Anderson's words were incorporated in a resolution giving all prisoners the right to a writ of *habeas corpus*. The resolution afterwards formed a clause of the petition of right (GARDINER'S *History* (1884), vi. 215, 244). Nor would Anderson tolerate the 'insolence of office' that often characterised the conduct of petty magistrates. At the Leicester assizes of 1599 the chief justice was informed that a shoemaker had been committed to prison by the mayor for saying, after the maypole of the town had been pulled down, that he hoped to see 'more morrice dancing and maypoles,' and Anderson peremptorily ordered the offender's release. Anderson likewise endeavoured to diminish as far as possible 'the law's delays,' and he is justly credited with considerable personal courage. When an affray took place in his presence on the Somersetshire circuit in 1602, 'the Lord Anderson himself,' at the age of seventy-two, writes Manningham in his 'Diary,' 'only with his cap in his hande, took a sworde from a very lustie fellow,' and so quelled the disturbance (MANNINGHAM'S *Diary*, p. 41, Camden Soc.).

In civil cases, Anderson's conduct was almost always patient and impartial, and he was renowned for his knowledge of law and his readiness in applying it. His reports, which were first published in 1664, consist of notes of cases taken by him while at the bar and on the bench between 1574 and 1603, and show great industry and learning. The book was long regarded as an authority by lawyers; a manuscript copy of it, in French, is preserved in the British Museum (*Addit. MS.* 25193). Lloyd, in his 'State Worthies' (p. 803), writing about 1665, describes Anderson as 'a pure legist, that had little skill in the affairs of the world, always alleging a decisive case or statute on any matter or question, without that account of a moderate interpretation, some circumstances of things require, being so much the less useful as he was incontinent.' But beside this verdict may be placed the well-supported statement of a reporter of Anderson's judgments, that he was never bound down by precedents, that he always gave judgment according to reason, and if there was no reason in the old law-books, he disregarded them (GOLDBOROUGH'S *Reports*, 1653, p. 96).

Anderson died on 1 Aug. 1605, and was buried at Eyworth in Bedfordshire, where an elaborate monument was erected to his

memory. Francis Bacon, writing at the time of his death, speaks of him as 'the late great judge' (*SPENCER'S Life of Bacon*, iii. 257). Anderson married Magdalen, daughter of Christopher Smyth, of Annables, in Hertfordshire, by whom he had nine children, and from him in the male line are descended the Earls of Yarborough. He amassed a considerable fortune by his practice at the bar, according to Lloyd, and multiplied many times the thousand pounds that he inherited from his father; he lived in some splendour first at Flixborough, probably his native village, then at Asbury in Warwickshire, and afterwards at Harefield Place in Middlesex, and at Eyworth in Bedfordshire. Foss states that Anderson entertained the queen at Harefield, and was presented by her with a diamond ring, but, according to Nichols, Anderson had sold Harefield Place to Sir Thomas Egerton, the lord keeper, in 1601, and by him Elizabeth was entertained on her only recorded visit to the house, in July 1602 (*Progresses of Queen Elizabeth*, iii. 581). Although Anderson's judicial career of twenty-three years' duration was not rewarded by a peerage, Elizabeth ordered him to preside over the House of Lords during an illness of the lord chancellor in 1587 (*Lords' Journal*, ii. 1276).

Besides Anderson's law reports, published after his death, he drew up several expositions of statutes enacted in Elizabeth's reign which remain in manuscript at the British Museum (*Lansd. MSS.* 37 fol. 21, 38 fol. 6). Goldesborough's 'Reports,' published in 1653, have often been attributed to Anderson, but they are merely records of his judgments in the chief cases brought before him, and were collected by the lawyer whose name they bear.

ANDERSON, GEORGE (fl. 1740), was a mathematician, about whom nothing is known beyond what is contained in eight letters addressed by him to the celebrated mathematician, William Jones (father of Sir W. Jones, the Orientalist), which were printed from the Macclesfield papers in 1841. They give proof of singular ability in treating the most advanced mathematical problems of the time, and by many indications show the writer (contrary to an editorial surmise) to have

occupied a respectable position in life. The first three are dated from Twickenham, Aug.-Oct. 1736; the last was written 27 Sept. 1740, at Leyden, where the writer had just entered upon a 'train of studies and exercises' at the university. He expressed in 1739 a strong desire to be admitted to the Royal Society, but his name does not appear upon the list of its members.

[Correspondence of Scientific Men of the Seventeenth Century, ed. S. J. Rigaud (1841), Oxford, i. 293-366; De Morgan in S. D. U. K. Biog. Dict. ii. 576; Index of Leyden Students, pub. by Index Soc., p. 3.] A. M. C.

ANDERSON, GEORGE (1760-1796), accountant-general to the Board of Control, was born at Weston, Buckinghamshire, in Nov. 1760. His parents were in no way distinguished from the peasant class to which they belonged, and he himself worked as a day labourer until near the close of his seventeenth year. He had, however, been early smitten with a passion for mathematical studies, and in 1777 he sent to the 'London Magazine' solutions of some problems which had appeared in its pages. His letter attracted the notice of a gentleman of scientific acquirements from the neighbourhood of Weston, named Bonnycastle, who sought out the writer, and found him threshing in a barn, the walls of which were covered with triangles and parallelograms. The incident caused some local sensation, and it was felt that such uncommon talents should not remain without cultivation. Mr. King, vicar of Whitchurch, accordingly took charge of his education, and, after some preliminary instruction at a grammar school, sent him to Wadham College, Oxford, where he took the degree of M.A. in 1784. His patron destined him for the clerical profession; but after he had taken deacon's orders, he found that his tastes were otherwise directed, and came to London in search of employment in January 1785. Through the influence of Scrope Bernard, M.P., brother-in-law to Mr. King, he shortly obtained a situation under the Board of Control, in which his arithmetical powers were so conspicuous as to secure his advancement to the post of accountant-general. While laboriously engaged in preparing the Indian budget for 1796, he was attacked with illness, and died in a few days, the victim of his assiduity, 30 April 1796. His death was deplored as a public loss by Mr. Dundas, then at the head of the Board of Control, and no Indian budget could, in fact, be produced that year. He married in 1790, but left no children. A pension was obtained for his widow by Mr. Dundas. In character he was amiable and unpretending. He pub-

lished in 1784 a translation from the Greek of the 'Arenarius' of Archimedes, with preface, notes, and illustrations of considerable merit; to which he added a version of the Latin Dissertation of Clavius. His only other work was a lucid and accurate statement as to the condition of Indian trade and finance, entitled 'A General View of the Variations which have been made in the Affairs of the East India Company from the Conclusion of the War in India in 1784 to the Commencement of the present Hostilities,' 1792.

ANDERSON, SIR GEORGE WILLIAM, K.C.B. (1791-1857), an Indian civil servant, was the son of Mr. Robert Anderson, a London merchant. Entering the Bombay civil service in 1806, Anderson was principally employed upon judicial duties until December 1831, when he was placed in administrative and political charge of the southern Mahratta districts, under the designation of principal collector and political agent. Both as a judicial officer and as a revenue and political administrator, Anderson's work repeatedly elicited the commendations of successive governments of Bombay, including those of Mr. Elphinstone, Sir John Malcolm, and Lord Clare, and also of the court of directors of the East India Company. In those days the superintendence of the police was vested in the district or zillá judge, and Anderson's exertions for its improvement, especially at Surat, were attended with marked success. He was employed by Mr. Elphinstone in framing the first systematic code of laws attempted in British India, known as the 'Bombay Code of 1827,' which was a great advance upon anything previously attempted in India, and served to prove by thirty years' experience of its working that there was no difficulty in applying a general code, founded upon European principles, to the mixed populations of India.

Partly in consequence of the experience which Anderson had gained in the performance of this duty, and partly in consequence of the ability which he evinced as a judge of the company's chief court of appeal, the Sadr Diwáni and Foujdári Adálat, and as a judge of circuit, in which latter capacity he submitted several valuable reports on the condition of the people and on the judicial administration, Anderson in 1835 was selected by the court of directors as the Bombay member of the newly constituted Indian Law Commission, of which Mr.

(afterwards Lord) Macaulay was president. This important office Anderson held until March 1838, when he was appointed a member of the council of the governor of Bombay. In April 1841, on the retirement of Sir James Carnac, he succeeded as senior member of council to the office of governor of Bombay, and held that important post until relieved by Sir George Arthur in June 1842 [see ARTHUR, SIR GEORGE]. The period during which Anderson officiated as governor of Bombay was a very busy and, during the latter part of it, a very anxious time in India. The first war with China was in progress, and, Bombay being the headquarters of the Indian navy and the nearest Indian port to England, many of the arrangements connected with the expedition had to be made through the government of Bombay. The position of our army in Afghanistan was a cause of still greater anxiety, especially after the destruction of the Cabul force: posts were still held by Bombay troops in the neighbouring countries of Beluchistán and Sind, and all the arrangements connected with their relief and reinforcement devolved upon the government of Bombay. As the temporary head of that government, Anderson was brought into close relations with the governor-general, and both from Lord Auckland and from his successor, Lord Ellenborough, he received most cordial acknowledgments of the effective aid rendered by him during that critical period. The court of directors, as a special mark of their recognition of Anderson's public services, extended his term of office as a member of council for one year beyond the prescribed period of five years. Anderson finally retired from the Indian civil service in February 1844, on which occasion the governor of Bombay, Sir George Arthur, placed upon record a minute reviewing his long official career, and testifying to the 'zeal, judgment, and ability,' combined with 'the most conscientious integrity and strict impartiality,' which had given peculiar value to his advice as a member of council.

In 1849 Anderson, having previously received the honour of knighthood and having been made a companion of the Bath, was appointed governor of Mauritius, which island at that time was in a very depressed condition. After having held this post little more than sixteen months, he was transferred to the government of Ceylon, but during the short period that he remained at Mauritius, he effected or inaugurated several important reforms. Among these was the introduction of municipal government into Port Louis, the principal town in the island, the establish-

ment in the districts of local magistrates who were invested with a summary jurisdiction in petty civil suits, the establishment of trial by jury, the introduction of a paper currency, arrangements for increasing the supply of labour by immigration, and for establishing steam communication with England *viâ* Aden, and a reduction of the public expenditure. On relinquishing the government he was presented with addresses by representatives of all the leading bodies in the colony.

Sir George Anderson's appointment to the government of Ceylon at the time at which it was made was a distinguished mark of confidence; for owing to a rebellion on the part of the Cinghalese which had recently taken place, the ill-judged measures which had accompanied its suppression, and the personal differences which had arisen between the late governor, Lord Torrington, and some of the chief officials in the island, the colony was in a very disorganised condition. The state of feeling which resulted from these occurrences could not fail more or less to embarrass the position of the new governor. Party spirit ran high, and the situation was aggravated by differences which unfortunately arose between the bishop of Colombo and several of his clergy. Anderson seems to have fully sustained his previous reputation. As in India and in Mauritius, so also in Ceylon, reforms in the judicial system, having for their object promptitude in the administration of justice and simplification of the procedure of the courts, engaged much of his attention. He developed the resources of the colony by improving the communications, exercised a strict control over the expenditure, and by his conciliatory bearing towards the chiefs and principal headmen of the central province, he restored the confidence of the Cinghalese portion of the population. After governing the colony for nearly four years and a half, the failure of his health compelled him to resign his post in the spring of 1855. He had been advanced to a knight commandership of the Bath on his appointment to Ceylon. He died 17 March 1857, in the sixty-seventh year of his age.

Anderson was married three times, and left a widow and fifteen children, the eldest of whom, the late Sir Henry Lacon Anderson, K.C.S.I., also a Bombay civil servant, rose to a high position in that presidency, and died in March 1879, being then a secretary at the India office.

[Annual Register, 1850, 1851, 1857; Records of the Government of Bombay; Mauritius Addresses, 1848-9; Records of the Government of Ceylon; private correspondence.] A. J. A.

ANDERSON, JAMES (1662-1728), Scotch genealogist and antiquary, was born at Edinburgh 5 Aug. 1662, being a son of the Rev. Patrick Anderson, a nonjuring clergyman, who was sometime minister of Lamington, in Lanarkshire, and who, during the persecutions in the reign of Charles II, had been incarcerated in the state prison on the Bass Rock. He was educated at the university of Edinburgh, where he was admitted to the degree of M.A. 27 May 1680. Having chosen to adopt the profession of the law, he served his apprenticeship to Sir Hugh Paterson, an eminent member of the Society of Writers to the Signet, and was admitted to the privileges of that body of legal practitioners 6 June 1691. His profession afforded him numerous opportunities to study ancient documents. He soon became fond of antiquarian research, and it appears from his correspondence that at an early period he formed an intimacy with Captain John Slezer, the author of the 'Theatrum Scotiæ,' whose historical investigations and personal disappointments bear so striking a resemblance to his own. It is probable, however, that Anderson might have passed through life in comparative obscurity but for a circumstance which occurred during the excitement consequent upon the proposed union between England and Scotland. In 1704, while feeling ran very high on this subject, an English lawyer named William Atwood, who had been chief-justice of New York, published a pamphlet entitled 'The Superiority and direct Dominion of the Imperial Crown and Kingdom of England over the Crown and Kingdom of Scotland.' The author of this work revived the claims of Edward I to the crown of Scotland, with many insulting sneers at the pretensions of Scottish independence. It curiously happened that Anderson, though altogether unknown to Atwood, was appealed to by him as an eye-witness to vouch for the trustworthiness of some of the charters and grants by the kings of Scotland. The charters in question are the well-known documents, supposed to have been forged by Harding the chronicler, of which no one now supports the authenticity. Anderson, in consequence of such an appeal, deemed himself bound in duty to his country to publish what he knew of the matter, and to vindicate the memory of some of the best of the Scottish kings, who were accused by Atwood of a base and voluntary surrender of their sovereignty. Accordingly, in 1705, he published 'An Historical Essay, showing that the Crown and Kingdom of Scotland is Imperial and Independent,' Edinb. 1705, 8vo. It is a clear,

well-written treatise, and was at the time a conclusive criticism on the forged charters. The work was so acceptable to his country that the Scottish parliament granted him a reward, and ordered thanks to him to be delivered by the lord chancellor in presence of her majesty's high commissioner and the estates. This was done, and at the same time parliament ordered Atwood's book to be burnt at Edinburgh by the hands of the common hangman.

The assurances of support which Anderson received on this occasion tempted him to relinquish his profession, and to embark on his great undertaking—the collection of facsimiles of Scottish charters and other muniments. It appears that before the union he had received a grant of 300*l*. In the last Scottish parliament held at Edinburgh his claims were brought forward by a committee who reported, on 12 Feb. 1707, that they 'do presume to give it as their humble opinion that the said Mr. James Anderson has made as great advance in the said matter as the time and difficulty in the performance could permit, and that his learned industry in a matter so useful, undertaken on the recommendation of parliament, deserves further encouragement to enable him to support the charge, and carry on the design uniformly, and with that beauty of execution which will be expected in a work begun by so great authority.' It was found that besides the 300*l*. voted to him he had spent 590*l*. in his project. The parliament recommended to the queen the repayment of this sum, and the advance of a thousand guineas to Anderson; and 'in consideration of his good services to his country, and of the loss he suffers by the interruption of his employment in prosecuting the said work, do further recommend him to her majesty as a person meriting her gracious favour in conferring any office of trust upon him.' Mr. John Hill Burton has observed that it was a favourite practice of the Scottish parliament to vote sums of money to public benefactors, leaving them to collect the money as they best could. In Anderson's case, however, there was not even a vote, because the Scottish parliament had met only to cease for ever, and he merely obtained a recommendation to the parliament of Great Britain, by which assembly his peculiar claims were not very likely to be recognised.

Soon after the union Anderson removed to London, where for many years he led a most unhappy life, his time being divided between the labours of completing his project and a series of unsuccessful attempts to

get his claims attended to by government. George Lockhart of Carnwath, in his 'Commentaries,' gives the following curious illustration of Anderson's disappointments:—

'This gentleman, by his application to the subject of antiquities, having neglected his other affairs, and having, in search after antient records, come to London, almost all the Scots nobility and gentry of note recommended him as a person that highlie deserved to have some beneficial post bestowed upon him; nay, the queen herself (to whom he had been introduced, and who took great pleasure in viewing the fine seals and charters of the antient records he had collected) told my Lord Oxford she desired something might be done for him; to all which his lordships usuall answer was that ther was no need of pressing him to take care of that gentleman, for he was *thee* man he designd, out of regard to his great knowledge, to distinguish in a particular manner. Mr. Anderson being thus putt off from time to time for fourteen or fifteen months, his lordship at length told him that no doubt he had heard that in his fine library he had a collection of the pictures of the learned, both antient and modern, and as he knew none who better deserved a place there than Mr. Anderson, he desired the favour of his picture. As Mr. Anderson took this for a high mark of the treasurer's esteem, and a sure presage of his future favour, away he went and got his picture drawn by one of the best hands in London, which being presented was graciously received (and perhaps got its place in the library); but nothing more appeared of his lordships favour to this gentleman, who having hung on and depended for a long time, at length gave himself no further trouble in trusting to or expecting any favour from him; from whence, when any one was asked what place such or such a person was to get, the common reply was, "A place in the treasurer's library."

Matrimonial troubles augmented the difficulties of Anderson's position; for it appears that he left behind him in Scotland a second wife, who was illiterate and ill-tempered, and who had charge of the children of a previous marriage, of whom she gives a very bad report in her letters to their father.

In 1715 he received the appointment of postmaster-general for Scotland, but he only retained it for a year and a half, though he continued to draw the salary of that office—200*l*. a year—in the form of a pension. In a memorandum dated 1723 he states that of his outlay before the union 140*l*. was still uncompensated; and crediting the government with 1,500*l*. (200*l*. a year for seven

years and a half), he states the balance due to him at 4,202*l*. He had in the meantime made an attempt, through his friend Sir Richard Steele, to relieve his embarrassments by selling his library to George II, but the negotiation failed. He had been compelled to halt, or at all events to proceed slowly, in his great undertaking, and in 1718 he is found advertising that those who wished to patronise it 'could see specimens at his house above the post-office in Edinburgh.' While, however, the great object of his life remained uncompleted, he was enabled to publish 'Collections relating to the History of Mary Queen of Scotland. Containing a great number of original papers never before printed. Also a few scarce pieces reprinted, taken from the best copies, 4 vols., Edinb. 1727-28, 4to. The original documents contained in this volume are invaluable to historical students. George Chalmers, it is true, insinuated that there was reason to question Anderson's honesty as a transcriber, but he failed to mention any specific instance. Such insinuations were a weakness of Chalmers when the facts of a case did not happen to agree with his own prejudices.

Anderson died very suddenly of apoplexy in London on 3 April 1728, having finished the collections for his great work only a few days previously. He had been compelled to pledge the plates of his 'Diplomata,' and in 1729 they were sold for 530*l*. Afterwards they were put into the hands of Thomas Ruddiman, and at length the long-expected work was published under the title of '*Selectus Diplomatum & Numismatum Scotiæ Thesaurus, in duas partes distributus: Prior Syllogem complectitur veterum Diplomatum sive Chartarum Regum & Procerum Scotiæ, una cum eorum Sigillis, a Duncano II ad Jacobum I, id est ab anno 1094 ad 1412. Adjuncta sunt reliquorum Scotiæ et Magnæ Britanniæ Regum Sigilla, à prædicto Jacobo I ad nuperam duorum regnorum in unum, anno 1707, coalitionem; Item Characteres & Abbreviaturæ in antiquis codicibus MSS. instrumentisque usitatæ. Posterior continet Numismata tam aurea quam argentea singulorum Scotiæ Regum, ab Alexandro I ad supradictam regnorum coalitionem perpetuâ serie deducta; Subnexis quæ reperiri poterant eorundem Regum symbolis heroicis.*' Edinb. 1739, fol. The introduction professes to be the production of Ruddiman, but it is not known how far Anderson left the materials for it among his manuscript papers.

C.

ANDERSON, JAMES, D.D. (1680?-1739), preacher and miscellaneous writer, brother of Adam Anderson [see ANDERSON, ADAM, 1692-1765], was born, about 1680, at Aberdeen, where he was educated, and probably took the degrees of M.A. and D.D. In 1710 he was appointed minister of the presbyterian church in Swallow Street, London, whence he was transferred, in 1734, to a similar charge in Lisle Street, Leicester Fields. According to the '*Gentleman's Magazine*,' he is said to have been 'well known among the people of that persuasion resident in London as Bishop Anderson,' and he is described as 'a learned but imprudent man, who lost a considerable part of his property in the fatal year 1720.' Several of his sermons were reprinted. One of them, '*No King-Killers*,' preached in 1715, on the anniversary of the execution of Charles I, was a zealous defence of the conduct of the presbyterians during the civil wars, and reached a second edition. Anderson was a freemason, and when, in 1721, on the revival of freemasonry in England, the grand lodge determined to produce an authoritative digest of the '*Constitutions*' of the fraternity, the task was assigned to him (ENTICK's edition (1747) of the *Constitutions*, p. 194 et seq.). It was as a grand warden of the lodge that he presented to it, on completing his task, '*The Constitutions of the Free Masons; containing the History, Charges, Regulations, &c. of that Most Ancient and Right Worshipful Fraternity. For the Use of the Lodges.*' London. In the year of Masonry 5723, Anno Domini 1723.' This work, which passed through several editions, was long recognised by the English freemasons to be the standard code on its subject, and was translated into German. An American facsimile of the first edition of 1723 was issued at New York in 1855, and there are reprints of the same edition in Cox's '*Old Constitutions belonging to the Freemasons of England and Ireland*' (1871) and in the first volume of Kenning's '*Masonic Archaeological Library*' (1878). Anderson also contributed to masonic literature '*A Defence of Masonry*, occasioned by a pamphlet called "*Masonry Dissected*" (1738?), which was translated into German,

and is reprinted in Oliver's 'Golden Remains of the Early Masonic Writers' (1847).

In 1732 appeared the work by which Anderson is chiefly remembered, 'Royal Genealogies; or, the Genealogical Tables of Emperors, Kings, and Princes, from Adam to these times.' Professedly based on 'Genealogische Tabellen' of Johann Hübner, it was largely supplemented by Anderson's industry. While the earlier sections of the work are of little historical value, the later are often of use in relation to the genealogies of continental dynasties and houses. The volume closes with a synopsis of the English peerage, and in the preface the author intimated his readiness, if adequately encouraged, 'to delineate and dispose at full length the genealogies of all the peers and great gentry of the Britannie isles.' Anderson's last work, which he was commissioned to undertake by the first Earl of Egmont and his son from materials furnished by them, bore the title, 'A Genealogical History of the House of Yvery, in its different branches of Yvery, Lovel, Perceval, and Gournay;' but the first volume alone was completed when Anderson died on 25 May 1739, and a second volume, subsequently published, was due to another pen (see 'To the Reader' in vol. ii.). The work was soon withdrawn from circulation on account of some disparaging remarks in it on the condition of the English peerage and on the character of the Irish people. It was re-issued, however, without the offensive passages, in 1742 (see *Notes and Queries*, 1st series, iv. 158, and *Letters of Horace Walpole* (1857), i. 107 n., and ii. 145). Much of the genealogical matter in the book has been pronounced to be mythical (DRUMMOND'S *Histories of Noble British Families* (1846), art. 'Perceival'). Another work of Anderson's, 'News from Elysium, or Dialogues of the Dead, between Leopold, Roman Emperor, and Louis XIV, King of France,' was published shortly after his death in 1739.

[Anderson's Works; Brief notices (sub nomine) in Catalogue of the Edinburgh Advocates' Library; Gentleman's Mag. liii. 41-2; Gowans's Catalogue of Books on Freemasonry (New York, 1856); Kloss, Bibliographie der Freimaurerei (1844).] F. E.

ANDERSON, JAMES (1739-1808), economist, was born at Hermiston, near Edinburgh, in 1739. At the age of fifteen he lost his parents, and undertook a farm which had long been in his family; he attended Cullen's lectures upon chemistry to improve his agricultural knowledge, and introduced the use of what was afterwards called the 'Scotch plough.' He afterwards took a farm called

Monkshill, in Aberdeenshire. In 1768 he married Miss Seton, of Mounie, Aberdeenshire, by whom he had a large family. He had published several essays upon agriculture, and in 1780 received the LL.D. degree from Aberdeen. In 1783 he moved to Edinburgh, and privately printed some remarks upon the Western Scotch fisheries. Though otherwise a generally orthodox economist, Anderson desired protection for the fisheries. Bentham remonstrated with him in a forcible letter, which offended Anderson for the moment, though Bentham afterwards wrote to him about the Panopticon in terms implying considerable confidence. Their intimacy dropped after an unexplained misunderstanding in 1793. In 1784 Pitt employed Anderson to survey the fisheries. In some correspondence with Washington, published in 1800, Anderson says that Pitt withheld remuneration because he 'dared do so.' In 1790 Anderson started a weekly paper in Edinburgh, called the 'Bee,' which, at its conclusion in 1794, filled eighteen volumes, containing many useful papers on economical and other topics. Some papers on the political progress of Great Britain induced government to begin a prosecution, which was dropped upon Anderson's declaring that he would be responsible. One Callender having charged Lord Gardenstone, a judge of sessions and an occasional contributor, with the authorship, Anderson announced that they were written by Callender himself. In 1797 Anderson moved to Isleworth, where he led a retired life, amusing himself with agricultural experiments. From 1799 to 1802 he published, in monthly parts, 'Recreations in Agriculture, Natural History, Arts, and Miscellaneous Literature,' which formed six volumes. His first wife died in 1788, and in 1801 he married a lady who survived him. He died 15 Oct. 1808.

Anderson is said to have done much for Scotch agriculture. He is specially noticeable as having published in 1777 a pamphlet called 'An Inquiry into the Nature of the Corn Laws, with a view to the Corn Bill proposed for Scotland,' which contains a complete statement of the theory of rent generally called after Ricardo. The passage is given in M'Culloch's 'Literature of Political Economy.' The same theory is expounded in the 'Recreations,' v. 401-28 (see M'Culloch's edition of Adam Smith). He is the author of many tracts: his first publication was 'Essays on Planting,' in Ruddiman's 'Edinburgh Weekly Magazine,' 1771; others are 'Observations on the Means of exciting a Spirit of National Industry,' 1777; 'An Account of the present State of the

Hebrides,' &c., 1785; 'Observations on Slavery,' 1789; 'A General View of the Agriculture and Rural Economy of the County of Aberdeen,' 1794; 'On an Universal Character,' 1795. A full list of his works is given in Anderson's 'Scottish Nation.'

[Gent. Mag. lxxviii. 1051-4; Bentham's Works, x. 127, 254, 258.]

ANDERSON, JAMES, M.D. (d. 1809), botanist, was physician-general of the East India Company at Madras. It appears from Dodwell and Milne's list of medical officers in India that James Anderson was assistant-surgeon in 1765, surgeon in 1786, member of the medical board in 1800, and died 5 Aug. 1809. Anderson gave an account in a series of letters to Sir Joseph Banks (published at Madras 1781) of an insect resembling the cochineal, which he had discovered in Madras. Gardens, superintended by Anderson, were cultivated for these insects, and when the die obtained from them did not answer, other insects were introduced from Brazil. Anderson afterwards attempted to introduce the cultivation of silk into Madras, and paid attention to other plants of commercial value, such as the sugar-cane, coffee plant, American cotton, and European apple. He published several series of letters upon these topics at Madras in 1789-96. He also published a paper on the minerals of Coromandel in the 'Phoenix,' 1797; and 'A Journal of the Establishment of Napal and Tuna for the Prevention or Cure of Scurvy,' &c., Madras, 1808.

[Royle's Essay on Productive Resources of India, pp. 57-63, 137, 142, &c.; Brit. Mus. Cat.]

ANDERSON, JAMES (1760-1835), captain in the navy, having served through the war of American independence as a midshipman, and through the first French revolutionary war as a lieutenant, was, in 1806, made a commander, and employed for several years in command of the Rinaldo brig against the enemy's privateers in the Channel. He was advanced to the rank of post-captain in 1812, and in August 1814 was appointed to the *Zealous*, of 74 guns, and sent out with stores to Quebec, where he was ordered to winter. The ship was old and rotten, very badly manned, and inadequately equipped; and Captain Anderson, judging that it was impossible to stay at Quebec without sacrificing the ship, returned to England; on the charge of this action being contrary to his orders, he was tried by court martial, and acquitted of all blame. Lord Melville, then first lord of the admiralty, was extremely dissatisfied at this decision, and

said to Anderson: 'If Canada fall, it will be entirely owing to your not wintering the *Zealous* at Quebec;' to which Anderson replied: 'I rather think it will be in consequence of proper supplies, in proper ships, not having been sent out there at a proper season of the year.' The fact seems to be that Lord Melville had meant to sacrifice the *Zealous*, in order to have a ready excuse for any disaster that might happen in Canada, and was annoyed that his subterfuge had been destroyed by her captain's promptitude and resolution. The difference of opinion with the first lord of the admiralty, combined with the reduction of the navy at the peace, deprived Anderson of any further service. He employed his leisure in scientific and literary pursuits, and is said to have contributed several articles to different magazines. The only one which bears his name is 'Some Observations on the Peculiarity of the Tides between Fairleigh and Dungeness,' in the 'Philosophical Transactions' for 1819, p. 217. He died 30 Dec. 1835.

[Ralfs's Naval Biography, iv. 323; Marshall's Royal Naval Biography, supplement, part iii. (vol. vii.) 15; Gent. Mag., 1836, i. 211.]

J. K. L.

ANDERSON, SIR JAMES CALEB (1792-1861), inventor, was the eldest son of John Anderson, the founder of Fermoy [q. v.], by his second wife, Elizabeth, only daughter of Mr. James Semple, of Waterford. He was born 21 July 1792, and was created a baronet 22 March 1813, as a mark of approbation, on the part of the government, of the great public services rendered to Ireland by his father. Sir James was a celebrated experimentalist in steam-coaching, and took out various patents for his inventions. He lodged specifications in 1831 for 'improvements in machinery for propelling vessels on water,' in 1837 for 'improvements in locomotive engines,' and in 1846 for 'certain improvements in obtaining motive power, and in applying it to propel carriages and vessels, and to the driving of machinery.' He died in London 4 April 1861. By his marriage, in 1815, with Caroline, fourth daughter of Mr. Robert Shaw, of Dublin, he had two sons (both of whom died unmarried) and six daughters. As he left no male issue, the baronetcy became extinct.

[Patents, 6147, 7407, 11273; Notes and Queries, 3rd series, vii. 153; Gent. Mag. cex. 588.]

T. C.

ANDERSON, JOHN (1668?-1721), theologian and controversialist, was tutor to the celebrated John, duke of Argyll

and Greenwich. He was ordained minister of Dumbarton, and here he entered the lists in the controversy between Episcopacy and Presbyterianism. Great anxiety was felt at the time by the presbyterian clergy in connection with the general use of the English liturgy in the episcopalian congregations, which had not been in common use among them till the beginning of the eighteenth century. About 1710 Anderson published 'A Dialogue between a Curate and a Countryman,' and in 1711 'The second Dialogue between the Curate and the Countryman respecting the English Service.' He next published 'The Countryman's Letter to the Curate, wherein, besides an historical view of the English Liturgy, the assertions of Sage, the author of the "Fundamental Character of Presbytery," concerning its universal usage in Scotland at the time of the Reformation, &c., are examined and proved to be false.' A reply to this was published by an episcopalian clergyman, Mr. Calder, which drew forth a rejoinder from Anderson, 'Curate Calder whipt,' a title that may readily suggest the bitterness by which it was characterised. The work by which Anderson continues to be known is a 'Defence of the Church Government, Faith, Worship, and Spirit of the Presbyterians,' published in 1714 in reply to a work entitled 'An Apology for Mr. Thomas Rhind, or an account of the manner how, and the reasons for which, he separated from the Presbyterian party and embraced the communion of the Church' (Edin. 1712). This publication has always been considered one of the ablest defences of the presbyterian system.

About the beginning of 1717 steps were taken for translating Anderson to Glasgow. The magistrates were favourable, and the ministers hostile; but after an appeal to the general assembly, his translation took place in 1720, and he became minister of what was then called the Ramshorn church, now St. David's. He afterwards published six letters upon the 'Overtures concerning Kirk Sessions,' a subject on which there was considerable discussion at that time. 'In these letters,' says McOrie, 'he does not appear to great advantage. They were answered in better temper and with much ability by Professor Dunlop of Edinburgh.' Wodrow, who speaks of him as 'a kind, frank, comradly man when not grated,' owns that he could be passionate and bitter, and tells how, in answer to his remonstrance with him for the Billingsgate style of his letters to curate Calder, he said that 'it was the only way to silence Calder.' After his removal to Glasgow, he seems to have fallen both in ability

and character. Though he had been the champion of presbytery, he fell under the censure of his brethren for what they considered an unpresbyterian service—a sort of consecration sermon preached at the opening of his church. He died in 1721, at the age of 53.

Professor John Anderson, his grandson [q. v.] (son of the Rev. James Anderson, minister of Roseneath), founded Anderson's College, Glasgow, and erected a tombstone over his grandfather's remains (see *infra*).

[Wodrow's Letters; Scott's Fasti.]

W. G. B.

ANDERSON, JOHN (1726-1796), natural philosopher, was born at Roseneath, Dumbartonshire. After the death of his father, the minister of Roseneath, he was educated at Stirling by an aunt, Mrs. Turner, whom he afterwards repaid for the expense. He was officer in a corps raised to resist the rebellion of 1745. He studied at Glasgow, where, in 1756, he became professor of oriental languages, and in 1760 professor of natural philosophy. He was specially interested in practical applications of science, and allowed artisans to attend his lectures in their working dress. He planned the fortifications raised to defend Greenock against Thurot in 1759. He sympathised with the French revolution, and having invented a cannon in which the recoil was counteracted by the condensation of air in the carriage, he went to Paris in 1791 (after failing to attract the attention of the English government), and offered it to the National Convention, who placed a model in their hall, inscribed 'The gift of science to liberty.' He translated into French two essays he had already written on war and military instruments, and distributed them among the people of Paris. He invented a plan for smuggling French newspapers into Germany at this time by means of small balloons. His principles made him unpopular with the other professors; and he brought an action against them in regard to the accounts, which he lost, though malversation was afterwards shown to have existed. Elaborate statements of the dispute were issued by both Anderson and his opponents. He published in 1786 the 'Institutes of Physics,' which went through five editions in ten years. He wrote various periodical papers, one of which, 'Observations upon Roman Antiquities lately discovered,' appeared as an appendix to Roy's 'Military Antiquities' in 1793, and was separately published in 1800. He also helped to obtain a collection of Roman remains, found near the wall of Antoninus, for the university. He died 13 Jan. 1796.

Anderson left all his apparatus, library, &c., for the foundation of an educational institution in Glasgow, which bears his name. Funds were raised by subscription; Thomas Garnett was appointed professor of natural philosophy under the trust 21 Sept. 1796; and on 21 June 1797 the institution was incorporated. Dr. Garnett was succeeded in 1800 by Dr. Birkbeck, who gave free lectures to 500 operative mechanics; and the institution has since been extended.

[Glasgow Mechanics' Magazine, ii. 412-4, iii. pp. v-ix and p. 215; Brit. Mus. Cat.]

**ANDERSON, JOHN** (fl. 1799), wood engraver, was born in Scotland, and was well educated. He was a pupil of Thomas Bewick. He cut (after drawings by J. Samuel) the blocks which illustrate 'Grove Hill,' a poem, very sumptuously issued by T. Bensley in 1799. This book, for the beauty of its cuts and the care with which they are printed, will bear comparison with Somerville's 'Chase.' The best work of Bewick is technically hardly better than that which Anderson shows in 'Shakespeare's Walk' in the book in question. His treatment of foliage is sometimes such as to remind one strongly of the cuts in Bloomfield's 'Farmer's Boy,' which the first edition of 1800 describes as 'with ornaments engraved by Anderson.' These cuts have been long erroneously ascribed to Bewick. Anderson also engraved illustrations to an edition of Junius. Redgrave says he formed 'a style of his own and showed much ability, but did not long follow his profession. He went abroad on some speculation, and was lost sight of. He died early in the century.' Historians of the wood-engraver's art should give to the author of such work as has been described a more important place than he has yet obtained.

[Redgrave's Dict. of Painters.] E. R.

**ANDERSON, JOHN, M.D.** (d. 1804), practised as a physician at Kingston, in Surrey, and subsequently, for several years before his death, was physician to, and a director of, the General Sea-bathing Infirmary at Margate, where he died in June 1804 at an advanced age. He wrote for his doctor's degree, which he took at Edinburgh, a dissertation 'De Scorbuto,' published in 1772. He was also author of 'Medical Remarks on Natural Spontaneous and Artificial Evacuations,' London, 1788; and of 'A Practical Essay on the good and bad Effects of Sea-water and Sea-bathing.' He was a fellow of the Society of Antiquaries.

[Gent. Mag. lxxiv. 978; Anderson's works mentioned above.] G. V. B.

**ANDERSON, JOHN** (fl. 1816), founder of Fermoy, born in very humble circumstances, was son of David Anderson, of Portland, N.B. Having scraped together a few pounds by some petty dealings, he removed to Glasgow, and by a venture in herrings acquired 500*l*. In 1780 he established himself at Cork, where he became an export merchant and trafficked in provisions, the staple trade of the place. In a few years he realised 25,000*l*., and laid it out in the purchase of four-sixths of the Fermoy estate, which is picturesquely situated on the river Blackwater, nearly in the centre of Munster. He resolved to make a town of Fermoy, and succeeded in constructing the handsomest country town in Ireland. Mr. D. Owen Madden, writing in 1848, says: 'The streets are spacious, and the town is tastefully designed. There is a neat square; there are fine churches for religious worship, and several private residences of respectability in the neighbourhood. The place looks bright and happy—not like the other dreary and dilapidated country towns in Ireland. Two large barracks, built in squares on the northern side of the town, contribute to the imposing appearance of the place. Fermoy has now 7,000 inhabitants. Sixty years ago the place was a dirty hamlet, consisting of hovels, and a carmen's public-house at the end of the narrow old bridge; now there is a cheerful and agreeable town, pleasant society, a good deal of trade, and more prosperity than might be expected.' With reference to the barracks it should be stated that when the French came into Bantry Bay the government was unable to procure land, except on the most extravagant terms, for encamping the troops in the south of Ireland. Lord Carhampton, commander of the forces, explained the difficulties to Anderson, who at once removed them by giving land on his Fermoy estate without any charge for the required encampment; and he afterwards gave forty acres, rent free, on which the barracks of Fermoy and Buttevant are built.

Anderson erected for himself a handsome residence at Fermoy, and placed himself at the head of the community which rapidly began to grow around him. Meantime he had not given up his business, and he discounted to a considerable extent. On the proposed establishment in Ireland of the mail-coach system, Anderson, at a moment when no other man of capital and position would venture on so hazardous an undertaking, offered to embark on the enterprise. His proposal was readily accepted, the government stipulating that he was to provide the whole of the necessary means.

The roads, which were at that period little better than horse-tracks, he was bound to repair and alter at his own cost. This Herculean task he lived to accomplish, and thus opened the country from north to south and from east to west. Anderson likewise established an agricultural society and a military college, and laboured in every possible way to civilise and improve his adopted country. The government so highly appreciated Anderson's services that a baronetcy was offered to him, which he declined. It was, however, conferred, in 1813, on his eldest son, James Caleb Anderson. Subsequently Anderson sustained considerable losses in consequence of his speculations in Welsh mines and other undertakings, and a meeting of his creditors was held at the King's Arms Inn at Fermoy on 19 June 1816. The meeting was also attended by several of the nobility and the principal commoners in the south of Ireland, who passed a series of resolutions which constitute a proof of the high estimation in which, despite his misfortunes, Anderson continued to be held. We have been unable to obtain particulars respecting Anderson's subsequent career and the date of his death.

[Notes and Queries, 3rd series, vii. 153; D. Owen Madden's *Revelations of Ireland*, 268-285; Anderson's *Scottish Nation*, i. 133; Irving's *Book of Scotsmen*; Burke's *Dictionary of the Peerage and Baronetage* (1862), 23, 24.] T. C.

ANDERSON, JOHN (fl. 1825), genealogist, writer to the Signet, and secretary to the Scottish Society of Antiquaries, an institute founded at Inverness in March 1825, wrote a 'History of the Family of Frisell or Fraser, particularly Fraser of Lovat, embracing various notices illustrative of National Customs and Manners, with original correspondence of Simon Lord Lovat, 1825,' 4to, pp. 208. He also wrote the prize essay on the 'State of Science and Knowledge in the Highlands of Scotland . . . at the period of the Rebellion in 1745, and of their progress up to the establishment of the Northern Institute for the Promotion of Science and Literature in 1825,' which was published in 1827, and obtained the gold medal offered to competitors by Sir George Stewart Mackenzie. He resided at Walker Street, Coates Crescent, Edinburgh, in 1825, but the dates of his birth and death are not on record.

[Prefaces to Anderson's Works.] J. W.-G.

ANDERSON, JOHN (1789-1832), genealogist, of Hamilton, Lanarkshire, was born, 6 June 1789, at Gilmerton House, Midlothian, became a licentiate of the Royal

College of Surgeons of Edinburgh, and while passing the college examinations was appointed by the Duke of Hamilton (then Marquis of Douglas) first surgeon to the Lanarkshire Militia, and afterwards his own medical adviser, positions which he held to the time of his death. He was very unassuming, of social disposition, and noted for his benevolence. He died 24 Dec. 1832 of inflammation of the brain.

His large work, 'Historical and Genealogical Memoirs of the House of Hamilton,' 4to, was published at Edinburgh in 1825; a supplement was issued in 1827. For twenty-nine years before his death Anderson was engaged upon a 'Statistical History of Lanarkshire,' and also upon a 'Genealogical History of the Robertsons of Struan,' but neither of these works appears to have been printed.

[Gent. Mag. ciii. pt. i. 648; Advocates' Library Cat. i. 131.] J. W.-G.

ANDERSON, JOHN (1795-1845), a diplomatic agent and writer on questions of Eastern policy and commerce, was born in Scotland (*Mission to Sumatra*, p. 116), and presumably in Dumfriesshire, in 1795. Receiving an appointment to the civil service of the East India Company in 1813, he became a 'writer' in Pulo Penang, or Prince of Wales's Island. He was promoted in 1821, when he held the position of deputy-warehousekeeper and Malay translator to the government, to the rank of 'factor,' and to the discharge of the functions of deputy-accountant, deputy-auditor, accountant to the recorder's court, and commissioner to the Court of Requests; the duties of which offices were continued to him on his preferment, in 1823, to be 'junior merchant.' By various steps he had become, in 1826, accountant and auditor, accountant-general to the recorder's court, superintendent of lawsuits, and Malay translator, and in 1827 attained the dignity of 'senior merchant,' with the offices of secretary to government and Malay translator. Later in the same year he was made a justice of the peace for Penang, Singapore, and Malacca (*Singapore Chronicle*, 6 Dec. 1827). In 1830 he was 'at home' (*East India Register and Directory*, 1831). His first publication was a work entitled 'Political and Commercial Considerations relative to the Malayan Peninsula and the British Settlements in the Straits of Malacca,' Prince of Wales Island, 1824. This work consists of reflections on the Siamese conquest of Quedah and Perak; an exposition of the advantages likely to result from declaring Quedah and the whole of the Malayan states under the protection of the British government; and a

descriptive sketch of the tin countries on the western coast of the peninsula of Malacca. In February and March 1823 Anderson had acted as agent to the governor of Pulo Penang for procuring engagements from native potentates in Sumatra, the sultans of Delly and Siack, and the Rajah of Langkat (SIR C. U. AITCHISON'S *Collection of Treaties, Engagements, and Sunnuds relating to India and neighbouring Countries*, 8vo, Calcutta, revised edition, vol. i. 1876). Anderson's Sumatran employment bore fruit a few years later in his 'Mission to the East Coast of Sumatra, in 1823, under the direction of the Government of Prince of Wales Island: including historical and descriptive Sketches of the Country, an Account of the Commerce, Population, and the Manners and Customs of the Inhabitants, and a Visit to the Batta Cannibal States in the Interior,' 8vo, Edinburgh, 1826. On his return to this country Anderson entered actively into mercantile and other duties in London, in the course of which he produced a work entitled 'Acheen, and the Ports on the North and East Coasts of Sumatra; with incidental Notices of the Trade in the Eastern Seas, and the Aggressions of the Dutch,' 8vo, London, 1840. This volume attracted much attention to the state of British commerce in the parts of the world of which it treated. Anderson died, after a short illness, at his house, No. 1 Euston Place, Euston Square, on 2 Dec. 1845, as correctly stated in the 'Gentleman's Magazine' for January 1846 (p. 104). In the first sentence of a more extended notice in the same periodical for the following month (p. 208), he is perplexingly described as 'of Bond Court, Walbrook, and Prince's Place, Kennington,' and as having died on 15 Jan. 1846, at the age of 75; being unaccountably confounded with Mr. John Adamson, a London merchant of the two specified addresses, whose obituary occurs in the 'Gentleman's Magazine' for March 1846 (p. 329).

[East India Register and Directory, 1813-1831; Gent. Mag. as above; Literary Gazette, 17 Jan. 1846.] A. H. G.

ANDERSON, JOHN (1805-1855), the founder of the mission of the Free Church of Scotland at Madras, was the son of a Scotch farmer. Born in Galloway, in the parish of Kilpatrick-Durham, he received the rudiments of his education in the parish schools, and in his twenty-second year entered the university of Edinburgh, where he obtained prizes in Latin and in moral philosophy, distinguishing himself by his facility in Latin

composition, and studying theology and church history under Chalmers and Welch. In 1836 he was ordained a minister of the church of Scotland, and in the same year was sent out to Madras as a missionary. The branch of missionary work to which Anderson devoted himself, was education. At that time the standard of education among the natives of the Madras presidency was very low. Anderson's object, as stated in the prospectus of the first mission school opened by him at Madras, was 'to convey through the channel of a good education as great an amount of truth as possible to the native mind, and especially of Bible truth,' the ultimate aim being 'that each of these institutions shall be a normal seminary in which teachers and preachers may be trained up to convey to their benighted countrymen the benefit of a sound education and the blessings of the gospel of Christ.' Anderson laid great stress upon education and native preachers in all missionary effort. The first school established by Anderson, which formed the nucleus of the institution now known as the Madras Christian College, speedily acquired a high reputation. The number of pupils rapidly increased, although the school was on several occasions almost broken up on the conversion to christianity of some of the pupils, and also by the admission of pupils of low caste. Notwithstanding these difficulties and the establishment of a very efficient government school, in which the instruction given was purely secular, the mission school prospered, and in the course of a few years branch mission schools were established in the town of Madras and in some of the principal towns in the neighbouring districts. One of the leading features in Anderson's method of instruction was the practice of making the pupils question each other on the subject of the lesson, a practice which, at that time, was new, at all events, in India. In 1841 the first native converts, two in number, were baptised, and in 1846 these two converts and one other were licensed as preachers, and were ordained in 1851. Anderson never looked forward to numerous conversions as the immediate result of mission work.

In 1839 Anderson was joined by a second missionary, Rev. Robert Johnston, who proved a most valuable coadjutor. In the course of a few years the number of Scotch missionaries was increased to four. In 1843, on the disruption of the church of Scotland, Anderson and his colleagues joined the Free Church, and thenceforward the mission was carried on in connection with that church. The subject of female education soon attracted Anderson's attention. There was no diffi-

culty in securing the attendance of girls of the lower castes; but in the case of native caste girls the difficulty was, and still is, very great. Indian girls marry early, and native parents see none of the material benefits to be derived from their education, which induce them to send their sons to mission schools, even at the risk of their being led to change their religion. But these obstacles were gradually overcome in some measure, and before Anderson's death seven hundred Hindu and Mohammedan girls, the majority of the former belonging to families of good caste, were under instruction in the schools of the mission. In this branch of his work Anderson was greatly helped by Mrs. Anderson. Anderson died at Madras in March 1855, after a short illness. He had laboured indefatigably for eighteen years at the work for which he had been set apart; only once during that period revisiting his native land, whither he was accompanied by the Rev. P. Rajahgopal, one of his first converts. His constitution, naturally strong, had become enfeebled by his incessant toils and anxieties in a debilitating climate.

[Braidwood's True Yokefellows in the Mission Field, Nisbet, 1862; Madras Native Herald.]

A. J. A.

ANDERSON, JOHN HENRY (1815-1874), conjuror and actor, was known as Professor Anderson, the Wizard of the North, and during many years appeared before the public as a performer of feats of legerdemain. For brief periods he tenanted in turn several of the London theatres, and travelled with his exhibition and apparatus through the provinces, to the colonies and America. His 'great gun trick'—in which he pretended to catch in his hand a bullet from a musket discharged by one of his audience—was at one time a much-admired illusion. He occupied Covent Garden Theatre for some months at the close of 1855 and the beginning of 1856, performing his conjuring tricks, producing a Christmas pantomime, and attempting the personation of William in 'Black-eyed Susan,' and Rob Roy in the melodrama of that name. His season closed with an entertainment described as a 'Grand Carnival Complimentary Benefit and Dramatic Gala, to commence on Monday morning and terminate with a *bal masqué* on Tuesday.' The *bal masqué* was 'a scene of undisguised indecency, drunkenness, and vice.' Between four and five o'clock on the morning of Wednesday, 5 March, Anderson ordered the National Anthem to be played and the gas to be lowered, to warn the revellers to depart. Suddenly the ceiling was discovered to be on fire. The masquers

had barely time to escape. In half an hour the destruction of the building was complete. Anderson is chiefly memorable from his connection with this catastrophe.

[Morley's Journal of a London Playgoer, 1866; Irving's Annals of Our Time, 1871.] D. C.

ANDERSON, JOSEPH (1789-1877), lieutenant-colonel, a veteran officer and leading colonist in Victoria, was born in 1789, and in 1805 was appointed to an ensigncy in the new 2nd battalion (since disbanded) of the 78th Highlanders, with which he served in Sicily, in the descent on Calabria and the battle of Maida in 1806, and in the luckless expedition against the Turks in Egypt in 1807. As a lieutenant in the 24th foot he fought in the Peninsular campaigns between 1809 and 1812, at Talavera, where he was wounded, at Busaco, at the defence of Torres Vedras, at Fuentes d'Onor, and in many minor engagements. In 1812 he was promoted to a company in the York chasseurs, a corps for West India service recruited chiefly from foreigners, and with it he was present at the recapture of Guadaloupe in 1815. The island had hoisted the tricolor on receipt of the news of Napoleon's return from Elba, and as the garrison refused to treat, the place was attacked and taken, after some sharp fighting, by a British force under General Sir J. Leith, seven weeks after the battle of Waterloo. Lieutenant-colonel Anderson was subsequently in the 50th foot, with which he served long in Australia and India. He was many years military commandant and civil governor of the penal settlement at Norfolk Island, and commanded a brigade in the Gwalior campaign of 1843, where he was wounded at the battle of Punniar. After forty-three years' hard service he retired from the army in 1848, and became a squatter on the Goulburn river soon after the erection of Victoria into a separate colony in 1850, and was made a member of the legislative council of Victoria in 1852. He died at his residence, Fairlie House, South Yarra, on 18 July 1877. His son, Colonel William Acland Anderson, C.M.G., who was once a subaltern in his father's regiment, was for some time commissioner at the Gold Fields, and succeeded the late Major-General Dean Pitt as commandant of the volunteer forces of Victoria.

[Hart's Army Lists; Heaton's Australian Dictionary of Dates.] H. M. C.

ANDERSON, LIONEL, *alias* MUNSON (d. 1680), Roman catholic priest, was tried with seven others for high treason under the statute 27 Eliz. c. 2, which banished from

the realm all subjects of her majesty born within her dominions who had received orders from the see of Rome. This statute, which under Elizabeth had been very vigorously administered, became after her death practically a dead letter, and so remained until the panic into which the nation was thrown by the fabrications of Oates and Bedloe led to its resuscitation. The trial was held at the Old Bailey on 17 Jan. 1680, before lord chief justice Sir William Scroggs, lord chief baron Montagu, justices Atkins, Dolben, Ellis, Jones, Pemberton, the recorder Sir G. Jefferies, and a jury. The prisoners were not allowed the benefit of counsel, and indeed the most skilful advocate must have been of little avail before judges who were determined to presume everything against rather than for the accused. Sir J. Keiling and Mr. Serjeant Strode prosecuted. The witnesses were Oates, Bedloe, Dangerfield, and Praunce. Dangerfield thus proved Anderson a priest: 'My lord, about the latter end of May or beginning of June, when I was a prisoner for debt in the King's Bench, this person took occasion to speak privately to me, and desired me to go into his room. He told me that he had received a letter from my lady Powis, and that letter was burnt. But the next letter that came from my lady Powis he would show it me. And he did so; and the contents of the letter was, as near as I can remember, just this: "Sir, you must desire Willoughby to scour his kettle," which was to confess and receive the sacrament to be true to the cause.' Anderson pleaded that in staying in the realm he was acting under an order from the council, and demanded that the three points necessary to bring him within the statute—viz. (1) that he was born in England, (2) that he had received orders from the see of Rome, (3) that in remaining within the realm he was acting contrary to the statute—should be expressly proved. No evidence was forthcoming to prove any one of them, but the judges presumed them all against him, holding that the mere fact of his having performed mass (which he admitted) was sufficient to make him guilty; and so they held of all the prisoners. One of them, however, Lumsden by name, proving to be a Scotchman, was acquitted, and another, Kemish, who was too ill to defend himself, was remanded. What became of him is not known; all the others were sentenced to be hanged, drawn, and quartered, and were executed accordingly. In an account of the trial published shortly after its occurrence Anderson is described as 'an ancient man and seeming to be sick,' and in the report of the trial itself there occurs a passage which sug-

gests that he was suffering from physical weakness; but his bearing on that trying occasion indicates firmness and courage, and his manner of conducting his defence exhibits no trace of mental decay. In the course of the trial Oates having alleged that Anderson was an Oxfordshire man, he denied it, asserting that he was the son of a gentleman of quality in Lincolnshire, well known to the lord chief baron Montagu, a statement which that judge did not hesitate to corroborate; and this is also borne out by his alias Munson, which is obviously identical with Mounson or Monson, the name of an ancient Lincolnshire family with which the Andersons of that county had often intermarried. Collier, in his 'Historical Dictionary' (2nd edition, 1688), notices one Lionel Anderson as lineally descended from the ancient family of the Andersons of Northumberland (afterwards settled in Lincolnshire), assigning Broughton as the chief seat of the family, and mentioning amongst others of their marriage connections the family of the Mounsons.

[Journals of the House of Commons, ix. 369, 370; Sir William Temple's Memoirs, part iii. in Works ed. 1814, ii. 521; Cobbett's State Trials, vii. 811, 823, 833-5, 839, 841, 848, 882; A Brief Account of the Proceedings against the Six Popish Priests, condemned for High Treason the 17th day of this instant January 1679-80, viz.: Lionel Anderson, alias Munson, William Russel, George Parry, Henry Starkey, James Corker and Will. Marshall, two Benedictine Monks formerly tryed with Wakeman, with whom was likewise tryed Alexander Lumsden.] J. M. R.

ANDERSON, LUCY (1790-1878), musician, the daughter of Mr. John Philpot, a music-seller, was born at Bath in December 1790. She received her first musical instruction from her father, who intended her to adopt the harp as her instrument, but, in spite of the weakness of sight from which she always suffered, she soon made such progress with the pianoforte as to appear as a solo player at a very early age. She played at a concert at Weymouth for the benefit of Bannister in 1802, and soon after coming to London (about 1818) was regularly engaged at all the principal concerts. In 1820 she married George Frederick Anderson, a distinguished violinist, and for some time master of the queen's private band. In 1829 Mrs. Anderson played at the Birmingham festival, and continued to play in public until 1862. As a teacher she was much sought after, and numbered amongst her pupils the queen and other members of the royal family. Mrs. Anderson was the first female pianist who appeared at the Phil-

harmonic concerts, and was also the first pianist to introduce into England many of the great works of Beethoven, Hummel, and other composers. Judged by the modern standard of pianoforte playing, she might have been considered deficient in executive power, but this was amply atoned for by the breadth of her style, her powers of expression and feeling, and her excellent touch and phrasing. She was on the best terms with Cherubini, Mendelssohn, Chopin, Hummel, and many other great musicians with whom she came in contact in the course of her long career. After amassing a considerable fortune, she retired from public life in 1862. She died 24 Dec. 1878.

[Grove's Dictionary, i. p. 65; private information from Mr. W. G. Cusins.] W. B. S.

ANDERSON, PATRICK (1575-1624), a Scotch Jesuit, was a native of Elgin or Moray, his mother being a sister of Dr. John Leslie, bishop of Ross. After a rudimentary education at the Elgin grammar school, and a course of classical study in the university of Edinburgh, he entered the Society of Jesus at Rome in 1597, and in due time acquired the reputation of an eminent linguist, mathematician, philosopher, and divine. Being sent home as a missionary, he arrived in London in November 1609, and proceeded at once to his native country, where his ministerial labours were highly successful, and his hairbreadth escapes from his persecutors very marvellous. He left Scotland for Paris to meet his superior, Father James Gordon (Huntly), late in 1611. It is a remarkable fact that at the time of his departure there was but one priest in all Scotland. To supply this dearth Anderson collected nearly a hundred promising youths who were eager to enter the priesthood. In 1615 he became the first Jesuit rector of the Scotch college in Rome. Returning to Scotland he was betrayed by a pretended Catholic and committed to the Tolbooth in Edinburgh. During his rigid confinement there he held several polemic conferences with presbyterian divines, and gave proofs of his learning and constancy. He was threatened with the barbarous torture of the 'boots,' and was daily expecting death when he was liberated by the intercession, it is believed, of the French ambassador, the Marquis Deflat, who chose him for his confessor. He died in London 24 Sept. 1624. His works are:

1. 'The Grovnd of the Catholike and Roman Religion in the Word of God. With the Antiquity and Continuance therof, throughout all Kingdomes and Ages. Collected out of diuers Conferences, Discourses, and Dis-

putes, which M. Patricke Anderson, of the Society of Iesvs, had at severall tymes with sundry Bishops and Ministers of Scotland, at his last imprisonment in Edenburgh, for the Catholike Faith, in the yeares of our Lord 1620 and 1621. Sent vnto an Honourable Personage by the Compyler and Prisoner himselfe.' 3 parts or vols. 1623, 4to. 2. 'Memoirs of the Scotch Saints.' MS. formerly preserved in the Scotch College at Paris. 3. Father de Backer mentions, in his list of Anderson's works, 'Copia de las Cartas que se embiaron de Escocia a nuestro Padre Claudio Aquaviva, Preposito general de la Compania de Jesus, por un Padre de Escocia, de la misma Compania a quatro de Enero del año 1612. Por este relacion se puede ver el estado bueno de las cosas de la Christianidad de Escocia, fol. 10 ff. De Escocia, á quatro de Enero, 1612. De V. P. hijo, y siervo indigno Patricio Andersono.'

[Oliver's Collectanea S. J. 16; Foley's Records, vii. 9; Ribadeneira, Bibl. Script. Soc. Jesu, ed. Southwell, 645; Dodd's Church History (1737), ii. 393; De Backer, Bibliothèque des Écrivains de la Compagnie de Jésus (1869), i. 147; Catholic Mag. and Review (Birmingham, 1835), vi. 17.] T. C.

ANDERSON, PATRICK (fl. 1618-1635), physician, was author of 'The Colde Spring of Kinghorne Craig, his admirable and new tryed properties so far forth as yet are found true by experience' (1618), dedicated to John, earl of Mar; and a very rare book called 'Grana Angelica; hoc est, Pilularum hujus nominis insignis utilitas, quibus etiam accesserunt alia quædam paucula de durioris Alvi incommodis propter materię cognitionem, ac vice supplementi in fine adjuncta,' Edinburgh, 12mo, 1635. The latter describes some mild aperient pills, the prescription for which Anderson says that he brought from Venice, which continued in 1843 to be sold in Edinburgh by the proprietor of an ancient patent. In 1625 Anderson saw through the press a religious work, called 'The Countesse of Marres Arcadia,' written by James Caldwode, minister of Falkirk, and to it he prefixed a long dedicatory epistle addressed to the Countess of Mar, one of his patients. He wrote a history of Scotland in three folio volumes, preserved in manuscript in the Advocates' Library. After his death Anderson's friends published a satirical dramatic poem by him, entitled 'The Copie of a Baron's Court, newly translated by Whats-you-call-him, clerk to the same. Printed at Helicon beside Parnassus, and are to be sold in Caledonia.' This piece was reprinted in a limited edition in 1821, and to it an account of the author was prefixed.

In several of his works Anderson is described as physician to Charles I.

[Anderson's *Scottish Baron's Court*, 1821; T. H. Burton in *S.D.U.K. Dict.*; *Brit. Mus. Cat.*]

ANDERSON, ROBERT (fl. 1668-1696), was a mathematician and silk-weaver of London, whom John Collins, one of the early members of the Royal Society, helped with the loan of books and the supply of scientific information (*Stereometrical Propositions*, Preface). He devoted special attention to improving the art of gunnery, and during at least twenty-one years from 1671 conducted some thousands of experiments with cannon mounted at his own expense on Wimbledon Common, showing that his means must have been considerable. 'I am very well assured,' he says (*Genuine Use and Effects of the Gunne*, p. 32), 'I have done more, being a private person, than all the engineers and gunners with their yearly salaries and allowances, since the first invention of this warlike engine.' He wrote: 1. 'Stereometrical Propositions variously applicable, but particularly intended for Gageing,' 1668, an ingenious, though uncouth little work, condemned by J. Gregory as 'pitiful stuff' (*Correspondence of Scientific Men* (Rigaud), ii. 258), but mentioned with approval in *Phil. Trans.* iii. 785. An appendix entitled 'Gaging Promoted' followed in 1669 (noticed in *Phil. Trans.* iv. 960). 2. 'The Genuine Use and Effects of the Gunne, as well experimentally as mathematically demonstrated. A new Work of Singular Use unto Generals of Armies, Engineers, and other Artists. *Tam Marte quam Mercurio*. With Tables of Projection, etc. by Thomas Streete,' 1674. 3. 'To hit a Mark, as well upon Ascents and Descents, as upon the Plain of the Horizon,' 1690. A short Discourse is added 'Of Granadoes, Carcasses, and Fireballs,' with 'Warlike Musick illustrated in several Consorts of Phrygian Flutes, clearly demonstrated by Principles of Musick and Mathematicks;' the last a ponderous scientific joke. 4. 'To cut the Rigging, and Proposals for the Improvement of Great Artillery,' 1691. 5. 'The Making of Rockets. In two Parts. The First containing the Making of Rockets for the meanest Capacity. The other to make Rockets by a Duplicate Proposition, to 1,000 pound Weight or higher,' 1696. Dedicated to Henry, Earl of Romney, Master-General of the Ordnance, from whose favour the author hoped for a trial of his improvements in artillery practice. 6. Watts (*Bib. Brit.*) mentions as the latest of his works a 'Treatise on the Use and Effects of the Gunne,' London, 1713, 4to.

[Hutton, *Phil. and Math. Dict.* i. 116; Montucla, *Hist. d. Math.* ii. 89; De Morgan in *S. D. U. K. Dict.* ii. 576.] A. M. C.

ANDERSON, ROBERT, M.D. (1750-1830), editor and biographer of the British poets, was born on 7 July 1750 at Carnwath in Lanarkshire. On the death of his father, a small feuar, or copyholder, in 1760, his family was left in straitened circumstances; but Robert, having received his early education at the parish schools of Carnwath and Libberton, and at the grammar school of Lanark, was sent to the university of Edinburgh to qualify himself for the ministry of the church of Scotland. Soon forsaking theology for medicine, he became surgeon to a dispensary at Bamborough Castle, but, after taking his degree of M.D., he married, and finding himself able to relinquish the practice of his profession, he settled finally at Edinburgh, and devoted himself to literary pursuits. He had already edited a volume of poems, written by himself and James Graeme, a youthful friend who died at an early age in 1782. Anderson also contributed a sketch of his friend's life to the 'Gentleman's Magazine.'

Some years afterwards, an Edinburgh publishing firm projected the issue of a selection from the edition of the English poets for which Johnson had written his 'Lives.' Anderson recommended a much more comprehensive enterprise than the publication of mere extracts from a collection into which no poets anterior to the Caroline age had been admitted, and from which Scottish poets were, as a rule, excluded. His plan was accepted, and thus originated what his publishers styled 'A Complete Edition of the Poets of Great Britain' (1792-5), furnished with biographical and critical notices written by the editor. The work consisted originally of thirteen volumes, to which a fourteenth was added in 1807. Chaucer, Surrey, Wyatt, and Sackville are the earliest poets included, and it was with great difficulty that Anderson could induce his publisher to admit any pre-Shakespearian author. His labours as editor procured him the esteem of Bishop Percy, with whom he afterwards regularly corresponded; and Southey (*Quarterly Review*, July 1814) thanked 'good old Dr. Anderson' for what he had succeeded in effecting towards the republication of our older poets, and complimented him on making many of the Elizabethan poets generally accessible for the first time. In 1798 the first edition of the collection, one of 2,000 copies, was nearly sold off, and the issue of a second was contemplated (Percy *Correspondence in Nichols's Illustrations of the Literary History of the Eighteenth Century*, vii. 74).

Some of the biographical and critical notices which appeared in the collection were ex-

panded by Anderson and afterwards published separately. That of Johnson, which was published in 1795, with a third edition in 1815, has no special value. Dr. Anderson also published a separate edition of Blair's 'Poetical Works' with a life (1794), and an edition of 'The Works of John Moore, M.D.' (father of Sir John Moore), with 'memoirs of his life and writings' (1818). To a separate edition of the 'Miscellaneous Works of Smollett' (1796, 3rd edition 1806), he likewise prefixed an enlarged memoir, which was subsequently published by itself as the 'Life of Smollett.' At the suggestion and with the aid of Bishop Percy, Anderson prepared for publication, before the bishop's death in 1811, a new edition of Grainger's poems (Percy Correspondence in NICHOLS's *Illustrations*, vol. vii. *passim*), but it did not appear until 1836, some years after Anderson's death.

Dr. Anderson was for a time the editor of the 'Edinburgh Magazine,' a position which enabled him to encourage young men of talent and promise. He was among the first to recognise the genius of Thomas Campbell, for whose 'Pleasures of Hope' he procured a publisher, and who gratefully dedicated to Anderson the volume of verse in which that poem first appeared. Anderson was a most amiable, kindly, and hospitable man, and his house was for many years one of the literary centres of Edinburgh. He died there on 20 Feb. 1830.

[Dr. Anderson's Works; Memoir (by his son-in-law, David Irving) in 7th and 8th editions of the *Encyclopædia Britannica*, and notice in *New Monthly Magazine* (then edited by Thomas Campbell) for June 1830 (mostly reproduced in *Annual Biography and Obituary* for 1831, p. 475); *Beattie's Life and Letters of Campbell* (1849), i. 194, &c.] F. E.

ANDERSON, ROBERT (1770-1833), a Cumbrian poet, was born in Carlisle, 1 Feb. 1770. He was at first sent to a charity school supported by the dean and chapter of his native city, and afterwards he attended the Quaker school of Carlisle, taught by one Isaac Ritson. This was the sum of his educational advantages. At ten years of age he began to earn his living as an assistant to a calico printer, and somewhat later he was bound apprentice to a pattern drawer in Carlisle. In pursuance of his calling he spent five years in London, and there the gratification of hearing songs sung at Vauxhall seems first to have fired his ambition as a poet. His earliest effort was entitled 'Lucy Gray,' and was a poetic rendering of a story he had heard from a Northumbrian rustic. Lucy had been the village beauty, who died in her seventeenth year, and was

soon followed by her lover. The simple story probably suggested to Wordsworth the beautiful lines: (written in 1799 and published first in 1800) beginning:

She dwelt among the untrodden ways.

The name and metre of Wordsworth's 'Lucy Gray' seem also to have been taken from a poem of Anderson's. In 1798 Anderson published this poem in his first volume, but it was not until seven years later that he issued the ballads in the Cumbrian dialect by which his name is known, though he wrote and published his popular ballad, 'Betty Brown,' in 1801. Anderson was by no means the first to write verse in the dialect of his district. Thomas Sander-son gives the name of Josiah Relph, of Sebergham, as that of the first Cumbrian poet who wrote in the dialect, and Sir F. Madden mentions a Rev. Robert Nelson, of Great Salkeld, as contemporary with Relph. Certainly Susanna Blamire, Ewan Clarke, and Mark Lonsdale, as well as Josiah Relph, were anterior to Anderson. The humour of Anderson placed him ahead of all competitors in the esteem of the peasantry. Anderson drew his materials from real life, was much feared for his personal attacks, had a keen eye for the ludicrous, and pictured with fidelity the ale-drinking, guzzling, and cock-fighting side of the character of the Cumbrian farm labourer. Perhaps his best dialect poems are 'The Impatient Lass,' 'King Roger,' 'Will and Kate,' 'The Bashful Wooer,' 'Lae Stephen,' 'The Lass abuin Thirty,' and 'Jenny's Complaint.' These poems are certainly destitute of those qualities which were supposed to place Anderson by the side of Burns, but some of them are made interesting by a vein of true rustic poetry, and all are valuable for the picture they afford of country manners and customs that are now almost, if not quite, obsolete. Late in life Anderson fell into habits of intemperance, and eventually into extreme poverty, and was haunted by the fear of ending his days in St. Mary's workhouse. He died in Carlisle 26 Sept. 1833. The portrait prefixed to one of the volumes of Sidney Gilpin's anthologies of Cumbrian songs shows a refined face of the cast of that of Wordsworth. The country people still living who remember Anderson describe with a good deal of humour the outbursts of misanthropy that tormented him in his last years. 'If ye happen'd to say til him, "It's a fine morning, Mr. Anderson," ten to yan bit his reply wad be, "Dust'e tak me for a fool or a bworn idiot? I kent that lang afooar I saw thee!"' In 1805 the 'Cum-

brian Ballads' were published in Wigton, but the best edition is that in 2 vols. published in Carlisle in 1820.

[Poetical Works of R. Anderson, with life of the author written by himself, Carlisle, 1820; Ballads in the Cumberland Dialect, Alnwick, 1840; Songs and Ballads of Cumberland, edited by Sidney Gilpin, Carlisle, 1874.] T. H. C.

**ANDERSON, THOMAS** (1832-1870), botanist, was born in Edinburgh 26 Feb. 1832, and was educated for the medical profession, graduating as M.D. at Edinburgh in 1853. His attention was early directed to botany, and while at the Edinburgh university he obtained a gold medal for the best local collection of plants, and assisted in arranging the Indian herbarium. In 1854 he entered the Bengal medical service, and went to Calcutta. Subsequently he went to Delhi, where he was actively engaged during the mutiny, returning to Calcutta in 1858. His health failing, he came home, and, the steamer being detained at Aden for some days, he made an interesting collection of the plants of that region, upon which he based his '*Florula Adensis*,' published in 1860. About this time he returned to India, taking temporary charge of the Calcutta Botanic Garden during the absence of Dr. Thomas Thomson, whom he afterwards succeeded as director. He did much to improve the garden, and introduced valuable medicinal plants, especially cinchona and ipecacuanha: to him is due the institution of the experiments which led to the successful cultivation of the former in India, and he issued many valuable reports upon the subject. In 1864 he undertook to organise and superintend the forest department in Bengal, but after two years he was forced to abandon this work by the pressure of his other duties. In 1868 he was compelled by serious illness to return home, but subsequently recovered, and devoted himself with much energy to working out from herbaria and his own collections the flora of India. The difficult order *Acanthaceae* received his special attention; but before his work could be completed he was again attacked by illness, and died at Edinburgh of disease of the liver on 26 Oct. 1870. He was a man of studious habits and amiable disposition, and his loss left an important gap among Indian botanists.

[Trans. Bot. Soc. Edinburgh (1873), ii. 41-5; Journ. Bot. 1870, 368.] J. B.

**ANDERSON, THOMAS, M.D. LL.D.** (1819-1874), chemist, was the son of a physician at Leith, from whom he acquired scientific tastes. After passing through the High School of Leith and the Edinburgh Academy, he be-

came a medical student in the university of Edinburgh. Here he obtained (1839-40) the biennial 'Hope Prize,' and he graduated M.D. in 1841, choosing for his thesis 'The Nature of the Chemical Changes which take place in Secretion, Nutrition, and the other Functions of Living Beings.' In 1842 he studied under Berzelius in Stockholm; in 1843 in the Giessen laboratory under Liebig; and he afterwards visited Bonn, Berlin, and Vienna, returning to Edinburgh an accomplished chemist. He became a Fellow of the Royal Society of Edinburgh in 1845; a year later an extra-academical university teacher of chemistry, and in 1848 chemist to the Highland and Agricultural Society of Scotland, an appointment which he held to within a short time of his death.

In 1852 he succeeded Dr. Thomas Thomson as regius professor of chemistry in the university of Glasgow. In 1859 he was elected President of the Glasgow Philosophical Society; and in 1867 president of the Chemical Section of the British Association for the Advancement of Science. The Royal Society of Edinburgh awarded him the Keith medal in 1855, and the Royal Society of London one of the royal medals in 1872. His last years were passed in much mental and bodily suffering, and he died on 2 Nov. 1874.

Anderson's earliest researches were on a new mineral species, and on the atomic weight of nitrogen. He conducted an elaborate inquiry into 'The Products of the Destructive Distillation of Animal Substances,' which resulted in the discovery of a new pyridine series, and of certain fatty amines. Then he examined the action of sulphur upon fixed oils, and obtained a new definite organic sulphide. His paper 'On the Crystalline Constituents of Opium' was very exhaustive. In 1861 he published a work on 'Anthracene and its Derivatives,' and somewhat later interesting theoretical memoirs on the Platino-pyridine Bases, and on the Polymerisation of Pyridine, and Picoline. His agricultural experiments, which extended over nearly a quarter of a century, are almost all published in the 'Journal of the Highland and Agricultural Society of Scotland.' He examined the composition of wheat, beans, and turnips at different periods of their growth, and made a number of analyses of soils, manures, plant ashes, and oil cakes. His 'Elements of Agricultural Chemistry' was published in 1860, and although not very original in treatment, it gave a clear summary of the science at that date. Anderson was an organic and agricultural chemist, and but rarely turned his attention to inorganic bodies.

[Journal of the Chemical Society of London (1875), pp. 1309-13.] G. F. R.

ANDERSON, WALTER (d. 1800), historian, was for fifty years minister of Chirnside, Berwickshire. He was the author of a rare (anonymous) book (said to have been suggested in joke by Hume), 'The History of Croesus, King of Lydia, in four parts, containing observations (1) on the Ancient Notions of Destiny; (2) on Dreams; (3) on the Origin and Credit of Oracles; (4) and the Principles on which their Responses were defended against any attack,' 12mo, 1755. It is chiefly a translation from Herodotus, with a serious discussion of the inspiration of oracles. It was ridiculed in the first 'Edinburgh Review,' and in Smollett's 'Critical Review.' In 1769 he published a history of France under Francis II and Charles IX, in 1775 a continuation to the edict of Nantes, and in 1783 another to the peace of Munster. Each book, it is said, was paid for by the sale of a house. In 1791 he published a volume on the 'Philosophy of Ancient Greece,' said to show reading and an improved style. He died 31 Aug. 1800 at Chirnside.

[Burton in S.D.U.K. Dict.; Anderson's Scottish Nation; Chalmers's Biog. Dict.; Gent. Mag. lxx, 999.]

ANDERSON, WILLIAM (d. 1778), surgeon and naturalist, accompanied Captain Cook as surgeon's mate in the Resolution in 1772-75, and as naturalist on board the same vessel on that commander's third voyage. He contributed the vocabularies of the various languages printed in the official relation of the former voyage, and his observations during the early part of the latter are cited by Cook in his own words. Amongst these may be mentioned an account of the Kerguelen cabbage, *Pringlea antiscorbutica*. His health began to fail towards the end of 1777, and he died of consumption on 3 Aug. 1778; an island sighted the same day was named Anderson's Island in his memory. Two papers by him, upon poisonous fish and a detached rock near Cape Town, are in the 'Philosophical Transactions,' vols. 66 and 68. His commander, in the narrative of the voyage, testified in strong terms to his sense of his abilities and devotion; and Robert Brown, in founding the genus *Andersonia* chiefly in honour of him, speaks in eulogy of his devotion to botany. In the Banksian Library in the British Museum there are manuscript lists of animals and plants noted by him during his two voyages.

[Cook and King's Voyage to the Pacific Ocean, i. 84, 106, 145, 321, ii. 440-1; Brown's Prodromus Floræ Novæ Hollandiæ, p. 553; Dryander's Cat. Bibl. Banks. ii. 32, iii. 184; Hooker's Companion to Bot. Mag. ii. (1836) 227.] B. D. J.

ANDERSON, WILLIAM (1757-1837), marine painter, exhibited at the Academy between 1787 and 1814. He was born in Scotland and brought up as a shipwright. His works, usually of small size, show a seaman's knowledge, and his drawing is correct and careful in all that concerns shipping. His water-colour paintings are pleasing, and have an interest for those concerned in the development of the art, but are not otherwise noteworthy. He painted on one occasion the interior of Westminster Abbey, and some landscapes, but his subjects are most often river scenes 'neatly painted, low and agreeable in colour.' In the print room at the British Museum is a large water-colour drawing, dated 1791, excellently representative of the painter. Five 'views of the battle of the Nile' were engraved in aquatint by William Ellis (1800) after drawings by Anderson. At South Kensington there are two good examples of his work. His later work shows some advance upon his earlier, which was rather like tinted drawing than true water-colour painting.

[Redgrave, Dictionary of Painters; Nagler, Künstler-Lexicon, ed. 1872.] E. R.

ANDERSON, WILLIAM (1766-1846), horticulturist, was born in Scotland, his father having been, just previous to the rising of 1745, forester and gardener to a Jacobite laird in the western highlands, who had some share in favouring the escape of Charles Edward. About 1790 he entered upon gardening work in some nurseries near Edinburgh, and subsequently made his way to London, where he became gardener to James Vere, of Kensington Gore, a wealthy silk merchant who had a large collection of plants. In 1814 he was appointed by the Society of Apothecaries gardener—a title changed during his occupancy of the office to curator—of their botanic garden at Chelsea, a post which he filled until his death. He at once set to work to raise the garden from the state of neglect into which it had fallen, and his efforts were attended with great success. In person he was tall and burly, somewhat rough in manners and appearance, but warm-hearted and charitable. He was elected an associate of the Linnean Society in 1798, and became a fellow in 1815; he contributed various papers on horticultural subjects to the 'Gardener's Magazine' and 'Horticultural Society's Transactions.' He died at Chelsea, 6 Oct. 1846, and is buried in the churchyard of the old church.

[Proceedings of Linnean Society, i. 331; Field and Semple, Mem. Bot. Gard. Chelsea (1878), 119, 203-5.] J. B.

ANDERSON, WILLIAM (1805-1866), miscellaneous writer, was born at Edinburgh 10 Dec. 1805. His father was supervisor of excise at Oban, and his mother the daughter of John Williams, author of the 'Natural History of the Mineral Kingdom.' He was thus a younger brother of John Anderson, the historian of the house of Hamilton [see ANDERSON, JOHN, 1789-1832]. After receiving a good education in Edinburgh he became clerk to a Leith merchant, but subsequently entered a lawyer's office in Edinburgh. At an early period he began to contribute to the newspapers, and in 1830 published a volume of verse, entitled 'Poetical Aspirations,' which reached a second edition in 1838. This was followed by a volume of prose and verse, entitled 'Odd Sketches.' After a short residence in London in 1831 he obtained a situation on the 'Aberdeen Journal.' In 1836 he returned to London, where he formed a rather extensive literary connection, and in 1839 brought out the 'Gift of all Nations,' an annual which numbered among its contributors Thomas Campbell, Sheridan Knowles, the Countess of Blessington, and Miss Pardoe. In the same year he also published 'Landscape Lyrics,' which reached a second edition in 1854. In 1842 he became editor of the 'Western Watchman,' a weekly newspaper published at Ayr; in 1844 he was chosen subeditor of the 'Edinburgh Witness,' which, although the articles of Hugh Miller had secured it a wide circulation, had hitherto been subedited in a very perfunctory manner; and in 1845 he became the chief subeditor of the 'Glasgow Daily Mail,' the first daily newspaper published in Scotland. On account of the serious effects on his health of severe night labour, he was two years afterwards compelled for a time to abandon literary work, and he never formed any subsequent connection with a newspaper. With the exception of a volume of 'Poems' published in 1845, and the 'Young Voyager,' 1855, a poem descriptive of the search after Sir John Franklin, and intended for juvenile readers, the remaining works of Anderson are of the nature chiefly of popular compilations. They include an edition of the 'Works of Lord Byron,' with a life and notes, 1850; the 'Poems and Songs of R. Gilfillan,' with a memoir, 1851; and a 'Treasury' series, embracing the 'Treasury of Discovery,' 1853; of the 'Animal World,' 1854; of 'Manners,' 1855; of 'History,' 1856; and of 'Nature,' 1857. Of a somewhat higher character than these compilations are the 'Scottish Nation,' 1859-63, an expansion of his 'Popular Scottish Biography' published in 1842; and 'Ge-

nealogy and Surnames,' 1865. The 'Scottish Nation,' though diffuse and ill arranged, displays great industry and a minute acquaintance with Scottish family history; while 'Genealogy and Surnames,' amid much that is commonplace, contains some curious information not easily accessible elsewhere. Anderson was, however, more successful as a composer of verses than as a prose writer; for though his poetry, both in English and vernacular Scotch, is generally sweet and tuneful, his compilations are not characterised by much merit of a literary kind. He died suddenly at London 2 Aug. 1866.

[Rogers's *Scottish Minstrel* (1870), pp. 327-8; Wilson's *Poets and Poetry of Scotland*, ii. (1877), 269-72; Irving's *Book of Eminent Scotsmen*, p. 10.] T. F. H.

ANDERSON, WILLIAM, LL.D. (1799-1873), theological writer and preacher, was born on 6 Jan. 1799, at Kilsyth, near Glasgow, where his father, Rev. John Anderson, was minister of a congregation of what was then called the Relief church, afterwards merged in the United Presbyterian. William Anderson became a minister in the same communion, having been ordained in 1822 pastor of the congregation in John Street, Glasgow, an office which he held till his death, though for some years he had retired from its more active duties. Very early in his career Dr. Anderson manifested an eccentricity which procured for him the *sobriquet* of 'daft Willie Anderson.' He showed much resolution in his early youth in insisting on his right to read his discourses in the pulpit from manuscript, and in his vindication of the use of the organ in public worship.

As a preacher he was popular, but his powers were more forcibly displayed on public platforms. He was an uncompromising opponent of slavery, an enthusiastic supporter of oppressed nationalities, an eager advocate of political reforms in the interest of the people, and a cordial supporter of liberal measures generally. He was likewise a strenuous advocate for the separation of church and state. On one occasion in London, in pleading the anti-slavery cause, he appeared on the same platform with Daniel O'Connell, and made so favourable an impression that O'Connell and the audience urged him to continue his speech when the time allotted to him came to an end.

Dr. Anderson was a great favourite with the community of Glasgow, and, in a sense, held a similar position to that of Dr. Chalmers before him, and that of Dr. Norman Macleod after him. He encouraged independence of thought and action, and had no

fear of the traditionary opinion that politics ought not to be introduced into the pulpit. He was a strenuous opponent of the Church of Rome. He was a strong millenarian, and in early life had come under the influence of Edward Irving and Mr. Cunningham of Lainshaw.

Dr. Anderson published many pamphlets and several books. His larger productions were two volumes of sermons, a volume on *Regeneration*, one on the 'Filial Honour of God,' and two volumes on the *Mass and Penance*. His theological position was that of a moderate Calvinist.

In social life his wide general knowledge, his humour, his store of anecdotes and memorable sayings, rendered him singularly attractive.

He received the degree of LL.D. from his own university of Glasgow in 1850.

[Life, by the Rev. George Gilfillan, of Dundee, 1873.] W. G. B.

ANDERTON, HENRY (1630-1665 ?), portrait painter, born 1630, was a pupil of Robert Streater, at one time a famous painter, and in choice of subjects he followed his master. He painted portraits, landscapes, still-life and historical subjects. He made a tour in Italy, and was employed by the court on his return. In 1665, according to Nagler, he stood in high repute. He died soon after. His most celebrated work was a portrait of Mrs. Stuart, afterwards duchess of Richmond. His success with this portrait obtained for him a sitting from Charles II and many of his courtiers. There are no engraved portraits bearing his name, and it is supposed that much of his work may have been ascribed to Sir Peter Lely, of whom he was in some sort the rival.

ANDERTON, JAMES (A. 1624), was a catholic controversialist, who, in the first quarter of the seventeenth century, published several learned works under the name of 'JOHN BRERLEY, Priest.' Of his personal history hardly anything is known, and the statements concerning him are very conflicting. The Rev. Charles Dodd, in his 'Church History of England, chiefly with regard to Catholics,' published between the years 1737 and 1742, asserts that 'John Brekeley' is 'either a fictitious name, or at least assumed by James Anderton of Lostock, in Lan-

cashire, a person of singular parts and erudition, as well as master of a plentiful estate; who, having published several controversial treatises, assumed the name of Brekeley in order to conceal his person, and secure himself against the penalties he might incur upon that account. Several authors I meet with positively affirm Mr. Anderton to have been the composer of the said works. Which is confirmed by some circumstances. The manuscripts in his own handwriting are still preserved in the family: where I have also seen a collection of protestant books with marginal notes by Mr. Anderton, and the passages scored with a pen accordingly as he had occasion to transcribe them and insert them in his works.' Dodd also states expressly and emphatically that Anderton was a layman. According to the pedigree of the family printed in Baines's 'History of the County Palatine of Lancaster,' the master of the 'plentiful estate,' during the earlier part of the seventeenth century, was Roger Anderton of Birchley, who died in 1640, but he had a brother James, of whom Baines says that he 'went abroad and became a catholic clergyman.' On the whole it seems probable, in spite of Dodd's positive assertion to the contrary, that James Anderton was a priest and a younger brother.

The works of Anderton are: 1. 'The Protestants Apologie for the Roman Chvrch. Deuided into three seuerall Tractes.' It passed through three editions. In the preface to the second, which appeared in 1608, in the shape of a closely printed quarto of more than 800 pages, the author addresses an 'Advertisement to him that shall answer this Treatise,' namely to Dr. Morton, afterwards bishop of Durham, and 'maketh bold to premonish him hereby of three things. First that in such his answer he would (at the least for so much thereof as is yet to do) be pleased to take notice of this edition, and not insist upon advantage of the other first, which was imperfect: and being (as was at first signified) published without the authors knowledg, was in such and other respects, suppressed by the authors speciall meanes, some few copies thereof (which were at first over hastily divulged) onely excepted.' The first edition thus complained of was published, according to Dodd, in 1604. The same writer states that the third edition was published in 1615; and a Latin translation of it, by William Rayner, a doctor of the Sorbonne, was published at Paris in the same year. The work, on its first appearance, attracted much attention. Dr. Morton, afterwards bishop of Durham, in the preface to his answer to it, acknowledges

that whatever of real pith had been said against the protestant cause 'seemeth herein to have been collected, urged, and reinforced against us with as singular choice of matter, with as ponderous weight of consequence, with an as exact and exquisite method and style, together with as sober a temper of speech as they'—the writers of the 'Apologie,' of whom he assumes more than one, 'by their diligence, judgment, wit, art, and moderation, could easily perform. This seene,' he adds, 'forthwith our most reverend, careful, and religious metropolitane,' Archbishop Bancroft, 'commanded a certain number of divines, then at hand, to employ their studies for the perfecting of a satisfiable reply.' Owing to various obstacles, however, the task fell upon Morton alone, who in 1610 published his answer under the title of 'A Catholike Appeale for Protestants.' The plan adopted in Brerely's book was to convict the protestants of inconsistency by producing from many of their writers passages in which they separately admitted each claim of the Roman catholic church. The plan of Morton, on the contrary, was to show that each of the doctrines had been held by some of the catholics who were admitted to be orthodox. His biographer, Dr. John Barwick, claims for him complete success, adducing as a proof the fact that none of his adversaries was ever so hardy as to attempt a rejoinder. Dodd, on the other hand, alleges that the catholic authors quoted by Morton were 'singular in their opinions, and not allowed of by the rest of that communion. Again, the various disagreements he mentions were not concerning essential, but indifferent matters. These two considerations render his reply insignificant.' 2. 'The Liturgie of the Masse: wherein are treated three principal pointes of Faith. 1. That in the Sacrament of the Eucharist are truly and really contained the body and bloud of Christ. 2. That the Masse is a true and proper sacrifice of the body and bloud of Christ, offered to God by Preistes. 3. That communion of the Eucharist to the Laity under one kind is lawful. The ceremonies also of the Masse now used in the Catholike Church, are all of them derived from the Primitive Church.' Cologne, 1620, a thick vol. of 469 pages, 4to. 3. 'St. Austin's Religion collected from his own Writings,' 1620, 4to. This was replied to by William Crompton in a work entitled 'Saint Austin's Religion: wherein is manifestly proued out of the Workes of that learned Father that he dissented from Poperie.' Lond. 1624 and 1625, 4to. The second edition of this reply was revised by Archbishop Laud at the express direction of

King Charles I, as appears from a passage in the archbishop's diary. 4. 'The Reformed Protestant.' This work is mentioned by Gee in his catalogue of popish books, and he adds: 'There was a printing house suppressed about three years since [i.e. in 1621] in Lancashire, where all Brerely's works, with many other popish pamphlets, were printed.' 5. 'Luther's Life collected from the Writings of him selfe, and other learned Protestants, together with a further shorte discourse, touchinge Andreas Melancthon, Bucer, Ochine, Carolostadius, Suinglius, Caluine, and Beza, the late pretended Reformers of Religion. Taken from the onely reporte of learned Protestants themselves.' St. Omer, 1624, 4to.

ANDERTON, LAURENCE, *alias* SCROOP (1577–1643), a learned Jesuit, was born in Lancashire in 1577, being the son of Thomas Anderton, of Horwick, and brother of Christopher Anderton, of Lostock. Having learned his rudiments at the grammar school of Blackburn, he was sent from thence to Christ's College, Cambridge, where he was admired for his brilliant genius and ready eloquence, upon which account he was commonly called 'Golden-mouth Anderton.' He took the degree of B.A. in 1596–7, and it is said that he became a clergyman of the established church. Dodd, the historian, relates that Anderton, 'being much addicted to reading books of controversy, could not get over some difficulties he met with concerning the origin and doctrines of the Reformation, which at last ended in his conversion to the catholic church.' Anthony à Wood, in reference to this turning-point in Anderton's career, observes that 'his mind hanging after the Roman catholic religion, he left that college (at Cambridge) and his country, and, shipping himself beyond the seas, entered into Roman catholic orders, and became one of the learnedest among the papists.' Proceeding to Rome, he entered the Society of Jesus in 1604, and became a very distinguished member of the English province. His missionary life, which extended over nearly forty years, in times of difficulty and danger, was chiefly passed in his native

county, where he died on April 17, 1643. He was remarkable for his talent in preaching, and gave proof of his ability in controversy by the following performances:

1. 'One God, One Faith,' under the initials of W. B., 8vo, 1625. 2. 'The Progenie of Catholics and Protestants, whereby on the one side is proved the lineal descent of Catholics, for the Roman faith and religion, from the Holie Fathers of the Primitive Church, even from Christs verie time until these our dayes, and on the other the never being of Protestants during al the foresayd time.' Rouen, 1633, 4to. 3. 'The Triple Cord; or, a Treatise proving the Truth of the Roman Religion, by Sacred Scriptures, taken in the literall sense, expounded by ancient Fathers, interpreted by Protestant writers. With a Discouery of sundry subtile Sleights vsed by Protestants, for euading the force of strongest Arguments, taken from cleerest Texts of the foresaid Scriptures.' St. Omer, 1634, 4to, a stout volume of 801 pages.

ANDRÉ, JOHN (1751-1780), major in the British army, was the son of a Genevese merchant settled in London. He received his education at Geneva, and upon his return to England became intimately connected with Miss Seward and her literary *coterie* at Lichfield, where he conceived an attachment for Honora Sneyd, subsequently the second wife of Richard Lovell Edgeworth. His relinquishment of mercantile for military pursuits has been attributed to the disappointment of his passion for this lady, whose marriage, however, did not take place till two years after the date of his commission, 4 March 1771. He joined the British army in America, and in 1775 was taken prisoner at St. John's. Upon his release he became successively aide-de-camp to General Grey and to Sir Henry Clinton, who entertained so high an opinion of him as to make him adjutant-general, notwithstanding his

youth and the short period of his service. This position unhappily brought him into connection with Benedict Arnold, who was plotting the betrayal of West Point to the British. As Clinton's chief confidant, André was entrusted with the management of the correspondence with Arnold, which was disguised under colour of a mercantile transaction, Arnold signing himself Gustavus, and André adopting the name of John Anderson. When the negotiations were sufficiently advanced (20 Sept. 1780), André proceeded up the Hudson River in the British sloop *Vulture* to hold a personal interview with Arnold. To avoid treatment as a spy, he wore his uniform, and professed to be aiming at an arrangement with respect to the sequestered property of Colonel Beverley Robinson, an American loyalist. His letter to Arnold on the subject having been shown by the latter to Washington, the American generalissimo so strongly protested against any interview that Arnold was compelled to resort to a secret meeting, which took place on the night of 21 Sept. Arnold then delivered to André full particulars respecting the defences of West Point, and concerted with him the attack which the British were to make within a few days. Meanwhile the *Vulture* had been compelled by the fire of the American outposts to drop further down the river, and André's boatmen refused to row him back. He spent the day at the farmhouse of Joshua Smith, a tool, but probably not an accomplice, of Arnold's, and had no alternative but to disguise himself as a civilian, which, as he was within the American lines, brought him within the reach of military law as a spy. He started the following morning with a pass in the name of Anderson signed by Arnold, and under the guidance of Smith, who only left him when he seemed past all danger. By nine on the morning of the 23rd he was actually in sight of the British lines when he was seized by three American militiamen on the look-out for stragglers. Had he produced Arnold's pass, he would have been allowed to proceed, but he unfortunately asked his captors whether they were British, and, misunderstanding their reply, disclosed his character. He was immediately searched, and the compromising papers were found in his boots. Refusing the large bribes he offered for his release, the militiamen carried him before Colonel Jameson, the commander of the outposts, who had actually sent him with the papers to Arnold, when, at the instance of Captain Talmadge, André was fetched back, and the documents forwarded to Washington. Jameson, however, reported his capture to Arnold,

and the news came just in time to enable the latter to escape to the British lines. André acknowledged his name and the character of his mission in a letter addressed to Washington on 24 Sept., in which he declared: 'Against my stipulation, my intention, and without my knowledge beforehand, I was conducted within one of your posts.' On 29 Sept. he was brought before a military board convoked by Washington, which included Lafayette and other distinguished officers. The board found, as it could not possibly avoid finding, that André had acted in the character of a spy. He was therefore sentenced to execution by hanging. Every possible effort was ineffectually made by the British commander to save him, short of delivering up Arnold, which of course could not be contemplated. Washington has been unreasonably censured for not having granted him a more honourable death. To have done so would have implied a doubt as to the justice of his conviction. André was executed on 2 Oct., meeting his fate with a serenity which extorted the warmest admiration of the American officers, to whom, even during the short period of his captivity, he had greatly endeared himself. A sadder tragedy was never enacted, but it was inevitable, and no reproach rests upon any person concerned except Arnold. Washington and André, indeed, deserve equal honour: André for having accepted a terrible risk for his country and borne the consequences of failure with unshrinking courage; and Washington for having performed his duty to his own country at a great sacrifice of his feelings.

André's countrymen made haste to do him honour. The British army went into mourning for him. A monument was erected to his memory in Westminster Abbey, and in 1821 his remains were transferred to the spot. His early friend Miss Seward published a monody on his fate, not devoid of poetical merit, and containing some valuable biographical particulars in the notes. To the charm of his character and manners there is a unanimous testimony, confirmed by every recorded trait and everything we have from his pen. His military promise must have been great to have justified such rapid promotion. He possessed considerable literary ability: the style of his letters is exceedingly good, and he left a satirical poem, 'The Cow Chace' (New York, 1780), in which the marauding exploits of the American general Wayne are ridiculed with much spirit. A pen-and-ink portrait by himself, sketched on the morning originally appointed for his execution, attests both his talent as an artist and his firmness of mind.

It is engraved in Sparks's 'Life of Arnold' and in 'Andreana,' in which collection there are three other portraits. The original of the sketch is at Yale College.

[The fullest authority for André's life is the biography by Winthrop Sargent (Philadelphia, 1862), of which, however, only 75 copies were printed. Mr. Sargent has been somewhat more liberal with his 'Andreana,' a collection of documents relating to André's trial, of which he has printed no less than 100 copies. See also Benson's *Vindication of the Captors of Major André* (1817, and reprinted in 1865); and Joshua H. Smith's *Narrative of the Causes which led to the Death of Major André* (London, 1808); Miss Seward's *Monody*, with the notes; the lives of Benedict Arnold by Jared Sparks and Isaac T. Arnold; and the various biographers of Washington and historians of the American war.]

R. G.

**ANDREAS, or ANDRÉ, BERNARD** (Æ.1500), poet and historian, was a Frenchman by birth, being a native of Toulouse, but came to England together with, or shortly before, Henry VII, whose poet laureate and historiographer he became. Nothing is known of his family, though he is described by a contemporary as of distinguished birth; nor can we even guess the date at which he was born, except vaguely from the fact that in 1521 he describes himself as having attained extreme old age. He was probably introduced to the notice of Henry VII by Fox, afterwards bishop of Winchester, whom he calls his *Mæcenas*. He received his appointment as poet laureate and a pension from the crown soon after Henry came to the throne. He is repeatedly called 'the blind poet' in the accounts of the king's payments, and allusions to this privation occur throughout his writings. Nevertheless, for his ripe scholarship he was appointed tutor to the king's eldest son, Prince Arthur, and probably had no small share in the education of his brother also, the future Henry VIII. He had doubtless taken priest's orders long before, and it seems that he had also been tutor at Oxford. He was, moreover, a friar of the Augustinian order. In 1486 he received a pension of ten marks from the king, and in 1498 the Bishop of Lincoln conferred on him the hospital of St. Leonard, Bedford, which he resigned the following year. In 1500 he was presented by the king to the parish church of Guisnes near Calais; and in 1501 the Abbot of Glastonbury conferred on him the benefice of Higham, which he resigned in 1505 on a pension of 24*l.* paid to him by his successor.

In the year 1500 he began to write a life of Henry VII, most of which, though very

short, must have been written at least two years later, and which he ultimately left incomplete with gaps in various places. The narrative is continued to the suppression of the Cornish revolt in 1497. Afterwards he proposed to present the king with some literary composition every year, and two such treatises are still extant, each containing an account of the principal occurrences of the year in which it was written. Two others also exist, addressed to Henry VIII; but these are not of an historical character, and have no claim to attention otherwise. In truth, it is impossible to attach any value to this author's compositions, except as one of the very few sources of contemporary information in a particularly obscure period. His contemporary Erasmus, who, being of the same order, lodged with him at the Austin Friars in London, is severe on his literary demerits, and accuses him besides of having prejudiced Henry VII against Linacre (*Er. Ep. xiv. lib. xxvi.*). His writings are for the most part in Latin; but we have two short poems in French, and a longer one entitled 'Les Douze Triomphes de Henry VII,' of which he was probably the author. His *Life of Henry VII* is printed in Gairdner's 'Memorials of Henry VII,' in the preface to which work will be found a biographical sketch of the author, with references to the sources of information.

The last notice we have of André is that he resigned the living of Guisnes in November 1521, and he probably died not long after (*Calendar of State Papers, Henry VIII, vol. iii. No. 1818*). J. G.

ANDREE, JOHN (1699?-1785), physician, whose place of birth is unknown, was M.D. Rheims, 1739, and licentiate of the College of Physicians, London, 1741. Dr. Andree practised in London, and wrote several books; but is chiefly known for his connection with the London Hospital, first called the London Infirmary, which he was chiefly concerned in founding in 1740, and of which he was the first and for some time the only physician. He resigned this office and retired from practice in 1764, and died 4 Feb. 1785.

He wrote: 1. 'Cases of the Epilepsy, Hysteric Fits, and St. Vitus's Dance,' &c., 8vo, London, 1746 and 1753. 2. 'Observations on a Treatise on the Virtues of Hemlock in the Cure of Cancers by Dr. Storck,' 8vo, London, 1761. 3. 'An Account of the Tilbury Water,' 8vo, London, first edition, 1737; fifth edition, 1781. 4. 'Inoculation impartially considered, in a Letter to Sir E. Wilmot, Bart.,' 8vo, London, 1765.

Dr. Andree's 'Cases of Epilepsy,' &c., contains histories of patients at the 'London Infirmary,' afterwards the London Hospital, of no special moment. His observations on Storck's pretended method of curing cancer by hemlock are sensible. The account of the Tilbury water refers to a medicinal spring at Tilbury in Essex, and contains reports of chemical analyses executed according to the methods of the day. He was an advocate of the practice of inoculation for the small-pox.

[Medical Register, 1779; Munk's College of Physicians (1878), ii. 148.] J. F. P.

ANDREE, JOHN, jun. (A. 1790), surgeon, who was born about 1740, was the son of Dr. John Andree, senior, to whom one of his books is dedicated. He was apprenticed to Mr. Grindall, senior surgeon to the London Hospital, and in 1766 he appears as a lecturer on anatomy in London, and surgeon to the Magdalen Hospital, and practising in Carey Street, Chancery Lane. In 1780 he was a candidate for the surgery to the London Hospital, but was defeated by Mr. (afterwards Sir William) Blizard. In 1781 he became surgeon to the Finsbury Dispensary, and in 1784 to St. Clement Danes workhouse. About the year 1798 he took the degree of M.D., though it does not appear in what university, and afterwards practised for some years in Hertford, but afterwards returned to London. He died some time after 1819.

Andree published several books, chiefly on surgical subjects. Through not being connected with a large hospital, he never took a leading position as a surgeon in London, but he performed one operation of historical importance. This was a successful operation of tracheotomy for the relief of croup of the larynx in February 1782, which, if not the first on record, since priority is claimed for an operation by Martin in 1730, was the first to attract attention. The patient was a boy five years old, who completely recovered. The case is described by Andree himself in a letter to Sir Astley Cooper, published in the appendix to a paper on 'Cynanche Laryngea' by Dr. J. R. Farre (*Med.-Chir. Transactions, 1812, iii. 335*), but had been previously related in 1786 in an inaugural dissertation by Dr. T. White, published at Leyden in that year. The same operation was done in 1812 by Sir Astley Cooper himself, and afterwards became celebrated in the hands of Bretonneau and Trousseau. In Andree's operation the annular cartilages were not divided, but only two punctures made in the membrane between them. No tube was introduced.

He wrote (all in 8vo): 1. 'On a Case of

Suppression of Urine, Medical Observations and Enquiries,' vol. v., 1776. 2. 'Essay on Gonorrhoea,' London, 1777. 3. 'Observations on the Venereal Disease,' London, 1779. 4. 'Considerations on Bilious Diseases,' Hartford, 1788; second edition, London, 1790. 5. 'Cases and Observations [in Surgery],' London, 1799. Andrew's writings on venereal diseases show much originality. In one capital point he anticipated John Hunter (whose work appeared in 1786), and described other pathological facts which have since been brought forward as novelties (see PROKRSCH, *Virchow's Jahresbericht der Medizin*, 1879, i. 395). A more conspicuous position, and possibly more self-confidence, were the only things wanting to make him famous.

ANDREW, JAMES, LL.D. (1774?-1833), principal of the East India Company's Military Seminary at Addiscombe, Surrey, was a native of Scotland, and received his education at Aberdeen. He established a private academy at Addiscombe, which acquired so high a reputation that the East India Company made choice of it for the education of their engineer and artillery pupils, when they decided to educate them separately from the king's cadets. In 1809 they purchased the mansion house of Addiscombe, Andrew being appointed head master and professor of mathematics. After conducting the college with great success he retired about 1823. He died at Edinburgh 13 June 1833. Andrew was the author of 'Astronomical and Nautical Tables,' 1805; 'Institutes of Grammar and Chronological Tables,' 1817; 'Key to Scriptural Chronology,' 1822; and 'Hebrew Grammar and Dictionary without Points,' 1823. The copy of this book in the British Museum belonged to the Duke of Sussex, and contains an autograph letter of Andrew.

[Gent. Mag. vol. ciii. part ii. 89; British Museum Catalogue.] T. F. H.

ANDREWE, LAURENCE (fl. 1510-1537), translator and printer, a native of Calais, translated in 1510 'The noble lyfe and natures of man, of bestes, serpentys, fowles & fishes, yt be made known [col.] Translated be me Laurens Andrewe of the towne of Calis, in the famous cite of Andwarpe. Emptrented be me John of Doesborowe [n.d.]' folio (HAZLITT's *Coll. and Notes*, 1876, p. 474). He probably learned the art

of printing from John Doesborowe or Peter Treveris (AMES's *Typ. Ant.* ed. Herbert, i. 412), and practised for some time in London in Fleet Street, at the Golden Cross by Fleet Bridge. Here, in 1527, he printed his own translation of 'The vertuose boke of Distyllacion of the waters of all maner of Herbes . . . by Jherom Bruynswyke, and now newly translate out of Duyche,' sm. folio. He appears to have translated other minor works which have not come down to us, as in the Prologue he observes: 'After dyvers and sondry small volumes and tryfeles of myrth and pataunce som newly composed, some translated and of late finished, [I am] now mynynded to exercise my pene in mater to the reder som what more pyttable.' The book contains a great number of woodcut illustrations of distilling apparatus with interesting figures and descriptions of plants. It is this work which has given Andrewe the credit of producing an edition of 'The grete Herball' in 1527. He also printed, without a date, 'The myrrour & dyscription of the World,' folio, a reproduction of the 1481 text of Caxton, with some of the original wood blocks. Herbert (*Typ. Ant.* iii. 1788) says: 'I have a fragment of Æsop's Fables, bound with his Myrrour, which seems to have been also printed by him.' Another undated production of his press was 'The Directory of Conscience,' 4to. A work entitled 'The Valuation of Golde and Siluer. Made in the famous cite of Antwarpe and newly translated into Englishe by me Laurens Andrewe . . . Emptrentyd in the famous cite of Andwarpe,' without date or printer, is placed by Ames (Herbert's edition, i. 412), who does not, however, appear to have seen it, at 1537, with the remark: 'Mr. Oldis supposed as he was a printer it might be printed by him, but then he must have been at Antwerp at that time.' Another edition of a similar work is given by Herbert (p. 1529) as of 1499, and described precisely. Although not an original author, Andrewe deserves consideration as one of the earliest of those who translated into English works on scientific subjects.

[Besides the editions of Ames's *Typogr. Antiquities* by Herbert and Dibdin, see Tanner's *Bibl. Britannico-Hibernica*.] H. R. T.

ANDREWE, THOMAS (fl. 1604), was the author of a curious and somewhat tedious poem in rhymed heroics, entitled 'The Unmasking of a Feminine Machiavell,' 4to, 1604. Following the title is a dedication 'to his worthy and reverend Vncle, M. D. Langworth, Archdeacon of Welles,' and then come some complimentary verses addressed

to the author by Samuel Rowlands and others. The drift of the poem is somewhat uncertain, as the lady whose machinations were to be exposed is only hinted at darkly. Andrewes was one of the many soldiers of fortune who sought a field for enterprise in the Low Countries. He tells us how he embarked at Dover and went to Guelderland to serve under Prince Maurice and Sir Francis Vere. He took part in the battle of Nieuport (22 June 1600) against the Archduke Albert; and he has given us a fairly spirited description of the battle. Shortly afterwards he returned to England, where he found a lady, whom he designates as a 'feminine Machiavell', busy in trying to take away his good name by calumnious reports. In self-defence he published his little book, which could never have interested any but a few private friends, and is now rarely found even in the libraries of collectors.

[Corser's Collectanea (Chetham Soc.), i. 41-44.] A. H. B.

**ANDREWES, GERRARD (1750-1825)**, divine, was the son of Gerrard Andrewes, vicar of Syston and St. Nicholas, Leicester, and master of the Leicester Grammar School. Cradock, who was one of his pupils, says that he was an excellent scholar, and had become an admirable reader by attending Garrick (*Memoirs*, i. 3 and iv. 90). The younger Gerrard was born at Leicester 3 April 1750, and educated at Westminster. He was elected to a Westminster scholarship at Trinity College, Cambridge, took his B.A. degree in 1773, M.A. 1779, and S.T.P. 1809. He became occasional preacher at St. Bride's, and afterwards at St. James's, in the Hampstead Road. In 1788 an old pupil, Lord Barrington, gave him the living of Zeal Monachorum, in Devonshire; and on 1 Dec. 1788 he married Elizabeth Maria, daughter of the Rev. Thomas Bale, by whom he had three daughters and a son, who married the daughter of Dr. Heberden. In 1791 he became preacher at the Magdalen, and in 1799 at the Foundling Hospital. Lady Talbot admired his sermons, and presented him in 1800 to the living of Mickleham, Surrey, to which he was again presented in 1802 after resigning it upon his collation by Bishop Porteus to St. James's, Piccadilly. In 1809 he gave up Mickleham on his appointment by Perceval to the deanery of Canterbury. In 1812 he declined an offer of the bishopric of Chester on the plea of advancing years. Dibdin says that his 'full strong voice' was never more sonorous and effective than when, in answer to the prime minister's question whether he would be a bishop, he answered,

'Nolo' (DIBDIN, *Reminiscences*, i. 173). He died 2 June 1825 at the rectory of Piccadilly, and was buried at Great Bookham, Surrey. He appears to have been an amiable man, and effective in the pulpit, where, we are told, he was 'fond of insisting on the evidences, and of enforcing, from motives of propriety and expediency, the moral duties.' His only publications are a few sermons.

[Nichols's Illustrations, vi. 256; Gent. Mag. xciii. 84; Cradock's Memoirs.] L. S.

**ANDREWES, LANCELOT (1555-1626)**, bishop of Winchester, was born in the parish of All Hallows, Barking. His father was a merchant, and rose to be master of Trinity House. Lancelot was intended for the same line of life, but his two schoolmasters, Mr. Ward, at the Coopers' Free Grammar School in Ratcliffe, and Mr. Mulcaster, of Merchant Taylors', observing the extraordinary promise of their scholar, persuaded his parents to give him a learned education. From Merchant Taylors' he proceeded to Pembroke Hall, Cambridge, as one of Dr. Watts's scholars. In 1576 he was elected fellow of Pembroke, and in the same year was nominated by Dr. Hugh Price to a fellowship at the newly-founded college of Jesus, Oxford. Andrewes continued to reside at Cambridge, and, having received holy orders in 1580, was appointed catechist at Pembroke. His 'catechetical lectures,' delivered every Saturday and Sunday at 3 p.m., were attended and carefully noted down by all who made any pretensions to the study of divinity; he was also much resorted to as a casuist. He was next persuaded by the Earl of Huntingdon, president of the North, to attend him thither as chaplain; and there 'by preaching and conference he brought over many recusants, priests as well as laity, to the protestant religion' (ISAACSON). In 1589, through the instrumentality of Walsingham, Queen Elizabeth's minister, he obtained the living of St. Giles's, Cripplegate; and shortly afterwards he was appointed to 'a prebend residentiary's place in St. Paul's,' and was chosen master of Pembroke Hall. He held the mastership till 1605, and changed a deficit in the college revenues to a surplus. At St. Giles's he preached constantly, and made his often-quoted remark that 'when he preached twice he prated once;' at St. Paul's he lectured three times every week during term time. From 1589 to 1609 he was also prebendary of Southwell. His work and ascetic mode of life injured his health, and for a while his life was despaired of; but he recovered, and was made chaplain to Archbishop Whitgift, and chaplain in ordinary to the queen. During

Elizabeth's reign he refused two bishoprics (Salisbury and Ely), because the offer in each case was coupled with the condition that he should consent to the alienation of part of the revenues of the see; but shortly before her death (1597-8) he accepted first a stall, and then (1601) the deanery at Westminster. Under King James I Andrewes's rise was rapid. In 1605 he was persuaded with some difficulty to accept the bishopric of Chichester, and was made in the same year king's almoner; in 1609 he was translated to Ely, and in 1619 to Winchester, 'whence,' says Bishop Buckeridge, 'God translated him to heaven,' not, however, before he had narrowly escaped another translation on earth, to the primacy of all England. In 1619 he was also made dean of the Chapel Royal; and he was a privy councillor both for England (1609) and for Scotland (1617). He took part in the Hampton Court conference (1603-4), where his vast patristic learning was of service; his name stands first in the list of divines who were appointed (1607) to make our 'authorised version' of the Bible, being one of the Westminster ten whose province was to translate the Pentateuch and the historical books from Joshua to 1 Chronicles; and when King James set up episcopacy in Scotland it was Andrewes who suggested, in vain, that the prelates elect ought to be ordained priests before they were made bishops. Though Andrewes was so great a favourite at three successive courts, and held, on religious grounds, the highest views of the regal power, he was no flatterer. The following anecdote has been often told: 'My lords,' said King James to the bishops, Neale of Durham and Andrewes of Winchester, as they stood behind his chair at dinner, 'cannot I take my subjects' money when I want it without all this formality in parliament?' 'God forbid, sir, but you should,' said Bishop Neale; 'you are the breath of our nostrils.' Andrewes replied (with perfect truth, for he systematically avoided mixing himself up with politics) that he had 'no skill in parliamentary cases;' but being pressed, 'Then, sir,' said he, 'I think it lawful for you to take my brother Neale's money, because he offers it' (WALLER). It is said that the awe of Andrewes's presence was wont to restrain King James from that unseemly levity in which he was rather too prone to indulge. Andrewes only went to court to deliver his divine Master's message, and so, 'when through weakness he was unable to preach,' Bishop Buckeridge tells us, 'he began to go little to the court.' Though he was so often preferred, Andrewes was quite indifferent about preferment; others were bitterly dis-

appointed when he was not advanced to the primacy, but he himself never was; and so far from showing any resentment against Abbot, who was preferred before him, he proved himself the kindest friend of the unfortunate archbishop when he fell under the charge of casual homicide. Truth, however, compels us to add that in some points Andrewes was not in advance of his age. It is sad to think that he was probably one of the bishops who sanctioned the burning of the Arian, Leggat; and that he voted for the divorce of Essex. He died 26 Sept. 1626.

Andrewes was eminent in three capacities: (1) As a prelate. Few men have more happily combined the various qualities which contribute to make a great prelate than Andrewes. His principles were most distinct and definite, and from these principles he never swerved. He was a thorough English churchman, as far removed from Romanism on the one hand, as from puritanism on the other. He never interfered in public affairs, either as a privy councillor or in any other capacity, except when the spiritual interests of the church seemed to him to be at stake; and then, in spite of his constitutional modesty, he spoke out boldly and to the point. His learning was unequalled. From his childhood to his death he was an indefatigable student; his multifarious business as a public man was never allowed to interfere with his studies. He made a rule of not being interrupted, except for public or private prayer, before dinner-time (12 o'clock); when he was intruded upon, he would say 'he was afraid he was no true scholar who came to see him before noon.' The result was that he made himself master of fifteen languages, if not more, while his knowledge of patristic theology was quite unrivalled. 'The world,' writes Fuller, 'wanted learning to know how learned this man was, so skilled in all (especially oriental) languages, that some conceive he might (if then living) almost have served as an interpreter general at the confusion of tongues.' Yet he was eminent for his social qualities; he had a guileless simplicity both of manner and mind, an unaffected modesty, and a rare sense of humour. His munificence was so great that the very multitude of his benefactions renders it impossible to enumerate them here. Bishop Buckeridge (who knew him perhaps better than any man) seems to have thought that this was the most prominent feature in his character; for he took for the text of his funeral sermon Heb. xiii. 16 ('To do good and to distribute forget not,' &c.), and dwelt largely on Andrewes's fulfilment of this precept. Among Andrewes's other merits as a prelate must be noticed his extreme con-

scientiousness in the distribution of patronage. Simony was one of the three vices (the other two were usury and sacrilege) which he specially abhorred, and he frequently involved himself in trouble and expense rather than institute to livings men whom he thought to be morally liable to the charge. Though he strove to show his gratitude to the friends of his youth, notably to Ward, Mulcaster, and Watts, who had helped him in his education, by seeking out their worthy relations for promotion, he never allowed favouritism or nepotism to influence him; he always strove to find the fittest man for the post which he had to fill, often to the great surprise of the recipient; hence many men, who were then or afterwards eminent, owed more or less to his discernment. He was the earliest patron and friend of Matthew Wren, subsequently the famous bishop of Norwich and of Ely, and one of the earliest who offered to befriend John Cosin, the still more famous bishop of Durham. William Laud, Meric Casaubon 'for his own and his father's merits,' Peter Blois, one of his fellow-translators of the Bible, Nicholas Fuller, 'the most admired critic of his time,' and many others of more or less note were indebted to him. Finally, a great prelate, while firm as a rock in his own convictions, must be large-hearted and tolerant of those who differ from him. And this was Andrewes's character. Take, as an instance, his reply to Du Moulin on episcopacy, remembering that the writer was himself a very decidedly high churchman: 'Though our government be by divine right, it follows not either that there is no salvation, or that a church cannot stand without it; he must needs be made of iron and hard-hearted that denies them salvation. We are not made of that metal,' and so forth. Or take his attitude in regard to worship. Personally he valued a high ritual, and therefore, both as bishop of Ely and as bishop of Winchester, he had his private chapels adorned with what Prynne calls 'popish furniture;' 'the altar 1½ yards high, and a cushion, two candlesticks with tapers, the daily furniture for the altar; a cushion for the service-book, silver and gilt canister for the wafers, like a wicker-basket, and lined with cambric lace; the tonne (flagon) upon a cradle, the chalice covered with a linen napkin (called the aire) on a credence; a little boate out of which the frankincense is poured, a tricanale for the water of mixture; the faldstoy, whereat they kneel to read the litany'—and much more which the reader will find in 'Canterburie's Doome,' not only described, but 'expressed to the life in a copper-piece.' Prynne of course records it all with disgust, but on

others it made a very different impression. 'His chapel,' writes his earliest biographer, 'was so devoutly and reverently adorned, and God served there with so holy and reverend behaviour, that the souls of many that came thither were very much elevated; yea, some that had bin there desired to end their dayes in the Bishop of Ely's chappell.' But, much as Andrewes valued such a service, he never forced it on others; he was 'content with the enjoying without the enjoining' (FULLER). His intimacy with, and kindness to, distinguished foreigners, some of whom held very different views from his own (Du Moulin, the Casaubons, Cluverius, Vossius, Grotius, and Erpinus), is another proof of his large-heartedness. Isaac Casaubon, in his 'Ephemerides,' constantly refers to the wonderful piety and learning of the (then) Bishop of Ely, and his kindness towards himself. Perhaps one must not lay too much stress on the fact that two poets, one an extreme high churchman, Richard Crashaw, the other a puritan, John Milton, celebrated him in verse; for Milton's elegy was written when the poet was only seventeen, and when his puritanism was not yet developed; but we may note that it was a puritan publisher (Michael Sparke) who said that 'to name him was enough praise.' The fact also that Bacon consulted him frequently about his philosophical works is a proof of the width of Andrewes's sympathies.

(2) As a preacher, Andrewes was generally held to be the very 'stella prædicantium,' an 'angel in the pulpit.' But in the later days of Charles II a reaction set in against the old style of sermons with their Greek and Latin quotations, plays upon words, and minute analyses of the text. Andrewes was rightly held to be the most distinguished representative of the old style, as Tillotson was of the new; hence praise of the latter is frequently combined with depreciation of the former. This depreciation has continued in some quarters to the present day, but in others there is a growing disposition to do justice to the most admired preacher in the palmiest days of English literature. His sermons are, no doubt, more full of word-play than the taste of later days approves of; but we can well believe that his 'verbal conceits' would tend to impress the truths he wished to convey more deeply upon his hearers. To take an instance: in one of his grandest sermons, on the 'Nativity,' he says: 'If this child be Immanuel, God with us, then without this child, this Immanuel, we be without God. "Without Him in this world," saith the apostle, and if without Him in this, without Him in the next; and if with-

out Him then, if it be not Immanu-*el*, it will be Immanu-*hell*. What with Him? Why if we have Him we need no more; Immanu-*el* and Immanu-*all*' (i. 145). Divest this of the word-play, and the idea is: 'If God be not with us, hell will be with us; if God be with us, all will be with us,' surely no mere 'frigid conceit.' Greek and Latin quotations are not nearly so numerous in Andrewes's sermons as in those of Jeremy Taylor and many other admired preachers of the seventeenth century. There is, indeed, a certain jerkiness of style in the sermons which renders them far less impressive to read than the flowing periods of Jeremy Taylor; but in their extraordinary wealth of matter they are unrivalled. And we must remember that, after all, we have only Andrewes the sermon-writer, not Andrewes the preacher. There is no doubt that his sermons gained immensely by the charm of his delivery. This it was which specially fascinated Queen Elizabeth; this is hinted at by the first editors of the sermons, Laud and Buckeridge, in their dedication to King Charles: 'Though they could not live with all the elegancy which they had upon his tongue, yet you were graciously pleased to think a paper-life better than none.' This is characteristically referred to by Fuller: 'Such plagiaries who have stolen his sermons could never steal his preaching.' And apart from their intrinsic merit there is an historical interest about these sermons which is perhaps unique. Of what other preacher can it be said, as it has been rightly said about Andrewes by his latest successor at Ely?—'He stood forth for a quarter of a century the great doctor of the Anglican church. For seventeen years it was he who every Christmas day expounded to the court of England the doctrine of the Incarnation, for eighteen on Easter day that of the Resurrection, for fifteen on Whitsunday that of the Holy Spirit, for fourteen in Lent that of self-denial.'

(3) As a writer. Andrewes published but little in his lifetime, though his works now fill eight 8vo volumes in the 'Library of Anglo-Catholic Theology.' His most important work was the 'Tortura Torti.' After the Gunpowder plot a fresh oath of allegiance was imposed, which was taken by most of the Romanists in England until it was condemned by two papal briefs. Then King James himself wrote an apology for the oath, and was answered by the famous controversialist, Cardinal Bellarmine, under the pseudonym of 'Matthæus Tortus,' the name of his almoner. Hence the racy title of Andrewes's reply, 'Tortura Torti' (1609). It was written in Latin, and proves that Andrewes was a good Latin scholar, as well as

a decided anti-Romanist, and a most learned and dexterous controversialist. Among others who spoke highly of the work was Isaac Casaubon (*Ephemerides*, p. 793). The 'Tortura Torti' was followed by another work also in defence of King James, who had again descended into the arena to treat more fully of the new oath. Bellarmine now threw off the mask, and attacked the king in his own name; and Andrewes, in reply, wrote a 'Responsio ad Apologiam Cardinalis Bellarmini.' To this he afterwards added a small tract, entitled 'Determinatio Theologica de Jurejurando exequendo.' No other works of importance were actually published by Andrewes; but after his death many works bearing his name gradually found their way into print. In 1628 ninety-six sermons were published, 'by his majesty's special command,' under the editorship of Laud and Buckeridge. These are, no doubt, word for word, Andrewes's own compositions; but the sermons on the Lord's Prayer and on the Temptation, the 'Exposition of the Moral Law' and the 'Pattern of Catechistical Doctrine' (virtually the same works under a slightly different form), and several more, are only so far Andrewes's as they express his ideas put into shape by others. But there is one set of writings which we must least of all omit to notice. Andrewes had that rarest of all gifts, the gift of composing prayers. His prayers at the consecration of a church or chapel are still generally used, and are admirable of their kind. In 1648 Richard Drake gave to the world a 'Manual of Private Devotions,' a 'Manual of Directions for the Sick,' and 'Prayers for the Holy Communion.' The three works only fill one small 8vo volume; they were all translated from the Greek and Latin manuscript of Andrewes, a copy of which the translator was 'fortunate enough to obtain from the hands of his amanuensis' (Henry Isaacson?) Of these three little works the first, and especially the first part of it, is by far the most famous. It was written in Greek, and was intended exclusively for the bishop's own private use; as also was the second part, which was written in Latin, and is far less finished than the first. The manuscript, we are told, was rarely out of the bishop's hands during the last period of his life. 'Had you seen,' writes Drake, 'the original manuscript, happy in the glorious deformity thereof, being slubbered with his pious hands, and watered with his penitential tears, you would have been forced to confess that book belonged to no other than pure and primitive devotion.' Another translation was published at Oxford in 1675; another by Dean Stanhope (himself a very able and excellent

clergyman) at the beginning of the eighteenth century; another by the excellent Bishop Horne in the later part of the century; another by J. H. Newman of the first part only, which was published first in the 'Tracts for the Times,' and afterwards in a separate form, the second part also being translated and bound up with it. They have reached the hearts of all classes of Christians, even of those who have differed most widely from the writer's views. Few prelates have had less sympathy with the school of thought to which Andrewes unquestionably belonged than the late Archbishop Tait; and yet he adopted Andrewes as his manual of devotion during all the later years of his life, and it was the very last devotional book which was used with him on his death-bed. Among his many admirers Bishop Hackett may be noticed, who knew him well, and concludes an eloquent panegyric with the question: 'Who could come near the shrine of such a saint, and not offer up a few grains of glory upon it?' (*Life of Williams*, p. 45). Andrewes died a bachelor; he was buried at St. Saviour's, Southwark, his old friend, Bishop Buckeridge, preaching the funeral sermon.

Isaacson); Russell's Life and Works of Lancelot Andrewes, 1863; Teale's Lives of English Divines, 1846; Fuller's Church History and Worthies; The St. James's Lectures, second series, Lecture 3, 1876; articles on Andrews, or Andrewes, in the Biographia Britannica and Hook's Ecclesiastical Biography; Prynne's Canterburie's Doome, 1646; Dean Church's Essay on Lancelot Andrewes, in Masters in English Theology; and the various editions of the Devotions with the Introductions, &c.] J. H. O.

**ANDREWS, EUSEBIUS** (d. 1650), royalist, of good family 'but inconsiderable estate' in Middlesex, was secretary to Lord Capel and a barrister (probably of Lincoln's Inn). Early in the civil war he joined the king's army; but on the surrender of Worcester in 1645, despairing of the success of his cause, he returned to the private practice of his former profession. He did not acknowledge the party in power, either by compounding for his 'delinquency,' or by subscription to the covenant and the tests which succeeded it. But his course of life, however retired, could not escape the vigilance of the regicide rulers, his actions, for years together, being as well known to the council of state 'as if they had kept a diary for him.' John Barnard, a major formerly under his command, was his frequent visitor, and 'obtruded upon his acquaintance two cavaliers, Captain Holmes,

and John Benson, a copying clerk under Rushworth—who proposed to take advantage of the discontent of the dismissed parliamentary officers, and of their repentant desire to serve the young king. It was suggested that Andrews should go into Cambridgeshire, to ascertain whether an old plan of his for the surprise of the Isle of Ely were still feasible; but this project was abandoned on the failure of the royalist movements in Scotland and Ireland. An ordinance having passed that all who had not taken the prescribed tests should leave London, Andrews prepared to quit England, and was in treaty with Sir Edward Plowden for some land in New Albion, when Barnard persuaded him to remain, on pretence of a rising to be headed by 'persons of quality' in Kent, Dorset, and Bucks. Andrews was induced to subscribe this new royalist 'engagement,' and to endeavour to draw in Sir John Gell, of Hopton, who was known to be influential and disaffected. But Gell, though protesting his loyalty, was too wary to commit himself; and Andrews, finding that the whole scheme was a delusion, prepared to carry out his former resolution of leaving the country, when he was arrested at Gravesend (24 March 1650). Barnard had been the spy of the council, and had only delayed the arrest of Andrews that other cavaliers might be, through him, decoyed to a like ruin. On his arrival in London, Andrews was examined by President Bradshaw, Sir Henry Mildmay, and Thomas Scott, with a view of extorting admissions to be used against others. Disappointed in this, they committed him to the Tower on a charge of treason in endeavouring to subvert the government; and the evidence of this design was furnished by the 'Narrative' he had himself handed in. Andrews charged Bradshaw with setting spies to trepan him, and Bradshaw acknowledged and defended the practice. Andrews was kept close prisoner for sixteen weeks. As prisoners then had to bear their own expenses, 'his score for necessaries was swollen beyond his ability to discharge,' and 'his friends were not permitted to visit or relieve him (a few persons were allowed to see him on law business only in the presence of the lieutenant) (*State Papers*, Dom. 1650). Having vainly petitioned the council four times for a pardon or a speedy trial, he addressed the same prayer to the parliament. The answer was his arraignment before the high court of justice (16 Aug.), where the attorney-general, Prideaux, urged his condemnation on the evidence of his own 'Narrative.' Andrews demurred to the jurisdiction of the tribunal, as a mere court-martial.

not a court of record—'having power only to condemn, not to acquit'—and established in contravention of Magna Charta, the Petition of Right, and the promise made by the parliament not to interfere with the ordinary course of justice. Prideaux replied 'that they were not at leisure to take notice of his law cases, but only of his confession,' and the inevitable condemnation followed. Andrews had in the meantime again petitioned parliament, but a resolution was passed (19 Aug.) that his confessions and examination having been transmitted to the high court, 'it was not fit to interfere further.' The usual sentence in treason cases was, however, altered to beheading, and he was executed on Tower Hill 22 Aug. 1650. Andrews met his fate with firmness, kissing the axe (probably that used on the king and Lord Capel), hoping to meet his former masters that day in the presence of the Saviour, and thanking those in power for their courtesy in awarding him a mode of death suitable to his quality. He gave the executioner 3*l*.—all he had—as a fee, and at his ejaculation, 'Lord Jesus, receive me!' his head was struck off at a blow. Of the other persons concerned—Barnard, rewarded with money and promotion, found his true deserts when, four years later, he was hanged at Tyburn for robbery; Ashley was condemned but pardoned; Benson was hanged; Sir John Gell was found guilty of misprision of treason, and so escaped with life, though his estate was forfeited, and he imprisoned till April 1653 (*Athena Oxon.* (ed. Bliss), iii. 561). Some writers have asserted that Andrews, by his demonstration of the illegality of the high court, practically abolished it. But it was too serviceable an instrument to be parted with, and he was by no means its last victim. A detailed account of his death was published by his friend Francis Buckley. It is curious to note that this narrative was reproduced, almost word for word, in a pamphlet professing to relate the particulars of the execution of the Earl of Derby in October 1651.

[State Trials; Whitelocke's Memorials.]

R. C. B.

ANDREWS, GEORGE (*f*. 1776), of the Middle Temple, barrister-at-law, published reports of cases argued in the court of King's Bench during the eleventh, twelfth, and thirteenth years of the reign of George II (1737–1740) before Sir William Lee, chief justice, and Sir Francis Page, Sir Edmund Probyn, and Sir William Chapple. He was only son of George Andrews, of Wells; was a member of the Middle Temple, and called to the bar in 1740.

Andrews's 'Reports' are seldom now referred to, but they had a high reputation in the last century. A folio edition was published in 1754, and an octavo edition, with some additional cases, in 1792 by G. W. Vernon of the Irish bar. They are pronounced by Marvin (*Legal Bibliography*, sub tit. 'Andrews') to be 'accurate, judicious, and satisfactory,' and are characterised by Rayner (*Readings on the Statutes*, p. 96, published 1775) as 'very much esteemed by the profession in general.'

[J. B. Wallace, Reporters, sub tit. Andrews; and the authorities cited above.] J. M. R.

ANDREWS, HENRY (1743–1820), an astronomical calculator, was born in 1743, of poor parents, at Frieston, near Grantham, Lincolnshire. At the age of ten, he began to observe the stars with a telescope mounted on a table in Frieston Green, and quickly developed an uncommon facility and fondness for astronomical calculations. He entered domestic service while still a lad, first in the house of a shopkeeper at Sleaford, next with a lady living at Lincoln, and lastly with a Mr. Verinum, who allowed him some hours a day for study. A distinguished company assembled at Aswarby Hall was supplied by him with the means of viewing the solar eclipse of 1 April 1764, which he had calculated with remarkable accuracy. Soon after, he became usher in a school kept by a clergyman at Stilton, having first tried the profession on his own account at Basingthorpe, near Grantham; he then removed for a while to Cambridge, and finally set up as bookseller and schoolmaster at Royston, Herts, where he remained until his death, at the age of 76, 26 Jan. 1820. For above forty years he was one of the calculators for the 'Nautical Almanack,' and on his retirement received the thanks of the Board of Longitude, with a handsome present in recognition of his services. Dr. Hutton employed him similarly for Moore's and other almanacks, and Dr. Maskelyne corresponded with him during nearly fifty years. By him and others he was esteemed no less for the modesty and integrity of his character than for the singular abilities by which he had raised himself from a humble station to a position of honour amongst men of science.

[Gent. Mag. xc. pt. i. 182, pt. ii. 639.]

A. M. C.

ANDREWS, HENRY C. (*f*. 1799–1828), botanical artist and engraver, lived at Knightsbridge, Middlesex, and there published the following works: 1. 'The Botanist's Repository for New and Rare Plants'

(1799-1811), in 10 vols. 4to. 2. 'Coloured Engravings of Heaths' (1802-30), 4 vols. folio. 3. 'The Heathery' (1804-12), 6 vols. 8vo. 4. 'Geraniums' (1805), 2 vols. 4to. 5. 'Roses' (1805-28), 2 vols. 4to. The drawings for these, which are careful and artistic, were executed by Andrews; but the letterpress accompanying them was in many instances by other hands; that of the 'Heaths' was by James Wheeler, then curator of the Chelsea Botanic Gardens, while in the first five volumes of the 'Repository' he was 'assisted by gardeners and cultivators,' and in the sixth 'by a botanist whose opinions were diametrically opposed to those of the former.' In consequence of this, Andrews tells us in the preface to his 'Geraniums,' that he thought it 'much better [in that work] to try his own strength, however weak, than to remain tottering between the support of two such unequal crutches.' Andrews does not seem to have contributed to contemporary periodical literature, and we have no record of the date of his death. Ventenat named a genus *Andreusia* after him, which is synonymous with *Myoporum*.

[Prefaces to Andrews's works.]

J. B.

ANDREWS, JAMES PETTIT (1737?-1797), antiquary and historian, was the younger son of Joseph Andrews, of Shaw House, a fine Elizabethan mansion near Newbury, and was born about 1737. He served in the Berkshire militia from the date of its being called out until it was disbanded, and after that date exchanged arms for the law, ultimately becoming in 1792, and remaining until his death, one of the magistrates at the police court in Queen Square, Westminster. His wife, Miss Anne Penrose, was a daughter of the Rev. Mr. Penrose, the rector of Newbury, and a sister of the Rev. Thomas Penrose, whose poetical pieces, edited by Mr. Andrews in 1781, are included in several old collections of English poetry. Mr. Andrews built at great expense a large house, called Donnington Grove, near his father's seat, but soon disposed of it to another. His wife died in 1785, and he himself 6 Aug. 1797; both lie buried in Hampstead church. His chief works are: 1. 'The Savages of Europe,' a translation from the French [of Messrs. Lesuire and Louvel], 1764, with illustrations by the translator—a grotesque satire on the English. 2. 'An Appeal to the Humane on behalf of Climbing Boys employed by the Chimney Sweepers,' 1788. 3. 'Anecdotes, antient and modern,' 1789, with 'Addenda' in 1790—an amusing collection of gossip from old books. 4. 'History of Great Bri-

tain from death of Henry VIII to accession of James VI of Scotland,' published in 1796 in one volume, second edition in two vols. in the same year, and third edition in 1806. 5. 'History of Great Britain connected with the Chronology of Europe from Cæsar's invasion to accession of Edward VI,' 1794-95, 2 vols. Both histories, though long since superseded, contained much curious information from ancient literature; the former work was intended as a continuation of Dr. Henry's history of Great Britain. In 1798 he joined Pye, the poet laureate, in a five-act tragedy from the German, called the 'Inquisitor.' Mr. Andrews contributed many topographical papers to the 'Archæologia' and to the 'Gentleman's Magazine.'

[Gent. Mag. lxvii. pt. ii. 716, 796 (1797); Hist. and Antiquities of Newbury (1839), 116-20, 172-75.] W. P. C.

ANDREWS, JOHN (17th cent.), poet, was the author of a striking and too long neglected poem called the 'Anatomie of Basenesse' (1615), which has been recently reprinted in the 'Miscellanies of the Fuller Worthies' Library' (vol. ii.). The 'Anatomie' was published with only the initials I. A. in the epistle dedicatory to Sir Robert Sydney, but this epistle guides to the authorship. Apologising for his dedication, the writer says, among other things, that he prints not 'vaine-gloriously,' or he would have 'subscribed his name,' and that he forbore to have his name published 'out of some respects.' The 'some respects' probably refer to his being a minister of the Gospel; he seems to have held that his satire was too drastic and vehement for a clergyman, and might lay him open to misconstruction. Anthony à Wood in his 'Athenæ,' and his editor Dr. Bliss, filled in the initials thus—'I[ohn] A[ndrews]'—and wrote of him: 'John Andrews, a Somersetshire man born, was entered a student in Trinity College 1601, aged 18, took one degree in arts [viz. M.A., *Fasti Oxon.*], left the university, became a painfull preacher of God's word, and a publisher of' certain books. . . . 'When he died, or where he was buried, I know not.' According to Dr. Bliss he 'seems to have been the same person with John Andrews, minister and preacher of the word of God at Barrick [Beswick] Bassett, in the county of Wilts, who was the author of "Christ's Cross; or the most comfortable Doctrine of Christ crucified, and joyful Tidings of his Passion." Oxon. 1614, qu. in two parts. To this writer we may ascribe a very rare poetical work entitled the "Anatomie of Basenesse." Sir Richard Hoare, the historian of Wiltshire,

makes no mention of Andrews. It would therefore appear that he was curate or assistant or lecturer rather than incumbent.

All the religious books of John Andrews have interspersed verses of the same stamp as those to be found in the 'Anatomie of Baseness.' They include: 1. 'Andrewes' Golden Chaine to linke the penitent sinner unto Almighty God' (1645). 2. 'Brazen Serpent . . . at Pauls Crosse' (1621). 3. 'Converted Man's New Birth' (1629). 4. 'Andrewes' Repentance, sounding alarum to returne from his sinne unto Almighty God, declaring his repentance. Published by John Andrewes, minister of the Word of God in the county of Wilts' (1623). 5. 'A Golden Trumpet sounding an Alarum to Judgement,' by 'John Andrewes, minister and preacher of God's Word,' of which the twenty-ninth impression appeared in 1648. 6. 'A Celestiall Looking-Glasse' by 'John Andrewes, preacher of God's Word' (1639). 7. 'Andrewes' Caveat to win Sinners . . . newly published by John Andrewes, preacher of God's Word' (1655).

Of the 'Anatomie of Baseness' only the solitary exemplar in the Bodleian is known. It is a vivid poem, and its terse aphoristic sayings linger in the memory. The 'Feast of the Envious' will still bear quotation. It contains these lines:—

Nor can the hand of reconciling Death  
Free men from this injurious monster's sting,  
Which through the bowels of the Earth doth  
pierce,

And in the quiet vault appears more fierce  
Than Death—the grave's sterne tyrannising king.

[Dr. Grosart's *Miscellanies of the Fuller Worthies' Library*; Books as cited, whose verse is given in Introduction in the *Miscellanies*; Wood's *Athenæ* (Bliss), ii. 493; *Fasti*, i. 305.]

A. B. G.

ANDREWS, JOHN (1736-1809), historical writer and pamphleteer, produced numerous works towards the end of the last and beginning of the present century. Among these are: 1. 'History of the Revolutions of Denmark,' &c., 1774. 2. 'History of the War with America, France, Spain, and Holland, commencing in 1775 and ending in 1783,' four vols., London, 1785-86. 3. 'Letters to his Excellency the Count de Welderen on the present Situation of Affairs between Great Britain and the United Provinces,' London, 1781 (of which a Dutch translation appeared in the same year at Amsterdam). 4. 'Letters to a Young Gentleman on his setting out for France, containing a survey of Paris and a review of French literature,' 1784. 5. 'Historical Review of the Moral, Religious, Lite-

rary, and Political Character of the English Nation,' 1806. The 'Gentleman's Magazine' for February 1809 has the following obituary announcement: 'At his house at Kennington, Surrey, in his seventy-third year, Dr. John Andrews, a gentleman well known in the literary world. By his death the nation is deprived of an able historian, a profound scholar and politician, and a man ever ready to take up his pen in his country's cause.'

[Gent. Mag. February 1809; British Museum Catalogue.] A. H. B.

ANDREWS, MILES PETER (d. 1814), dramatist, was the son of a drysalter in Watling Street. After assisting his father in business during the day, he was accustomed 'to sally forth in the evening with sword and bag to Ranelagh or some other public place, giving himself the airs of a man of fashion. Gradually forming higher connections, he engaged in certain very profitable speculations. He became the constant companion of the dissolute Lord Lyttelton, and is responsible for a story of the appearance to him of that nobleman's ghost (see *WARD's Illustrations of Human Life*, 1837). He was the owner of powder magazines at Dartford, said to be the most extensive in England, and became member of parliament for Bewdley. Occupying a large mansion in the Green Park, formerly tenanted by Lord Grenville, his grand entertainments and gala nights were of great attraction to the fashionable world of London. He affected the society of actors and authors, and was elected a member of the Beefsteak, the Keep-the-Line, and other convivial clubs. He enjoyed a reputation for wit and good humour, for kindness and hospitality, while his temper was said to be extremely irritable, and he was nervous, credulous, and superstitious. He was the author of the following plays: the 'Conjuror,' a farce, produced at Drury Lane in 1774; the 'Election,' a musical interlude, produced at the same theatre in the same year; 'Belphegor, or the Wishes,' a comic opera, produced at Drury Lane in 1778; 'Summer Amusement, or an Adventure at Margate,' written in conjunction with William Augustus Miles, produced at the Haymarket in 1779; 'Fire and Water,' a ballad opera, produced at the Haymarket in 1780; 'Dissipation,' a comedy, produced at Drury Lane in 1781; the 'Baron Kinkervankotsdorssprangkendatchdern,' a musical comedy, founded on a novel by Lady Craven, produced at the Haymarket in 1781; the 'Best Bidder,' a farce, produced at the Haymarket in 1782; 'Reparation,' a comedy, produced at Drury

Lane in 1784; 'Better Late than Never,' a comedy, produced at Drury Lane in 1790; the 'Mysteries of the Castle,' produced at Covent Garden in 1795. In the two last-named works Andrews was assisted by Frederick Reynolds. Andrews was less successful with his plays than with his prologues and epilogues, which, although tawdry and vulgar enough, laden with slang and with gross caricatures of the foibles of the day, were so skillfully delivered by the popular comedians, Lewis and Mrs. Mattocks, as to command great applause. Sheridan said of Andrews that he only succeeded in the head and tail of a play and always broke down in the body. George Colman the younger describes Andrews as 'one of the most persevering poetical pests,' and his plays as 'like his powder mills, particularly hazardous affairs, and in great danger of going off with a sudden and violent explosion.' Andrews's 'doggrel' and 'unmeaning ribaldry' were severely censured by Giffard in his 'Baviad.'

ANDREWS, ROBERT (d. 1766 ?), a translator of Virgil, was descended from an eminent nonconformist family which had lived for nearly two centuries at Little Lever and at Rivington Hall, near Bolton, Lancashire. He received his theological education under Dr. Caleb Rotherham, at Kendal. He was chosen in 1747 minister of the presbyterian congregation at Lydgate, in the parish of Kirkburton, Yorkshire. He continued to hold this charge till about 1753, when he became minister of Platt Chapel, a place of worship for protestant dissenters in Rusholme, Lancashire. His stay there did not exceed three years. He afterwards presided over a presbyterian congregation at Bridgnorth, where he remained till his health broke down and he became mad.

He was a man of considerable taste and scholarship. In the earlier part of his life he sent to the press a criticism on the sermons of his friend, the Rev. John Holland, and some animadversions on Dr. Brown's 'Essays on the Characteristics.' His 'Virgil Englished,' 1766, 8vo, was dedicated to the Hon. Booth Grey. It is in blank verse, and has the strange peculiarity of conveying the sense of Virgil, or what Andrews conceived to be such, line for line. This rare book, printed by Baskerville, now finds a place among the curiosities of literature. There is no copy in the British Museum Library. An-

other work of his, called 'Eidyllia,' is a volume of poems, 1757, 4to, dedicated to the Hon. Charles Yorke. The preface contains a violent attack on rhyme.

ANDREWS, WILLIAM (d. 1656-1683), astrologer, is the author of some astrological works ranging from 1656 to 1683. The first of these is the 'Astrological Physician,' 1656, to which William Lilly contributed a preface. Among the Ashmolean MSS. (227-8) is preserved a letter, dated from Ashdown, Essex, 31 March 1656, in which Andrews thanks Lilly for writing the preface. In 1672 he published 'Annus Prodigiosus, or the Wonderful Year 1672,' 4to, and 'More News from Heaven unto the World, or the Latter Part of the Wonderful Year 1672; being a further Account of the Portents and Signification of the Stars touching the United Netherlands,' 4to. His last work was 'An Almanack for 1683,' 4to.

[Watt's Bibl. Brit.; British Museum Catalogue; Black's Catalogue of Ashmolean MSS.] A. H. B.

ANDREWS, WILLIAM (1802-1880), naturalist, was born at Chichester, but is chiefly known in connection with Irish natural history. He was one of the earliest members, and subsequently secretary and president, of the Dublin Natural History Society, in the proceedings of which he took a very active part. He at first devoted his attention to botany, but subsequently took up marine ichthyology, in which branch of science he made some important discoveries: he also published papers on ornithology and entomology. He distributed many botanical specimens, many of which were taken from plants cultivated in his garden, and hence accidental mistakes as to their origin not unfrequently arose. His name is best known to botanists in connection with a variety (*Andrewsia*) of the Killarney fern (*Trichomanes radicans*). He died in Dublin, 11 March 1880.

[Journal of Botany, 1880, pp. 256-86, 1883, p. 181; Proceedings Royal Irish Acad. iii. No. 4 (1880).] J. B.

ANDREWS, WILLIAM EUSEBIUS (1773-1837), journalist and author, was born at Norwich 15 Dec. 1773, of parents in a humble position in life, who were converts to the Roman catholic faith. He was apprenticed to the printers and proprietors of the 'Norfolk Chronicle,' and afterwards he was

manager of that newspaper for fourteen years. Perceiving the importance of the press for the advocacy of catholic principles, he removed to London, where he started in 1813 the 'Orthodox Journal and Catholic Monthly Intelligencer.' While conducting this periodical he published for a year, at Glasgow, a weekly pamphlet at 2d., entitled the 'Catholic Vindicator,' with the view of counteracting the influence of a publication called the 'Protestant.' Pecuniary losses compelled him to suspend the publication of the 'Orthodox Journal' for a time; but with the aid of a few friends, mostly protestants, he established his first weekly stamped newspaper, the 'Catholic Advocate of Civil and Religious Liberty,' in December 1820. For nine months he struggled with great difficulties, and was obliged to abandon the undertaking. Proposals were then made for bringing out two separate publications, one for catholics under the title of the 'Catholic Miscellany,' with a nominal editor, and the other exclusively political, the 'People's Advocate,' avowedly edited by him. Both made their appearance in January 1822, but the political pamphlet survived only seven weeks, and the sole editorship of the other devolved upon Andrews after the second number. He continued, under very pressing pecuniary difficulties, to conduct it until June 1823, when the 'Miscellany' passed into other hands. In the previous January he had re-established the 'Orthodox Journal,' and he continued to publish it for some months. On 25 Sept. 1824 he started a weekly stamped newspaper called the 'Truth-teller.' This he carried on for twelve months, and afterwards he continued it in the form of a pamphlet; but eventually it had to be given up for want of support. It began on 1 Oct. 1825, and ended on 25 April 1829, extending to fourteen volumes. Still unsubdued, the indefatigable journalist renewed his periodical labours in the 'Orthodox Journal,' and completed its twelfth volume. Subsequently he continued his exertions in the 'British Liberator' and 'Andrews's Constitutional Preceptor' (1832), and on 8 Sept. 1832 he started 'Andrews's Penny Orthodox Journal' as a weekly candidate for public favour. It survived only till 1 March 1834, and was followed by 'Andrews's Weekly Orthodox Journal' from 8 March to 27 June 1836. It was then entitled the 'London and Dublin Orthodox Journal,' and after the death of Andrews it was continued by his son till November 1845, after which date it came out monthly under the simple original title of the 'Orthodox Journal.'

In 1826 Andrews established the society of the 'Friends of Civil and Religious Liber-

ty,' which, in little more than a year, circulated nearly half a million of tracts. This was the parent of the 'Metropolitan Tract Society,' and of several similar associations. The great object of Andrews throughout his busy life was to vindicate and spread Roman catholic principles through the medium of the press; but he does not appear to have received much encouragement from the ecclesiastical authorities, with the exception of Bishop Milner, who was always his warm friend and supporter. He died at his house, 3 Duke Street, Little Britain, London, on 7 April 1837.

His separate publications include: 1. 'The Catholic School Book,' 1814, which was extensively used in catholic schools in England and the United States. 2. 'The Historical Narrative of the Horrid Plot and Conspiracy of Titus Oates,' 1816. 3. A series of eighteen controversial pamphlets in answer to a Lancashire clergyman named Sibson, 1822. 4. 'A Critical and Historical Review of Fox's Book of Martyrs, showing the inaccuracies, falsehoods, and misrepresentations in that work of deception,' vol. i., London, 1824, 8vo. Lowndes mentions an edition in three vols. 8vo, 1826. This work, as Mr. John Hill Burton points out, was the natural fruit of the anti-catholic animosity of the day. It was published in numbers at 3d. each, with woodcuts, the first of which represents the devil prompting Fox to write his 'Acts and Monuments.' The author's object of casting odium on his opponents is best accomplished in details of the persecution of the catholics under Queen Elizabeth, and an account of the later penal laws of Ireland. As a criticism on Fox the work exhibits occasional ingenuity, but not much learning or impartiality. 5. 'Popery Triumphant! a right-doleful clerical-comical Drama, as performed at the Upper Rooms, Bath, on the 10th of December 1833, by some of His Majesty's servants of the Law Church, assisted by a few dissenting preachers, members of the British Reformation Society; with a commentary on each performer,' London [1833], 8vo. 6. 'The Catholic's Vade Mecum.' 7. 'The Two Systems.' 8. 'An Abridgment of Plowden's History of Ireland.' 9. An edition of Bishop Milner's 'End of Religious Controversy.'

T. C.

**ANDROS, SIR EDMUND** (1637-1714), colonial governor, was the second son of a Guernsey gentleman belonging to Charles I's household. He was appointed gentleman in ordinary to the Queen of Bohemia in 1660, served in the regiment of foot sent to America in 1666, was major in Rupert's dragoons in 1672, and succeeded his father as bailiff of Guernsey in 1674. The same year he was appointed by James, duke of York, to be governor of the province of New York, which had been granted to the duke by Charles II. In 1678 he was knighted. He was engaged in some disputes with the authorities of the neighbouring colonies, and in 1681 was recalled to England. On the accession of James II to the throne, Andros was appointed governor of the various colonies consolidated to form the dominion of New England, which included all the English North American settlements, except Pennsylvania, between Maryland and Canada. In this position Andros made himself very unpopular with the colonists by his energy in carrying out James's instructions. Acting under the king's directions, he proclaimed liberty of conscience, put restrictions on the freedom of the press, and appointed a general council, by whose advice he was to carry on all government and legislation. It was James's policy and that of his able deputy to break down the power of the puritan oligarchies which ruled in the New England provinces, and to weld them into one strongly governed state such as should be able to show a firm front to the encroachments of the French. The charters of Massachusetts and the other colonies were revoked. There is a well-known story to the effect that Andros appeared in the council-chamber at Hartford at the head of an armed guard, and demanded the charter of Connecticut, which could not be found, as it had been concealed in the famous 'Charter Oak.' It is probable, however, that Andros really did get possession of the charter, and that only a duplicate was concealed. Even greater resentment was aroused by his interference with the settlers' lands, and his attempts to collect rents from them. All this time he was constantly engaged in successful military operations against the Indians, and in repressing the pirates who were the scourge of the New England coast. His unpopularity, however, continued to increase; and on 18 April 1689 the people of Boston suddenly seized the governor with some of his subordinates and imprisoned them. Sir Edmund was sent over to England, with a committee of accusers, to be put on his trial, but was examined by the lords of the committee for

trade and plantations, and released without being formally tried. In July 1692 he returned to America as governor of Virginia. Here he encouraged education, founded William and Mary College, promoted manufactures and agriculture, and made himself generally popular. He, however, quarrelled with the colonial church authorities, and through the influence of Dr. Blair, the Bishop of London's commissary in Virginia, was recalled in 1698. In 1704 he was appointed governor of Jersey, which office he held till 1706. The remainder of his life seems to have been passed in London, where he died 27 Feb. 1713-14, and was buried at St. Anne's, Soho. Andros was an active and capable administrator, and scarcely deserves the evil reputation which his unpopular government left behind him in New England.

[Whitmore, *The Andros Tracts*, with notes and a memoir of Sir Edmund Andros, Boston, 1868; *A Narrative of the Proceedings of Sir Edmund Andros*, Boston, 1691 and 1773; *Collections of the Massachusetts Hist. Soc.* 3rd series, vii. 150; Brodhead, *The Government of Sir Edmund Andros in New England*, Morrisania, 1867; Brodhead's *History of New York*; Index to O'Callaghan's *New York Colonial Documents*; Palfrey's *History of New England*, iii. 127, &c.]  
S. J. L.

**ANEURIN** (*fl.* 603 P) was a Welsh poet, about whose life little is known, and whose very date has been a matter of dispute. The few data which can be relied upon are found mainly in his poem of the 'Gododin,' the longest and most important composition in early Welsh literature, and even these have been very differently interpreted, generally with the object of supporting some preconceived theory of Welsh history.

The generally received account of Aneurin's life is shortly as follows: He was the son of Caw ab Geraint, lord of Cwm Cawlwyd, a chief of the Otadini or Gododin, a tribe occupying the sea coast south of the Firth of Forth, lying between the walls of Septimius Severus and Antoninus Pius. Caw is represented as the father of a large family, variously given from ten to twenty-one sons, among whose names appears that of Gildas; but in those manuscripts in which the name of Gildas appears, that of Aneurin does not, and conversely when Aneurin's name is given Gildas's is not, and this circumstance has given rise to the theory that Aneurin and Gildas, the British historian, were identical. The internal evidence of the 'Gododin' and of the writings of Gildas seems sufficiently to refute this supposition. To quote Mr. Stephens: 'Gildas was a preacher of the Gospel; Aneurin was an odd compound of christianity

and paganism. . . . The one was a virulent and bigoted monk, who delighted in reviling his countrymen; the other, without palliating the drunkenness which led to their defeat at Cattraeth, extols the bravery which half redeems their character. . . . The one makes no allusion to the battle of Cattraeth, though it was one of the turning-points in the life of the other.' Mr. Stephens then proceeds to propose the theory that Aneurin was the son of Gildas. His arguments may be shortly stated as follows: Gildas is sometimes called Euryn y Coed Aur; now Euryn and Gildas are words of similar meaning, being connected respectively with *aurum* and *gold*, and Gildas was probably intended as a translation of Euryn. Again, the prefix *An* is a patronymic, and Aneurin thus means 'the son of Euryn,' that is of Gildas. Further, Gildas states that he was born in the year of the battle of the Mons Badonicus, A.D. 516, and thus might well have had a son present at Cattraeth, in A.D. 603. Mr. Stephens supports his theory with characteristic thoroughness and minute care, but it may perhaps be doubted whether the data at our command are sufficient to enable us to form any such theories with any degree of confidence. Aneurin appears to have been educated at St. Cadoc's College at Lllancarvan, and afterwards to have entered the bardic order. From his own statements in the 'Gododin' he seems to have been present at Cattraeth both as bard and as priest. He fled from the battle, but was taken prisoner, and in his poem he describes the hardships he underwent when in captivity; but he appears to have been soon released by Ceneu, the son of Llywarch Hen, whom he gratefully commemorates. Aneurin now returned to Wales and went again to Lllancarvan, where it probably was that he made the acquaintance and secured the friendship of Taliesin, a friendship commemorated by both poets. In his old age he revisited the north, and lived with his brother Nwython in Galloway. Aneurin's death is mentioned in the Triads as one of the 'three accursed hatchet-strokes of the isle of Britain,' he having been murdered by Eidyn ab Einygan, of whom nothing else is known.

The 'Gododin' may be described as an epic poem relating the defeat of the Britons of Strathclyde by the Saxons at the battle of Cattraeth; a defeat ascribed by Aneurin to drunkenness on the part of the British troops:—

The heroes marched to Cattraeth, loquacious was the host;  
Blue mead was their drink and proved their poison, &c.

In its present form the 'Gododin' contains

more than 900 lines, but is obviously not a complete whole, and is probably interpolated. The language is very obscure, and many passages lend themselves to various interpretations. It is impossible to construct from its vague and poetical diction a consistent or satisfactory narrative of the British defeat, and it may perhaps be doubted whether the subject of the poem is not in truth a compression into a single battle of the long and disastrous struggle of the British inhabitants of the island with their more powerful invaders.

Edward Davies, in his 'Mythology and Rites of the British Druids,' broached the theory that the subject of the 'Gododin' is the massacre of the Britons at Stonehenge, A.D. 472, asserting that Cattraeth is not the name of a place, but a contraction of Cadeiriaeth, 'the language of the chair' of bardism, figuratively used for the temple at Stonehenge, and that Gododin is a compound of *Godo*, 'a partial covering,' and *din*, 'a fortification,' and further that Aneurin uses Gododin and Cattraeth as convertible terms; but this theory is capable of easy refutation and has found no supporters, and does not call for further discussion here.

The late Mr. Thomas Stephens, after an elaborate examination of the poem, assigns the battle of Cattraeth to the year 603, identifying it with the battle of Degsastan or Degstan, recorded in that year in the Saxon Chronicle. Degstan he assumes to be the same as Sigstan, a place to the west of Catterick, which he identifies with Cattraeth.

Besides the 'Gododin' Aneurin is also the reputed author of a poem in twelve stanzas, entitled 'Englynion y Misoedd,' or 'Stanzas on the Months.'

The 'Gododin' was first printed entire in the 'Myvyrian Archæology' of Owen Jones, but a few stanzas had been given, with a Latin translation, in Evan Evans's 'Specimens of the Poetry of the Ancient Welsh Bards,' 1764, and again in Edward Jones's 'Relics of the Welsh Bards,' 1784. In 1852 the Rev. John Williams ab Ithel published the whole poem, with an English version and notes; and in 1866 the Welsh text, with a translation by the Rev. D. Silvan Evans, was printed in Mr. W. F. Skene's 'Four Ancient Books of Wales.' The Cymmrodorion Society are now publishing a new edition of the 'Gododin,' with introductions, translation, and notes, by the late Mr. Thomas Stephens of Merthyr-Tydfil.

A. M.

**ANGAS, CALEB** (1782-1860), a celebrated Yorkshire agriculturist, was born in 1782, and died at Driffield, 6 Feb. 1860. His letters to the 'Sun' newspaper (the chief organ of the free-trade movement) excited much attention at the time, and were of great service to the cause. Mr. Cobden frequently referred to them in the course of his crusade against protection. He was formerly of Brancepeth, but at the age of thirty-two he removed to Neswick farm, under the late John Grimston, Esq. In the East Riding he was considered to be the best authority on farming. He was not only a clever writer and a good mathematician, but he possessed considerable mechanical information.

[Gent. Mag. 3rd series, viii. 524.] J. W.-G.

**ANGAS, GEORGE FIFE** (1789-1879), one of the founders of the colony of South Australia, was born at Newcastle-on-Tyne on 1 May 1789, and died at Lindsey House, Adelaide, South Australia, on 15 May 1879. He was the senior partner of a large firm of shipowners and merchants in London until 1833, when he retired to Devonshire. He was appointed one of the first commissioners when the act passed in 1834 for the formation of the colony of South Australia, and when the government insisted on a certain amount of land being sold before the foundation, he guaranteed 35,000*l.*, and was largely concerned in forming the South Australian Company for purchase of land and settlement of the population. Afterwards, suffering heavy losses through his colonial agents, he was compelled to send out his son, J. H. Angas, to look after his property in 1843; and soon after he himself emigrated to Adelaide, arriving there on 15 Jan. 1851, with his wife and youngest son, his two eldest sons and two daughters having preceded him, and another daughter remaining in England. He was also the founder of the National and Provincial Bank of England, the Bank of South Australia, and the Union Bank of Australia, and was chairman of the London boards of direction of all these companies up to the time of leaving his native country.

He was noted for his liberal support of all religious, educational, and charitable objects, and gave 5,000*l.* to the Bushman's Club, founded by his son. He filled various offices in the colony, was a member of the educational board and a representative of the district of Barossa in the legislative council. Hareus in his work on South Australia says of him: 'Mr. Angas is one of the best and most useful colonists the province has ever had. He devoted time and labour to the colony when it needed the best assistance of its best friends.

More than this, he risked to a large extent his considerable private means to give this province a start on a safe footing.' To his efforts was due the settlement of a German colony which became very prosperous.

Angas resided at Lindsey House, one of the most beautiful spots in the colony. His son, Mr. J. H. Angas, who at the age of twenty helped to retrieve his father's fortunes, now lives there.

[Heaton's Australian Dict. of Dates, 1879; Hareus's South Australia, 1876; Times, 24 May 1879.] J. W.-G.

**ANGAS, WILLIAM HENRY** (1781-1832), sailor missionary, was born at Newcastle-on-Tyne 6 Oct. 1781; went to sea and was captured by a French privateer, and imprisoned for a year and a half. He afterwards commanded ships of his father's, but became a baptist minister in 1817 after a year's study at Edinburgh. In 1822 he was appointed missionary to seafaring men by the 'British and Foreign Seamen's Friend Society and Bethel Union.' He travelled to various ports and foreign countries for religious purposes, and was serving a chapel at South Shields, when he died of cholera 9 Sept. 1832.

[Life, by Rev. F. A. Cox, D.D., 1834.]

**ANGEL, JOHN** (A. 1555), chaplain to King Philip and Queen Mary, is said to have been a 'person of singular zeal and learning.' He published a work on the Real Presence under the title of 'The Agreement of the Holy Fathers,' 1555, 12mo.

[Dodd's Church History (1737), i. 509.]

T. C.

**ANGEL, or ANGELL, JOHN** (A. 1655), was 'a Gloucestershire man,' born towards the end of the sixteenth century. He was admitted of Magdalen Hall, Oxford, in 1610. He proceeded to his degrees of B.A. and M.A. He was ordained in holy orders; at a bound became a frequent and popular preacher, and many laudatory puns were made on his name. He does not appear to have been presented to any living, but to have gone about as an evangelist. In 1629, or earlier, one Higginson having declined an appointment as town-preacher at Leicester because of his growing nonconformity, Angel, who then conformed to the establishment, was put in his stead by 'the mayor of Alderney,' and he is found in 1630 conducting that puritan institution, the lecture, which high churchmen disliked, but which golden-mouthed Jeremy Taylor vindicated in his great book of the 'Liberty of Prophesying.' In 1634 he was suspended by the dean of Arches for preaching without license; for

an ordinary minister, whether benefited or unbenefited, was at the time only permitted to read 'plainly and aptly (without glossing or adding) the Homilies,' and was not allowed to preach without a license from the bishop of the diocese certifying that he was a 'sufficient and convenient preacher' (49 *Canon*). With relation to Angell's suspension Laud writes in his 'Diary': 'In Leicester the dean of the Arches suspended one Mr. Angell, who had continued a lecturer in that great town for these divers years without any license at all to preach, yet took liberty enough. I doubt his violence hath cracked his brain, and do therefore use him more tenderly, because I see the hand of God hath overtaken him.' Clark tells us that Angell was subject to great spiritual darkness, wherein Richard Vines relieved and comforted him, and it is to his religious fervour, which produced this mental distress, that Laud refers.

In 1650, at Leicester, Angell differed with the Independents (or congregationalists), having refused to sign their famous 'Engagement.' The Mercers' Company of London stepped in to relieve him. He was appointed by them lecturer at Grantham, in Lincolnshire, and he remained there until his death in 1655. Even Anthony à Wood is constrained to quote fully the tributes that contemporaries paid him. He wrote, or rather published, little. His 'Right Government of the Thoughts, or a Discourse of all Vain, Unprofitable, Idle, and Wicked Thoughts' (1659), and his 'Right Ordering of the Conversation' (1659), and 'Preparation for the Communion' (1659), and 'Funeral Sermon for John, Lord Darcey' (1659), are of the rarer books of later puritans. He is penetrative and wise in counsel, energetic and powerful in appeal.

[Wood's *Athenæ* (Bliss), iii. 397; Laud's *Works*, v. 325-6; Brook's *Lives*, iii. 236; Clark's *Lives*, i. 60.] A. B. G.

ANGELL, JOHN (*J.* 1758), a professional shorthand writer of Dublin, and professor of the art there, published in 1758 'Stenography, or Shorthand Improved; being the most compendious, lineal, and easy method hitherto extant. . . . By John Angell, who has practised this art above 30 years,' London, 1758, 8vo. It contained an historic preface, commonly ascribed to Dr. Johnson, though it has no trace of that author's style. Angell, indeed, on one occasion visited Johnson, who was not favourably impressed with his abilities as a reporter. 'Mr. Samuel Johnson, A.M., London,' was a subscriber to Angell's work. It was favourably commended to the

public in 1770 by the Dublin Society, presided over by the lord-lieutenant. There was a second edition in 1782, sold by M. Angell in Lincoln's Inn Passage, London; and the method reached a fourth edition (without date), sold by the same publisher. Angell's shorthand, based on the lines more successfully followed up by Gurney, was never very popular. It is a variation of the system of W. Mason. He was the author of an 'Essay on Prayer' (London, 1761, 12mo), to which were annexed specimens of prayers of several eminent dissenting ministers in London, taken by the editor in shorthand.

[Lewis's *Hist. of Shorthand*, p. 122; Boswell's *Life of Johnson*, ed. Fitzgerald, i. 462; Watt's *Bibl. Brit.*] J. E. B.

ANGELIS, PETER (1685-1734), painter, was born in Dunkirk on 5 Nov. 1685. His real name was Angillis, as is shown by the registry preserved in his native place. We have chosen to keep the name Angelis, which is that by which in England he has always been known. Other forms are Angiles, Angelus, Anchillus, &c. Van Gool says that he knew 'Anchilus' in London in 1727, and that he had then been settled there eight years. It seems indeed to be the fact that he came to England about 1719. Redgrave gives 1712 as the date of his arrival, which is certainly too early, because we know that he was painting in Antwerp in 1716, and some time between September in that year and September 1715 he was enrolled there a member of the Painters' Guild of St. Luke. These facts receive confirmation from the unpublished 'Notices' of Jacob Van der Sanden, now or lately in the possession of Mme. Moons Van der Starten of Antwerp. Sanden says that 'Angillis,' having come to Antwerp, worked for the painter, Jean Baptiste Bouttats; that he went next to Düsseldorf, came back again to Antwerp, and remained three years. In 1728 he sold his pictures by auction and went to Rome. Amongst them were the four copies after Rubens and Snyders, now in the 'Hermitage' at St. Petersburg. The originals of these pictures were at Houghton, so it seems probable that the sale took place in England. He stayed three years in Rome, and his pictures were much esteemed. His reserved manner and disinclination to exhibit his work are said, however, to have damaged him from a worldly point of view. On his return from Rome he made a stay at Rennes, in Brittany, and was at once so overwhelmed with employment that he settled and died in that city in 1734. While in England his portrait was painted by Hans Huyssing.

Angelis was a painter of landscapes and conversation pieces. The foregrounds of his landscapes are occupied by small figures and various still-life representations of fruit, fish, &c. He formed his style upon Teniers and Watteau, his own paintings holding a middle place between those of his masters. Later in life he fell under the influence of Rubens and Vandyck. He was a good draughtsman, but his colouring was weak and unsatisfactory. In England he was very popular.

[Archives of the Guild of St. Luke in the Academy at Antwerp; unpublished 'Notices' of J. Van der Sanden; Walpole's *Anecdotes of Painting*; Van Gool's *Nederlantsche Kunstschilders*, ii. 138; Nagler's *Künstler-Lexicon*, 2nd edition.] E. R.

ANGELO. [See TREMAMONDO.]

ANGELUS À SANCTO FRANCISCO (1601-1678), was the name assumed in religion by RICHARD MASON, D.D., a learned Franciscan of the Strict Observance, whom Dodd in his 'Church History' by mistake divides into two distinct persons. He was born in England—probably in Yorkshire—in 1601, joined the Franciscan Order in 1624, entered the ranks of the priesthood four years later, and was created the second Doctor of Divinity of the restored English Province. He filled in succession in his Order the offices of definitor or consultant, guardian of the house of English Recollet friars at Douay, professor of divinity there, confessor to the nuns of the Order of St. Francis, missionary, president, provincial, commissary, and lastly provincial of his brethren from April 1659 till April 1662. It appears that for a time he was chaplain at Wardour, the seat of the Arundels, and the focus of Catholicism in Wiltshire. Worn out with missionary labours, he at length obtained permission to quit England, and to retire, in 1675, to St. Bonaventure's Convent at Douay, where he died 30 Dec. 1678. It is stated in the Franciscan Annals that Angelus à S. Francisco was Dean of Emly, in Ireland, before he joined the Order, but this is highly improbable. His works, many of which are of extreme rarity, are fully enumerated by the Rev. Dr. George Oliver in the 'Rambler' for July 1850. The most interesting are:

1. 'Liber Sacrorum Privilegiorum, quondam Seraphico Patri Sancto Francisco indultorum, &c.' Douay, 1633. 2. 'Regula et Testamentum S. Francisci,' &c., with a treatise 'De Confraternitate Chordæ' and 'Manuale Tertii Ordinis S. Francisci.' These were reprinted at Douay, in Latin, 1643; and in the same year there issued from the same press his translation into English of the Manual, dedicated to

the Dowager Lady Elizabeth Rivers. The translation of the work on the Confraternity is entitled 'A Manuell of the Arch-Confraternitie of the Cord of the Passion, institvted in the Seraphicall Order of S. Francis. Wherein is conteyned an ample Declaration of most things concerning this Confraternitie. Together with many profitable instructions, how Christians may satisfie for their Sinnes by the meanes of Indulgences: not unproper also for all such, as through deuotion, doe enroll themselves in any other Confraternitie. By Br. Angelus Francis, the least of the Frier Minors Recollects.' 2nd edit. Douay, 1654. 12mo. Dedicated to the Lady Anne Howard. 3. 'The Rule of Penance of the Seraphical F. St. Francis, as approved and confirmed by Leo X.' 2 vols. Douay, 1644. 4. 'Certamen Seraphicum Provincie Angliæ pro Sancta Dei Ecclesia. In quo breuiter declaratur, quomodo Fratres Minores Angli calamo & sanguine pro Fide Christi Sanctaque eius Ecclesia certant.' Douay, 1649, 4to, a valuable historical and bibliographical work of 356 pages, finely printed and embellished with portraits. 5. 'Apologia pro Scoto Anglo. In qua defenditur D. Ioannes Pitseus in sua relatione, de loco Natiuitatis Subtilis Doctoris F. Ioannis Scoti: & rejectis argumentis aduersæ partis, maximè R. P. Ioannis Colgani Hiberni, Scotum fuisse Anglum natione ostenditur.' Douay, 1656. 12mo. 6. 'A Liturgical Discourse of the Holy Sacrifice of the Mass,' in two parts, of which, strange to say, the second part was printed first in 1669, and the first in the following year, with a dedication to Henry, third Lord Arundel of Wardour.

[Wadding's *Scriptores Ord. Minorum* (1806); Oliver's *Collections illustrative of the Catholic Religion in Cornwall, &c.* (1857), pp. 229, 541; *The Rambler*, July 1850, vi. 14; Dodd's *Church History* (1737), iii. 100, 113; Ware's *Writers of Ireland*, ed. Harris, 336; Lowndes's *Bibl. Manual*, ed. Bohn, i. 44; Duthilloul's *Bibliographie Douaisienne*, 91.] T. C.

ANGELUS, CHRISTOPHER (d. 1638), was a native of the Peloponnesus, who was persecuted by the Turkish governor of Athens. Having been released from prison at the request of some of the archonti, he sailed in an English ship for Yarmouth in 1608. The clergy of Norwich received him hospitably, and he was sent by the bishop to Trinity College, Cambridge. He moved, for the sake of his health, to Oxford in 1610, where he studied in Balliol, read Greek with the younger students, and died 1 Feb. 1638, leaving the character of 'a pure Grecian and an honest and harmless man.'

He wrote: 1. 'Of the many Stripes and Torments inflicted on Christopher Angelus by

the Turks for the faith which he had in Jesus Christ,' Oxford, 1617. 2. 'An Encomium of the famous Kingdome of Great Britaine, and of the two flourishing sister Universities, Oxford and Cambridge,' Cambridge, 1619. Both these are in Greek and English. 3. 'Enchiridion de Institutis Græcorum,' Cambridge, 1619; an account in Greek and Latin of the rites of the Greek church. A Latin version by George Fhelan was published at Frankfurt, 1655, 'Status et Ritus Ecclesiæ Græcæ,' and an enlarged edition of the latter version, called 'De Statu hodiernorum Græcorum Enchiridion,' at Leipzig in 1679 in Cyprinus's 'Chronicon Ecclesiæ Græcæ.' 4. 'Labor Christophori Angeli, Græci, de Apostasia Ecclesiæ et de homine peccati, scilicet Antichristi,' &c., London, 1624; an attempt to identify Mahomet with Antichrist, and to prove that the last Mahomet will be destroyed in 1876.

[Gent. Mag. lxiv. pt. ii. 785; Wood's Athenæ, ed. Bliss, ii. 633.]

ANGERSTEIN, JOHN JULIUS (1735-1823), merchant, philanthropist, and amateur of fine art, was of Russian extraction, and at the age of fifteen came first to England. At twenty-one he was introduced to Lloyd's, and became an underwriter. His talents and assiduity were quickly recognised, and he was soon an important figure in the commercial world. It is recorded that 'policies sanctioned by his subscription speedily acquired so great an authority that for some years they were, by way of distinction, called "Julians."' His services to commerce were important. By his exertion and personal influence it was that 'Old Lloyd's' coffee house was evacuated and the modern 'Lloyd's' established. 'Great public good, as well as private advantage, resulted from his labours in this respect; for the magnitude and convenience of the new arrangement put an entire stop to the transaction of business in private offices scattered throughout the metropolis. . . . In short, Lloyd's coffee house has ever since been a kind of empire within itself—an empire of almost incalculable resources' (*Annual Biography and Obituary*, 1824). Angerstein secured a great benefit to trade by applying for and obtaining from parliament an act which prohibited the owner of a vessel from changing the name by which she had been originally distinguished. Prior to this act it had been a common custom for the owners of unseaworthy ships to 're-baptise' in order to pass them as vessels of good character.

In 1793, commercial credit being insecure, Angerstein exerted himself to obtain a loan

of exchequer bills for the temporary relief of trade. This, against much opposition, he succeeded in procuring from Mr. Pitt, and the crisis was averted. Angerstein also devised a scheme of state lotteries, which was adopted by parliament. At various times at the head of the largest trading firms of the city he accumulated a 'princely fortune,' and retired (in 1811) from business life to spend his time alternately at his house in Pall Mall and his villa of 'Woodlands' at Blackheath.

Of his work as a philanthropist it is worth recording that he was actively instrumental in re-establishing the Veterinary College, of which the funds had sunk extremely low. It was at his suggestion that a reward of 2,000*l.* was offered from the fund at Lloyd's for the invention of the lifeboat. For the discovery of the 'Monster' (Renwick Williams), whose mysterious attacks upon women had so agitated the town, Angerstein offered a reward and worked hard to obtain his prosecution (vide *Brit. Mus. Gen. Cat.* 'Banks, Sarah Sophia'). It is, however, rather as an amateur of art than as a merchant or general benefactor that he claims attention. Aided by Sir Thomas Lawrence, and in some instances by Benjamin West, he acquired the collection of pictures which formed the nucleus of our National Gallery. By his will he directed his pictures in Pall Mall to be sold. In 1823 he died, and in 1824 a vote of 60,000*l.* enabled the government to obtain for the nation the greater part of those pictures, and to meet the expenses incidental to removing and exhibiting them. The catalogue of the gallery shows that many of our richest treasures were secured by this purchase.

As a man of business he bore the highest character; his many acts of public munificence and unostentatious private generosity cannot be detailed. As a collector his name is famous. Sir Thomas Lawrence has left some record of his long friendship in two portraits: one of Angerstein himself, which was presented to the National Gallery by William IV; and another of the second Mrs. Angerstein, who is presented as 'a beautiful female wandering over a desolate and unfrequented island without hat or shawl!' He is caricatured by Gillray in a drawing called 'Connoisseurs examining a picture by G. Morland, and the studies for that same,' which is in the Dyce and Forster collection at South Kensington. Angerstein died at Woodlands on 22 Jan. 1823. By his first wife (the widow of Charles Crockett, Esq.) he had children, John and Juliana; of his second (also a widow) there was no issue.

[Annual Biography and Obituary, 1824; Miller's Biographical Sketches of British Characters recently deceased, 2 vols. 1826, gives an account of the engraved portraits of Angerstein; Young's Catalogue of the celebrated Collection of Pictures of the late John Julius Angerstein, fol. London, 1823; Percy Anecdotes, Sholto and Reuben Percy, 1820; National Gallery Catalogue, Introduction to Foreign Schools.]

E. R.

**ANGERVILLE, RICHARD.** [See BURY, RICHARD DE.]

**ANGIER, JOHN** (1605-1677), nonconformist divine, was a native of Dedham, in Essex, where he was baptised 8 Oct. 1605. His father settled his and his three brothers' callings according to their boyish ambitions, and John at his own desire was brought up to be a preacher. Even at the age of twelve he was a grave child; but during his stay at Cambridge as an undergraduate of Emanuel College 'he fell off to vain company and loose practices.' After he had taken his B.A. degree his father died while he was from home, and whilst staying subsequently at his mother's house he came under the influence of John Rogers, of Dedham, one of the most forcible of the puritan preachers, who used to take hold of the supporters of the pulpit canopy and roar hideously to represent the torments of the damned. Angier resided for some time with Rogers, and afterwards with a Mr. Witham, who was a better scholar than preacher. Next we find him boarding, studying, and sometimes preaching, at the house of John Cotton, of Boston, which was a place of great resort for puritan divines. Here he met Ellen Winstanley, a native of Wigan, the niece of Mrs. Cotton, and married her at Boston church 16 April 1628. After the birth of his first son he had almost decided upon going with other ministers to New England; but before this intended departure he made a journey into Lancashire to his wife's relations. He preached a sermon at Bolton, and one of the hearers got from him a promise to preach at Ringley chapel, which he did. In spite of his swooning in the pulpit on this occasion, the Ringley people were determined to have Angier as their pastor, and in September 1630 he accepted their call, and settled with them. Ecclesiastically his case was a peculiar one. By the interest of Cotton he was ordained by Lewis Bayley, bishop of Bangor, but without subscription; and he remained a nonconformist to the Anglican ceremonies to the end of his days. His diocesan was Bridgman, bishop of Chester, who dealt with him in a spirit so mild as to provoke the rebuke of Laud.

VOL. I.

Angier was, however, suspended from Ringley after about eighteen months' service. Denton chapelry was at this time vacant by the suspension of its puritan minister, and the choice of the people was directed towards 'the little man' at Ringley, who settled with them in 1632, and remained their pastor, with some interruptions, caused by the troubles of the time, for more than forty-five years. He was twice excommunicated, and his congregation often were disturbed by the ruling powers. It was thought that he had some hand in a book reflecting on Laud, which was discovered at Stockport; but in his diary he professed his innocence of it. However, although subject to frequent annoyance, Angier escaped any greater persecution. His first wife, a pious and sickly woman, died in December 1642, leaving him a son and two daughters. By her deathbed suggestion Angier, a year later, married Margaret Mosley, of Ancoats, whose family were of great local consideration, and held the lordship of the manor of Manchester. They were married in 1643 'very publicly in Manchester church, in the heat of the wars, which was noticed as an act of faith in them both.' She died in 1675. Angier's own daughter, by his desire, was betrothed to Oliver Heywood, a month before their marriage in Denton chapel in 1655, and after the final ceremony he entertained about a hundred guests at his table, for he said he loved to have a marriage like a marriage. When the episcopal constitution of the church was abolished, he had many calls to places of greater moment than Denton, and his former congregation at Ringley endeavoured to recover him. The friendly contest between the two congregations was referred to the judgment of ministers, who decided that Angier should stay in his latest settlement. When the presbyterian form of church government was established in Lancashire, he often acted as moderator of the 'classis,' and attended the provincial assembly, and had ruling elders in his own congregation. His presbyterianism was of a moderate kind, and he incurred some blame amongst the more ardent brethren for the breadth of his views as to church discipline. He signed the document known as the 'Harmonious Consent,' issued in 1648, in which the presbyterian ministers denounce in no measured terms the notion of 'an universal toleration of all the pernicious errors, blasphemous and heretical doctrines broached in these times.' Whatever doubts he had as to episcopacy, he had none about monarchy; he testified against the execution of Charles I, and refused to sign the engagement to be true to the commonwealth of England as established

P

without king or house of lords. On this account he was, with other ministers, taken prisoner to Liverpool; but as the plague was raging there, they were removed to Ormskirk. The time was passed in a weighty discussion about prayer, and the diversity of opinion led them to select one of their number to treat the matter more fully. In this talk of the prison-house originated the treatise on prayer of Edward Gee of Eccleston. Many cases of conscience were propounded to Angier, whose judgment was so greatly relied upon, that the ill-natured styled him the 'idol of Lancashire.' He had also a well-earned reputation as a healer of quarrels. In the work of the ministry, notwithstanding a feeble constitution, he was unflinchingly energetic, preaching twice on the Sunday, and often on week days, praying seven times daily, fasting and travelling frequently, yet by severe temperance and care in diet he outlived many of his stronger brethren. He took no overt part in the Cheshire rising of 1659, and after the Act of Uniformity he escaped the persecution that fell upon most of the nonconformists. Warrants were indeed issued against him; but those who had to execute them acknowledged that they would not see him for a hundred pounds. Something, no doubt, was due to the influence of his brother-in-law, Mosley of Ancoats, whose mother and sister stayed with Angier for many years. When the Oxford Act came into operation, he removed into Cheshire; but an attack of gout came on, and saying to Oliver Heywood, 'Come, son, let us trust God and go home,' he returned to Denton. The neighbouring justices said, 'He is an old man, and will not live long; let us not trouble him.' Wilkins, the new bishop of Chester, so far from desiring to annoy, frequently inquired after the health and welfare of the good old man. Angier had the courage to admit Oliver Heywood to the communion at Denton after his excommunication. The old man was much affected by the death of his daughter, Mrs. Heywood, and by the extravagance and misconduct of his own son, whose ordination had to be preceded by a confession of his youthful wildness. John Angier died in prayer, after several days' illness, 1 Sept. 1677, and was buried at Denton, his funeral being attended by a great concourse of people.

The only work bearing John Angier's name is 'An Helpe to Better Hearts for Better Times,' London, 1647. It is a rare book, and consists of sermons preached in 1638, a fact found stated on some, and omitted on the title-page of other copies. From one characteristic passage we learn that even in those puritan days some attenders at public wor-

ship slept 'from the beginning to the end, as if they came for no other purpose but to sleep.' Another work has been attributed to him, and Dr. Halley holds it to be 'undoubtedly' his. This is a rare tract, with a quaint title, 'Lancashire's Valley of Achor is England's doore of hope; set wide open in a brief history of the wise, good, and powerful hand of Divine Providence, ordering and managing the militia of Lancashire. By a well-wisher of the peace of the land and piety of the church,' London, 1648. This is full of important matter relating to the incidents of the civil war in Lancashire. One passage which strengthens the supposition that it is the work of Angier may be quoted: 'This was a providence not unlike what I have heard in Boston. The chancellor gave organs to Boston church. Before they breathe in the new world the godly pray. After their prayer a mighty wind forceth its passage into the church, blows down the organs, and stops their breath.' If Angier wrote 'Lancashire's Valley of Achor,' his dislike to instrumental music was matched by his antipathy to tobacco, of which some of his brethren, in Dr. Halley's opinion, were too fond.

John Angier's son, also named John, was born at Boston in 1629, and, like his father, went to Emanuel College, Cambridge, where his course was so unsatisfactory that, when in 1657 he applied for ordination, 'he was approved for parts and ability,' but it was thought fitting that he should make public acknowledgment of the errors of his youth. He was appointed to Ringley Chapel, but removed into Lincolnshire, where he was resident at the time of his father's death. His widow died in 1699. Samuel Angier, nephew of John Angier the elder, was born at Dedham 28 Aug. 1639, and was a pupil of the famous Busby. He went to Christ Church, Oxford, in 1659, but was banished thence by the Act of Uniformity, and after some stay with Dr. Owen he settled as assistant to his uncle at Denton. His ordination, which took place in 1672 at the house of Robert Eaton in Deansgate, Manchester, was the first presbyterian ordination amongst the nonconformists in the north of England, and perhaps the first in any part of the kingdom. At his uncle's death many desired that Samuel Angier might be his successor, and they knew that this also was the wish of their dead pastor. The warden and fellows of Manchester, however, were not disposed to appoint another nonconformist, and the Rev. John Ogden was nominated; but great difficulty was experienced in inducing Samuel Angier to give up possession of the house. He retired to the adjacent village of Dukinfield. He

had to suffer for his nonconformity, and in 1680 was excommunicated; but under the Act of Toleration in 1689 he became minister of a dissenting meeting at Dukinfield, where a chapel was built for him in 1708. In his later years he was almost blind, and died 8 Nov. 1713. Samuel Angier kept a register of 'christenings and some marriages and funerals' from 1677 to 1713. One entry relates to the death, 20 Feb. 1697-8, of another Samuel Angier, who is believed to have been a minister of the 'ancient chapel' of Toxteth Park, Liverpool.

Chester, kept by the Rev. Samuel Angier (Transactions of Historic Society of Lancashire and Cheshire, 1882); Davis's Ancient Chapel of Toxteth Park, Liverpool, Liverpool, 1884; Fishwick's Lancashire Library, 1875; Parkinson's Life of Adam Martindale, 1845 (Chetham. Soc.)] W. E. A. A.

**ANGIERS, or ANGIER, PAUL** (*f.* 1749), engraver, was in London about 1749, and was taught by John Tinney. He was chiefly employed by the booksellers, and etched some neat plates. According to Heineken he died about thirty. His best plates are 'Roman Ruins' after Pannini, 1749; a landscape after Moucheron, 1755; and 'Dead Game,' after Huet, 1757.

**ANGUS, LORD**, Scottish judge. [See **DOUGLAS, ARCHIBALD** (1609-1655).]

**ANGUS, JOHN** (1724-1801), independent minister, born at Styford, near Hexham, Northumberland, in 1724, was sent at the age of 16 to the university of Edinburgh. Two years later he removed to London, and in 1748 he took charge of the independent congregation at Bishop's Stortford, Hertfordshire. For nearly fifty-four years he exercised his ministry in that town, where he died 22 Dec. 1801. He published some occasional discourses, including a funeral sermon on the death of the Rev. D. Parry (1770), and an-

other on the death of the Rev. T. Davidson (1788).

**ANLABY, WILLIAM** (1552?-1597), catholic missionary, a native of Eton in Yorkshire, matriculated in the university of Cambridge as a pensioner of St. John's College, 12 Nov. 1567, and proceeded to the degree of B.A. in 1571. He had been brought up in the protestant religion, and entertained a strong aversion to the catholic dogmas; but when about twenty-five years of age, during his travels abroad, he was introduced at Douay to Dr. (afterwards Cardinal) Allen, who had established a seminary there. This meeting resulted in Anlaby's conversion and his reception into the college (1574). In 1577 he was ordained priest, and in the following year sent upon the English mission. His missionary labours were in his native county of York. 'For the first four years of his mission,' says Bishop Challoner, 'he travelled always on foot, meanly attired, and carrying with him, usually in a bag, his vestments and other utensils for saying mass; for his labours lay chiefly amongst the poor, who were not stocked with such things. Afterwards, yielding to the advice of his brethren, he used a horse and went something better clad.' After nearly twenty years' labour on the mission he was condemned as a seminary priest, and was drawn, hanged, and quartered at York on 4 July 1597.

**ANNALY, BARON.** [See **GORE, JOHN.**]

**ANNAND, WILLIAM** (1633-1689), dean of Edinburgh, was born at Ayr in 1633. Four years afterwards his father, minister of Ayr, was seriously assaulted by the presbyterian women of Glasgow for having preached in favour of Laud's liturgy before the diocesan synod held in that city; and being deposed by the general assembly in 1638, the elder Annand migrated to England, where he ultimately obtained church preferment, first as vicar of Throwley, and afterwards as rector of Leaveland, in Kent. In 1651 his son was admitted a scholar of University College, Oxford, then under presbyterian rule, but while there he consorted with royalists and adherents of episcopacy. He proceeded B.A. in July 1655, and having, in 1656, received orders at the hands of an Irish bishop, he performed the Anglican service for some

years at Weston-in-the-Green, Oxon. Some time after taking his M.A. degree, in July 1656, he became vicar of Leighton Buzzard in Bedfordshire, and published, in 1661, his 'Fides Catholica, or the Doctrine of the Catholic Church,' containing the substance of sermons preached before the Restoration. During the next year Annand returned at last to his native country, as chaplain to the Earl of Middleton, the royal commissioner in the parliament which restored episcopacy in Scotland. In 1663 Annand was appointed minister of what was then called the Tolbooth church in Edinburgh, from which he was transferred, a few years afterwards, to the charge of the Tron church in the same city. Mention is made of a sermon which he preached in Edinburgh in 1664, 'on the composing all differences' (*Calendar of State Papers, Domestic, 1664-5*, p. 93), and in 1676 he was made dean of Edinburgh, the degree of D.D. being conferred on him by the university of St. Andrews in 1685. As dean of Edinburgh, Annand was on the scaffold at the right hand of the Earl of Argyll on his execution in 1686, and received from him 'his paper.' Having lived to see episcopacy restored in Scotland, he died just when it was being abolished, on 13 June 1689, the very day that Edinburgh Castle was surrendered to the convention of Scottish estates by the Duke of Gordon, who had held it for James II. On his deathbed Annand said that 'he never thought to have outlived the church of Scotland, yet hoped others should live to see it restored.' Besides 1. the 'Fides Catholica,' Dean Annand published: 2. 'Panem Quotidianum' (1661); 3. a sermon in defence of the liturgy, on Hosea xiv. 2 (1661); 4. 'Pater Noster, or the Lord's Prayer explained' (1670); 5. 'Mysterium Pietatis, or the Mystery of Godliness' (1672); 3. 'Doxologia' (1672); 7. 'Dualitas, or a two-fold subject explained' (1674), a politico-ecclesiastical treatise. 'A Funerall Elegie upon the death of George Sonds, Esq., who was killed by his brother, Mr. Freeman Sonds. Ann. Domini 1655. By William Annand, junior,' is also ascribed to the dean in the new catalogue of the British Museum library. His writings are flavoured with a lively quaintness, which sometimes reminds one of Thomas Fuller.

ANNANDALE, MARQUIS OF. [See JOHNSTONE.]

ANNE OF BOHEMIA (1366-1394), first queen of Richard II, was the eldest daughter of the Emperor Charles IV by his fourth wife, Elizabeth of Pomerania. She was born at Prague on 11 May 1366. Her father was the son of that blind king, John of Bohemia, who was killed at the battle of Cressy, and was king of Bohemia himself as well as emperor. The place he fills in history is peculiar. Educated at Paris, his leanings all through life were French and papal. He was not too well loved by the Germans, and was only accepted as emperor because no rival candidate could be induced to stand. He was not too well loved elsewhere, and got crowned at Rome only on condition never to enter Italy again without the leave of the pope. He was, nevertheless, a man of great energy, made terms with all parties, and obtained from Innocent VI the celebrated Golden Bull, which settled the constitution of the Roman Germanic empire so long as it existed. But, worn out with a hopeless struggle between conflicting interests, he died in 1378 at the age of 62. In that same year the great schism in the papacy began, and though Charles was succeeded as emperor by his own son Wenceslaus, the old alliance with France had received its death-blow. In 1379 Wenceslaus began to make overtures to Richard II touching the support of Urban VI against his rival Clement VII at Avignon; and England, Germany, and Flanders very soon made common cause against France. Towards the end of the following year the Earl of Kent and two others were sent over to Flanders to conclude with ambassadors named by the emperor for the King of England's marriage to his sister, Anne of Bohemia. In the commission given to the English plenipotentiaries it is expressly stated that Richard had selected her on account of her nobility of birth, and her reputed gentleness of character. The omission of all reference to beauty is perhaps significant. The house of Luxemburg to which she belonged was not generally distinguished for this quality.

It was intended to receive the bride in England before Michaelmas (RYMER (1816 *seq.*), vii. 302); but in June the frightful insurrection of Wat Tyler and the bondmen occasioned some delay. An embassy, however, was commissioned on 1 December to receive her and bring her to England; and on the 13th of the same month a general pardon to the rebels was issued at her intercession. Meanwhile she remained at Brussels, whither she had been conducted by the Duke of Saxony,

till she could cross the sea in safety. Twelve armed vessels, full of Normans, were sent by the King of France to intercept her. The Duke of Brabant, however, who was Anne's uncle, sent to remonstrate with the French king, Charles V, who thereupon ordered the Normans into port, declaring that he did so merely for the love of his cousin Anne, and out of no regard for the King of England. She then pursued her journey, accompanied by the Duke of Brabant to Gravelines, where the Earls of Salisbury and Devonshire received her with a guard of 500 spears, and conducted her to Calais. After waiting some time for a favourable wind, she embarked on Wednesday morning, 18 Dec., and reached Dover the same day. Scarcely had she landed when a heavy ground swell of quite an unusual character dashed the vessels in port against each other, and the very ship in which she had come over was broken to pieces by the violence of the sea.

On the third day after her landing she went on to Canterbury, where she was met by the king's uncle, Thomas, afterwards Duke of Gloucester. The city of London gave her a magnificent reception, and she was married to Richard on 14 Jan. 1382 at St. Stephen's Chapel, Westminster. Her coronation followed on the 22nd. From all that is known of her disposition and character we may believe that her coming did something to secure a brief interval of peace to a distracted country; but it was a stormy period, and within a very few years the cruelties practised by the serfs were almost outdone by the acts of the parliament truly named as 'Merciless.' Even before that date an incident occurred which gives striking evidence of ferocity in high places. In 1385, when the king was on his way to Scotland, Sir Ralph de Stafford, a knight in the queen's service, was murdered at York by the king's own half-brother, Sir John Holland. The murdered man was at the time on his way to London with messages to the queen. He was the son of the Earl of Stafford, and was a boon companion of Richard, with whom he had been brought up from an early age. His father applied to the king for justice. The murderer took refuge in the sanctuary of Beverley; but Richard confiscated his goods and showed his determination to punish crime even where the closest family ties stood in the way. The king's mother, who was also mother of the murderer, strove in vain to intercede, and died of grief that her prayers were ineffectual. After her death, apparently, Richard at length consented to pardon the crime.

The incident just recorded arose, as we are

informed by Froissart, out of an encounter between Sir John Holland's retinue and that of a Bohemian knight, whose life one of Stafford's archers had been able to protect only by slaying one of Holland's squires. The queen had brought with her into England, besides Bohemian fashions such as ladies' side saddles and the extraordinary cap worn by ladies in those days, a numerous body of Bohemian followers, who not only excited national prejudice against them, but added to the expenses of a very expensive court. There is no appearance that the queen herself shared their unpopularity. The respect with which she is spoken of by contemporary writers leads us to infer the contrary. The devoted attachment of her husband, who seldom allowed her to quit his side, was of a kind unusual among royal personages. But the great expenses of the household had certainly a good deal to do with the approaching struggle between king and parliament, which forms the turning point of Richard's reign. On one point only—though the fact is not very well authenticated—does it seem that Anne carried her friendship and partiality too far; for it is said that she wrote to Pope Urban VI in favour of the divorce which the Duke of Ireland sought in order that he might marry one of her Bohemian maids of honour. On what pretence such a suit was instituted we do not know; but it was deeply resented in England, as the duchess was a daughter of Ingram de Coucy, earl of Bedford, and was cousin-german to the king himself.

In 1387 the Duke of Ireland and the other ministers, by whose advice the king had been guided, were forced to fly the country by a confederacy of five leading noblemen with Gloucester at their head, who marched up to London with an army of 40,000 men and took possession of the capital. Gloucester even aimed at the king's deposition, but found that he could not reckon surely on the support of his confederates. The five lords, however, took possession of the government, removed a number of ladies from the royal household, and called to a severe reckoning all those other friends of the king who had not yet escaped. Under their direction the 'Merciless Parliament' (1388) caused the whole body of the judges to be arrested, and the king's late ministers condemned as traitors. They banished the former to Ireland, and the king's confessor also, because he had concealed from the five lords the policy of the king's council. They impeached and sent to the block Sir Simon Burley and some others. Burley was an old companion in arms of the Black Prince, who had committed to him

the charge of his son Richard's education. It was he, moreover, who had gone to Prague on Richard's behalf to ask Anne in marriage, and the queen was naturally interested in him more than the other victims. Richard himself interceded for him most urgently, and Anne was three hours on her knees before the lords praying that they would spare his life. But it was all to no purpose. 'M'amie,' said the Earl of Arundel to her with insolent familiarity, 'pray for yourself, and for your husband; you had much better.'

Next year the king emancipated himself from the thralldom of the confederate lords. He asked his uncle Gloucester at the council table to tell him how old he was; and when the duke replied that he was twenty-two, 'Then,' said Richard, 'I must be able to manage my own affairs as every heir in my kingdom can do at twenty-one.' On this he commanded the great seal and the keys of the exchequer to be given up to him, dismissed Gloucester and most of the other lords, and governed for some years after with prudence and moderation. The only occurrence which for a while threatened to renew old differences was when in 1392 the king demanded a loan of 1,000*l.* from the city of London, which the citizens not only refused to give, but would not allow a willing lender to advance, inasmuch that they nearly killed the Lombard who offered it. The king caused the mayor and sheriffs to be arrested, and it was decreed in council that the city should forfeit its privileges and be governed thenceforth by wardens. The city made a humble submission, and appealed to Queen Anne as mediatrix. Richard's wrath was appeased. 'I will go,' he said, 'to London and console the citizens; nor will I suffer them further to despair of my favour.' He accordingly passed through the city on Wednesday, 21 Aug., in great pomp and splendour, the queen by his side wearing a rich golden crown that was presented to her at Southwark, and robes glittering all over with gems. During their whole progress the king and queen were received with enthusiasm. The ingenuity of the age had exhausted itself in devising pageants for their entertainment; and a minute account of the day's festivity was composed in Latin verse by a contemporary poet. The procession ended at Westminster Hall, where Richard took his seat on the king's bench, sceptre in hand, and the queen kneeling at his feet made her formal intercession for the city. Richard raised her from her knees and seated her beside himself; then addressing the mayor, assured him of renewed favour and gave him back the key and the sword. On 19 Sept. a formal pardon, dated at Wood-

stock, was granted to the mayor, sheriffs, and aldermen. It is four times stated in the document that it was granted at the intercession of the queen. Just before this great triumph, according to the date given in a contemporary memorandum, the king and queen dined in the refectory of the Grey Friars of Salisbury, with a great attendance of bishops and lords, on the feast of the Assumption of the Virgin (15 Aug.), 1392, the king wearing his crown and all the insignia of royalty (*Eulogium*, ed. Haydon, iii. 369). This must have been the meeting of the council in which it was agreed on what terms the city of London should be restored to favour.

Two years later Anne died of the pestilence at Shene on Whit Sunday, 7 June 1394. She was mourned by her husband with a bitterness of grief that knew no moderation. 'Besides cursing the place where she died,' says the chronicler Stow, 'he did also for anger throw down the buildings, unto the which the former kings, being wearied of the city, were wont for pleasure to resort.' The funeral was put off till 3 Aug., in order that it might be made as magnificent as possible. Peers were required to be in attendance with their wives in London on the Wednesday previous, which was 29 July, and to accompany the corpse from Shene to Westminster the day before the interment. Abundance of wax was procured from Flanders for flambeaux. The rank of the deceased queen, as daughter of an emperor, was thought to require higher honours than had been paid even to Queen Philippa. Yet one disagreeable incident marred the solemnity. The turbulent Earl of Arundel, one of the five lords of 1387, absented himself from the procession which accompanied the body from St. Paul's to Westminster, and then, arriving late at the abbey, asked permission to leave early on urgent business. Richard was deeply offended at what he evidently regarded as a wilful slight, and seems to have drawn his sword upon the earl. 'The king himself,' says the contemporary writer from whom our only knowledge of the incident is derived, 'polluted the place with the blood of the Earl of Arundel at the commencement of the funeral office.' He also ordered the earl that same day to the Tower, but a week later issued a warrant for his liberation (RYMER, vii. 784, 785). Anne died childless, but lamented by all, alike the great and the humble, to whom she had endeared herself by her constant desire to promote the general welfare. Her husband caused a gorgeous tomb to be erected over her at Westminster, and ordered his own effigy to be raised upon it alongside of hers,

with their hands clasped together. The monument still remains, and conveys a very perfect notion of the queen's personal appearance; but the head-dress was removed by Cromwell's soldiers when they stabled their horses in the abbey.

Anne of Bohemia has commonly the repute of having favoured the doctrines of Wycliffe. No specific instance, however, has been shown of her active patronage of the reformer, who died just three years after she came to England. A passage, cited by Huss from Wycliffe's writings, does indeed suggest that she read the gospels in three languages, Bohemian, German, and Latin; but this does not go far to establish any sympathy with Wycliffe's principles. There is no doubt that she was highly educated. Her father knew the importance of learning, and was the founder of the university of Prague. She was at least indirectly instrumental in spreading Wycliffe's views by the mere fact of her marriage; for it was the Bohemians in her train who first introduced his writings to John Huss. It is well known that even at the present day many of those writings exist in manuscript at Vienna and at Prague, of which copies are rare or not to be found in England.

[Walsingham's *Historia Anglicana* and Ypodigma Neustrie; Froissart; Hist. Ricardi II a monacho quondam de Evesham, ed. Hearne; *Chronique de la Traïson et Mort de Richart Deux*, ed. Williams; *Eulogium Historiarum*, ed. Haydon, *Rolls Ser.*; Ric. de Maydeston in Wright's *Political Poems*, i. 282-300; *Rolls of Parliament*, iii. 376; Rymer's *Fœdera* (1816), vol. vii.; and among modern writers Strickland's *Lives of the Queens*, vol. i.; Wallon's *Richard II.*, and Höfler's *Anna von Luxemburg*.] J. G.

ANNE (1456-1485), queen of Richard III, was the daughter of Richard Nevill, earl of Warwick, known in history as 'the King-maker,' and of Anne, the heiress of the former earls, of the Beauchamp family. She was born at Warwick Castle on 11 June 1456. She had an elder sister named Isabel, born also at Warwick in 1451, who was the only other child her father had. In 1461, when she was about five years old, Henry VI was deposed, and Edward IV crowned king by her father's means. In 1466 she and her sister were present at the enthronement of her uncle, George Nevill, as archbishop of York; and it is to be noted that, at the banquet which followed, her future husband, Richard, then Duke of Gloucester, was placed at the head of the table (LELAND's *Collectanea*, vi. 4). In 1469 her father, the Earl of Warwick, intrigued against Edward IV, and seduced the king's brother Clarence from his allegiance. He stirred up a rebellion in

England and withdrew to Calais, of which place he was governor; and there Clarence married his daughter Isabel. The countess and her two daughters appear to have been at Calais before the earl and Clarence arrived there. Immediately after the marriage these two lords returned again to England, where they took the king prisoner, and put some of his wife's relations to death at Coventry. Edward escaped soon after, and issued a general pardon; but next year another rebellion was raised in Lincolnshire, with the view of making Clarence king. It was quelled at the battle called Lose-coat field, fought near Stamford, and Clarence and Warwick escaped with some difficulty once more across the sea. The Duchess of Clarence fled with her husband, and was delivered of a child on board ship while crossing the Channel. They were obliged to land, not at Calais, where Warwick's own lieutenant refused him entrance, but at Dieppe; and they were well received by Louis XI, with whom the earl had long been in secret correspondence.

And now began a negotiation of a kind unparalleled in history. The French king set himself to reconcile the high-spirited Margaret of Anjou with the man who had turned her husband off the throne, his object being to unite Warwick, Clarence, and the house of Lancaster in one confederacy against King Edward. His efforts were successful, and a treaty was at length agreed and sworn to at Angers, by which Margaret agreed to pardon Warwick, and Warwick engaged to maintain the cause of King Henry, while Louis, for his part, undertook to assist them to the utmost of his power. It was further arranged that after the kingdom had been recovered for Henry, his son Edward, Prince of Wales, should marry Warwick's daughter Anne. Meanwhile they were solemnly betrothed at Angers, and Warwick and Clarence set out on their expedition for the conquest of England. They succeeded beyond all expectation, insomuch that King Edward was taken by surprise, and obliged to escape beyond sea. Henry VI was set at liberty and was king once more. Margaret of Anjou, her son, and her son's *fiancée*, prepared at once to set out for England; but the weather was so stormy that they were detained seventeen days on the coast of Normandy before they could cross. At length they landed at Weymouth on the evening of Easter Sunday, 14 April 1471. But meanwhile a great change had taken place. Edward IV had obtained aid from his brother-in-law, the Duke of Burgundy, and had already effected his crossing into England while Margaret

was waiting for a wind. He had, moreover, won the decisive battle of Barnet on the very day that Margaret landed; who learned to her dismay on Easter Monday that her new supporter, Warwick, was slain and her husband once more a prisoner. Moreover, she was deserted by Clarence, who had made peace with his brother Edward. Nevertheless, encouraged by the support of the Duke of Somerset, she went on into the West country, summoning the people to join her in defence of her husband's rights. She was joined by a large company out of Cornwall and Devonshire, but was met at Tewkesbury by Edward at the head of a superior force, and utterly defeated. Young Edward, prince of Wales, was either slain in the field, or, as there is too much reason to believe, shamefully butchered after the battle; and Richard, duke of Gloucester, who afterwards married the lady to whom he had been affianced, is commonly believed to have been an accomplice in the deed. It is important, however, to observe that no early writer considers him the sole agent in this particular crime. He was at that time only in his nineteenth year, and his education in ferocity was only just beginning.

Anne was now, according to most writers, a widow. But the marriage arranged at Angers between her and Prince Edward does not appear ever to have been solemnised. She was at this time not quite fifteen years of age, and she must have looked upon her brother-in-law Clarence as her chief protector, who seems to have treated her as his ward. For he, perceiving that his own brother Gloucester desired to have her for his wife, not only disapproved the match, but induced her to put on disguise in order to escape his attentions. Richard, however, discovered her place of concealment, where he found her in the attire of a kitchenmaid, and took her to the sanctuary of St. Martin's. The dispute between the brothers was carried before the king's council. Clarence selfishly declared that Richard might have his sister-in-law if he pleased, but they should part no livelihood; he himself meant to be sole heir of all the Earl of Warwick's property, except some portions which had already been granted by patent to his brother. Little regard was paid by either brother to the claims of their mother-in-law, the widowed Countess of Warwick, who was at this time living in the sanctuary of Beaulieu, and petitioning parliament and the king for restitution of her own inheritance. In 1473, apparently, the king had some thought of doing her justice. In that year she left sanctuary, and was conveyed into the north

by Sir James Tyrell, when she apparently put herself under the protection of Gloucester. 'The king,' says a contemporary letter-writer, 'has restored the Countess of Warwick to all her inheritance, and she has granted it unto my lord of Gloucester, with whom she is.' In May 1474 the dispute between the brothers was settled at her expense. An act passed in parliament that they should divide the whole inheritance between them and succeed to it at once 'as if the said countess were now naturally dead.' A singular provision was also added 'that if the said Richard, duke of Gloucester, and Anne be hereafter divorced, and after the same be lawfully married,' they should still have the full benefit of the act just as if no divorce had taken place. What this could have implied it is not very easy to divine, unless it be that there was some doubt whether a real marriage had taken place. There seems to be no precise record of the date of the event, and perhaps a dispensation should have been procured to make it valid. Their only son, Edward, was born at Middleham Castle (*Rolls of Parl.*, 64) in 1476, as we may infer from his having been a little over seven when created prince of Wales (*HEARNE'S Ross*, 217). At Middleham Richard and Anne made their principal abode during the latter part of his brother's reign. The locality was convenient for him as warden of the West Marches against Scotland, an office to which he was appointed by the king, and in which he acquitted himself so well that it was confirmed to him and the heirs male of his body by parliament in 1482 (*Rolls of Parl.* vi. 204). At Middleham we may presume that Anne remained during her husband's very successful campaign in Scotland; and here, no doubt, they were both staying (for Richard, at least, was in Yorkshire according to Polydore Vergil) when the death of Edward IV called him suddenly up to London.

That was in April 1483. In June Richard usurped the crown, and Anne was queen. On 6 July she was crowned along with him at Westminster Abbey with peculiar splendour. He soon after left her at Windsor to go on a progress, at first towards the west of England; but she rejoined him at Warwick and went on with him to York, where the citizens gave them a magnificent reception. Here they stayed some days, and on 8 September Richard created their son Edward prince of Wales. This was the occasion that is sometimes inaccurately spoken of as Richard's second coronation, when he and Queen Anne walked through the streets in solemn procession, with crowns upon their heads. Next year, on 9 April, the young

prince died at Middleham, and Richard and Anne were childless. It was a bitter disappointment, and no doubt tended to make the ill-won throne still more insecure. Whether it affected Anne's health we do not know; but she did not outlive her son a whole year. Her end, according to some accounts, was hastened by foul play; and there seems to be no doubt that even while she was alive a shameful rumour was propagated that after her removal Richard might possibly marry his niece Elizabeth, daughter of Edward IV, and so defeat the designs of Richmond. After she fell ill, Richard abstained from her bed, alleging that he was advised to do so by physicians. It is said, also, that he complained to several nobles of her barrenness, and thereby created a belief that she would not be allowed to live long. Nevertheless, it is clear that her illness lasted some time. Her death occurred on 16 March 1485, the day of a great eclipse of the sun.

Three portraits of Anne exist, two of them drawn by her chaplain, Rous of Warwick, in an illuminated roll, now in the Herald's College. The third is in a similar roll, belonging to the Duke of Manchester. She seems to have been a lady with well-formed regular features and long flowing hair.

[Paston Letters; Hist. Croyland Contin.; Jo. Rossi Hist. Regum, ed. Hearne; Polydore Vergil; Hall and Grafton; Excerpta Historica (S. Bentley), 380; Cott. MS. Julius B. xii. 317.] J. G.

ANNE (1507-1536), the second queen of Henry VIII, was the daughter of Sir Thomas Boleyn, afterwards earl of Wiltshire and Ormond. He was the grandson of Sir Geoffrey Boleyn, a prosperous London merchant, who was lord mayor in 1457, and who purchased the manor of Blickling in Norfolk from the veteran Sir John Fastolf. Thrift seems to have prepared the way for the future greatness of the family. Sir Geoffrey married a daughter and coheir of Lord Hoo and Hastings. His son, Sir William Boleyn of Blickling, married Margaret, daughter and coheir of Thomas Butler, earl of Ormond; and their son, Sir Thomas, married Elizabeth, daughter of Thomas Howard, earl of Surrey, who, for his services at the battle of Flodden, had his father's dukedom of Norfolk restored. These were the parents of Anne Boleyn, who, according to Camden (Introduction to *Annals of Eliz.*), was born in 1507. She had a brother named George, afterwards Viscount Rochford, and an elder sister named Mary, some parts of whose personal history appears to have been confounded with her own. Both sisters spent some of their early years in France, and it

would seem that Anne, then seven years old, must have accompanied her elder sister Mary when she went thither in the suite of Henry VIII's sister Mary, who was married to Louis XII in 1514. Mary Boleyn was in England again in 1520 when she married William Carey; while Anne, who became, as Cavendish observes, 'one of the French queen's women,' remained in France till the end of 1521 or beginning of the year 1522, when, owing to the hostile intentions of England towards France, she was called home. She took part in one of the court revels in March 1522; and it is certain that she soon found more than one admirer besides the king. Sir Thomas Wyatt, the poet, paid her marked attention, though he was at the time a married man. Little respect was shown to conjugal ties by Henry VIII's courtiers. The king himself had before this time dishonoured Anne's sister Mary, whom he married to William Carey; and it is something to say for Anne in the midst of that exceedingly corrupt court that she did not yield in the same manner. A more honourable suitor appeared in the person of Lord Henry Percy, heir to the earldom of Northumberland; but when his attachment became manifest, Wolsey put a stop to it by the king's direction. He called the young lord before him in his gallery, reproved him for his indiscretion in entangling himself 'with a foolish girl in the court,' and informed him that the king had been arranging to marry her to some one else, finally sending for the earl, his father, who threatened to disinherit him for his presumption.

The king had in truth planned a marriage for her while she was still in France, and it was to this that Wolsey no doubt alluded, and not to any secret design of Henry to marry her himself; for the occurrence can be proved by the most conclusive evidence to have taken place as early as 1522, that is to say, within a year of her return from France. That Cavendish, from whom we derive our knowledge of the fact, should have interpreted it otherwise, is not wonderful, as he wrote many years afterwards, and knew nothing of the earlier project. The intended match was with the son of Sir Piers Butler, Earl of Ormond, and is frequently mentioned in the State Papers of 1520 and 1521 as a convenient project for reconciling two rival families in Ireland. It was, however, dropped not long after Anne's return from France. In April 1522, which was just after her first appearance at the English court, her father received two separate grants of lands and

offices from the crown, and like favours continued to be bestowed upon him during the three following years, in the last of which (1526) he was created a peer by the title of Viscount Rochford. That this steady flow of honours marks the beginning of the king's attachment to his second daughter there can be little doubt; but the secret of Henry's intentions was well kept, and it was not till the year 1527 that he was known to contemplate so serious a step as a divorce from his first wife, Katharine of Arragon. Some of the love-letters that he addressed to Anne Boleyn during this period (which have by some unexplained means found their way into the Vatican at Rome, and have more than once been printed) give an extraordinary notion of the progress of this intrigue. In one or two the royal lover expresses himself like a young gallant languishing in despair, complaining that he has been wounded for more than a year with the dart of love, and is unable to bear her absence. In others he has grown bolder and more familiar, even passing the bounds of modesty and indulging in gross allusions. It is evident that though the lady at first gave him little encouragement in his suit, it was from no particular sense of delicacy on her part; and that as soon as the king had committed himself to the course of seeking a divorce in order to marry her, she allowed him to address her in a style which would have been an insult to a really modest woman.

In May 1527 certain secret proceedings were commenced before Wolsey as legate, the king being summoned (of course by his own desire) to defend himself on a charge of cohabiting with the wife of his deceased brother Arthur. By this shameful device was it at first proposed to set aside a marriage of eighteen years' standing. The object, however, was not found practicable after such a fashion, and the proceedings were discontinued. The affair was kept a profound secret, and nothing whatever was known of it till our own day, when the original record of the proceedings was discovered in the Record Office. But though this particular step was effectually concealed, Katharine immediately afterwards gained some knowledge of the king's intentions, and the rumour soon became pretty general that Henry was seeking a divorce. Next year Cardinal Campeggio was sent by the pope to England to try the cause along with Wolsey, and both the king and Anne Boleyn seem to have been sanguine of a favourable issue. Splendid apartments were fitted up for Anne at Greenwich, close by those of the king, and courtiers repaired to her every day in

crowds, while the queen was comparatively neglected. It was evidently intended to accustom the people by degrees to her future position; but the people looked on in sullen silence (*LE GRAND'S Hist. du Divorce*, iii. 231-2). A few months later, in June 1529, the French ambassador strongly suspected that the couple had already anticipated marriage while the case was still before the legates (*ib.* 325). But the expected sentence was not pronounced, the cause was revoked to Rome, and four years more passed away before the king dared to take that step which, according to his own contention, he had all along been free to take on his own responsibility. During those four years, or at all events during some of them, the relations which subsisted between the king and Anne Boleyn could scarcely be matter of doubt. After Henry had finally parted with his wife in 1531, Anne went about with him from place to place, reviled and hated by the people. At Rome she was distinctly spoken of as the king's mistress, and even Simon Grynaeus, who visited England in the year just mentioned and had every wish to cultivate Henry's good will, was not certain that she had not borne him children (*Original Letters relating to the Reformation*, Parker Society, ii. 552). In fact Henry's conduct in cohabiting with her, as well as in repudiating his lawful wife, is reproved in more than one papal brief issued in the year 1532; and it does not appear that the imputation was disavowed even by the king himself.

All this while the king's suit for a divorce was before the courts at Rome, but various subordinate issues had been raised by Henry's agents, really with the view of removing the cause once more and preventing an impartial decision. At length, at Easter in the year 1533, it was made known that the king had actually married Anne Boleyn on or about St. Paul's day (25 Jan.) preceding. No sentence had yet been given declaring the king's former marriage invalid; but some nuptial rite, it seems, had been performed in the strictest secrecy, and when the fact was announced Anne was already some months advanced in pregnancy. A sentence, however, was soon after obtained from Archbishop Cranmer pronouncing the marriage with Katharine null, and another sentence declaring Anne Boleyn the king's lawful wife, immediately after which Anne was crowned on Whitsunday at Westminster Hall with great magnificence.

She had now attained the summit of her ambition; but never was woman in exalted station less to be envied, even in the moment of her triumph. Her coronation excited no

enthusiasm out of doors, and real love was absent within. The passion which had thus far blinded the king was already on the wane. Within three months of her coronation he gave her cause of jealousy, and, when she complained of his conduct, brutally told her to shut her eyes 'as her betters had done,' for he had the power to humble her even more than he had raised her. It was very shortly after this incident that she gave birth to her only daughter, the future Queen Elizabeth, on 7 Sept. 1533. The disappointment at court was great, for physicians, astrologers, and others had flattered the king's sanguine hopes that the child was to be a boy. Next year there was a worse disappointment still: Anne met with a miscarriage. All this gave evident satisfaction to the people, who were anxious to see the Princess Mary restored to her place in the succession. Anne moreover became more and more conscious that the king's regard for her was diminished. Indeed Henry told her flatly, when she complained, that she ought to be very well satisfied with what he had done for her already, for he would not do the same thing again if the matter were to begin anew. Then a third disappointment came, still greater than either of the others. On 29 Jan. 1536—little more than three weeks after the death of her rival Katharine of Arragon—she was delivered prematurely of a dead child.

The climax of her miseries was now at hand. On Mayday following a tournament was held at Greenwich, from which the king suddenly took his departure with only six attendants, leaving the spectators, and most of all (we are told) the queen, in perplexity as to the cause. If, however, we may believe the Jesuit Sanders, who, though a little later, is scarcely a more one-sided authority than Hall, the king had seen her let fall a handkerchief that one of her supposed lovers in the lists might wipe his face with it. Such an act may have been the pretext for the king's departure, yet the thing itself was probably neither better nor worse than a thousand other trivialities which could hardly have escaped notice before. If Anne was really guilty, it was certainly not the first time she had shown undue familiarity towards others besides the king. The two indictments afterwards found against her, in Kent and in Middlesex, charge her with a number of acts of adultery and also of incest, extending over nearly the whole three years of her married life. These charges, even though untrue, must have been plausible, and it is scarcely conceivable that during all this period the king saw nothing in Anne's conduct that might have been construed amiss.

His growing disgust no doubt led him to interpret her acts in a way that his own self-respect had hitherto forbidden him to do. But it was not in one day or one moment that his opinion of her was altogether changed. There is reason, indeed, to believe that even before the tournament commenced one of Anne's alleged paramours had confessed his guilt under torture, or at least under the dread of it (see the remarkable deposition of George Constantyne in *Archæologia*, xxiii. 64). In any case we can hardly imagine that the dropping of that handkerchief was the first thing that aroused the king's suspicions, supposing them to be real and well founded.

The day after the tournament, about five in the evening, Anne was conducted to the Tower by the lord chancellor, the Duke of Norfolk, and others. On entering the court-gate she fell on her knees and protested her innocence. Her brother Lord Rochford and her other alleged paramours seem to have been arrested at an earlier hour that same day and brought to the Tower before her. Lord Rochford was accused of the revolting crime of incest—a charge apparently supported by his own wife, but not more credible on that account; for of her it is sufficient to say that she afterwards suffered death for assisting Henry's fifth queen, Katharine Howard, in her intrigues. The untitled offenders, however, were first disposed of. On 12 May Sir Francis Weston, Mr. Henry Norris, and William Brereton, gentlemen of the privy chamber, with Mark Smeaton, a musician, were arraigned for criminal intercourse with the queen, and condemned of high treason. Anne's case was thus prejudged before she herself was put on her trial. She and her brother were tried before a body of six-and-twenty peers assembled for the purpose in the Tower on the 15th; and every peer from the lowest to the highest gave in a verdict of guilty. The Duke of Norfolk then, as lord high steward, gave sentence that she should either be burnt or beheaded at the king's pleasure, and that her brother should undergo the hideous punishment that was usual in cases of high treason. This was, however, commuted to simple decapitation, which he and the others suffered on the 17th, the queen's execution being deferred till the 19th.

Meanwhile on the 17th her marriage with the king was pronounced invalid by a court of ecclesiastical lawyers presided over by the Archbishop of Canterbury at Lambeth. On what ground this judgment could have been given it is difficult to understand, unless it was that there had been a previous contract between her and the Earl of Northumber-

land; but the earl himself four days before had solemnly denied this, declaring that he had already attested his denial by receiving the sacrament, and was ready to do so again. We may, perhaps, suspect that this was just a little too much protesting, and that the earl, on cross-examination afterwards, confessed enough of his former intimacy with her to enable ecclesiastical lawyers to make out a case of precontract. On Friday, the 19th, Anne was brought to execution on Tower Green in presence of the principal nobility and of the mayor and aldermen of London. On the scaffold she made a brief address to the bystanders, not acknowledging the crimes with which she was charged, but expressing perfect submission to the law and declaring that she accused no one on account of her death. Her head was then smitten off with a sword by the executioner of Calais, whose services were engaged for the occasion, the manner of death being one at that time practised in France but wholly unknown in England.

The evidence on which she was condemned, however it may have satisfied public opinion at the time, would probably not have impressed men in our day even with a general belief in her guilt, much less have justified her execution. No one of her alleged accomplices except Smeaton appears to have made any confession; and the queen herself, even when desiring earnestly the consolations of religion to enable her to prepare for death, protested in the most emphatic terms to Kingston, the constable of the Tower, that she was innocent of criminal intercourse with any man whomsoever. The charges, we may presume, derived their plausibility from certain acts of indecorous familiarity which the loose conventionalities of the court must have for a long time condoned, and which in the case of her brother were positively not a little revolting. But her conduct in the days of her prosperity had been so arrogant and overbearing that few men in those days pitied her fate or doubted that it had been righteously decreed. Her own uncle, the Duke of Norfolk, sat in judgment upon her and pronounced her sentence. Her own father even was one of the peers who found a verdict of guilty against her alleged paramours, thereby admitting by implication that he considered her guilty too. No one after her fall seems to have felt the smallest sympathy. Yet her conduct in prison, as described in the letters of Sir William Kingston, sadly mutilated as they are and illegible from the Cottonian fire, can hardly but be considered to afford strong presumption of her innocence. As for the often

quoted letter supposed to have been written by herself from the Tower, it is a manifest fabrication of the time of Queen Elizabeth. But there is no doubt that she met her fate with singular cheerfulness and courage; inasmuch that Sir William Kingston was moved to write of her, 'This lady has much joy and pleasure in death' (see also METELEN, f. 21, who follows a contemporary account). It is commonly held that the king's estrangement from her was due mainly, if not entirely, to a newly developed passion for another woman; and it is a fact that he married Jane Seymour with most indecent haste immediately after Anne's execution. But the revulsion of feeling which he manifested with regard to Anne seems to have been far more vehement than a man might be expected to show who had simply got tired of one mistress and taken up with another. His passion, in fact, had been declining from the very moment that he married her, and he only sought consolation in a new attachment for a bondage that was becoming more and more intolerable.

Of her personal beauty the opinion of the time was not altogether unanimous. 'Madame Anne,' says one writer, 'is not one of the handsomest women in the world. She is of middling stature, swarthy complexion, long neck, wide mouth, bosom not much raised, and in fact has nothing but the king's great appetite, and her eyes, which are black and beautiful' (*Venetian Calendar*, iv. No. 824). But besides her eyes her long flowing hair, which she allowed to fall down her shoulders, thick set with jewels, commanded general admiration (*ib.*, Nos. 802, 912); and Cranmer himself was struck with her at her coronation, 'sitting in her hair upon a horse litter' (ELLIS's *Letters*, 1st ser. ii. 37). That she knew how to make the most of her personal attractions we may very well believe. According to George Wyatt, the grandson of the poet, there was even a slight personal defect in one of her finger-nails, which she generally contrived to hide with the tip of another finger.

Soc.); Cavendish's *Life of Wolsey*; Sanderus de Schismate Anglicano; Wyatt's *Life of Anne Boleyn*; Metelen, *Histoire des Pays Bas*, f. 21; Love *Letters of Henry VIII and Anne Boleyn*; Burnet; Rymer, *Foedera* (1816 seq.), xiv. 470-1; Statutes

25 Hen. VIII, c. 22, 28 Hen. VIII, c. 7; Ellis's Letters, 1st series, ii. 53 sq.; Baga de Secretis in Report iii. of Dep. Keeper of Pub. Records, pp. ii. pp. 242-5. A valuable work on Anne Boleyn, by Mr. Paul Friedmann, has just appeared (1884). It gives the fullest account from the latest sources of Anne's personal history and the political history of the time. His view of the facts agrees in the main with the above, but on the evidence of a portrait at Basel he dates her birth in 1503 or 1504. He also thinks that she was older than her sister Mary, a view which is opposed to some evidence.] J. G.

ANNE OF CLEVES (1515-1557), fourth queen of Henry VIII, was the daughter of John, duke of Cleves, surnamed the Pacific. Her mother, Mary, was the only daughter of William, duke of Juliers, and her father was consequently possessed of that duchy also in her mother's right. She herself was born on 22 Sept. 1515. She had an elder sister, Sybilla, who was married in 1527 to John Frederic, duke of Saxony, the leader of the Smalcaldic league; and a younger sister, Amelia, who remained single. She had also a younger brother, William, who, by an arrangement made at Nimeguen, became duke of Gueldres in 1538, and united that duchy after his father's death to those of his inheritance. In 1533 her father established Lutheranism throughout his dominions. He was the most powerful supporter of protestantism in the west of Germany, and it was not unnatural that after Jane Seymour's death she should have been thought of by Cromwell as a match for Henry VIII. There were, however, some drawbacks; and one was intimated pretty distinctly beforehand, even as early as December 1537, before the king had been two months a widower. John Hutton, ambassador in the Low Countries, wrote at that time to Cromwell, mentioning her among other possible ladies. 'The Duke of Cleves,' he observes, 'hath a daughter; but I hear no great praise neither of her personage nor beauty.' Nevertheless, after the failure of some other negotiations, Henry was induced, in the spring of 1539, to desire her portrait of her brother-in-law, the Duke of Saxony, her father being then lately dead. Christopher Mont, a German himself, was the king's agent at that court, and wrote to Cromwell in a very different vein from what Hutton had done some fifteen months before. Every man, he said, praised the lady's beauty. She as far surpassed her sister, the duchess, 'as the golden sun did the silver moon.' The Duke of Saxony, however, put off sending her portrait, alleging that his painter, Lucas Cranach, was ill, till the king commissioned his own artist, Holbein, to do the work, who

painted likenesses both of her and of her sister Amelia, which seem to have given great satisfaction.

It is one of the extraordinary features of the case that so little seems to have been thought of any possible objection except plain looks. Nicholas Wotton, afterwards dean of York and Canterbury, wrote at this time from Germany, that the lady had been very strictly educated by her mother, the duchess, 'and in manner never from her elbow;' that she was very meek and gentle, but that she could neither read nor write any language but her own. She might, no doubt, learn English soon, for she was very intelligent; but at that time (within five months of her marriage) she knew not a word of it, and, worse still, she could not sing or play upon an instrument. Henry was devotedly fond of music; but in Germany it was thought unworthy of a great lady to have any knowledge of the art. The only thing in which she was at all proficient was needlework, and with that she occupied most of her time. The prospect of her union with Henry was certainly far from satisfactory. Nevertheless everything was arranged. Frederic of Bavaria, count palatine of the Rhine, came to England accompanied by the vice-chancellor of her brother, the Duke of Cleves, to conclude the match, and the treaty was signed at Windsor 24 Sept. 1539. Anne left Düsseldorf and proceeded by easy stages to Calais, where she was met, 11 Dec., by Fitzwilliam, earl of Southampton, lord high admiral, and a great array of English lords and gentlemen. She was received with immense firing of guns both from the town and from the ships in Calais haven. She remained at Calais fifteen days for lack of favourable wind, but crossed on 27 Dec., and landed at Deal. Thence she proceeded, by Dover, Canterbury, and Sittingbourne, to Rochester. She was met on Barham down and conducted into Canterbury by the archbishop and four of his suffragans with a great company of gentlemen. Again she was met on Rainham down and conducted into Rochester by the Duke of Norfolk and a great company of lords, knights, and esquires. She reached Rochester on New Year's eve, where Henry himself came upon her next day by surprise, having informed Cromwell beforehand that he intended to visit her privily 'to nourish love.' He found her looking out of a window at a bull-baiting, and showed her a token from himself, still preserving his *incognito*. She thanked him with commonplace civility, and still kept looking out of window, till the king, after putting off his cloak in another chamber, returned in a coat of purple velvet,

and the reverence shown him by the lords and knights about him convinced her that he was her destined husband.

To outward appearance the interview passed off well. The king spent the evening in her company, and was with her again next morning till past midday, when he took his leave and returned to Greenwich. It is perhaps an exaggeration that he was disgusted with her at the first glance. But he confessed to Cromwell next day that though she was 'well and seemly,' he considered her 'nothing so fair as had been reported.' The tedious effort to converse with her could not have helped to alleviate any disappointment which he felt at her personal appearance, and he asked in dismay if there was no means by which he could avoid fulfilling the engagement. Had she not made a contract once with the Marquis of Lorraine? This impediment was discussed by the council, but the precontract had been annulled. 'Is there no remedy, then,' said the king, 'but that I must needs put my neck in the yoke?' There appeared to be none, and the victim resigned himself to his fate, giving no external evidence of his extreme mortification. Anne meanwhile completed her journey up to London. A rich tent of cloth of gold had been set up for her on Blackheath, where the city companies and a great array of knights and gentlemen came to meet her, and there Henry himself again met her and gave her a public greeting, riding with her by his side in procession to Greenwich. The following Tuesday, being Twelfth day, was appointed for the marriage. That morning the king said to Cromwell, 'My lord, if it were not to satisfy the world and my realm, I would not do that which I must do this day for none earthly thing.' The rite, however, was duly performed by Cranmer at Greenwich, and the pair showed themselves in procession that same day afterwards. Chroniclers report, with their usual delight in pageants, the jousts which took place on the following Sunday, and a procession up the river to Westminster on 4 Feb. Parliament met on 12 April, and among other matters settled the dower of the new queen; and nothing occurred for some time to show the world at large that there was the least disposition to call in question the validity of the marriage.

But a great change took place during the next three months. On 17 April Cromwell was created earl of Essex, as if his services in the matter of the king's marriage had marked him for peculiar honour. In June he was arrested and sent to the Tower. His fall was connected with a great political change and a reaction in favour of catholic

doctrines. At the time of the marriage Henry stood in no small fear of the emperor, and indeed of a European combination against him, owing to the policy of which Cromwell had been the instrument. The marriage was calculated to give the emperor some trouble at home by the encouragement it gave to the German protestants. But now Henry was rather inclined to seek reconciliation with the emperor, and to drop the alliance with the German princes. He accordingly had the less difficulty in seeking to release himself from a distasteful union. An act of attainder was passed against Cromwell in parliament, and while he lay in prison expecting his inevitable fate, the king compelled him to reveal a number of shameful conversations with himself, tending to show that he had so disliked the lady all along that he had never consummated the marriage, and that if she was a maid when she came to him (which his majesty was pleased to doubt) he had left her just as good a one as before. On this, both houses of parliament having requested that the validity of the marriage should be inquired into, the question was laid before convocation, which, on 9 July, unanimously declared it to be null and void. An act of parliament was immediately passed in accordance with this determination, and very soon afterwards—though on what precise day is uncertain—Henry married Katharine Howard, the Duke of Norfolk's niece, in whom he had evidently for some time taken a very strong interest.

It must be owned that Anne herself consented to the dissolution of her marriage with the king. On 25 June the king had formally notified his intentions to her by a deputation whom he sent to her at Richmond. At first she fainted at the intimation, but she agreed to refer the matter to the clergy, and seemed satisfied with an arrangement by which lands to the value of 3,000*l.* a year were settled upon her on her renouncing the name of queen for that of the king's 'sister.' A further condition was attached to the grant, that she should not cross the sea again but remain the rest of her days in England.

There is not much to record of her after-life. There was a scandalous report at one time, which proved to be unfounded, that she had given birth to a child. After the fall of Katharine Howard her brother, the Duke of Cleves, vainly hoped that the king would take her back again as his wife. Under Edward VI she was put to some inconvenience by the pensions which ought to have been paid by the crown to some of her servants falling into arrear, and also by some exchange of land with the king which

were forced upon her by the council. At the coronation of Queen Mary she rode in the procession along with the Princess Elizabeth, with whom she was also seated at the banquet at the end of the table. She died on 16 July 1557, and was buried with considerable ceremony at Westminster Abbey on 3 Aug. following. Her will is dated on 12 and 15 July immediately before her death.

Bentley); Herbert's History of Henry VIII. Miss Strickland's life of this queen contains also some particulars derived from original researches.] J. G.

**ANNE OF DENMARK** (1574–1619), queen consort, according to the style adopted by her husband, King James I, of Great Britain (France) and Ireland, was born at Skanderborg, in Jutland, 12 Dec. 1574 (not 1575, as sometimes stated; see RESEN, *Kong Friderichs II Krønike*, 278). Her father, King Frederick II of Denmark and Norway (of the Oldenburg line of the dukes of Schleswig-Holstein), belonged to a family that had early thrown in its cause with that of the Lutheran Reformation, and was himself an orthodox and persecuting Lutheran. Anne's mother was Sophia, daughter of Ulric III, duke of Mecklenburg, and at that time bishop of Schwerin, and she also came from an orthodox Lutheran stock (RUDLOFF, *Handbuch der Mecklenburgischen Geschichte*, part iii. vol. ii.). Queen Sophia was a highly gifted princess, and took an interest in the scientific researches of Tycho Brahe, who was protected by her husband; and after her forced retirement from public life soon after her husband's death (1588), she devoted part of her leisure to the study of astronomy, chemistry, and other sciences. Writing from Roeskilde, 10 Aug. 1588, Daniel Rogers speaks of her to Burghley as 'a right vertuous and godlie princess, which, with a motherlie care and great wisdom, ruleth the children' (ELLIS, *Original Letters*, 2nd series, iii. 149. As to Queen Sophia, see also E. C. WERLAUFF, *Sophia af Mecklenborg*, Copenhagen, 1841). These children were seven in number. Of the four daughters the eldest, Elizabeth, married Duke Henry Julius of Brunswick-Wolfenbüttel, who played a more memorable part in literary than in political history; the second was Anne; the third, Augusta, married Duke John Adolphus of Holstein-Gottorp; and the fourth, Hedwig, the Elector Christian II of Saxony, after having missed the hand of the future Emperor Ferdinand II (see GINDELY, *Geschichte des dreissigjährigen*

*Krieges*, i. 183). The eldest son was Christian IV of Denmark (1588–1648), the most famous of her kings. Anne's second brother, Ulric, bishop of Schwerin and Schleswig, is found at the English court in 1604–5, when he urges renewal of the war with Spain (*Calendar of State Papers, Domestic, James I*, 9 Jan. 1605), and is described as 'not very rytehe any way' (Lord Lumley to Earl of Shrewsbury in NICHOLS's *Progresses of James I*, i. 466), a circumstance which may be connected with his speculations upon the hand of Lady Arabella Stuart (see Miss STRICKLAND, *Lives of the Queens of England*, vii. 416). The third brother, John, died young at Moscow, 'when about to marry.'

If the absurd story be authentic, according to which the Princess Anne was carried about in the arms of her attendants without being allowed to walk alone till after she was nine years old, the etiquette of the Danish court must have been as rigorous as the pride of the Danish royal family was high; fortunately, however, as Miss Strickland points out, no ill came of it, since its victim 'was afterwards very famous for her agile dancing.' There appear to be no traditions as to the more advanced stages of the training of the Princess Anna (it was thus that she always spelled her name). She probably received a fair education, though her innate frivolity was in some respects proof against its influence. Either in her youth or later she learned to write a singularly beautiful hand; and she had a sprightliness of style which may or may not have come by nature.

Before her childhood had ended, negotiations concerning her marriage had begun. In the year 1585, according to Sir James Melville, Queen Elizabeth of England was, by her intelligence from Denmark, advertised 'of a gret and magnifk ambassade send be the King of Denmark in Scotland; thre ambassadours, with a sexscore of persones, in twa braue schippis.' Melville adds that he cannot tell whether she suspected a marriage to be the ultimate purpose of the embassy; but it is obvious that the English council feared that the Danes intended a close alliance with Scotland, and that accordingly Wotton was sent into that country to counteract any such design. From a comparison of Melville's account (in which as usual Melville plays the leading part) with that in the 'Historie and Life of King James the Sext,' it seems clear that the primary object of this Danish embassy, sent in July 1585, was to negotiate the restitution of the Orkney and Shetland isles to the Danish crown, which had been pledged as security for the dowry of Margaret, daughter of King

Christian I of Denmark, on her marriage with James III of Scotland in 1469. The ambassadors had no instructions to speak of any marriage; but before they took their departure they contrived to let it be known that the King of Denmark had fair daughters, a marriage with any one of whom would, as they supposed, settle the Orkney claim at the same time. Notwithstanding the endeavours of Wotton and his friends to prejudice King James against a Danish alliance, he was in the end, by Melville's eloquence or otherwise, induced to return civil though dilatory answers; and the Danish ambassadors departed, satisfied, in August. King James VI was at this time only in his twentieth year, but he had other and more cogent reasons for hesitating about marriage. Queen Elizabeth, who still kept the mother in durance, assumed to herself the right of controlling to some extent the conduct of the son. Whether or not James was to be her successor, he must be her subservient ally; and she would not hear of the Danish connection. Towards the end of 1585 King James had gone so far as to send his almoner, Peter Young, to Denmark, to make polite speeches and discreet inquiries, and to promise a more honourable embassy. Young and Colonel Stuart, who had followed him to Denmark on his own business, returned in 1586 'with sa gud and frendly answers, that ther was little mair mention maid of the restitution of the ylls of Orkeney' (MELVILLE). Meanwhile Wotton's intrigues continued, growing, if Melville is to be believed, into grave designs against the king himself, the discovery of which led to the English ambassador's flight from Scotland. In the following year, 1587, the Scottish nobility had been roused to vehement indignation against Queen Elizabeth by the execution of Queen Mary; and at the same convention in which the king was called upon to revenge his mother's murder, 'the nobilitie concludit that the kinge's marriage with Denmarc suld be followit furth' (*Historie and Life*, p. 230). In vain Queen Elizabeth had influenced the secretary (from 1588 chancellor) Maitland and others of the dominant party against the proposed marriage; Maitland ultimately proved to be chiefly intent upon securing for himself a slice of the lordship of Dunfermline that would eventually form part of the queen's settlement, and the king was becoming more and more bent upon the match, though still proceeding with great caution. Early in 1588 the laird of Barnbarroch and Peter Young were once more sent to the King of Denmark, who now began to complain of vexatious delay. Possibly he was

aware that, shortly after the despatch of these agents from Scotland, Du Bartas (the poet) had arrived there on a confidential mission from King Henry of Navarre to propose the hand of his sister Catharine to King James. But this scheme came to nothing, and Queen Elizabeth, who had favoured it, now counselled the king to suit himself in marriage, but not in such a way as might not suit her (cf. CAMDEN's *History or Annals of England under Elizabeth*, ap. Kennet, ii. 1706). King Frederick II's death, which occurred in April 1588, doubtless caused further delay; but it seems to be an incorrect statement that his eldest daughter Elizabeth was married before his second daughter (Elizabeth married 19 April 1590; see COHN's *Stammtafeln*, No. 86). At last, in June 1589, Earl Marishal, accompanied by Lord Dingwall and a retinue of knights and gentlemen, sailed for Copenhagen; and on 20 Aug. the Princess Anne was duly married by proxy to King James VI. She soon embarked upon her homeward journey with her proxy husband, Earl Marishal; but tempestuous winds drove them upon the coast of Norway, where they stayed for some time awaiting fair weather. 'Quhilk storm of wind was allegit to haue bene raised be the witches of Denmark, be the confesioun of sindre of them, when they wer brunt for that cause' (MELVILLE, 369). The bride's own ship was missing for three nights, and in a most perilous condition before it was found by the ambassador's ship (CALDERWOOD, *History of the Kirk*, v. 59). Meanwhile James was impatiently awaiting their arrival in Scotland, where the weather was likewise stormy, and the chancellor Maitland, whom the king charged with having caused the untoward delay, suggested to him the adventurous project of putting to sea himself to fetch home his bride. James resolved, in Mr. Burton's words, 'to have one romance in his life,' and after issuing a most extraordinary proclamation to his people in explanation of his conduct (see BURTON, vi. 39-41) sailed from Leith, 22 Oct. 1589, on his chivalrous errand, accompanied by the chancellor Maitland and others. On the 28th he landed at Slaikray, on the coast of Norway, and thence proceeded to Opsloe (on the site of which Christiania was afterwards founded by Christian IV), where Queen Anne was waiting. At their meeting, which took place on 19 Nov., 'his majestie myndit to giue the queine a kiss after the Scotis faschioun, quhilk sho refusit, as not being the forme of hir cuntries. After a few wordis prively spoken betuix his majestie and hir, thair past familiaritie and kisses.' On the 23rd they were married at Upslo by David Lyndsay, minister at Leith.

'The banquet was maid after the best forme they could for the tyme' (MS. quoted in *Documents relative to the Reception at Edinburgh of the Kings and Queens of Scotland*, cited in the introduction to the *Maitland Club Letters*, p. xvii). The king's intention of speedily returning to Scotland, announced in his proclamation, was once more frustrated by stormy weather; and at the invitation of the queen dowager and council of Denmark the newly married couple spent the remainder of the winter in that country, where Anne appears to have gone through the marriage ceremony for the third time at Kronenborg. According to Archbishop Spottiswoode (*History of the Church and State of Scotland*, fol., p. 380, incorrectly given by Miss Strickland, *u. s. p.* 337), the Danish government, on the occasion of the 'compleating' of the marriage, abandoned all claim of right to the Orkneys till King Christian IV should have come of age. This was a temporary abandonment only, and the most recent historian of Scotland states it to have been 'a question fertile in ingenious speculations in international law, whether, if payment of the dower of Margaret of Norway should at any time be offered, Britain would be bound to restore the islands' (BURTON, iii. 166).

On 21 April 1590 the royal couple sailed from Kronenborg, and on 1 May they landed at Leith. Great preparations had been made to welcome them, and the lord provost and baillies of Edinburgh had judiciously resolved to 'propyne' the queen with a magnificent jewel which the king had pledged to the town for 4,000*l*. But Holyrood Palace was, after all, not ready for their reception till the 6th of that month. The queen's solemn entry into Edinburgh was to have taken place on the same day as her coronation, 17 May; but as this was the Lord's Day, it was decided 'among the ministers' that, though the coronation might be held upon it, the entry might not, and the latter ceremony was accordingly deferred to the 19th. On this occasion the queen enjoyed a foretaste of that allegorical pageantry which afterwards became one of the ruling passions of her life; and Andrew Melville delivered an oration to the Danish ambassadors which was commended by Joseph Scaliger in the memorable words, 'Profecto nos talia non possumus' (CALDERWOOD, *u. s.* 95-6). Immediately after her arrival in Scotland she had taken legal possession of the three lordships of Falkland, Dunfermline, and Linlithgow belonging to her dowry. She afterwards indulged her love of building in the renovation of her palace at Dunfermline. As late,

however, as 1593, a Danish embassy arrived to 'demand a just rental of her dowry in Scotland' (*Historie of James the Sext*).

According to the enthusiastic testimony of the minister who married her at Upslo, Anne was at this time a beautiful girl. Even in later times her white skin and yellow hair were admired, though Osborne, in his 'Traditionall Memoyres,' unkindly describes the former as 'far more amiable than the features it covered.' But though the world and she might now seem to smile on one another, there were other reasons besides her youth and good looks why it behoved her to move warily in the strange court and country in which her lot had fallen. The ceaseless strife of the Scottish factions was full of perils for her high spirit and in experience, and she was quite out of sympathy with the dominant religious sentiment of the people. At first she manifested a dislike to the counsellor whom the king had placed in her household; but, if Sir James Melville's account is to be trusted, the successful way in which he fulfilled his delicate functions at length gained him her goodwill. To the charges brought against Bothwell (Francis Stuart) of having been guiltily mixed up with the witchcraft that had delayed her coming, she was of course a stranger. Scandalous rumours arose on the occasion of the death of the Earl of Murray (son-in-law of the Regent Murray), who, being supposed to favour Bothwell's desperate designs, was massacred by the Earl of Huntly and his Roman catholic followers in February 1592. But there is no clear proof that the deed was done by the king's command, and no proof of any kind to show that the queen had given him cause for jealousy (BURTON, vi. 59). Nor is there anything to connect Queen Anne with the escapade of her gentlewoman, Margaret Twynstoun, who in the same year enabled Wemys of Logie, accused of intercourse with Bothwell, to escape at night-time out of the window of the queen's chamber (*Historie and Life of James the Sext*, 253-4). It would, however, certainly seem as if the party which was opposed to the influence of the chancellor Maitland, and which had brought about his temporary dismissal, had found a supporter in the queen, till he contrived to make his peace with her after recovering the royal favour (MELVILLE, 405). To suppose, on the other hand, that she in any way abetted the mad attempts of Bothwell upon the royal palaces and their inmates, would amount to nothing short of injustice. The birth of her eldest son at Stirling on 19 Feb. 1594—the year of the last of Bothwell's exploits—was the best encouragement for the loyalty which had

defeated them. There was now an heir to the throne.

Henry Frederick, prince of Carrick, and afterwards prince of Wales, was fondly loved by his mother, whom, at least in the days of his later boyhood, he was said greatly to resemble (*Chamberlain to Carleton*, 13 Nov. 1611, ap. BURCH). When he died in 1612—the young Marcellus of English history—she passionately mourned his premature death; a full month after that event, though her conversation had recovered some of its cheerfulness, she is described as sitting in a darkened room hung with black; nor would she, in 1614, attend a solemnity of which her second son was to be the central figure, lest she should renew her grief by the memory of his brother. In Prince Henry's early days the question of his custody was the chief trouble of his mother's life. Already, in 1595, the king had committed the charge of the prince to the Earl of Mar, solemnly admonishing him, 'in case God should call me at any time, to see that neither for the queen nor estates their pleasure, you deliver him till he be eighteen, and that he command you himself.' The queen's wish to have the prince brought up in the castle at Edinburgh was accordingly refused by the earl, with the king's approval. For the present she made no further attempt. On 15 Aug. 1596 she gave birth to her eldest daughter, the admired Princess Elizabeth and Rose of Bohemia of later days. Considering her destiny, it is curious that the care of her should have been committed to Lord Livingstone, whose wife was a Roman catholic. Great discontent was hereby aroused among the ministers of the Kirk, who were at that time greatly exercised by the leniency shown by the government towards the 'popish lords.' The occasion of the child's christening was taken advantage of by the general assembly to review the morals and manners of the court, and in particular to express a desire for the reformation of the queen's majesty's ministry, as well as to animadvert upon 'her company, her not repairing to the Word and sacraments, night-waking, balling, &c., and such like concerning her gentlewomen' (BURTON, vi. 75-77).

Queen Anne can hardly at this early date have entertained the personal predilection for Rome which was afterwards imputed to her. A deadlier antagonism than that between the Lutheranism in which she had been brought up and the Calvinism which now confronted her could not easily be imagined; and in the closing years of the sixteenth century this conflict had reached its climax. Stimulus enough was given to the hopes of

the Roman Catholics that Prince Henry too might be placed in the care of a member of their faith by the negotiations which, beyond a doubt, King James was, during these years of expectation, carrying on with Rome or her agents. Queen Anne's second daughter, Margaret (who died in infancy), was born at Dalkeith Palace, 24 Dec. 1598; her second son, Charles, at Dunfermline on 19 Nov. 1600—the same day, as the ecclesiastical historian (Calderwood) pleasantly puts it, 'that Gowrie's and his brother's carcasses were dismembered.' It would be futile to dwell on the foul scandals and vague rumours which attributed to Queen Anne the moral responsibility for part or the whole of the Gowrie tragedy, especially as, not long after its occurrence, the king and queen seem to have been on the best of terms with one another. In April or May 1601 a fifth child, 'Duik Robert,' was born to them, who died in infancy. A daughter (Mary), born at Greenwich in April 1605, who died in 1607, was the youngest of their children.

On 24 March 1603 Queen Elizabeth died, and King James I was proclaimed in London. Twelve days afterwards he had started on his southward journey, his queen not accompanying him, for the simple reason that the ladies of the household could not wait on her till after the late queen's funeral (*Calendar of State Papers*, 14 April 1603); though before she left Scotland she received from him the jewels which had been the ordinary wear of her predecessor. Not unnaturally perhaps, Queen Anne appears to have been moved by the increase of grandeur in her position, as well as by the fact of her husband's absence, to give the rein to her self-will, seeking to take the appointments to her household into her own hands, and, above all, resolving to make one more attempt to obtain possession of the person of her eldest son. The Earl of Mar having accompanied the king to London, the prince and his sister had been placed under the care of the old countess, who refused to deliver the prince up to the queen. The latter was so much incensed by this refusal, that she fell into a fever which caused a miscarriage. The king, though approving the conduct of the Mar family, hereupon sent the Duke of Lennox to Scotland with a warrant empowering him to receive the prince and deliver him up to the queen; but she now refused to be satisfied by this, and demanded a public reparation from the Earl of Mar. Finally the difficulty was adjusted by the king, whose letters in this matter (see *Maitland Club Letters*) show much good feeling as well as judgment, and the queen

started for England with her eldest son on 2 June 1603. It is curious to find Cecil protesting to the queen that had he been consulted by her in these 'accidents of Scotland,' he would have supported her cause, her interest being with him paramount over all others (*Calendar of State Papers*, May 1603). In the sequel Salisbury, though on one occasion he felt constrained to disoblige, and received very hard words from her in consequence (GOODMAN'S *Court of King James I*, i. 37-8), on the whole contrived to render her so many services that she could not ignore her indebtedness to him (Viscount Lisle to Salisbury, *Calendar of State Papers*, 19 Aug. 1611).

Queen Anne's journey was conducted with considerable pomp, the warrant of charges for her lords and ladies alone amounting to 2,000*l*. At Berwick there had been some difficulties about the household, and the intended meeting between king and queen at York had not taken place there. But at Althorpe (near Northampton) Ben Jonson's charming 'Mask of the Fairies' appropriately welcomed *Oriana*, while the observant Lady Anne Clifford noted that the queen 'shewed no favours to the elderly La', but to my La. Rich, and such like companie' (NICHOLS, i. 174). At Easton Neston the courts joined, and king and queen met; and on 2 July Windsor was reached. It was here that the curious incident of the quarrel between Lords Southampton and Grey of Wilton occurred in the queen's presence, and led to a very hot-tempered letter to the king on the part of the queen herself. On 24 July both were crowned, 'it being then very bad weather and the pestilence mightily raging.' It was noted that the queen declined to receive the sacrament according to the rites of the Church of England (BIRCH'S *State Papers*, cited by Miss Strickland, p. 409), but whether from Lutheran dogmatic considerations, or, as was suspected, from Roman catholic leanings, cannot be decided. The entry through the city of London was deferred till 15 March, for which occasion Dekker devised the solemnity. An unusually liberal jointure (5,000*l*. a year in land) was settled upon her, the chief offices of her household were filled up, and the day of her splendour had begun.

The serious business of Queen Anne's life might almost seem to have consisted in its pleasures. Of these the chief was her participation in the entertainments which, especially of course at court, absorbed so large a share of the time and of the intellectual activity of her generation, and which exercised no inconsiderable influence upon the progress

of English literature and art. If the name of Queen Elizabeth is traditionally associated with the greatest period of our drama, that of Queen Anne—Ben Jonson's *Oriana*, or, as he afterwards preferred to name her, *Bel-Anna*—links itself in its turn with the history of the English mask, and of cognate entertainments. The details of her patronage of these must be read in Nichols's elaborate volumes; among the authors whose masks were produced by her orders or for her entertainment were, besides Jonson, Daniel and Campion; among the pieces in which she personally appeared were Jonson's 'Mask of Blackness' (1604), his 'Mask of Queens' (1609), and Daniel's 'Tethys's Festival' (1610). As late as the year 1617 we find her dancing in a mask at Twelfth-night with the newly-made Earl of Buckingham and the Earl of Montgomery. By that time it may be supposed that she had begun to eschew apparel for herself, if not for her ladies, which in 1604-5 had struck Sir Dudley Carleton as 'too light and curtezan-like for such great ones,' though another observer, about the same time, was enchanted by 'her seemely hayre downe trailing on her princely-bearing shoulders.' She was fond of progresses through the country, starting on her first with the king almost immediately after their coronation (in August 1603); that which seems to have given her the greatest satisfaction was her progress in 1613 to Bath, where the Queen's Bath was named in her honour with an inscription in bad Latin, and to Bristol, whence she departed with tears, saying that 'she never knew she was a queen till she came to Bristol.' This journey (as to which see NICHOLS, ii. 640 *seqq.*) was estimated by Chamberlain as likely to cost 30,000*l*. A theatrical company of youths was not long afterwards licensed, at the mediation of the queen on behalf of Samuel Daniel, to perform tragedies and comedies at Bristol under the name of the Youths of her Majesty's Chamber there (*Calendar of State Papers*, 10 July 1615). In addition to her passion for these entertainments and for the extravagance which they entailed in dress and such-like matters (*Chamberlain to Carleton*, 8 Jan. 1608), in addition to her expensive dealings with her silkmán, with purveyors of 'physical and odoriferous parcels,' and, above all, with the court jewellers, Herriot and Van Lore—of which the State Papers contain frequent notices—she indulged the taste for building which she had already gratified in Scotland. We hear of her in 1617 'building at Greenwich, after a plan of Inigo Jones,' and she was continually making architectural changes in her London

residence, Somerset House, which was rechristened Denmark House early in that year (*Birch's Letters in Court and Times of James I*, i. 461). Under these circumstances it is not wonderful that Bacon and others should have contrasted the economy of Queen Elizabeth's reign with the expenditure that ensued under her successor; and that Queen Anne, notwithstanding the income which she enjoyed, and the grants and gifts which supplemented it, should have lived and died in debt. In 1605 Salisbury noted her total expenditure at more than 50,000*l.*; and though in 1610 she held an annuity of 13,000*l.*, besides a charge upon the sugar-duties afterwards estimated as worth 3,000*l.* a year to her, yet in the year following she is found owing her jeweller 9,000*l.*, and nearly 8,000*l.* more to Sir John Spilman. In the same year (1611) the delightful estate of Oatlands in Surrey had been granted her; Greenwich House was added in 1614, and the honour of Pontefract in 1616. But she was never clear of difficulties. In 1614 she asks for (apparently without obtaining) a patent of the grant of coast-fishing licenses to foreigners; in 1615 she is unable to go to Bath for want of money, and has to negotiate a loan on some of her jewels with Sir John Spilman. In 1616 her debts are estimated by an auditor at very nearly 10,000*l.*, and a plan is devised by Coke of limiting her annual expenditure to 16,000*l.* and having her accounts made up regularly once a year. Shortly afterwards the expenses of her household and the officers of her revenue are reckoned at rather over 4,000*l.* a year; and in 1617 it is resolved to increase her jointure on the death of the king to 20,000*l.* Finally, late in 1618, quite towards the close of her life, she obtained an 'imposition upon white cloths,' variously reckoned as worth 8,000*l.* and as worth nearly 10,000*l.* a year, and doubtless not the less welcome to her because it formed part of Somerset's forfeited allowance. A few months before she died she told Coke that she wished her debts paid out of her own revenues, without troubling the king, and her jewels, &c. annexed to the crown. The king appears to have wished these latter to be bequeathed to Prince Charles. Though a large number of them had been sold, yet, according to Howell, she 'left a world of brave jewels behind.' Chamberlain states that her jewels were 'valuably rated at 400,000*l.*, her plate at 90,000*l.*, her ready coin 80,000 iacobus pieces; 124 whole pieces of cloth of gold and silver, besides other silks and linen for quantity and quality beyond any prince in Europe; and so for all kinds of hanging, bedding, and furniture answerable.' He reckoned that by her demise the

king saved in the expenses of her court 60,000*l.* a year, besides the grants on sugars and cloths, and '24,000*l.* that was her jointure and allowed her own purse.' It may be added here that of her jewels a large number were said to have been embezzled after her death by her 'Frenchman' Pierro and, according to one account, by her Danish maid Anna; the 'ready' money was likewise said to be not forthcoming, and a troublesome inquiry took place which deeply exercised the gossips of the day. The queen's debts seem to have been gradually paid, although the pensions promised by her to her servants were said not to have been ratified by the king. (Most of the above details on Queen Anne's income and expenditure, with many others, will be found in the *Calendars of State Papers, Domestic*, 1603-1619; a few are taken from *Birch's Letters in Court and Times of James I*).

If Queen Anne inspired, or at least employed, artists and craftsmen of various kinds, her influence was less direct and in general less potent upon affairs of state and church in England. In 1605 it is said of her that 'she carrieth no sway in state matters, and *præter rem uxoriam* hath no great reach in other affairs.' But *res uxoria* is an elastic term, more especially in the case of a husband such as King James I. There can be no reasonable doubt as to the affection which subsisted between the king and the queen, notwithstanding the sneers of Sir Anthony Weldon and the foul slanders of Sir Edward Peyton. A curious letter from James I to Salisbury in August 1608, of which the original is in the British Museum, certainly suggests that the king was not without his jealous moments, for which the gaiety of the queen's disposition, very clearly recognisable in some of her letters, may have given him some superficial reason (see Introduction to *Maitland Club Letters*, p. xlix, and compare the facsimile letters 4, 5, 6 in the collection). But, as these letters likewise show, she was really attached to her husband, and Arthur Wilson, who had derived his information from Lord Essex, agrees with Bishop Goodman that they were on good terms together, defending her reputation as warmly as the courtly prelate defends that of her husband. The bishop, indeed, adds that in their later years they mostly lived apart. But she humoured the king's fondness for field-sports, and even, as the well-known anecdote of the dog Jewel's untimely end shows, tried on occasion to enter into them herself. In the last years of her life they were in some measure estranged by her dallies with Rome: but the affection between

them was not extinguished. When, in 1614, James had had a fall from his horse, she begged for leave to see him, but it was thought needless. In return he visited her twice in her illness, two months before her death. At the last he was prevented by a most serious malady from seeing her once more; but he was not unmindful of her death, though the lines which he wrote upon it exhibit no personal feeling of grief (they are cited from the *State Papers* by GARDINER, ii. 240). The statement that Queen Anne attended the representation of plays in which the king was made ridiculous is uncorroborated, nor is it easy to imagine to what plays it can refer.

The truth seems to be that Queen Anne was possessed of the kind of motherwit which is able to understand character without the aid of caricature. She soon found out that, though extremely jealous of being thought to be really under the control of his wife, the king liked to shelter himself against subsequent complaints on her part by granting her an imaginary influence over his choice of favourites. This rather subtle species of moral obliquity is excellently described by Archbishop Abbot: 'King James had a fashion that he would never admit any to nearness about himself, but such one as the queen should commend unto him, and make some suit on his behalf, that if the queen afterwards being illtreated, should complain of this dear one, he might make his answer: "It is long of yourself, for you were the party that commended him unto us." Our old master loved things of this nature.' In this way, as well as by the liveliness of her temperament, the queen was induced to interfere in personal transactions of graver public import than the matrimonial matches to the making of which her energies were largely devoted. She was from the first much interested in Raleigh, and is said to have helped to alleviate his long years of durance by concessions which she obtained for him. Already in 1611 he implored her from prison to represent his hard case to the king, while reminding him of the advantages which might be derived, before it was too late, from the riches of Guiana. Then, in 1612, as the story ran, on the occasion of her eldest son's mortal illness she sent to Raleigh 'for some of his cordial which she herself had taken in a fever some time before, with remarkable success,' and which, as the inventor unfortunately assured her, 'would certainly cure the prince, or any other, of a fever, except in case of poyson;' so that the queen believed to her dying day that her beloved son had had foul play done him (WILSON, ii. 714, note). Whatever may be

the truth of this anecdote, her goodwill towards Raleigh endured to the last. When in 1617 he was starting on his last and fatal expedition across the main, she would have visited his ship, had she not been prevented by Prince Charles. And when after his return his doom was descending upon him, and he had in solemn verse appealed to her to plead his cause, she wrote to Buckingham the letter which has naturally enough been regarded as one of her chief titles to a kindly popular remembrance. Although in her last years Queen Anne became estranged from the Spanish interest, yet it is clear that her efforts on behalf of Raleigh were dictated by personal rather than political sentiment. The fact that Raleigh's legal persecutor, Coke, also solicited the queen's intercession on his own behalf, is explained by the services he had previously rendered to her, and by her liking for his wife (*Calendar of State Papers*, June 1616; compare March and 6 July 1616). During the earlier part of the reign in England she had shown a predilection for Spain which most strangely contrasted with her birth and connections. Already on her arrival in England the French envoy De Rosni (Sully) reported her Spanish sentiments to his sovereign; and though Buzenval soon afterwards declared that she was wholly for the French alliance (WINWOOD, i. 31), hope must in this instance have told a flattering tale. In 1605 Salisbury was informed that she was anxious to alienate the king's favour from him, 'as one who for your owne endes sought to crosse her desires of amitie with Spain' (*Cornwallis to Salisbury*, ap. WINWOOD, i. 159); in the same year, though her brother Ulric was in England urging war with Spain, she refused to see the ambassadors from the States General. In the same way, though her brother King Christian IV was interested in the project of marriage between her daughter Elizabeth and the young elector palatine, it was only gradually that she was herself brought to lend her countenance to the match, to which, according to an apocryphal anecdote, she is moreover said to have objected as below the family dignity, deriding her daughter as 'goody Palsgrave' in consequence. A fit of the gout prevented her from taking part in the signing of the marriage contract, but she attended the wedding on February 12, robed 'all in white, but not very rich, saving in jewels' (*Chamberlain to Mrs. Carleton*, 8 Feb. 1613). She was also present at another marriage much talked of at the end of the same year and afterwards—the marriage between the new Earl of Somerset and the divorced Countess of Essex. But though she had favoured the notion of

a Spanish marriage for Prince Charles, which was already in 1618 being advanced by Sarmiento (Gondomar), she had too strong an aversion from Somerset to aid the intrigues in the same direction into which he was entering about the year 1614, with the object of recovering the ascendancy that he was beginning to lose. Possibly, the visit to England in 1614 of her brother King Christian IV (whose falsely reported death she had in 1612 'mourned in white taffeta') may have helped to weaken whatever Spanish sympathies she retained. He had come this time unexpectedly and—to the gossips—unaccountably, not in magnificent state, as on his earlier visit in 1606, when, amidst the thunder of the navy guns, he had on Windmill Hill told King James that if he had spent half a kingdom on a conquest he could not have contented him half so well. At all events, with the help of the newly appointed secretary of state, Sir Ralph Winwood, the queen began to operate against Somerset, dark suspicions against whom may have had their weight with her; and in April 1615 she was prevailed upon through Archbishop Abbot (see his narrative in vol. i. of RUSHWORTH'S *Collections*) to persuade the king to appoint Villiers a gentleman of the bedchamber—the first step towards the supplanting of the favourite *in esse*, which was soon consummated by the Overbury scandal. With Villiers, as her correspondence shows, the queen was always on easy and excellent terms, though probably her personal influence over the king was never slighter than during the ascendancy of his last favourite. In 1616 the queen was thought to aim at a regency during the king's absence in Scotland—whether for any motive beyond that of vanity does not appear. In her last years she showed a friendly feeling towards the French royal family, even when, in 1618, court ladies were beginning to adopt the catholic religion in expectation of the Spanish match (see *Calendar of State Papers*, 7 March 1618). Her own coquettings with Rome—for some such term seems, after all, appropriate—had come to an end at a rather earlier date. Their history on the whole forms the most curious chapter in her life, though different historians have put very different interpretations upon it. The hopes entertained by the catholics in Scotland in the years immediately preceding James's accession to the English throne have been already touched upon (BURTON, vi. 137). In England rumour began to busy itself with the queen's supposed inclination towards Rome already at the time of her coronation, when she had

refused to communicate according to the rites of the church of England. She had communicated on a subsequent occasion, and had accompanied the king to church on Christmas day, 1603. But she refused to do so again. Soon afterwards she received consecrated objects from Pope Clement VIII through Sir Arthur Standen, a catholic whom King James had sent on a mission to some of the Italian states. Standen, who made no secret of the matter, was sent to the Tower, the pope's gifts were returned, and some changes were made by the king in the queen's household. But the chief result of her first communications with Rome was a proclamation, in February 1604, for the banishment of all Jesuits and seminary priests (GARDINER, i. 116, 142-4). Towards the end of the same year Sir James Lindsay went to Rome, with instructions but without a mission, not a paid ambassador but a messenger who had been granted a pension beforehand. He was reported to have told the pope—but he denied the truth of the report—that the queen was already a catholic at heart, and that the king was, on certain conditions, ready to follow her example. At all events the pope had been much gratified by Lindsay's information, had appointed a committee of cardinals for considering the condition of England, and had ordered prayers to be offered up for her conversion (*ib.* 225-6). With these endeavours may perhaps be connected the journey from Spain to England, contrived by the jesuit Walpole in 1605, of a lady, who is manifestly to be identified with Donna Luisa de Carvajal, 'with purpose to convert the queen our mistress to the Roman religion.' Great hopes were entertained of this visitor, but already in the same year her endeavours are said to have met with little success (WINWOOD, *Memoirs*, ii. 149, 157). The events of this year 1605—the year of the Gunpowder plot—could not but repress any desire in high places to show favour to catholicism; and the queen had special reason to be cautious, as Garnet, in a statement which the king would not allow to be given in evidence, had referred to her as 'most regarded of the pope' (GARDINER, *u. s.*, 280, *note*). Thus it was not till some years afterwards, under Paul V, that Rome, this time in a less sanguine spirit, again took up the English question (BROSCH, *Geschichte des Kirchenstaates*, i. 366). In 1608 the Savoy ambassador at Madrid told Sir Charles Cornwallis that Philip III and the Duke of Lerma had been very hopeful that a toleration of catholicism would within a few years be granted in England, partly because of 'the great incli-

nation of the queen,' but that Lerma had now changed his opinion, confessing to having been misinformed about the queen (WINWOOD, *Memorials*, ii. 485). In 1612, however, her supposed leaning to catholicism was once more made the subject of speculation. According to Galluzzi (*Storia del Granducato di Toscana*, lib. vi. cap. ii.) among the courts which in 1611 and 1612 were anxious to secure a matrimonial alliance for one of their princesses with Henry, Prince of Wales, was that of Florence, where the grand duke, Cosmo II, was desirous of marrying his sister Catharine to the English prince, hoping that the prospects of catholicism in England would benefit by the match. The Cavalier Ottaviano Lotti, who represented the grand duke in London, was very popular at court there; and him 'the queen had admitted to the secret of her catholicism, and he served her in procuring her from Rome indulgences and *devozioni*;' and the Prince of Wales desired him for his companion. Pope Paul V, however, could not be prevailed upon to approve of the scheme, and forbade its being carried on further. Lotti was therefore charged to accumulate all possible arguments for persuading the pope of the usefulness of the match for converting the island; and he was further instructed to try to interest Queen Anne in the matter, and to extract from her some documentary attestation of her sincerity in the catholic faith and of the hopes they had to induce the prince to profess it. Lotti did as he was bid, and the queen furnished him with a memorandum in which, while professing herself a catholic and desirous of the re-establishment of catholicism in the island, she showed that this could not be effected unless the pope obtained for her a daughter-in-law of that communion, adding that the prince was not firm in Anglican opinions. She assured his holiness of the desire of all good catholics in England that the marriages should be brought about, and finally, in a letter all in her own hand, declared herself the pope's most obedient daughter, and prayed him to believe what Lotti should have said in her name. But though the principal English catholics all added their instances to those of the queen, the pope was not to be moved; and the grand duke hereupon hit upon the plan of sending his sister to Lorraine, where Prince Henry was to marry her out of hand. But when Lotti returned to England to broach this device, he found things entirely changed at court there—Salisbury dead, and other marriages for the prince on the carpet. The death of Prince Henry in November 1612 put an end to the business. This circumstan-

tial story, which was rather grandiloquently referred to in an article on Ranke's 'Popes' in the 'Quarterly Review,' April 1837, but which has not found its way into other histories, probably contains a considerable substratum of fact. At the same time what is known of the religious views of Prince Henry conflicts so strongly with one of the statements in the narrative as to throw some doubt upon the others. According to despatches now at Simancas sent by Gondomar in 1613, at the time when he was using the influence of the queen to help him to divert King James from the French alliance, she at that time attended the services of the church of England with the king, but 'she never could be induced to partake of the communion at the hands of a protestant minister, and those who were admitted to her privacy in Denmark House knew well that as often as she thought she could escape observation she was in the habit of repairing to a garret for the purpose of hearing mass from the lips of a catholic priest, who was smuggled in for the purpose' (GARDINER, ii. 225). The main influence which had inclined her to catholicism was ascribed to the first lady of her bedchamber, Mrs. (Miss) Drummond, who was in the receipt of a pension from Spain. When this lady married and returned to Scotland in 1613, a powerful influence was removed; but the queen continued to indulge her inclination towards Rome, and at Oatlands had two priests, one of whom said mass daily in her presence. They forbade her accompanying her husband to church, so that angry words passed between the king and queen, and he complained to Gondomar of the change which he found in her (*ib.* 293). When, in 1615, we find the lady of the archduke's ambassador appealing to the queen to intercede for the release of ten priests, this request might be sufficiently explained by her reputation for kindness of heart (*Cal. of State Papers*, July (P) 1615, and compare *ib.* July 14). And there is satisfactory proof that, when her last hour came, she made open profession of protestantism. Abbot, archbishop of Canterbury, and King, bishop of London, attended at her deathbed; when not only did she follow their prayers word by word, but in answer to the archbishop she declared that she 'renounced the mediation of all saints and her own merits, and relied only upon her Saviour' (BURTON, vi. 169, from a paper, 'Madam the Queen's Death and Maner theirot,' among Sir James Balfour's MSS.; *Abbotsford Miscellany*, 81; compare also Sir Edward Harwood to Carleton, 6 March 1619, *Cal. State Papers*). Thus the Church of Rome could not actually claim

as a convert the sister of Christian IV, as she could the daughter of Gustavus Adolphus.

Beyond these traces of her relation to the main currents of English life and opinion in the first quarter of the seventeenth century there is little to be noted in the biography of Anne of Denmark. Among the ladies of her court, Lucy, countess of Bedford, the friend of Donne and the patroness of Jonson, Daniel, and many other poets, had earliest obtained her confidence; another favourite was the well-known Lady Anne Clifford, daughter of the proud Earl of Cumberland, and successively countess of Dorset, Pembroke, and Montgomery; a third was the Mrs. Drummond, afterwards Lady Roxborough, already mentioned. The voluble Sir Robert Carey was at one time much trusted by her, and spoken of as her favourite. Her partiality for Lord Herbert of Cherbury rests on his own evidence, which is to be found in some of the most delightfully coxcombical passages in the whole range of biographical literature (*Life of Edward, Lord H. of C., written by himself*, pp. 148-53, ed. 1826). Among the officers of her household were Sir George Carew as vice-chamberlain and receiver, Lawrence Hyde as attorney-general, and Sir Matthew Lister as physician-in-ordinary. She had another physician named Schoverus, who, like her chaplain Seringius, may have been of Danish origin; and she was, of course, likewise attended by the great Mayerne, whose pension of 400*l.* from her, added to the same sum from the king and 'many other commodities,' so deeply excited the jealousy of Casaubon. (Mayerne's sagacious saying of the queen is preserved, that she 'has the faith in the baths which often leads to a cure.') To the last, however, she seems to have had about her one if not more of the attendants whom she had brought with her from her Danish home. ('Beloe, the queen's man,' is probably mis-spelt for Bülow.) 'Anna, the queen's Danish maid,' is frequently mentioned; according to Miss Strickland her name was Anna Kroas; and doubtless she is the person who, under the name of 'Mrs. Anna Maria,' is stated to have walked at the queen's funeral. She had attended her mistress at her deathbed; and one would fain disbelieve the story, already referred to, that after the queen's death she was with another culprit 'clapt up for embezzling of jewels (as it is thought) to the value of 30,000*l.*' (Chamberlain to Carleton, 31 May 1619; see NICHOLS, *Progresses of James I.*, iii. 549).

Queen Anne had suffered for many years—since 1612 at all events—from a malady which had been at first thought to be gout,

but which ultimately, after much and at times almost unbearable suffering, declared itself as dropsy. About Christmas 1618 her case was thought dangerous, though not desperate, and she was then still able to attend a whole sermon, preached in her inner chamber by the Bishop of London. Already, in accordance with the habits of shameless greed which characterised court and society under James I, the courtiers began to 'lay about them,' and plot for the distribution of the spoils. She lay at Hampton Court, while the king was at Newmarket, where he fell seriously ill. Her condition improved slightly in January and February; nor was it till 2 March that she died. During her last illness she had been free from pain, her vitality having, as the autopsy afterwards showed, wasted away. She had expressed a wish to see her husband, but her death seems after all to have been rather sudden, so that, notwithstanding reports to the contrary, she died without a will, leaving her affairs, as has been already stated, in some confusion. Her funeral, after being long deferred—partly, it would seem, for want of money—took place on 13 May; some thought it 'very dull,' according to a more balanced judgment it 'was better than that of Prince Henry, but fell short of Queen Elizabeth's; the chariot and six horses in which her effigy was drawn were most remarkable' (Chamberlain to Carleton, Brent to Carleton, *Cal. of State Papers*, 14 and 15 May 1619).

Between 18 Nov. and 16 Dec. 1618, 'a mighty blazing comet which appeared in *Libra*, whose bearded beams covered the Virgin sign,' had been visible in England; and the common people 'thought this great light in heaven was sent as a flambeau to the queen's funeral; their dark minds not discovering, while this blaze was burning, the fire of war that broke out in Bohemia, wherein many thousands perished' (ARTHUR WILSON). In truth, no mighty life was extinguished when this *Anna Regina* died (it was in this form that her name and title had been 'danced in letters' in a mask at Greenwich two years before). But there is evidence enough that she had been a popular queen; when she had been ill she had been 'wished well'; 'she cannot do amiss,' it had been trusted, 'that has so many good wishes,' and a few days after her decease she was said to be 'much lamented, having benefited many and injured none; she died most willingly, and was more comely in death than ever in life' (Sir Gerard Herbert to Carleton, 16 March 1619, in *Cal. of State Papers*). Simple tributes of kindly feeling such as this have a better historical value than

the 'Lachrymæ Cantabrigienses' and other occasional sorrowings that were sprinkled upon her grave. (For a bibliographical list of tracts on the death of Queen Anne see NICHOLS'S *Progresses of James I*, iii. 534.) The people liked her if they did not love her, because of her good humour and high spirits, because of her gaiety and love of amusement; when she had nothing better, she told her husband, she was not a little pleased with 'practise of tilting, of riding, of drumming, and of musike;' and when she had first come to England her princely example had taught Arabella Stuart 'to play the child again.' They also liked her because of the shows and the free expenditure which were the natural results of these tastes and qualities. She was a virtuous wife, an affectionate mother, and a faithful friend; she was both generous and compassionate as becomes a queen and a woman; she had the courage of her race as well as its quick temper; and in the midst of her mostly frivolous existence she would seem to have cherished a desire if not to have possessed a capacity for higher things.

(1844).—For the period before 1603: *The Historie and Life of King James the Sext*, printed for the Bannatyne Club, 1825; Sir James Melville's *Memoirs of his own Life*, printed for the Bannatyne Club, 1827; Calderwood's *History of the Kirk of Scotland*, edited by T. Thomson, 1844, vols. v. and vi.; Camden's *History or Annals of England under Elizabeth*; Burton's *History of Scotland*, vol. vi.—For the period from 1606: *Calendar of State Papers, James I*, Domestic Series, vols. i. ii. iii.; *The Court and Times of James I* illustrated by Authentic and Confidential Letters (from Birch's Collections), 2 vols. 1848; Nichols's *Progresses of King James I*, 4 vols. 1828; Sir Ralph Winwood's *Memorials of Affairs of State in the Reigns of Elizabeth and James I*, vol. ii.; Camden's *Annals in the Reign of King James I*; Arthur Wilson, *The Life and Reign of James the First, King of Great Britain*; Bishop Goodman, *The Court of King James I*, edited by J. Brewer, 2 vols. 1839; S. R. Gardiner's *History of England, 1603-1642*, vols. i.-iii. 1883. Miss Aikin's *Court of James I*, 2 vols. 1822, is full of pleasant gossip; while the *Secret History of the Court of James I*, 2 vols. 1811, comprises all the malice and slander of Weldon and Peyton. For both periods should be compared the *Letters to King James the Sixth from the Queen, Prince Henry, &c.*, printed from the originals in the Library of the Faculty of Advocates for the Maitland Club, 1835, and the Introduction prefixed to them. Among the portraits of Queen Anne there is a characteristic one in the Master's lodge at St. John's College, Cambridge.]

A. W. W.

ANNE (1665-1714), queen of Great Britain and Ireland, was born at St. James's Palace, London, 6 Feb. 1665. She was the second daughter of James, duke of York, afterwards King James II, and his first wife, Anne Hyde, daughter of the Earl of Clarendon. Of the eight children born from this marriage only the Princesses Mary and Anne survived their mother, who died 31 March 1671 after receiving the last sacraments of the church of Rome. There can have been little resemblance between this 'very extraordinary woman,' as Burnet calls her, and her second daughter, unless Grammont's gossip be worthy of record, that the duchess too was fond of eating. Not long after the death of his first wife the duke was pressed by his friends to marry again, and in 1673 gave his hand to Mary of Modena, whom in later days the Princess Anne came cordially to detest, and to regard as an evil influence with her father (see her letter, 9 May 1688, in DALRYMPLE'S *Memoirs*, ii. 174). But this censorious attitude can only have been gradually adopted. During Charles II's reign Anne necessarily shared the fortunes of her father and stepmother, though protected together with her sister by the prudence of the king from sharing their unpopularity. By the express command of Charles II, and with their father's consent, the two princesses were brought up as members of the church of England. With the same intention Lady Frances Villiers, wife of Colonel Edward Villiers, and daughter of the Duke of Suffolk, was chosen as governess for the Princess Anne. She appears to have been a sickly child, and when about five years of age was sent over on a visit to France for the benefit of her health. Of her childhood little else is known. It must, however, have been at a period of her life of which no dated records have come down to us, that she first formed an intimacy destined to affect nearly the whole of her after life. 'The beginnings of the princess's kindness for me,' writes the Duchess of Marlborough, 'had a much earlier date than my entrance into her service. My promotion to this honour was wholly owing to impressions she had before received to my advantage; we had used to play together when she was a child, and she even then expressed a peculiar fondness for me' (*Conduct*, 9). More trustworthy details concerning the Princess Anne begin for us with the first week in November 1677, which 'produced four memorable things.' The Duke of Cambridge, the Duke of York's eldest son by Mary of Modena, was born on the same day as that on which the Archbishop of Canterbury (Sheldon), who had been the godfather of

the Princess Anne, died. The Princess Mary and the Prince of Orange were married on the Sunday, and 'on the Friday Lady Anne appear'd to have the small-pox.' With this record of sickness (confirmed by a letter in the *Hatton Correspondence*, i. 155) begin such personal reminiscences as we possess concerning a life which will never be justly judged if its sufferings are left out of the account. The passage referred to opens the diary of Dr. Edward Lake, which extends from November 1677 to April 1678. Dr. Lake was introduced as chaplain and tutor into the service of the Princesses Mary and Anne by the Bishop of London, Dr. Henry Compton, who was said to have actively contributed to the decision that they should be educated as protestants, and who had himself been appointed their preceptor. On 23 Jan. 1676 he had confirmed them in the Chapel Royal at Whitehall, of which he was dean. Lake was much troubled at being kept away from attendance on the Princess Anne by her illness, the more so 'because her nurse was a very busy, zealous Roman catholic;' and accordingly obtained permission from the governess and the preceptor to offer his ministrations notwithstanding. He gives a rather touching picture of the poor young princess during this passing attack of illness, which shows both that a warm affection had up to this time united her to her elder sister, and that even as a child she was full of protestant zeal, for she bade him take care to instruct her nurse's child in the protestant religion. His last entry concerning the princess is a singular statement, proving how imperfect her own training had up to this time been in the forms of the most sacred rite of the church. She afterwards became a very regular communicant.

Less than a year after her sister's tearful departure, about the beginning of October 1678, the Princess Anne accompanied her stepmother on a visit to Holland. Luttrell mentions the rumour that some priests went with them, who wished to keep out of the way of the notable 'discoveries' of Oates and Tongue, which had then begun to set the nation in a ferment. The duke was, in 1679, for the second time obliged to leave England with the duchess, on this occasion for the Netherlands; but, according to his own remembrance, the Princess Anne was obliged to remain behind (see MACPHERSON'S *Original Papers*, i. 91, and cf. *Hatton Correspondence*, i. 177). It seems, however, that she and her sister Isabella were afterwards permitted to join their parents at Brussels, and to accompany them to the Hague. The duke and his family returned to London in October, and

soon afterwards undertook a journey with great pomp into Scotland, where the duke had been appointed lord high commissioner. In 1681 a project of marriage between Anne and Prince George of Hanover was apparently not unfavourably received by Charles II, to whom it had been proposed through Prince Rupert by his sister Sophia, then Duchess of Calenberg (Hanover). Her son, Prince George, had, however, hardly reached England when he was recalled by his father, who had arranged a marriage for him with his cousin Sophia Dorothea. In the same year 1681 the Princess Anne twice, in March and in July, journeyed to Scotland to visit her parents; on the second occasion, as the duke believed, 'to be a blind upon his return, and hinder any disturbance upon the people's imagining it' (*Original Papers*, i. 682-3). It was a troubled year for the duke and duchess, who, in addition to political troubles, suffered the loss of their youngest daughter, Isabella (4 March); but in 1682 the skies had in some measure cleared, and in May the duke brought home his family to St. James's amidst the ringing of bells and the blazing of bonfires. Not long afterwards they paid a visit to the king at Windsor. Charles II, now once more at liberty to show his goodwill to his brother and his family, greatly resented the presumption of one of the most self-sufficient of his subjects, the Earl of Mulgrave, in 'pretending courtship' to the Princess Anne. He was forbidden the court, and had all his places taken from him.

In 1683 a more acceptable suitor made his appearance. Already in May, in which month the duke and duchess and their daughter paid a five days' visit to Oxford, the rumour was about town that Prince George of Denmark was coming over to England to marry the Lady Anne. On 19 July the prince arrived at Whitehall, and on the evening of the 28th the marriage was solemnised in the Chapel Royal at St. James's by the Bishop of London. At court the prince was thought 'a handsome fine gentleman' (*Hatton Correspondence*, ii. 81); and at the university Prior, taking his part in the 'Hymenæus Cantabrigiensis,' declared that Venus was mated with Mars. (The effusion is signed A. Prior, St. John's, but is confidently assigned to Matthew in the Aldine edition, ii. 318). Burnet, however, states that the marriage 'did not at all please the nation, for we knew that the proposition came from France.' Prince George's brother, King Christian V, a very able and active sovereign, had accepted French mediation in his long-standing quarrel with Sweden, and he was on bad terms with the Dutch. But English public opinion

was at this time excited on the religious question only; and as France was supposed to have pushed the marriage, it was feared that the prince would become a convert to Rome (BURNET).

The marriage of the Princess Anne made certain changes necessary in her household. At her earnest request the wife of Colonel Churchill (formerly Sarah Jennings) was now made one of the ladies of her bedchamber. The office of first lady of the bedchamber was bestowed upon the Countess of Clarendon, her aunt by marriage, who, as the Duchess of Marlborough afterwards spitefully wrote, 'looked like a mad woman, and talked like a scholar.' According to the same authority the princess's court was throughout so oddly composed that she must, in any case, have preferred Colonel Churchill's lady to her other attendants. 'Be that as it will, it is certain she at length distinguished me by so high a place in her favour, as perhaps no person ever arrived at a higher with queen or princess.' It seems to have been some time between the princess's marriage and the accession of her father to the throne that she made the girlish proposal to Lady Churchill 'that, whenever I should happen to be absent from her, we might, in all our letters, write ourselves by feigned names, such as would import nothing of distinction of rank between us. Morley and Freeman were the names her fancy hit upon; and she left me to choose by which of them I would be called. My frank open temper naturally led me to pitch upon Freeman, and so the princess took the other; and from this time Mrs. Morley and Mrs. Freeman began to converse as equals, made so by affection and friendship' (*Conduct*, 10-14).

In 1684 occurred the first of those disappointments of which Anne was to have so frequent and so sad an experience. But as yet the report (mentioned by Luttrell under 30 April) that she had given birth to a dead child could hardly cause public apprehension. On 6 Feb. in the following year her father was safely seated upon the throne; and the princess, who had attended the opening of parliament on 22 May, was on 1 June delivered of a daughter. She was christened by the Bishop of London on the next day by the name of Mary. On 12 May 1686 the princess gave birth to another daughter, who was christened Anne Sophia by the Bishop of Durham, Lady Churchill being one of her godmothers. Both infants died within a few days of each other, the younger on 2 Feb., and the elder on 8 Feb. 1686-7. The death of 'the lettl princess, Lady Anne,' writes the kindly Alice Hatton, proved 'a great affec-

tion' to her mother; and shortly after the death of their 'eldest and only daughter,' the princess, who had miscarried in January, withdrew for a time with her husband to Richmond. Similar mishaps are noted by Luttrell in the latter part of October in the same year, and in the middle of April 1688.

Though the fears expressed in a letter written in the 'fatal' February 1686-7, that the princess's mind might be too sensibly affected by her sufferings, proved groundless, she cannot have inquired very deeply into the causes of the political troubles of the times. They were, however, becoming clear enough to the husband of her chosen friend, if not to that friend herself, who had soon after the accession of James II, on the departure of Lord and Lady Clarendon for Ireland, become first lady of the bedchamber to the princess. Even Lady Churchill, simple creature as she describes herself to have been in those days, had become convinced that as things were everybody must sooner or later be ruined who would not become a Roman catholic. Traces have been found of a scheme in which the French ambassador Bonrepaux and the papal nuncio d'Adda were the chief movers, to obtain the consent of the princess and her husband to a change of religion on the part of the former in return for the succession being secured to her before her sister (MAZURE, *Histoire de la Révolution de 1688*, cited by HALLAM, *Constitutional History*, chap. xiv.). There seems, however, no indication that James II made any attempt to interfere with the religious beliefs of his daughter beyond putting books and papers in her hands. The Earl of Tyrconnel (who had married Frances Jennings, a sister of Lady Churchill) is also said by his sister-in-law to have sought to gain over the princess through her to the church of Rome (*Conduct*, 15-16). In general the king's conduct to his daughter seems to have been marked by paternal affection, nor is it necessary in support of this to cite the apocryphal anecdote which was thrown in the teeth of the Duchess of Marlborough, and which represented the king as having twice paid heavy debts incurred by the princess under the influence of her favourite (see *The Other Side of the Question*, 47-8). Nor is there any evidence of his having shown resentment, even when at a critical time in his reign she adopted a course of conduct prejudicial to his interests, if not to his honour. The birth on 10 June 1688 of a Prince of Wales—afterwards the 'Old Pretender'—hastened the collapse of his father's rule, for a widespread belief arose that, in Burnet's words, a base imposture had been put upon the nation. Among the circumstances

which helped to surround the event with suspicions was the absence of the Princess of Denmark, who was staying at Bath, and who pleaded the state of her health as a reason for not attending the extraordinary privy council held in October to place the genuineness of the young prince beyond all possible doubt. Whether her journey to Bath in June had been undertaken from any motive hostile to her stepmother, it is not easy to decide. There was certainly no love lost between them, even if Boyer's story, that there had been a quarrel between the royal ladies, ending, as some said, by the queen throwing a glove in the princess's face, be rejected as scandal. The king afterwards declared that he had desired her to defer her visit, and that he had only consented to it in the hope that she might still be back in time (CLARKE'S *Life of James II*, ii. 160). On the other hand Burnet asserts (iii. 249-50) that the king pressed her going to Bath against the opinion of most of her physicians and of all her other friends, and in a letter to her sister the princess herself expresses her deep concern at having been away at the time of the birth, 'for I shall never now be satisfied whether the child be true or false. It may be our brother, but God only knows' (DALRYMPLE, ii. 175). Her father afterwards entertained no doubt that the two princesses both expected to succeed to the crown in turn, and that the journey to Bath had been contrived on purpose (CLARKE, ii. 159), and elsewhere he states that it was the scepticism of the Princess Anne which induced the queen to consent to the extraordinary council (*ib.* ii. 197). This scepticism did not wholly give way even after the council had been held (CLARENDON'S *Diary*, ii. 196-9), and it abundantly manifests itself in the extracts made by Birch from her correspondence with her sister, which include the string of questions, fit only for a jury of matrons, propounded by the Princess of Orange on the subject of the birth, and answered *seriatim* by the Princess of Denmark (DALRYMPLE, ii. 167 *seqq.*). If we may credit her father, her doubts were completely resolved a year afterwards by a witness of experience (see *Original Papers*, i. 157), and it is clear that in her later years she regarded the Pretender as her brother.

Very soon the storm burst over the head of King James II, and, his elder daughter's side having been chosen for her, it became necessary for the younger also to decide upon a course of action. From a letter of the princess, dated 13 March 1688, it appears that, after assenting to Anne's paying a visit to her sister in the spring of that year the

king had withdrawn his permission, and this is confirmed by Barillon. The letters between the sisters, given in extracts by Dalrymple, certainly convey the impression that there was a thorough understanding between them. Among the assurances of support which reached the Prince of Orange in the latter part of the summer was a letter from Churchill, of which the salient point was that he 'put his honour absolutely into the hands of the prince.' On 23 Sept. Clarendon had a conversation with the Princess Anne, in which she spoke with great dissatisfaction of the Sunderlands, and appeared to her uncle to have something on her mind (*Diary*, ii. 189). On 1 Nov. William's declaration was circulated in London, and on the 5th he landed at Torbay. Four days afterwards Clarendon asked his niece to say something to the king 'whereby he might see her concern for him;' but she declined to put herself forward (*ib.* ii. 201). And when the news came to town that Clarendon's son, Lord Cornbury, 'who had been early taught to consider his relationship to the Princess Anne as the groundwork of his fortunes and had been exhorted to pay her assiduous court,' had joined the Prince of Orange with some soldiery, the princess seemed unable to understand Clarendon's emotion, and expressed her belief that 'many of the army would do the same' (MACAULAY, from CLARENDON). A prophetic, if not a well-informed, spirit spoke in her words. The news of Cornbury's desertion had reached London on 15 Nov. On the 24th the Duke of Grafton and Churchill, accompanied by Colonel Berkeley, escaped from the king's quarters at Salisbury to the Prince of Orange's at Exeter. Churchill, it was afterwards asserted, had in fear for his own security anticipated the outbreak of a plot, of which he was the centre, to seize the person of the king. Next evening Prince George of Denmark, after supping with the king at Andover, whither the royal army had retreated, rode away in the company of the Duke of Ormond and the Earl of Drumlanrig to the Prince of Orange, whom they found at Sherburne on the 30th. And when the king reached London on the 26th he found that his daughter, accompanied by her favourite, had fled from him like their husbands. In the words of a letter written on the following day, 'yesterday morning, when the Princess of Denmark's women went to take her out of her bed, they found she had withdrawn herself, and hath not yet been heard of. Nobody went in her company that we hear of besides Lady Churchill and Mrs. Berkeley' (ELLIS, *Original Letters* 2nd series, iv. 164-5; cf. CLARENDON'S

*Diary*, ii. 207). 'Mrs.' Berkeley had been governess to the princess's children. There is naturally enough considerable obscurity as to the events which preceded and led to the flight of the princess. Even Burnet describes Churchill, before the coming of William, to have undertaken 'that Prince George and the Princess Anne would leave the court, and come to the prince, as soon as was possible.' After the landing the princess had written to William, by the advice of the Churchills, approving his enterprise, and assuring him that she was entirely in the hands of her friends, by whose decision she would regulate her movements (MACAULAY, referring to the letter in DALRYMPLE, dated 18 Nov.). And Lediard (i. 80) has a story that, about six weeks before her flight, the princess had a private staircase constructed in her apartments at Whitehall, obviously with a view to future contingencies. On the other hand, we have the narrative of the Duchess of Marlborough (*Conduct*, 16-19), who represents matters as if the princess had been taken by surprise by the news of her husband's flight, and as if all that she (the writer) did was to obey her mistress's orders. Acting on a hint previously received, Lady Churchill advised the princess to send her to the Bishop of London, who, having been suspended, was secretly lodged near by in Suffolk Street, and with him the nocturnal escape by the backstairs was arranged. In the company of the Earl of Dorset the bishop met the fugitives in the neighbourhood and carried them in a hackney-coach to his house in the city. Next day they went on to Lord Dorset's at Oopt Hall, whence they journeyed to Lord Northampton's, and so to Leicester and by way of Harborough, where she first 'discovered' herself and was accompanied to Nottingham by Sir Charles Shuckborough with about fifty horsemen, in a cavalcade swelled by further accessions. Here, where she had arrived on 1 Dec., she was joined by others, including the Earls of Devonshire, Northampton, Chesterfield, and Scarsdale, and a guard was appointed for her person, with officers to attend her, and the valiant Bishop of London, whom King James had once told that 'he talked more like a colonel than a bishop,' for captain. According to Lord Chesterfield the princess appointed a council to settle the course of proceedings, and a project was discussed and approved by the princess to destroy all the papists in England should the Prince of Orange be killed by any of them. From Nottingham she returned to Leicester, where a very large concourse of nobility and gentry was now assembled, fourteen or fifteen troops of horse

in all, and where the whole militia of the county had been summoned in a letter signed by all the principal gentlemen. The Northamptonshire militia was likewise called out, and a few days later, after progressing through Coventry and Warwick, the princess 'made a splendid entry into Oxford . . . the Earl of Northampton with 500 horse leading the van. Her royal highness was preceded by the Bishop of London, at the head of a noble troop of gentlemen, his lordship riding in a purple cloak, martial habit, pistols before him, and his sword drawn, and his cornett had the inscription in golden letters on his standard, "Nolumus leges Angliæ mutari." . . . The vice-chancellor with the heads of the university attended in their scarlet gowns, made to her a speech in English, and the prince [George] received her royal highness at Christ Church quadrangle with all possible demonstrations of love and affection' (see ELLIS, *Original Letters*, 2nd series, iv. 177-8. For other details of the progress, cf. *Hatton Correspondence*, ii. 118-21; LUTTRELL; *Letters of the Second Earl of Chesterfield*, 335-6; cf. *Memoir*, 48-51; and COLLEY CIBBER's *Apology*, 57, where it is stated that on the princess's flight the country was alarmed with the news that 'two thousand of the king's dragoons were in close pursuit to bring her back to London').

It was reported that when the news of the king's first flight reached Anne on her progress, she 'called for cards and was as merry as she used to be,' and when Clarendon afterwards reproached her with this, her defence was that 'she never loved to do anything that looked like an affected constraint.' On 19 Dec. she returned in safety with her husband to Whitehall, where they were immediately visited by the Prince of Orange (LUTTRELL), a date which does not tally with the story that on the day (18 Dec.) when William arrived at St. James's, and James was making his way down the stormy Thames to Rochester, his daughter, accompanied by Lady Churchill, both covered with orange ribbons, went to the theatre in the king's coach. In the ensuing discussions as to the settlement of the throne, the Princess Anne of course took no direct part. If her agents exerted themselves in the matter, she disowned them. When at last the arrangement which was actually adopted was under discussion, she did not, if she told the truth to Clarendon, authorise Lord Churchill to signify her consent to it (*Diary*, ii. 255). It seems, however, that the influence of Tillotson and of Lady Russell was brought to bear upon her; and, as the Duchess of Marlborough represents it, no sooner had the princess's

favourite lady been brought to see reason, than she contrived to make her mistress see it likewise. The Prince of Orange was, on his side, willing to make a concession except on the main point, and thus the Declaration of Right, while settling the crown on William and Mary and vesting the government in William alone, established the succession after them of the posterity of Mary, then of Anne and her posterity, and then of William's posterity by another wife. It was noted at the time by Evelyn that the house of Hanover was left out of the succession. A clause moved by Burnet to include it was, however, still in debate between the lords and commons, when the birth of a son to the Prince and Princess of Denmark seemed to render it superfluous. As, notwithstanding, the lords still adhered to Burnet's clause, the Bill of Rights had in consequence to be dropped for the session. When it was revived and passed in 1689, the clause was absent, and, as Macaulay says, during eleven years nothing more was heard of the house of Hanover.

Princess Anne had attended the coronation of King William and Queen Mary on 11 April 1689. It was on 24 July that her hopes seemed at last to be fulfilled by the birth at Hampton Court of a son; and three days afterwards the prince was by the trusty Bishop of London christened William; the king and the Earl of Dorset were his godfathers, and the former was pleased to declare him Duke of Gloucester (LUTTRELL, i. 564; CLARENDON'S *Diary*, ii. 283). Though in August fears were entertained for the child's safety, it survived its early perils, and in October and November the parents took part in the gaieties of the day, the prince visiting Newmarket and appearing at the lord mayor's show, and the princess entertaining the queen and the ladies of the court at a ball at Whitehall. There had hitherto been no reason for anything but goodwill between the royal pair on the throne and the Prince and Princess of Denmark. The king had begun by a series of courtesies towards Prince George, assenting in April to a bill naturalising him in England and creating him Duke of Cumberland. By his own desire and at his own expense the prince took part in the king's expedition to Ireland in June 1690, but the king coolly ignored his presence during the campaign and even refused him a seat in the royal coach (*Conduct*, 38). When, at the end of April 1691, the king was on the point of embarking for the war in Flanders, the prince in vain asked his permission to serve at sea as a volunteer and without any command (LUTTRELL, ii. 219, 225; *Conduct*, 38-40).

But it was not only or chiefly resentment of the treatment shown to the prince which caused the estrangement between Anne and her royal relatives. In the first instance, immediately after the accession of William and Mary, there arose a difficulty connected with the princess's apartments at Whitehall (*Conduct*, 27-8; cf. *The Other Side*, 31). Much about the same time she in vain endeavoured to obtain from the queen the house at Richmond where she had lived as a child (*Conduct*, 28). According to the favourite of the Princess Anne, the two sisters were not fitted for living together in comfort, inasmuch as 'Queen Mary grew weary of everybody who would not talk a great deal, and the princess was so silent that she rarely spoke more than was necessary to answer a question' (ib. 25). Yet as girls they had been good friends, and Queen Mary afterwards protested that she had treated the princess and her infant with the tenderness of a mother (BURNET, iv. 162). Money began the quarrel. At the beginning of the new reign Anne enjoyed an annuity of 30,000*l.* charged upon the civil list, besides another of 20,000*l.* secured to her by her marriage settlement (BOYER, 5; *Conduct*, 32; MACAULAY inverts these figures). Some days after the birth of the Duke of Gloucester it had been proposed by a zealous friend of the princess in the commons to raise her grant on the civil list to 70,000*l.*; but though her actual income was clearly inadequate, the motion had been 'baffled.' Five months afterwards, on 18 Dec. 1689, it was renewed. The queen, on becoming aware of what was intended, is said (by the Duchess of Marlborough) to have asked her sister the meaning of these proceedings, and, when told by the princess that her friends had a mind to make her a settlement, to have imperiously exclaimed: 'Pray, what friends have you but the king and me?' Much nettled, the princess now let things take their course. The motion gave rise to a two days' debate, which was so disagreeable to the king that he sent the Earl of Shrewsbury to offer through the Countess of Marlborough that if the princess would stop the proceedings in the house her civil list annuity should be raised to 50,000*l.* The answer returned by Anne, the language of which Macaulay may be right in attributing to 'her friend Sarah,' was 'that she could not think herself in the wrong to desire a security for what was to support her, and that the business was now gone so far that she thought it reasonable to see what her friends could do for her.' The princess obtained an annuity of 50,000*l.*, with the parliamentary security desired. Some soreness,

however, remained on both sides; nor was it forgotten at court how warmly the Earl and Countess of Marlborough had interested themselves in the matter. When, therefore, a year afterwards, Mrs. Morley pressed upon Mrs. Freeman an annual pension of 1,000*l.*, there was fitness in the proposal; but Macaulay's sneer seems unwarranted that 'this was in all probability a very small part of what the Churchills gained by the arrangement' (cf. with his account of the whole episode, *Conduct*, 29-38). The garter, which the princess took occasion to remind the king he had promised to Marlborough, was not sent; 'Caliban,' *alias* 'the Dutch monster,' as Mrs. Morley ventured to call him in writing to her friend, was not to be forced into keeping inconvenient promises (MISS STRICKLAND, xi. 96, 247 note). In connection with the money affairs of the princess may be noticed the granting away as a forfeiture by King William of the Irish estate of James II, to which the Princess Anne was co-heiress with Queen Mary. In this grievance, too, Marlborough seems to have interested himself (*Calendar of Treasury Papers*, 1708-14, p. 611).

But the years 1690 and 1691 passed without any serious outbreak between the sisters. The daughter to whom Anne gave birth on 14 Oct. 1690, and who lived but two hours, was christened Mary—like one of her poor little elder sisters—before she too was privately buried in Westminster Abbey. It was quite early in 1692 that the sudden and mysterious disgrace of Marlborough, who on 21 Jan. was dismissed from all his employments, led to an estrangement between the queen and the princess which was never healed. His wife afterwards coolly asserted that his disgrace was designed as a step towards removing her from her position with the princess. It is virtually certain that King William had already reason for serious suspicion of Marlborough's dealings with the exiled king, although an angry conversation on 9 Jan., in which the queen was said to have threatened the princess with the reduction of her revenue by one half, may have contributed to hasten the course of events. James declared that a 'most penitential and dutiful' letter which Anne wrote to him about this time, but which he did not receive till he had arrived at La Hogue in April 1692, 'considering the great power my Lord and Lady Churchill had with the princess, was a more than ordinary mark of that lord's sincerity in what he professed' (CLARKE, *James II*, ii. 476-8; cf. *Original Papers*, i. 241). In any case, even after Marlborough's dismissal, the princess was by no means disposed to accept the situation, and on 4 Feb. she took the countess with her to

court at Kensington. Hereupon the queen, in a letter dated 5 Feb., which has a kindly tone even when embedded in the duchess's context, told the princess plainly that she must dismiss Lady Marlborough. After in vain attempting to prevail upon her uncle Rochester to be her messenger, Anne on the 6th sent a reply to the queen defending her favourite, but received no answer, except a message by the lord chamberlain forbidding Lady Marlborough's further presence at the Cockpit. Even when Anne on the 8th announced her intention of retiring herself from court should the queen persevere in her resolution, the latter was immovable, and Lady Marlborough was relieved of her offices as groom of the stole and governess of the household to the princess, which were given to the Countess of Suffolk (LUTTRELL, ii. 343, 360, whose dates, however, do not altogether agree with the duchess's in the *Conduct*). But though defeated Anne was not cowed, and that she was not without friends was shown by the 'proud Duke of Somerset' lending her his villa on the Thames called Sion House, whither she went, accompanied by the countess, on 19 Feb., and by his losing no time in paying her his respects there with the Duke of Ormond. The latter soon reappeared with a peremptory message from the king bidding the princess remove her favourite, but 'the answer,' writes Luttrell, 'we hear not.' On the same day, 1 March, the young Duke of Gloucester, who had remained with the queen at Kensington, was, by his mother's desire, carried to Sion House.

After, on 17 April, the princess had given birth to the youngest of her children, Prince George, who lived only long enough to be baptised, the queen paid a visit to her sister, but, according to Lady Marlborough, only in order to insist upon the removal of the obnoxious favourite. Being refused, she departed in anger, nor was she conciliated by a letter sent by the princess after her recovery through the Bishop of Worcester (Stillingfleet), inasmuch as it did not promise obedience to her demand. And about this time the royal displeasure against the princess found vent in a series of petty indignities, the remembrance of which was of course carefully treasured up. The guard of honour attending upon her and her husband seems to have been taken away before; and on paying his respects at Kensington the prince had missed the customary salute on entering the palace, though the drums duly beat on his departure (LUTTRELL, ii. 366, 376). Pressure was put upon the nobility to prevent them from waiting on the princess; and when she came to town, where she had taken Berkeley

House (on the site of the present Devonshire House, and at that time the 'last house' in London), further humiliations were inflicted on her. At St. James's Chapel the rector ceased to bow to her from the pulpit, or to send his text to be laid upon her cushion; and it was said that the very bellman of Piccadilly was forbidden to sing her praises under her windows. When in the autumn she visited Bath, the mayor and aldermen were ordered to desist from their daily ceremonious attendance on her person (*Conduct*, 100; LUTTRELL, ii. 564; MACAULAY).

Before this journey, however, further events had happened that seemed to justify the royal severity which was the source of all these hardships. On 5 May Marlborough was committed to the Tower on a charge of high treason, several other persons being likewise taken into custody. Fortunately the particular evidence against him proved a forgery [see CHURCHILL, JOHN]; but for the moment, though the princess showed absolute confidence in his innocence, there was panic in Berkeley House. Mrs. Morley wrote to her dear Mrs. Freeman, from whom at last she had been obliged to part, that she was 'told by pretty good hands that as soon as the wind turns easterly, there will be a guard set upon the prince and me' (COXE, i. 51). She soon withdrew to Sion House, where, in June, she fell ill of a fever; and in July she was again indisposed. Before she went to Bath with her husband in August she had dined at St. Albans with Marlborough (who had been released on bail in June) and the countess, which Luttrell says was 'taken notice of.' Bishop Compton was of the party; and it may have been due to the mixed inspirations here received or refreshed that the princess was at Bath heard to declare that 'no papist or Jacobite should come into her presence' (LUTTRELL, ii. 556). After her return to Berkeley House she still reserved apartments there for her faithful Mrs. Freeman, in which Marlborough occasionally resided; and so closely did she connect his disgrace with her service that she was only prevented by the unselfishness or prudence of his wife from creating a new place for him in her household (*Conduct*, 285). Under such circumstances the rumours of a reconciliation between the queen and the princess, which from time to time flew about the town, could hardly prove correct. The childless queen indeed continued to show many kindnesses to the Duke of Gloucester; but there was no open return of goodwill between the sisters, and about January 1693 Grubstreet accordingly abused the princess in a scandalous pamphlet, and then 'vindi-

cated' her in a half-treasonable one (LUTTRELL, iii. 15, 16). Rochester in vain sought to bring about a reconciliation on the basis of a temporary removal of Lady Marlborough; and after, by somebody's fault (see *The Other Side*, 127, versus *Conduct*, 100-2), this attempt had fallen through, the princess continued at Berkeley House 'in a quiet way;' two further disappointments of the kind to which the poor lady was by this time accustomed happening to her in March 1693 and in the January following.

A change came over the English court in 1694 by the sudden decease, on 28 Dec., of Queen Mary. Macaulay tells us that 'Mary died in peace with Anne.' At all events, natural courtesies passed. On the first news of the queen's being taken with the smallpox Anne had affectionately offered to 'run any hazard for the satisfaction' of seeing her; but it had been thought better to keep the patient quiet for the present. The princess continued her inquiries without, as Lady Marlborough asserts, receiving any answer except on one occasion 'a cold thanks.' After her sister's death nothing was wanting in the princess's conduct. Her husband, indeed, when he called to offer his condolences, was told that the king was asleep; but she wrote to William a becoming though brief letter (the original is at Longleat), in which she assured him of her being 'as sensibly touched with this sad misfortune as if she had never been so unhappy as to fall into the queen's displeasure,' and asked leave to wait upon him. He soon received her at Kensington, treating her 'with extraordinary civility' (*Conduct*, 107-10; cf. LUTTRELL, iii. 418-19).

Even had William been otherwise disposed, he must have perceived the necessity of being on good terms with his sister-in-law. Some of the Jacobites, cherishing the notion that in the event of a contest between them the English people would prefer the Princess of Denmark to the Prince of Orange, urged that the opportunity should be used for a rising. There was little immediate fear that the Princess Anne would enter into a combination with her father, even he at the time could hardly have expected it (cf. *Original Papers*, i. 246). But she had dangerous advisers. Hence William left nothing undone that it was in his power, or in his nature, to do to bring about a complete reconciliation. The Archbishop of Canterbury was sent by the king to wait upon the princess; her guard of honour was restored, and she was invited to keep a court of her own at Whitehall, 'as if,' says Luttrell, 'she were a crowned head,' 5,000*l.* a quarter being assigned to her for the maintenance of divers servants of the

late queen, whom she was requested to take into her 'family.' After she and the prince had given up Berkeley House, they for a time lived at Camden House; and the king then made over St. James's Palace to them, of which they took possession in the spring of 1696. In the summer of the same year they resided at Windsor; in 1694 and 1695 the princess had rusticated at Twickenham (LUTTRELL; EVELYN; and see Miss STRICKLAND, xi. 391, 368). In return the princess endeavoured to show her loyalty to the king's interests. She instructed her servants to vote at the Westminster election in 1694 for the candidates agreeable to the king (LUTTRELL, iii. 537); and it was said that when her uncle Clarendon, who had never taken the oaths, presented himself at her door, she sent word to him that she received nobody but the friends of the king (O. KLOPP, vii. 24, from a despatch of Hoffman, the imperial resident; COKE, *Detection*, 127, places this occurrence after the death of James II). Whatever there may have been wanting now as of old in the personal demeanour of the king, no doubt whatever existed as to his desire to be on terms of amity with the princess and her husband; it was universally felt that her star was at last in the ascendant, and her audience-chamber was now as crowded as it had formerly been deserted (*Shrewsbury Correspondence*, 220; cf. LUTTRELL, iii. 437). One important point, however, remained in the relations between the king and his sister-in-law, which neither of them was likely to overlook. 'Our friend,' writes the Duke of Shrewsbury to Admiral Russell (ORFORD), who has no small credit with her, seems very resolved to contribute to the continuance of this union, as the only thing that can support her, or both. I do not see he is likely at present to get much by it, not having yet kissed the king's hand; but his reversion is very fair and great.' After contradictory reports had for some time circulated as to the treatment which awaited Lord and Lady Marlborough (see O. KLOPP, vii. 24, note; and *Hatton Correspondence*, ii. 210), all doubts were set at rest by the earl being introduced into the king's presence, and kissing hands, on 29 March 1695. After this crowning favour it is not wonderful that when in the following May arrangements were being made for the government of the country during the king's absence in Flanders, he should have been expected by many to appoint the princess regent. But, in point of fact, though he had made his peace with her, he did not, as Burnet puts it, 'bring her into any share in business;' and shortly after this time we find Evelyn recording a conversation

at Lambeth Palace, where, in a large company, 'we discoursed of several matters, particularly of the Princess of Denmark, who made so little figure' (*Diary*, 5 July). The next year, 1696, was one of the darkest of William's reign. At St. Germain's a corresponding hopefulness prevailed; and King James states that about this time he received a letter from his surviving daughter, asking whether he would permit her to accept the crown should William die, expressing her readiness to make restitution when opportunity should serve, and arguing that a refusal of the crown by her would only remove him the further from the hope of recovering his rights. But James declined to enter into any such bargain (see CLARKE, *James II*, ii. 559-60; and *Original Papers*, i. 257-8. The letter is unusually full of lacunæ, with salient words inserted afterwards).

Few notices remain of the life of the princess in this and the three following years (1697-1699). Her health continued uncertain: she miscarried in February 1696 and again in December 1697, September 1698, and January 1700; in December 1696 she is reported ill of convulsion fits, and in April 1699 of the gout. A visit to Tunbridge Wells in the summer of 1697 can have conferred no lasting benefit, though in the winter following she took a more decided lead in the amusements of the court, for a time giving a ball every Monday at St. James's, while the prince followed the fashion and his own inclination by periodical sojourns at Newmarket (for all these details see LUTTRELL). Lady Marlborough continued her chosen friend, and when in 1698 Mrs. Freeman's daughters began to be married, it was Mrs. Morley who doubled the dowry of 5,000*l.* given to the eldest by her father, the larger offer of 10,000*l.* having been refused by the countess. Lady Harriet Churchill married the only son of Lord Godolphin, for whom, according to an unauthenticated tradition, the Princess Anne had in her younger days entertained a tender sentiment (Mrs. THOMSON, i. 168). In January 1701, when her god-daughter, Lady Anne Churchill, married the Earl of Sunderland's heir, Lord Spencer, she repeated her munificence. Corresponding gifts were made to the younger daughters of the duchess, who married after Anne came to the throne. In 1698 an arrangement under the king's orders had closely connected the Earl of Marlborough himself with the domestic affairs of the prince and princess. The frail life of the little Duke of Gloucester, who to his mother before he died must have represented a hope seventeen times cherished and but once permitted to survive more or less speedily disap-

pointment, alone safeguarded the succession as by law established. But even the Jacobites could not look in a very grim humour on such a scene as that of the little duke on his mother's birthday heading his company of small soldiers in Hyde Park (*Hatton Correspondence*, ii. 200; cf. LUTTRELL, iii. 265-266).

The unsentimental king—partly perhaps for his wife's sake—took a kindly interest in the child, and as early as November 1695 bestowed on him a vacant garter. The installation was held with great splendour at Windsor in July 1696. Yet all this pomp could not conceal the fact that the health of the little prince was the reverse of good; he escaped the small-pox in May 1695; but in these years the despatches of the foreign ministers from time to time mention how little reliance was to be placed on the child's vital powers (KLOPP, vii. 129). In 1698, however, the Duke of Gloucester was nine years old, and in settling a revenue for life on the king after the peace of Ryswick, parliament took into account among other things the expediency of a distinct household being established for his nephew. The king accordingly before going abroad in that year appointed Marlborough governor of the prince, and the Bishop of Salisbury preceptor—as he states, much against his own wish, and as his annotator, Lord Dartmouth, states, much against the princess's. At the same time King William appointed the little prince to the command of his own cherished Dutch regiment of footguards. Lady Marlborough's censures on the king's settlement of the expenses of the young duke's household, and her account of his passing quarrel with the princess as to its composition (*Conduct*, 116-120), may be passed by. Marlborough was at the same time restored to his place in the council and to his military rank and employments, and not long afterwards was made one of the lords justices for conducting the government during the king's absence. As late as November 1699 we hear of the Duke of Gloucester on the anniversary of Queen Elizabeth's birthday (a festival boisterously kept by all true English protestants, even under Queen Anne) 'firing all his guns and making great rejoicings' (LUTTRELL). But on 26 July of the following year he was taken sick at Windsor—it was again erroneously thought of the small-pox—and on the 29th he died.

Burnet relates that the princess attended on her son 'during his sickness with great tenderness, but with a grave composedness that amazed all who saw it; she bore his death with a resignation and piety that

were very singular.' The description of her overwhelming grief is quite reconcilable with this; and there is something pathetic as well as grotesque in the fact that from this time forth she always called herself, in correspondence with her friend, 'your poor, unfortunate, faithful Morley' (COXE, i. 162). The sympathy was very general, and even the French court, after receiving a formal announcement from King William, went into mourning (*DUKE of MANCHESTER, Court and Society from Elizabeth to Anne*, ii. 147-50). At St. Germain's, of course, hopes ran higher than ever, and an agent from the Jacobites in England speedily found his way thither. It seems not improbable that the sympathies of the Princess Anne herself now began to flow in this direction, though it may be questioned whether Lord Stanhope is right in assigning to this point of time her letter to her father already noticed (*Reign of Queen Anne*, 9). At all events there was no personal reason for her favouring the claims of the Electress Sophia of Hanover, more especially as the wishes of the latter seem now and for some time afterwards to have been for the family at St. Germain's rather than for herself (KLOPP, vii. 15 *et passim*; and cf. STANHOPE, i. 7). In the country there seems at first to have been an expectation, or wish that the king should marry again (LUTTRELL, iv. 673); but when he opened the new parliament of 1701 he recommended a provision for the succession in the protestant line. On 12 June the Act of Settlement, which placed the Electress Sophia and her heirs in the succession, received the royal assent. It may be mentioned here that almost immediately after William's death, a charge was bruited about against him of his having intended to exclude Princess Anne from the succession; according to Burnet there was a further rumour that she was to be imprisoned. An inquiry ordered by the lords ended in a resolution of their house declaring the report groundless and scandalous, and requesting Anne to prosecute its authors (SOMERVILLE, 8-9; RANKE, vii. 9).

James II died at St. Germain's on 17 Sept. 1701, and Louis XIV recognised his son as King of England. Under the influence of these events a parliament, in which the Tories no longer commanded a majority, was elected. 'James III' was attainted, and the men and money needed were voted for the war with France.

There is no reason to suppose that affection for her father had ever been altogether dead in Anne's heart. When, towards the end of her reign, the Jacobites wished to persuade themselves that she favoured their

cause, a story from such a source reached the ears of the Hanoverian agent Schütz that she was greatly touched by an affecting letter written to her by her father before his death, in which he recommended his family to her. 'It was brought to her by Madame Oglethorpe, who went twice to France' (*Occasional Papers*, ii. 504; the authority given by Schütz is the Jacobite Lord Portmore). Such a letter may have been written and received; and, at all events, shortly after the death of James II his widow wrote to the Princess Anne conveying to her his last blessing and forgiveness, with his prayer that God might convert her heart and confirm her in the resolution to 'repair to his son the wrongs done to himself' (CLARKE, *James II*, ii. 601-2). But probably King James never saw reason to unsay his words to Lord Peterborough, that he could never have a good opinion of the Prince and Princess of Denmark, or put any confidence in them (*Original Papers*, i. 281). He had never, largely no doubt because of the difference of creed between him and his daughter, gained an ascendancy over her mind, and its constitution was not such as to let it easily fall a prey to remorse. On receiving the news of her father's death she went into mourning and secluded herself (LUTTRELL). She cannot be supposed to have promoted the introduction by the tories into the bill for abjuring the Pretender of a clause making it high treason to compass her death, which clause was unanimously accepted. The bill passed on the last day of King William's life; on the following morning, 8 March 1701-2, he died.

When Queen Anne ascended the throne, the grand alliance, though not yet complete, had been knit, and the country was on the eve of the declaration of war against France (actually issued on 4 May following). A tory House of Commons had been followed by one in which parties seemed nearly balanced, but which had given in its adhesion to the policy of King William; in the lords the whig interest was still in the ascendant. On St. George's day, 23 April 1702, Anne was crowned.

Three days after her accession the queen made her first speech in parliament. Marlborough had carried the sword of state before her on the occasion, and the countess had of course accompanied her in her coach. The queen's declaration 'that she knew her heart to be entirely English' was resented by those who were loyal to the memory of the late king (DALRYMPLE, iii. 244, says that this and other expressions supposed to reflect upon him were ill received by 'the public,' but the

words 'entirely English' were engraved on her coronation medal; see MISS STRICKLAND, xii. 66). The speech was, however, very warlike in tone, and also referred to the project, recommended by William III shortly before his death, of a union between England and Scotland. Parliament, though enabled by an act passed in the previous reign to sit for six months after the death of the sovereign, could hardly do more than approve the appointment of commissioners for giving effect to the proposal. Before parliament was prorogued in May with a view to its dissolution (2 July), it had granted to the queen the same revenue as that latterly enjoyed by her predecessor, and she had in return announced her intention to apply 100,000*l.* out of the first year's 700,000*l.* to the public service.

Anne did not wait for the election of her first parliament before making a series of appointments, on some of which her heart was set, while others followed almost as a necessary consequence. It was understood that Anne's first wish had been to associate her husband with herself in the regal dignity; but the parallel with her sister's case had not been considered to hold (*Original Papers*, i. 621; BURNET, v. 56; COXE, i. 155). Nor was it possible for her to entrust to him the command in the Netherlands which he had desired; but he received the title of generalissimo of her majesty's forces, Marlborough declaring himself 'ravished' to serve under him, and the office of lord high admiral. Towards the end of the year, after considerable resistance in the lords, by taking a prominent part in which Sunderland incurred the queen's lasting resentment, a life annuity of 100,000*l.*, double, says Burnet, of what any queen of England ever had in jointure, was granted to the prince, and he was also made constable of Dover and lord warden of the Cinque Ports. Next to her husband the man whom the queen delighted at last to have the opportunity of honouring was of course the Earl of Marlborough. Three days after her accession he received the long-delayed garter, and on the day following was, in accordance with King William's wish, made captain-general of the English forces at home and abroad, and soon afterwards master of the ordnance. To these offices was added the rangership of Windsor Park, a pleasant sinecure made doubly pleasant by the fact that the hated Portland had had to vacate it. The countess was made groom of the stole and mistress of the robes, and received the control of the privy purse. Other favours flowed in rapidly upon the Marlborough family and those connected with it (COXE, i.

108). Luttrell (v. 163) gives a list of the ladies of the bedchamber, who included whig as well as tory ladies. Rochester, whose daughter's services were declined, was himself, instead of being placed at the head of the treasury, left in the doubtful position of an Irish viceroy, whose commission had been cancelled by the late king. The rivalry between him and Marlborough soon became patent, and ended in his angrily resigning his office, in which he was succeeded by Ormond. By Marlborough's advice the treasurer's staff was given to his political *alter ego* Godolphin. Other changes were made, among which need only be mentioned the appointment of the high-church Earl of Nottingham to one of the secretaryships of state. Several whigs were left in the ministry and household, but from the list of the new privy council the names of the great whig leaders of the late reign were omitted. Politics apart, the queen seems to have acted generously towards her predecessor's servants (LUTTRELL, v. 172); but not all the claims left unsettled by him were liquidated by her (*Calendar of Treasury Papers*, 1702-7, Preface, x).

With regard to another class of appointments, it was rumoured very early in Anne's reign that 'her majesty would herself dispose of all ecclesiastical preferments belonging to the crown as they became vacant, and not leave it to the Archbishop of Canterbury and five other bishops as the late king did' (LUTTRELL, v. 157). High-church feeling had of late vigorously revived. Anne appointed the Archbishop of York (Sharpe) instead of Tenison of Canterbury to preach her coronation sermon; and of the statesmen admitted to office upon her accession most were well-known 'highfliers.' Among the addresses presented to her on her accession she left unnoticed one presented by the presbyterian, independent, and baptist ministers of London, and at the prorogation of parliament in May, while undertaking to maintain the act of toleration, she declared that 'her own principles must always keep her entirely firm to the interest and religion of the church of England, and would incline her to countenance those who had the truest zeal to support it' (STOUGHTON, v. 323). In the elections for the new parliament the church question accordingly assumed great prominence, and the result was that the tory high-churchmen were stronger in Queen Anne's first parliament than they had been in any since the revolution (SOMERVILLE, 23-4). She gratified the majority by dismissing from the office of almoner the Bishop of Worcester (Lloyd), who was accused of having sought to influence his clergy against the tory candidate

in the Worcestershire election. During the summer she had paid a state visit to the headquarters of the high-church party, the university of Oxford, afterwards continuing her progress, on which she was enthusiastically welcomed, to Bath and Bristol.

Intent, however, as the new House of Commons, with Harley as its speaker, was upon church affairs, the war necessarily claimed its first attention. The grand alliance had been strengthened by further additions, but the chief military successes of the year were gained by the English general. On 12 Nov. Queen Anne went in state to St. Paul's, the Countesses of Marlborough and Sunderland accompanying her in her coach. After Marlborough's return to England she insisted, notwithstanding the protests of his lady, on raising him to a dukedom (she may have been annoyed by the pyramidal illumination at Ludgate, in which his name was placed after Ormond's, COKE, 129), and on settling upon him for the term of her own life an annual pension of 5,000*l.*, derived from the post office. Her wish that this pension should be settled for ever on the title was, however, rejected by the commons, and it was on this occasion that the queen made the offer of a further 2,000*l.* a year to the duchess out of the privy purse, which the latter declined at the moment, but afterwards, 'by the advice of her friends,' inserted in her accounts.

On 4 Nov. 1702 the bill against occasional conformity, which was for many years to be regarded as the test measure of church opinion and sentiment, was brought into the House of Commons. The queen was ardently on the side of the bill. The Prince of Denmark, though himself an occasional communicant, had been induced to vote for it. But it had at last to be dropped in the lords. When, in a rather less rigorous form, it was reintroduced in November 1703, stronger opposition was offered to it by the whigs, and Marlborough and Godolphin, though they voted for it, were less than lukewarm in its favour; and though the queen seems still in her heart to have wished it to pass, the prince absented himself from the division in which it was thrown out by a majority of eleven. In November 1704 it again appeared. This time its defeat in the lords was foreseen, and not averted by the shameless proposal to force it through the lords by tacking it to a land-tax bill. As both Marlborough and Godolphin on this occasion voted against it, there can have been little or no pressure from the queen in its favour. In this very year 1704, however, she had chosen a better way for proving her goodwill to the national church. On the day after her birthday, which fell on a Sunday,

she informed the commons that she desired to grant for the benefit of the church her entire revenues from tenths and first-fruits, appropriated to the crown in 1534, and amounting to between 16,000*l.* and 17,000*l.* a year (STOUGHTON, v. 349). Notwithstanding the rancorous accusations of Swift, there seems no reason to doubt Burnet's assertion that he had suggested this step to the queen and Godolphin after having previously recommended it to her predecessors; but Queen Anne's Bounty, as the fund established by statute to carry out her wishes was called, remains a living monument of her piety and beneficence, more especially since its application has been extended to cognate purposes (STANHOPE, 118, who refers to BURN'S *Eccelesiastical Law*, ed. Phillimore, ii. 283-95).

The ecclesiastical views of the queen, which, beyond all doubt, added to her popularity in England, were not of a nature to augment such goodwill as accrued to her in Scotland by virtue of her Stuart descent. Here discontent had reached a very high pitch; the union was still a mere project, and the ministers of the crown who, contrary to expectation, had been continued in office after the queen's accession, were universally unpopular. It was now rumoured that a letter from the queen to the Scottish privy council betrayed suspicious tendencies towards a continued toleration of the adherents of episcopalianism in Scotland, and these suspicions were confirmed when the letter, either surreptitiously or by authority, found its way into print (BURTON'S *History of Scotland*, 1689-1748, i. 354-5). Though the parliament, opened 9 June 1702 by the Duke of Queensberry as the royal commissioner, unanimously recognised Queen Anne's title, voted the requisite supply, and agreed to the joint commission for negotiating the union, yet, when the draft of an abjuration bill was presented, a strong feeling of opposition manifested itself. Two very factious sessions followed, as the result of which bills were passed showing the angry and jealous temper of the people. The act securing the presbyterian establishment as 'the only church of Christ within this kingdom,' and another declaring that after her majesty's decease no king or queen of Scotland should have the power to make war or peace without the consent of parliament, received the royal assent; but the act of security which the Scottish parliament had chiefly at heart, the queen's commissioner refused to touch with the sceptre (10 Sept.) This act provided that in the event of the queen's death the Scottish estates should name a successor from among the protestant descendants of the royal line (the proposal to insert the

name of the Electress Sophia had been rejected with furious indignation); but that this successor should not be the same as the successor to the English throne, unless the religion, freedom, and trade of the Scottish nation should have been previously secured. Queen Anne had throughout manifested the strongest disapproval of the proceedings of the Scottish parliament, and had sent instructions, which fortunately arrived too late, for the suppression or rejection of the act of security. The Scottish titles granted at this time by the queen, and her revival of the order of the Thistle, could not act as balm to the 'spirit of ferocity and opposition' which, as Smollett says, 'threatened the whole kingdom with civil war and confusion.' The winter of 1703-4 witnessed the natural result of this state of things in the shape of a plot, or the rumour of a plot, of which the queen apprised the lords on 17 Dec. The reality of the so-called 'Scottish plot' [see LOVAT] being asserted by the whigs and denied by the tories, the lords and the commons were at issue on the subject, and the queen had to assuage the troubled waters by pointing out how inconvenient for the public service and how uneasy to her were such misunderstandings between the houses (for a full account of the dispute see *Somers Tracts*, xii. 423-30). The 'Scottish plot' itself dropped out of notice; and when the Scottish parliament had reassembled in July 1704 and the act of security, tacked to a bill of supply, had been passed without debate for a second time, the royal commissioner (now the Marquis of Tweeddale) was empowered to signify the royal assent (SOMERVILLE; BURTON). In Ireland the succession was, in 1703, settled by an act modelled upon the English act of 1701, and containing the imposition of a severe church of England test upon all officials and magistrates.

The domestic troubles of the year 1703 were not counterbalanced by any brilliant successes abroad. The Emperor Leopold I having on 12 Sept. 1703 renounced his claim to the Spanish throne, his second son was, under the title of Charles III, proclaimed King of Spain and the Indies. He soon set forth on his journey to Spain, visiting on the way, under the guidance of Marlborough, the lords 'of the heretics in England, by whose grace,' according to the Jacobite pamphleteers, he was 'the catholic king' (NOORDEN, i. 401). His voyage across the Channel was delayed by the effects of the terrible storm which strewn the English coasts with wrecks and filled the land with desolation, so that the queen gave orders for the observance of a general fast on 19 Jan.

following. But on 28 Dec. Charles landed at Portsmouth, and on the 29th reached Windsor, where he remained till the 31st (*Marlborough Despatches*, i. 223). He was received by the queen with royal honours; nor could she in any way have more closely and personally identified herself with the policy of the war, and have seemed more resolutely to shut the door against any peace which should fail to establish the Habsburg claimant upon the Spanish throne. (For details of the reception see LUTTRELL, v. 374-376; and compare ELLIS, *Original Letters*, first series, iii. 356-7, for the queen's letter to Sir George Rooke, 22 Jan., ordering him to 'pay the same obedience to the King of Spain as to time and manner of his setting sail' for Lisbon, 'as you would do to myself'.)

Already in the winter 1702-3 the desirableness of modifying the administration in a sense more favourable to their policy had suggested itself to Marlborough and Godolphin. The zeal of the Tories for the war had begun to cool; the jealous ambition of Rochester had helped to make Nottingham recalcitrant, and he had many followers in the Commons and some in the ministry itself. In the summer of 1703 the Duchess of Marlborough duly communicated her husband's complaints to the queen, who, in reply to the expression or pretence of a wish on the part of the duke to resign, appealed in pitiable tones to the patriotic devotion of her friends (COXE, i. 202). The language of this letter encouraged the duchess still further to urge upon the queen the cardinal fact that the Whigs were her friends and not the Tories; but Anne had too much in common with the latter to give them up even at her favourite's bidding, and the duke was as cautious about throwing himself into the arms of the Whigs as they were about an alliance with him and Godolphin. Furthermore, Harley, who contrived to command the confidence of many moderate men of both parties, had already suggested to Marlborough another and a more attractive combination. These manoeuvres explain among other things the ministerial changes which followed the duke's departure for the continent in 1704. In his absence, Nottingham declared to the Tory high churchmen that the queen was desirous to do everything she could to give them satisfaction, but that she was hindered by Marlborough and Godolphin; and then developed his plan of securing their support to the Occasional Conformity Bill by the celebrated device (the *tack*) already mentioned. He at the same time made an urgent appeal to the queen herself to make her choice between the Whigs and the Tories, declaring his resolution to

resign if she persisted in retaining the former. The queen, after endeavouring to make him reconsider his resolution, acquiesced in his proposed resignation, and by way of encouragement began by dismissing two of his adherents, Lord Jersey and Sir Edward Seymour. Mrs. Freeman was informed by her friend that 'something more of the nature, it is believed, will soon happen that will not be disagreeable to her,' and on 18 May Nottingham formally resigned the secretaryship of state, in which he was succeeded by Harley. A few other changes took place, among which was the appointment of Henry St. John as secretary at war. This rearrangement of the ministry, though it contented Marlborough, is in no sense to be regarded as a Whig victory; and Swift either judged rashly or was in a bad temper when he wrote in the preceding February that 'the queen and House of Lords and half the Commons are Whigs, and the number daily increases' (*Letters*, i. 4; cf. the curious letter from Gwynne to Robethon in *Original Papers*, i. 690). On the contrary, as late as 21 Nov. 1704, we find Mrs. Morley declaring to Mrs. Freeman, when discussing the course of church affairs in the late reign, that whenever things lean towards the Whigs 'I shall think the church beginning to be in danger' (*Conduct*, 158).

The great victory of Blenheim in 1704 was followed by other successes on the Rhine and Moselle. Queen Anne was full of joy. Evelyn describes her appearance at the thanksgiving held at St. Paul's on 7 Sept. for the late great victory. In her rich coach drawn by eight horses she was accompanied by the Duchess of Marlborough only, in a very plain garment, while the queen was resplendent with jewels. The house voted supplies of unheard-of liberality for the prosecution of the war, and presented its address of thanks to Marlborough after his return to England, when he was warmly received by the queen at St. James's on 14 Dec. On 3 Jan. 1704-5 she had the satisfaction of seeing, from the windows of St. James's Palace, the trophies of Blenheim borne to Westminster Hall; and soon afterwards, in reply to an address from the Commons, she declared her wish to bestow upon the duke and his heirs for ever the royal manor of Woodstock, asking the assistance of the house to clear off the encumbrances on the estate. Furthermore, she gave orders that a palace bearing the name of Blenheim should be constructed at her own expense in Woodstock Park. Nearly everything that her gratitude and friendship could bestow upon the great general and his consort was now offered them, and as yet their favour

with her was unbroken. She resented the attempt of the university of Oxford, at one of its solemnities, to imitate the House of Commons by coupling the achievements of Sir George Rooke with those of the hero of Blenheim. At Cambridge, to which she paid a visit after the dissolution of parliament in April, the Duke of Somerset, for whom she had a strong regard, entertained her as chancellor. The greatest scholar and the greatest man of science who adorned her reign—Bentley and Newton—took part in the Cambridge festivities; and the latter, at that time M.P. for the university, was together with the vice-chancellor knighted by the queen. She seems at this time to have been in the best of humours; at Newmarket, whence the visit to Cambridge had been undertaken, she ordered her house to be rebuilt, liberally contributed to the improvement of the town, and bought 'a running horse of Mr. Holloway, which cost a 1,000 guineas, and gave it to the prince' (LUTTRELL, v. 542-4).

Before the dissolution of parliament the lords had, besides throwing out the Occasional Conformity Bill, put a stop upon a tory place bill, which had passed the commons and which had for its object to exclude from their house all holders of offices created since 1684. The queen had been adverse to this bill, and had requested the Archbishop of York to induce his brethren to vote against it. Notwithstanding her ecclesiastical predilections and her rooted suspicion of the whigs, it was becoming more and more difficult for Anne to avoid making a choice between that party and the baffled high-church Tories; and this very circumstance made her as desirous as ever to maintain Marlborough, Godolphin, and the moderate men. On the other hand, however, Marlborough and Godolphin were becoming more fully convinced than before that the war could not be effectively carried on without the support of the whigs, and this lent colour to the belief that the queen herself was being drawn in the same direction. All the foreign ministers were fluttered by the tidings that on 18 April she had dined with Orford, one of the whig leaders (NOORDEN, ii. 248 note). Some influence was probably exerted by these rumours on the issue of the parliamentary elections held in May in the midst of unusual excitement fanned by audacious party libels against Queen Sarah and the regicide whigs; for when parliament met on 25 Oct. the election of speaker proved the whigs to possess a considerable majority in the commons. It is certain that the queen's interest had been exerted on behalf of the whig candidate for the speakership (see her letter to

Lady Bathurst, cited by MISS STRICKLAND, xii. 142). But she had not been converted. Before the houses assembled, a long struggle had been waged against the unwillingness of the queen to remodel her administration in deference to the wishes of the victorious whigs and their staunch advocate, the Duchess of Marlborough. Of the whig leaders—the Junto as they were called—Somers, Halifax, Orford, Wharton, and Sunderland, the last two were the most distasteful to the queen: Wharton, because of his profligacy and undisguised contempt for religion; Sunderland, because, as she had already experienced, no member of his party surpassed him in unyielding resoluteness. The efforts of the whigs and the duchess to obtain a high office of state for her son-in-law, Sunderland, were not supported by Marlborough; but the queen was at last prevailed upon to send him as ambassador to Vienna, where the accession of the Emperor Joseph I in May 1705 gave special importance to the selection. Next, a struggle began for the removal of Sir Nathan Wright from the lord chancellorship; and the efforts of the duchess, who speaks with unmitigated contempt of this 'warm stickler for the church,' were on this occasion seconded by Godolphin. The queen's hesitation to confer upon a whig an office to which so great an amount of church patronage belonged is very noteworthy; but when in her difficulty she appealed to Marlborough himself, whom she had hitherto found so reasonable, he plainly told her that she must choose between following the advice of Godolphin and 'sending for Lord Rochester and Lord Nottingham.' On 11 Oct. the great seal was transferred to Cowper; and a step—but no more—had been taken towards the construction of a whig government (COXE, i. 483-4. The duchess, *Conduct*, 147, modestly says: 'I prevailed with her majesty to take the great seal from Sir Nathan Wright').

Mindful, no doubt, of the changed aspect of parties, the queen, in the speech with which she opened parliament in October 1705, after dwelling on the importance of prosecuting the war and bringing about a union with Scotland, promised to make the support of the church her chief care, adding the curious words: 'I mention this with a little more warmth because there have not been wanting some so very malicious as even in print to suggest the church of England as by law established to be in danger' (STANHOPE, 205. The special allusion seems to be to a publication called 'The Memorial of the Church of England;' see the scornful reference in *Conduct*, 148. The author, Dr. Drake, resorts to the artifice of representing

the whigs as systematically traducing the queen and making her at one time 'the common subject of the tittle-tattle of every coffee-house and drawing-room.' MRS. THOMSON, i. 444). Hereupon the high tory leaders on 15 Nov. brought forward a proposal that Anne should invite to England the heir presumptive to the throne, the Electress Sophia. The proposal was moved by Lord Haversham, and the queen was present at the debate. (Her first attendance at a debate seems to have been 29 Nov. of the previous year, when Lord Haversham had introduced a discussion on the affairs of Scotland. STANHOPE, 166.) Burnet's suggestion, or the suggestion reported by him, that this motion was brought forward with the mischievous purpose of creating a misunderstanding between queen and nation, may be beyond the mark; but the demand was doubtless prompted by extreme factiousness, and the queen bitterly resented the speeches of the tory leaders, among whom Buckingham was personally insolent to herself, and more especially she 'could never overcome' the unpleasant impression she on this occasion received of Nottingham. (See DARTMOUTH'S note to BURNET, v. 233.) Nor should it be overlooked that the whigs, friends though they were to the Hanoverian succession, strongly opposed the motion, knowing 'it was disagreeable to the queen' (SMOLLETT, ii. 65). She wrote to the duchess accordingly, that she believed Mrs. Freeman and she would not disagree as they had formerly done; 'for I am sensible of the services those people have done me that you have a good opinion of, and will countenance them, and am thoroughly convinced of the malice and insolence of *them* that you have always been speaking against' (*Conduct*, 159). At the same time the debate had suggested the expediency of taking practicable measures for safeguarding the protestant succession; and in April 1706 the queen could transmit to the elector by Lord Halifax several acts favourable to the interests of his family. They included the Regency Act, which was afterwards carried into execution after Anne's death, and of which a clause obliged the privy council to proclaim the successor appointed by law with all convenient speed, as well as an act naturalising the Electress Sophia and her issue. Queen Anne, who had been in friendly correspondence with the court of Hanover during the past year (*Original Papers*, i. 705 *seqq.*), and who had recently received from the electress the expression of her belief 'that it would be for the good of England and all Europe that the queen should live for a hundred years' (*ib.* ii. 31), took the occasion of sending the

garter to her cousin, the electoral prince. In September the electoral house was still further gratified by his being made a peer of England under the title of Duke of Cambridge (*ib.* ii. 64). The patent does not, however, appear to have been sent to him till the spring of 1708. See his letter to the queen in ELLIS, 2nd series, iv. 247).

The ebullitions of something not unlike disloyalty which the queen had found to be compatible with tory and high-church opinions in both clergy and laity were insufficient to change either her principles or her prejudices, and would probably have exercised a still slighter influence upon her conduct than they actually did, had not the strength of Marlborough's position still remained the same. The military glories of the year 1705 had indeed fallen to the genius of Peterborough. But 1706 was a year of victories on every side: in Italy, where later in the year Prince Eugene's victory at Turin secured the north for the grand alliance, and severed the south for ever from the monarchy of Spain; in Spain itself, where Peterborough raised the siege of Barcelona, and Galway for a few weeks occupied Madrid; and in Flanders, where Marlborough's victory at Ramillies placed the Spanish Netherlands in the hands of the allies.

Queen Anne's fidelity to the policy recommended to her by her predecessor was as yet unshaken. Not only had she publicly testified to this by appointing and attending a thanksgiving-service at St. Paul's on 23 Aug. 1705, though there was less reason for rejoicing than in the following year when she twice, on 27 June and 31 Dec., attended similar ceremonies. She also showed great liberality towards her army, as when in January 1706 she presented 30,000*l.* to the officers and soldiers who had lost their horses in the last campaign for 'recruiting' them (LUTTRELL, vi. 2); and in March of the same year Marlborough describes her efforts to meet the expenses of the war as 'extraordinary' (*Marlborough Despatches*, ii. 447). But the policy of the war was in her mind personally identified with no other statesmen than Marlborough and Godolphin; nor could she yet understand the necessity of submitting to the advice—which meant the control—of the whigs. In the autumn of 1706 they were still only tolerated by her. They had resolved upon bringing into the ministry a member of their party who was most repugnant to the queen. The duchess returned to the charge again and again, and finally, with the aid of a misread word, contrived to give serious, though apparently only passing, offence to the queen. ('I beg of God Almighty,

as sincerely as I shall do for his pardon at my last hour, that Mr. and Mrs. Morley may see their errors as to this notion before it is too late.' The queen had read the word *notion* as *nation* (COXE, ii. 152.) Explanation and (after a week's delay) a kind of apology from the queen followed; but though a letter from Marlborough respectfully represented the absolute necessity of employing the whigs if the war was to be vigorously carried on, the queen still held out against the appointment of Sunderland. She stated that she was still 'always ready to be easy with Mrs. Freeman,' but in truth a cloud had already settled upon the relation between them. These doings belong to the months from August to October (COXE, ii. 138-158). On 20 Oct. the duchess had surpassed her previous efforts by a letter in which Mrs. Morley was desired to reflect 'whether you have never heard that the greatest misfortunes that ever has happened to any of your family, has not been occasioned by having ill advice, and an obstinacy in their tempers' (*Private Correspondence*, i. 152). But it was not till after an interview with Marlborough, who had returned to London on 18 Nov., that the queen at last gave way. On 3 Dec., the day fixed for the meeting of parliament, Sunderland was at last appointed secretary of state, Sir Charles Hedges being removed to make room for him. Some minor offices and peerages, or promotions in the peerage, were soon bestowed upon whigs; but the downfall of the high Tories was most significantly marked by the removal from the privy council of Buckingham, Nottingham, and Rochester, together with Lords Jersey and Gower, and Sir George Rooke. The disgrace of the first two of these showed the excellence of the queen's memory; her relations with Rochester are more doubtful, but it is certain that he was hated by the duchess. Marlborough and Godolphin still seemed without rivals in the royal confidence. But though the relations of the queen to them and even to the duchess seemed unchanged—it was on 17 Dec. that a further favour was bestowed upon the house of Churchill by the extension of its ducal honours to the female line—Anne was not to forget that her 'obstinacy' had been overcome and her personal wishes affronted.

The year 1707, which added no military or naval glories to those of its predecessor, witnessed the accomplishment of the one great act of domestic statesmanship for which Queen Anne's reign is memorable. Her own concern with the act of union was mainly formal, and, as has been seen, Stuart though she was, but little love was lost

between her and her Scottish subjects. Yet she was not wanting in a sense of what becomes a monarch in the great moments of a nation's life; and her royal assent to the act was given, on 6 March 1707, in a speech of excellent taste and feeling (BURTON, *Reign of Queen Anne*, i. 350). The speech is cited by STANHOPE, 279-80). As late as 27 May, Secretary Boyle writes to Lord Manchester that 'the queen does not remove to Windsor till next month, having more business than is usual at this time upon the account of the union' (*Court and Society*, iii. 223; for a narrative of the events in Scotland which preceded the union and proved its necessity see BURTON, *Reign of Queen Anne*, iii. chap. vii.).

The strife of parties, which had fortunately not prevented the consummation of the union, was inevitably fed by the failure of the military operations of 1707. In this year (April) Marlborough indeed achieved a notable diplomatic success by securing, in the famous interview at Altranstedt, the neutrality of the dangerous hero, Charles XII of Sweden. But in Flanders the general's designs were again impeded by his Dutch allies, and frustrated by bad weather, while the south-west of Germany was falling back into French hands before the elector of Hanover had by Queen Anne's wish assumed the command. (His letter to the queen on this occasion, dated 26 Oct., is in *Original Papers*, ii. 95.) But the great reverse of Almanza had taken place at a much earlier date (25 April).

In the summer of 1707 the crisis in Queen Anne's personal relations began to announce itself to those most interested in their continuance. Marlborough, though aware of the ill feeling which existed between Harley and the whigs, had been slow to suspect him of any endeavour to insinuate himself into the queen's personal confidence by the arts of flattery and intrigue. The duke's own relations with the whig chiefs were by no means easy, and he had offended Halifax, who had been sent as envoy to Hanover, by thwarting his desire to be appointed a plenipotentiary for the peace negotiations which had been in prospect after the campaign of 1706. The queen was growing weary of the obligation of adapting her will to the counsel of her ministers. Her high-church opinions were her own, and she had always considered ecclesiastical appointments to be not merely nominally within her own bestowal. Her wish (ultimately baffled) to appoint instead of Dr. Potter (afterwards Archbishop of Canterbury) the high-church candidate, Dr. Smalridge, to the vacant chair of divinity at

Oxford, and her promise of the two vacant sees of Exeter and Chester to Dr. Blackall, an uncompromising churchman, and Sir William Dawes, who was supposed to hold similar opinions, aroused the wrath of the whigs. Their wishes were supported, in the matter of the Oxford chair effectually, by Marlborough and Godolphin. But the duchess foresaw a greater danger threatening the position of herself and her friends; and her indignation was fired by the discovery that she had herself nourished the serpent that was to sting her. According to the duchess's account, Abigail Hill was an indigent first cousin of her own, for whom she had obtained the place of bedchamber-woman in the establishment of the Princess of Denmark. The steps by which a personal attendant becomes a personal friend, and as such acquires an influence over the mind of master or mistress, rarely admit of being fixed by dates; moreover, Queen Anne was often more or less of an invalid, and invalids are apt to become the prey of their servants. Though the duchess had begun to find the queen more shy of her company and more reserved when with her than before, she was not rendered suspicious of her 'cousin Hill' till she had been informed of her private marriage to Mr. Samuel Masham. She speaks of this information as having reached her in the summer of 1707; already, on 3 June, the duke advises her, 'if Mrs. Masham does speak of business to the queen,' to warn the former cautiously, 'for she certainly is grateful, and will mind what you say.' (In the *Private Correspondence*, i. 77, this letter is dated 9 June.) The duchess goes on to state that when she tenderly expostulated with Mrs. Masham, both her conduct and that of the queen convinced her that there was some mystery in the affair. 'And in less than a week's time I discovered that my cousin was become an absolute favourite; that the queen herself was present at her marriage in Dr. Arbuthnot's lodgings' (Arbuthnot, though a strong tory, had been appointed physician to the queen in October 1705; see CRAIK'S *Swift*, 127), 'at which time her majesty had called for a round sum out of the privy purse; that Mrs. Masham came often to the queen, when the prince was asleep, and was generally two hours every day in private with her. And I likewise then discovered beyond all dispute Mr. Harley's correspondence and interest at court by means of this woman.' She then remembered many signs and tokens to which she had previously been blind (*Conduct*, 177-85; cf. COXE).

There can be no reasonable doubt that the duchess had made a real discovery. In

the measure in which her influence over the queen had declined, that of her kinswoman had risen. The intrigues of Harley are not proved by any direct evidence, but they were suspected by a correspondent of the Duke of Shrewsbury as well as by Lady Marlborough, and are admitted by the tory writer who, in answering the narrative of the duchess, proposed to show 'The Other Side of the Question' (see COXE, ii. 259 note). The duchess, to whom Godolphin had in vain induced Mrs. Masham to make an overture of reconciliation, now opened all portholes for the combat, while the duke and Godolphin adopted a more temperate course of conduct, consisting in the main of threats of resignation at first neither made nor probably received very seriously. Harley in some measure diminished their zeal by protesting that he was their sincere and loyal friend, and the queen declared that, though she had a very good opinion of Mr. Harley, and would never change it unless she saw cause, she relied entirely on none but 'Mr. Freeman [Marlborough] and Mr. Montgomery [Godolphin].' Thus the lord treasurer hesitated, and Marlborough on 8 Nov. from the Hague advised his wife to leave off struggling 'against wind and tide' (COXE, ii. 341-68). The duchess, however, continued to make the queen, as the latter was still patient enough to phrase it, 'truly sensible of her kindness in telling her her mind freely upon all occasions,' and told some of it to Mrs. Masham likewise. On paying her respects to the queen at Christmas 1707 the duchess was coldly received, and some days passed before a letter in which she had (not disrespectfully) reproached the queen obtained a kindly answer (*Conduct*, 203-11).

It was a sign of the growing power of the whigs that at the end of 1707 the queen had filled the contested Oxford chair with the whig candidate, and had appointed a whig (Dr. Trimnel) bishop of Norwich. The party had effectually shown its strength to Marlborough and Godolphin, and on 22 Dec. it completely identified itself with their war policy by carrying in both houses an address which declared that no peace could be honourable or safe if any part of the Spanish monarchy were left in the power of the house of Bourbon. Under such circumstances it was impossible that the queen, in spite of her personal confidence in him, should any longer continue Harley in office, for he had hoped to stand against the whigs with the aid of Marlborough and Godolphin, while probably at the same time undermining the influence of these latter with the queen. In January 1708 they finally made up their

minds against him. But the queen would not allow him to go. They hereupon announced to her their determination to quit her service if he were retained in it, and, when she still remained unmoved, absented themselves from a cabinet meeting. Dartmouth (note to BURNET, v. 354) relates that Marlborough, after waiting on the queen to announce his intention, left her highly incensed, and that a kind of demonstration in her support was hereupon organised by a crowd of courtiers, doubtless Tories. She had the mortification of seeing the incomplete cabinet break up before her eyes, after so trusted a minister as Somerset had declared it impossible to proceed without the general and the treasurer (*Conduct*, 212; COXE, ii. 387-8; the presence of the queen is mentioned by BURNET). Even so she would not give way, nor was it till Harley had himself pressed his resignation upon her, and the Prince of Denmark had added his representations, that she summoned Marlborough to her presence and announced to him that she had agreed to Harley's withdrawal. On 11 Feb. he resigned his secretaryship of state, and a whig (Henry Boyle) was appointed in his place. St. John and two others likewise quitted office. It is to the credit of the queen's good nature that when, before Harley's dismissal, the duchess had declared to her that if the duke resigned his offices she must abandon hers, the queen had promised that should this event unhappily ever occur, she would bestow the duchess's offices among her daughters (*Conduct*, 213).

The public feeling against Harley was embittered by the news, which became generally known in March 1708, of French preparations at Dunkirk for an invasion of Scotland. The British government was forewarned in time, and though the French ships under Forbin, with the Pretender on board, reached the coast of Scotland, no response was apparent there, and the expedition returned to Dunkirk by April. Stringent measures were taken by parliament to prevent any outbreak in Scotland of the Jacobite zeal which had been found wanting at the critical moment, but at the same time care was taken not to goad the country into fury by inopportune severity; and St. Simon, in a noteworthy passage of his 'Memoirs' (iv. 106-7, 1862 edition), is eloquent in his praises of Queen Anne's conduct on this occasion. She had been encouraged by loyal addresses in which all parties joined; and it was observed that in her answer to one of these she for the first time adverted to her brother as 'a popish pretender, bred up in

the principles of the most arbitrary government' (COXE, ii. 400; cf. *Court and Society*, ii. 312). Yet when the question as to the treatment of the chevalier, should he be captured by the British fleet, had been mooted in council, the queen had shown great agitation and shed tears, so that the discussion of the matter could not be proceeded with (TINDAL, cited by SOMERVILLE, 519 note). She must, by the way, have been disturbed if informed of the fact that in the interval between the sailing of Forbin's expedition and its return to Scotland, several episcopal clergymen—members of a body for which she had so warmly interested herself—had been prosecuted at Edinburgh for having officiated without the qualification of the oaths, and for having evaded the injunction to pray for the queen and the Princess Sophia (BURTON, *History of Scotland* (1689-1748), ii. 29-30). With reference to more dangerous offenders, it may be added that in 1709 the law of treason in Scotland was made the same as that in England.

Notwithstanding the parliamentary addresses of December 1707, it was clear to Marlborough that success alone could sustain what popular feeling still existed in favour of the war. On 11 July 1708 he gained the long-contested victory of Oudenarde. France was now reduced to a condition in which it was impossible for her to carry on the struggle, and the fearful severity of the winter 1708-9 spread distress and famine through the land. Peace was therefore offered by Louis XIV, but on terms to which the British plenipotentiaries, Marlborough and Townshend, refused to listen. In May 1709 the king made the famous appeal to his people, with the result that, when the campaign of 1709 began, the French forces in the Low Countries were as numerous as those of the allies.

At home the strife of factions had continued round the queen. In the first instance the whigs, encouraged by the dismissal of Harley and his followers, pressed upon her the appointment of Somers to the presidency of the council, and, when she demurred to this, his admission into the cabinet without any office. The queen had at this time a personal objection against Somers, whom she regarded as the chief mover in the attacks upon the admiralty administration of her husband, and it was supposed that the prince, instigated by Admiral Churchill, was urging her to hold out. Godolphin supported the demand of the whigs, and Marlborough, on being appealed to by the queen, represented to her that, should she not accede to it, everybody would feel convinced

that she was 'guided by the insinuation of Mr. Harley.' In answer, Godolphin reports, she 'renounced and disclaimed any talk, or the least commerce, with Mr. Harley, at first or second hand, and was positive that she never speaks with anybody but the prince upon any things of that kind.' Godolphin seems to have given credit to this assertion; and on 6 May the queen, in a letter to the Duke of Marlborough, showed the regard she still retained for *him* (the italics are the duchess's) by kindly assurances and by the promise that she would never at any time 'give her consent to a peace but upon safe and honourable terms.' But in the same letter she openly complained of the importunities of the whigs; and she continued as obstinately opposed to the appointment of Somers as ever. 'The battle between us,' Godolphin writes on 12 June, 'might have lasted till now, if, after the clock had struck three, the Prince of Denmark had not thought fit to come in, and look as if he thought it were dinner-time' (COXE, ii. 420-34; cf. *Conduct*, 214).

Parliament had been dissolved on 15 April, and in the elections which followed the whigs made every effort to increase their majority. Amidst various vexations the queen seems to have much leant upon the advice of Somerset, who, as master of the horse, had constant access to her, and whose interference irritated the whigs against Marlborough, still very imperfectly trusted by them. It is impossible to say what other influences were exerted in conjunction with that of Mrs. Masham, which continued as strong as ever through the spring and summer. In April the duchess was nauseated by the phrase 'Masham and I' in a letter from the queen, and her correspondent Maynwaring entreated her to return to court and help putting an end to 'the senseless farce of Harlequin and Abigail'; but in May she seems to have thought that 'Mrs. Masham does not meddle with business' (*Private Correspondence*, i. 111, 113, 120). She afterwards went so far as to assert that during the whole summer of this year the queen continued in secret correspondence with Harley, having taken her residence for the purpose, notwithstanding the sultry weather which made the prince pant for breath, in the hot small house at Windsor, to which Mrs. Masham could privately introduce visitors from the garden (*Conduct*, 222). After the victory of Oudenarde the queen wrote a letter to Marlborough, which the duchess's censor (*The Other Side*, 363) rightly considers deserving of particular notice; for it shows her as struggling between an old and

deep attachment, which had been made galling to her, and the desire for a freedom of action which on 'the other side' had been represented to her as her duty towards herself. The duke answered her in words such as have been rarely addressed by a subject to a sovereign, urging her 'as a good christian' to get rid of her private resentments, and to 'make use of such as will carry on this just war with vigour: which is the only way to preserve our religion and liberties, and the crown on your head.' The correspondence continued in much the same strain, Marlborough having now fully resolved to cast in his lot with the whigs, and in reply to his renewed offer or threat of resignation the queen, on 27 Aug., summed up her case by declaring herself desirous 'to encourage those whig friends that behave themselves well,' but unwilling 'to have anything to do with those that have shown themselves to be of so tyrannising a temper; and not to run further on those subjects, to be short, I think things are come to, whether I shall submit to the five tyrannising lords' [the *junto*] 'or they to me' (COXE, ii. 501-18).

In the meantime an open quarrel had taken place between the queen and the duchess. The duchess chose the opportunity of the thanksgiving service for Oudenarde, held at St. Paul's 30 Aug., to mingle with complaints as to Mrs. Masham's unwarranted rearrangement of the jewels worn by the queen, remonstrances as to her want of trust in the duke. Anne not unnaturally requested that these public confidences or 'commands,' as she afterwards called them, which had continued from the coach into the church, should cease. The result was a brief but very sarcastic correspondence, followed on 20 Sept. by an interview which the duchess has not noted in her narrative, but of which she preserved some memoranda written by herself. (They are given by COXE.) It ended by greatly agitating both the queen and the duchess, who was angrily sent away. Hereupon she for a time thought of desisting from further endeavours, and her resolution was applauded both by the duke, who owned to a tenderness for the misguided queen, and by the whig leaders, who no longer anticipated any advantage from their advocate's efforts (COXE, ii. 521-5; cf. *Conduct*, 219-21).

In the parliament which met on 16 Nov. 1708, the whigs were again in the majority; and the agitation for the admission of Somers to the cabinet was therefore resumed more eagerly than ever. The Prince of Denmark and Admiral Churchill continuing to operate against the whigs, the party now proceeded

to carry out a plan of action upon which its chiefs had previously determined. (See the curious letter from Sunderland to Newcastle in ELLIS, *Original Letters*, 2nd series, iv. 251 seq.) The prince was to be deprived of his office, 'for that whatever council he has, George Churchill will in effect be always lord high admiral.' The duke judiciously persuaded his brother to resign; but, more especially as nothing short of the removal of the prince would facilitate the redistribution of offices they had at heart, the whigs refused to be appeased by this sacrifice. At last, in order to spare a cruel humiliation to her husband, who was at the time hopelessly ill, the queen signified her willingness to give way in behalf of Somers. On 2 Nov. Godolphin joyfully announced the news to Marlborough; on the 28th the Prince of Denmark died. The queen, who had displayed a constant affection towards him, had been assiduous in her attentions during his sufferings. For nearly two months after his decease she saw no visitors, nor did she appear in public till her birthday in the following year (LUTTRELL). The Duchess of Marlborough had in a not unbecoming manner pressed her sympathy upon the queen at the last stage of the prince's illness, and had been present at his deathbed in Kensington Palace. The account of the curious scenes which followed will be found at length in her 'Private Correspondence' (i. 410-16). The queen, who 'expressed some passion' on quitting her husband's corpse, suffered herself to be persuaded by the duchess to leave Kensington for St. James's, but deeply offended her former favourite by the preference she exhibited for Mrs. Masham. At St. James's in the evening a similar experience awaited the duchess, who indulged in some unseemly sarcasms against her mistress, adding, by way of amends, that the queen 'had bits of great tenderness for the prince;' and 'I did see the tears in her eyes two or three times after his death, upon his subject, and, I believe, she fancied she loved him; and she was certainly more concerned for him than she was for the fate of Gloucester; but her nature was very hard, and she was not apt to cry.' No real reconciliation followed these meetings; and when, in March 1708-9, Marlborough returned to England after the failure of the peace negotiations, he was mortified to find Mrs. Masham courted by persons of all ranks and distinctions (COXE, iii. 31).

After some delay it proved that, outwardly at least, the prince's death had made a great change in public affairs. In November Pembroke was made lord high admiral,

Wharton lord lieutenant of Ireland, and Somers lord president of the council. The queen's mourning rendered the reserve now shown by her to her ministers, both old and new, less surprising. Little respite, however, was allowed her. A passage in the prayer book, suitable to her married state, having been rather tardily altered, both houses immediately sent up an address requesting her not to indulge her grief so far as to lay aside thoughts of a second marriage, which she very properly met by declining to send any particular answer. Indeed, the address had, by many persons on both sides, been regarded as a bad joke (*Wentworth Papers*, 75). But a more pertinacious attempt was made to oblige her to satisfy the claims to office of the two members of the junto still left out in the shade—Halifax and Orford. In the end, she once more appealed to Marlborough to take her part against the whigs; but he must have declined to interfere, as, before his return from his campaign in November 1709, Orford had been placed at the head of the admiralty. In the summer of 1709 the duchess had, notwithstanding the duke's warnings, striven to keep up a sarcastic correspondence with the queen; and having embarrassed her through asking, by way of a more convenient entrance to her own apartments, for some rooms which the queen wished to give to Mrs. Masham's sister, improved the occasion to the best of her power. The queen was driven to inform her that their connection must henceforth be an official one, whereupon the duchess surpassed herself by drawing up a copious narrative of her twenty-six years' services given and favours received, and forwarding it to the queen with extracts concerning friendship and charity from 'The Whole Duty of Man,' and a similar passage from Jeremy Taylor. Anne failed to fulfil a promise to read and answer these papers, and at church passed the duchess with an impersonal smile (*Conduct*, 224-7). Nor was there any longer any doubt as to the importance of Mrs. Masham's influence. Among her statesmen she chiefly favoured Somerset, while Harley was busily directing the attacks of Jacobite zeal and tory spite against Marlborough and the war policy. For with this policy Marlborough and Godolphin must stand or fall.

The campaigns of 1709 had but little advanced the war, although after the surrender of Tournay the battle of Malplaquet (11 Sept.) had led to the fall of Mons (26 Oct.). Marlborough now proposed that his office of captain-general should be conferred on him for life. The proposal was not supported by the

whig leaders, and fell through. That it was actually placed before the queen and refused by her seems unproved (see NOORDEN, iii. 616 note, where it is stated that no such draft of a letter from the duke to the queen referring to her refusal as is cited by Coxe, iii. 136 note, can be discovered among the Coxe MSS. in the British Museum). But the fact of the application was bruited abroad, and soon Marlborough was subjected to a series of annoyances. When, early in 1710, he was ordered by the queen to confer a vacant regiment upon Colonel Hill, the brother of Mrs. Masham, he sought an audience in order to represent the inexpediency of distinguishing so young an officer; but the queen dryly bade him 'advise with his friends.' Hereupon he temporarily withdrew from London, leaving it on the day appointed for a cabinet council. Finding, however, that the queen had taken no notice of his absence, he at first sought to obtain the support of the other members of the government for a letter offering the queen the choice between his resignation and the dismissal of Mrs. Masham. Perhaps a united effort might have carried the day; but among the leaders only Sunderland supported the bold policy of an address to the queen in the lords. Marlborough accordingly compromised matters by addressing to her a strong remonstrance against 'the malice of a bedchamber woman,' without, however, insisting upon her removal (*Conduct*, 232-4; cf. *The Other Side*, 409-10). The queen, on being further importuned by Godolphin and the whigs, hereupon gave way as to the regiment, and, Marlborough having at the advice of the whig leaders forborne from further pressing the dismissal of the favourite, an audience in which he was graciously received by the queen seemed to put a satisfactory termination to the incident (4 Feb.). The Dutch envoy reported to the Hague a complete reconciliation, and Marlborough was enthusiastically congratulated by Heinsius (NOORDEN, iii. 622 note). In truth, however, the affair had, besides incensing the favourite, increased the coolness between Marlborough and the whigs. When in March the commons addressed the queen on his approaching departure to the Netherlands as both general and plenipotentiary, she caused the answer prepared by Godolphin to be so altered as to deprive it of its cordiality. Scarcely had he crossed the water when the news reached him of the virtual failure of the Sacheverell impeachment (20 March 1709-10). The queen's sympathy could not but be on Sacheverell's side; nor was the mob in error which shouted to her as she passed in her chair, 'God bless your majesty! God bless

the church! We hope your majesty is for Dr. Sacheverell.' Afterwards, when the suspension to which he was sentenced had expired, she presented him to the valuable living of St. Andrew's, Holborn, though she prudently declined to make him a bishop. Her favourite prelates, York and London, voted *not guilty*, and there were other indications that those on whom she looked with the greatest goodwill were against the spirit of the impeachment.

After this *fiasco* the air was again full of rumours of impending ministerial changes. Yet this was the time chosen by the Duchess of Marlborough, who had been in vain importuning the queen to allow her to resign her offices in favour of her daughters, to force herself into the royal presence. Though repulsed by a command to make her communication in writing, she contrived afterwards to obtain the promise of an interview, and when this promise was again withdrawn renewed her request, declaring that no misunderstanding should be caused by her, and that no answer would be required from the queen. Then, without waiting for a reply, she appeared at Kensington (17 April 1710). On being at last admitted, she could hardly elicit any words from the queen but 'You desired no answer, and you shall have none.' Protestations and tears were alike in vain, though, after the queen had brusquely left the room and been followed to the door of the closet by the duchess, the latter had extracted from her a species of permission to pay her respects when the queen should be at Windsor (the graphic narrative in the *Conduct*, 238-44, is supplemented by COXE, iii. 202, from another version apparently by the duchess, and from her letter to Mr. Hutchinson). Mrs. Morley and Mrs. Freeman never met again. On the day after their parting the duchess sent to the queen a letter from the duke to Godolphin concerning a dangerous foreigner, against whom it was thought prudent to protect the queen's person. The letter was returned to the duchess with a brief formal message and without thanks. Their correspondence, too, was nearly at an end.

The appointment of Shrewsbury to the office of lord chamberlain, which took place about this time, and of which the queen informed Godolphin as of a settled thing, was the first public sign of the coming change, for Shrewsbury was known to have a secret understanding with Harley. Then a possibly unintentional awkwardness on the part of Marlborough involved him in another personal difficulty with the queen. In a list of promotions sent by him for her approval he had not included the names of Colonel Hill

and Mr. Masham, but had drawn the line in his recommendations slightly above them. The queen insisted upon the promotion of Masham to a colonelcy, and, to cover the advancement of Hill, commanded that all the colonels of his year should be made brigadiers. Marlborough assented to the former of these orders, but, against the advice of Godolphin, refused to agree to the other. He had the double humiliation of finding the queen persist in her decision, and himself so inadequately supported by his colleagues that he had once more to give way. But more important proceedings were already in course of preparation, and on 18 June the dissolution of the whig government began. Sunderland, the first whig admitted to it, was the first dismissed, the high tory Dartmouth being appointed secretary of state in his place. On the day before her son-in-law's dismissal the Duchess of Marlborough wrote her last letter but one to the queen, enclosing in her angry missive several affectionate letters written to her by Mrs Morley in earlier days (COXE, iii. 261-2; the duchess's letter is not in the *Conduct*). A brief and hasty reply from the queen, refusing to return her letters, provoked a retort on the part of the duchess, stating that in consequence she would take a little better care of the remainder.

As yet, however, neither Marlborough nor his colleagues seemed inclined to relinquish their posts, and the duke was urged by a joint ministerial memorial to retain his command. The intrigues of Harley to disunite the government however continued, and there were jealousies among its members. Somers, for instance, was suspected by Marlborough and others of scheming on his own account, and it would seem that his deferential manner to the queen over their teacups, and, if the duchess is to be believed, his politeness to Mrs. Masham, had made him not unwelcome at court (*Private Correspondence*, ii. 152). On 8 Aug. the queen took advantage of an altercation at a cabinet meeting in her presence to strike a deadly blow at the stability of the ministry by dismissing Godolphin. The treasury was now put into commission, and Earl Poulett made first lord; but the chancellorship of the exchequer was, 'as a particular favour of the queen's' (LUTTRELL, vi. 618), given to Harley, whose manoeuvres were thus made patent by their success. Very soon the ministry was gradually transformed by the dismissal of all the whig chiefs and the admission into it of high tories, such as Rochester, Buckingham, and Ormond (who was sent to Ireland); while a secretaryship of state was given to the most brilliant speaker of their party, Henry St. John.

There can be no doubt that the queen looked upon the victory as one gained on her behalf; she spoke of herself as released from a long captivity (BURNER, vi. 14). According to Dartmouth she regretted the loss of Somers, and desired him to wait often upon her.

The Sacheverell agitation, the rumours of the domineering treatment of the queen by the late ministers, and the growing weariness of the people in the matter of the war, combined to decide the elections of 1710 in favour of the tory party. With the electors at large, as for instance, in Middlesex, the church question—or the supposed church question—was uppermost. But the victory had no doubt been also, to a great extent, gained with the aid of other elements of dissatisfaction; and Harley, the chief author of the political revulsion, took care to put 'the queen' forward with unctuous iteration (see the curious document entitled 'Mr. Harley's Plan of Administration,' 30 Oct. 1710, in *Miscellaneous State Papers* (1501-1726), ii. 485-7). Whether he influenced the course of conduct now adopted by the queen towards the Duke and Duchess of Marlborough, or whether it was due to the whisperings of inter-feminine spite, must be left an open question. Notwithstanding the fresh Hampstead air sought by her thrice a week in the summer, the queen seems this year to have suffered from the gout; and she had observed the thanksgiving for the successes of her army on 7 Nov. in the chapel at St. James's (BOYER). She acquiesced in the wish of the new ministers that the usual parliamentary vote of thanks to the general should be pretermitted, and at his first audience begged him not to insist upon it. Unfortunately the indiscretions of his wife had not ceased during his absence, and while overwhelming the queen with documents chiefly transmitted through the royal physician, Sir David Hamilton, she had been with difficulty restrained from publishing the queen's private letters to herself. Though terrified and at the same time determined not to see her, Anne had been generous enough to pronounce her incapable of the speculations with which she had been charged by Swift in the 'Examiner' (see COXE, iii. 344-7; cf. *Conduct*, 263). Perceiving on his return that the official disgrace of the duchess had been determined upon, and humiliated by the treatment which he experienced from the ministers and parliament, Marlborough strove to make peace between his wife and the queen at any cost but that of the loss of office. He induced the duchess to write an apologetic letter, in which she promised, so long as she was retained in the queen's service, to hold her peace (COXE, iii. 352; in the *Conduct*,

364, the duchess gives it to be understood that her resignation was at last her own act). The letter and the pleadings with which Marlborough presented it had no effect. The queen declared that she could not change her resolution, and must insist upon the duchess's key of office being returned within two days (17 Jan. 1710-11). It was returned on the same evening. The vacant offices of mistress of the robes and groom of the stole were conferred upon the Duchess of Somerset, while the privy purse was given to Mrs. Masham.

In the meantime the course of events had favoured the prospects of peace. The ministry had continued to take advantage of the popular feeling so thoroughly in unison with the sentiments of the queen against the whigs and the captain-general, and in favour of the recently endangered church. The House of Lords, however, rejected both a proposal for a commission of inquiry into grants made since the revolution of 1688 (30 April), and a bill to repeal the act for the general naturalisation of protestants. The former device was to have filled the exchequer at the expense of the whig magnates, the latter to have gratified the popular dislike of the 'poor Palatines,' to whom the queen had formerly been munificent. Afterwards, in March 1712, she renewed her charity to the Palatines settled in Ireland; but the experiment was not saved from ending as a failure (*Treasury Papers*, 1708-14, 475). A worthier sign of church zeal than this demonstration against the dissenters was the act passed on the recommendation of the queen for the building of fifty new churches in London, the cost of which was to be defrayed from part of the duty on coals hitherto devoted to Wren's reconstruction of St. Paul's. The queen's message was brought into the House of Commons by St. John while Harley was recovering from the murderous attack made on him by Guiscard (8 March). It was even reported that the terrible adventurer had formed a design against the person of the queen, and precautions were taken to insure the safety of her residence at St. James's Palace (LUTTRELL, vi. 705). Burnet says that her health was at this time much shaken; besides suffering from the gout she had three attacks of the ague, which appear to have been caused or intensified by her agitation about public business. Much later in the year (December 1711) we find convocation congratulating her on her recovery from an illness which had in some quarters, possibly by design, been represented as extremely dangerous (STOUTON, v. 374; cf. *Wentworth Papers*, 210, 215). She had never been more popular, and her birthday this year was celebrated with

great rejoicings (LUTTRELL, vi. 688). Her absence from court on the anniversary of her accession was attributed to the dangers surrounding her; much to her credit she personally forbade the indecent show made of Guiscard's body after his execution (CRAIK'S *Swift*, 213 and 216 note).

The principal task of the administration of which Harley, now Earl of Oxford and lord treasurer, stood at the head, was carried on in secret. There were at this time not less than five secret agents of France in England, who, though acting separately, were all guided by the same hand (MESNAGER, 109-10). The British ministers were not less discreetly served; so that they were able to make the Dutch believe that whatever proposals might be brought to London, they would not be dealt with till after consultation with the states. Mesnager was in the midst of his labours presented at Kensington to the queen, who told him: 'Tis a good work; pray God succeed you in it. I am sure I long for peace; I hate this dreadful work of blood' (*ib.* 184). Torcy declares (*Mémoires*, ii. 43-44) that she did her best to forward the negotiations. After having declared, on 25 Aug., that there was no French plenipotentiary in London, she made things pleasant for Mesnager in his *incognito*, and even expressed a wish to defray his expenses. And Mesnager himself attributes the success of the negotiations mainly to two causes, viz. 'the steadiness of the queen, guided by her own aversions to some of the other people, and especially by her resentments of the affronts which it is said had been offered her by some of the women about her person,' and 'the exquisite management of the treasurer' (MESNAGER, 182). After the signature of the preliminaries she received Mesnager graciously in a secret audience (so TORCY, ii. 73-4), and continued to give effectual support to the action of her ministry, even when they sailed dangerously near the wind. A different set of preliminary articles, which included a barrier for the Dutch, and was otherwise more careful of the interests of the allies, had been communicated to the states and to Count Gallas, an imperial diplomatist residing in London under the designation of ambassador of the king of Spain; and when Gallas, indignant even at this version, published it in the newspapers, and loudly denounced the conduct of the queen and her government, she forbade him the court, notwithstanding her personal regard for him (TORCY, ii. 102), and requested Charles VI to send another ambassador in his place.

On 17 Nov. 1711 Marlborough landed in

England, accompanied by Baron von Bothmar, the Elector of Hanover's plenipotentiary. It is likely enough that the queen's mind had been inflamed against him by the story that a design was on foot which could only be defeated by her having 'no man in any considerable command but such as might be depended upon' (MESNAGER, 167). For there can be little doubt that his dismissal was a settled matter before his arrival. The whigs, though they had not agreed to dethrone the queen, had desperately engaged in a very questionable manoeuvre. The high-church tory, Nottingham ('Not-in-the-game'), for whom no office had been found in the tory government, proffered the whigs his alliance on the condition of their supporting an endeavour on his part to carry a bill against occasional conformity. With Nottingham and Somerset the whigs were certain of a constant majority in the lords, by which a peace unacceptable to their party could be rendered absolutely impossible. On 7 Dec. the queen, after opening parliament, had the mortification of listening to a debate in which both Nottingham and Marlborough inveighed against the preliminaries, and by a majority of 62 to 54 a clause was added to the address, declaring no peace to be safe in which Spain and the West Indies were left to the house of Bourbon. In the commons a similar clause was indeed defeated by a large majority; but the deadlock had been established. According to Swift (*Letters*, i. 113) some of the lords who voted in the majority had been told that by doing so they would please the queen. This it is not easy to credit; but he also says, on the authority of Mrs. Masham, that on leaving the house after the debate the queen had given her hand in a marked manner to Somerset, one of the most vehement opponents of the peace, and she continued to show great favour to the Duchess of Somerset (*Wentworth Papers*, 223, 235). Out of leading-strings she seemed hard to hold; it was almost as if she refused to be directed except by her caprices. As for the whigs, they paid their part of the bargain by helping Nottingham to carry the bill against occasional conformity through the lords, whereupon it easily passed through the commons, and at last became law (December).

The ministry were not slow in retaliating. Charges of peculation and falsified accounts were trumped up against Marlborough, and the report containing these was published by order of the House of Commons. At a cabinet council on 31 Dec. the queen ordered the removal of Marlborough from all his employments, on the ground of the informa-

tion laid before parliament. On the same day as that which witnessed the downfall of Marlborough, the famous simultaneous creation of twelve peers was announced, by which, though the House of Lords can hardly be said to have been 'swamped,' the coalition majority was hopelessly undone. One of the new peers was Mrs. Masham's husband.

At the beginning of 1712 the queen was again troubled with gout; hence her message to the lords, requesting them to adjourn to the same day as that fixed by the commons, which gave rise to a debate on privilege. Her illness must have served her as a welcome excuse for not showing much personal attention to Prince Eugene, who early in January had arrived in London on a visit of several weeks; but on her birthday she presented him with a sword splendidly set with diamonds (LUTTRELL, vi. 723). The peace negotiations opened at the end of the month without the prince having been able to produce any change in the policy of the British government. The ministers, who greatly resented his coming, did not disdain to listen to denunciations accusing him of a plot with Count Gallas and Marlborough to set fire to London, seize the person of the queen, and oblige her to convoke a new parliament, for the purpose of putting an end to the peace negotiations and punishing their authors (see TORCY's *Mémoires*, ii. 139-140, where the authenticity of these designs is judiciously treated as an open question. No doubts as to the 'hellish plot' beset Hamilton; see his *Transactions during the Reign of Queen Anne*, 205-8). As usual, the most was made of the alarm; the queen's guards were doubled; several entrances to St. James's Palace were closed; and even Prince Eugene was 'protected' (TORCY, ii. 142). London was, as a matter of fact, in an excited and turbulent condition. The Mohocks were abroad, and Marlborough was supposed to have or to contemplate an understanding with them. On the queen's birthday he was insulted by the mob in the park, while the court was 'crowded more than ever by all the church, nobility, and gentry' (*Original Papers*, ii. 270). In parliament the proceedings against him and others connected with the administration of the army (Walpole and Cardonnell) continued, and he was condemned virtually unheard (January). Then the Barrier treaty, signed by Townshend in October 1709, was taken into consideration, and those who had concluded or advised it were censured as enemies to the queen and kingdom. In the meantime the peace congress, in which England was represented by the Bishop of Bristol (Robinson) and the

Earl of Strafford, had actually held its first meeting at Utrecht on 29 Jan.

A suspension of arms was agreed to in Flanders in June, and again in August, 1712; and by the end of the year the opposition to the peace in England had become powerless. But the treaty of peace still awaited its conclusion, which was delayed above all by one obstacle, the continued presence of the Pretender in France. The question of the treatment which he was to receive had been a grave difficulty, the more so that both Louis XIV and Queen Anne had a personal interest in his welfare. But for her strong aversion from the religion professed by him, there can be no doubt that her sympathy would have been much warmer now (cf. Buckingham to Middleton in *Original Papers*, ii. 330). For her protestant feeling was by no means growing feebler as her years increased, though she may have failed to derive comfort from the prophecy of the Bishop of Worcester (Lloyd) made to her about this time (June 1712), that four years hence there would be a war of religion, when the King of France would be a protestant and fight on their side (SWIFT'S *Letters*, i. 167). She was, however, greatly pleased when Hampden's motion for a joint guarantee in the treaty of peace of the Hanoverian succession was rejected by the commons (17 June) in favour of a general expression of confidence in her fidelity to the protestant succession itself (SMOLLETT, ii. 237). But to what extent Queen Anne showed an interest at this time in her brother's future it is impossible to determine. In the so-called 'Minutes of the Negotiations' of Mesnager (210-326) a long and circumstantial account is given of his endeavours, with the aid of a person 'near the queen' (Lady Masham), to obtain the insertion in the treaty of peace of a secret clause which should relieve King Louis from the obligation of keeping his promise to recognise the succession of the House of Hanover beyond the lifetime of Queen Anne. It is here insinuated that the queen, who before Mesnager went to Utrecht caused him to be presented with her portrait set in diamonds, favoured the scheme, but that it was frustrated by the clumsiness of the agents of St. Germain in England. The story that the Abbé Gaultier had hoped by the sheer force of his eloquence to persuade the queen to resign the crown in favour of the chevalier must be taken for what it is worth. In October 1712 Gaultier certainly informed Torcy that Bolingbroke was interested in the prince and his future, provided that the queen's rights were not prejudiced, and that he was at the same time anxious to

verify a rumour as to some of the whigs having eighteen months before taken steps in the same direction (STANHOPE, 536, from letters in the archives of the French foreign office). There seems, however, no doubt that at St. James's, whatever may have been the thoughts and feelings of the queen and her ministers, fear sealed their lips towards one another on the subject of the Pretender (see SOMERVILLE, 582). But the immediate difficulty had been to induce him to leave France, so that he might not have to be expelled from its soil. He had begun his journey in September 1712; but it was not till 20 Feb. 1712-13, that he actually crossed into Lorraine. About the same time Bolingbroke in a vigorous despatch insisted that an end should at last be made of delay, and on 31 March the treaties of peace and commerce between France and Great Britain, as well as the French treaties with the other members of the grand alliance except the emperor, were at last signed at Utrecht.

The support given by Queen Anne to the tory ministry had materially contributed to the conclusion of the peace. In the remaining period of her reign the person of the sovereign was more than ever prominent in the calculations of politicians; yet it cannot be said that her conduct critically affected the struggle in progress around her. She continued to fulfil the duties of the throne as she conceived them, more especially interesting herself in ecclesiastical appointments. She compensated Dr. Smalridge for his former disappointment by raising him to the see of Bristol, vacated by Dr. Robinson on his translation to London; she refused a mitre to Swift, as he professed to believe through the ill offices of his 'mortal enemies' Sharpe of York and the Duchess of Somerset (April 1713); but consented to Atterbury being rewarded for 'the flame he had raised in our church' (BURNET) by the bishopric of Rochester and the deanery of Westminster (May). But though she interested herself as before in church and state, it was well known that her bodily condition was becoming more and more infirm, so that during the last two years of her life the state of her health was the cause of repeated alarms. In the spring and summer of 1712 a marked improvement had been thought observable in her health (*Wentworth Papers*, 287, 292, 297); but Swift reports a passing fear concerning her already in September of that year (*Letters*, i. 175), and in October and December he speaks of her as more or less suffering from the gout (*ib.* i. 178, 209). She was still 'lame with the gout' in February 1712-13 (*ib.* i. 243, 245);

but, though the Jacobites had been informed that she could not live longer than March (*Occasional Papers*, ii. 390), she was able on 9 April, at the meeting of parliament after the conclusion of the peace, to be carried to the House of Lords, where she read her speech 'very well, but a little weaker in her voice' (*SWIFT'S Letters*, i. 279). She did not as yet communicate the terms of the treaties to the houses; but she spoke of her efforts for securing the protestant succession and of the perfect friendship existing between her and the house of Hanover, and, referring to the unparalleled licentiousness of the libellous publications of the day, exhorted factions and parties to calmness and mutual forbearance (*WYON*, ii. 441. The Stamp Act of the previous year had only extinguished the small deer of the periodical press). Of course at such a time her words were carried away by the wind. On 5 May 1713 peace was proclaimed in London; on 9 June the debates on the treaty of commerce with France began in the commons, and by a small majority this early endeavour in the direction of free trade was thrown out. Then a cabal between Scottish malcontents and the whigs to effect the repeal of the union was only defeated by a narrow majority in the lords (June).

More personal to the queen was the question raised by a message from her to the commons in the same month concerning a considerable debt which had accumulated above her civil-list expenditure. After some hesitation a bill enabling her to raise 500,000*l.* for the discharge of these arrears was consolidated with another money bill and passed. Burnet (vi. 178) seeks to show that there were grounds for the suspicions raised by the queen's demand, inasmuch as a few years before the actual debt had amounted to little more than half the sum now required. Nor, though the charitable expenditure of the queen had doubtless continued, had Blenheim of late been a drain upon her purse. It was accordingly, he says, concluded by 'all people' that the coming elections were the real purpose for which the money was in part needed. At all events there can have been no truth in the charge made in the next reign that it was intended for the service of the Pretender (*WYON*, ii. 459). About this very time two addresses were successively carried in the lords requesting the queen to intervene for the removal of the Pretender from Lorraine, to which she returned evasive answers; but when a similar address was carried in the commons, she promised to use her endeavours (*BURNET*, vi. 175). When on 16 July she closed the session of parliament by a speech from the

throne (she had been unable to be present on the 7th at the peace thanksgiving in St. Paul's), it was noticed that the customary assurance of her determination to support the Hanover succession was omitted (*WYON*, ii. 466). At the end of the season (31 July) the queen was well enough to review the household troops in Hyde Park (*Wentworth Papers*, 345).

Sanguine as the Jacobites abroad were at all times, their hopes which the peace of Utrecht might have dashed to the ground revived with the news, true or false, of the queen's ailing condition, and as the signs increased of doubt and uncertainty, to say the least, among her ministers. The rumours diligently posted about 'Miss Jones,' 'Mrs. Ord,' 'Christopher,' 'Dunbar,' 'Quaint,' 'Quanton' (or whatever other pseudonyms Queen Anne went by in the Jacobite correspondence), frequently pointed to her speedy decease; in the meantime she was to name her brother as her successor, after being authorised to do so by the loyal majority in the new parliament. (Many passages of this kind will be found in the Stuart sections of *Original Papers*.) At the same time the official changes made during the latter part of the summer, mostly between the middle of August and the middle of September, could not but excite eager speculation. Shrewsbury was sent to Ireland, Ormond's presence nearer home being thought desirable. The Earl of Mar, who was regarded as a Jacobite, was made secretary of state for North Britain, another of the secretaryships of state being given to Bromley, and the chancellorship of the exchequer to Wyndham (formerly secretary at war), who were supposed to hold similar opinions. Other changes were made of the same kind; and it seemed evident that so many placeholders must be speculating on an event by which they would *not* lose their places. After every exertion had been made, and the pens of the ministerial fighting-men had been more active than ever, the elections for the British House of Commons resulted in an overwhelming tory majority. In Ireland a whig House of Commons had been recently elected; and Shrewsbury had soon been instructed to prorogue parliament with a view to its dissolution (December).

On Christmas eve, 1713, the queen was seized by a violent attack of fever, which left her for several hours unconscious (*WYON*, ii. 475). A panic ensued, which was repeated when after her recovery several relapses followed. In February Swift writes that 'few of the whigs will allow the queen to be alive, or, at best, that she can live a month' (*CRAIK*, 277-8). When parliament

met on the 18th, there was a general feeling of uneasiness attested by the falling of the stocks, which had been affected by rumours of every kind; so that it was thought expedient for the queen, when she had sufficiently recovered, to address a letter to the lord mayor, intended to calm the apprehensions of the public. Among the incidents which had excited fears had been a movement of French troops to the coast, very innocently explained by the French government.

Immediately after the meeting of parliament the whigs found an opportunity for reviving the suspicions against the queen excited by the announcement of her debts in the previous session. When it was discovered that a quarter of the profits of the South Sea Company were to be reserved to assignees of her majesty, the question who these assignees were came to be so pertinaciously asked that the ministers ultimately had to abandon the proposal as to the quarter-share itself (Wron, ii. 480; cf. *Wentworth Papers*, 396 *sqq.*). On 2 March 1713-14, when parliament reassembled after an adjournment, the queen was carried in a chair to the House of Lords. About this time she seemed again in better health, and though soon afterwards she had a 'fit of shivering' at Windsor, she appeared to be very well in April (*Wentworth Papers*, 359, 360, 375). The injunctions of the royal speech had little effect upon the whigs, who seized the occasion of the ratification of the treaties with Spain to take up the cause of the shamefully deserted Catalans, and afterwards in the lords to condemn the commercial treaty (July). But the question of the succession remained the really disquieting element in the political atmosphere. In her answer to an address from the lords, Queen Anne alluded with very little obscurity to a proposed 'diminution of the royal dignity' which had by this time become the favourite item in the whig programme. The queen had throughout continued on terms of civility with the electress dowager Sophia and her son; and just before the opening of parliament she had furnished Thomas Harley with a letter to the elector promising her assent to any further securities which the electoral family might desire. But even then she had referred to proposals from other quarters inconsistent with her own dignity and security which she felt herself bound to oppose. What the whigs had in view was to bring over to England a member of the Hanoverian family—if possible the elector; if not, his son the electoral prince. At a meeting of the whig leaders held about the end of April it was resolved to carry into effect this design,

which had been for some time cherished. A debate on the state of the nation had just ended in the lords, which had been characterised by extraordinary violence. After losing by a small majority a proposal to declare the protestant succession in danger, the whigs had carried an address to the queen to renew her endeavours for the expulsion of the Pretender from Lorraine; and to this a clause had been added, on the motion of Wharton, asking the queen to proclaim a reward for the apprehension of the Pretender, dead or alive. The address had been in some measure softened down after an adjournment; but even so the queen's answer had not disguised her just resentment (SOMERVILLE, 555). It was then that the whigs thought of taking advantage of the circumstance that as Duke of Cambridge the electoral prince was a peer of the realm, in order to obtain for him the usual writ of summons and thus bring him over to England. The Hanoverian envoy, Baron Schütz, accordingly applied for the writ to the chancellor (Harcourt), who referred the matter to the queen. So indignant was Anne at the attempt to force her hand that she forbade Schütz her presence. Never, Oxford told him, had he seen the queen in a greater passion (*Original Papers*, ii. 598). At a cabinet it was indeed resolved to issue the writ, which could not be refused, and which Schütz accordingly carried to Hanover. The electoral family were advised by Stratford to disavow the proceedings of their envoy, and he sought to convey to the queen the assurance that there had been no desire on their part to disoblige her (*Wentworth Papers*, 31-32). But before long, a memorial, dated 7 May, from the electress dowager and the elector reached the queen, which suggested as necessary securities for the succession the removal of the Pretender from Lorraine, and the presence in Great Britain of a prince of the electoral family. In answer to this memorial, Queen Anne on 30 May wrote the two memorable letters to the Electress Sophia and to the electoral prince, which, accompanied by a third from Oxford to the elector, left no room for doubt as to the queen's mind being made up on the subject. The letters are in truth what they were called by the Duchess of Marlborough, to whom they were forwarded by the electress—'very extraordinary;' and possibly the rumour was true that 'the queen's letter touched the old electress so much that it hastened her death,' which took place on the day after that on which it had reached her (8 June; see *Letters of Sarah, Duchess of Marlborough*, 1875, 110, and cf. Molyneux's letter from Hanover in Cox, iii. 574.

The letters are printed in *BOYER*, 699-700). The elector, now heir-at-law to the throne, answered courteously, but not in such a way as to reassure the queen, though the electoral prince was profuse in his apologies; and the silly Earl of Clarendon was sent to Hanover to see that the dreaded project remained unexecuted.

The ascendancy of Bolingbroke over Oxford, which to Bothmar seemed evident from the selection of Clarendon as envoy to Hanover (*Original Papers*, ii. 626), showed itself also by other signs. Thus in domestic affairs the introduction of the schism bill (May), which the whigs vainly opposed in the lords, marks the climax of the high-church intolerance of Queen Anne's reign; and of this intolerance it suited Bolingbroke to pose as the champion. Oxford was unable to put a check upon him either in this matter or in those administrative measures of which the consequences might be more personally disastrous to their authors. (As to the measures said to have been taken shortly before the queen's death for securing the obedience of the troops, see a curious draft of a memorial from Stair to Marlborough in *Miscellaneous State Papers*, ii. 522-524). Unable either to satisfy the Tories or to keep a door open towards the whigs, Oxford had already in June offered his resignation to the queen, but she had declined it. Early in July, however, Swift was told that his patron's fall was near, and on the 27th Oxford himself announced it as impending for the following day. On the 29th Lady Masham, who, according to Swift's correspondent Ford, had never been in higher credit with the queen, confirmed the news of the downfall of the partner and director of her old intrigues. Her letter dwells on Oxford's ingratitude to her dear mistress, whom he had teased and vexed for three weeks, and had thus probably caused the illness from which she was now suffering. There cannot, she declares, be a greater object for compassionate help than 'this good lady.' Another of Swift's correspondents (Erasmus Lewis) informs him that the queen had told all the lords that Oxford was negligent, 'seldom to be understood,' untrustworthy, unpunctual, ill-mannered, and disrespectful (*Letters*, ii. 45, 49, 68-71).

The queen, who had closed the session of parliament on 9 July with a speech implying reproof of factionousness, and again omitting all reference to the house of Hanover (*Wentworth Papers*, 401), had of late seemed stronger; on 12 June Arbuthnot described her to Swift as in good health (*Letters*, ii.

33; cf. *Wentworth Papers*, 386, 387). But there was no real hope of her days being many; the importance of the arrangements to be made after Oxford's dismissal was manifest; and the sense of responsibility which weighed upon those concerned seems to have been overwhelming. On the night of 27 July, after Oxford had resigned his office, the queen presided over a long-protracted cabinet council. Instead of the lord treasurer's staff being given to Bolingbroke, it was resolved to put the treasury into commission; but the choice of the members of the commission proved too difficult a matter to settle before the cabinet separated at two o'clock in the night. Next morning, the 28th, the queen was reported too ill to attend to business, and the meeting was postponed to the following day. On the 29th, after being cupped, she seemed better; but on the 30th, in the morning, a fit which the doctors considered to be apoplexy, and treated accordingly, rendered her insensible for nearly two hours. The Duchess of Ormond, who was in waiting, sent word to her husband, who was in deliberation at the Cockpit with the other members of the cabinet, including the Duke of Shrewsbury. They at once repaired to Kensington, where the queen lay. According to one account, of which Swift's correspondent Ford disputes the correctness, the Dukes of Somerset and Argyll, who had with many other persons likewise hastened to Kensington, entered the room where the cabinet was assembled, and took part in the deliberations which followed. Their names were still on the privy council list, and by their presence the cabinet (at that time no very distinctly defined body) virtually became a privy council. The physicians in attendance having been called upon to give their opinions as to the condition of the queen, Sir Richard Blackmore, Dr. Shadwell, and Dr. Mead seem to have agreed that her case was desperate, the last-named (a whig) thinking that death would be immediate. Arbuthnot, on the other hand, appears to have suggested a rather more hopeful view of the case, though privately sharing the alarm of his colleagues (see *Wentworth Papers*, 407). The physicians at the same time declared that the queen might be spoken to; and it must have been hereupon that 'one of the council,' said by Ford to have been Bolingbroke, proposed that Shrewsbury should be recommended to her as lord treasurer. The lords were admitted to the queen's chamber, where Bolingbroke stated to her the recommendation upon which the council had agreed. She at once placed the staff in Shrewsbury's hands. This

was at about one o'clock in the afternoon. The queen continued ill the whole day, through which as well as through the ensuing night the council continued to sit. (The scandal as to the evil intentions of Arbuthnot and the cold selfishness of Lady Masham (see *Wentworth Papers*, 408) is not worth repeating. As to Dr. Radcliffe's refusal to attend the queen, see RADCLIFFE.) In London, on the morning of 30 July, the report went that the queen was dead. She was not prayed for, says Ford, even in her own chapel at St. James's, 'and, what is more infamous, stocks arose three per cent. upon it in the city.' At Kensington a full privy council was sitting, including Somerset and Argyll and a large number of whigs. They dictated a series of orders; a regiment was despatched to Portsmouth, and instructions were given to secure the tranquillity of London. Messengers were sent to Flanders to recall the troops, and to the Hague and Hanover. On the 31st the queen was in a lethargic state—'the breath is said to be in her nostrils, but that is all,' writes Lewis, another of Swift's correspondents.

Everything was in readiness for the nomination of the regency, and for the proclamation of King George. But the queen still lingered. By her bedside lay her will, ready for signature; and the Bishop of London was in attendance, in case an opportunity should still offer for his ministrations. But the lethargy continued till, a few minutes after seven on the morning of Sunday, 1 Aug. 1714, Queen Anne died. (As to the circumstances of her last illness and death, see especially Ford's letters to Swift, ii. 74-80; and cf. BOYER, 714. A full narrative will be found in WYON, ii. 522-8, and MISS STRICKLAND has further particulars. Among them is the legend, which Carte is supposed to have had from Ormond, that the queen at the last made a sort of confession to the bishop, and that his words, on leaving the room, pointed to this confession having had reference to her brother. See also *Original Papers*, vi. 231, and a note to BURNET, vi. 231). The cause of the queen's death seems to have been suppressed gout, ending in erysipelas, which produced an abscess and fever. (After her death an inspection of the body was made by Dr. Thomas Lawrence, of which an account will be found in *Treasury Papers*, 1714-1719, 363). Her funeral took place at Westminster on 24 Aug., when she was interred in the vault on the south side of Henry VII's Chapel, which already contained the remains of her children and of her husband, and in which, according to the instructions

given by her after his death (*Private Correspondence*, i. 415), room had been left 'for her too.' The vault was then closed up with brickwork (COKE, 482).

A few days after Queen Anne's death, Arbuthnot, who had been her physician since 1705, wrote to Swift that her days had been numbered in his imagination, 'and could not exceed certain limits, but those were narrowed by the scene of contention among her servants. I believe sleep was never more welcome to a weary traveller than death was to her' (SWIFT's *Letters*, ii. 92). He adds that, owing to the queen's will having been left unsigned, Lady Masham and several of the queen's servants were left in deplorable case, and in another letter (*ib.* ii. 99) he says that 'the queen's poor servants are like so many poor orphans exposed in the streets.' There is certainly no feature more striking in the early administrative records of the new reign than the difficulty which was found in meeting the claims which had come over to it from that of Queen Anne (see *Treasury Papers*, 1714-1719, *passim*). The will also contained a bequest of 2,000*l.*, to be distributed among poor people as her majesty's alms, the payment of which had likewise to be left to the decision of her successor (*ib.* 70).

Queen Anne's good qualities were not altogether unroyal. She loved her country and its institutions, and shrank from no exertion of which she was capable on their behalf. Her hatred of the factiousness which clogged the wheels of the state-machine was not mere lip-hatred, and to those in whose guidance she had come to trust she was, during by far the greater part of her reign, no fickle mistress but a steady friend. More than this, she was on occasion generous and self-sacrificing; neither wholly lost in the frivolities of life nor deaf to the call of its nobler duties; condescending, without want of dignity in bearing; and open-handed to the soldiers who fought her battles, and to the poor under the shadow of her throne. But the effect of these qualities was marred by the obstinacy of character which she had inherited from her ancestors, and which in her took the form of a tenacity of opinion often proof against arguments, threats, or entreaties alike, coupled with a certain dullness of intellect, incapable of distinguishing between the binding force of moral principles and the duty of having her own way. Probably the Duchess of Marlborough was near the truth when she wrote of her former mistress and friend that 'in matters of ordinary moment her discourse had nothing of brightness or wit, and in weightier matters she never spoke but in a hurry, and had a

certain knack of sticking to what had been dictated to her to a degree often very disagreeable, and without the least sign of understanding or judgment' (*Private Correspondence*, 120). But with regard to the period of her womanhood, at all events, it should never be forgotten that Anne had since her marriage undergone an amount of bodily suffering and mental anguish which, in the opinion of competent medical authority, would have weakened the intellectual vigour of most women.

The public life of Queen Anne, for the influence of whose personal character room enough was left by the incompleteness of the British constitution, reflects both her virtues and her defects. She took an active personal share in the business of state, frequently attended cabinet councils, and even on occasion originating measures herself. Thus Bolingbroke asserts that the 'restraining orders' to Ormond were first proposed by the queen (see *Miscellaneous State Papers*, ii. 482-3). She continued the custom of her ancestors in attending debates in the House of Lords. But she regarded it as her special right to appoint her ministers according to her own choice, and from any party (see her letter to Marlborough in COXE, ii. 439). This principle was in direct conflict with the system of party government which was in her reign, though still with very incomplete success, continuing to assert itself.

The ornamental surroundings of royalty had comparatively little charm for her; and in her later years, partly no doubt in consequence of the condition of her health, she lived so much to herself that her court at times seemed 'as it were abandoned' (BURNET, vi. 230). She had striven to reform the system of selling places in her household, but without enduring success (MRS. THOMSON, i. 362). Her own expenditure was free and generous. On coming to the throne she strove to fulfil the engagements of her predecessors, although she did not think it necessary to renew all the pensions granted to cavaliers by her uncle and father and dropped by William III (*Treasury Papers*, 1702-1707, 36, 43). For herself she at least announced, in March 1703, the admirable principle that 'the queen grants no reversions' (ib. 123), which, however, she seems at one time to have intended to violate in the case of the daughters of the Duchess of Marlborough. We find her naturally generous to her late husband's servants, continuing their salaries during her life, 'provided they keep no public houses' (LUTTRELL, vi. 390; *Wentworth Papers*, 63; but see *Treasury Papers*, 1708-1714, 531). Her charity extended itself to

the most various objects, and is apparent in many transactions of her reign.

But, as has been seen, there was one department of affairs which Queen Anne considered specially her own. Her interest in the church as shown by her endeavour to take the ecclesiastical patronage of the crown into her own hands, and more enduringly by the bounty which bears her name, has already been sufficiently illustrated. She was zealous for the efficiency of the clergy as well as for their welfare (cf. ELLIS, 3rd series, iv. 331). The curious hallucination, which in 1706 at least momentarily prevailed at the Curia, that she was a convert to the church of Rome, is one of the unsolved problems of her history (see STRICKLAND, xii. 113). In the crisis of 1688 she had written to her sister that 'she would choose to live on alms rather than change' her religion (Appendix, DALRYMPLE'S *Memoirs*, ii. 170).

The Duchess of Marlborough inscribed on the statue erected by her to the queen at Blenheim, that she was 'religious without affectation.' Perhaps it cannot be added that she was religious without superstition. The revival by her of the practice of the royal touch, which William III had all but discontinued, can, however, hardly have been a matter of personal choice (see BURTON, ii. 202; *Treasury Papers*, 1702-1707, p. 142). It is well known that among those she touched was Samuel Johnson. Anne touched as late as March and April in the year of her death (see *Wentworth Papers*, 359, 375). In the observance of the duties of religion Queen Anne was an example of regularity (STOVINGTON, v. 322), nor did she tolerate slackness in others.

Anne's affectionate disposition was in her earlier years prevented by untoward circumstances from finding its most natural outlet. Deprived of her mother, separated from her sister, estranged in some degree from her father, she had to take refuge in the friendship which was the consolation, till it became the bane, of her life. When, in after years, this bond was at last broken, she had grown suspicious and hard to be led, even by the politician who had shown to her the irksomeness of the old guidance. The devotion of Abigail never became to her as the friendship of Mrs. Freeman. The Duchess of Somerset seems in some degree, by the great charm of her manner, to have taken the place in the queen's affections of her imperious predecessor (see DARTMOUTH'S note to BURNET, vi. 34, where he also states that the Queen of Sicily, Anna Maria of Savoy, was the only relation he ever heard Queen Anne speak of with much tenderness). Peculiarly suscep-

tible to the influences of friendship, the queen was at the same time, as has been sufficiently seen, an affectionate wife and a tender mother. Nor, having suffered herself, was she without ready sympathy for the sufferings of others.

The personal tastes of Queen Anne show little or no love of the polite arts. She took no interest in the theatre, except to check its more obvious immoralities (see her proclamation of January 1704 in ASHTON, 255). She never visited the public play-houses; but plays seem now and then to have been performed at court (STRICKLAND, xii. 103; cf. ASHTON, 255).

For art she cared as little as for letters. Wren was her court architect, but on her splendid gift of Blenheim Palace Vanbrugh was employed. Early in her reign Verrio finished the famous frescoes at Hampton Court, which began to be out of fashion already under her successor. Of course she sat to Kneller. For music she cared so little, that in 1708 she is stated never to have heard her own band play (*Court and Society*, ii. 337). The personal tastes of Queen Anne went in a different direction. Her predilections were rather in favour of open-air amusements, more especially that of hunting. Swift tells Stella of the famous chaise, or 'open calash,' as Luttrell calls it (v. 205), arranged so as to fit only the portly figure of the queen, and drawn by one horse, 'which she drives herself, and drives furiously like Jehu,' following the stag-hunt in Windsor forest (CRAIK, 225; cf. STRICKLAND, xi. 361). Her patronage of racing may have been largely due to a wish to respond to the tastes of her husband.

In person Queen Anne is described by Smollett (ii. 279) as 'of the middle size, well proportioned. Her hair was of dark brown colour, her complexion ruddy; her features were regular, her countenance was rather round than oval, and her aspect more comely than majestic.' With this judicious description may be compared the portrait drawn by the Duchess of Marlborough of the queen in her last years when she had grown 'exceeding gross and corpulent' (*Private Correspondence*, ii. 119 seq.). Her hand was considered very beautiful, and may be still admired in Kneller's portrait at Windsor (STRICKLAND, xii. 53). She suffered greatly from her eyes, but was gifted 'with a softness of voice, and sweetness in the pronunciation, that added much life to all she spoke' (BURNET, v. 2, where the annotators state that Charles II was so pleased with the natural sweetness of her voice that he had her taught to speak by the famous actress, Mrs. Barry). Neither Knel-

ler's brush nor Bird's less fortunate chisel, nor the flattery, often equally robust, of her poets and prose writers, has succeeded in persuading posterity that good Queen Anne was either an attractive woman or—though she appropriated to herself Queen Elizabeth's motto (*semper eadem*)—a great queen. On the other hand, spared though she was by neither foe nor friend, yet even in her own libellous age it was chiefly left to foreign pens to libel a genuinely national queen. Since Queen Anne has been dead, popular sentiment has preserved her name in kindly remembrance for the sake of her homely virtues, and neither partisan nor sectarian prejudice has prevented historians from acknowledging that she took no ignoble view of the responsibilities belonging to the throne on which a parliamentary compromise had seated her—the last of our Stuart sovereigns.

[The only biography proper of Queen Anne is that of the enthusiastic but uncritical Miss Strickland, in her *Lives of the Queens of England*, vols. x–xii. 1848. Among the earlier historical accounts of her reign are Boyer's *Annals of the reign of Queen Anne*, 11 vols. 1703–13, and 1 vol. folio 1735, the edition here cited; the *Histories of Oldmixon*, Tindal, Ralph, Smollett, here cited in the 5 vols. edition of 1822, Cunningham, and Belsham; and Roger Coke's *Detection of the Court and State of England*, vol. iii. (here cited in the 4th edition, 1719). An admirably lucid narrative is Somerville's *History of Great Britain during the Reign of Queen Anne*, 1798, which includes an essay on the 'Danger of the Protestant Succession during her last years.' Charles Hamilton's *Transactions during the Reign of Queen Anne from the Union to her death*, 1790, is violently partisan and valueless. More recent historians of the period are Lord Stanhope, here cited from the separate *History of England*, comprising the reign of Queen Anne until the peace of Utrecht, 1870; Ranke, in *Englische Geschichte*, vol. vii., and the Oxford translation; Burton, *Reign of Queen Anne*, 3 vols., 1880; C. von Noorden, *Europäische Geschichte im 18. Jahrhundert*, vols. i–iii., 1870–1882, which reaches to the year 1710; and Wyon, *History of Great Britain during the Reign of Queen Anne*, 2 vols., 1876; Morris's *Age of Anne* (1877) is a useful little manual. The earlier period of Anne's life falls within the narratives of Macaulay, and of Onno Klopp, *Der Fall des Hauses Stuart*, 1875–81. For Scottish affairs see also Burton's *History of Scotland*, from 1689–1748, 2 vols. 1853, with the Lockhart Papers, 2 vols. 1817, and Lockhart's *Memoirs of the Affairs of Scotland*, 1714. Many administrative details will be found scattered through the *Calendars of Treasury Papers*, 1702–7, and 1708–14, Rolls Series, 1879. The memoir-literature furnishing materials for Anne's biography is very large. Foremost in it stands

Burnet's History of his own Time, here cited in the six-volume Clarendon Press edition of 1833; for the earlier period information is supplied in the Diary of Dr. Edward Lake, 1677-78, Camden Society, 1847; the Correspondence of Henry Earl of Clarendon, and Lawrence Earl of Rochester; with Clarendon's Diary, 1687-90 (1828), and the Hatton Correspondence, Camden Society, vol. ii. 1878; Sir John Dalrymple's Memoirs, 3 vols. 1790, with their curious appendices, only reach the early years of Queen Anne's reign. Over a longer period extend Narcissus Luttrell's invaluable Brief Historical Relation of State Affairs from Sept. 1678 to April 1714, 6 vols. 1857; Evelyn's Diary, which reaches to 1706, and the Correspondence of the Duke of Shrewsbury, 1695-1704, ed. Coxe, 1821; the Wentworth Papers, ed. Cartwright, 1883, begin with the year 1705. The relations of the queen to the Duke and Duchess of Marlborough are most fully given in Coxe's Memoirs of the Duke of Marlborough, here cited in the 3 vols. 4to edition of 1819, which, though written with a strong bias, have permanent value as an historical work. They are supplemented by the Coxe MSS. in the British Museum, by the Letters and Despatches of the Duke, ed. Sir George Murray, 5 vols. 1846, and by Lediard's biography, 3 vols. 1736. The Duchess's own narrative, prepared for publication by Hooke, is the celebrated Account of the Conduct of the Dowager Duchess of Marlborough, from her first Coming to Court to the year 1710 (1742), here cited as 'Conduct.' It was answered by Ralph in The Other Side of the Question, 1742, defended by Fielding in A Vindication of the Duchess Dowager of Marlborough, and further criticised in a A Review of a late Treatise, &c., and A Continuation of a Review, &c. (both 1742). Numerous other letters and papers of the duchess, bearing on her relations to the queen, will be found in the Private Correspondence of Sarah, Duchess of Marlborough, 2 vols. 1838; the volume of Letters, published in 1875, belongs mainly to her later years. See also Mrs. Thomson's Memoirs of the Duchess and the Court of Queen Anne, 2 vols. 1839. For Anne's relations to her father and brother, and the history of Jacobite affairs before and during her reign, Clarke's Life of James II, founded on the king's manuscript memoirs, 2 vols., 1816, and the Stuart Papers in Macpherson's Original Papers, 2 vols. 1775, must be cautiously studied; the Hanover Papers, in the latter collection, illustrate Anne's relations to the Court of Hanover. As to her interest in the peace negotiations of the *Mémoires du Marquis de Torcy*, Collection Petitot, vols. lxxvii. and lxxviii. 1828, and the Minutes of the Negotiations of Mons. Meunier, 'done out of French,' it is said, by De Foe, here cited in the 2nd edition, 1736. Some curious details of a less special nature are contained in the Duke of Manchester's Court and Society from Elizabeth to Anne, from the Kimbolton Papers, 2 vols. 1864. But the most vivid conception of court and society under Anne is to be formed from the Journals

and Letters of Swift and his correspondents, here chiefly cited from the 5th edition of his and his friends' Letters, from 1703 to 1740 (1777). Among his professedly historical writings the Memorial on the Change of Ministry, 1710, and the History of the Last Four Years of Queen Anne, 1758, now regarded as his by the best authorities, are specially noticeable. See also the biographies of Swift (especially Craik's), and of Bolingbroke (Cooke, Macknight). Some interesting political matter is to be gleaned from Somers's Tracts, vol. xii. A succinct account of Queen Anne's relations to the church will be found in Stoughton's Hist. of Religion in England, vol. v., 1881. For general details see J. Ashton's Social Life in the Reign of Queen Anne (new edit., 1883).] A. W. W.

**ANNESLEY, ALEXANDER** (d. 1813), legal and political writer, was a London solicitor and member of the Inner Temple. After many years' practice, by which he acquired a large fortune, he retired to Hyde Hall, Hertfordshire, and died there on 6 Dec. 1813. Annesley was a man of many accomplishments, paid repeated visits to the continent, and was an enthusiastic sportsman. In politics he followed Pitt. His works are: 1. 'Strictures on the true Cause of the present alarming Scarcity of Grain and Provisions, and a Plan for permanent Relief,' 1800. Annesley proposed 'bounties on production rather than on importation, an excise on all grain, the establishment of public granaries and additional corn-mills.' 2. 'Observations on the Danger of a Premature Peace,' 1800. 3. 'A Compendium of the Law of Marine Insurance, Bottomry, Insurance on Lives, and of Insurance against Fire, in which the mode of calculating averages is defined and illustrated by example,' 1808 (cf. Walford's 'Insurance Cyclopædia,' i. 96).

[Gent. Mag. lxx. 1270, lxxi. 58, lxxviii. 419-24, lxxxiv. 94, where a memoir may be found.]

S. L.

**ANNESLEY, ARTHUR**, first EARL OF ANGLESEY (1614-1686), born at Dublin on 10 July 1614, was son of Sir Francis Annesley [q. v.], Lord Mountnorris. In 1624 he was sent to England, and in 1630 to Magdalen College, Oxford, where he took his degree in 1634 (Wood's *Ath. Oxon.* iv. 181, and *Happy Future State of England*, p. 3). In the same year he joined Lincoln's Inn. Having made the grand tour, he returned to Ireland in 1640. Annesley did not, as is sometimes stated, sit in the king's parliament at Oxford in 1643 (*Parl. Hist.* iii. 219). Subsequently (27 April 1647)—Annesley's friend, Sir W. Pett, says nothing about his being M.P. earlier (*Happy Future State of England*, p. 5)—he was elected to the Long parliament for Radnor county in place of Charles Price, disabled (cf. *Return of Members of Parlt.*;

Wood's 'Athenæ,' iv. 182, ed. Bliss, from which the former notices have evidently been copied). Annesley's first public employment was in 1645. It seemed probable that Ormond would succeed in establishing a cordial union with the Scotch forces under Monroe in Ulster. To defeat this, Annesley (selected no doubt for his knowledge of Irish affairs) and two others were sent over with a commission under the great seal. Their duty was fulfilled ably and with entire success (REID, *History of the Presbyterian Church in Ireland*, ii. 79, 100). In February 1647 Ormond, who was with difficulty holding Dublin against the Irish, reluctantly applied to the parliament for help, and Annesley was placed at the head of a second commission to conclude the matter (CARTE's *Ormond*, iii. 168, 305). By the 19th all was settled, and Dublin handed over to the parliament. Annesley appears to have identified himself with the parliamentary as opposed to the republican party, and, according to Heath's 'Chronicle' (p. 420), was one of the members seceded in 1648. This appears confirmed by his letter to Lenthall printed in 'England's Confusion' (note to p. 182 of vol. iv. of Wood's *Athenæ*). His name, however, does not appear on the list in the parliamentary history taken from the well-known 'Vindication.' In Richard Cromwell's parliament of 1658 he sat for the city of Dublin, and endeavoured, with some others of the seceded members, to gain admittance into the Rump parliament when restored by the officers in 1659 (HEATH, p. 420). For the statement (*Biog. Brit.*) that he was concerned in Booth's abortive rising there seems no authority; but he was certainly in the confidence of the royalist party, though a professed friend to the presbyterians (REID, ii. 335), for he held a blank commission from Charles II, with Grenville, Peyton, Mordaunt, and Legge, to treat, on the basis of a free pardon, with any of his majesty's subjects who had borne arms against his father except the regicides (COLLINS's *Peerage*). In February 1660 he was chosen president of the council of state. In the Convention parliament he sat for Carmarthen town (*Parl. Hist.* iv. 8). On 1 May he reported from the council to parliament an unopened letter from the king to Monk, and he was on the committee for preparing an answer to that sent direct to the house. On the same day he took part in the conference with the lords on 'the settlement of the government of these nations.' On 1 June he was sworn of the privy council, and on 4 June was placed on the commission for tendering the oaths of supremacy and allegiance (CARTE's *Ormond*, iv. 1). It was now

that Annesley and men of his moderate and practical views played a useful part. To them it was chiefly due that the lords were checked in their desires for revenge, and that the restoration was wellnigh bloodless. In the trials of the regicides and in the debates on the Act of Indemnity, Annesley was throughout on the side of lenity; and he advised the carrying out of the king's declaration in its integrity. It was largely owing to him that Hazelrig's life was spared. At the same time he made himself useful to the court by securing on 10 Aug. the passing of a money bill before the act of grace, and again on 12 Sept. by helping successfully to oppose the motion that the king should be requested to marry, and to marry a protestant. In November, probably in the court interest, he moved that the question of passing the king's declaration concerning ecclesiastical affairs into a law should be referred to a committee of the whole house. At the abolition of the court of wards he strenuously but vainly resisted, on the ground of its injustice, the proposal made in the interests of the landed gentry to lay the burden on the excise. In the settlement of Ireland his services were often called for and liberally rewarded. In August 1660 he received his father's office of vice-treasurer and receiver-general for Ireland, which he held until July 1667, when he exchanged it with Sir G. Carteret for the treasurership of the navy (CARTE's *Ormond*, iv. 340; PEPYS, 26 June 1667), and on 6 Feb. 1660-1 he received a captaincy of horse. On 9 March 1660-1 he was placed on the commission for executing the king's declaration for the settlement of Ireland, and in June on the permanent committee of council for Irish affairs. By the death of his father in November 1660, he became Viscount Valentia, and on 20 April 1661 he was made an English peer by the title of Lord Annesley of Newport-Pagnell in Bucks, and Earl of Anglesey. On 21 July 1663, Anglesey appeared as the sole signer of a protest against the bill for the encouragement of trade on grounds which show how little such questions were then understood, while in 1666, on the other hand, he strongly opposed the bill for prohibiting the importation of Irish cattle (*Parl. Hist.* iv. 284; and CARTE's *Ormond*, iv. 284). In 1667 he was threatened with an examination of his accounts if he refused to assist in Buckingham's attack on Ormond; and such an examination actually took place in 1668, but no charge could be sustained. He was, however, temporarily suspended from his office of treasurer to the navy (CARTE, iv. 330, 340;

PEPYS, 8 Dec. 1667, and 29 and 31 Oct., and 5, 11, and 14 Nov. 1668). During 1671 and 1672 Anglesey was employed continuously upon commissions appointed to inquire into the working of the acts of settlement; and in 1671 he also took the leading part in the conference between the houses regarding the lords' right to alter money bills, and wrote an acute and learned comment thereupon. On 22 April 1673 his services were rewarded with the office of lord privy seal, and in 1679 he was placed on the newly modelled privy council, which was framed at Temple's instance. When the popish terror began, Anglesey showed independence of character; he is recorded as the only peer who dissented from the vote declaring the existence of an Irish plot; and, according to his own testimony, he interceded for Langhorne, Plunket, and Stafford, though convinced of the guilt of the last (*Happy Future State*, p. 205; SIR W. PETT, *Memoirs of Anglesea*, pp. 8, 9). This line of action brought upon him, on 20 Oct. 1680, an accusation by Dangerfield, and he was attacked by Sir William Jones, attorney-general, in the House of Commons (*Happy Future State*, p. 267; DANGERFIELD, *Narration*). In 1681 Anglesea published 'A Letter from a Person of Honour in the Country,' containing his 'Animadversions' upon some memoirs regarding Irish affairs written by the Earl of Castlehaven. There were in this letter passages which seemed to reflect on Charles I; Ormond was called upon to answer it, and on 9 Aug. 1682 Anglesey was dismissed from his lucrative post of privy seal. His loss of office was doubtless hastened by another paper addressed to the king, entitled 'The Account of Arthur, Earl of Anglesea, to your most excellent Majesty, of the true State of your Majesty's Government and Kingdom.' This was dated 27 April 1682, immediately after the dissolution of Charles's last parliament. The boldness of the tone of remonstrance, and the vehemence with which the attack on James was supported at such a time, are remarkable. Upon his dismissal he retired to his seat of Blechingdon in Oxfordshire, and took no further part in public affairs, except by voting in a minority of two, in 1685, against the reversal of Lord Stafford's attainder, for whose condemnation he had voted, though pleading afterwards for his pardon (SIR W. PETT, *Memoirs*, p. 10). He died of quinsy on 26 April 1686.

Anglesey was undoubtedly a most useful official during his unbroken service of twenty years (PEPYS, *passim*), laborious, skilful, cautious, moderate, and apparently, on the whole, honest and independent in action, a

sound lawyer, with a high reputation for scholarship, research, and the use of a 'smooth, sharp, and keen pen' (*Athenæ Oxon.* ii. 784). But there is no reason whatever for regarding him as a great man. His care for his own interests was constant and successful. Besides the profits of his various offices he secured large sums and grants from Ireland. Thus, in 1661, he had a grant of the forfeited estates of the regicides Ludlow and Jones, as well as other spoil; on 10 March 1665-6 he received a pension of 600*l.* a year; on 24 March in the following year 500*l.*; on 10 Oct. 5,000*l.* out of forfeited lands, as well as many grants, both of lands and money, under the acts of settlement, at various times.

Anglesey is noted as perhaps the first peer who devoted time and money to the formation of a great library. The sale of this library at his death is remembered because among the books was a copy of the 'Eikon Basilike,' which contained a memorandum, presumably by himself, though this is warmly disputed (*Biog. Britan.*), to the effect that the writer had been told both by Charles II and James II that the 'Eikon Basilike' had been composed not by Charles I but by Bishop Gauden.

In addition to the works mentioned, Anglesey wrote: 1. 'The History of the late Commotions and Troubles in Ireland,' from the Rebellion of 1641 to the Restoration, the manuscript of which was unfortunately lost. 2. 'True Account of the whole Proceedings betwixt his Grace the Duke of Ormond and the Earl of Anglesea.' 3. 'The King's Right of Indulgence in Spiritual Matters asserted.' 4. 'Truth Unveiled.' 5. 'Reflections on a Discourse concerning Transubstantiation.'

[Wood's *Athenæ* (Bliss), iv. 18; *Biographia Britannica*; and other authorities quoted above.]  
O. A.

ANNESLEY, SIR FRANCIS, BART., first BARON MOUNTNORRIS and first VISCOUNT VALENTIA (1585-1660), descended from the ancient Nottinghamshire family of Annesley, was son of Thomas Annesley, high constable of Newport, Buckinghamshire, and was baptised 2 Jan. 1585-6. As early as 1606 he had left England to reside at Dublin, and he took advantage of the frequent distributions of Irish land made to English colonists in the early part of the seventeenth century to acquire estates in various parts of Ireland. With Sir Arthur Chichester, who became lord deputy in 1604, he lived on terms of intimacy, and several small offices of state, with a pension granted 5 Nov. 1607, were

bestowed on him in his youthful days. In the colonisation of Ulster, which began in 1608, Annesley played a leading part, and secured some of the spoils. In October 1609 he was charged with the conveyance of Sir Neil O'Donnell and other Ulster rebels to England for trial. On 13 March 1611-12 James I wrote to the lord deputy confirming his grant of the fort and land of Mountnorris to Annesley 'in consideration of the good opinion he has conceived of the said Francis from Sir Arthur's report of him.' On 26 May 1612 Annesley was granted a reversion to the clerkship of the 'Checque of the Armies and Garrisons,' to which he succeeded 9 Dec. 1625. In 1614 county Armagh returned Annesley to the Irish parliament, and he supported the protestants there in their quarrels with the catholics. On 16 July 1616 the king knighted him at Theobalds; in 1618 he became principal secretary of state for Ireland; on 5 Aug. 1620 received from the king an Irish baronetcy; and on 11 March 1620-1 received a reversionary grant to the viscounty of Valentia, which had recently been conferred on Sir Henry Power, a kinsman of Annesley, without direct heir. In 1625 he was elected M.P. for the county of Carmarthen in the English parliament. Meanwhile in 1622 Lord Falkland became lord deputy of Ireland. Dissensions between Annesley and the new governor in the council chamber were constant, and in March 1625 the lord deputy wrote to Conway, the English secretary of state, that a minority of the councillors, 'amongst whom Sir Francis Annesley is not least violent nor the least impertinent,' was thwarting him in every direction. But Annesley's friends at the English court contrived his promotion two months later to the important post of vice-treasurer and receiver-general of Ireland, which gave him full control of Irish finance (RYMER'S *Fœdera* (2nd edition), xviii. 148), and in 1628 Charles I raised him to the Irish peerage as Baron Mountnorris of Mountnorris. In October of the same year an opportunity was given Annesley, of which he readily took advantage, to make Falkland's continuance in Ireland impossible. He was nominated on a committee of the Irish privy council appointed to investigate charges of injustice preferred against Falkland by an Irish sept named Byrne, holding land in Wicklow. The committee, relying on the testimony of corrupt witnesses, condemned Falkland's treatment of the Byrnes, and Falkland was necessarily recalled on 10 Aug. 1629. On 13 June 1632 the additional office of 'treasurer at wars' was conferred on Mountnorris.

In 1633 Sir Thomas Wentworth, afterwards

Earl of Strafford, became lord deputy, and Lord Mountnorris soon discovered that he was determined to insist on the rights of his office more emphatically than Falkland. Wentworth disliked Mountnorris from the first as a gay liver, and as having been long guilty, according to popular report, of corruption in the conduct of official duties. In May 1634 Wentworth obtained an order from the English privy council forbidding his practice of taking percentages on the revenue to which he was not lawfully entitled; this order Mountnorris refused to obey. Fresh charges of malversation were brought against him in 1635, and, after threatening to resign office, he announced that all intercourse between the lord deputy and himself was at an end, and that he should leave his case with the king. Mountnorris's relatives took up the quarrel. A younger brother insulted Wentworth at a review, and another kinsman dropped a stool in Dublin castle on Wentworth's gouty foot. At a dinner (8 April 1635) at the house of the lord chancellor, one of his supporters, Mountnorris boasted of this last act as probably done in revenge of the lord deputy's conduct towards himself; he referred to his brother as being unwilling to take 'such a revenge,' and was understood to imply that some further insult to Wentworth was contemplated. Wentworth was now resolved to crush Mountnorris, and on 31 July following obtained the consent of Charles I to inquire formally into the vice-treasurer's alleged malversation and to bring him before a court-martial for the words spoken at the dinner in April. At the end of November a committee of the Irish privy council undertook the first duty, and on 12 Dec. Mountnorris was brought before a council of war at Dublin castle and charged, as an officer in the army, with having spoken words disrespectful to his commander and likely to breed mutiny, an offence legally punishable by death. Wentworth appeared as suitor for justice; after he had stated his case, and counsel had been refused Mountnorris, the court briefly deliberated in Wentworth's presence, and pronounced sentence of death. The lord deputy informed Mountnorris that he would appeal to the king against the sentence, and added: 'I would rather lose my head than you should lose your head.' In England the sentence was condemned on all hands; in letters to friends, Wentworth attempted to justify it in the cause of discipline, and even at his trial he spoke of it as in no way reflecting upon himself. The only real justification for Wentworth's conduct, however, lies in the fact that he had obviously no desire to see the sentence exe-

cuted; he felt it necessary, as he confessed two years later, to remove Mountnorris from office, and this was the most effective means he could take. Hume attempts to extenuate Strafford's conduct, but Hallam condemns the vindictive bitterness he here exhibited in strong terms; and although Mr. S. R. Gardiner has shown that law was technically on Wentworth's side, and his intention was merely to terrify Mountnorris, Hallam's verdict seems substantially just. In the result Mountnorris, after three days' imprisonment, was promised his freedom if he would admit the justice of the sentence, but this he refused to do. On the report of the privy council's committee of inquiry he was stripped of all his offices, but on 13 Feb. 1635-6 a petition to Strafford from Lady Mountnorris, which was never answered, proves that he was still in prison. Later in the year Lady Mountnorris petitioned the king to permit her husband to return to England, and the request was granted.

The rest of Mountnorris's life was passed in attempts to regain his lost offices. On 11 May 1641 he wrote to Strafford enumerating the wrongs he had done him, and desiring, in behalf of wife and children, a reconciliation with himself, and his aid in regaining the king's favour. But other agencies had already been set at work in his behalf. A committee of the Long parliament had begun at the close of 1640 to examine his relations with Strafford, and on 9 Sept. 1641 a vote of the commons declared his sentence, imprisonment, and deprivations unjust and illegal. The declaration was sent up to the lords, who made several orders between October and December 1641 for the attendance before them of witnesses to enable them to judge the questions at issue; but their final decision is not recorded in their journals. In 1642 Mountnorris succeeded to the viscounty of Valentia on Sir Henry Power's death. In 1643 the House of Commons granted him permission, after much delay, to go to Duncannon in Ireland. In 1646 he was for some time in London, but he lived, when not in Ireland, on an estate near his birth-place, at Newport Pagnell, Buckinghamshire, which had been sold to him by Charles I in 1627. In 1648 parliament restored him to the office of clerk of the signet in Ireland, and made him a grant of 500*l*. Later he appears to have lived on friendly terms with Henry Cromwell, the lord deputy of Ireland during the protectorate, and to have secured the office of secretary of state at Dublin. In November 1656 he proposed to the English government that he should resign these posts to his son Arthur (*Rawl.*

*MSS.*, A. 44, f. 120; A. 57, f. 263). Henry Cromwell, writing to General Fleetwood (4 Feb. 1657-8), urges him to aid in carrying out this arrangement, and speaks in high terms of father and son (*THURLOW'S State Papers*, vi. 777). Lord Mountnorris died in 1660.

Lord Mountnorris married Dorothy, daughter of Sir John Philipps, Bart., of Picton Castle, Pembrokeshire, who died 3 May 1624. By her he had three sons, of whom Arthur, the eldest, became later Lord Annesley and Earl of Anglesey [see *ANNESLEY, ARTHUR*].

[Lipscomb's Buckinghamshire, i. 279-80; Gardiner's History of England, ed. 1884, viii. 20-3, 182-198; Nichols's Progresses of James I, vols. iii. and iv.; Hallam's History, ii. 445; Calendars of Irish State Papers, 1606-25; Clarendon State Papers, vol. i. passim; Strafford's Letters, i. 508, et seq.; Lords' Journals, vols. iv. ix.; Commons' Journals, vols. ii. iii. v. vi.; Liber Hiberniæ, 44, 45, 99.] S. L.

**ANNESLEY, JAMES** (1715-1760), claimant, was born in 1715, and was the son of Lord Altham, according to one account, by his wife Mary Sheffield, natural daughter of the Duke of Buckingham, or, according to another, by a woman called Juggy Landy. Lord Altham, grandson of Arthur, the first Earl of Anglesey, was a dissolute spendthrift. He was married in 1706, quarrelled with his wife, was reconciled to her in 1713, and lived with her for some time at his house at Dunmaine, co. Wexford. During their cohabitation the child was born. In 1716 they were again separated; the child remained with the father, and was said to have been treated for a time like a legitimate heir. About 1722 Lord Altham fell under the influence of a mistress, named Gregory. Lady Altham returned to England in 1723, having for some time suffered from paralysis, and lingered in London till her death in October 1729. Meanwhile the mistress (it is suggested) alienated the father's affections by persuading him that the boy was not his own son. The lad was left to himself, rambléd to different places during two years previously to his father's death (16 Nov. 1727), and was at one time protected by a butcher named Purcell. Lord Altham was succeeded by his brother Richard, afterwards Earl of Anglesey, in spite of the reports as to the existence of a legitimate son. In order to make things pleasant, the uncle attempted to kidnap the nephew, and succeeded, about four months after the father's death, in having him sent to America and sold for a common slave. The boy remained there till the term of his slavery was out; at the end of 1740

he entered one of the ships of Admiral Vernon's fleet as a sailor, told his story to the officers, and was brought back by Vernon to England, where he took measures to support his claim. He was actively supported by a Mr. Mackercher, who appears as M—— in a chapter of 'Peregrine Pickle,' where Smollett introduces a long narrative (of questionable authenticity) of the Annesley case and Mackercher's previous history. An action of ejectment was brought against the uncle, now Lord Anglesey, in possession of the Irish estates. On 1 May 1742 James Annesley went out shooting at Staines, with a gamekeeper; they met a poacher netting the river, and a dispute followed, in which Annesley shot the man dead. He was tried for murder (15 July 1742), and Lord Anglesey, who had previously been thinking of a compromise, now thought that he could get rid of his nephew, instructed an attorney to prosecute, and said that he did not care if it cost him 10,000*l.* to have his nephew hanged. It was, however, clearly proved that the shot was fired by accident, and James Annesley was acquitted. He went to Ireland in 1743 with Mackercher to carry on his action, in spite, as is said, of various attempts upon his life by the uncle. On 16 Sept. 1743 they went to some horse races at the Curragh, where they encountered Lord Anglesey and his party. A riot took place; the party were violently assaulted by the earl's servants and friends; Annesley escaped by the speed of his horse, though injured by a bad fall, and three of his friends were knocked down, beaten, and stunned. The trial for ejectment came on upon 11 Nov. 1743, and lasted for the then unprecedented space of fifteen days. The question was simply whether Lady Altham or Juggy Landy was the claimant's mother. The most contradictory evidence was given. Several witnesses swore that they had been in the house at the time of the birth, and said that Landy was the foster-mother; that a road was specially made to her cottage after the event; that the christening was celebrated by bonfires; and that Lord Altham repeatedly acknowledged James as his legitimate son and treated him accordingly. On the other hand it was sworn, especially by Mary Heath, who attended Lady Altham until her death, that the lady had never been pregnant at all. The weight of evidence seems to be against the legitimacy, as the parents had strong reasons for establishing the birth of a legitimate heir; though Lord Anglesey's unscrupulous behaviour implies doubt as to the sufficiency of his cause. The verdict, however, was given for the claimant. Mary

Heath was prosecuted for perjury on 3 Feb. 1744, but, after a repetition of much of the former evidence, was acquitted. On 3 Aug. 1744 Lord Anglesey, with Francis Annesley and John Jans, was tried for the assault at the Curragh, and they were all convicted and fined.

It seems that Annesley was unable to raise the funds necessary to prosecute his case further. An 'Abstract of the Case of James Annesley,' published in 1751, is an appeal to the public to help him. He died 5 Jan. 1760, having been twice married, to a daughter of Mr. Chester of Staines (*d.* 1749), by whom he left a son (*d.* 1763) and two daughters, and, secondly, to a daughter of Sir Thomas l'Anson, by whom he had a son (*d.* 1764) and a daughter (*d.* 1765). A doubtful narrative of his life in America is given in the 'Gentleman's Magazine,' vol. xiii. The very curious trials are fully reported in the 'State Trials,' vols. xvi. and xvii. The story was turned to account by Scott in 'Guy Mannering' (see *Gent. Mag.* for July 1840), and it has been more directly used by Charles Reade in the 'Wandering Heir.'

[Howell's State Trials, vols. xvi. and xvii. Abstract of Case of James Annesley, 1751; *Gent. Mag.* vols. xiii. and xiv.] L. S.

**ANNESLEY, RICHARD, EARL OF ANGLESEY** (1694-1761), was seventh Viscount Valentia, seventh Baron Mountnorris, and fifth Baron Altham in the peerage of Ireland, and sixth Earl of Anglesey and Baron of Newport-Pagnell in the peerage of England, and held for some time the post of governor of Wexford, but was chiefly distinguished for the doubts which hung about his title to the barony of Altham and the legitimacy of his children. He took his seat in the Irish House of Lords as Baron Altham in 1727, on the death of his brother, the fourth baron, second son of Richard, the third baron, sometime prebendary of Westminster, and dean of Exeter in 1680, and succeeded his cousin Arthur, the fifth Earl of Anglesey, as remainderman in default of lawful issue in 1737, when he took his seat in the Irish House of Lords as Lord Viscount Valentia and Baron Mountnorris, and in the English House of Lords as Earl of Anglesey and Baron of Newport-Pagnell. He was for a short time an ensign in the army, but quitted the service in 1715. In this year he married a lady named Ann Prust or Prest, daughter of Captain John Prust or Prest, of Monckton, near Bideford, Devonshire, but he appears to have deserted her almost immediately. She died in 1741 without issue. Between 1737 and 1740 he lived with a lady

named Ann Simpson, whom he forced to quit his house in 1740 or 1741. From that time until his death he lived with one Juliana Donovan, whom he married in 1752. In 1741, Ann Simpson having taken proceedings against him in the ecclesiastical court on the grounds of cruelty and adultery, with a view to obtaining permanent alimony, he set up by way of defence that he was lawfully married to Ann Prest at the time when he was alleged to have gone through the ceremony of marriage with Ann Simpson, and the lady appears to have gained nothing by her suit. She survived the earl, dying in 1765, leaving three daughters, Dorothea, Caroline, and Elizabeth, but no son. Juliana Donovan is variously reported as the daughter of a merchant in Wexford, and of an alehouse-keeper in Cammolin. By this woman the earl had four children, Arthur, Richarda, Juliana, and Catherine. In or about 1742 there appeared in England one James Annesley, who represented himself to be the legitimate son of Arthur, the late Baron Altham, an account of whose claim is given under *ANNESLEY, JAMES*. James Annesley failed to establish his claim, and the earl continued in the enjoyment of his estates and his titles until his death in 1761. Upon that event two memorials were presented to the Earl of Halifax, the lord-lieutenant of Ireland: one by Sir John Annesley and the other by the Countess Juliana, on behalf of her infant son Arthur, both claiming the Irish honours of Viscount Valentia and Baron Mountnorris. Both memorials were referred to the attorney-general and solicitor-general for consideration, who in 1765 reported to the lords-justices in favour of the claim of Arthur, who accordingly, on coming of age, took his seat in the Irish House of Lords. He was not, however, so successful in the proceedings which he took to make good his claim to the English earldom. In 1766, being then of age, he presented a petition to the king, praying to be summoned to parliament as Earl of Anglesey and Baron of Newport-Pagnell. The petition was considered by the committee of privileges in 1770-1. It was opposed by Constantine Phipps, Lord Mulgrave, who claimed to be interested in the result by virtue of the will of James, Earl of Anglesey, the grandfather of the claimant. Mr. Wedderburn (afterwards Lord Loughborough, Earl of Rosslyn), who became solicitor-general during the progress of the inquiry, and Mr. Dunning, appeared for the claimant; Mr. Serjeant Leigh and Mr. Mansfield for Lord Mulgrave. The issue came to depend entirely on whether a certain marriage certificate, bearing date 1741, was genuine or

not. The countess swore that she had been secretly married to the late earl in 1741, and produced the certificate in evidence. On the other hand Lord Mulgrave's witnesses swore that the certificate had been made out at the date of the marriage in 1752, and purposely antedated. The witnesses to the alleged marriage being all dead, the case for the claimant broke down, and the committee reported that he had no right to the titles, honours, and dignities claimed by him. The English peerage accordingly became extinct. The earl by his will had entailed his estates upon the issue of his son Arthur, whose right to the Irish titles was reinvestigated on the petition of John Annesley of Ballysax, Esq., but was confirmed, and who in 1793 was created Earl of Mountnorris. This title has, however, since become extinct, the present Viscount Valentia and Baron Mountnorris being the lineal descendant of the sixth son of the first viscount. The family derives its name from Annesley, in Nottinghamshire, where it is supposed to have been settled before the conquest. The Irish titles were derived from Sir Francis Annesley, who in 1619 was created baronet of Ireland, and subsequently (1621) Viscount Valentia by James I, and (1628) Baron Mountnorris by Charles I. The arbitrary imprisonment of the first viscount by Strafford in 1635 for a mere personal affront was made part of the fifth article of his impeachment. The second viscount was created Baron Annesley of Newport-Pagnell in Bucks and Earl of Anglesey in 1661. As to the title of Baron Altham, see *ALTHAM ad fin.* The present Marquis of Anglesey [see *PAGET*] belongs to a different family.

J. M. R.

**ANNESLEY, SAMUEL** (1620?-1696), one of the most eminent of the later puritan nonconformists, was the son of John Aneley (*sic*) of Hareley, in Warwickshire; this spelling of his father's name was accentuated by Anthony à Wood in order to support his baseless representation that Samuel Annesley, by slightly altering his name, falsely sought relationship with the first Earl of Anglesey. As a matter of fact, he was ac-

knowledge as the earl's full nephew, and when the Countess of Anglesey was dying she asked to be buried in his grave. Annesley was born 'about the year 1620' at Kellingworth, near Warwick. Deprived of his father in his fourth year, the care of his education devolved on his mother, who was 'a very prudent and religious woman.' In Michaelmas term, 1635, he was admitted a student in Queen's College, Oxford, and there he proceeded successively B.A. and M.A. He seems to have been naturally slow and sluggish while at the university, but to have 'supplied this defect in nature by prodigious application.' He was from his youth 'inclined to the ministry.' Like others he must have had a twofold ordination. First Anthony à Wood informs us 'he took holy orders from a bishop.' Secondly, Calamy adduces a certificate of presbyterian ordination, dated 18 Dec. 1644, and subscribed by seven presbyterian ministers. The latter stated that he was appointed chaplain on 'a man of war called the Globe.' It is possible, however, that Anthony à Wood was misinformed, seeing that in 1644 he was just of age to receive orders. In the *Globe* he was chaplain to the Earl of Warwick, then admiral of the parliament's fleet.

'In process of time his own behaviour and the great interest he had with such as were then in power' procured him one of the prizes of the church, viz. Cliffe in Kent. Here he succeeded Dr. Griffith Higges, who was ejected for his loyalty to the king and treason to the Commonwealth. Cliffe was an important post; for besides its income of nearly 400*l.* per annum 'a great jurisdiction belonged to the incumbent, who held a court wherein all matters relating to wills, marriage contracts, &c., were decided.' The parishioners were devoted to their ejected clergyman, and were disposed to show their esteem by rude and rough misconduct towards his successor. Annesley told them 'that if they conceived him to be biassed by the value of so considerable a living, they were exceedingly mistaken; that he came among them with an intent to do good to their souls, and that he was resolved to stay, how ill soever they used him, till he had fitted them for the reception of a better minister; which whenever it happened, he would leave them, notwithstanding the great value of the living.'

On 26 July 1648 he preached the fast sermon before the House of Commons, which Anthony à Wood vehemently attacks and supporters of the parliament highly praise.

'About this time' he was 'honoured with the title of doctor of laws by the university

of Oxford.' Nearly contemporaneously he was again at sea with the Earl of Warwick, 'who was employed in giving chase to that part of the English navy which went over to the then prince, afterwards King Charles II.'

The parishioners of Cliffe being not only reconciled but greatly attached to Annesley, he resigned the living that he might keep the promise he had made to them 'when they were in another disposition.' In 1657 he was nominated directly by Cromwell 'lecturer of St. Paul's,' and in 1658 was presented by Richard Cromwell to the vicarage of St. Giles, Cripplegate, London. This presentation becoming 'useless,' he, in 1660, procured another 'from the trustees for the maintenance of ministers,' being also a commissioner for 'the approbation and admission of ministers of the Gospel after the presbyterian manner.' This second presentation growing equally out of date with the first, he, on 28 Aug. 1660, procured a third presentation from Charles II. But even this did not hold him long at St. Giles, for in 1662 he chose to be one of the illustrious band of the ejected two thousand. His undoubted relative, the Earl of Anglesey, did all he could to induce him to conform, but in vain. He preached semi-privately wherever opportunity was given him. His nonconformity 'created him,' says Neal, 'troubles, but no inward uneasiness.' His goods were distrained for, as the phrase ran, 'keeping a conventicle.' That 'conventicle' was at the meeting-house in Little St. Helen's. He was spared to 'a good old age.' He died on 31 Dec. 1696, and his funeral sermon was preached by Dr. Daniel Williams, while Daniel Defoe (who was a member of his congregation) wrote a pathetic and melodious elegy on his death. 'He had the reputation,' concludes the *Biographia Britannica*, 'of being a warm, pathetic preacher, as well as a pious, prudent, and very charitable divine, laying by the tenth part of his income, whatever it was, for the use of the poor.' The 'notorious' John Dunton was his son-in-law (see his *Life and Errors*). More memorable still, his daughter Ann, as wife of the Rev. Samuel Wesley, became the mother of the Wesleys. His writings consisted of sermons separately published, and in the various 'Morning Exercises' and certain minor biographical things.

ANNET, PETER (1693-1769), deistical writer, is said to have been born at Liverpool in 1693. He was at one time a school-master, but about the years 1743 and 1744 he published some bitter attacks upon the apologetic writings of Bishop Sherlock and others, and in consequence lost his employment. He was one of the most conspicuous members of the Robin Hood Society, which took its name from the public house—the Robin Hood and Little John in Butcher Row—where its debates were held. Its theological discussions are ridiculed by Fielding in the 'Covent Garden Journal' (1752). In 1756, as appears by a letter of Annet's (*Gent. Mag.* liv. 250), he held a small post in some public office, and he says that some one of his way of thinking had offered to make him steward to an estate in the country. He is supposed to have been the author of 'A History of the Man after God's own Heart' (1761); the preface says that George II had been compared to David by his panegyrists, and the book is intended to show 'how the memory of the British monarch is insulted by the comparison.' This book seems to have suggested Voltaire's 'Saul,' which is described by its author, with obvious mystification, as translated from the English of 'M. Huet,' member of the English parliament and nephew of the famous bishop of Avranches, 'qui, en 1728, composa le petit livre très curieux, "The Man after the Heart of God." Indigné d'avoir entendu un prédicateur comparer à David le roi Georges II, qui n'avait ni assassiné personne, ni fait brûler ses prisonniers français dans des fours à briques; il fit une justice éclatante de ce roi-let juif.' The book has also been attributed to a John Noorthook (*Notes and Queries*, 1st series, xi. 204). In 1761 Annet published nine numbers of a paper called the 'Free Enquirer,' attacking the Old Testament history. He was tried for blasphemous libel in the Michaelmas term of 1763, the information stating that he had ridiculed the Holy Scriptures (in the 'Free Enquirer') and tried to show 'that the prophet Moses was an impostor, and that the sacred truths and miracles recorded and set forth in the Pentateuch were impositions and false inventions, and thereby to infuse and propagate irreligious and diabolical opinions in the minds of his majesty's subjects and to shake the foundations of the christian religion and of the civil and ecclesiastical government established in this kingdom' (*STARKIE'S Law of Libel*, 1876, p. 596). He was convicted and sentenced to a month's

imprisonment in Newgate, to stand twice in the pillory, then to have a year's hard labour in Bridewell, and to find sureties for good behaviour during the rest of his life. He is described as 'withered with age' and making no defence. Some 'liberal minds,' we are told, subscribed to relieve him in Newgate. Archbishop Secker, it is added, 'afterwards repented so far'—or, according to his friends, showed so much christian charity—as to relieve Annet's wants till the day of his death. Goldsmith procured for him an offer of ten guineas for a child's grammar; but the offer was withdrawn upon Annet's passionately refusing to be anonymous. He kept a small school at Lambeth after his release, where one of his pupils was James Stephen (1758-1832), afterwards master in Chancery (unpublished papers). Annet died on 18 Jan. 1769.

Annet's writings are of some interest as forming a connecting link between the deism of the early part of the eighteenth century and the more aggressive and outspoken deism of Paine and the revolutionary period. He is a coarse but forcible writer. 'A Collection of the Tracts of a certain Free Enquirer noted by his sufferings for his opinions' (n. d.) includes 'Judging for Ourselves, or Freethinking the great Duty of Religion, displayed in two lectures delivered at Plais-terers' Hall, by P. A., minister of the gospel,' 1739; 'The History and Character of St. Paul examined' (in answer to Lyttelton); 'Supernaturals examined' (in answer to Gilbert West and Jackson); 'Social Bliss considered' (an argument in favour of liberty of divorce), 1749; 'The Resurrection of Jesus considered, in answer to [Sherlock's] the Tryal of the Witnesses, the third edition with great amendments, by a Moral Philosopher' (1744); 'The Resurrection reconsidered' (1744); 'The Sequel of the Resurrection of Jesus considered,' 'The Resurrection Defenders stripped of all Defence,' 1745. A volume of lectures of similar character, 'by the late Mr. Peter Annet, corrected and revised by him just before his death, with the head of the author curiously engraved by his own direction,' has a portrait of 'Peter Annet, ætat. 75, anno 1768.'

Besides these works, Annet was author of a system of shorthand. Priestley learned it at school and entered into correspondence with the author. A copy of verses by Priestley is prefixed to a second edition of the system.

**ANSSELL, CHARLES, F.R.S., F.S.A.** (1794–1881), known for some years before his death as the father of the profession of actuaries, was born (probably in Essex) in 1794, entered the Atlas Fire and Life Assurance Company in 1808, and took a prominent position on the staff in 1810. In 1823 he was appointed actuary of the life branch of the company, and held the office down to 1864—a period of forty-one years—when he retired from active official life, but still remained the consulting actuary of the company. He also filled a similar post in the National Provident, the Friends' Provident, and the Clergy Mutual Life Offices, and was, likewise, the actuary of the Customs' Annuity and Benevolent Fund.

He was on several occasions called upon to advise on various schemes of national finance, notably on the government superannuation scheme, which ultimately fell through. He gave evidence before the select parliamentary committee (1841–43) to consider the law of joint-stock companies, and the select committee on assurance associations (1853).

His chief practice for many years was in connection with the actuarial problems involved in the working of friendly societies. He published a work upon that subject in 1835, which attracted much attention at the time, and remained a useful handbook for many years afterwards. It was, indeed, almost a first effort to treat friendly societies from a scientific standpoint. The work was published under the superintendence of the Society for the Diffusion of Useful Knowledge. He gave evidence before the select parliamentary committee on friendly societies in 1849, and before some of the later committees. Many years since he was instructed by the then Bishop of London (Dr. Blomfield) to make some calculations of this class, and he named as his fee 100 guineas. 'A hundred guineas, Mr. Ansell! Why, there are many curates in my diocese who don't get more than that for a year's services.' 'That may be,' was the quiet rejoinder; 'but actuaries are bishops.' The fee was paid.

Mr. Ansell resided during the later years of his life at Brighton, but he was only a few years before his death high sheriff of Merionethshire, where he had considerable landed property. He superintended the bonus investigation of the National Provident Association when close upon eighty years of

age, and died at the close of 1881, at the age of 87. His personal estate was proved for 21,000*l*.

[For further and more technical details see Insurance Cyclopædia, vol. i.] C. W.

**ANSELL, GEORGE FREDERICK** (1826–1880), scientific inventor, was born at Carshalton on 4 March 1826. He was apprenticed for four years to a surgeon, and studied medicine with the intention of adopting a medical life as his profession, but abandoned it for chemistry. After undergoing a course of instruction at the Royal College of Chemistry, he became an assistant to Dr. A. W. Hofmann at the Royal School of Mines. In 1854 he gave lectures in chemistry at the Panopticon in Leicester Square, London, but that institution did not last long, and Mr. Ansell accepted from Mr. Thomas Graham, in November 1856, a situation in the Royal Mint. He remained in this office for more than ten years, when differences of opinion between him and its chiefs led to the loss of his position. After his retirement and until his death, which took place on 21 Dec. 1880, he practised as an analyst. Mr. Ansell devoted much attention to the dangers arising from firedamp in collieries, and made a valuable series of experiments on the subject in the Ince Hall colliery near Wigan. The 'firedamp indicator,' which he subsequently patented, has been adopted with considerable success in many of the collieries on the continent. For the cyclopædia of Mr. Charles Tomlinson he wrote a treatise on coining—one hundred copies of which were struck off for private circulation—and his work on the 'Royal Mint' was an amplification of this article. This volume first appeared in 1870, and was reissued in the next year; its popularity was somewhat marred by the introduction of the narrative of his quarrels with his colleagues in the office, but it contained much information not to be found elsewhere. Several articles on the subjects in which he took most interest were contributed by him to the seventh edition of Ure's 'Dictionary of Arts,' &c.

[Times, 25 Dec. 1880, p. 10; Athenæum, 1 Jan. 1881, p. 24.] W. P. C.

**ANSELM, SAINT** (1033–1109), archbishop of Canterbury, was born at or near Aosta about the year 1033, or two years before the death of Cnut, king of England, and two years before William the Conqueror became duke of Normandy. At the date of Anselm's birth Aosta was on the borders of Lombardy and Burgundy, but was reckoned as belonging to the latter, which

had ceased to be an independent kingdom by the death of Rudolph III in 1032, and had become part of the empire. There is some probability that Ermenberga, the mother of Anselm, was a niece of Rudolph III. She was also related to Odo, count of Maurienne, who, by his marriage with Adelaide, marchioness of Susa, added the valley of Aosta to his domains, and became progenitor of the royal house of Savoy. Anselm's father also, Gundulf, who was a Lombard by birth, but thoroughly naturalised at Aosta, seems to have been a kinsman to the Marchioness Adelaide. A comparison of passages in several chroniclers respecting the parentage of Anselm suggests the conclusion that he had royal blood in his veins on his mother's side, but not on his father's. At any rate both parents were well born, and held considerable property under the counts of Maurienne. It probably included the village of Gressan, about three miles south-west of Aosta. Whether a tower at Gressan, called St. Anselm's tower, can have been a part of his parents' dwelling-place, is more than doubtful, but it is likely enough that they had a house here, and the solitary anecdote of Anselm's early childhood bears the impress of the scenery amidst which he must have lived. He imagined that heaven rested upon the mountains; he dreamed that one day he climbed the mountain-side until he reached the palace of the great King, and there having reported to Him the idleness of His handmaidens, whom he had passed, lazily reaping the corn in the valley, he was refreshed with bread of heavenly purity and whiteness by the steward of the divine household (EADMER, *Vita Ans.* i. 2).

It was from his mother that he first learned, as was natural, his religious ideas and love of holy things. She was a good and prudent housewife, as well as a devout woman. His father Gundulf was an impetuous man, liberal and generous to a fault. Anselm seems to have been their only son, and he had an only sister younger than himself, Richers, or Richeza, who married a man named Burgundius, by whom she became the mother of a son who bore his uncle's name. Anselm took great interest in the education of this nephew, and several letters are addressed to him (see esp. *Epist.* iv. 31, 52). From an early age Anselm was studious, as well as clever and amiable. He made rapid progress in learning, and grew up loving and beloved. He probably received his earliest teaching in the school of the abbey of St. Leger, near Aosta; but after a time he was entrusted to the care of a kinsman as his private tutor, who kept him so closely confined to his studies that his health gave way. He became shy and me-

lancholy. His mother's good sense saved his reason, if not his life; she brought him home and bade her servants let him do exactly what he liked, until he gradually recovered his health and spirits (Cod. 499, Queen of Sweden's collection in Vatican library, copied by Mr. Rule, *Life*, vol. i. appendix).

Before he was fifteen he began to consider how he might best shape his life according to God, and he became persuaded that there was nothing in the ways of men better than the life of monks. So he went to a certain abbot whom he knew, and begged that he might be made a monk; but the abbot refused on finding that the request was made without his father's knowledge. The boy then prayed for an illness, hoping that it might induce his father to yield to his inclination. The sickness came; he sent for the abbot and implored him, as one who was about to die, to make him a monk without delay. The abbot, however, dreading the displeasure of Anselm's father, still refused; and the lad recovered. A period of reaction followed; his longing for the religious life, and even his ardour for study, cooled; he began to devote himself more to youthful sports, and after the death of his mother, being like a ship parted from its anchor, he drifted yet more completely into a worldly course of life (EADMER, *Vita*, i. 3, 4). Some passages in one of his 'Meditations' (xvi.) would, if literally interpreted, imply that he fell into very serious sin; but there is some doubt whether he is speaking in his own person, and, even if he is, the language may be no more than the self-reproaches, rhetorically expressed, of a highly sensitive conscience. For some reason not explained, his father, Gundulf, conceived a great dislike to him, which Anselm's meekness and submission seemed rather to inflame than soften. At last in despair, when he was about twenty-three years of age, he resolved to quit his home and seek his fortune in some other land. He set out northwards, accompanied by a single clerk. In crossing Mont Cenis, Anselm was much exhausted, their provisions were spent, and but for his companion moistening his lips with snow, and the timely discovery of a morsel of bread in the wallet, he must have perished on the road. Having spent three years partly in Burgundy, partly in France, he made his way to Normandy, and took up his abode at Avranches about the year 1059. Here Lanfranc had kept a school; but he had now become prior of the abbey of Le Bec. His fame as a scholar had made that house one of the most renowned seats of learning in western Christendom, and to Bec, after a brief sojourn at Avranches, Anselm also repaired. When Anselm came to Bec, Lanfranc

had been prior for several years, and the house was at the height of its reputation. Students flocked to it from all quarters, and the great men of Normandy lavished gifts upon it. Anselm threw himself heartily into the work of the place. The severity of his studies and the austerities of the monastic rule were almost more than the delicate frame could bear; but he was persuaded that the moral discipline was good for his soul, and his desire to become a monk increased in strength. But if he became a monk, whither was he to go? If to Clugny, he thought his learning would be thrown away, owing to the excessive strictness of the rule. If he remained at Bec, he thought it would be so completely overshadowed by that of Lanfranc as to be of little use. Meanwhile, by the death of his father, he became the heir of the family property. Three courses then presented themselves for selection. Should he settle at Bec, or become a hermit, or return to his native valley and administer his patrimony for the benefit of the poor? He took counsel with Lanfranc. Lanfranc advised him to consult Maurilius, archbishop of Rouen, and accompanied him on a visit to that prelate. Maurilius decided in favour of the monastic life, and so in 1060 Anselm took the cowl and remained at Bec. Three years afterwards Lanfranc was made abbot of the new house of St. Stephen at Caen, founded by Duke William. Anselm succeeded him at Bec in the office of prior. He held this post for fifteen years, 1063-78. Then Herlwin, founder and abbot, died, and for fifteen years more Anselm governed the house as abbot, 1078-93.

It was during this period of thirty years that his powers developed themselves to the full. If Lanfranc was a man of great talent, Anselm was a man of lofty genius. Both morally and intellectually his character was of a finer type. He had not only more tenderness, more breadth of sympathy, and more transparent simplicity of purpose, but far profounder and more original powers of thought. Having an absolute and unshakeable faith in Holy Scripture, he did not shrink from applying to it the full force of his reason, and therefore he was enabled, in the words of his biographer Eadmer (*Vita*, i. 9), to penetrate and unravel some of the most intricate and, before his time, unsolved questions touching the nature of God and of our faith. The whole day between the hours of prayer was often consumed in giving advice orally or by letter to persons, many of them of high rank, who consulted him on questions of faith or conduct; and the greater part of the night was spent either in correcting the books of the monastery (which up to that time Eadmer

says were the most ill-written in the world), or in meditation and devotional exercises. He did not shrink even from the drudgery of instructing boys in the rudiments of grammar, although he owned (*Epist.* i. 55) that he found this an irksome task. But the work in which he most delighted and excelled was that of moulding the minds and characters of young men. For this he was eminently fitted by his affectionate sweetness and sympathy which won their hearts, by his deep piety and powerful intellect, by his acuteness in discerning character, and his practical wisdom in suggesting rules for moral conduct. He compared the age of youth to wax finely tempered for the seal. If the wax be too hard or too soft, it will not take a clear impression. Youth, being between the two, was an apt compound of softness and hardness, which could receive lasting impressions and be turned to any shape. Similar good sense in the education of the young is manifested in his advice to an abbot who complained of the difficulty of teaching the boys brought up in his monastery. They were incorrigibly perverse, the abbot said, and although beaten continually day and night they only grew worse. 'Beat them, do you?' said Anselm; 'and pray what kind of creatures are they when they are grown up?' 'Dull and brutal,' was the reply. 'You are verily unfortunate,' said Anselm, 'if you only succeed in turning men into beasts.' 'But what can we do then?' rejoined the abbot; 'we constrain them in every possible way, but all to no purpose.' 'Constrain them, my lord abbot! If you planted a young shoot in your garden, and then confined it on all sides, so that it could not put forth its branches, would it not turn out a strange misshapen thing when at last you set it free, and all from your own fault? So these children have been planted in the garden of the church to grow and bear fruit for God. But you cramp them so excessively with threats and punishments that they contract all manner of evil tempers, and doggedly resent all correction.' After more plain speaking of this kind the abbot, with a sigh, confessed that his method of education had been all wrong, and promised to try and amend it (EADMER, *Vita*, i. 29-31).

Anselm's own tact in dealing with the young was illustrated by his management of a youthful monk named Osbern. Osbern was clever, but headstrong, and set himself up as the leader of a small faction which resented the appointment of Anselm as prior. Anselm first softened him by forbearance and small indulgences. Having thus gained his affection, he gradually withdrew the in-

dulgences, and subjected him at last to the full rigour of monastic discipline, even to the extent of punishing him with stripes. Osbern stood all these tests even in the face of taunts from his companions, and became exceedingly dear to the prior, who rejoiced over his steady growth in goodness. After a while, however, he was stricken with a mortal illness. Anselm watched him by day and night. As the end drew near, Anselm charged him, if it were possible, to reveal himself to him after death. Osbern promised and passed away. When the body was placed in the church and the brethren were chanting the psalms, Anselm retired to a corner of the building to weep and pray in secret, and at length, overpowered by weariness and sorrow, he fell asleep. In his sleep he saw certain forms of most reverend aspect, clad in the whitest of garments, enter the room where Osbern had died, and sit in a circle as if to give judgment. Presently there entered Osbern himself, pale and haggard. Anselm asked him how he fared. 'Thrice,' said he, 'did the old serpent rise up against me, thrice did I fall backwards, and thrice did the bearded of the Lord deliver me.' Then Anselm awoke and was comforted (EADMER, *Vita*, i. 13-16). The memory of Osbern never faded from his mind. During a whole year he offered a daily mass for Osbern's soul, and in one of his letters to his friend Gundulf, bishop of Rochester (*Ep.* i. 4), he writes: 'Wherever Osbern is, his soul is my soul; farewell! farewell! I pray, I pray, I pray, remember me, and forget not the soul of Osbern my beloved, and if that seem too much for you, then forget me and remember him.'

Notwithstanding his powerful influence, Anselm shrank with extreme reluctance from the responsibility of ruling others. When he was unanimously elected abbot of Bec on the death of Herlwin, he besought the brethren with the most passionate entreaties to spare him; and it was only in deference to their persistence and the authority of the archbishop of Rouen that he yielded at last. As abbot he gave up most of the secular business of the house to such of the brethren as he could trust, and devoted himself to study, meditation, and the instruction of others. If the monastery, however, was involved in any lawsuit of importance, he took care to be present in court, in order to prevent any chicanery being practised by his own party; but if the other side used craft and sophistry, he heeded not, and occupied his time in discussing some passage in the Scriptures or some question of ethics, or calmly went to sleep. Yet if the cunning argu-

ments of his opponents were submitted to his judgment he speedily detected the flaws in them, and tore them to pieces as if he had been wide awake and listening all the time (EADMER, *Vita*, i. 37). He was also obliged occasionally to visit the property of the house in various parts of Normandy and Flanders. These journeys brought him into contact with persons of all ranks and conditions, and many gave themselves and their property to the monastery. For himself he never would accept anything as his private possession (EADMER, *Vita*, i. 33).

He visited England soon after he became abbot, not only to look after the English possessions of his house, but also to see Lanfranc, now primate. He was received with great respect at Canterbury, and, after making an address to the monks of Christ Church, was admitted as a member of the house. Here began his acquaintance with Eadmer, one of the brotherhood, who became his most devoted friend and biographer. He has recorded the great impression which Anselm made at Canterbury by the wonderful way he discoursed and by his private conversation. His large-heartedness also was displayed on this occasion in his decision of a case which the archbishop submitted to him. Lanfranc told Anselm that he doubted the claim of one of his predecessors, Archbishop Ælfeah, to martyrdom, because, although he had been murdered by the Danes, he did not die in defence of any religious truth. Anselm, however, maintained that since Ælfeah died rather than wring a ransom from his tenants, he had died for righteousness' sake, and that he who died for righteousness would certainly have died for Christ himself who taught it, and therefore he was fully entitled to the honours of martyrdom (EADMER, *Vita*, i. 41-44).

The almost feminine tenderness of Anselm's nature appeared in his treatment of the lower animals, which he regarded with respect as the product of God's hand. And, as in the love of animals for their offspring he saw an emblem of the love of God for man, so in any cruelty to animals on the part of man he saw a figure of the devil's malice and his hatred to all God's creatures. Thus, one day seeing a bird teased by a boy who had fastened a string to its leg and let it fly a little way in order to pull it back again, he made him release it, saying that was just the way in which the devil served his victims. So also when a hare ran for shelter under the legs of his horse, and the hunters crowded round with noisy delight at his capture, he burst into tears and forbade them to touch it, saying that it was an apt image of the

departing soul of man, which on going forth from the body was beset by the evil spirits who had pursued it all through life. So he suffered not the dogs or hunters to touch the hare (EADMER, *Lib. de Similitudinibus* S. Ans. 189, 190).

William the Conqueror received his death-wound in 1087. In the presence of Anselm we are told that he who to most men seemed harsh and terrible became so mild that bystanders looked on with amazement (EADMER, *Vit. Ans.* i. 47). And when he lay dying in the abbey of St. Gervase at Rouen he sent for Anselm to hear the confession of his burdened conscience. Anselm came from Bec. William, however, put off seeing him for a few days, deeming that he should get better. Meanwhile Anselm himself fell ill, and before he had recovered the king died (EADMER, *Hist. Nov.* 1, 17 c). Anselm, however, was present at the strange and terrible scenes amidst which the body of the Conqueror was laid in the minster of St. Stephen at Caen.

Lanfranc crowned William the Red king of England, and in the following year, 1089, he died. William the Red was, unlike his father, profligate and profane, without reverence for goodness, or respect for law and justice. He found a minister worthy of himself in Ralph Flambard, a lowborn Norman clerk, a coarse and unscrupulous man. One simple expedient for replenishing the royal treasury was to keep the great offices of the church vacant and confiscate their revenues.

After the death of Lanfranc the see of Canterbury was kept vacant for more than three years, and its lands were farmed to the highest bidders. The whole nation was shocked by this shameless spoliation of the metropolitan see, and longed to see the man appointed to it who, on his visits to England, had won the hearts of all men, and who was admitted to have no superior in Christendom in piety and learning. But the king cared not. Meanwhile, in 1092 Hugh of Avranches, earl of Chester, invited Anselm to England, to assist him in the work of substituting monks for canons in the minster of St. Werburgh at Chester. Anselm, however, having heard the rumour which marked him out for the primacy, and fearing that the motives of his visit might be misconstrued, declined to come; but at last he was compelled to yield to the urgent entreaties of the earl, who said that he was mortally ill, and that if Anselm did not come his soul's peace in the future world might be for ever disturbed. The chapter of Bec also wished him to go, in order to get the royal exactions on their English property lightened.

So he set sail from Boulogne, where he had been staying with the Countess Ida, and reached Canterbury on 8 Sept., the eve of the Nativity of the Virgin; but being hailed by monks and people as their future archbishop, he hurried away early the next morning. On his road to Chester he visited the court, where he was received with great honour, even by the king himself. Anselm asked for a private interview, in which he rebuked the king for the evil things which men said were done by him. William seems to have turned the subject off with a laugh, saying he could not prevent idle rumours, and that the holy man ought not to believe them. So they parted, and Anselm went on to Chester. Here he found Earl Hugh restored to health, and after spending some months in settling the new constitution of St. Werburgh he desired to return to Normandy; but the king would not give him leave to go. In the baseness of his soul he may have thought that Anselm secretly desired the primacy, and that even he might be induced to pay some price for it. Meanwhile the midwinter gemot, held at Gloucester, had passed a resolution that the king should be asked to allow prayers to be offered in all churches that God would put it into his heart to appoint some worthy man to the long vacant see. The king assented, but contemptuously remarked, 'Pray what ye will; no man's prayer shall shake my purpose.' Anselm was compelled to frame the prayer. After the gemot the king went to a royal seat at Alvestone, near Gloucester. Here one of his nobles spoke one day of the virtues of Anselm, how he was a man who loved God only, and desired nothing belonging to this fleeting world. 'Not even the archbishopric?' said William, with a sneer. 'No, not even that,' replied the other, 'and many think with me.' The king, however, maintained that had Anselm the least chance of it he would rush to embrace it, but 'by the holy face of Lucca,' he added, 'neither he nor anyone else shall be archbishop at present except myself.' Soon after this the king was taken very ill. He was moved to Gloucester; the lay nobles, bishops, and other great men visited the sick and, as it was thought, dying man, and urged him to redress the wrongs which he had inflicted on the nation, and especially on the church. But the king's advisers felt the need of some one at this critical moment who had peculiar skill in awakening the conscience and ministering to the diseases of the soul. There was no one comparable to Anselm, and he, unconscious of the king's illness, was sojourning not far from Gloucester. He was fetched

with all speed. He heard and approved of the advice already given to the king; the holy man was brought to the bedside of the royal sinner; he bade him make a clean confession of his misdeeds, solemnly promise amendment if he should recover, and promptly perform it. The king confessed, and pledged his faith that if he recovered he would rule with justice and mercy. He took the bishops to be witnesses of his promise, and to record it before the altar. Further, a proclamation was issued under the royal seal, promising all manner of reforms, ecclesiastical and civil. But the great men of the realm urged on him the duty of proving his repentance by doing immediate justice to the long vacant see of Canterbury. The sick man signified his willingness. He was asked to name the man whom he deemed worthy of such an office. He raised himself with an effort on his arm in the bed, and, pointing to Anselm, said, 'I choose yonder holy man' (WILL. MALM. *Gest. Pont.* i. 48). A shout of joy rang through the chamber. When Anselm heard it he trembled and turned pale, and when the bishops tried to drag him to the king to receive the pastoral staff at his hands he resisted with all his force. The bishops took him aside and remonstrated with him. Anselm pleaded that he was an old man, unused to worldly affairs, and unfitted for the duties of so burdensome an office. Moreover, he was the subject of another realm, and he owed allegiance not only to the Duke of Normandy but to the archbishop of Rouen, and to the chapter of his own abbey. These pleas, however, were all made light of, and he was again taken to the bedside of William, who besought him by his friendship for his father and mother to yield to the general wish. Anselm was inflexible. At the king's bidding they fell down at his feet, but Anselm prostrated himself also, and could not be persuaded. Then they lost patience; they partly pushed and partly pulled him to the king's bedside. The king presented the pastoral staff; they held out Anselm's hand to take it, but he kept his hand tightly clenched; they tried to force it open till he cried aloud with pain. At length they succeeded in unclosing his forefinger, and thrust the staff in between that and the other clenched fingers. Anselm was borne rather than led into the neighbouring church, still protesting and exclaiming, 'It is nought that ye do.' 'It would have been difficult,' he says, in a letter to the monks at Bec, 'for a looker-on to say whether a sane man was being dragged by a crowd of madmen, or whether sane men were dragging a madman

along' (*Ep.* iii. 1). After some ceremony in the church, Anselm went back to the king and renewed his protest in the shape of a prophecy. 'I tell thee, my lord king, that thou wilt not die of this sickness; therefore thou mayest undo what thou hast done in my case, for I have not consented, nor do I now consent, to its being ratified.' Then, turning to the bishops, he told them they did not know what they were doing: they were yoking an untamed bull with a weak old sheep to the plough of the church, which ought to be drawn by two strong oxen. He then burst into tears, and, faint with fatigue and distress, retired to his lodging. (EADMER, *Vit. Ans.* ii. 1, 2; *Hist. Nov.* i. 18, 19). All this took place on the first day of Lent, 6 March 1093. The king gave orders that Anselm should be inducted without delay into the temporal possessions of the see, and that meanwhile he should reside on some of the archiepiscopal manors under the care of his friend Gundulf, bishop of Rochester. The consent of Robert, duke of Normandy, and of the archbishop of Rouen to the appointment of Anselm was easily obtained, but the monks of Bec were very reluctant to part with their beloved abbot, and it was after a long debate and by a very narrow majority that they acquiesced in the appointment (*Epist.* iii. 3, 6).

Meanwhile the Red King recovered, and repented of his repentance. His last state was worse than the first, and the ill which he had done before seemed good in comparison with the evil which he did now. And when Bishop Gundulf remonstrated with him he swore by his favourite oath, the holy face of Lucca, that he would never requite good for the ill which God had done to him (EADMER, *Hist. Nov.* i. 19 B). He did not, however, revoke the appointment of Anselm.

In the course of the summer of 1093 William, returning from a conference at Dover with the count of Flanders, met Anselm at Rochester. Anselm then told him that he was still hesitating whether he would accept the archbishopric, but if he did it must be on three conditions: (1) that all the lands belonging to the see in the time of Lanfranc should be restored without any lawsuit or dispute, (2) that the king should see justice done in respect of lands upon which the see had a long-standing claim, (3) that in matters pertaining to God the king should take him for his counsellor and spiritual father, as he on his part would acknowledge the king as his earthly lord. Lastly he warned the king that of the two rival claimants to the papacy, Clement and Urban, he himself, in common with the

whole Norman church, had acknowledged Urban, and to this choice he must adhere. The king took counsel with Count Robert of Meulan and William of St. Calais, bishop of Durham, a prelate who had a few years before been banished for appealing to the pope against a judgment of the king and witan on a purely temporal charge, but who appears throughout the transaction with Anselm one of the most zealous supporters of the royal supremacy (FREEMAN, *Will. Rufus*, i. ch. 2). The king asked Anselm to repeat his statement in the hearing of these counsellors, and after conferring with them he replied that he would restore all the lands which had belonged to the see in the time of Lanfranc, but upon the other points he should reserve his judgment.

A few days afterwards he summoned Anselm to Windsor, and begged him to accept the primacy to which he was called by the choice of the whole realm (EADMER, *Hist. Nov.* i. 371). It is remarkable that neither at this point of the story nor any other is there a distinct record of any formal election, either by the monks at Canterbury or by the witan. Expressions to that effect seem to be used in a vague and rhetorical sense, and to signify no more than the general desire that the archbishopric might be conferred on Anselm, and the unanimous approval of the appointment. We must either suppose that, the general wish in favour of Anselm being notorious, a formal election was deemed unnecessary, or that, if it did take place, it was for the same reason deemed needless by the chroniclers to make any formal record of it. With the request that Anselm would accept the primacy, the king coupled a request which started a fresh difficulty. Certain lands held of the archiepiscopate by Englishmen on tenure of knight's service before the Norman conquest had lapsed to the lord for lack of heirs during the incumbency of Lanfranc. They had, in fact, become demesne lands of the see, but during the vacancy the king had turned them into military fiefs, and he now arbitrarily summoned Anselm into the king's court in order that this arrangement might be made permanent. But Anselm refused; it would involve, he thought, a wrong to the church which the king, as advocate, had no right to inflict, and which he himself, as trustee, had no right to permit. To accept the archbishopric on such terms would be very like a simoniacal transaction. The king was so much irritated by his refusal that Anselm began to hope he might, after all, escape the burden of the office he so much dreaded (*Ep.* iii. 24).

This, however, was not to be. The whole nation was enraged by the king's relapse into evil courses, and was determined to force him, if possible, to a renewal of the promises which he had made during his sickness at Gloucester. A special gemot was held for this purpose at Winchester, in which the king solemnly renewed his pledges. Anselm was now persuaded to accept the archbishopric, and did homage according to custom. The royal writ was issued, announcing that the king had bestowed the archbishopric on Anselm with all the rights, powers, and possessions which belonged to the see, and with all liberties over all his men, and over as many thegns as King Edward had granted to the church (EADM. *Hist. Nov.* i. 372; *Fœdera*, i. 5). These last words seem to imply that the point disputed at Windsor was conceded in Anselm's favour. On 5 Sept. 1093, Anselm was enthroned at Canterbury amidst a rejoicing multitude. But the solemnity and festivity of the event was disturbed by one whose appearance was a sinister omen of troubles to come. To the indignation of all, the insolent Ralph Flambard took this strange opportunity of serving a writ in the king's name for a suit against the primate. The object of the writ is not stated; we are only told that it concerned a matter with which the king's court had properly nothing to do (EADM. *Hist. Nov.* i. 372).

On 4 Dec. Anselm was consecrated by Thomas of Bayeux archbishop of York, assisted by all the bishops of the southern province except Wulfstan of Worcester, Herbert of Thetford, and Osbern of Exeter. According to the old ritual, the book of the Gospels, opened at random, was laid on the shoulders of the newly consecrated prelate, and the passage at which it opened was taken as a sort of omen of his episcopate. The passage which now presented itself was, 'He bade many, and sent his servant at supper-time to say to them that were bidden, Come, for all things are now ready. And they all with one consent began to make excuse.'

The Christmas gemot of 1093 was held at Gloucester. Anselm attended, and was warmly welcomed, not only by the nobility of the realm, but by the king himself. At this gemot a hostile message from Robert, duke of Normandy, was considered, and war was decreed. As usual the great need was money. The chief men offered their contributions, and Anselm offered 500 pounds of silver. The king accepted the gift graciously, but some malignant persons represented that he ought to have received a

much larger sum, 2,000*l.* or 1,000*l.* at least. So a message was sent later to Anselm that his offer was rejected. Anselm sought an audience with the king, and entreated him to take the contribution, which, although his first, would not be his last. A free gift, however small, was far more valuable than a much larger one forcibly exacted. The king felt that this remark was intended as a reproof of his extortionate methods of raising money, and he angrily replied, 'Keep your scolding and your money to yourself. I have enough of my own. Begone.' Anselm departed, thankful, after all, that the gift had been refused, for no man could now insinuate that his gift was a preconcerted price for the archbishopric. He was urged to offer double the sum, but steadfastly refused, and bestowed his despised present on the poor. So the midwinter gemot broke up; Anselm went to his manor at Harrow, where he consecrated a church built by Lanfranc. His right was disputed by Maurice, bishop of London, in whose diocese the manor lay. The question was referred to the aged Wulfstan, bishop of Worcester (*Epist.* iii. 19), who decided in favour of Anselm, declaring that the primates had always exercised free spiritual rights in all their manors wherever they might be (*EADM. Hist. Nov.* 372-5). On 2 Feb. 1094, the forces destined for the invasion of Normandy were collected at Hastings. Anselm and other bishops were summoned thither to invoke a blessing on the expedition. The passage of the army was delayed for more than a month by contrary winds. During this interval, on 11 Feb., Anselm, assisted by seven bishops, consecrated the church of the great abbey which the late king, in fulfilment of his vow, had reared upon the ground where his victory over Harold had been won. In one religious act, at least, the two unequal yoke-fellows, the fierce bull and the gentle sheep, William, the sinner, and Anselm, the saint, took part together as they stood before the altar of 'St. Martin of the place of battle.'

On 12 Feb. Anselm consecrated Robert Bloet bishop of Lincoln in the chapel of the castle at Hastings, and on the first day of Lent he presided at the ceremony of sprinkling ashes, and preached a sermon, in which he took the opportunity of rebuking the young courtiers for their mincing gait, their effeminate dress and habits, and especially that of wearing their hair long. He refused to give the ashes of penitence or administer absolution to those who would not abandon these customs. He had good reason for attacking them, since they were

the outward signs of gross and detestable vice, vice which Anselm says in one of his letters (iii. 62) had grown so common that many practised it without any consciousness of sin. The king himself was addicted to it; nevertheless Anselm tried to get his help in repressing it. In one of the daily interviews which he seems to have had with William at Hastings, he frankly told him that if he would hope for a blessing upon his expedition to Normandy or any other enterprise, he must aid in re-establishing Christianity, which had well-nigh perished out of the land. He therefore asked leave to hold a national synod of bishops, which was a time-honoured remedy in England and Normandy for ecclesiastical and moral evils. William replied that he would call a council at his own pleasure, not Anselm's; 'and pray,' said he, 'with a sneer, 'what will you talk about in your council?' 'The sin of Sodom,' answered Anselm, 'to say nothing of other detestable vices which have become rampant. Only let the king and the primate unite their authority, and this new and monstrous growth of evil may be rooted out.' But the heart of the Red King was hardened, and he only asked, 'And what good will come of this matter for you?' 'For me, perhaps, nothing,' replied Anselm, 'but something, I hope, for God and for thyself.' 'Enough!' rejoined the king; 'speak no more on this subject.' Anselm obeyed, but turned to another evil, the injury done to religion by the prolonged vacancies in the abbeys. This touched the king in two of his tenderest points, his greed of money and his royal rights. 'What,' he burst forth, 'are the abbeys to you? Are they not mine? Shall you do as you like with your manors, and shall I not deal as I choose with my abbeys?' 'The abbeys,' returned Anselm, 'are yours to protect as their advocate, not to waste and destroy. They belong to God, and their revenues are intended for the support of His ministers, not of your wars.' 'Your words are highly offensive to me,' said the king; 'your predecessor would never have dared to speak thus to my father. I will do nothing for you.' So Anselm, seeing that his words were cast to the winds, rose up and went his way. But he was deeply vexed at this loss of the royal favour, because he felt that without it he could not accomplish the reforms on which his heart was set. He sent the bishops to the king, to beg that he would take him into his friendship, or, at least, say why he refused it. The bishops returned, saying that the king did not accuse Anselm of anything,

but would not show him any favour, because he 'heard not wherefore he should.' Anselm inquired what the latter words meant. 'The mystery,' replied the bishops, 'is plain. If you want peace with him, you must give plenty of money. Offer him again the 500*l.* which he refused, and promise him as much more, to be raised from your tenants.' Anselm indignantly rejected such a method. It would set a disastrous precedent for buying off the king's wrath. The bishops urged him at least to repeat the offer of the 500*l.*, but Anselm refused to give again what had been once rejected; moreover, he said he had promised it to the poor, and the greater part had already been given away. His words were reported to the king, who sent back his answer. 'Yesterday I hated him much, to-day I hate him more, and to-morrow and henceforth I shall hate him with even bitterer hatred. I will no longer hold him as father and archbishop, and his blessing and prayers I utterly abhor and despise. Let him go where he will, and not tarry any longer to bless my voyage.' 'We therefore speedily left the court,' says Eadmer, who became from this time his constant companion, 'and abandoned the king to his will' (*Hist. Nov.* i. 379 B). William crossed at length to Normandy about the middle of March. He spent much and gained little in his campaign, and returned to England on 28 Dec. 1094.

Anselm had not yet received his pallium from the pope, which, although not considered essential to the validity of archiepiscopal functions, was looked upon as an indispensable badge of metropolitan authority; and Anselm had now been a full year in office without receiving it. Some time, therefore, in February 1095, he went to Gillingham, near Shaftesbury, where the king was keeping court, and asked leave to go to Rome for his pallium. The papacy was now claimed by two rivals, Urban and Clement. Normandy had acknowledged Urban. England had not as yet acknowledged either. William asked Anselm from which of the two he intended to get his pallium. 'From Urban,' was the reply; and he reminded the king of the warning he had given him at Rochester, that he had, when abbot of Bec, promised allegiance to Urban, and could not recede from it. William, however, maintained that Anselm could not obey the pope against the king's will consistently with the allegiance due to himself. He had not yet acknowledged Urban, and it was neither his custom nor his father's to let any one in England acknowledge any pope without his leave.

Anselm felt that the king had no right to force any one into renouncing a choice made before he became a subject. The conflict, however, between the claims of the king and of the pope on his obedience was one which he rightly thought could be settled only by the great council of the nation. He asked for such a council, and the request was granted. A great assembly of the chief men in church and state was convened for Sunday, 11 March 1095, at the royal castle of Rockingham, on the borders of Leicestershire and Northamptonshire. A crowd of bishops, abbots, nobles, monks, clerks, and laymen were gathered at an early hour in the castle and the precincts. The king and a party of privy councillors sat in a separate chamber; a messenger passed to and fro between them and the general assembly, which seems to have been either in the chapel of the castle or the great hall which may have opened out of it.

Anselm himself opened the proceedings with an address; the bishops came from the royal presence chamber to hear it. He explained the object of the assembly, which was to decide whether there was any real incompatibility between his allegiance to the king and his obedience to Urban. The bishops, who, throughout these transactions, appear as timid and obsequious courtiers, replied that the archbishop was too wise and good a man to need advice from them; but, at any rate, no advice could they give him unless he first submitted absolutely to the king's will. They reported his speech, however, to the king, who adjourned the proceedings to the morrow.

On Monday, therefore, Anselm, sitting in the midst of the assembly, asked the bishops if they were now ready with their advice. But they had only the same answer to make. Then Anselm spoke in solemn tones, with uplifted eyes and kindling countenance, 'Since you, the shepherds of the people, who are called the leaders of the nation, will give no counsel to me, your head, save according to the will of one man, I will betake me to the chief Shepherd and Head of all, to the Angel of great counsel, and will follow the counsel which I shall receive from Him in my cause, yea, rather in His cause and that of His church. He who declared that obedience was due to St. Peter and the other apostles, and through them to the bishops, saying, "He that despiseth you despiseth me," also taught that the things of Cæsar were to be rendered to Cæsar. By those words I will abide. In the things which are God's I will give obedience to the vicar of the blessed Peter;

in things touching the earthly dignity of my lord the king, I will, to the best of my ability, give him faithful counsel and help.' The cowardly bishops could not gainsay the words of Anselm, but neither did they dare carry them to the king. So Anselm went himself to the presence chamber, and repeated them in the audience of William. The king was exceedingly wroth, and consulted with the bishops and nobles concerning the answer to be given. Their perplexity was extreme. They broke up into small groups, each discussing how some answer might be framed. Anselm meanwhile, having retired to the place of assembly, rested his head against the wall, and went quietly to sleep. At last he was roused by a party of bishops and lay lords bearing a message from the king. He demanded an immediate answer from Anselm. As for the matter at issue between him and the primate, it needed no explanation. For themselves the bishops counselled Anselm to cast away his obedience to Urban, and freely submit, as became an archbishop of Canterbury, to the king's will in everything. Anselm replied that he certainly would not renounce his obedience to the pope, but as the day was far spent he asked leave to reserve his answer for the morrow. The bishops suspected this meant that he was wavering, or that he did not know what to say. The crafty and unscrupulous William of St. Calais, bishop of Durham, who was the leader of the bishops on the king's side, now thought he would be able to drive Anselm into a corner. He boasted to the king that he would force the primate either to renounce obedience to the pope, or to resign the archiepiscopal staff and ring. This fell in with the king's wishes. So the bishop of Durham and his party hastened back to Anselm, and informed him that no delay would be granted him unless he immediately reinvested the king with the imperial dignity of which he had robbed him by having made the bishop of Ostia pope without his authority. Anselm, having patiently listened to this peremptory address, calmly replied: 'Whoever wishes to prove that I violate my allegiance to my earthly sovereign, because I will not renounce my obedience to the sovereign pontiff of the Holy Roman Church, let him come forward, and he will find me ready to answer him *as I ought and where I ought*.' These last words disconcerted the bishop and his friend, for they understood him to mean that, as archbishop of Canterbury, he could not be judged by any one save the pope—a doctrine which it seems no one was prepared to

deny. Meanwhile a murmur of sympathy with Anselm ran through the mixed throng. A soldier stepped forward, and, kneeling before the archbishop, said, 'My lord father, thy children beseech thee, through me, not to be disquieted, but to be mindful how the blessed Job, on his dunghill, overcame the devil, and avenged Adam, who had been vanquished in Paradise.' Anselm graciously received this odd address from the honest man, for it assured him that he had the good will of the people. The discomfited bishops returned to the king, and were loaded with reproaches. On the morrow, Tuesday, Anselm once more took his seat, awaiting the king's message. The councillors were perplexed. Even William of St. Calais had no course to recommend but force. The staff and ring might be wrested from the primate, and he himself expelled from the kingdom. But this suggestion did not please the lay nobles. It would be an awkward precedent if the first vassal in the kingdom were deprived of his fief at the king's pleasure. William, in a rage, told them that he would brook no equal in his kingdom; if the proposal of the bishop of Durham did not please them, let them consult and say what would; for, by the face of God, if they did not condemn Anselm, he would condemn them. Count Robert of Meulan then spoke: 'As for our counsel I own I know not what to say; for when we have been devising plans all day, and considering how we can make them hang together, the archbishop innocently goes to sleep, and then when they are submitted to him, with one puff of his lips he blows them to pieces as if they were cobwebs.' The king then turned to the bishops, but they had no suggestion to offer. Anselm was their primate, and they had no power to judge or condemn him, even had any crime been proved against him. The king then proposed that they might at least withdraw their obedience and brotherly intercourse from the archbishop. And to this strange suggestion they had the baseness to accede. Accompanied by some abbots, they announced their intention to Anselm, and informed him that the king also withdrew his trust and protection, and would no longer hold him for archbishop or spiritual father. Anselm mildly replied that they did ill to withdraw their allegiance from him because he refused to withdraw his own from the successor of the chief of the apostles. Although the king withdrew all protection from him, he would not cease to care for the king's soul; retaining the title, power, and office of archbishop,

whatever oppression it might be his lot to suffer. William now tried to make the lay lords abandon the archbishop, saying, 'No one shall be my man who chooses to be his,' to which the nobles replied that as they never were the archbishop's men, they had no fealty to withdraw; 'notwithstanding,' they said, 'he is our archbishop; to him pertains the rule of Christianity in this land, and in this respect we cannot, whilst we live here as christians, refuse his guidance.' William dissembled his wrath, for he was afraid of offending the nobles, whose manly utterance put the craven conduct of the bishops in a more odious light. The king tightened his grip upon these wretched time-servers, required an unconditional renunciation of their obedience to Anselm, and squeezed more money out of them to buy back his favour. Anselm meanwhile requested a safe-conduct to one of the havens and leave to quit the kingdom. William heartily wished to be rid of him, but did not wish him to go while seised of the archbishopric, yet saw no way to disseise him of it. In this dilemma the nobles proposed a truce, and an adjournment of the whole question to Whitsuntide. This proposal was made on the fourth day of the meeting, Wednesday, 14 March, and Anselm assented to it (*EADM. Hist. Nov. i. 379-87*). And so ended the famous meeting at Rockingham. It seemed to come to nothing; nevertheless a great moral victory had been gained.

William kept the letter of the truce with Anselm, but vented his spite by attacking his friends. He expelled Baldwin of Tournay, a monk of Bec, one of Anselm's most confidential friends, from the kingdom, he arrested his chamberlain, and worried his tenants by unjust lawsuits and imposts. His next device was to gain the pope to his side. He secretly despatched two clerks of the Chapel Royal, Gerard, afterwards archbishop of York, and William of Warelwast, afterwards bishop of Exeter, to Rome, first to ascertain which was the real pope, secondly to persuade him to send the pallium to the king, so that he might be able to bestow it on any one he pleased should he succeed in getting rid of Anselm. The envoys had no difficulty in discovering that Urban was the pope in possession. They acknowledged him in the name of the king, and obtained their request. Cardinal Walter, bishop of Albano, returned to England with them, bringing the pallium. The journey was made with all speed, in order to reach England before Whitsuntide. Great secrecy also was observed. The legate was not allowed to converse with any one, except in the presence of the envoys, and on reaching

England he was hurried to the court without being allowed to tarry in Canterbury or to see Anselm. Shortly before Whitsuntide he had an interview with the king. What passed is not recorded, but it was understood that William was encouraged to hope that his wishes would be granted, and that the legate had not spoken a word on Anselm's behalf. The king now ordered a formal recognition of Urban as pope to be published throughout his dominions, and he then asked the legate that Anselm might be deposed by papal authority, promising a large annual payment to the Roman see if his request was granted. But he had overshot his mark. The cardinal flatly declared such a compact to be out of the question. Thus William had gained nothing and lost much by his dealing with Rome. He had acknowledged Urban, whom Anselm had acknowledged long ago, and, instead of getting rid of the primate, it seemed now impossible to avoid going through the form at least of reconciliation with him. This took place at Windsor, where Anselm was summoned to meet the king at Whitsuntide. He was again urged to propitiate the king by money and to receive the pallium from his hands; but he was inflexible, and the king had to give way. On the third Sunday after Trinity (10 June 1095) the legate brought the pallium with great pomp in a silver casket to Canterbury. He was met by the monks of the two monasteries of Christchurch and St. Augustine, and a vast concourse of clergy and laity. Near the cathedral the procession was met by Anselm, barefoot, but in full pontificals and attended by his suffragans. The sacred gift was laid upon the altar, thence it was taken by Anselm and presented to be kissed by those who were round about him, after which he put it on and celebrated mass (*EADM. Hist. Nov. ii. 390-2*). A short interval of peace now followed. The king went northwards to put down a revolt of Robert of Mowbray, Earl of Northumberland. The archbishop stayed at Canterbury, the care of the city, and apparently of Kent, being committed to him under the king's writ and seal, against an expected attack from Normandy. So faithful was he to this trust that he refused to leave Canterbury even for a day to confer with the papal legate upon the reforms in the church which he had so much at heart (*Epist. iii. 35, 36*). He attended the Christmas gemot at Windsor, where his bitter adversary, William of St. Calais, died. Anselm received his confession and tended him in his dying hours with affectionate care. He had already absolved two bishops who had expressed penitence for their conduct at

Rockingham, Osmund of Salisbury, the compiler of the celebrated Use of Sarum, and Robert of Hereford. Most of the other bishops now followed their example; yet there were some who still remained hostile, and when the papal legate remonstrated, they had the incredible baseness to say that Anselm was not a lawful archbishop because he had received investiture from a king who at the time was in schism with Rome, the very king to whom they themselves had paid the most obsequious homage (*Epist.* iii. 36).

On 18 Nov. 1095 the first crusade was preached by Urban at Clermont in Auvergne. Robert, duke of Normandy, was seized with the impulse which stirred the heart of Christendom, but his treasury was empty and his hold on his duchy was weak. He therefore mortgaged it for three years to his brother William for the sum of 10,000 marks, which the Red King undertook to raise. The sum was levied with great difficulty. The clergy were already so impoverished that to furnish contributions they were forced to part with many of their most sacred treasures. Anselm was willing to contribute, but he had not enough ready money. By the advice of Walkelin, bishop of Winchester, and Gundulf of Rochester, he borrowed 100 pounds from the monks of Christ Church on the security of his manor of Peckham, which he mortgaged to them for seven years. It turned out a very good bargain for the monks, who enlarged the east end of the cathedral out of the Peckham rents. Altogether Anselm scraped together 200 pounds, and the king seems to have been satisfied. The bargain between the king and his brother was settled in September 1096. Robert started for Palestine. William took possession of Normandy, and remained in the duchy till the following Easter, when the disturbed state of Wales brought him back to England. After holding a gemot at Windsor in April he made a great expedition into Wales, which seemed to be successful. The submission of the country turned out to be only nominal, but at the moment the Red King, by the acquisition of Normandy and reduction of Wales, appeared to have reached the height of his prosperity. A favourable opportunity seemed to have come for again pressing reforms on the king. It may have been, as Anselm believed, only another device to put off the discharge of this duty, that the king, on his return from Wales, wrote an angry letter complaining of the contingent of knights whom Anselm had furnished for the Welsh campaign. They were so ill equipped, he said, and ill trained as to have been quite useless, and Anselm must expect a summons

in the King's court to 'do him right.' The archbishop did not think it necessary to take any notice of this petulant message. He attended the Whitsuntide gemot, and was graciously received. He again exhorted the king to set about the work of reform, but his appeals were utterly vain, and he now resolved to take the step to which his mind had been gravitating for some time. He sent a formal message to the king by some of the nobles, saying that he was driven by urgent need to ask his leave to go to Rome. The king refused the license. But Anselm had quite made up his mind that the only hope of redress for his own wrongs or the wrongs of the church lay in an appeal to the pope. He renewed his request at another gemot held in August, and again at Winchester in October. The king was now thoroughly enraged. He not only refused the license, but declared that Anselm must pay a fine for asking it. Anselm offered to give good reasons for his request, which the king declined to hear, and told him that if he did go he should seize the archbishopric and never receive him as archbishop again. An adjournment was granted for one day, and on the morrow Anselm said he still asked for the license. For the sake of his own soul, for the sake of religion, and for the king's own honour and profit, it was needful he should go, and if the king would not grant leave he must go without it, obeying God rather than man. The bishops again urged submission. 'You have spoken well,' said Anselm; 'do you go to your lord, and I will cleave to my God.' The lay barons also were now against him. He had sworn to observe the customs of the realm, and it was contrary to those customs for any man in his position to go to Rome without the king's license. Anselm replied that he had indeed promised to observe the customs, but only so far as they were in accordance with right and agreeable to the will of God. He went into the royal presence chamber, and seating himself at the king's right hand, maintained this doctrine at some length, until the king and Count Robert of Meulan exclaimed that he was preaching a sermon, and a general uproar followed. Anselm quietly waited till it had subsided, and then summed up his argument. He then rose and departed, accompanied by the faithful Eadmer. They were followed by a messenger from William, who told Anselm that he might leave the kingdom, but must not take anything belonging to the king. 'I have horses, clothes, and furniture,' replied Anselm; 'perhaps some one will say they belong to the king; if so, I will go naked and

barefoot rather than abandon my purpose.' The king sent word back that he did not wish him to go naked and barefoot, but he must be at the haven ready to cross within eleven days, and there a messenger would meet him, and let him know what he might take with him. Anselm returned to the presence chamber, and, addressing the king with a cheerful countenance, 'My lord,' he said, 'I am going. . . Now, therefore, not knowing when I shall see you again, I commend you to God, and as a spiritual father to a beloved son, as archbishop of Canterbury to the king of England, I would fain, before I go, give you God's blessing and my own, if you refuse it not.' For a moment the heart of the Red King was touched; 'his good angel perhaps spoke to him then for the last time. "I refuse not your blessing," was his answer. The man of God arose, the king bowed his head, and Anselm made the sign of the cross over it' (FREEMAN, *Will. Rufus*, i. 594). Then he departed, and the saint and the sinner never met again (EADM. *Hist. Nov.* ii. 395-402).

This happened on 15 Oct. 1097, and Anselm immediately left Winchester for Canterbury. On the day after his arrival he took an affecting farewell of the monks. Then, in the presence of a great congregation, he took the pilgrim's staff and scrip from off the altar, and, having commended the weeping multitude to Christ, he set forth for Dover, accompanied by Eadmer and Baldwin. At Dover they found the king's chaplain, William of Warelwast, awaiting them. For fourteen days they were detained by stress of weather, during which William of Warelwast was Anselm's guest. At last the wind was favourable, and Anselm and his party hastened to the shore. But William of Warelwast forbade their embarking until their baggage had been searched. This was done upon the beach amidst the astonishment and execration of the bystanders; but nothing was found which could be seized for the king, and after this vexatious delay Anselm and his friends set sail and landed safely at Whitsand. As soon as they were out of the country, the king not only seized the estates of the see, but cancelled all acts and decrees relating to them made by the archbishop. Meanwhile Anselm, after halting a while at the monastery of St. Omer, journeyed through France and the duchy of Burgundy to Cluny, where he had a hearty welcome and spent Christmas. A curious story is told by Eadmer (*Hist. Nov.* ii. 404) how Odo, duke of Burgundy, tempted by the report of the archbishop's riches, set out, intending to plunder him on the way, but was so completely captivated by Anselm's

manner and appearance that he accepted his kiss and his blessing, and gave him a safe conduct. The roads were deemed dangerous for travelling in the winter; so the rest of the season was spent at Lyons with the Archbishop Hugh, who was an old friend of Anselm. From Lyons he wrote a letter to Pope Urban, explaining the purpose of his coming; how he had spent four fruitless miserable years in the high office which had been forced upon him, how he had seen the church plundered and oppressed, how he had no hope of getting these evils redressed in England. He therefore sought the protection and counsel of the apostolic see. The bearers of the letter returned with a pressing invitation from the pope, and in the spring Anselm and his friends set forth. They preserved a strict incognito, for fear of robbers in the pay of the antipope Clement, and reached Rome in safety. Here they were warmly welcomed by the pope, and lodged in the Lateran. The day after they arrived there was a grand gathering of the Roman nobility at the papal palace, which Anselm attended. When he prostrated himself at the feet of the pontiff, Urban raised him up and embraced him, and made him sit by his side. He then introduced him to the assembly as the patriarch or pope of another world, a miracle of virtue and learning, the champion of the Roman see, yet so humble as to seek from the unworthy occupant the counsel which he himself was more fitted to give. In fact, Eadmer says Anselm was quite disconcerted by the pope's flattery. After the public reception Urban heard the narrative of his wrongs, and promised him his assistance (EADM. *Vit. Ans.* ii. 42; *Hist. Nov.* ii. 405-8).

Meanwhile the season was approaching when Rome was unhealthy for strangers, and Anselm was urged by the abbot of Telesse in Apulia, formerly one of his scholars at Bec, to take up his abode with him. This he did with the consent of the pope, and as the heat increased the abbot transferred him to the mountain village of Schiavi. The weary old man was enchanted with the pure cool air, the seclusion and repose of this sweet retreat. He resumed the simple studious habits which he had loved so well in his happy days at Bec, and he completed his treatise on the incarnation, the 'Cur Deus Homo?' which he had begun amidst all the turmoil of his life in England. He was obliged, however, to leave his retreat, in order to meet the pope in the camp of Duke Roger of Apulia, who was besieging Capua. Their quarters were close together, a little outside the actual camp. Eadmer tells us how all folk, including even the Saracens in the army of Count Roger of

Sicily, were charmed by Anselm. William of Malmesbury (*Gest. Pont.* 98) says that the Red King wrote to Duke Roger to try and prejudice him against Anselm. The duke, however, was so captivated by Anselm, that he besought him to take up his abode in Apulia, offering to bestow some of his best lands upon him if he did. To this Anselm would not consent, but he entreated the pope to relieve him of the archbishopric, in which he was convinced that he could do no good whilst William was on the throne, of whose outrages on religion and morals travellers continually brought fresh tidings. Urban, however, would not release him, and for the present he returned to Schiavi, where he remained until summoned to attend the council of Bari in October 1098. At the council of Bari the question of the 'procession of the Holy Ghost' was discussed with the Greek delegates. A hot debate arose. The pope referred to Anselm's work on the Incarnation, and presently called on Anselm himself to step forward and vindicate the true doctrine of the Holy Ghost before the assembly. An eager crowd thronged round the papal throne, immediately below which Anselm was placed. Urban then formally introduced him, and expatiated on the wrongs which had driven him from England. His speech on the doctrinal question was delivered the next day, and is described as a masterpiece of learning and power, for which he was publicly thanked by the pope; but we have no detailed report of it. The sympathy of the council with his troubles was so strong that they unanimously urged the excommunication of the Red King, which, according to Eadmer, the pope was only hindered from promulgating by the intercession of Anselm himself. Urban, however, was a wary man, and it may be doubted whether he intended more than a demonstration (*EADM. Vit. Ans.* ii. 45-9; *Hist. Nov.* ii. 408, 409, 413-16). Anselm and his friends accompanied the pope from Bari to Rome, and soon after their arrival shortly before Christmas, 1098, William of Warelwast appeared as advocate for the Red King. In a public audience Urban adopted a severe and threatening tone, telling him that if the king did not reinstate Anselm before the council to be held the next Easter he must expect to be excommunicated. William's agent, however, knew how to deal with the papal court. He tarried several days in Rome, and made good use of his time by a judicious distribution of gifts amongst the councillors of the pope. The result of his dealings was that the pope granted William a respite to the following Michaelmas. Anselm and his companions now began to see that they

were leaning upon a broken reed, and they asked leave to return to Lyons. But the pope insisted on their remaining for the great council to be held at Easter, and meanwhile paid Anselm all possible honour. When the council assembled in St. Peter's in April 1099, there was some curiosity to see where he would be seated, as no one present had ever seen an archbishop of Canterbury attend a general council at Rome. The pope ordered him to be placed in the seat of honour in the centre of the half-circle of prelates who sat on either side of the papal chair, and therefore immediately opposite himself. Decrees were passed or renewed against simony and clerical marriages, and anathema was pronounced against the layman who should bestow investiture of an ecclesiastical benefice, or the clerk who should receive it at his hands and become his man. This decree was flatly opposed to the 'customs' of England and Normandy, and became the occasion of the dispute which afterwards arose between Anselm and Henry I. When the canons were to be read in St. Peter's, the pope ordered Reinger, bishop of Lucca, a man of great stature and powerful voice, to read, so that all might hear. Reinger read a little way, then suddenly stopped, and burst forth into an indignant declamation upon the uselessness of passing laws when they did nothing to right a man who was the meek victim of tyrannical oppression. 'If you do not all know whom I mean,' he said, 'it is Anselm, archbishop of England,' and he ended by smiting the floor thrice with his staff, and uttering a groan through his teeth tightly clenched. 'Enough, enough! brother Reinger,' said the pope; 'good order shall be taken concerning this.' The whole scene reads like a piece of acting. Anselm clearly suspected it to be so. At any rate nothing came of the demonstration, and the next day Anselm left Rome, 'having obtained,' says his biographer, with subdued irony, 'nought of counsel or assistance save what I have related' (*Hist. Nov.* ii. 418-21). They reached Lyons in safety, travelling by a circuitous route to avoid the agents of the antipope, and were heartily welcomed by Archbishop Hugh. Anselm resided with him, and assisted him in his episcopal duties.

In the following July, 1099, Pope Urban died; and on 2 Aug. 1100 William fell in the New Forest, pierced by an arrow from an unknown hand. Anselm was sojourning at the monastery of God's House (Casa Dei), not far from Brioude in Auvergne, when the tidings of William's death reached him. It was brought by two monks, one from Canterbury, the other from Bec. At first he was stupefied by the shock, and then he broke into a flood of

tears. His friends were astonished at this burst of grief over such a man as William; but Anselm, in a voice broken by sobs, declared that he would rather have died himself than that the king should have perished by such a death. He then returned to Lyons, where another monk from Canterbury presently arrived, bearing a letter from the mother-church, imploring him to return and comfort his children now the tyrant was no more. Archbishop Hugh was most unwilling to part with him, but owned that it was his duty to go. Before he reached Cluny another messenger came, bringing a letter from the new king Henry and the lay lords, begging Anselm to return with all speed, and even chiding him for not coming sooner. Normandy was in a disturbed state, as Robert had just returned, and the Norman nobles were intriguing with him, or through him, against his brother. So Anselm, by Henry's advice, avoided Normandy on his journey to Whitsand, from which port he crossed to Dover. He landed on 23 Sept., and his return, after nearly three years' absence, was welcomed with transports of joy by the whole country. The hopes of the nation revived. But as regarded the relations between the king and the primate they speedily received a check. Anselm had returned, pledged, as he conceived, to obey the canons of the councils of Clermont, Bari, and Rome, which forbade clerics to receive investiture at the hands of laymen, or do homage to them for their benefices. A difficulty arose at once between him and Henry on this point. They met at Salisbury a few days after he had landed, and the king was cordial in his greeting; but the temporalities of the see of Canterbury being in his hands, he required Anselm to do homage for their restitution, according to the ancient custom of the country. Anselm replied that he could not do this in the face of the canons lately passed by the council of Rome. The king was grievously perplexed. He was most unwilling to give up the ancient rights of investiture and homage, but he was also most unwilling to quarrel with Anselm, and especially before he was firmly established on the throne. He therefore proposed a truce until the following Easter, during which envoys should be sent to Rome to induce the pope to relax the decrees in favour of the ancient custom of the realm, and meanwhile Anselm was to be reinstated in all the possessions of his see (*EADM. Hist. Nor.* iii. 424-5). Anselm consented, although with little hope of the pope's yielding. Personally he does not seem to have entertained any objection to the customs in question, to which he had himself formerly conformed. His opposition to the king was simply a mat-

ter of obedience to the Roman see. While matters were thus in a state of suspense, Anselm did the king a piece of good service. Henry was anxious to marry Matilda, whose English name was Eadgyth, the daughter of Malcolm, king of Scotland, and Margaret, his wife. Margaret was a granddaughter of Eadmund Ironside, and consequently an alliance with her daughter would connect Henry with the old royal line of England. But it was said by many that Matilda or Eadgyth was a nun, and therefore could not legally be married. Matilda, however, denied that she had taken any monastic vows. Her aunt Christina, a nun in the abbey of Romsey, to whose care she had been entrusted as a child, had made her wear the veil, and wished her to become a nun, but she had always refused. Anselm laid the case before a large assembly of clerics and laymen at Lambeth. Having heard the evidence of the maiden herself and of others, they decided that she was free. Anselm heard their reasons and approved their judgment. In the presence of a vast concourse which came to witness the royal marriage, he challenged any one who disputed its legality to come forward and prove his objection. A unanimous shout of approval was the response. Anselm then celebrated and blessed the marriage on 11 Nov. 1100. Matilda was his firm friend through all his difficulties, and constantly corresponded with him when he was absent from England (see esp. *Epist.* iii. 55).

Easter came (1100), but the envoys had not returned from Rome. The truce therefore between Henry and Anselm was extended, and meanwhile he rendered another good service to the king. Ralph Flambard, the infamous bishop of Durham, had escaped from the Tower, in which he was imprisoned soon after Henry's accession. He made for Normandy and stirred up Robert to attempt an invasion of England. It was a critical time for Henry. The chief men of Norman birth in England wavered in their allegiance. At the Whitsuntide gemot king and nobles met with mutual suspicion. Both sides looked to Anselm as a mediator, and the king holding his hand renewed the promise of good laws which he had made at his coronation. Robert landed at Portchester in July, and the armies met near Alton. Several of the Norman barons went over to Robert's side, but, mainly owing to the indefatigable exhortations, public and private, of the archbishop, the mass of the English army and the bishops remained loyal to Henry. The brothers held a parley and came to terms without fighting. Robert gave up England. Henry gave up Normandy

except Domfront, but it was only for a little time (EADM. *Hist.* Nov. ii. 426-31). At last the envoys returned from Rome. They brought a letter from Pope Paschal distinctly refusing to recognise Henry's claim to invest prelates by the delivery of the pastoral staff and ring. The will of the pope and the will of the king were thus placed in direct conflict. Henry was not a violent man like Rufus, and he did not wish to quarrel with Anselm, but he was cold-blooded and resolute. Anselm was summoned to court and again asked if he would do homage and consecrate the prelates whom the king invested. Anselm replied that he must abide by the decrees of the council at which he had been present. The king proposed that a second and more distinguished embassy should be sent to Rome representing both sides. On Anselm's side were his old friend and companion, Baldwin of Bec, and Alexander, a monk of Canterbury; on the side of the king were Gerard, archbishop of York, who also went to get his pallium, Herbert, bishop of Thetford, and Robert, bishop of Chester. The envoys found Paschal as inflexible as before. A letter in the same determined strain was sent to the king, and another to Anselm bidding him to persevere in his present attitude. On the return of the envoys an assembly of the great men of the realm was convened in London. An unconditional surrender was again demanded from Anselm. This he declared to be impossible in the face of the letter which he had received from the pope. Every one was allowed to read this letter. The letter to the king, on the contrary, was not made public. And now, to the bewilderment of all, the king's agents stepped forward and declared on their faith as bishops that the pope in a secret interview had bidden them tell the king that so long as he appointed good and pious prelates, and otherwise conducted himself as a good prince, the pope would not interfere with his claim to investiture, but the pope, they said, would not commit this to writing, lest other princes should quote it as a precedent. Anselm's agents expressed the greatest amazement at this announcement. The assembly was divided. Some maintained that the greatest credence must be given to letters bearing the pope's own seal and signature, others that the word of bishops must outweigh the authority of mere documents supported only by the testimony of paltry monks (*monachellorum*) unversed in secular affairs. In such a conflict of evidence and opinion there was clearly no alternative but to send yet another deputation to Rome to learn what the pope really had said. All that Anselm wanted to know was

the truth. He wrote to the pope (*Epist.* iii. 73), saying that he did not wish to doubt either the letter or the bishops. Let the pope either exempt England from the decrees of the council, or let him say that they were to be obeyed, and Anselm would let them drop or he would enforce them, even at the peril of his life. Meanwhile he consented that the king should act on the assumption that the story of the bishops was true, and invest prelates with the ring and staff, and further he consented to hold intercourse with such prelates, provided he was not required to consecrate them. The king lost no time in acting on this understanding. He gave the see of Sarum to his clerk Roger, who became one of the ablest chancellors of the realm, and Hereford to another Roger who had been the steward of his larder. During this period of compromise, about Michaelmas 1102, a large mixed council was held at Westminster for the reform of abuses ecclesiastical and moral. It was the sort of national synod for which Anselm had repeatedly asked in vain during the reign of Rufus. Several abbots were deposed for simony, canons were passed against the secular habits of the clergy, and especially against their marriage and concubinage. One decree was passed against the slave traffic in England, whereby it is said men were sold like brute beasts; others were directed against those gross forms of vice which had become common during the reign of the late king (*Hist. Nov.* ii. 438-9; WILL. MALM. *Gest. Pont.* i. 64). Henry seems to have violated the terms of the compromise with Anselm in asking him to consecrate the bishops whom he appointed and invested. Anselm of course refused, and Gerard of York, a timeserving courtier who was ready to consecrate anybody, was called upon to discharge the duty. But, to the general astonishment, some of the king's nominees now began to turn scrupulous. Reinhelm, bishop-elect of Hereford, sent back his ring and staff, and William Giffard, when on the point of being consecrated bishop of Winchester, declared that he would rather be spoiled of all his goods than wrongfully receive the rite at the hands of Gerard. The multitude which had come to witness the consecration applauded the resolution of William, but the king was highly displeased, and in spite of Anselm's intercession (*Ep.* iv. 126) William Giffard was banished.

About the middle of the following Lent, 1103, the king and Anselm met at Canterbury. The messengers had returned from Rome bringing an indignant repudiation by the pope of the story told by Gerard and the other prelates, and confirming the contents

of his letters in every particular. The king, however, still demanded submission from Anselm; his patience, he said, was worn out, he would brook no more delays, the pope had nothing to do with the rights which all his predecessors had enjoyed. Anselm was, as ever, respectful, but firm; he did not wish to deprive the king of his rights, but he could not, even to save his life, disobey the canons which he had with his own ears heard promulgated in the Roman council. For the moment the aspect of things seemed blacker than ever; men even began to fear for the personal safety of the primate, when suddenly, and with a mildness which makes one think that Henry had all along been assuming more sternness than he really felt, he suggested, almost besought, Anselm to go himself to Rome and try whether he could not induce the pope to give way. Anselm asked that the proposal might be reserved for the decision of the Easter gemot, which was then about to be held at Winchester. The assembly considered it and urged him to go. He replied that since it was their will he would go, weak and aged though he was. Anselm hastened back to Canterbury, and, setting out four days afterwards, embarked at Dover and crossed once more to Whitsand. He had not to suffer any indignities this time, but travelled in the king's peace, and throughout his absence friendly letters passed between him and the king. He was warmly welcomed everywhere, more especially, of course, at Bec, where he spent the summer on account of the risk to health of visiting Rome in the hot season. By the end of August he set out. At Rome he found his old opponent William of Warelwast come to act as the king's advocate. William pleaded so skilfully that he made a great impression on some of the pope's councillors, and boldly wound up an harangue by saying, 'Know all men present that not to save his kingdom will King Henry lose the investiture of the churches.' 'And before God, not to save his head will Pope Paschal let him have them,' was the answer. Nevertheless a moderately worded letter was despatched to Henry, informing him that though the rights of investiture could not be granted, and those who received it at his hands must be excommunicated, yet he himself should be exempted from excommunication and enjoy the exercise of all other ancestral customs. In fact it was intended to be a soothing letter, and the points at issue were somewhat veiled by compliments and congratulations to the king on the birth of his son. Meanwhile Anselm and his friends set out on their homeward journey. They were conducted

through the Apennines by the renowned Countess Matilda. At Placentia they were joined by William of Warelwast, who travelled with them over the Alps and then hastened to England, while Anselm went to Lyons to spend Christmas with his old friend the archbishop. Before they parted William told him that he had been bidden by the king to say that he felt the warmest regard for Anselm, and if Anselm would only be to the king all that his predecessor had been to Henry's predecessors he would be right gladly welcomed. 'Have you no more to say?' asked Anselm. 'I speak to a man of understanding,' was the reply. 'I know what you mean,' said Anselm, and so they parted. At Lyons Anselm sojourned for a year and a half. The king confiscated the revenues of the see of Canterbury, but two of Anselm's own men were appointed receivers, that the tenants might not be oppressed. Anselm was to be allowed whatever was convenient for his own needs, and the king continued to keep up an amicable correspondence with him. At the same time he sent another embassy to Rome. His aim seems to have been twofold. He wanted to persuade the pope to dispense with the canon against lay investiture in his favour, and meanwhile he hoped to persuade Anselm to act on the assumption that the pope would yield. He was not successful in either aim. The pope did not dare, even for the sake of securing Henry's support, openly to set aside the canons of a Roman council, although he was dilatory in action and hesitating in speech. Anselm, on the contrary, was as firm, clear, and straightforward as ever. In spite of reproachful or suppliant letters from England urging him to return to his bereaved church, he steadfastly refused until the point in dispute was settled one way or the other. He would be to Henry all that Lanfranc had been to Henry's father, if he could be put in Lanfranc's position, if the decrees which had been passed since Lanfranc's time were rescinded by the same authority which had issued them, not otherwise (*Epist.* iii. 93, 94, 95, 97, iv. 43, 44). The perfect straightforwardness of Anselm was in fact embarrassing both to Henry and the pope; neither of them wished to act with complete decision and honesty of purpose, nothing short of which would satisfy Anselm. He continually sent letters or messengers to the pope, but received nothing but consolatory promises which came to nothing, while from Henry he got nothing but polite excuses. At last he resolved upon an act which should force the question to a crisis. In the summer of 1105 he set out for Normandy, where the

king then was. On the way he heard that Adela, countess of Blois, sister of the king, was very ill. He turned his steps to Blois, and tarried there some days till she was convalescent. Then he told her that for the wrong which her brother had done to God and to him for two years and more he was going to excommunicate him. Adela was greatly distressed, and Henry himself was alarmed when he heard of Anselm's intention. It would tarnish his reputation to undergo such a sentence from a man of Anselm's character, and might strengthen the hands of his adversaries in the critical struggle in which he was then engaged for the possession of Normandy. Through the mediation of Adela an interview was arranged between him and Anselm at Laigle on 22 July 1105. Nothing could exceed the courtesy of Henry; he restored the revenues of the see, he implored the primate to return if only he would recognise those who had been invested by the king. But Anselm insisted that permission to do this must be given from Rome. This involved yet another embassy, and there was considerable delay in sending it. Henry meanwhile added to the list of his wrongs done to the church by levying heavy taxes upon it for his expenses in the war with Normandy. He began by exacting fines from the clergy who had disobeyed the canons against marriage, but, finding the sums so raised inadequate, he imposed the tax on the whole body. The clergy were in great distress, and besought the queen, 'good Queen Mold,' to plead for them with the king; but though moved to tears by their sad plight she dared not interfere. In this strait even the court bishops began to turn to Anselm for help. They wrote a piteous letter, saying that if only he would return they would stand by him and fight for the honour of Christ (*Ep.* iii. 121). Anselm wrote a letter of sympathy (iii. 122), mixed with some gently ironical congratulations on their having perceived at last the consequences of their subservience, and expressing his regret that he could not return, anxious as he was to do so, until the pope had decided the point in dispute between him and the king. Meanwhile he wrote a severe letter of reproof to Henry (*Ep.* iii. 109) for taking upon himself to punish priests, a duty which pertained to bishops only, and he warned him that the money so raised would not turn to his profit. At the same time he wrote to his archdeacon and to the prior and chapter of Canterbury, ordering the penalties of deprivation or excommunication to be enforced upon those clergy who infringed the canons concerning marriage (*Ep.* iii. 110-12). Henry replied

to Anselm in polite but evasive terms, expressing himself ready to make amends if he had offended, and promising that the archiepiscopal property should not be molested (*Hist. Nov.* iv. 460).

At length, in April 1106, William of Warelwast and Baldwin of Bec returned with the latest instructions of the pope. Anselm was now authorised to release from excommunication those who had broken the canons about investiture and homage. The judgment laid down no rule for the future, but it set Anselm free to return and renew intercourse with the offending bishops, and the king sent messengers to Anselm at Bec urging him to come without delay. He was detained, however, for some time, partly at Bec, partly at Jumièges, by alarming illness. Henry expressed the greatest anxiety; all his wants were to be supplied, and the king would shortly cross to Normandy and pay him a visit. His life was despaired of, but just as he seemed on the brink of death he began to recover, and on the feast of the Assumption he was well enough to see the king at Bec. At this interview the king pledged himself to release the churches henceforth from the vexatious burdens laid on them by his brother, to exact no more fines from the clergy, to compensate in the course of three years those who had already paid them, and to restore everything which he had kept in his hands belonging to the see of Canterbury. Anselm now started for England, and landing at Dover was greeted with enthusiastic joy, in which the queen took a prominent part, going to meet him, and then travelling in advance in order to arrange for his comfort at the places where he halted. Henry remained in Normandy, and before long wrote to Anselm announcing his decisive victory at Tenchebrai over his brother Robert, and the complete subjugation of Normandy, 28 Sept. 1106 (*Hist. Nov.* iv. 464).

The final and formal settlement of the long dispute concerning investiture was made at a large gemot held in London on 1 Aug. 1107. It was debated for three days by the king and the bishops, Anselm being absent. Some were for still insisting on the old custom, but Pope Paschal had conceded the question of homage, and so the king on his part was the more willing to concede the right of investiture. In the presence, therefore, of Anselm and a great multitude of witnesses, the king granted and decreed that thenceforth no man in England should be invested with bishopric or abbey by staff and ring either by the hand of the king or any other layman, and Anselm on his side promised that no one elected to a prelacy

should be debarred from consecration on account of having done homage to the king. In accordance with this compromise appointments were immediately made to several churches which had long been destitute of incumbents without any investiture by staff and ring from lay hands. On Sunday, the 11th, Anselm consecrated several men with whom he had not been able to hold communion to bishoprics, including William Giffard to Winchester, and Reinhelm to Hereford, who had refused to be consecrated by Gerard of York, Roger to Sarum, and William of Warelwast, so long his opponent but now his friend, to Exeter (*Hist. Nov.* iv. 466). Anselm did not long survive the termination of his protracted struggle for the rights and liberties of the church; and during this brief remainder of his life he was repeatedly attacked by severe illness. But in the intervals he was actively engaged, and we see the same indomitable spirit at work. He not only laboured to enforce the canons of London against simony and the marriage of the clergy, but largely through his efforts the king was moved to put down false coining with a strong hand, and a stricter discipline was maintained amongst his followers, whose acts of violence, when he made his progresses, had long been a cause of misery to the people. Anselm also promoted the erection of Ely into an episcopal see to relieve the great diocese of Lincoln, and he upheld the paramount dignity of the see of Canterbury against the pretensions of Thomas, archbishop elect of York, who tried to evade making his profession of obedience, but was compelled to do so by a decree passed in a gemot at London. Nor were his literary labours diminished; he carried on a wide correspondence with distinguished persons, clerical and lay, who sought his counsel in all parts of Christendom, including Alexander, king of the Scots, Murdach, king of the Irish, and Baldwin, king of Jerusalem; and he wrote a treatise 'concerning the agreement of foreknowledge, predestination, and the grace of God with free will.' The composition of this treatise was delayed by frequent interruptions of illness and increasing weakness. At last he became so feeble that he had to be carried in a litter from place to place instead of riding on horseback. Till within four days of his death he was carried daily into his chapel to attend mass. Then he took to his bed. On Palm Sunday, being told by one of those who stood around him that they thought he was about to leave the world to keep his Master's Easter court, he replied, 'If His will be so, I shall gladly obey it;

but if He pleased rather that I should yet remain amongst you till I have solved a question which I am turning in my mind about the origin of the soul, I should receive it thankfully; for I know not any one who will finish it after I am gone.' This wish, however, was not to be fulfilled. On Thursday he could no longer speak intelligibly, and on Wednesday, 21 April, at dawn he passed away, in the year 1109, the sixteenth of his pontificate and the seventy-sixth of his life. He was buried in the cathedral at Canterbury, next his friend Lanfranc, in the body of the church in front of the great rood; but his remains were afterwards removed to the chapel, beneath the south-east tower, which bears his name, and there they now rest (*EADMER, Vit. Ans.* ii. c. 7; *Hist. Nov.* iv. 467, *ad finem*). If guileless simplicity, spotless integrity, faithful zeal, and patient suffering for righteousness sake give any one a claim to be called 'saint,' Anselm certainly deserved the title. And it was by virtue of these qualities, combined with inflexible firmness, courage, and straightforward honesty of purpose, more than by his intellectual gifts, great as they were, that he won the day in his struggle first with lawless insolence, and then with diplomatic craft. After his death he became the object of increasing veneration to men of his own time, and to later generations. Dante, in his vision of Paradise, saw him 'among the spirits of light and power in the sphere of the sun.' A halo of miraculous legend gathered round the story of his life. Yet, strange to say, the first demand for his canonisation made by Thomas Becket was not successful, and he was not formally placed on the roll of saints till 1494, when he suffered what has been well called the 'indignity of canonisation' at the hands of Roderic Borgia, Pope Alexander VI (*CHURCH'S Anselm*, p. 301).

A catalogue of Anselm's writings is given below. His fame as a philosopher and theologian rests mainly upon three treatises—the 'Monologion,' the 'Proslogion,' and the 'Cur Deus Homo?'

The 'Monologion,' which, as the name implies, is in the form of a continuous discourse as distinguished from a dialogue, is an attempt to prove the existence and nature of God by pure reason without the aid of Scripture or of any appeal to authority. It is an application of the Platonic theory of 'ideas' to the demonstration of christian doctrine. Some efforts in this direction had been made by the (so-called) Dionysius the Areopagite, whose writings had become well known in western Christendom through a

translation made by John Scotus Erigena. St. Augustine worked out the method more systematically in his treatise on the Trinity (lib. viii. c. 3), but not with such completeness and precision as Anselm, whose treatise is one close and compact chain of reasoning, every link being, so to speak, tightly fastened to that which precedes and follows it. Starting from the contemplation of sensible objects, he propounds the question whether the goodness in all good things, although known by different names, such as justice in a man, strength or swiftness in a horse, and so on, comes from one source or divers. All varieties of excellence, by whatever name they may be called, are resolvable at last into a few simple elements—the good, the beautiful, the great, the useful. Hence he arrives at the conclusion that all things to which any of these qualities in various degrees and forms are attributed must derive them from something which is in itself always the same, which is in itself absolutely and unchangeably good and great. As also there is a difference in natures, some being better than others, as a horse is superior to a dog, and a man to a horse, there must be one nature so superior to all others that it cannot be exceeded by any; otherwise there would be no end to the series, which is absurd. This supreme nature must be the author of its own existence: it must be ‘per se’ and ‘ex se,’ ‘by means of itself’ and ‘from itself;’ it must be ‘per se,’ for if it was by means of another that other would be the greater, which is contrary to the supposition; if it were out of nothing, then it must be brought out of nothing either by itself or by another; not by itself, for then itself would be prior to itself, which is absurd, nor by another, for then it would not be the highest nature of all. In this way he proves the eternal self-existence of the divine nature. And by similar rigorously logical methods he goes on to prove the existence and nature of the Word, and the Holy Spirit.

In the ‘Proslogion,’ so called because it is in the form of an address to God, he endeavours to prove the existence of the Deity by a shorter method—by a single deductive argument instead of a lengthened inductive chain. He had long been anxious, he says, to discover such an argument, and vexed that it continually eluded him, until at last, to his great joy, it was suddenly revealed to him. The point of departure in this case was not the contemplation of the outer but of the inner world, not of sensible objects but of the mind of man. He could prove, he thought, the being of a God out of the

very saying of the fool that there was no God. That very denial involved the idea of a Being than whom no greater can be conceived; but if no greater can be conceived, then He must exist, since existence is a necessary point of perfection. This is substantially the argument which was employed by Descartes six hundred years afterwards, although there is no evidence that Descartes had any knowledge of Anselm’s writings. Leibnitz, however, is inclined to suspect that he had, because he thinks that both in the style and matter of Descartes’ writings he detects a larger obligation to other authors than Descartes chose to acknowledge (*Epist. ad Bierlingium*, 1710, v. 361, 393). It is to be noted that neither Anselm nor Descartes seeks to prove the existence of God in order to *produce* belief, but, starting from belief as a fact, their aim is to show that reason independently followed necessarily confirms the convictions of faith. It is remarkable that in the period between Anselm and Descartes no one seems to have adopted the same method. Anselm cannot properly be considered as the first or forerunner of the schoolmen; their method was not Platonic, but Aristotelian, a method far better adapted than Anselm’s to the ordinary mind of the middle ages. In boldness, indeed, and originality of thought, Anselm was too far ahead of the intellectual standard of his day to be thoroughly understood or appreciated. The aim of the ‘Cur Deus Homo?’ is to prove the necessity of the incarnation as the only means whereby the debt of obedience due from man to God could be discharged, an adequate reparation made for his offences, and the immortality of body and soul recovered for which he was originally destined. Unlike the other two treatises, it is in the form of a dialogue, which renders it easier reading, although the reasoning is not less close and cogent. There is no apparent lack of finish in the work, although Anselm in his preface says that he should have made several additions if he could have secured some quiet leisure, but that it was begun in England amidst great distress of heart—‘in magna cordis tribulatione’—and finished during his sojourn in the province of Capua.

If his philosophical treatises exhibit the profundity, the daring originality, and masterly grasp of his intellect, his meditations and prayers reveal the spiritual side of his nature, the deep humility of his faith, and the fervour of his love towards God, while his letters show him in his more human aspect—his tender sympathy and affection, his courtesy and respectfulness, combined

with firmness in maintaining what he believed to be right, and in reproving what he believed to be wrong. Thus his writings completely verify the statement of William of Malmesbury (i. § 47) that he was thoroughly spiritual and industriously learned—'penitus sanctus, anxie doctus.'

The first complete and satisfactory edition of Anselm's works was that of Gabriel Gerberon (Paris, 1721), a monk of the congregation of St. Maur. He says in his preface that hitherto most of the copies of his works were so mutilated or disfigured by corrections that they were scarcely intelligible. He framed a new text by a careful collation of as many manuscripts as he could collect, and an examination of existing printed editions. These were—two bearing no mark of date or place of issue; one printed at Nuremberg, 1491; two at Paris, 1544 and 1549; one at Venice, 1549; two at Cologne, 1578 and 1612; and one at Lyons, 1680. Gerberon arranged the works in his edition in three divisions:—

1. The theological and philosophical, including the Monologion, the Prosligion, the attack of Gaunilo, a monk of Marmoutiers, on the same, and Anselm's reply; the 'De Fide Trinitatis,' the 'De Processione Spiritus Sancti contra Græcos,' 'Dialogus de Casu Diaboli,' 'Cur Deus Homo,' 'De Conceptu Virginali et Originali Peccato,' 'Dialogus de Veritate,' 'Liber de Voluntate,' 'Dialogus de Libero Arbitrio,' 'De Concordiâ Præscientiæ et Prædestinationis,' 'De Azymo et Fermentato,' 'De Sacramentorum Diversitate (Waleranni epistola),' 'Responsio ad Waleranni Querelas,' 'Offendiculum Sacerdotum,' 'De Nuptiis Consanguineorum,' 'Dialogus de Grammatico,' 'De Voluntate Dei.'

2. Devotional and hortatory: 'Homilies and Exhortations,' 'Sermo de Passione Domini,' 'Exhortatio ad Contemptum Temporalium et Desiderium Æternorum,' 'Admonitio Morienti,' 'Duo Carmina de Contemptu Mundi,' 'Liber Meditationum et Orationum xxi,' 'Meditatio super Miserere,' 'De Pace et Concordiâ,' 'Tractatus Asceticus,' 'Oratio dicenda ante Perceptionem Corporis et Sanguinis Domini,' 'Salutatio ad Jesum Christum ex anecdotis sacris de Levis,' 'Hymni et Psalterium de S. Mariâ,' 'Versus de Lanfranco,' 'De Verbis Anselmi,' 'Quædam Dicta utilia ex dictis S. Anselmi.'

3. Four books of letters.

The Abbé Migne's edition, in two volumes, imperial octavo, is a reproduction of Gerberon's edition, revised, including the footnotes of 'Henschenius,' and the 'Vita' and 'Historia Novorum' of Eadmer. The 'various

readings' are in this edition placed at the bottom of each page instead of being put at the end of the works, as in Gerberon's edition. The references in this article are to Migne's edition.

[The primary authorities for the life of Anselm are the two works by Eadmer, a monk of Canterbury, afterwards bishop-elect of St. Andrews, which were edited by Mr. Rule in the Rolls Series in 1884. After Anselm became primate, Eadmer was his domestic chaplain and most intimate friend, and was an eye-witness of most of the events which he relates. He first wrote the 'Historia Novorum,' which might be called a 'Life and Times of Anselm,' and the 'Vita Anselmi,' which deals more with the inner personal life and character of his subject. William of Malmesbury (*Gesta Pontificum*, lib. i.) and John of Salisbury, Bishop of Chartres (*Life of Anselm* in 'Anglia Sacra,' vol. ii.), although they supply a few details of their own, avowedly draw their accounts mainly from Eadmer, and Odoericus Vitalis, in his scanty notices (*Hist. Eccles.* lib. x. and xi.), refers his readers to the same source for further information. Next to the memoirs of Eadmer in value are Anselm's own letters, upwards of four hundred in number, which throw much light not only on his life but on the history of the times. The principal modern biographies are by: 1. Möhler, formerly Roman catholic professor at Munich, a fragment only, but good as far as it goes, translated into English in 1842. 2. Hasse, protestant professor at Bonn, 1843, 1852. 3. Franck, Tübingen, 1842. 4. Charles de Rémusat, Paris, 1853, and second edition 1868, an excellent biography with an able and lucid criticism of Anselm's philosophy. In connection with the latter may be mentioned a critique on the philosophy by M. Emile Saisset, in a volume of miscellanies, 'Mélange d'Histoire, de Morale, et de Critique,' which was originally written as a review of M. Rémusat's work for the 'Revue des Deux-Mondes,' also a translation of the Monologion and Prosligion, with an introductory essay by H. Bouchitté, in 'Le Rationalisme Chrétien.' 5. M. Charma, Paris, 1853, a short but interesting study with a companion one on Lanfranc. 6. Montalembert, a short fragment of much beauty, 1844. 7. Crozet Mouchet (Paris and Tournai), 1859, valuable for what relates to the early life at Aosta. 8. R. W. Church, dean of St. Paul's, London, a masterly sketch, accurate, vigorous, and graceful, and as full as was possible within the prescribed limits of the series for which it was written, Macmillan's Sunday Library. 9. Mr. E. A. Freeman has dealt twice over most carefully with the history of Anselm, first in his 'History of the Norman Conquest,' vols. iii., iv. and v. (also notices in i. 355, 564, and ii. 25, 215, 217), and again more fully in his 'History of the Reign of William Rufus,' vol. i. ch. iv., and vol. ii. ch. vii. (see also an interesting note on Anselm's letters, Y in appendix). His narratives are especially valuable for the minute and exact references

which they contain to original authorities, and for bringing out some points hardly noticed elsewhere, especially the bearing on Anselm's appeal to Rome of the former appeal made by Bishop William of St. Calais. 10. Mr. Martin Rule's 'Life and Times of St. Anselm' (2 vols. demy octavo, 1883) contains a good deal of useful matter, the fruit of long and careful labour, but is marred by irrelevant digressions and a cumbrous style. His prejudices, also, as a warm partisan of the papacy, sometimes distort his view of simple facts.] W. R. W. S.

ANSLAY, BRIAN (*f.* 1521), yeoman of the wine cellar to Henry VIII, translated the 'Tresor de la Cité des Dames' of Christine de Pise, under the title of the 'Boke of the Cyte of Ladies,' 1521. In a preliminary copy of verses the printer, Henry Pepwell, states that the translation was published at the instance of the Earl of Kent. The book consists of a number of short stories about famous women, much of the material being drawn from Boccaccio. There are some notices of Anslay in 'Letters and Papers of the Reign of Henry VIII' (art. 4231, 23, et seq.). A 'Bryan Anslay, Esquier, late of Lee, in the county of Kent . . . served Queene Elizabeth as one of ye band of Gentlemen Pensioners to her Ma<sup>tie</sup> the space of XXX<sup>vii</sup> years; and, dying 10 July 1604, was buried in the church of Lee, Kent, where a memorial slab, still legible, gives an account of him and his family. He was probably the son of Anslay the translator.

[Ellis's Historical Sketches, ii. 20; Athenæum for 2 Sept. 1876, where the inscription on the younger Anslay is printed in full, by Mr. J. W. Hales, who has reprinted it in his *Essays and Notes on Shakespeare*, p. 271.] A. H. B.

ANSON, GEORGE, LORD ANSON (1697-1762), admiral of the fleet, was the second son of William Anson, of Shugborough, in the parish of Colwich, in Staffordshire, and was born there on 23 April 1697; his mother Isabella, daughter of Charles Carrier, of Wirksworth, in Derbyshire, was sister of Janet, the wife of Thomas Parker, afterwards Lord Parker and Earl of Macclesfield, and in 1718 created lord chancellor. On 2 Feb. 1711-12, Anson entered on board the *Ruby*, commanded by Captain Peter Chamberlen, as a volunteer, and on 27 March followed Captain Chamberlen to the Monmouth, where he remained till 27 June 1713, when he was discharged, as the ship was about to pay off. All attempts to trace his service during the next three years have been unsuccessful; but in May 1716 he was serving as midshipman or supernumerary in the fleet bound for the Baltic under Sir John Norris, who wrote from

the Nore on 17 May that a lieutenant of the Hampshire had requested to be put on half-pay, and that he intended 'to commission Mr. George Anson, who is cousin to my Lord Parker.' In 1716 the most brilliant merit conceivable was all the more brilliant in the nephew of the lord chief justice.

He continued in the Hampshire till she paid off in December 1717, and in March 1718 was appointed second lieutenant of the *Montagu*, and was in her in the action off Cape Passaro on 31 July 1718. On 2 Oct. 1719, he was transferred to the *Barfleur*, Sir George Byng's flagship; and in June 1722 was made a commander, and appointed to the *Weasel* sloop, which was employed in the North Sea against the Dutch smugglers. In February 1723-4, he was advanced to the rank of captain, appointed to the *Scarborough* frigate, and sent out to South Carolina, with instructions to protect the coast and the commerce against pirates and Spanish cruisers, which were already practising the system of annoyance which ultimately led to the war of 1739. They did not at that time, however, menace the Carolina coast; and the general nature of Anson's service was to cruise to and from the Bahamas. On one occasion he had intelligence of a Spanish boat which had been molesting some of the English traders, but proceeding to look for her, he touched at Providence, where he learned that she had been already taken 'by a sloop bound for Jamaica, who carried her there, where the people were condemned for pirating and hanged' (Anson to Burchett, 16 Jan. 1724-5). A few months later he received orders to act against the Spaniards wherever he met them, but the little war of 1726 passed over without any incident in Anson's career. In July 1728, on the death of Captain Morris of the *Garland*, he moved into that ship, and sent home the *Scarborough*, which was badly in want of refitting; but he himself was kept out two years longer, and did not return to England till July 1730. His long service on the coast of Carolina, however useful, was in no way brilliant; but he would seem to have been popular with the colonists, who still preserve his memory embalmed in the name of Anson county; and a Carolina lady, writing to her sister in London, could say nothing worse of him than that it was 'averred' he loved his bottle, and was far from being a woman-hater; whilst, on the other hand, he was handsome, good-natured, polite, well bred, generous, and humane; passionately fond of music, and 'so old-fashioned as to make some profession of religion' (BARROW'S *Life*, 14).

In 1731 he commanded the *Diamond* frigate

in the Channel; and in February 1731-2, being appointed to the *Squirrel*, was sent out to his old station on the coast of Carolina, whence he returned in June 1735; the *Squirrel* was paid off, and Anson, for the first time, was on shore for two years and a half.

In December 1737 he was appointed to the *Centurion*, of 60 guns, and sent to the west coast of Africa for the protection of the English trade against the encroachments of the French, after which he crossed over to the West Indies, and was recalled thence in the autumn of 1739. It had been determined to give him the command of one of two squadrons that were to be sent to the Pacific; and when it was found necessary to curtail the plan and send only one, that one was put under the orders of Anson with the nominal rank of commodore. The establishment of the navy, after many years of peace and decay, was at a very low ebb, and the expense of fitting out the fleet for the West Indies and the coast of Spain swallowed up all the resources of the admiralty. There was thus great difficulty in equipping and manning the ships intended for the Pacific; whilst instead of the regiment of soldiers which had been told off for this service, a number of pensioners, old, worn-out, and crippled, were put on board, together with a number of newly enlisted and wholly undrilled marines. All this caused great delay, and it was not till 18 Sept. 1740, after eight months' preparation, that the little squadron of six ships put to sea from St. Helens. Arriving in the neighbourhood of Cape Horn in the stormy season, the ships were severely buffeted; two were driven back, and never got round at all; one, the *Wager*, was driven ashore and totally lost [see BYRON, JOHN]; the *Centurion* narrowly escaped a similar fate; and it was not till 11 June 1741 that she arrived at Juan Fernandez, with not more than thirty men, officers included, fit for duty. The *Gloucester*, of 50 guns, arrived some time after in still worse plight, as also the *Trial* brig; and after refitting and resting till September, it was found that out of the 961 men who had left England in these three ships, 626 had died, leaving 335 men and boys, a number quite insufficient for even the *Centurion* alone. Anson, however, determined to do what he could to effect the purpose of his voyage, and, with a hollow pretence of strength, he managed to destroy the Spanish commerce, blockade the ports, and sack and burn the town of Païta. He then hoped to intercept the yearly ship from Manila for Acapulco; but finding that he had missed her, and that there was no chance

of her sailing on the return voyage while he was on the coast, he made sail for China. The *Trial* had long since been condemned; the *Gloucester* now proved to be unseaworthy, and was cleared out and set on fire; the *Centurion*, alone remained, and again, as off Cape Horn, was visited by scurvy in its worst forms. It was only after refreshing and resting for two months at Tinian, that her men, sorely diminished in numbers, were able to take the ship on to Macao; and, after refitting there, they sailed to cruise off Manila in quest of the *Acapulco* ship. The *Centurion* had now less than 200 men left of the original 961; but some Spanish negroes and Indians, as well as some Dutchmen and Lascars, had been picked up at Macao, and she had actually on board, of all creeds and colours, 227. With this reduced crew, however, she met the great galleon on 20 June 1743, and captured her. In size and number of men the *Spaniard* was vastly superior to the *Centurion*; but she was lumbered with merchandise, and of her 600 men few were trained to arms or to act together, whilst during the last cruise Anson had taken very great pains in exercising his men. The amount of treasure was enormous; and Anson, deciding that nothing more was to be done, resolved to return to England round the Cape of Good Hope. Good fortune favoured him at the last, and as he came into the Channel a thick fog hid him from the French fleet which was cruising in the Soundings; he passed safely through it, and anchored at Spithead on 15 June 1744. The treasure which he had brought home amounted to about 500,000*l.* This was landed at Portsmouth, sent up to London, and paraded in triumph through the city in a procession of thirty-two wagons, the ship's company marching with colours flying and band playing.

In ready acknowledgment of Anson's good service and good fortune, the admiralty at once promoted him to the rank of rear-admiral, but they refused to confirm an acting commission as captain of the *Centurion*, which Anson, claiming to act as commodore, had given to his first lieutenant, Mr. Peircy Brett, whilst in China. They did indeed specially promote Mr. Brett, but Anson rejected the compromise, returned his own commission—which was accordingly cancelled—and went on half pay as a captain. As his share of the prize money had rendered him a wealthy man, quite independent of the service, he would certainly not have accepted any further appointment from the Earl of Winchelsea, but the change of ministry a few months later brought in a new admiralty, with the Duke of Bedford at its

head, and Anson as one of its members. Its very first act was to reverse the decision of the former board, and to confirm the commission which Anson had given to Captain Brett (the patent of the board is dated 28 Dec. 1744; the minute confirming Brett's commission is dated 29 Dec.), and on 20 April 1745, Anson was re-promoted to flag rank, this time as rear-admiral of the white.

For a year and a half Anson continued in London, taking a leading share in the work of the admiralty, and, though a very junior member of the board, acting directly as the Duke of Bedford's representative in all matters of executive administration. He was M.P. for Hedon, Yorkshire, from 1745 to 1747. Beyond the old friendship existing between Lord Chancellor Hardwicke and the Macclesfield family it is now impossible to trace the particular political interest which Anson enjoyed.

In July 1746 Vice-Admiral Martin resigned the command of the Channel fleet; and Anson, now vice-admiral of the blue, undertook the duty and hoisted his flag on board the Yarmouth on 9 Aug. The fleet was very short-handed, for in Martin's last cruise bad provisions and bad beer, scurvy, fever, and small-pox, had caused the death or sickness of an enormous number of men (Martin to Corbett, 3 July 1746; JOANNIS HUXHAMI *Observationes de Aere et Morbis epidemicis* (1773), p. 341); and now Admiral Lestock, fitting out for the expedition to Lorient, had carried off every seaman that he could find (Anson to Bedford, 11 Aug. 1746, in *Bedford Correspondence*, i. 137). It was thus the end of the month before Anson could get the fleet to sea; and he then cruised to the westward, off Ushant, hoping to intercept on its return the French fleet, which had gone to Chebucto (the present Halifax) under the Duke d'Enville. The terrible fate of that expedition was not yet fully known; and, though Anson put into Plymouth at the end of October, it was only for a supply of water. 'My men,' he wrote to the Duke of Bedford (28 Oct.), 'begin to be very sickly, and most of the ships very foul, but the hope of destroying some of the enemy's fleet will make me risk health and everything else.' On 4 Nov. he wrote that he hoped to be complete and at sea in two or three days, and to have better fortune in his next cruise. 'I am surprised,' he added, 'that Mr. Lestock, who had such certain intelligence, from the French ships burnt in the bay, of the shattered condition of D'Enville's ships, should not cruise off Ushant for them, as his squadron was not in want of anything' (*Bedford Corr.* i. 174).

Notwithstanding Anson's haste to get to sea, the French hospital ship and a sloop were all that he fell in with. It was by this time certainly known that the French squadron was in an almost helpless condition, and that if it could be met with, it must be captured. It received, however, warning from a Dutch merchant ship of the neighbourhood of the English fleet, and by keeping to the southward got in-shore of it, and so safely to Brest. The next spring Anson was more fortunate. The French were preparing to send out another expedition to America, and at the same time a squadron to the East Indies. On 29 April the two sailed together from the Roadstead of Aix, under the command of M. de la Jonquière, whose energetic behaviour and clever escape in bringing home the shattered remains of the fleet the year before had pointed him out as a capable and a lucky officer. But Anson had early and fairly exact knowledge of the projected expedition, and, in his double capacity of lord of the admiralty and commander-in-chief of the fleet, took care to have with him an overpowering force and such a number of cruisers that it was wellnigh impossible for the enemy to escape him. With his own flag on board the Prince George, of 90 guns, and having with him Rear-Admiral Warren in the Devonshire, Captain Boscawen in the Namur, and others, numbering altogether fourteen ships of the line, he stationed himself off Cape Finisterre, and continued there during the greater part of April, exercising his fleet in forming line and in manœuvres of battle till then absolutely unknown. On the morning of 3 May the French fleet was sighted, and was successfully pursued. Anson at first made the signal for line of battle, but presently, perceiving that the French were of very inferior force, he made the signal for a general chase and fell on them pell-mell. La Jonquière placed his convoy to leeward, in charge of two frigates, and drew up his squadron in line to meet the enemy; but including two 40-gun ships, a 50-gun ship with only half her guns on board, and four Indiamen, he numbered only ten ships in all. The ships of war fought well, but were speedily overpowered; the Indiamen, with valuable cargoes on board, endeavoured to make off, but were captured afterwards. The defence, however, was sufficient to permit the greater part of the convoy to escape during the night. Amongst the captured ships were the Gloire, of 40 guns, and the Invincible, of 74. When M. de Saint-George, the captain of the latter, went on board the Prince George to surrender his sword to Anson, he addressed him with, 'Monsieur, vous avez vaincu l'Invin-

cible, et la Gloire vous suit.' Saint-George returned to England with Anson, and between the two there sprang up a friendship and correspondence which continued till death ended it.

Anson's great superiority of force was mainly due to his own care and forethought; and he made such good use of it as utterly to overwhelm the enemy. A French fleet had been utterly defeated, and some 300,000*l.* in specie had been captured and carried through London in triumph. 'I ought to be satisfied,' wrote Anson to the Duke of Bedford, 'but wish he (La Jonquière) had had a little more strength, though this is the best stroke that has been made upon the French since La Hogue.' It was not only a national but a political success, and the ministry, accepting it as such, heaped rewards on the victors. Anson was raised to the peerage as Baron Anson of Soberton, in Hampshire; Warren, the second in command, was made a knight of the Bath; and Boscawen, the senior captain, though of only ten years' standing, was specially included in the next promotion of admirals.

In February 1747-8 the Duke of Bedford was appointed secretary of state, and Lord Sandwich became first lord of the admiralty. The duke had virtually assigned the executive administration of the navy to Anson, but now, in the absence of Sandwich in Germany, Lord Vere Beauclerk took the direction of affairs. As captain, as admiral, and in the admiralty patent, Beauclerk was the senior of the two, and may naturally have felt some annoyance at the preference previously given to his junior. It was now Anson's turn to feel aggrieved; he wrote to Lord Sandwich on 15 Feb.: 'In your absence Lord Vere may make as much a cipher of me as he pleases, which you will easily imagine must be very disagreeable to me after the share the Duke of Bedford has allowed me in the direction of affairs afloat and the success which has attended his grace's administration of naval affairs in every branch of the department. Besides, I think the world will see me in a very disadvantageous light. . . . He has been in my way ever since I came into the world. Two years ago I endeavoured to shove him before me, but there was no moving him from the earth to his proper element, and to continue now in his rear, both at land and sea, I own I cannot well endure' (BARROW, p. 201). To this, on 19 March, Lord Sandwich replied: 'I think that so far from Lord Vere being able to make a cipher of you, that you must put him absolutely in that situation himself. I always told you that whenever I got to the head of

the admiralty it should, except in the name and show of it, be the same thing as if you were there yourself. . . . If Lord Vere's purposes are disagreeable to you, it is very easy to prevent them, by desiring first to know my opinion. . . . You may be assured I will do no act whatever but directly through your hands, which will plainly show people where the power centres, and I think indisputably fix you in the entire management of affairs' (*ibid.* p. 204).

It was shortly afterwards, 25 April 1748, that Anson was married to Lady Elizabeth Yorke, daughter of the lord chancellor. The marriage brought wealth as well as influence. 'The whole portion,' wrote Lord Hardwicke to his intended son-in-law, a few days before the marriage, 'shall be paid either in bank-notes, or in my draft upon the bank, as you like best.' Notwithstanding the frequent indelicate jokes of Horace Walpole, there is no reason to suppose that the marriage was other than a happy one. No children followed, although a letter from Lord Hardwicke, dated 30 Aug. 1748 (BARROW, p. 208), seems to imply that some such result was expected. If so, however, it ended in disappointment.

Anson's public life was meantime devoted to reorganising certain weak points in the navy which the war had brought to light. The marine regiments were to be broken, a new corps of marines under the jurisdiction of the admiralty was to be formed, the administration of the dockyards was to be improved, and, most important of all, a new code of articles of war was to be drawn up and passed through parliament. Within the next few years all these things were done, and done effectually. Dockyard administration no doubt remained for very many years exceedingly corrupt, though not, we may believe, so atrociously bad as in former years. The building of ships, too, was improved, and the establishment of guns and all stores put on a more satisfactory footing. The articles of war, as passed in 1749, remained the law of the service till 1865; and the corps of marines, as then planned, and definitely formed in 1755, is the same as at the present day. Of these several measures the chief part of the credit must attach to Anson, who, as we have seen, was placed by Lord Sandwich at the head of the executive, and who in June 1751 became actually, as well as virtually, first lord of the admiralty. This post he filled until the change of ministry in November 1756, and it was thus during his administration that the fleet under Admiral John Byng sailed for the Mediterranean in March, and was defeated off Cape Mola on

20 May 1756. Anson's whole life and career are utterly opposed to the idea of his having, in this matter, erred through carelessness. We are forced, therefore, to the conclusion that in not ordering a larger fleet to the Mediterranean, he was honestly mistaken, and that in appointing Admiral Byng to the command he was under some undiscoverable influence. We know now that the French, in the spring of 1756, had no idea of invading England or Ireland; but the ministry certainly thought it necessary to keep an overwhelming force at home or in the Bay of Biscay. But the main cause of the failure was the misconduct of Byng, and Anson is directly concerned in the appointment, as commander-in-chief, of a man whom events proved to be utterly unfit for the office. It can only be said now, that this had not been proved in March 1756, that Byng was a man of high-service rank who might almost claim the highest command, and that there was nothing whatever known against him. That afterwards, on Byng's failure, Anson should not be inclined to show him any undue consideration, or to err on the side of lenity, was natural enough. He very probably regarded Byng with feelings akin to personal hatred, as the incarnation of the one great mistake he had made in a prosperous career, and was quite willing that the offender should feel the full weight of the law; but, as a matter of fact, Anson had nothing whatever to do with Byng's trial and execution, which took place under a ministry with which he had no connection.

Having gone out of office in November 1756, he did not re-enter till the end of June 1757, when he was again appointed first lord of the admiralty in the Newcastle-Pitt administration. He was thus the chief of the navy when the bootless expedition against Rochefort was sent out in the autumn of that year; and in 1758, when the petty incursions on the coast of France, as at St. Malo or Cherbourg, ended disastrously at St. Cas. In these matters Anson took no part, except in providing the covering force of men-of-war, and in taking command personally of the main fleet, which meantime blockaded Brest, in order to allay some irritation felt by Sir Edward Hawke. It was his last service at sea. During the next year, 1759, this fleet was commanded by Hawke, and put an end to the necessity of blockading Brest by demolishing the French fleet in Quiberon Bay. Anson's share in this brilliant victory was merely that of the home administrator by whose care the fleet was fitted out and supported; he had also the same share in the conquest of Canada and in many other of

the events which rendered the year 1759 'wonderful,' not only in Garrick's celebrated song but in the current language of the day (WALPOLE'S *Letters*, iii. 269, ed. Cunningham, 1861), and the years immediately succeeding memorable in English annals.

In June 1761 Anson was advanced to the high rank of admiral of the fleet; but, except to bring over the new queen, Princess Charlotte of Mecklenburg-Strelitz, he never hoisted the distinguishing flag of union at the main. He died quite suddenly on 6 June 1762 at his country seat of Moor Park in Hertfordshire, and was buried in the family vault at Colwich. The title died with him. His wife had died two years before, on 1 June 1760, and his very large property went to his sister Janetta, wife of Mr. Sambrooke Adams, whose son George afterwards inherited also the family estate of Shugborough, and took the name of Anson. The son of George Adams was in 1806 created Viscount Anson and Baron Soberton, and his grandson in 1831 was made Earl of Lichfield.

Anson is undoubtedly best known to posterity by his voyage round the world, the history of which, as written, or rather edited, by his chaplain, Mr. Walters, or in different abridgments, has always been a popular book even among schoolboys. It is to that voyage, and the temper, the tact, and the judgment which he displayed under very trying circumstances, that his further advancement was mainly due. Anson may have been cold in his affections, studious of his own interest, and even selfish; calm, placid, possibly—as his enemies might say—fish-like in his temperament; but he was a careful, painstaking, thoughtful man, of singularly accurate judgment; and much of the more important work which fell to him was work in which a warmer-hearted, warmer-tempered, more loveable man might well have broken down. And one point which tells enormously in Anson's favour is the fact that so many young officers, trained under him in the *Centurion*, were afterwards honourably known. In the whole history of our navy there is not another instance of so many juniors from one ship rising to distinction, men like Saunders, Saumarez, Peirey Brett, Denis, Keppel, Hyde Parker, John Campbell.

Sir John Barrow has expressed surprise 'that neither private affection nor public gratitude has ever raised a monument to one who shed such lustre on the name.' This is not strictly correct, for there is in Shugborough Park a sort of triumphal arch which was erected to his memory by his elder brother Thomas. The colossal lion, once the

figure-head of the Centurion, after standing for many years in the Anson ward of Greenwich Hospital (BARROW, p. 419), was in 1870 transferred to the playground of the hospital school, and fell to pieces from decay in 1873. Copies of a portrait of Anson, by Sir Joshua Reynolds, are in the National Portrait Gallery, and in the Painted Hall at Greenwich. The original, belonging to Lord Lichfield, was exhibited at the Grosvenor Gallery, 1884.

[The Life of Anson by Sir John Barrow is by no means free from serious faults both of omission and commission, and is absolutely crowded with mistakes of sheer carelessness, e.g. the mispellings of names. The well-known 'Voyage round the World' bears on the title-page of the 1st edition (1748) 'compiled from papers and other materials of the Right Honourable George Anson, and published under his direction by Richard Walter, M.A., chaplain of his Majesty's ship Centurion in that expedition.' Many years afterwards a claim was made that the work was written, not by Mr. Walter, but by Mr. Benjamin Robins (Robins's Mathematical Tracts (1761), i., xxxvi, xli); 'this has never been substantiated except by mere assertion; and though Robins was certainly employed as sub-editor and assistant (Peirce Brett to Cleveland, 3 Jan. 1747-8), there is no reason to doubt the plain statement on the title-page, which was always believed by Walter's children and grandchildren (Notes and Queries, 5th series, iv. 78, 100) and was directly sanctioned by Anson. But in any case, whether edited by Walter or Robins, the book was virtually written by Anson himself, as stated on the title-page, and as affirmed by Anson's friends (Barrow, p. 408). The Journal of a Voyage to the South Seas, by Pascoe Thomas, teacher of the mathematics on board the Centurion (1745), is an independent account, not always so favourable to Anson. Correspondence of the fourth Duke of Bedford, edited by Lord John Russell (1842), vol. i.; Brit. Mus. MSS. Add. 16955-6-7; and Official Letters and Documents in the Public Record Office.]

J. K. L.

ANSON, GEORGE (1797-1857), general, born 13 Oct. 1797, was second son of the first Viscount Anson, and brother of the first Earl of Lichfield. He entered the army at an early age, in the 3rd (or Scots Fusilier) Guards, with which regiment he served at Waterloo. In 1818, while still an officer in the guards, he was elected M.P. for South Staffordshire, and sat for many years, holding in succession the political offices of principal storekeeper of the ordnance and clerk of the ordnance. In 1853, having meanwhile attained the rank of major-general in the army, he was appointed to command a division in Bengal, and in the following year

succeeded to the command of the Madras army, from which post he was advanced to that of commander-in-chief in India early in 1856. General Anson was holding this important command when the mutiny of the Bengal army took place. Hastening down from Simla, whither he had gone only a few weeks previously to recruit his health, he collected a force at Amballa, and marched with it against Delhi, but being attacked by cholera at Karnál died at that place on 27 May 1857. General Anson was a man of unquestionable talent, and although he had never seen war except at Waterloo, where he served as a mere youth, those who knew him best had very high expectations that he would distinguish himself in his profession if an opportunity offered. It has been alleged that he showed vacillation and want of promptitude when preparing for the march upon Delhi; but the allegation has been amply refuted by a distinguished officer (Sir Henry Norman) who held an important position on the staff of the army at the time, and had the best means of forming a judgment. Sir Henry says that, 'suddenly placed in a more difficult position than has probably ever fallen to the lot of a British commander,' General Anson 'met the crisis with fortitude and with a calm endeavour to restore our rule where it had disappeared, and to maintain it where it still existed.' General Anson married in 1830 Isabella, daughter of the first Lord Forester, who survived him less than two years.

ANSPACH, ELIZABETH, MARGRAVINE OF (1750-1828), dramatist, was the youngest daughter of Augustus, fourth Earl of Berkeley, by his countess Elizabeth, daughter of Henry Drax, of Charborough, in the county of Dorset. In 1767, she married Mr. William Craven, afterwards the sixth Earl of Craven, and of this union six children were born. Lord and Lady Craven separated in 1783, and her ladyship left England for France, and travelled in Italy, Austria, Poland, Russia, Turkey, and Greece. In 1789 she published in quarto her 'Journey through the Crimea to Constantinople,' related in a series of letters. Subsequently she visited Anspach, and took up her abode with Christian Frederick Charles Alexander, Margrave of Brandenburg, Anspach, and Bareith, Duke of Prussia, and Count of Sayn. She wrote to her husband that she was to be treated as the Margrave's sister. She wrote little plays in French for the Court theatre—'La

Folle du Jour' and 'Abdoul et Nourjad'—and, further to entertain the Margrave, translated into French the English comedy of 'She would and she would not.' Lord Craven dying in September 1791, she was married to the margrave in the following month. In 1792 the margrave sold his principality to the King of Prussia, and settled in England, having purchased Brandenburg House, Hammersmith, and the house and estate of Benham, in Berkshire, which had long been possessed by the Craven family. The margrave died and was buried at Benham in 1806. Walpole, who always expressed his admiration of Lady Craven, and even addressed impromptu stanzas to her, furnished the Rev. William Mason with a lively account of the production of her comedy, the 'Miniature Picture,' at Drury Lane, in May 1780: 'She went to it herself the second night in form, sat in the middle of the front row of the stage-box, much dressed with a profusion of white bugles and plumes, to receive the public homage due to her sex and loveliness. . . . It was amazing to see so young a woman entirely possess herself; but there is such an integrity and frankness in her consciousness of her own beauty and talents, that she speaks of them with a *naïveté* as if she had no property in them, but only wore them as gifts of the gods. Lord Craven, on the contrary, was quite agitated by his fondness for her and with impatience at the bad performance.' Nevertheless three years later they separated. In 1785 Walpole wrote of Lady Craven to Sir Horace Mann: 'She has, I fear, been *infiniment* indiscreet, but what is that to you or me? She is very pretty, has parts, and is good-natured to the greatest degree; has not a grain of malice or mischief, almost always the associates, in women, of tender hearts, and never has been an enemy but to herself.' Her first comedy, the 'Somnambule,' an adaptation from the French, was printed at Walpole's private press at Strawberry Hill in 1778, and acted for a charitable purpose at Newmarket. In 1779 she published 'Modern Anecdotes of the Family of Kinvervankotsprakenatchdern, a Tale for Christmas,' a caricature of German pomposity, dramatised by W. P. Andrews. Others of Lady Craven's plays are the 'Silver Tankard,' a musical farce, produced at the Haymarket in 1781; and the 'Princess of Georgia,' presented on the occasion of Fawcett's benefit at Covent Garden in 1799. At the private theatre attached to Brandenburg House the margravine produced in 1794 a comedy called the 'Yorkshire Ghost;' in 1799 a pantomime called 'Puss in Boots;' in 1805 a comedy called 'Love in a Convent,' and other works. For

these plays the margravine composed the music. As she writes in her Memoirs, published in 1826: 'My taste for music and poetry and my style of imagination in writing, chastened by experience, were great sources of delight to me. . . . Our expenses were enormous.' The margravine often took part in the performances at Brandenburg House. In 1796 the comedy of the 'Provoked Wife' was presented there, Mrs. Abington lending her services as Lady Fanciful, while the margravine appeared as Lady Brute. The comedy was reduced to three acts, and great importance was assigned to the character assumed by the margravine. Mrs. Abington, however, insisted that certain of the excisions should be restored, so that her part of Lady Fanciful should not suffer. The margravine died at Naples in 1828.

[Memoirs of the Margravine of Anspach, 1826; Walpole's Letters, 1859; Biographia Dramatica, 1812; Genest's History of the Stage, 1832.]

D. C.

ANSTED, DAVID THOMAS, F.R.S. (1814-1880), a geologist of considerable reputation in his time, was born in London in 1814, educated in a London school and at Jesus College, Cambridge, where he took his degree in 1836, being afterwards elected a fellow of his college. The earlier part of his life was devoted to educational work. He was professor of geology at King's College, London, and lecturer at Addiscombe and at the Civil Engineering College at Putney. From 1844 to 1847 he acted as assistant-secretary of the Geological Society, and for many years he edited its quarterly journal. In later life, from about 1850, he turned to the practical applications of geology in connection with mining, engineering, water-supply, and the like, and was constantly consulted on such matters both in this country and abroad. He was a prolific author, and some of his geological writings for a time kept their place as standard authorities, while others of a popular character attained a wide circulation. Among the former may be mentioned his 'Geology' (1844), and among the latter his 'Great Stone Book of Nature' (1863). He also wrote several books of travel, besides contributing a great number of papers to the Geological Society, the British Association, the Society of Arts, and other societies. His death took place at his residence near Woodbridge, Suffolk, in May 1880.

ANSTER, JOHN (1793-1867), regius professor of civil law in the university of Dublin, and translator of Goethe's 'Faust,' was son of John Anster, Esq., of Charleville, co. Cork, where he was born in 1793. He entered Trinity College, Dublin, in 1810, and obtained a scholarship in 1814. In 1815 he printed in Dublin a collection of short poems, but thought fit to have it suppressed soon after publication. Four years later he obtained a prize offered by the authorities of Trinity College for a poem on the death of the Princess Charlotte; and in the same year, 1819, appeared his volume of 'Poems, with some Translations from the German' (Blackwood, Edinburgh, pp. 244), which included, with several pieces from the suppressed pamphlet, his prize poem, a blank verse poem entitled 'The Times' (written immediately after the battle of Waterloo), which shows the influence of Coleridge, 'Zamri,' a fragment of an Eastern tale, in Byron's manner, and various translations, the most important of these being a rendering of Goethe's 'Bride of Corinth.' In 1820 appeared in 'Blackwood's Magazine' translations by Anster of some passages from Goethe's 'Faust,' the first rendering into English of any part of that poem. In Easter term, 1824, Anster was called to the Irish bar; in the following year he took the degree of doctor of laws. He was married in 1832 to Elizabeth, eldest daughter of W. Blacker Bennett, Esq., of Castle Crea, co. Limerick. The complete translation of the first part of 'Faust,' with notes, appeared in 1835 ('Faustus, a Dramatic Mystery,' Longman, Rees, and Co., pp. 491). Its high merits were at once recognised (see *Edinburgh Review*, October 1835). Occasionally somewhat lacking in conciseness, it is throughout the translation of a poet by a poet. Two years later he published 'Xenola: Poems, including translations from Schiller and De la Motte Fouqué' (Dublin, Milliken and Son, pp. 174). It reprints several of the poems of the 1815 volume, the principal addition being translated scenes from Fouqué's drama, the 'Pilgrimage.' In the same year, 1837, Dr. Anster was appointed registrar to the high court of admiralty in Ireland. From 1837 to 1856 he was a frequent contributor of prose and verse to the 'Dublin University Magazine.' Among these articles, mainly historical and literary, may be found a series on Italian poets. At a later date, from 1847 onward, he contributed to the 'North British Review,' first dealing with Irish affairs at a critical moment, 1847-49, then choosing literary topics ('Life and Writings of Shelley,' 'Swift and his Biographers,' 'Southey's Life and Correspond-

ence,' 'Life and Letters of Campbell,' 'Autobiography of Leigh Hunt,' 'Dante'). In 1841 Dr. Anster was granted a pension on the civil list. In 1850 he was elected regius professor of civil law in the university of Dublin, a position which he held until his death. His introductory lecture, 'On the Study of the Roman Civil Law,' has been published (Dublin, Hodges and Smith, 1851, pp. 51). Many fragments of the second part of 'Faust' having been rendered into verse by Anster, 'a member of my family,' he writes, 'became interested in the subject, and felt it desirable to arrange such passages as could be found among papers disregarded and almost forgotten by me. This accident led me to complete the poem.' 'Faustus, the Second Part, from the German of Goethe,' with copious notes, was published in 1864 (London, Longmans and Co., pp. 485). While adhering more closely to the original than did the translation of the first part, it possesses a like poetical quality (reviewed in *Saturday Review*, 1 Oct. 1864). The first part, long out of print in England, was twice reprinted in Germany during Anster's life. For some time before his death he was engaged in revising his translation for a third German edition, which appeared in the Tauchnitz series (Leipzig, 1867) after the translator's death. Dr. Anster died in Dublin, 9 June 1867, aged 73, leaving two sons and three daughters. His social charm, kindly wit, and wide literary culture rendered Anster a delightful companion. A portrait of him at the age of forty-six will be found in the 'Dublin University Magazine,' November 1839. To Will's 'Lives of Illustrious Irishmen' Anster contributed the life of Gerald, sixteenth Earl of Desmond.

[Gent. Mag. August 1867; Dr. Waller, in *Imperial Dict. of Biog.*; materials furnished by Miss Anster.] E. D.

ANSTAY, CHRISTOPHER (1724-1805), poet, was born on 31 Oct. 1724. He was the only son of the Rev. Christopher Anstey, D.D., of Brinkley in Cambridgeshire, sometime fellow of St. John's College, Cambridge. He went to school at Bury St. Edmunds, and afterwards to Eton as an oppidan. In 1742 he succeeded to a scholarship at King's College, and distinguished himself by the Tripos verses he wrote for the Cambridge commencement in 1745. In the same year he was admitted fellow of King's, and in 1746 took his bachelor's degree. The leading part which he played in opposing certain alterations of the college regulations had the effect of preventing him from obtaining his master of arts degree. To this

he refers in the Epilogue to the 'New Bath Guide':

Granta, sweet Granta, where studious of ease,  
Seven years did I sleep, and then lost my degrees.

Besides the Tripos verses above referred to, he had distinguished himself at Cambridge by a Latin poem on the peace of 1748. He continued to be a fellow of King's, and occasionally resided there until 1754, when his mother died, and having succeeded to the family estates, he resigned his fellowship.

In 1756 he married Ann, third daughter of Felix Calvert, Esq., of Albury Hall in Hertfordshire, and for many years seems to have combined the cultivation of letters with the pursuits of a country gentleman. A bilious fever, partly brought on by the death of his only sister—the Miss Anstey of Mrs. Montagu's letters—led to his visiting Bath, where later he fixed his home. In 1751 Gray had published his famous 'Elegy,' and, in 1762, in conjunction with Dr. Roberts of King's, Anstey made the first translation of it into Latin—a translation which had the advantage of Gray's criticisms and the good fortune to elicit an interesting letter from the poet, part of which is given in Anstey's 'Works' (Introduction, pp. xv-xvi, ed. 1808). From 1762 to 1766 Anstey published nothing. In 1766, however, appeared the famous series of letters in rhyme entitled the 'New Bath Guide, or Memoirs of the B—r—d [Blunderhead] Family, in a series of Poetical Epistles.' It was composed at the author's country seat of Trumpington, and printed in quarto at Cambridge. Its success was instantaneous. Walpole enthusiastically describes it thus: 'It is a set of letters in verse, in all kind of verses, describing the life at Bath, and incidentally everything else; but so much wit, so much humour, fun, and poetry, so much originality, never met together before. Then the man has a better ear than Dryden or Handel. *Apròpos* to Dryden, he has burlesqued his St. Cecilia, that you will never read it again without laughing. There is a description of a milliner's box in all the terms of landscape, *painted lawns and chequered shades*, a Moravian ode, and a Methodist ditty, that are incomparable, and the best names that ever were composed' (*Letter to Montagu*, 20 June 1766). Gray, too, writes to Wharton (26 Aug. 1766): 'Have you read the "New Bath Guide"? It is the only thing in fashion, and is a new and original kind of humour.' The 'new and original kind of humour' has by this time grown somewhat ancient in the metres of Barham and Moore and a hundred others, and the nineteenth century reader would scarcely

endorse Walpole's view of the 'Methodist ditty,' which even in Anstey's day was sometimes pasted down by the scrupulous; but there can be no doubt of the contemporary popularity of the book, or its clever ridicule of fashion and her freaks. Dodsley, who, after the appearance of the second edition, paid the author 200*l.* for the copyright, had made so much money by it ten years later that he gave it back to him. Smollett was at Bath in 1766-7, and it is admitted, even by his biographers, that he was indebted to the 'New Bath Guide' for something of the scheme of 'Humphry Clinker.'

Anstey never repeated the success of the 'New Bath Guide.' His reputation as a rhymester and humorist attracted attention to his subsequent performances, but they have neither the freshness nor the vivacity of his first effort. In 1767 he published an elegy upon the Marquis of Tavistock, who died by a fall from his horse, and in the same year appeared 'The Patriot,' a 'Pindaric epistle' on prize-fighting, addressed to the notorious bruiser Buckhorse. In 1770, in order to educate his children, he removed to Bath permanently, and was one of the first residents in the Crescent. He continued to write verse at intervals, producing, among other pieces, 'A Serious Alarm to the People of Bath' [1772]; 'An Election Ball,' 1776 (in the 'Bath Guide' vein); 'The Priest Dissected,' an exceptionally virulent satire; 'Envy,' 1778; 'Liberality, or the Decayed Macaroni'; and various occasional verses. The 'Election Ball' and 'Priest Dissected' were contributed to that classic vase set up by Mrs. (afterwards Lady) Miller at Batheaston (*Letter to Conway and Lady Aylesbury*, 15 Jan. 1775). The 'Election Ball' was illustrated with six copper-plates by C. W. Bampfylde.

Anstey died in 1805, aged 81, and was buried in Walcot Church, Bath. A monument was afterwards erected to him in Poets' Corner.

[Poetical Works of the late Christopher Anstey, Esq., with some Account of the Life, and Writings of the Author by his Son, John Anstey, Esq., 1808.] A. D.

ANSTEY, JOHN (d. 1819), poet, and second son of Christopher Anstey, was a barrister of Lincoln's Inn and a commissioner for auditing public accounts. Under the pseudonym of 'John Surrebutter,' he wrote 'a didactic poem' in 1796, entitled 'The Pleader's Guide,' further described as 'containing the conduct of a suit at law, with the arguments of Counsellor Botherum and Counsellor Boreum, in an action between John-a-Gull and John-a-Gudgeon for

assault and battery at a late contested election.' It has a great deal of humour, though chiefly of a legal kind. Porson is said to have known it by heart, and Lord Campbell quotes it in his 'Lives of the Justices.' John Anstey also edited his father's works in 1808 [see ANSTEX, CHRISTOPHER].

[Notes and Queries, 3rd series, ii. 475; Gent. Mag. lxxxix. part ii. 569.] A. D.

**ANSTEY, THOMAS CHISHOLM** (1816-1873), lawyer and politician, who took a prominent part in various political controversies, was the son of one of the earliest settlers in Van Diemen's Land (Tasmania), and was born at London in 1816. He received his education at University College, London (opened in 1828), and in Hilary term 1839 was called to the bar at the Middle Temple. Although he had no personal relations with Oxford, the Oxford movement greatly affected him, and he was one of the earliest converts to Roman Catholicism that it produced. With the passionate enthusiasm that characterised his public life, he became at once an uncompromising champion of the political interests of the Roman Catholics in England and Ireland. Shortly after his conversion he was appointed professor of law and jurisprudence at the Roman Catholic College of Prior Park, near Bath, and a series of six lectures delivered there on the laws and constitution of England was published by him in 1845. He issued about the same time many pamphlets on the legal and political position of the Roman Catholics, one of which was entitled 'A Guide to the Laws affecting Roman Catholics' (1842), and another 'The Queen's Supremacy considered in its relation with the Roman Catholics in England' (1850). He also contributed frequently to the 'Dublin Magazine,' then recently started under the joint superintendence of Cardinal Newman, Daniel O'Connell, and Henry Bagshawe. On resigning his professorship, he appears to have turned his attention almost exclusively to politics. Ireland mainly interested him, and he was a violent supporter of the extreme section of O'Connell's followers. In 1846 he denounced the illegality of the arrest and imprisonment of W. Smith O'Brien by order of the House of Commons, for refusing to serve on a parliamentary committee, in a short paper reviewing the legal aspect of the question; and in 1847 his advocacy of advanced views on Irish questions was rewarded by his election as member of parliament for Youghal. In the House of Commons he rapidly made himself notorious by his incessant and intemperate attacks on Lord Palmerston.

Every step taken by the minister in foreign policy was decried by Anstey, 'not merely as mistaken or unprincipled in itself, but as part of a deliberate scheme for selling us to the despots of the continent, and destroying the liberties of England and Europe.' In his first session he attacked Palmerston's negotiations in connection with the treaty of Adrianople in a speech of six hours' duration. Upon almost every subject that came before parliament, and especially on Irish and colonial affairs, Anstey addressed the house; but his command of language and unusual facility as a speaker did not prevent him becoming 'a malcontent of the highest bore-power.' His political programme, on his entrance into parliament, included the repeal not only of the Irish, but also of the Scotch union, the abolition of excise duties, the reduction of the customs, and the repeal of the currency laws, and he never lost what he imagined to be an opportunity to ventilate his views on these topics. In the House of Commons he found few supporters; but Mr. David Urquhart and Anstey frequently acted together on questions of foreign policy. Ridiculed repeatedly in 'Punch,' Anstey continued to press his views on the parliament to which he was returned; but on its dissolution in 1852 he failed in his candidature for Bedford and his parliamentary life ended.

Although his political conduct hardly seemed to give him any claim to government office, in 1854 Anstey was nominated attorney-general of Hongkong; but his distrust in the value of almost all existing political institutions was there only confirmed. According to his own account he found abuses imbedded in the whole government of the colony which he resolved to root out. The police, he declared, connived at Chinese piracy and at a large number of other irregularities practised by the Chinese of the district. In pursuit, therefore, of radical reforms in the administration of the colony, Anstey came into serious collision with Sir John Bowring, the governor, and many of his subordinates; after protracted disputes he was suspended in 1858 from his post by Sir John, and the suspension was confirmed by the home government. On his return to England in 1859 Anstey represented himself as the victim of a serious political injustice, and the matter was brought before parliament by Mr. Edwin James. Anstey himself stated his view of the case in an elaborate pamphlet containing a number of letters addressed by him to the Duke of Newcastle, the colonial secretary at the time. But his grievance excited little interest, and Anstey retired to India, to practise at the Bombay bar. There

he rapidly achieved great success, and filled a temporary vacancy on the bench in 1865. His rapidity of decision pleasurably astonished the suitors of the court; but a too vigorous denunciation of the alleged commercial immorality of the presidency of Bengal led him into controversies with all the superior officials, and he was compelled to withdraw from his judicial appointment. The year 1866 he spent in England, and threw himself with his wonted energy into the agitation then proceeding for parliamentary reform. In a tract entitled 'A Plea for the Unrepresented for the Restitution of the Franchise,' he declared himself in favour of manhood suffrage, and attempted to prove that all limitations of the franchise were due to class-legislation, and were usurpations of original popular rights. Lord Houghton, although he disagreed with its conclusions, characterised the pamphlet as 'a valuable contribution to the argumentative and historical literature of reform' (*Essays on Reform*, p. 49). In another tract, published in 1867, Anstey severely criticised Disraeli's Reform Act of 1867; and during that and the following year he contributed three important papers to the 'Transactions' of the Juridical Society—one on Blackstone's theory of the omnipotence of Parliament (iii. 305-39), another on judicial oaths as administered to heathen witnesses (iii. 371-401), in which Anstey advocated the abolition of all oaths; and a third on the competence of colonial legislatures to enact laws in derogation of common liability and common right (iii. 401-57). About the close of 1868 Anstey, who had sought in vain a practice at the English bar, returned to Bombay, and reassumed his former prominent position at the bar there. He died in India on 12 Aug. 1873, and was deeply lamented by the native population of Bombay, whether Parsees, Hindoos, or Mahomedans, to whom he had always been ready to render legal assistance. In spite of his pugnacious disposition and unseemly quarrels, and in spite of his strange addiction to multifarious crotchets, 'a real high honesty of purpose' seems to have lain at the bottom of his extravagances. His aims were invariably legitimate enough, but he rarely took rational measures to attain their fulfilment.

[Times, 15 Aug. 1873; Pall Mall Gazette, 3 Sept. 1873; Times of India, 14 Aug. 1873; Tablet, 16 Aug. 1873; Weekly Register, 16 Aug. 1873; Hansard's Parliamentary Debates, 1847-1852; Brit. Mus. Cat.] S. L.

ANSTICE, JOSEPH (1808-1836), classical scholar, was born in 1808. He was educated at Westminster School and Christ

Church, Oxford. He took his B.A. on 3 Feb. 1831, and M.A. on 2 April 1835. In 1831 he was appointed professor of classical literature in King's College, London, a post which he resigned in 1835 from ill-health. He died on 29 Feb. 1836 at Torquay. He published: 1. 'Richard Cœur de Lion' (prize poem), 1828. 2. 'Introductory Lecture at King's College, London,' 1831. 3. 'Selections from the Choric Poetry of the Greek Dramatic Writers, translated into English Verse,' 1832. 4. 'The Influence of the Roman Conquests upon Literature and the Arts in Rome' (in Oxford English Prize Essays), 1836. 5. 'The Child's Christian Year,' 1841, was partly his work.

[Gent. Mag. for May 1836, N.S., v. 552; Josiah Miller's Our Hymns, 1866, p. 377.] A. G.

ANSTIE, FRANCIS EDMUND (1833-1874), physician, was born at Devizes, Wiltshire, 11 Dec. 1833, the son of Mr. Paul Anstie, a manufacturer belonging to a family long notable for their attachment to liberal principles. He was educated at a private school till the age of sixteen, when he was apprenticed to his cousin, Mr. Thomas Anstie, a medical practitioner, with whom he remained three years. In 1853 he entered the medical department of King's College, London, where his teachers were Sir William Fergusson, Mr. Bowman, and especially Dr. R. B. Todd, whose doctrines and practice produced a permanent impression upon Anstie's mind. He became M.R.C.S. and L.S.A. in 1856, was M.B. London in 1857, M.D. 1859. He was admitted a member of the College of Physicians in 1859, fellow 1865. In 1860 he was elected assistant physician to the Westminster Hospital, but did not become full physician till 1873. He was lecturer at that school, first on forensic medicine, afterwards for many years on materia medica, and for a short time on medicine. In 1862 Anstie married a daughter of Mr. Wass of Cromford, Derbyshire, whom he left a widow with a son and two daughters.

On his first entrance into professional life Anstie was occupied in administering chloroform for the operations of Sir William Fergusson; but he soon went into practice as a physician, and became very fully occupied in hospital work and in journalism, being for some years a member of the editorial staff of the 'Lancet'; while in the last few years of his life he was beginning to get a good consulting practice. Dr. Anstie's life was cut short by an illness contracted in the course of a sanitary inspection. Some strange cases of fatal disease having occurred in the schools of the Patriotic Fund at Wandsworth, Anstie

was called in to make an inspection of the buildings and investigate the causes of the epidemic. In making a post-mortem examination he received a slight wound, from the effects of which he died on 12 Sept. 1874. The sudden death of a man so full of energy and promise by a wound received in the discharge of duty caused an acute and painful sensation throughout his own profession and the public. Shortly afterwards a large number of his personal friends and others raised a memorial fund in his honour, which was applied for the benefit of his family.

Dr. Anstie was a skilful physician, an eager investigator, and a vigorous writer. Literary work connected with medicine, in addition to regular journalism, occupied much of his energy during his whole professional life. His activity was mainly directed in three lines—in the advancement of therapeutics, in questions of public health, and in the study of nervous diseases. In therapeutics he began with investigating the action of alcohol on the body in health and disease; and in this he was a pupil of Dr. R. B. Todd, one of whose leading principles was the use of stimulants in medicine. After writing scientific and popular papers on the subject (in the 'London Medical Review,' 1862, and the 'Cornhill Magazine' respectively), Anstie brought out in 1864 his important work on 'Stimulants and Narcotics,' containing the result of experiments, observations, and literary research, and these subjects continued to occupy his attention till the last year of his life.

In 1868 he became joint-editor (and in the next year sole editor) of the 'Practitioner,' a new journal intended to advance the scientific study of therapeutics. The special character and importance of this journal, which has done much to invigorate the study of therapeutics in this country, were of Anstie's creation.

In questions of public health Anstie was warmly interested; and he took an important part in initiating two important public reforms. In 1864 certain scandals connected with the administration of the poor-law infirmaries attracted public attention, and induced the proprietors of the 'Lancet' to appoint a commission, consisting of Dr. Anstie, Mr. Ernest Hart, and Dr. Carr, to report on the subject. Anstie took the largest part in examining the London infirmaries, and wrote the report which appeared in the 'Lancet' 1 July 1865. Others followed, and one on the state of Farnham workhouse, published in 1867, led to an inquiry by the Poor Law Board, which justified the report of the 'Lancet'

commissioners. These inquiries may justly be regarded as the starting-point of the movement of reform which has of late years greatly improved the system of poor-law medical relief. In 1874 Anstie brought before the College of Physicians a motion that the college should petition the prime minister to provide some remedy for the injurious overcrowding of the poor in London, which the introduction of certain railways and improvements had lately aggravated. The petition, being adopted and sent in, was largely influential in inducing the then home secretary, Mr. Cross, to bring in a bill in parliament which became law as an 'Act for facilitating the Improvement of the Dwellings of the Working Classes in large Towns.' In this momentous question, the solution of which has not yet been found, Anstie deserves honourable mention as a pioneer.

On diseases of the nervous system Anstie wrote several memoirs, and finally a book on 'Neuralgia and the Diseases which resemble it,' London, 1871, on which his friends would be inclined to rest his reputation. He also contributed an article on the same subject to Reynolds's 'System of Medicine.' The views which he expounded in both works were to a large extent original, and doubtless open to criticism; but many of his observations are of permanent value. In 1867 he gave two lectures at the College of Physicians on the sphygmograph.

There can be no doubt, however, that the completeness of his scientific work was much interfered with by his multifarious occupations and the ceaseless literary activity which circumstances imposed upon him. Though finding little time for elaborate research, he was a zealous advocate of new and more accurate methods, and did much not only to make known the results of investigation, but to stimulate and sustain the scientific movement in medicine.

At the time of his death Anstie's reputation was rapidly growing, and was as great in America as at home. It is no secret that brilliant offers were made to induce him to accept a professorship and hospital appointment in that country, which family reasons, among others, induced him to decline. In 1874 he took part in the foundation of the Medical School for Women, and acted with great energy as the first dean of the school.

Anstie was a man of singularly attractive character. He was warm-hearted and generous, a firm friend and an honourable opponent. Though as a reformer he was often engaged in controversy, he gained the regard of the best among his antagonists; one of whom wrote after his death: 'It was impossible to

mistake the ardour of the man, or to doubt the complete and very unusual disinterestedness with which he threw himself into all his work.'

Besides the works mentioned above, he wrote a very large number of papers and articles, some signed, some anonymous. Among the former were: 1. 'Lectures on Diseases of the Nervous System' (Lancet, 1872-73). 2. Articles in Reynolds's 'System of Medicine,' vol. ii. 1868: Alcoholism, Neuralgia, and Hypochondriasis—the latter jointly with Sir William Gull; *ibid.* vol. iii. 1871: 'Pleurisy, Pleurodynia, Hydrothorax, Pneumothorax, and Hepatalgia.' 4. 'On the Hereditary Connection between certain Nervous Diseases' (Journal of Mental Science, Jan. 1872). 5. 'Notes on Epidemics, for the use of the Public,' 1866. Several medical papers in the Practitioner.

[Memoir by Dr. Buzzard (his brother-in-law), Practitioner, Jan. 1876; Lancet, 19 Sept. 1874.]  
J. F. P.

ANSTIS, JOHN, the elder (1669-1744), heraldic writer and Garter king of arms, was born at St. Neots, Cornwall, 28 (or 29) Sept. 1669, entered Exeter College, Oxford, in 1685, and was admitted to the Inner Temple in 1688. Of a good family, and possessed of considerable fortune, Anstis was elected one of the members for St. Germans to the parliament of 1702. As a strong tory, he voted for the bill for the prevention of occasional conformity, and his name appeared among the 'tackers' in the prints of the time. In 1703 Anstis was appointed deputy-general to the auditors of the imprest (an office which he never executed), and one of the principal commissioners of prizes. On 2 April 1714 he received a reversionary patent for the office of Garter. In a letter to the lord treasurer, dated 14 March 1711-12, he appears to be referring to the grant: 'I have a certain information it would be ended forthwith if the lord treasurer would honour me by speaking to her majesty at this time, which, in behalf of the Duke of Norfolk, I most earnestly desire, and humbly beg your lordship's assistance therein' (NOBLE'S *History of the College of Arms*). From 1711 to 1713 Anstis represented St. Maw's, and in the last parliament of Queen Anne was returned for Launceston, or Dunheved, being re-elected at the accession of George I. In 1715 he was suspected of intriguing in the cause of the Pretender, and with other gentlemen was thrown into prison. A pamphleteer of the time states that the 'government had intimation of their designs to raise an insurrection in Cornwall, the rather

because their interest was very great amongst the tinnars there, of whom Mr. Anstis was hereditary high-steward' (*A full and authentic Narrative of the intended horrid Conspiracy, &c.*, 1715). While Anstis was in prison the office of Garter became vacant by the death of Sir Henry St. George. Sir John Vanbrugh, Clarencieux king-at-arms, was appointed to the vacancy, Anstis's claims being set aside. But Anstis would not submit to this arrangement. He cleared himself of the charge of treasonable practices, and then proceeded to prosecute his claims with the utmost vigour. His opponent urged that in a contest in the time of Charles II the king had given up the right of nomination; but Anstis contended that Charles had merely waived the right. After much delay the controversy was at last terminated, on 20 April 1718, in favour of Anstis, who for some time previously had been residing in the college. In spite of the prejudice that had been raised against him, he succeeded in gaining the respect and favour of the government. On 8 June 1727, shortly before the death of George I, he received a patent under the great seal securing the office to himself and his eldest son and the survivor of them. In the following year Anstis had a dispute with the authorities of All Souls College, Oxford. His son, though of founder's kin, failed to secure a fellowship, the college alleging that he was incapacitated for election by his possession of a patent place and pension under government. The visitor, to whom Anstis appealed, ruled in favour of the college.

Anstis died at Mortlake on 4 March 1743-44, and was buried at Dulo, in Cornwall. He married Elizabeth, daughter and heiress of Richard Cudlipp, of Tavistock, Devonshire, by whom he had three sons and three daughters.

Anstis was a man of the greatest learning and industry. His published works were considerable, but his manuscript collections were still more extensive. In 1706 he published 'A Letter concerning the Honour of Earl Marshal,' in 1720 'The Form of the Installation of the Garter,' in 1724 'The Register of the Most Noble Order of the Garter, from its cover in black velvet usually called the Black Book; with Notes placed at the bottom of the pages, and an Introduction prefixed by the Editor,' a work in two folio volumes, published at the editor's expense; in 1725 'Observations introductory to an Historical Essay on the Knighthood of the Bath,' 'Sixty-four pages,' says Noble, 'of his Latin Answer "to the case of Founders' Kinsmen" were printed in 4to, with many coats of arms;' and Watt

mentions among Anstis's books a quarto published in 1724, 'Brook's Errors of Camden, with Camden's Answer and Brook's Reply.' In 1702 a few sheets were published of a work entitled 'Curia Militaris, or a Treatise of the Court of Chivalry, in three books.' Noble states that the whole work was printed privately in 1702, but no copy is known to exist. In Gutch's 'Collectanea Curiosa,' ii. 186, is a history of visitation books, under the title, 'Nomenclator Fecialium qui Angliæ et Walliæ comitatus visitarunt, quo anno et ubi autographa seu apographa reperiuntur, per Johannem Anstis, Garter, Principal. Regem Armorum Anglicanorum,' from a manuscript in the library of All Souls College. Leland's 'Collectanea,' v. 325, 337, contains 'An Account of the Ceremonial of the Marriage between Frederick, Count Palatine of the Rhine, and the Princess Elizabeth, eldest daughter of King James I, in the year 1613; and 'Ceremonial of the Marriage between William, only son of Frederick-Henry, Prince of Orange, and Mary, eldest daughter of King Charles I, the 2nd of May 1641,' drawn up by Anstis in 1733 from original manuscripts in the possession of Joseph Edmondson, Mowbray Herald. In the 'Gentleman's Magazine,' lxi. 194, there appeared some extracts from a letter of Anstis, dated 13 Nov. 1731, 'in which he answers queries that had been proposed to him as to the pretensions of a dean of Westminster might have to bear the insignia of the Bath; and, supposing them to be well founded, in what manner the shield was to be exhibited upon a sepulchral monument.' Anstis left in manuscript the following works: 1. 'Aspilogia, a Discourse upon Seals in England,' of which an abstract was read before the Society of Antiquaries in 1735-6. 2. Two quarto volumes of drawings of sepulchral monuments, stone circles, crosses, and castles in the three kingdoms, extracts from which are printed in the 'Archæologia,' xiii. 208. 3. A collection of epitaphs and other inscriptions in England and Wales (fac-similes). 4. 'Collectanea, in sixteen folio volumes, respecting almost every subject of English History, Jurisprudence, Chronology, Ecclesiastical and Military Affairs.' 5. 'Sigilla in officio Ducatus Lancastriæ,' a catalogue of ancient seals, deeds, and charters. 6. 'Pedigree of the Anstis Family.' 7. A treatise on the name, origin, and duties of the Earl Marshall. 8. An article on the estate and degree of a serjeant-at-law. 9. A petition relative to the visitatorial power of All Souls College. These manuscripts came into the possession of Thomas Astle at the sale of Anstis's library in 1768, and are now

in the Stowe collection (British Museum). Besides these were (10) five large folio volumes, on the 'Office, &c., of Garter King-at-Arms, of Heralds and Pursuivants, in this and other Kingdoms, both Royal, Princely, and such as belonged to our Nobility,' that were acquired by George Naylor, York Herald, who allowed the use of them to Noble for his 'History of the College of Arms.' 11. 'Memoirs of the Families of Talbot, Carew, Granville, and Courtney.' 12. 'The Antiquities of Cornwall.' 13. 'Collections relating to the Parish of Colliton, in Devonshire,' dealing with the question of tithes, which had been the subject of a dispute between the parishioners and his son, the Rev. George Anstis, the vicar. 14. 'Collections relating to All Souls College,' purchased for the college. 15. 'Heraldic, Genealogical, and Historical Collections,' British Museum Add. MSS. 12227, 14291, 19818; collections for a treatise 'De Baronis,' 24964. Some letters of Anstis's are printed in Nichols's 'Literary Anecdotes,' v. 271.

Pope alludes to Anstis in the 'Imitations of Horace':—

A man of wealth is dubbed a man of worth,  
Venus shall give him form, and Anstis birth;  
and Prior mentions him in an epigram:—

But coronets we owe to crowns,  
And favour to a court's affection.  
By nature we are Adam's sons,  
And sons of Anstis by election.

There is a portrait of Anstis at Oxford and in the hall of the College of Arms.

Stowensis; Full and authentic Narrative of the intended horrid Conspiracy, 1715; Archæologia, i. xxviii; Watt's Bibliotheca Britannica; Burrows's Worthies of All Souls, 406-8]. A. H. B.

ANSTIS, JOHN, the younger (1708-1754), son of John Anstis the elder, was born about 1708, became a gentleman-commoner of Corpus Christi College, Oxford, and in 1725, at the revival of the order of the Bath, was made genealogist and registrar. By virtue of the grant passed in 1727 he was joined with his father in the office of Garter. He was elected a fellow of the Society of Antiquaries on 21 July 1736, and was presented with the degree of LL.D. on 22 April 1749, on the occasion of the opening of the Radcliffe library. When invested with the order of the Garter, the Margrave of Anspach presented Anstis with three hundred ducats, a gold-hilted sword, and one hundred ducats, 'in lieu of his upper robe, which Garter

claimed as belonging to him by virtue of his office.' He resided for the most part at Mortlake, where he died on 5 Dec. 1754, having shortened his days by excessive indulgence in wine. Anstis's abilities commanded respect, but his 'violent vindictiveness' made him many enemies, especially among his colleagues at the Herald's College. He died a bachelor, and his brother George, vicar of Colyton, Devonshire, became his heir.

[Noble's College of Arms, pp. 379-80; Nichols's Anecdotes, v. 272.] A. H. B.

**ANSTRUTHER, SIR ALEXANDER** (1769-1819), Anglo-Indian judge, was the second son of Sir Robert Anstruther, bart., of Balcaskie, Fifeshire. He was born 10 Sept. 1769; called to the bar at Lincoln's Inn, and published 'Reports of Cases argued and determined in the Court of Exchequer, from Easter Term 32 George III to Trinity Term 37 George III, both inclusive,' which were published in three volumes in 1796 and 1797, and were reprinted for a second edition in 1817. The work is a careful and accurate compilation, and was for many years a useful legal authority. Anstruther went out to India in 1798, and was appointed advocate-general at Madras in 1803; in March 1812 he succeeded Sir James Mackintosh as recorder of Bombay, and was knighted; he died at Mauritius on 16 July 1819. He wrote a small work on 'Light, Heat, and Electricity.'

[Calcutta Monthly Journal, August 1819; Asiatic Journal, May 1820; David Jardine in Soc. D. U. K. Dict.] J. S. C.

**ANSTRUTHER, SIR JOHN** (1753-1811), politician and Anglo-Indian judge, born 27 March 1753, was second son of Sir John Anstruther, bart., of Elie House, Fifeshire. Educated at Glasgow University under Professor Millar, he was called to the bar at Lincoln's Inn in 1779; practised chiefly before the House of Lords in Scotch appeals; and was M.P. for Cockermouth 1790-96 and for Craik and Anstruther district of burghs 1796-7. He was solicitor-general to the Prince of Wales 1793-5. An active supporter of Fox, and one of the managers of the impeachment of Warren Hastings, he summed up the evidence on the charge relating to Benares, and opened the charge relating to presents. In 1797 he was appointed chief justice of Bengal, and in 1798 was created a baronet; in 1806 he returned to England; was immediately sworn on the privy council, and re-entered parliament as member for the Kilrenny district

of burghs. In 1808 he succeeded to his father's baronetcy; and died in London 26 Jan. 1811.

J. S. C.

**ANSTRUTHER, ROBERT** (1768-1809), general, was the eldest son of Sir Robert Anstruther, Bart., M.P., and Lady Janet Erskine, daughter of the Earl of Kellie, and was born in 1768. He was educated at Westminster, but early showed a taste for a military life, and in 1788 his father purchased for him an ensigncy, and in 1792 the rank of lieutenant and captain in the 3rd or Scots guards. He led the usual life of a young officer in the guards, but at the same time paid great attention to his military duties. He served with his regiment in the campaigns of 1793 and 1794 in Flanders, and in 1796 was for a short time attached to the Austrian head-quarters, but, seeing no further chance of active service in the guards, he purchased, in March 1797, a majority, and in August of the same year a lieutenant-colonelcy in the 68th regiment, with which he served in the West Indies, where he attracted the attention of Sir Ralph Abercromby. In August 1799, hearing that the guards were going on active service, he exchanged into his old regiment as captain and lieutenant-colonel, and served with it in the expedition to the Helder. In the same year he married Miss Hamilton, the daughter of Colonel Hamilton, of the guards, a nephew of the Duke of Hamilton. The next year, though only a lieutenant-colonel, he was selected by Sir Ralph Abercromby to be quartermaster-general of his army in the Mediterranean, at the same time that another young Scotchman, John Hope, who was also to gain fame in Moore's retreat, was nominated adjutant-general. Sir Ralph placed the greatest confidence in Anstruther, and it was mainly on his report, after a visit to the Turkish headquarters, that the Turks would not be ready for a long time, if they could be of any use at all, that Sir Ralph left Marmorice Bay and determined to act alone. Through the whole Egyptian campaign he served with the greatest credit, and was made one of the first knights of the Crescent when the sultan established that order. On his return he was promoted colonel, was made first deputy quartermaster-general in England, and then adjutant-general in Ireland, and spent some years of domestic happiness at home. But he failed in his attempt to obtain active employment, until, on the return of the tories to power in 1807, he was appointed brigadier-general, and ordered

to take command of a brigade consisting of the 20th and 52nd regiments, and four companies of the 95th or rifle regiment, which was about to sail to the assistance of Sir Arthur Wellesley in Portugal.

He embarked at Ramsgate in August 1808, and, on reaching the mouth of the Douro in company with Brigadier-general Acland, found orders from General Wellesley to proceed at once down the coast to Maceira Bay. Wellesley himself had, after his success at Rorica, marched along the coast, for he wished to receive reinforcements before he either attacked Lisbon or engaged Junot's whole army. At Paymayo and Maceira accordingly Anstruther and Acland met Wellesley and disembarked their brigades, though with much difficulty and loss from the heavy surf. When disembarked, Wellesley formed his whole army in a strong position at Vimieiro, and awaited the attack which Junot was meditating. At the battle of Vimieiro, the churchyard which formed the key of the English situation was occupied by the brigades of Fane and Anstruther, and on them fell the brunt of Junot's attack. The French were, however, repulsed with heavy loss, and Anstruther proved his ability as a brigadier. On the arrival of Moore, Burrard, and Dalrymple, the army was re-divided, and Anstruther had the other companies of the 95th given to him, and was put under the orders of Edward Paget, who was to command the reserve. On the advance into Spain, Paget led his brigades by way of Elvas and Alcantara, to join Moore at Salamanca.

It was in the retreat from Salamanca, or rather from Toro, that Anstruther's most important military duties were performed. The reserve was ordered to form the rear division, and Anstruther's brigade actually closed the retreat. The conduct of the troops was now severely tried, but the reserve stood the test well. While the leading divisions were perpetually in disorder, the reserve, of which both officers and men had been trained by Sir John Moore himself at Shorncliffe, maintained perfect discipline, and in Anstruther's brigade served two of the regiments, the 52nd and 95th, which were to form the nucleus of the famous light division under Wellington. As far as Lugo, the French were never a day's march behind, every day saw sharp skirmishes, and there were at least two smart engagements at Cacabelos on 3 January and Constantino on 5 January 1809, in which the reserve and cavalry were alone concerned. Anstruther proved himself a model officer, and Moore declared that to the conduct of the reserve, and of Paget and Anstruther in particular, the safe arrival of

the army at Corunna was due. But the exertions of this trying time were too much for General Anstruther, and on 14 January, the day but one after he had led his brigade into Corunna, and the day but one before the battle, he died from fatigue and exhaustion. He was buried at Corunna, and when Moore was himself dying, he expressed a wish to be buried beside his gallant friend and companion, so that the column erected by Marshal Soult over Moore's remains marks also the grave of Robert Anstruther. He presents a singular instance of military devotion; with wealth, domestic happiness, and a certain seat in parliament, he preferred to risk his life and lose it in the service of his country.

[There is a short sketch of Anstruther's career in the Royal Military Panorama, vol. iv. For his more important services in the Peninsula see Napier, book ii. chap. 5, and book iv.]

H. M. S.

**ANSTRUTHER, SIR WILLIAM, LORD ANSTRUTHER** (*d.* 1711), judge, of old Scottish family, was son of Sir Philip Anstruther of Anstruther, a royalist who was taken prisoner at the battle of Worcester, had his estates sequestered by Cromwell and restored to him by Charles II, and died in 1702. Sir William represented the county of Fife in parliament in 1681, and strongly opposed the measures of James, Duke of York, then lord high commissioner in Scotland. He was again returned for that county in 1689, and continued to represent it until the union (1707). In the revolution of 1688, Sir William took the side of the Prince of Orange, and was rewarded by being appointed one of the ordinary lords of session (22 Oct. 1689), and later a member of the privy council. In 1694 he was created baronet of Nova Scotia. In 1704 he was nominated one of the lords of judiciary in the room of Lord Aberuchil. By a charter under the great seal dated 20 April 1704, and ratified by parliament 14 Sept. 1705, the baronies of Anstruther and Ardross and the office of bailliary of the lordship of Pittenweem, with certain minor estates, rights, and privileges, and the office of carver and master of the household to her majesty and her heirs, were granted to Sir William Anstruther and his heirs for ever. Sir William Anstruther was strongly in favour of the union, and his name appears frequently in the division lists during the period when the question was agitating the Scotch parliament. He was the author of a volume of essays, interspersed with verse, published in 1701 under the title of 'Essays, Moral and Divine,' of which his friends thought so

poorly that in his own interest they begged him not to publish it; and it is said that after the death of the judge, which happened in 1711, his son bought up all purchasable copies and suppressed the work. The contents of the volume were as follows: (1) Against Atheism; (2) Of Providence; (3) Of Learning and Religion; (4) Of Trifling Studies, Stage Plays, and Romances; (5) Of the Incarnation of Jesus Christ and the Redemption of Mankind. Sir William was married to Helen Hamilton, daughter of John, fourth Earl of Haddington.

M. R.

**ANTHONY, FRANCIS** (1550-1623), a noted empiric and chemical physician, was born in London 16 April 1550, the son of a goldsmith, who had a place in the jewel office under Queen Elizabeth. He studied at Cambridge and became M.A. 1574. He is said to have been afterwards M.D. in one of our universities, but in which does not appear. His knowledge of chemistry was presumably derived from his father. He commenced medical practice in London without a license from the College of Physicians; and after six months was called before the president and censors of the college (A.D. 1600), when, being examined in medicine and found ignorant, he was interdicted practice. For disregarding this injunction, he was fined five pounds and committed to prison, whence he was released by a warrant of the lord chief justice. The college, however, got him re-committed, and Anthony submitted. Being again prosecuted for the same offence and refusing to pay a heavy fine, he was kept in prison for eight months, till released at the petition of his wife, and on the ground of poverty, in 1602. He continued to practise in defiance of the college, and further proceedings were threatened, but not carried out, probably because Anthony had powerful friends at court. His practice consisted chiefly, if not entirely, in the prescription and sale of a secret remedy called *aurum potable*, from which he derived a considerable fortune. He died 26 May 1623, leaving two sons: John, who became a physician in London [see ANTHONY, JOHN]; and Charles, who practised at Bedford. According to the writer in the 'Biographia Britannica' (1747, i. 169), who professes to have derived his information

from family manuscripts, Anthony was a man of high character and very liberal to the poor.

The career of Anthony and his conflict with the College of Physicians illustrate the conditions of the medical profession in the seventeenth century. He was obnoxious to the college, not only because he practised without a license, or because he lauded chemical remedies and despised the traditional 'Galenical'—i.e. animal and vegetable drugs—but because he kept the composition of his remedy a secret, and put it forward as a panacea for all diseases. Anthony was a man of some learning, and defended his panacea in several pamphlets, in which he quotes many authors, chiefly chemists, as Raymond Lully and Arnold de Villa Nova, in support of his contention. He refers to Paracelsus with an apology, but disclaims any special debt to him; and among other authorities to Conrad Gesner, who had written of *aurum potable* (*The Treasure of Euonymus*, London, 1565, p. 177). Of these tracts, the two earlier (*Fr. Antonii Londinensis Panacea Aurea*, Hamburg, 1598; and *Medicina Chymica et veri potabilis Auri assertio*, Cambridge, 1610) are probably very rare, and the present writer has not been able to find them; but the latter is known from the answer to it published by Matthew Gwinne (*Aurum non Aurum: In Assertorem Chymicae, sed verae Medicinae desertorem*, Fr. Anthonium, Londini, 1611). His later book (*Apologia Veritatis illucescentis pro Auro Potabili*, London, 1616; also in English the *Apologie or Defence, &c. of Aurum Potabile*, same date) is well known. In these Anthony labours to show that metals are excellent medicines, gold most of all; that by his method it was dissolved in a potable form and furnished a universal medicine. His adversaries denied the superiority of metallic to other medicines and the special efficacy of gold, declared that Anthony's method did not dissolve gold, and there was no such thing as a universal medicine. Anthony offered to demonstrate his process to certain select witnesses; and it appears that a trial actually took place at the College of Physicians in 1609, in the presence of 'Baron' Thomas Knivet, the master of the mint, and other skilled persons, when an ounce of gold was given to Anthony, which, by his method, he failed to dissolve (GWINNE, *Aurum non Aurum*, p. 169). The process is indeed given in the 'Biographia Britannica,' ostensibly on the authority of a manuscript of Anthony's own; and it is evident that as there described the ultimate product could not contain any gold. The efficacy of the remedy, if any, as a cordial, was possibly due to certain ethers which

would be formed in the process of distillation, and also to the good canary wine in which it was ultimately dissolved. In Anthony's last work he relates the history of numerous cures which he says he performed on various distinguished persons. This brought upon him a violent attack from a Dr. Cotta, one of whose patients was spoken of. In spite of these attacks the potable gold became a very popular remedy.

The popular belief in the virtues of gold, though based on fanciful grounds, was too deeply rooted to be shaken, and even Robert Boyle, in 1685, says that, though prejudiced against 'aurum potable and the like' (*sic*), he found a certain tincture of gold which had marvellous effects (BOYLE on *Specifick Medicines*, London, 1685). It is now known that preparations of gold have some, though not very potent, medicinal properties; but certainly not the marvellous powers attributed to preparations which, after all, did not contain it.

[Goodall's Royal College of Physicians, London, and an Historical Account of the College's Proceedings against Empiricks, &c., London, 1684; Biogr. Britannica, 1747; Wood's *Athenae Oxonienses*, s. v. 'Gwinne,' i. 513, ed. 1721; Cotta's *Antipology*, showing the Counterfeitness of Dr. Anthony's Aurum Potabile, Oxford, 1623.] J. F. P.

ANTHONY, JOHN (1585-1655), physician, was the son of Francis Anthony. He was educated at Pembroke College, Cambridge; graduated M.B. 1613, M.D. 1619; was admitted licentiate of College of Physicians, London, 1625. According to the 'Biographia Britannica' he gained a handsome income from the sale of his father's 'Aurum Potabile;' according to Dr. Munk, he succeeded to the more reputable part of his father's practice. A John Anthony served in the civil war, on the parliamentary side, as surgeon to Colonel Sandys (*Mercurius Rusticus*, ed. 1685, p. 125). He was the author of a devotional work, 'The Comfort of the Soul, laid down by way of Meditation . . . by John Anthony, Dr. of Physick, London, 1654, 4to. The same work in the same impression was afterwards issued with a new title-page as 'Lucas Redivivus, or the Gospel Physician, by J. A., Dr. of Physick, London, 1656, 4to.' In the British Museum (*Sloane MS.* 489) is a small note-book, bound with the arms of Charles I, entitled 'Joannis Antonii Praxis Medica,' containing notes in Latin on various diseases and their treatment. In it Paracelsus is quoted as the authority for a certain prescription. The notes are evidently

for private use, not intended for publication, but clearly belong to this John Anthony.

[Biogr. Britannica; Munk's Roll of College of Physicians, 2nd ed. i. 185.] J. F. P.

ANTON, ROBERT (*fl.* 1616), poetical writer, supposed to have been a son of George Anton, recorder of Lincoln, graduated B.A. of Magdalene College, Cambridge, in 1609-10. He is the author of a quarto volume of satires, published in 1616, under the title of the 'Philosophers Satyrs.' A second edition appeared in the following year, bearing the title 'Vices Anatomie Scourged and Corrected in New Satires.' There are seven pieces, each being named after one of the seven planets (an idea borrowed from Ariosto). The chief interest of the book, which is written in curiously strained language, lies in the references to Beaumont, Spenser, Jonson, Chapman, and Daniel. One Shakespearian allusion occurs—'What Comedies of errors swell the stage,' &c. There is preserved in Sir Charles Isham's library at Lamport Hall a unique prose tract of Anton's, in black letter, entitled 'Moriomachia, imprinted at London by Simon Stafford, 1613, 4to.

[Corser's *Collectanea*; Hazlitt's Second Series of Bibliographical Collections; Cooper's New Biographical Dictionary.] A. H. B.

ANTRIM, EARL OF. [See MACDONNELL.]

APLIN, PETER (1753-1817), admiral, was midshipman of the *Roebuck* on 9 Oct. 1776, when her first lieutenant was killed in action with the batteries at the mouth of North River [see PARKER, HYDE (2)], and was promoted to the vacancy caused by his death. Aplin's further promotion was rapid, and on 23 Nov. 1780 he was appointed captain of the *Fowey* frigate of 24 guns. He was still in her at Yorktown in the following October, when she was destroyed by the enemy's red-hot shot; after which he served, with his crew, on shore under the orders of Lord Cornwallis. He had no further service at sea until, in 1797, he was appointed to the *Hector* of 74 guns, which, after the battle off Cape St. Vincent, reinforced the fleet off Cadiz. He continued in this command for nearly two years, when he was promoted to flag rank. As an admiral, however, he never served, although, he passed through the several gradations by seniority, and attained the high rank of admiral of the white before his death, which occurred on 17 April 1817.

[Gent. Mag. Lxxxvii. 89.] J. K. L.

APPLETON, CHARLES EDWARD CUTTS BIRCH (1841-1879), man of letters, was the second son of the Rev. Robert Apple-

ton. He was born on 16 March 1841, and educated at Reading grammar school, of which his father was head master. In 1859 he was elected to a scholarship at St. John's College, Oxford, which led in due course to a fellowship. His university honours were a second class at moderations and another second class in the final examination, both in classics. He graduated as B.A. in 1863, and, in accordance with the custom of his college, proceeded to the higher degree of D.C.L. in 1871. Shortly after taking his bachelor's degree, he travelled on the continent, and studied for about two years at more than one German university. In 1867 he returned to Oxford, and was appointed lecturer in philosophy at St. John's. At this period he read much, but wrote little. During all his life he was an enthusiast for learning, rather than a teacher or an author. The metaphysics of Hegel, considered from a theological (and almost an Anglican) standpoint, was the special branch of learning to which he was himself inclined; but his sympathies were wide enough to comprise everything that a German includes under 'Wissenschaft.' It was Appleton's fate that the remainder of his life should be devoted to the encouragement of learning in England by precept rather than by example. The bulk of his writings is not large, nor can it be said that their permanent value is very great; but he founded the literary periodical called the 'Academy,' and he organised the movement for the 'endowment of research.' The first number of the 'Academy, a Monthly Record of Literature, Learning, Science, and Art,' appeared on 9 Oct. 1869; and Appleton remained editor until his death. The distinctive characteristic of the paper was the signature of all the critiques by the writers' names in full; and its early contributors included men of high eminence in literature and science. If the 'Academy' has not consistently carried out the ambitious programme with which its founder started, it has at least continued to live to the present time without more vicissitudes than are common to newspaper enterprise. On 16 Nov. 1872 the first meeting was held in London of the 'Association for the Organisation of Academical Study,' in which Appleton again was the prime mover. The association held but one more meeting, and then fell to pieces. Shortly after the birth of the 'Academy' Appleton finally left Oxford for London, and occupied an old-fashioned cottage on the edge of Hampstead Heath, in which he delighted to play the host. In the autumn of 1875 he paid a visit to America, and was led to take up the question of international copyright

with his wonted energy. The work that Appleton imposed on himself in connection with the 'Academy' was by no means entirely literary. He also undertook the business management of the paper, and became secretary of a company which he formed to foster it. In the opinion of his friends the labour and anxiety thus incurred contributed much to the breakdown of his constitution. The winter of 1877-8 he was ordered to spend in the south. The excitement of travel in Egypt and the Levant he enjoyed thoroughly, but when he came back to England he was visibly worse. Again he went to Egypt, and died at Luxor on 1 Feb. 1879.

To a volume, entitled 'Essays on the Endowment of Research, by Various Writers' (1876), Appleton contributed two essays, the one on the Economic Character of Subsidies to Education, and the other on the Endowment of Research as a Form of Productive Expenditure.

[A sketch of Appleton's career, together with most of his papers on philosophical subjects, will be found in 'Dr. Appleton: his Life and Literary Relics,' by his brother, John H. Appleton, and A. H. Sayce (1881)]. J. S. C.

APPLETON, HENRY (fl. 1650-1654), captain in the navy and commodore, was a townsman and presumably a native of Hull; but his name does not appear in any list of naval officers during the civil war or until 26 Sept. 1650, when an order was sent by the parliament to the council of state to appoint him 'as commander of the ship now to be built at Woolwich, or any other ship that they think fit.' This is the earliest mention of him as yet known. That his appointment was irregular and gave offence to his subordinates, officers of some experience at sea, and that he had neither the knowledge nor the ability to enforce obedience to his orders, appears throughout his whole correspondence, which gives an account of his sailing in the *Leopard* of 50 guns, of his arrival at Smyrna with the convoy, of his sailing thence in April 1651, and of his successive arrivals at Zante, Messina, Naples, and Genoa. In November he went to Leghorn, and immediately off that port captured, or permitted the ships with him to capture, a French vessel; thus, at the outset, giving offence to the Grand Duke of Tuscany. After staying a month at Leghorn he left for Naples, and with the Levant trade sailed again to Smyrna, returning to Leghorn in the end of June 1652. The war with Holland had just broken out, and a squadron of fourteen Dutch ships of war rendered it impossible for the English to move out. The force that Apple-

ton had with him was not more than half that of the Dutch, and during the rest of the summer he attempted nothing beyond despatching the *Constant Warwick* to reinforce Commodore Badiley, who was expected shortly on the coast of Italy. On 27 Aug. the Dutch learned that Badiley was off the island of Elba; and slipping out with their squadron, now of ten ships, they brought him to action, when, after a fight which lasted through that day and into the next, they succeeded in capturing the *Phoenix*. Appleton made no attempt to help Badiley, pleading afterwards 'that the Lord had at that time visited him with a violent sickness;' to which Badiley answered that no one else knew of it, and that even if he was sick he ought still to have sent his ships.

Badiley, after his defeat, retreated to Porto Longone, where he was blockaded by part of the Dutch squadron, the other part watching Appleton at Leghorn and refitting the *Phoenix*. On 2 Nov. Badiley came overland to communicate with Appleton, having received instructions from home to take the entire command. It seems to have been then arranged between them that, in defiance of the neutrality of the port, an attempt should be made to retake the *Phoenix*, which was successfully carried into execution by Captain Cox on the evening of 20 Nov., or, according to new style, 30 Nov., when the Dutch were holding drunken revelry in honour of St. Andrew. The grand duke was further incensed by Appleton's seizure next day of a Dutch prisoner who had escaped and put himself under the protection of a Tuscan sentry. The duke sent for Appleton, made him a close prisoner under circumstances of much indignity, and two days later sent him, still a prisoner, to Commodore Badiley at Porto Longone, who, holding a council of war, superseded him from the command of the *Leopard*; all which was approved of by the government at home, and orders were sent out for Appleton to return to England overland. It was, however, decided by Badiley to leave Appleton in command of the *Leopard* whilst the two squadrons combined to force their way past the Dutch, who had prevailed on the grand duke to give the English a peremptory order to restore the *Phoenix* or to quit the port (Longland to Navy Committee, 7 March 1652-3).

Appleton was accordingly sent back to his ship at Leghorn, and on 1 March 1652-3 Badiley wrote to him to be ready to come out to meet him as soon as he should appear off the port, Badiley's idea was that the Dutch would attack whichever squadron happened to be to leeward of them, and that the windward squa-

dron might support it. They did not do so; but the wind being off shore, as soon as Appleton was well clear of the port on 4 March they fell on him, and before Badiley, who was a considerable distance to leeward, could come at all near, had completely crushed him. Of the six ships which formed his squadron one only escaped. The *Leopard* defended herself stoutly, till at last the ship's company refused to fight any longer, and would not permit the poop, which the enemy had won, to be blown up; they seized and disarmed Appleton, and called for quarter. He was held prisoner for some months, but being released on a security of 5,000 pieces of eight, he returned to England, complaining bitterly of having been deserted and betrayed. Inquiry showed that these complaints were unfounded, and that his defeat by the Dutch was due, not to any shyness on the part of Badiley, but to his own ill-judged haste in leaving the port before Badiley was engaged with the Dutch. Appleton was never employed again, and vanished into the darkness from which he had sprung.

**APPLEYARD, SIR MATHEW** (1606-1670), military commander, was the son of Thomas Appleyard, the descendant of a family whose residence for several generations was Burstwick Hall Garth, in the East Riding of Yorkshire. In the civil war he took the side of the royalists, and was knighted on the field by Charles I. On the taking of Leicester, the king 'presently made Sir Mathew Appleyard, a soldier of known courage and experience, his lieutenant governor.' He married Frances, daughter of the third Sir Wm. Pelham, of Brocklesby, Lincolnshire; sat in the English House of Commons as M.P. for Hedon from 1661 till death, and in the Irish House for Charlemont 1665-6; was customer for the port of Kingston-upon-Hull; was a firm supporter of Church and State, and died on 20 Feb. 1669-70.

[A monumental inscription on a stone in the chancel floor in All Saints Church, Burstwick; Poulton's History of Holderness, ii. 362, 364; Clarendon's History of the Grand Rebellion, book ix., 33.] A. S. B.

**APPOLD, JOHN GEORGE, F.R.S.** (1800-1865), an ingenious mechanician and an inventor of considerable capacity, was the son of a fur-skin dyer, established in Finsbury. Succeeding to his father's busi-

ness at the age of twenty-two, he introduced into it so many scientific improvements that he soon amassed a considerable fortune and was able to devote his time and attention to his favourite mechanical pursuits. His inventions, though numerous and evincing very great ingenuity, were not of the very highest class. Perhaps the most important of them was his centrifugal pump. This procured him a 'council medal' at the 1851 exhibition, and it is highly commended in the report of the juries on that exhibition. It should be mentioned that the medal was for the special form of pump, the principle having been known and acted upon many years before. Another invention of considerable value was a break, employed in laying deep-sea telegraph cables. This apparatus was used in laying the first Atlantic cable. Appold was very liberal in communicating his ideas to others. He was on terms of friendship with many of the chief engineers of his time, and was consulted by them frequently with advantage. He patented but few of his ideas, preferring generally to give them freely to the public. His house was a museum of mechanical contrivances, such as doors which opened at a person's approach, and shutters which closed at the touch of a spring, while the same movement turned on and lighted the gas. Probably, had he been compelled to rely for his support on his mechanical talents, his inventions would have been further developed, and have been brought more prominently into notice than they were. As it was, he was a man of high reputation among his contemporaries, who left behind him but little to keep his name from forgetfulness.

[Full accounts of Appold and his inventions will be found in the Proceedings Roy. Soc. xv. i., and in the Proceedings Inst. C. E. xxv. 523.]

H. T. W.

APSLEY, SIR ALLEN (1569?-1630), lieutenant of the Tower, was youngest son of John Apsley, Esq., of Pulborough, Sussex, and was born about 1569. Coming up to court to seek his fortune, he lost his all at play, and sailed for Cadiz with Essex 1596. Passing, on his return, into Ireland, he became victualler of Munster, married a rich widow, and was knighted at Dublin 5 June 1605 (*Carew Papers*, 619, p. 160). He next married a daughter of Sir Peter Carew, and was made victualler to the navy about 1610. Having married, thirdly, Lucy, daughter of Sir John St. John (by whom he was father of the celebrated Mrs. Hutchinson), he obtained in addition the lieutenancy of the Tower, 3 March 1617. 'Here,' says Mrs. Hutchinson, 'he was a father + all his prisoners.' Many

eminent prisoners were under his charge, including Sir Walter Raleigh and Sir John Eliot, and his wife is said to have provided Raleigh with the means for continuing his experiments. But he was the friend and political ally of the Duke of Buckingham (*Hist. MSS. Com. Rep.* iv. 310), and Mrs. Hutchinson's statement must be compared with Mr. Forster's detailed description of his rigorous treatment of Sir John Eliot and other enemies of Buckingham (FORSTER'S *Sir John Eliot*, ii. 469-78, 521). Apsley witnessed Buckingham's will drawn up 25 June 1627, just before the duke sailed for the island of Rhé (*Wills* (Camden Soc.), p. 91). Apsley himself served with that expedition (1628) and caught a fever, followed by a consumption, of which he died 24 May 1630, aged 61. He was buried in the Tower chapel, where a tablet was erected to his memory. He died deeply involved in debt. As victualler of the navy he set forth in a petition that he had spent 100,000*l.*, which was unpaid at the date of his death. The 'State Papers' throughout the seventeenth century are full of references to this and other of Apsley's debts (cf. *Hist. MSS. Com. Rep.* viii. 143; *Cal. Treasury Papers*, i. 166).

[Mrs. Hutchinson's Introduction to her Memoirs of Colonel Hutchinson; Bell's Memorials of Persons buried in the Tower, pp. 35-36; *Cal. State Papers* (Dom. 1627-8), p. 499.]

J. H. R.

APSLEY, SIR ALLEN (1616-1683), royalist leader, holder of minor offices of state under Charles II, and poetical writer, was the eldest son of Sir Allen Apsley, lieutenant of the Tower, by his third wife Lucy, youngest daughter of Sir John St. John of Lydiard Tregooz, Wiltshire, and was baptised at the church of All Hallows, Barking, on 6 Sept. 1616. His sister, Lucy, married, in 1638, John Hutchinson, afterwards a well-known colonel of the parliamentary army. Apsley was educated firstly at Merchant Taylors' School, where he and a younger brother, William, were entered as pupils in 1626 (ROBINSON'S *Merchant Taylors' School Register*, p. 115). He afterwards went to Trinity College, Oxford, but did not take his degree of M.A. till 28 Sept. 1663. His father had left his affairs at his death in the utmost confusion, and during Apsley's youth the resources of his family seemed to have been very precarious. His mother married again in the early years of her widowhood, against the wishes of her first husband's relatives, and Apsley played a part in the domestic quarrel that followed. Numerous petitions concerning the financial position of Apsley and his brothers and sisters were presented to the

king and his council between 1634 and 1637. But before the outbreak of civil war in 1642, the disputes were apparently settled to Apsley's advantage.

Throughout the king's preliminary struggles with the parliament Apsley supported the royalists, and he received the honour of knighthood. When active hostilities began in 1642, he was placed in command of a company of horse raised in Charles's behalf, and soon afterwards proceeded to the west, where he was appointed 'governor of the fort of Exeter.' He was joined in Devonshire by the Prince of Wales in 1645 (CLARENDON'S *History*, iv. 49), but before the surrender of Exeter in April 1646 he became governor of Barnstaple. He was, however, unable to hold out against the parliamentary army for many days, and on 10 April 1646 he negotiated a capitulation (WHITELOCK'S *Memorials*, 435; cf. SPRING'S *Anglia Rediviva*, p. 243). The articles of surrender enabled him to retire to Nottingham, where he took refuge with his brother-in-law, Colonel Hutchinson, the parliamentary governor of the town. For several years after the king's death Apsley was much harassed by the parliamentary authorities; they pressed him, contrary, as he believed, to the terms originally made with him, to make large compensation for the injuries sustained by parliamentarians in Barnstaple at the hands of royalist soldiers under his command. 'One wicked woman,' Mrs. Hutchinson writes in her husband's memoirs, 'for her revenge and malice against Sir Allen Apsley, which was so venomous and devilish . . . stuck not at inventing false accusations and hiring witnesses to swear to them;' her object was to obtain from him 'a recompence out of his estate, treble and more than the value of a house of hers in the garrison of Barnstaple, which was pulled down to fortify the town for the king, before he was governor of the place.' But through the assistance of Colonel Hutchinson, justice was at length obtained from the parliament, and an order, dated 17 Aug. 1654, relieved Apsley of further liability on account of his service in the king's behalf. In 1647 he was engaged with Sir John Berkeley in negotiations between the king and the army (BERKELEY'S *Memoirs* in Harl. Miscel. ix. 470-1). He appears before 1655 to have paid 434*l.* to the parliamentary commissioners in Sussex for permission to retain his lands in that county (*Sussex Archaeological Collections*, xix. 93).

It is probable that during some years of the Commonwealth, Apsley, like other royalists, retired to Holland. It was his brother

James—'one Apseley, a desperate cavalier at the Hague'—who made in April 1651 a ruffianly attempt to murder St. John, the parliamentary ambassador in Holland, and 'the States . . . ordered Apseley to be apprehended, but he fled away' (WHITELOCK'S *Memorials*, 491; *Mercurius Politicus*, 1651, p. 728).

At the Restoration Apsley was taken into high favour at court. In June 1660 he was appointed keeper of the king's hawks, with a good salary and perquisites. On 2 Sept. 1662 he was made keeper of the North park at Hampton Court, and the management of the king's game-preserves seems to have passed largely into his hands. Shortly afterwards, James, Duke of York, conferred on Apsley the office of treasurer of his household, and when his master became lord high admiral, large sums of money to be applied to the navy were entrusted to his keeping. In 1667 Apsley was given a colonelcy in the army raised under the Duke of York in view of a threatened war with the Dutch. From 1661 to 1678 Apsley sat in parliament as member for Thetford, and Pepys, who frequently met him in society, notes that on 19 Dec. 1666, he caused much disturbance in the house by coming there in a state of drunkenness.

In the days of his prosperity Apsley's conduct was not always above suspicion. He contrived to make his offices at court as profitable to himself as possible, and Pepys relates how he 'did make good sport' at a London dinner party in 1667 by complaining of the reduction of his salary as 'Master Falconer' and by declaring that England under Cromwell was hardly worse off than under her present rulers. To all outward appearance he endeavoured at the same time to protect his brother-in-law, Colonel Hutchinson, from the vengeance of the royalists, and Mrs. Hutchinson attributes to him the preservation of her husband's life and property in 1660. But Apsley did not prevent his subsequent imprisonment and cruel death in 1664. He certainly somewhat alleviated his sister's misery during the last years of Colonel Hutchinson's life, by procuring her admission to his prison and other privileges. One of Hutchinson's dying requests to his brother was, in fact, 'to remember him to Sir Allen Apsley, and tell him that he hoped God would reward his labour of love to him.' But a letter among the state papers of the time dated 14 Jan. 1663-4, and addressed by Apsley to one of the king's secretaries, proves that he was giving information to the government about his sister and her husband which it is difficult to reconcile with their belief in

the sincerity of his regard for their interests (*Cal. State Papers*, 1664, p. 441).

On 15 Oct. 1688, Apsley died at his house in London in St. James's Square, and was buried two days later in Westminster Abbey. He married Frances, daughter of John Petre of Bowhay, in Devonshire, who died in 1698. By her he had several children, and Apsley secured for his son Peter a reversion to a clerkship of the crown in June 1667. Peter was afterwards knighted, and was frequently employed in the foreign secret service by both Charles II and James II (*Secret Services of Charles II and James II* (Camden Soc.), 110, 114, et seq.). Sir Allen's daughter, Frances, married Sir Benjamin Bathurst, whose eldest son, Allen, was created Baron Bathurst in 1712 and Earl Bathurst in 1772. The courtesy title of Baron Apsley was borne by Earl Bathurst's heir.

Sir Allen Apsley published anonymously in 1679 a long poem, which is now rarely accessible, entitled 'Order and Disorder; or the world made and undone, being Meditations on the Creation and Fall. As it is recorded in the beginning of Genesis,' London, 4to. A private letter, dated 26 April 1669, from Apsley to John Evelyn, relating to some business of the Duchess of York, is preserved at the British Museum (*Addit. MS.* 15857, f. 10).

[Wood's *Fasti Oxon.* (ed. Bliss) ii. 272; Berry's *Sussex Genealogies*, p. 150; State Paper Calendars from 1634-5 to 1667; Peypys' *Diary* (1849), ii. 187, iii. 364, iv. 162; Chester's *Registers of Westminster Abbey* (Harleian Soc.), pp. 208, 243; Mrs. Hutchinson's *Memoirs of Colonel Hutchinson* (1846), 123, 301, 354, 408-79; Whitelock's *Memorials*. Mr. W. H. Blaauw described, in 1851, in the *Sussex Archaeological Collections* (iv. 219-30, v. 29, et seq.), a collection of documents (the property of Mrs. Mabbott), known as the Apsley MSS., relating to the civil war in Sussex, and containing *inter alia* a series of interesting letters written by Dame Elizabeth Apsley, wife of Sir Edward Apsley, of Thakenham, to the Princess Elizabeth of the Palatinate. Sir Edward Apsley was a cousin of Sir Allen, and the Apsley MSS. contain references to very many members of his family.] S. L.

**AQUEPONTANUS.** [See BRIDGEWATER, JOHN.]

**ARABELLA STUART** (1575-1615), was the daughter of Charles Stuart, Earl of Lennox, younger brother of Lord Darnley. This earl was, through his mother, the grandson of Margaret, the eldest sister of Henry VIII., by her second husband, Archibald Douglas, Earl of Angus. Arabella stood in the line of succession to the English throne next to her first cousin James. When Elizabeth's age made a speedy vacancy pro-

bable, there were some persons in England who argued that her title was preferable even to that of James, as she was born on English soil, whereas he, being an alien, and therefore disqualified for possessing land in England, was also disqualified for wearing the crown. A little before Elizabeth's death Arabella was arrested by the queen's orders in consequence of a rumour that a marriage was planned between her and William Seymour, the grandson of Catherine Grey, the heiress of the Suffolk line. James, however, succeeded peaceably, and treated Arabella with favour as a kinswoman, disbelieving the idle rumours which accused her of taking part in the plots of Cobham and Raleigh. She, as we hear, was much in want of money, and we hear of her in 1608 and 1609 begging for English and Irish monopolies. In December 1609 she was put in confinement with her servants, on the ground of her being engaged in a treaty of marriage with some person whose name is not given. She regained the king's good graces by pleading discontent on the ground of poverty. James granted her a pension of 1,600*l.* a year.

On 2 Feb. 1610, Arabella became actually engaged to William Seymour, whose descent from the Suffolk line made him specially an object of jealousy to James. She and Seymour were summoned before the Privy Council, and declared that he would never marry her without the king's consent. On this Arabella was again taken into favour, and on 22 March received the grant of the Irish monopoly for which she had long been petitioning. Early in July the couple were privately married. The secret was not kept, and on the 9th Arabella was committed to the custody of Sir T. Parry, and her husband to the Tower. On 13 March 1611, she was put under the charge of the Bishop of Durham, to be carried by him to Durham. She appealed in vain for a writ of *habeas corpus*. On 16 March she was removed in a condition of physical prostration, and was allowed to rest at Barnet for a month. When the month was over, she protested she could not travel. On 4 June she escaped in man's apparel, got on board a French vessel in the Thames, and sailed for Calais. She was captured in the Straits of Dover, brought back, and lodged in the Tower. Seymour was more successful, and landed safely at Ostend. Arabella remained a prisoner in the Tower till her death on 25 Sept. 1615.

[E. Cooper, *Life and Letters of Lady Arabella Stuart*; E. T. Bradley (Mrs. A. Murray Smith), *Arabella Stuart*, 2 vols. 1889.] S. R. G.

**ARAM, EUGENE** (1704-1759), was born in 1704, probably in September, at Ramsgill,

Nidderdale, Yorkshire. His father was gardener to Sir Edward Blackett, of Newby; and after receiving the elements of education at Ripon, he went to London to be placed in the counting-house of a member of the family. An attack of small-pox occasioned him to lose his situation. Returning into Yorkshire he applied himself to study with so much diligence that he was soon able to open a school at his native place, where he married, very unfortunately as it would seem; thence he removed to Knaresborough in 1784. He there continued to teach, occupying his leisure hours in the study of Latin, Greek, and Hebrew, until, in 1745, he left the town under suspicion of being concerned in a fraud practised by a man named Daniel Clark, who, having borrowed a large quantity of valuable property under various pretexts, suddenly disappeared, and was not again heard of for many years. Aram now led a roving life, teaching in various schools, at one time earning his bread as copyist to a law stationer in London, but continually prosecuting his studies, to which botany, heraldry, French, Arabic, and the Celtic tongues were added, and laying the foundation of a comparative dictionary of all European languages. In Aug. 1758, while usher at the corporation school of Lynn Regis, he was arrested on the charge of having murdered Clark, on the information of an accomplice named Houseman. Houseman had been long suspected, and the discovery of a skeleton supposed to be Clark's had led to his apprehension. 'This,' asseverated Houseman, 'is no more Dan Clark's bone than it is mine.' His peculiar manner warranted the inference that he at all events knew where Clark's remains were, and upon being pressed he acknowledged that Clark had been murdered by Aram and buried in St. Robert's Cave, near Knaresborough; where, upon search being made, a skeleton was actually found. Aram was consequently apprehended, and tried at York on 3 Aug. 1759, Houseman appearing as the sole witness against him. He defended himself with extraordinary ability, laying but little stress on the tainted character of Houseman, who, he probably thought when he prepared his speech, would not be admitted to give evidence, but insisting on the fallibility of circumstantial testimony, and adducing numerous instances of the discovery of human remains. His speech, however, does not breathe the generous indignation of an innocent man; and though it is said to have impressed the jury, it did not influence the summing up of the judge. Aram was convicted, and executed on 6 Aug., after

having attempted suicide by opening his veins with a razor. Before his death he acknowledged his guilt to two clergymen, but alleged, no doubt truly, that Houseman had had the principal hand in the deed, and ascribed his own share in it to the desire of avenging his wife's infidelity with Clark. The body was conveyed to Knaresborough and hung in chains. Ghastly stories are told of his wife, who continued to live at Knaresborough, picking up the bones as they dropped one by one, and of his children taking strangers to view their father's gibbet. The eldest daughter, Sally, however, appears to have been a very interesting person, with a strong resemblance to her father. After several adventures she married comfortably in London. The last known descendants of Aram emigrated to America.

Aram was undoubtedly convicted on the testimony of a greater criminal than himself, and his talents and misfortunes excite so much interest that it would be satisfactory to be able to concur with Bulwer's view that he was merely guilty of robbery. Unhappily all external evidence tends to fix upon him the charge of participation in deliberate fraud and murder, and there is little in his general conduct to rebut it. His indulgence to children and his kindness to animals are indeed amiable traits attested on good authority, but such as have frequently been found compatible with great moral obliquity. As a self-taught scholar he has had many equals; but his peculiar distinction is to have lighted upon a truth of the greatest moment, unrecognised in his day by any scholar—the affinity of the Celtic to the other European languages. He had indeed been anticipated by Edward Lhuyd, and to a less extent by Davies and Sheringham; but their observations had passed unregarded. Aram's fragment on the subject, though marred by fanciful analogies between Celtic and Hebrew, proves that he had thoroughly grasped it. He had a clear perception of the importance of local names in etymology, and he was perhaps the only man in his age who disputed the direct derivation of Latin from Greek. It is hardly too much to say that had he enjoyed wealth and leisure he might have advanced the study of comparative philology by fifty years. Nothing of any scientific value was done to establish the Indo-European affinities of the Celtic languages until the publication of Prichard's 'Eastern Origin of the Celtic Nations,' in 1831. Aram's name does not appear in Prichard's book.

[The most copious authority for Aram's life is Norrison Scatterd (Memoirs, 2nd edition, 1838; Gleanings, 1836). Scatterd is a writer of

great industry, but little judgment, whose romantic interest in Aram led him to collect everything referring to him in the slightest degree. A contemporary account, carefully compiled by W. Bristow, and including Aram's defence and most of his other compositions, was printed at Knarborough and in London in 1759, and often since. The best edition is that printed at Richmond in 1832. See also the *Annual Register* for 1759, pp. 360-65. Aram is probably best known from the highly idealised portrait in Bulwer's brilliant novel. Bulwer derived the idea of this work from Godwin, who had meditated a romance on the same subject, but he departed from his original. Bulwer makes his hero, temporarily bewildered by sophistry, a malefactor on utilitarian principles for the general good of mankind. Godwin aimed at inculcating that 'no man shall die respecting whom it can be reasonably concluded that, if his life were spared, it would be spent blamelessly, honourably, and usefully' (Kegan Paul, *William Godwin*, ii. 305). Hood's *Dream of Eugene Aram* is known to all readers of poetry.] R. G.

ARBLAY, FRANCES (BURNEY), MADAME D' (1752-1840), novelist, was born 13 June 1752, at King's Lynn, where her father, Dr. Burney, was then organist. He had been married in 1749 to her mother, Esther Sleepe, the granddaughter of a French refugee named Dubois. Frances was one of six children, of whom Esther (afterwards Mrs. Burney, of Bath) and James (afterwards Admiral Burney) were older, Susannah (Mrs. Phillips), Charles (a well-known Greek scholar), and Charlotte (Mrs. Clement Francis, and afterwards Mrs. Broome) younger than herself. In 1760 Dr. Burney moved to London, where his whole time was soon absorbed in giving music lessons and in social engagements. The death of his wife, 28 Sept. 1761, broke up his household, and Dr. Burney sent Esther and Susannah to a school in Paris. Frances was detained at home from a fear lest her reverence for her maternal grandmother, then living in France, should cause her conversion to Catholicism. Dr. Burney was married again in 1766 to Mrs. Stephen Allen, who seems to have been a kind stepmother. A scheme of sending Frances to follow her sisters was then abandoned. She was thus entirely self-educated, her father having no time to spare even for directing her studies. She was a backward child, and did not know her letters when eight years old. At ten she began scribbling stories, farces, tragedies, and epic poems, till her conscience smote her for this waste of time, and on her fifteenth birthday (preface to *Wanderer*) she burnt all her manuscripts. The heroine of the last story consumed was Caroline Evelyn, the mother of Evelina.

The situation struck her fancy, and she continued to work out Evelina's adventures in her head. The story was not written down till it was fully composed, when the first two volumes were offered to Dodsley by her brother Charles. Dodsley declined to deal for an anonymous work. It was then offered to Lowndes, who asked to see the whole. She now confided her secret to her father, who treated the matter as a joke, made no objection to her plan, and 'dropped the subject.' The completed book was then sent to Lowndes, who gave 20*l.*, to which he subsequently added 10*l.* and ten handsomely bound copies. It was published anonymously in January 1778, under the title of 'Evelina, or a Young Lady's Entrance into the World.' It was favourably received and soon attracted notice. Dr. Burney, on reading it, recognised his daughter's work. He confided the secret to Mrs. Thrale, to whose daughter he had given music lessons. Mrs. Thrale had discussed it with Dr. Johnson, who said that he 'could not get rid of the rogue,' and declared that 'there were passages which might do honour to Richardson.' He got it almost by heart, and mimicked the characters with roars of laughter. Sir Joshua Reynolds took it up at table, was so absorbed in it that he had to be fed whilst reading, and both he and Burke sat up over it all night. No story since 'Clarissa Harlowe' had succeeded so brilliantly. Miss Burney expressed her delight on hearing some of this news by rushing into the garden and dancing round a mulberry tree—a performance which in her old age she recounted to Sir W. Scott (*Scott's Diary* for November 1826). This was at Chessington, near Epsom, the retreat of an old friend of her father's, Samuel Crisp, who had retired from the world in disgust at the failure of a play and some loss of money (*Memoir of Dr. Burney*, i. 179). Miss Burney loved him, called him 'daddy,' and wrote to him long and amusing letters. She was now introduced to Mrs. Thrale, and during the next two or three weeks became almost domesticated in the family. She spent many months at Streatham, and was greatly caressed by Dr. Johnson, whom, though he was an old acquaintance of her father's, she seems only to have seen once before. Mrs. Thrale pressed her to write a comedy. Sheridan, whom she met at Sir Joshua's, declared that he would accept anything of hers unseen; and the playwright Murphy offered her the benefit of his experience. Thus prompted, she wrote the 'Witlings,' and submitted it to the judgment of Mr. Crisp and her father. It was suppressed in deference to 'a hissing, groaning,

catcalling epistle' from the two; Mr. Crisp thinking that it recalled too strongly to its own disadvantage Molière's 'Femmes Sçavantes,' a work which she had never read. Returning to her more natural occupation, she composed with great care her second novel, 'Cecilia,' which was published in five volumes in the summer of 1782. Macaulay had heard from contemporaries that it was expected as impatiently as any of Scott's novels; and the success was unequivocal. Three editions of 'Evelina' had consisted of 800, 500, and 1,000 copies; and a fourth edition had been published in the summer of 1779. The first edition of 'Cecilia' was of 2,000 copies, which were all sold in three months (*Diary and Letters*, i. 175 and vi. 66). She was now introduced to her admirer, Burke, who had praised her second work with an enthusiasm all but unqualified. Miss Burney had already been introduced to Mrs. Montagu, the female Mæcenas of the day; and her acquaintance was now (January 1783) sought by the venerable Mrs. Delany. In 1785 George III. assigned to Mrs. Delany a house at Windsor and a pension of 300*l.* a year. The Streatham household had been broken up after the death of Mr. Thrale; his widow's marriage (1784) to Piozzi led to a coolness between the friends, and Miss Burney attached herself to Mrs. Delany. Though always on good terms with her father and his wife, their affection seems to have been of the kind which is not cooled by absence and therefore, doubtless, does not dread separation. She helped Mrs. Delany to settle at Windsor, and there she was seen by the royal family, who were constantly dropping in at Mrs. Delany's house. She soon received the offer of an appointment to be second keeper of the robes, under Madame Schwellenberg. She was to have 200*l.* a year, a footman, and to dine at Madame Schwellenberg's table. After many misgivings she accepted the offer, partly in the belief that she would be able to serve her father. She was assured that there were 'thousands of candidates of high birth and rank,' and her appointment was regarded as matter for the warmest congratulation by Dr. Burney, Mrs. Delany, and her acquaintance generally. She accordingly entered upon her service 17 July 1786. A desire to compensate Dr. Burney for his failure in an application for the mastership of the king's band was probably one cause of the appointment. Her misgivings were amply fulfilled. Her duties were menial—those, in fact, of a lady's maid. She attended the queen's toilette three times a day, and spent much of the intervening time in looking after her own clothes. She rose early and went to bed

late. She dined with Madame Schwellenberg, whom she describes as coarse, tyrannical, and ill-tempered. She was rarely permitted to see her friends, and her society was that of the backstairs of a court, a 'weary, lifeless uniformity,' relieved by petty scandal and squabbles. She always speaks of the king, the queen, and all the royal family with a fervent loyalty which verges, to say the least of it, upon adulation. But the queen, though kindly in intention, was a rigid upholder of etiquette, and Miss Burney, whose health was not strong, suffered under rules which sometimes kept her for hours upon trembling legs. Her diary, during her confinement to the court, is lively and interesting, especially the descriptions of the impeachment of the Warren Hastings; of the scenes during the king's attack of insanity in 1788-9; and of various details of the domestic life of royalty during the courtly progresses. Of the fictitious names in the diary, Mr. Turbulent means La Guiffardière, French reader to the queen and princesses; Miss P. is Miss Port (afterwards Mrs. Waddington); Colonel Welbred is Colonel Greville; Colonel Fairly is the Hon. Stephen Digby, who lost his first wife, a daughter of Lord Ilchester, in 1787, and married Miss Gunning, called in the diary Miss Fuzilier, in January 1790. Colonel Digby talked poetry and religious sentiment to Miss Burney, who appears to have had a tender feeling for him, and to have been annoyed at his marriage. Her health became worse as time went on; her friends heard rumours of her decline; she confided at last to her father her desire to resign, and he seemed to admit the necessity, yet hesitated long, till there arose a general 'outcry in their own little world' (*Memoirs of Dr. Burney*, iii. 112). Windham declared that he would 'set the literary club' upon him to hasten his resolution; Boswell swore that all her friends were growing 'outrageous;' Reynolds, 'all the Burkes,' and even Horace Walpole protested against her seclusion; and at last, at the close of 1790, she entertained the queen's permission to retire in a humble memorial delivered with much trembling. After 'a scene almost horrible' with Madame Schwellenberg and long negotiations, she was at last permitted to retire, 7 July 1791, with a pension of 100*l.* a year. Miss Burney travelled for some time through different parts of England, and her health improved. Her sister Susanna (now Mrs. Phillips) was living at this time at Mickleham, close to Norbury Park, which belonged to the Lockes, old friends of the Burney family. Some of the French refugees had

settled in Juniper Hall, in the immediate neighbourhood. M. de Narbonne and General d'Arblay lived there and were visited by Madame de Staël and Talleyrand. Miss Burney speedily became attached to General d'Arblay, who had been a comrade of Lafayette's, and was with him at the time of his arrest by the Prussians. They were married 31 July 1793, at Mickleham, the ceremony being repeated next day at the catholic chapel of the Sardinian embassy. Their whole fortune was Madame d'Arblay's pension of 100*l.* a year; and Dr. Burney, though protesting on prudential grounds and declining to be present at the marriage, gave a reluctant consent. The married pair settled at the village of Bookham, within reach of Norbury, and lived with great frugality, which was more imperative on the birth of a son, Alexander. Towards the end of 1794 Madame d'Arblay tried to improve her income by bringing out a tragedy, 'Edwy and Elvina,' the rough draught of which had been finished at Windsor August 1790. It was performed at Drury Lane 21 March 1795; but in spite of the acting of Mrs. Siddons and Kemble it failed and was withdrawn after the first night. She also published a brief and stilted address to the ladies of Great Britain, in behalf of the French emigrant priests, but judiciously declined to edit a weekly anti-Jacobin paper to be called the 'Breakfast Table,' which had been projected by Mrs. Crewe. Another scheme was at least more profitable. She published by subscription the novel of 'Camilla,' in 1796; and in pursuance of a suggestion once made by Burke, the lists were kept by ladies instead of booksellers, the dowager duchess of Leinster, Mrs. Boscawen, Mrs. Crewe, and Mrs. Locke. Three months after the publication, 500 copies only remained of 4,000, and Macaulay gives a rumour that she cleared 3,000 guineas by the sale. Burke sent her a banknote for 20*l.*, saying that he took four copies for himself, Mrs. Burke, and also for the brother and son whom he had recently lost. Miss Austen was another subscriber. The book was a literary failure, like all her works after 'Cecilia,' but it brought in profit enough to enable her to build a cottage, called Camilla Cottage from its origin, on a piece of land belonging to Mr. Locke, at West Humble, close to Mickleham, whither she removed in 1797. A comedy called 'Love and Fashion' was accepted by the manager of Covent Garden, but withdrawn, in deference to her father's anxieties, in 1800. In 1801 M. d'Arblay returned to France and endeavoured to get employment. He offered to serve in the expedition to St.

Domingo; but his appointment was cancelled upon his attempting to make a condition that he should never be called upon to serve against England. He was placed *en retraite* with a pension of 1,500 francs. In 1802 his wife and child joined him in Paris, where, in 1805, he also obtained a small civil employment, and they passed ten years at Passy, during which communication with England was almost entirely interrupted by the war, and few memorials of Madame d'Arblay are preserved. In 1812 Madame d'Arblay obtained permission to return to England with her son, who was now reaching the age at which he would become liable to the conscription. She arrived, after much difficulty and some risks, in August 1812, to find her father broken down in health, and attended him affectionately till his death, at the age of 86, in April 1814. At the beginning of the same year she published her last novel, the 'Wanderer,' already begun in 1802, for which she was to receive 1,500*l.* in a year and a half, and 3,000*l.* on the sale of 8,000 copies. She says that 3,600 copies were sold at the 'rapacious price' of two guineas. The book was apparently never read by anybody. Upon the fall of Napoleon, M. d'Arblay was restored to his old rank and appointed to a company in the *corps de garde*. Madame d'Arblay rejoined him at Paris; and upon the return of Napoleon from Elba she retired to Belgium, and was in Brussels during the battle of Waterloo, where her adventures, graphically described in the diary, were perhaps turned to account by Thackeray in the corresponding passages of 'Vanity Fair.' M. d'Arblay had meanwhile received an appointment to endeavour to raise a force of refugees at Trèves. Here Madame d'Arblay rejoined him after the battle to find that he had been seriously injured by the kick of a horse. He recovered, but was incapacitated for active service and was placed, contrary to his own wishes, upon half-pay. Madame d'Arblay passed the rest of her life in England. Her journals give us few incidents except a lively account of her narrow escape from drowning at Ilfracombe in 1817. Her husband died on 3 May 1818. Her son was elected to a Tancred studentship at Christ's College, Cambridge; was tenth wrangler in 1818; was ordained deacon in 1818, priest in 1819; was nominated minister of Ely chapel in 1836, and died of a rapid decline 19 Jan. 1837. Madame d'Arblay's last literary employment was the preparation for the press of the memoirs of her father, which appeared in 1832. The book is disfigured by an elaborate affectation

of style and is singularly vague in dates; but it contains much interesting matter and many fragments of letters and diaries, full of vivacious description. She had a severe illness, with spectral illusions, in November 1839, and died at the age of 87 on 6 Jan. 1840. Five volumes of her 'Letters and Diaries' were published in 1842, and two more in 1846. Madame d'Arblay's 'Memoirs of Dr. Burney' and her diary were attacked with great bitterness by Croker in the 'Quarterly Review' for April 1833 and June 1842. The pith of the first article is an accusation (repeated in the second) against Madame d'Arblay (then 80 years old) of having intentionally suppressed dates in order to give colour to a report that 'Evelina' was written at the age of 17. Croker had taken the trouble to inspect the register of baptisms at Lynn, and announced his success with spiteful exultation. Macaulay retorted fiercely in the 'Edinburgh Review' for January 1843; and the accusation is examined at great length by the last editor of 'Evelina'. It is petty enough. Miss Burney was 25 when 'Evelina' appeared, the composition of which, from her account, occupied a considerable period. Her friends clearly made a great point of her youthfulness at the time. Mrs. Thrale and Johnson compared her performance with Pope's 'Windsor Forest', the first part of which (according to Pope himself) was written at the age of 16, and was finished at 25. Miss Burney accepted this (amidst much more) admiration. The belief, if it really existed, that 'Evelina' was composed at the age of 17 was probably due to an identification of the author with the heroine. It does not appear, however, that any definite report of the kind existed, or was sanctioned by Miss Burney, and if, at the age of 80, she had become vague about dates of her youth, the circumstance is not inexplicable. There can be no doubt that the charm of 'Evelina' was due in part to the youthfulness of the author. It represents, in fact, the spontaneous impressions of a girl of great vivacity and powers of observation upon entering the society of which she caught glimpses in the house of her father. The second more elaborate and didactic novel, 'Cecilia', is heavier, and the style generally shows signs of deterioration. There are traces of an imitation of Johnson, which gave rise to a false report that he had corrected it himself (*Diary*, 4 Nov. 1802). The later novels are now unreadable; and in the 'Memoirs of Dr. Burney' she adopted a peculiar magniloquence which may be equally regarded as absurd or as delicious. The

earlier novels mark a distinct stage in our literature. The form of 'Evelina' is adapted from Richardson's plan of a fictitious correspondence; but its best passages are in the vein of light comedy, and, unlike her predecessor, she is weak in proportion as she attempts a deeper treatment. She gave in turn the first impulse to the modern school of fiction which aims at a realistic portrait of society and remains within the limits of feminine observation and feminine decorum. She was, in some degree, a model to the most successful novelists in the next generation, Miss Edgworth (b. 1767) and Miss Austen (b. 1775), the last of whom took the title of her first novel, 'Pride and Prejudice,' from the last pages of 'Cecilia,' and speaks with admiration of Miss Burney in a remarkable passage in 'Northanger Abbey.' Madame d'Arblay's diary is now more interesting than her novels. The descriptions of Mr. Thrale and Johnson and Boswell himself rival Boswell's own work; and the author herself with her insatiable delight in compliments—certainly such as might well turn her head—her quick observation and lively garrulity, her effusion of sentiment, rather lively than deep but never insincere, her vehement prejudices corrected by flashes of humour, is always amusing; nor to some readers is even the fine writing of the 'Memoirs of Dr. Burney' without its charm.

S.

ARBuckle, JAMES (1700-1734?), minor poet and essayist, is supposed to have been a native of Ireland and to have been born in 1700. His earliest works were 'Snuff,' a mock-heroic poem, containing some curious information respecting the snuff-taking and snuff-boxes of the time, and 'An Epistle to Thomas, Earl of Haddington, on the death of Joseph Addison, Esq.,' both published in 1719. Arbuckle contributed to the 'Edinburgh Miscellany' of 1721, in which appeared the earliest printed effusions of Thomson and Mallet, and in the same year he produced a poem, entitled 'Glotta,' describing the scenery about the Clyde, on the title-page of which he is described as a 'student in the University of Glasgow.' Here, as in most of his other compositions, the verse runs smoothly, and bears traces of Pope's influence. On finishing his studies at Glasgow, Arbuckle,

it is supposed, settled as a schoolmaster in the north of Ireland. In the columns of a Dublin newspaper he conducted a periodical miscellany of prose and verse, to which the poet Parnell, Francis Hutcheson, and Samuel Boyse occasionally contributed. Its contents were reprinted in a separate form as 'Hibernicus's Letters; a collection of Letters and Essays on several subjects, lately published in the Dublin Journal' (2 vols. 1725-7), but the work possesses little literary or other interest. Arbuckle was a friend of Allan Ramsay, to whom he wrote some laudatory verses, and who addressed to him a genial epistle in rhyme in 1719, on his return to Scotland from a visit to Ireland.

[Arbuckle's Works; MS. notice of him prefixed to the copy of Glotta in the Library of the British Museum; Allan Ramsay's Poems (1800), i. 173, and ii. 359; Campbell's Introduction to the History of Poetry in Scotland, p. 183; Catalogue of the (Edinburgh) Advocates' Library.]

F. E.

**ARBUTHNOT, ALEXANDER** (1538-1583), a Scotch divine and poet, second son of Andrew Arbuthnot, of Pitcarles, was born in 1538. He was educated at St. Andrews University, and in 1560 was declared by the general assembly to be qualified for the ministry. Before engaging in ministerial work, he spent five years in studying civil law at Bourges. At his return he was licensed a minister, and on 15 July 1568 was appointed to the living of Logie Buchan, in the diocese of Aberdeen. About the same time he was directed by the general assembly to revise a book called the 'Fall of the Roman Kirk,' which had been suppressed (pending certain amendments) by the ecclesiastical authorities, as containing matters injurious to the interests of the kirk. On 3 July 1569 Arbuthnot was elected principal of King's College, Aberdeen, in place of Alexander Anderson, who had been ejected for popery, and shortly afterwards he received the living of Arbuthnot in Kincardineshire. By Anderson's action the finances of the college had been much reduced; but under Arbuthnot's vigorous management prosperity quickly returned. In 1572 he attended the general assembly which met at St. Andrews, and in the same year he published at Edinburgh his 'Orationes de Origine et Dignitate Juris,' 4to, of which not a single copy is now known to exist. He was moderator of the assembly which met at Edinburgh in August 1573, and in the following March he was one of four appointed to summon the chapter of Murray for giving, without due inquiry,

letters testimonial in favour of George Douglas, bishop of the diocese. At the same time he was directed to give assistance in drawing up a plan of ecclesiastical government for the consideration of the assembly. In April 1577 he was again moderator of the general assembly, and in the following October he was chosen, with Andrew Melville and George Hay, to attend a council (never held) which was to meet at Magdeburg to establish the Augsburg confession. At Stirling, on 11 June 1578, he was among the ministers named by the assembly to discuss matters of ecclesiastical government with certain noblemen, gentlemen, and prelates. On 24 April 1583 Arbuthnot and two others were desired by the assembly to request the king to dismiss Manningville, the French ambassador, whose popish practices had excited much indignation; and when, on the same occasion, a commission was appointed to inquire into the financial condition and educational efficiency of St. Andrews University, Arbuthnot was named one of the commissioners. He was also employed with two others to lay certain complaints, on behalf of the assembly, before the king. But his activity in the presbyterian cause had been watched with little satisfaction by James; and in 1583, when he had been chosen minister of St. Andrews by the assembly, he received a royal mandate to return, on pain of horning, to his duties at the King's College, Aberdeen. (The statement that he gave offence by editing Buchanan's 'History of Scotland' is an error, caused by the identity of Arbuthnot's name with that of the printer of the history.) The assembly remonstrated; but the king replied that he and his council had good reason for the action they had taken. This severity is said to have hastened Arbuthnot's death. He fell into a decline, died 10 Oct. 1583, and was buried in the chapel of the King's College. Andrew Melville wrote his epitaph, in which he is styled 'Patriæ lux oculisque' (*Delitæ Poetarum Scotorum*, ii. 120).

Arbuthnot regulated his life so well that, while earning the devotion of his friends, he secured the respect of his adversaries. His 'Orationes de Origine et Dignitate Juris' was praised in a copy of Latin verses (*Delitæ Poetarum Scotorum*) by Thomas Maitland, the Roman catholic writer; and Nicol Burne, another champion of Romanism, in his 'Admonition to the Antichristian Ministers of the Deformit Kirk of Scotland,' 1581, exempts Arbuthnot from his general anathema. Spottiswood describes him as 'pleasant and jocund in conversation, and in all sciences expert; a good poet, mathematician, philosopher, theologian, lawyer, and in medicine

skilful; so as in every subject he could promptly discourse and to good purpose.'

Three poetical pieces of Arbuthnot's, 'On Luve,' 'The Praises of Women,' and the 'Miseries of a Pure Scholar,' are printed in Pinkerton's 'Ancient Scottish Poems.' He left in manuscript an account of the Arbuthnot family, 'Originis et incrementi Arbuthnoticæ familiæ descriptio historica,' which was translated by George Morrison, minister of Benholme, and continued to the Restoration by Alexander Arbuthnot, the father of the famous Dr. Arbuthnot.

A. H. B.

**ARBUTHNOT**, or **ARBUTHNET**, **ALEXANDER** (d. 1585), merchant burghess and printer of Edinburgh, with Thomas Bassandyne, brought out the first Bible issued in Scotland. In March 1575 the two presented a petition to the general assembly requesting permission to print the English Bible. This was given, and it was agreed that 'every bible which they shall receive advancement for shall be sold in albis [sheets] for 4 pound 13 shill. 4 pennies Scottis [=  $\frac{1}{12}$ th English money], keeping the volume and character of the said proofs delivered to the clerk of the assembly' (LEE, *Mem. for the Bible Societies of Scotland*, p. 29). From the 'obligatioun for prenting of the Bybill,' 18 July 1576 (*Register of Privy Council of Scotland*, 1878, ii. 544) it appears that the regent Morton caused the 'advancement' spoken of to be made to the printers from the contributions of the parish kirks, collected by the bishops, superintendents, and visitors of the dioceses. An 'authentic copy' from which to print was delivered, and certain persons were appointed to see that the copy, the Genevan edition of 1561, was duly followed. 'Mr. George Young, servant to the abbot of Dunfermline,' corrected the proofs; Robert Pont compiled the kalendar and preliminary tables. License from privy council was obtained 30 June 1576, giving Arbuthnot and Bassandyne the exclusive right of printing and selling for ten years 'Bibillis in the vulgare Inglis toung, in haill or in partis, with ane callindare' at the price mentioned before (LEE, *Mem. Appendix* No. 5). The name of Bassandyne alone appears on the New Testament, which is dated 1576. The partners seem to have quarrelled. Upon the complaint of Arbuthnot to the privy council, 11 Jan. 1577, of the delay in the publication, Bassandyne was ordered 'to deliver to the said Alexander the said werk of the

Bybill ellis prentit, with the prenting hous and necessaris appertening thairto meit for setting furthwart of the said werk, conforme to the said contract' (*Register*, ii. 583). Bassandyne died 18 Oct. 1577. On 1 April 1579 Arbuthnot received license to print, sell, and import psalm books, prayers, and catechism, for the space of seven years. The publication of the Bible was delayed until the completion by Arbuthnot in 1579: 'The Bible and Holy Scriptures contained in the Olde and Newe Testament . . . Printed at Edinburgh, be Alexander Arbuthnot, printer to the King's Maiestie, dwelling at ye kirk of feild, 1579; 2 vols. folio. The British Museum copy contains a facsimile of the eight leaves following the title, reproduced from a copy, in which variations occur, belonging to Mr. Fry. In spite of the large edition which must have been printed, the book is now extremely scarce, especially in perfect condition. It is a reprint of the second folio edition of the Genevan version (1561), with all the notes, cuts, and maps exactly reproduced. That no effort was made to change the spelling and style to the Scottish usage shows that the southern English was perfectly familiar in the north. The publication was a joint enterprise on the part of the church and the printers, of whom Arbuthnot seems to have been the capitalist and Bassandyne the practical mechanic. The 'Dedication,' which was written by Arbuthnot and revised by the general assembly, is addressed in their name to James VI, and the impression is said to have been intended 'to the end that in euerie paroch kirk there sulde be at leist ane thereof kepit, to be callit the commoun buke of the kirke.' The 'Dedication' is dated 10 July 1579; six weeks later (24 Aug.) Arbuthnot was made king's printer, with right of printing ordinary books and special license to print and sell Bibles 'in the vulgar Inglis, Scottis, and Latein toungis' (LEE, *Mem. App.* No. 7). An act of parliament was passed in 1579 to compel every gentleman householder and others with 300 marks of yearly rent, and every substantial yeoman or burghess to 'have a bible and psalme buke in vulgar language in their hous' under penalty of 10l. (*Act. Parl. Scot.* iii. 139). Searchers were appointed to carry the law into effect, and local authorities issued proclamations calling the attention of the citizens to the enactment. The demand for the new Bible seems to have been so great that some delay occurred in supplying copies (*Articles of General Assembly*, ap. CALDERWOOD'S *Hist.* iii. 467).

A romance poem, 'The Buik of the most noble and valizeand Conquerour Alexander the Great,' was printed by the Bannatyne

Club in 1831 from the unique copy belonging to Lord Panmure. Two devices (pp. 105-6) indicate that the book came from the press of Arbuthnot about 1580. In 1582 he printed the first edition of Buchanan's 'Rerum Scotticarum Historia,' folio, more remarkable for beauty than correctness. He also issued the acts of parliament for 1584. He died intestate 1 Sept. 1585, as appears from the inventory of his effects 'maid and gevin vp be Agnes Pennyuckie, his relect spous, in name and behalf of Alesone, Agnes, Thomas, George, and Johne Arbuthnettis, their lauchfull bairnis' (*Bannatyne Miscellany*, ii. 207). He left two printing presses with fittings.

**ARBUTHNOT, CHARLES** (1767-1850), diplomatist and politician, one of the sons of J. Arbuthnot, by the daughter of J. Stone, a London banker, whose brother was Archbishop Stone, the primate of Ireland, was born in 1767. He began his apprenticeship in public life in 1793, when he accepted the position of précis writer in the Foreign Office, and entered upon his political career with his election in March 1795 as member for East Loos. He served in important diplomatic positions in Sweden and Portugal, and, after holding for a few months (Nov. 1803 to June 1804) the post of under-secretary for foreign affairs, was appointed ambassador extraordinary at Constantinople. When holding this appointment he was instructed by the cabinet to demand from the Porte the dismissal (amongst other things) of the French envoy, General Sebastiani, the rejection of which led to the forcing of the Dardanelles by our fleet. Mr. Arbuthnot, during this operation, was on board the admiral's ship, and it was mainly owing to his firmness that whatever success attended the operation was achieved. The late Sir Henry Blackwood, in a letter to Lord Castlereagh, described him as having been 'not only minister, but admiral.' On receiving his appointment at Constantinople he was sworn of the privy council, and on his return to England in 1807 a pension of 2,000*l.* per annum was conferred upon him. At the same time Mr. Arbuthnot abandoned foreign for home service. From 1809 to 1823 he was one of the joint-secretaries of the treasury; from the latter year until 1827, and again for a few months in 1828, he presided over the board of woods and forests; and for two years (1828-30) he held the chancellorship of the duchy of Lancaster. In April 1809, when he was returned for Eye in Suffolk, he

re-entered parliamentary life. At the dissolution in 1812 he became member for Orford in the same county; from 1818 to 1827 he sat for St. Germans, in Cornwall; from 1828 to 1830 for St. Ives, and in 1830-1 for Ashburton. His first wife was a daughter of William Clapcott Lisle, and a granddaughter of the Marquis of Cholmondeley. After her death Mr. Arbuthnot married Harriett, the third daughter of the Hon. Henry Fane. She died in 1834, and he died at Apsley House 18 Aug. 1850. The Duke of Wellington was much attached to Mr. Arbuthnot, who during the latter years of his life lived in the duke's house as his confidential friend.

**ARBUTHNOT, GEORGE** (1802-1865), a distinguished member of the permanent civil service, was the son of Lieutenant-general Sir Robert Arbuthnot [see **ARBUTHNOT, SIR ROBERT**]. He was appointed by Lord Liverpool a junior clerk in the treasury on 18 July 1820, and served in that department until his death on 28 July 1865. He was then holding the appointment of auditor of the civil list, and was also secretary to the ecclesiastical commissioners. On Mr. Arbuthnot's death, the lords commissioners of the treasury, in noticing his 'singular and eminent services,' gave the following account of his official life:—'On 22 March 1850 Sir Charles Wood made the following communication to the board of treasury: "The chancellor of the exchequer avails himself of this opportunity of bringing before the board the services of Mr. Arbuthnot, who has acted as his private secretary for nearly four years. Mr. Arbuthnot has been thirty years in the treasury, during nearly the whole of which period he has been employed in situations of great trust and responsibility. He acted as private secretary to six successive secretaries, and two assistant secretaries of the treasury. He was appointed in May 1841 to perform the duties of colonial clerk during the illness of Mr. Brande, and has since acted as assistant to that gentleman, and has executed the duties of colonial clerk during Mr. Brande's annual vacation to the entire satisfaction of the board. In February 1843 he was selected by Sir Robert Peel to be one of his private secretaries, and he has received not only from Sir Robert Peel, but from the secretaries of the treasury to whom he acted as private secretary in former years, repeated testimonies of their approbation. On Sir Charles Wood becoming chancellor of the

exchequer in July 1846 Mr. Arbuthnot was appointed to his present situation; and Sir C. Wood considers it due to him to record his obligation to him for his constant and zealous exertions at all times, and for the able assistance which he (Sir C. Wood) has received from him in times of great difficulty and on subjects of the greatest moment and importance, and he strongly recommends Mr. Arbuthnot to the board for some distinguished mark of that approbation with which such public services as he has performed must be regarded." My lords have only to add to this just tribute to Mr. Arbuthnot's merits that during the fifteen years which have since elapsed, he has continued his useful career with the same devotion to the public service, and with the still larger opportunities of usefulness which his increased experience afforded him.'

Mr. Arbuthnot's work, as the foregoing minute shows, was not confined to the ordinary business of the treasury. He was constantly consulted on important questions of currency and banking, upon both of which subjects he was regarded as a high authority. As private secretary to Sir Robert Peel at the time when the latter passed through parliament the Bank Charter Act of 1844, Mr. Arbuthnot was intimately associated with the great minister in the framing of that measure, and some years afterwards, when the question of a revision of the act was under consideration, he published a pamphlet containing an able justification of its principles and provisions. In later years he was frequently consulted on questions connected with the Indian currency, when it was proposed to attempt the substitution of a gold for a silver currency in that country; and about the same time he submitted to the lords of the treasury a series of valuable reports upon the currency of Japan in connection with difficulties which had arisen from certain provisions of the treaty executed between the British and Japanese governments in 1858.

Mr. Arbuthnot's paper on Civil Patronage, written in 1854, with reference to alleged defects in the organisation of the permanent civil service, which had been brought to notice in a report made by Sir Stafford Northcote and Sir Charles Trevelyan in the previous year, contains a very able defence of the system of appointment which then prevailed, and a powerful refutation of the arguments advanced in the report in question. His style of writing was singularly vigorous and clear, and the rapidity and energy with which he wrote constituted not the least of his many merits as a public servant.

Mr. Arbuthnot was twice offered the appointment of financial member of the council of the governor-general of India, first on the death of Mr. James Wilson in 1860, and again on the retirement of Sir Charles Trevelyan in 1865, but on both occasions he was compelled by the state of his health to decline the offer.

[Records of her Majesty's Treasury; Report on the Organisation of the Civil Service, published 1854; Pamphlet, entitled 'Sir Robert Peel's Act of 1844, regulating the issue of Bank Notes, vindicated by G. Arbuthnot,' 1857; Arbuthnot's Reports on the Japanese Currency, 1862-3; Macmillan's Magazine, August 1870; Globe, August 1865.] A. J. A.

**ARBUTHNOT, JOHN** (1667-1785), physician and wit, was the son of a Scotch episcopal clergyman settled at Arbuthnot, Kincardineshire. He is said to have studied at Aberdeen, but he took his doctor's degree in medicine at St. Andrew's on 11 Sept. 1696. His father lost his preferment upon the revolution, and retired to a small estate of his own; and the sons, who shared his high-church principles, found it desirable to seek their fortunes abroad. One of them, Robert, became ultimately a banker in Paris; his extraordinary amiability is celebrated by Pope (*Letter to Digby*, 1 Sept. 1722); he married a rich widow of Suffolk in 1726 (*Swift to Stopford*, 20 July 1726); and he was suspected of Jacobite tendencies (*Gent. Mag.* ii. 578, 766, 782). Another was in the army (*Journal to Stella*, 26 Sept. 1711). John Arbuthnot settled in London, where he first stayed at the house of Mr. William Pate, a woollendrapier, and gave lessons in mathematics. In 1697 he published 'An Examination of Dr. Woodward's Account of the Deluge, &c.,' criticising a crude theory suggested by Woodward (1695) in an 'Essay towards a Natural History of the Earth.' Arbuthnot next published an able 'Essay on the Usefulness of Mathematical Learning, in a letter from a gentleman in the city to his friend in Oxford,' dated 25 Nov. 1700. He was elected a fellow of the Royal Society, 30 Nov. 1704; and in 1710 he contributed a paper to its 'Transactions' upon the slight average excess of male over female births; which he regards as a providential arrangement intended to provide against the greater risks of the male sex, and as proving that polygamy is contrary to the law of nature. Arbuthnot was meanwhile rising in his profession, and had the good luck to be at Epsom when Prince George of Denmark was suddenly taken ill and to prescribe for him successfully. He was appointed physician extra-

ordinary to Queen Anne, 30 Oct. 1705; and on the illness of Dr. Haines, fourth physician in ordinary, 11 Nov. 1709. Swift calls him the 'queen's favourite physician.' On 27 April 1710, he was admitted a fellow of the Royal College of Physicians, was censor in 1723, and pronounced the Harveyan oration in 1727. Arbuthnot's favour at court was strengthened by his intimacy with the leading statesmen of the Harley administration. He formed a close friendship with Swift, and is frequently mentioned in the 'Journal to Stella.' He was a member of the famous 'Brothers Club,' and took an active share in the literary warfare against the whigs. He was the author, as Swift tells us (*Journal to Stella*, 12 Dec. 1712) of the 'Art of Political Lying,' one of the best specimens of the ironical wit of the time. A more celebrated production was the well-known pamphlet called ultimately, 'Law is a Bottomless Pit; or, the History of John Bull,' published 1712. Both Swift and Pope ascribe this to Arbuthnot (SPENCE'S *Anecdotes*, p. 145; *Journal to Stella*, 12 Dec. 1712). It is an ingenious and lively attack upon the war policy of the whigs; and, if it wants the force of Swift's profounder satire, it is an admirably effective and still amusing party squib. It does not seem to be known whether Arbuthnot originated or only adopted the nickname, John Bull. During the last years of Queen Anne's reign Swift and Arbuthnot had become intimate with the younger wits, Pope, Gay, and Parnell. They called themselves the 'Scriblerus Club,' and projected a kind of joint-stock satire to be directed against 'the abuses of human learning in every branch.' Lord Oxford carried on an exchange of humorous verses with them; and, according to Pope (SPENCE'S *Anecdotes*, p. 10), Atterbury, Congreve, and even Addison, proposed to join in their scheme. Arbuthnot writes a letter to Swift with various suggestions for Scriblerus during his friend's retirement at Letcombe; and Swift in his reply says that Arbuthnot was the only man capable of carrying out the plan, which had been originally suggested by Pope. The scheme dropped for a time upon Anne's death and the retirement of Swift to Ireland. Fragments, however, had been executed and formed part of the 'Miscellanies' printed by Pope in 1727. The 'Memoirs of Martinus Scriblerus' were first published in the quarto edition of Pope's works in 1741; they are mainly, if not exclusively, Arbuthnot's, and give the best specimen of his powers. The ridicule of metaphysical pedantry is admirable, though rather beyond popular apprecia-

tion. Other passages are directed against the antiquarians and Arbuthnot's old opponent, Woodward, and his supposed discovery of an ancient shield. The account of Scriblerus's education clearly gave some hints to Sterne's 'Tristram Shandy.'

Arbuthnot was in attendance upon Queen Anne in her last illness. Upon her death he retired for a short time to France. He went there again in 1718, his chief business being, as he told Swift (14 Oct. 1718), to leave his two girls with their uncle. Such visits might be suspicious in the eyes of good whigs. Upon the accession of George I he lost his place at court, but he appears to have retained his practice among the great people. We find him introducing Swift to the Princess of Wales—soon to become Queen Caroline—in April 1726. He was the friend and physician both of Chesterfield and of Pulteney, the last of whom tells Swift that no one but Arbuthnot understood his case. He attended Mrs. Howard, afterwards Lady Suffolk, and Congreve. He was the trusted friend and adviser of all the wits. He helped to get up a subscription for Prior when the poet was in distress. He was the constant adviser, medical and otherwise, of his friend Gay. Pope constantly expressed his gratitude to Arbuthnot, paid to him some of his finest poetical compliments, and dedicated the most perfect of his satires to this

Friend to my life, which did not you prolong,  
The world had wanted many an idle song.

Though his correspondence with Swift was often interrupted, their friendship never changed. Arbuthnot, who was a musician, helped Swift to get singers for his cathedral, and sent him prescriptions and medical advice. If there were a dozen Arbuthnots in the world, said Swift (*Letter to Pope*, 29 Sept. 1725), he would burn his 'Travels.' 'Our doctor,' he adds, 'hath every quality in the world that can make a man amiable and useful; but, alas! he hath a sort of slouch in his walk.' Elsewhere (*Letter to Gay*, 10 July 1732), he calls Arbuthnot 'the king of inattention,' and Chesterfield confirms the statement that Arbuthnot was frequently absent-minded in company. 'The doctor,' said Swift on another occasion, 'has more wit than we all have, and his humanity is equal to his wit.' And this seems to have been the universal opinion.

Arbuthnot was singularly careless of his literary reputation. His witty writings were anonymous; he let his children make kites of his papers, allowed his friends to alter them as they pleased, and took no pains to

distinguish his share. After the death of Queen Anne he took part, with Pope and Gay, in the silly farce called 'Three Hours after Marriage,' in which his old enemy Woodward is once more ridiculed, and which, being unworthy of all the three authors, was deservedly damned in 1717. Another trifle, called 'A Brief Account of Mr. John Gingleutt's treatise concerning the Altercation or Scolding of the Ancients,' is identified as Arbuthnot's by letters to Swift from Pulteney (9 Feb. 1731) and Pope (1 Dec. 1731); but Pope's view that it is of 'little value' seems to be better founded than Pulteney's admiration of its humour. Arbuthnot had published about 1707 a collection of 'Tables of Grecian, Roman, and Jewish Measures, Weights, and Coins reduced to the English Standard,' and dedicated to Prince George of Denmark. He republished these in 1727, with preliminary dissertations and with a dedicatory poem to the king by his son Charles, then a student of Christ Church, for whose benefit, he tells us, they were again printed. The death of this son in 1731 was a severe blow to Arbuthnot, and is mentioned with pathetic resignation in the father's letter to Swift, 13 Jan. 1732-3. Arbuthnot's health had long been uncertain. Swift notices, in the 'Journal to Stella' (4 Oct. 1711), that the doctor was suffering from symptoms of stone. In 1723 he tells Swift that he is as cheerful as ever on public affairs, 'with a great stone in his right kidney, and a family of men and women to provide for.' His characteristic cheerfulness seems to have declined under illness and domestic trouble, and some of his later letters express some sympathy with Swift's misanthropical views. In his last years he published three medical treatises: 'An Essay concerning the Nature of Aliments and the Choice of them' (1731); 'Practical Rules of Diet in the various Constitutions and Characters of Human Bodies' (1732); and an 'Essay concerning the Effects of Air on Human Bodies' (1733). He retired for a time to Hampstead in 1734, to try the effect of the air, and there wrote touching letters to Pope (17 July) and to Swift (4 Oct. 1734), taking leave of them with affectionate goodwill. 'A recovery in my case and in my age,' he wrote, 'is impossible; the kindest wish of my friends is euthanasia.' He died peacefully, though in much suffering, 27 Feb. 1734-5.

Arbuthnot had two sons—Charles, mentioned above, and George, who became secondary in the Remembrancer's Office—and two daughters, who died unmarried. George, whose melancholy is contrasted with his

father's cheerfulness by Swift's friend Erasmus Lewis, was one of Pope's executors; Pope left to him a portrait of Bolingbroke and a watch given by the King of Sardinia to Peterborough, and by Peterborough to Pope. He also bequeathed 200*l.* to George and 200*l.* to his sister Ann Arbuthnot. Arbuthnot's acknowledged works are given above. Two volumes, called 'The Miscellaneous Works of the late Dr. Arbuthnot,' were published at Glasgow in 1751. George Arbuthnot advertised that they were not his father's works, but 'an imposition upon the public.' They were republished in 1770, with a few additional pieces and a life, the accuracy of which was admitted by George Arbuthnot (see *Biog. Brit.* 1778). The collection has no authority, but includes the following, which were clearly Arbuthnot's: the 'Usefulness of Mathematical Learning,' the 'Scolding of the Ancients,' the 'Examination of Woodward,' a sermon at the Mercat Cross, Edinburgh (see *ELWIN'S Pope, Letters*, ii. 489), and a poem called *Ἐνῶπι σκαυδόν*, first printed by Dodsley in 1748, with Arbuthnot's name. The 'Masquerade,' a poem, is probably Fielding's, with whose 'Grubstreet Opera' it was printed in 1731, having first appeared (it is there said) in 1728. The letter to Dean Swift is attributed to Gordon of the 'Independent Whig' (*Monthly Review*, iii. 399). It is said in Chalmers's 'Biog. Dict.' that several of the pieces 'were written by Fielding, Henry Carey, and other authors.' They are for the most part worthless, and seem to have been taken at random on account of the subjects. 'Gulliver decypher'd' is attributed to Arbuthnot in the 'Biog. Brit.,' and by a writer in the 'Retrospective Review,' but it is a more than ostensible attack upon Swift, Pope, and himself; it deals with certain sore subjects for all three on which Arbuthnot was very unlikely to touch. The 'third part of John Bull' seems to be quite unworthy of him. Besides these, he has been credited with 'Critical Remarks on Capt. Gulliver's Travels by Dr. Bantley,' 'Don Bilioso de l'Estomac,' 'Notes and Memorandums of the six days preceding the Life and Death of a late Right Rev. —' (that is Bishop Burnet), and the 'Essay upon an Apothecary' in a 'Supplement to Dean Sw—t's Miscellanies,' all in the same collection. They are at best very doubtful. It appears, also, that Arbuthnot helped in the notes to the 'Dunciad' (NICHOLS, *Illustrations*, iii. 766, and *Anecdotes*, v. 586). He may probably have written the 'Virgilius Restauratus' appended to the same; and he is said to have written the 'Reasons offered by the Company

of exercising the Trade and Mystery of Up-holders against part of the Bill for viewing and examining Drugs and Medicines; the 'Petition of the Colliers, Cooks, Blacksmiths, &c., against Catoptical Victuallers; and 'It cannot rain but it pours, or London strewed with rarities,' generally printed in Swift's works. They first appeared in the additional volume of 'Miscellanies' published by Pope in 1732, together with an 'Essay of the learned Martinus Scriblerus concerning the Origin of Sciences' (which is traced to the monkeys of Ethiopia) attributed to Arbuthnot and Pope himself by Pope (SPENCE, 167). He may have contributed in some degree to the treatise on the Bathos, which seems, however, to have been almost entirely Pope's.

The 'History of John Bull' originally appeared in 1712, in successive parts, entitled 'Law is a Bottomless Pit, exemplified in the case of Lord Strutt, John Bull, Nicholas Frog, and Lewis Baboon, who spent all they had in a lawsuit;,' 'John Bull in his Senses,' being the second part of the above; 'John Bull still in his Senses,' the third part; 'Appendix to John Bull still in his Senses; and 'Lewis Baboon turned honest and John Bull politician,' being the fourth part. They are described on the title-page as written by the author of the 'New Atalantis.' The history was reprinted in Pope's 'Miscellanies' (1727). Arbuthnot's works were collected and edited by G. A. Aitken in 1892.

[Life in Miscellaneous Works, 1770; Biographia Britannica; Works of Swift and Pope, passim; Spence's Anecdotes; Chesterfield's Works, 1845, ii. 446; Retrospective Review, vol. viii.; Munk's College of Physicians (1878), ii. 27.]

L. S.

**ARBUTHNOT, MARRIOT** (1711?-1794), admiral, was a native of Weymouth. About his birth, parentage, and early years, nothing is certainly known. It has been supposed that he was related to Dr. John Arbuthnot, but apparently on no stronger grounds than the similarity of name; and the fact that up to 1763 he always wrote it Arbuthnott, as the family of Viscount Arbuthnott still does, may perhaps suggest a nearer connection with that stem. He did not attain the rank of lieutenant till 1739, when he was twenty-eight years of age. In 1746 he was made a commander, and in 1747 a captain. In 1759 he commanded the Portland, one of the ships employed under Commodore Duff in the blockade of Quiberon Bay, and was present at the total defeat of the French on 20 Nov. From 1771 to 1773 he commanded the guardship at Portsmouth, and in 1775 was appointed commissioner of the navy at Halifax; but he was recalled in January 1778

on his advancement to flag rank. He reached home in September, and in the following spring, after sitting as a member of the court-martial on Admiral Keppel, he was appointed to the command of the North American station, for which he sailed in the Europe of 64 guns on 1 May. He reached New York on 25 August. Here he remained through the autumn and winter, for some time expecting the attack of the Count d'Estaing, which however broke without much harm on Savannah. Afterwards, in concert with Sir Henry Clinton, he undertook the expedition against Charlestown, which surrendered without further resistance, when the passage into the harbour had been forced by the fleet. On 10 July 1780 a squadron of seven ships of the line and four heavy frigates, with a body of 6,000 soldiers newly arrived from France, captured Rhode Island, and Arbuthnot, reinforced at the same time and with a squadron now numbering nine ships of the line, took up his station in Gardiner's Bay at the north end of Long Island, whence he could keep watch on the enemy. He was still here at the latter end of September, when he unexpectedly received a letter from Sir George Rodney, acquainting him that he had arrived at Sandy Hook and taken on himself the command of the station. Sir George was at this time the commander-in-chief at the Leeward Islands, and having reason to believe that the Count de Guichen, the French admiral, had brought his fleet on to the coast of North America, had also come with ten ships of the line. Arbuthnot resented this supersession, and expressed himself upon it with much temper and insolence. Rodney submitted the whole matter to the admiralty. The admiralty approved Rodney's view, and Arbuthnot, nettled by the implied censure, requested, on the plea of ill-health, that he might be relieved from the command which had again devolved on him, since Rodney had gone back to the West Indies as soon as he knew that Guichen had certainly returned to France.

Through the first two months of 1781 the French and English squadrons lay opposed to each other at Rhode Island and Gardiner's Bay. It was only with the beginning of March that M. Destouches, the French senior officer, was persuaded by Washington to attempt a movement against the English positions at the mouth of the Chesapeake. The time was well chosen, for one of the English ships had been wrecked a few weeks before, and another dismasted [see AFFLECK, EDMUND]. Arbuthnot, however, got to sea very shortly after Destouches, and on the morning of 16 March, being then some forty miles to the eastward of Cape Henry, the French squadron

was sighted to the north-east. It was now to leeward; but as Arbuthnot steered towards it the wind gradually drew round from west to north-east. Throughout the forenoon he endeavoured to get to windward of the enemy, and about 1.30 p.m. Destouches, finding that he was losing ground and apprehensive of having his rear doubled on, gave up the weather-gauge, and running down to leeward formed his line on the starboard tack. As the English squadron, on the opposite tack, was now nearly abreast and to windward of the enemy, Arbuthnot began to wear in succession; and the three leading ships, opposed to the enemy's van, found themselves engaged by the whole enemy's line before the rest of their squadron could support them. In this way these three ships were dismantled; whilst the enemy, passing by them and wearing in succession, reformed their line on the larboard tack and waited for a renewal of the action. But this was out of the power of the English to attempt; for of their eight ships three were disabled, and all that could be done was to make for the Chesapeake and, anchoring in Lynnhaven Bay, prevent any operations the French might have in view. But these, on their part, had also suffered severely, and were unable to attempt anything further. Their expedition had miscarried, and they returned to Rhode Island, where they anchored on the 30th. A fortnight later the English took up their old position in Gardiner's Bay, and Arbuthnot, having received permission to return home, surrendered the command to Rear-Admiral Graves, and sailed for England on 4 July. He had no further employment at sea, but, advancing in rank by seniority, was, on 1 Feb. 1793, promoted to be admiral of the blue. He died in London on 31 Jan. 1794 at the age of 83.

Admiral Arbuthnot may be considered as, in some respects, a late survival of the class of officer described under the name of Flip or Truncheon. That he was ignorant of the discipline of his profession was proved by his altercation with Sir George Rodney; that he was destitute of even a rudimentary knowledge of naval tactics was shown by his absurd conduct of the action off Cape Henry; and for the rest he appears in contemporary stories (cf. *Morning Chronicle*, 18 May 1781) as a coarse, blustering, foul-mouthed bully, and in history as a sample of the extremity to which the maladministration of Lord Sandwich had reduced the navy.

[Charnock's *Biographia Navalis*, vi. 1; Ralfe's *Naval Biography*, i. 129; Beaton's *Naval and Military Memoirs*; Mundy's *Life of Lord Rodney*; *Official Letters and Documents in the Record Office*.]

J. K. L.

ARBUTHNOT, SIR ROBERT, K.C.B., K.T.S. (1773-1853), lieutenant-general, was the fourth son of John Arbuthnot, of Rockfleet, county Mayo, and brother of the Right Honourable Charles Arbuthnot and of Lieutenant-general Sir Thomas Arbuthnot [see ARBUTHNOT, CHARLES]. He entered the army as a cornet in the 23rd light dragoons on 1 Jan. 1797, and was present at the battle of Ballynamuck in the Irish rebellion on 8 Sept. of the following year. He subsequently served with his regiment at the capture of the Cape of Good Hope in 1806, and in South America as aide-de-camp to General (afterwards Lord) Beresford, with whom and the rest of the troops under General Beresford's command he was made a prisoner of war, and remained a prisoner for eighteen months, until released under the convention made by General Whitelock. On his return from America, Arbuthnot, then a captain in the 20th light dragoons, resumed his position on General Beresford's staff at Madeira, and served with him as aide-de-camp, and afterwards as military secretary, throughout the greater part of the Peninsular war.

Few officers have taken part in so many general actions. Besides the battle of Ballynamuck, two at the Cape, and three in South America, Sir Robert was present at the battle of Corunna, the passage of the Douro, the battle of Busaco, the lines of Torres Vedras, the siege and reduction of Olivenza, the first siege of Badajoz, the battle of Albuera, the siege and storming of Ciudad Rodrigo, the third siege and storming of Badajoz, the battles of the Nivelle, Nive, passage of the Adour, and the battles of Orthes and Toulouse. He received the gold cross and three clasps for Busaco, Albuera, Badajoz, Nivelle, Nive, Orthes, and Toulouse, and the war medal and two clasps for Corunna and Ciudad Rodrigo. He also received Portuguese and Spanish orders, including the special star given by the Portuguese government to all English officers of superior rank engaged at Albuera. He brought home the despatches regarding Albuera, and on that occasion was appointed a brevet lieutenant-colonel. He was created a knight of the Tower and Sword by the government of Portugal, and in 1815 was appointed a K.C.B. In 1830 he attained the rank of major-general, and in 1838 was appointed to the command of the troops in Ceylon, after which he commanded a division in Bengal until his promotion as lieutenant-general in 1841. In 1843 he was appointed colonel of the 76th foot. He died on 6 May 1853.

Sir Robert Arbuthnot was an officer of

conspicuous gallantry, and was remarkable for his quickness of eye and readiness of resource. At Albuera he distinguished himself by galloping between two regiments, the British 57th and a Spanish regiment, and stopping the fire which by mistake they were exchanging—a feat which he performed without receiving a single wound. In the same battle, at a critical moment, he was enabled by his quickness of sight to discern a retrograde movement on the part of the French, which Marshal Beresford had not perceived, and induced the latter to recall an order which he had just given for the retirement of two batteries of artillery. At an earlier period, in South America, when he and General Beresford were prisoners in the hands of the Spanish, and when all the officers were about to be searched for papers, he contrived by a clever stratagem to secrete in an orchard an important document, viz. the convention which had been executed between General Beresford and the Spanish general Linieres, and of which the Spanish were anxious to regain possession.

[Hart's Army List; Annual Register, 1853; Maxwell's Victories of the British Armies; Napier's History of the Peninsular War; Despatches of the Duke of Wellington.] A. J. A.

**ARBUTHNOT, SIR THOMAS** (1776–1849), lieutenant-general, was the fifth son of John Arbuthnot, of Rockfleet, county Mayo [see **ARBUTHNOT, CHARLES**, and **SIR ROBERT**, lieutenant-general]. He entered the army as an ensign in the 29th foot in 1794, and after serving in that and other regiments joined the staff corps under Sir John Moore in 1803. He subsequently served as quartermaster-general at the Cape of Good Hope, whence, in 1808, he joined the army in the Peninsula, and was assistant quartermaster-general to General Picton's division during the greater part of the war. He was twice wounded, once in the West Indies and again in one of the latest actions in the Peninsula. He was appointed an aide-de-camp to the Prince Regent in 1814, and a K.C.B. in 1815. Promoted major-general in 1825, he was sent next year to Portugal in command of a brigade. He afterwards commanded a district in Ireland, and having attained the rank of lieutenant-general in 1838, was appointed, in 1842, to the command of the northern and midland districts in England, which command he retained until his death on 26 Jan. 1849. Sir Thomas Arbuthnot had a considerable military reputation. Sir Thomas Picton held him in high esteem, and the good opinion which the Duke of Wellington entertained of his judgment and efficiency was

proved by his having selected him for the newly constituted command at Manchester at a time when the chartists were causing a good deal of anxiety in that part of the country.

**ARCHANGEL, FATHER.** [See **FORBES, JOHN.**]

**ARCHDALL, MERVYN, M.A.** (1723–1791), Irish antiquary, was descended from John Archdall, of Norsom or Norton Hall, in Norfolk, who went to Ireland in the reign of Queen Elizabeth, and settled at Castle Archdall, co. Fermanagh. He was born in Dublin 22 April 1723. After passing through the university of Dublin with reputation, his antiquarian tastes introduced him to the acquaintance of Walter Harris, Charles Smith, the topographer, Thomas Prior, and Dr. Pococke, archdeacon of Dublin. When the latter became bishop of Ossory, he appointed Archdall his domestic chaplain, bestowed on him the living of Attanagh (partly in Queen's County and partly in co. Kilkenny), and the prebend of Cloneamery in the cathedral of Ossory (1762), which he exchanged (1764) for that of Mayne in the same cathedral; this he resigned in 1772. Archdall was also chaplain to Francis Pierpoint, Lord Conyngham, and a member of the Royal Irish Academy. Having married his only daughter to a clergyman, he resigned part of his preferments in the diocese of Ossory to his son-in-law, and obtained the rectory of Slane in the diocese of Meath, where he died, 6 Aug. 1791.

His works are: 1. 'Monasticum Hibernicum; or an History of the Abbies, Priories, and other Religious Houses in Ireland,' Dublin, 1786, 4to, pp. 820. This work was the result of forty years' labour. The collections for it filled two folio volumes, but the author was obliged to abridge them considerably. Compared with Dugdale's 'Monasticon Anglicanum,' it is a weak and feeble production, and eighty-two mistakes in it are rectified in Dr. Lanigan's 'Ecclesiastical History of Ireland.' An interleaved copy, with numerous manuscript additions by W. Monck Mason, is preserved in the Egerton collection in the British Museum (Nos. 1774, 1775). Considerable portions of the work appear to have been contributed by Edward Ledwich. The publication of a new edition, with notes by the Rev. Patrick F. Moran, D.D., and other antiquaries, was commenced, in parts, at Dublin in 1871. 2. An edition of Lodge's Peerage of Ireland, 'revised, enlarged,

and continued to the present time,' 7 vols. 1789. On this work Archdall was engaged only four years, confining himself to genealogical inquiries, as, according to his own admission, he was almost totally ignorant of heraldry. Mrs. Archdall rendered valuable assistance to her husband in the preparation of the work by deciphering the valuable notes of additions and corrections left by Lodge in shorthand or cipher. 3. 'Manuscript Collections relating to Irish Topography,' sold with Sir William Betham's MSS. for 7*l.* 15*s.*

**ARCHDEKIN, or ARSDEKIN, RICHARD** (1618-1693), an Irish Jesuit, who has adopted both forms of his name on his own title-pages, and is also known as **MAC GIOELLA CUDDY**, was the son of Nicholas Archdekin and his wife Ann Sherlock, and was born at Kilkenny 16 March 1618. He went through a course of classical studies, and for two years applied himself to philosophy before he entered the Jesuit order; and he studied theology for four years at Louvain. Entering the Society of Jesus at Mechlin 28 Sept. 1642, he was in due time enrolled among the professed fathers of the order. He was teaching humanities in 1650; he studied under the Jesuits at Antwerp and Lille; and arrived at the Professed House at Antwerp 26 March 1653. For six years he taught humanities, and he was professor of philosophy, moral theology, and Holy Scripture for a long period, chiefly at Louvain and Antwerp. His death occurred in the latter city 31 Aug. 1693.

Father Archdekin, who was proficient in the Latin, Irish, English, and Flemish languages, composed the following works:—1. 'A Treatise of Miracles, together with New Miracles, and Benefits obtained by the sacred reliques of S. Francis Xavierius exposed in the Church of the Society of Jesus at Mechlin,' Louvain, 1667, 8vo, in English and Irish. This very scarce book is supposed to be the first ever printed in the two languages in conjunction. 2. 'Precipue Controversiæ Fidei ad facile methodum redactæ; ac Resolutiones Theologicæ ad omnia Sacerdotis munia, præsertim in Missionibus, accommodatæ,' Louvain, 1671, 8vo. At the end of

this volume, which is a summary of theology, is usually found: 3. 'Vitæ et Miraculorum Sancti Patricii Hiberniæ Apostoli Epitome, cum brevi notitiâ Hiberniæ et Prophetiâ S. Malachiæ' (Louvain, 1671, 8vo), a life of St. Patrick, with a short notice of Ireland, and the prophecy of St. Malachi respecting the succession of the popes. The 'Controversiæ Fidei' had a wonderful success. A few copies of the work which found their way to the university of Prague were received with such enthusiasm that some transcripts of the whole were made for the use of the students; and in 1673 the book was reprinted, without the knowledge of the author, at the University Press. The third edition, which was printed at Antwerp with the author's corrections and additions, was followed by a fourth and fifth at Cologne and Ingolstadt; and the sixth, again at Antwerp, by a seventh again at Cologne. These particulars are gathered from the prefaces to the eighth edition, which appeared at Antwerp in 1686, and where the title, the bulk, and the arrangement of the work are so altered that it would hardly be recognised as the same. The 'Controversiæ Fidei' of 1671 is a small octavo of 500 pages. In the edition of 1686 the title is 'Theologia Tripartita Universa,' and the three volumes quarto, of which it consists, comprise in all about 1,100 pages closely printed in double columns, containing about five times the matter of the 'Controversiæ.' The work includes a life of Oliver Plunket, the catholic archbishop of Armagh, who was executed at London in 1681, and a life of Peter Talbot, the catholic archbishop of Dublin, who died in imprisonment at Dublin in 1680. In addition to these Archdekin's work contains a number of anecdotes connected with the history of Ireland, introduced as examples in support of his theological doctrines. Archdekin's work displays much order, knowledge, and precision, but some of his decisions in cases of conscience have been controverted by higher authority in the catholic church. In 1700 it was prohibited until correction should be made by the Congregation of the Index. The first edition published with the necessary corrections appears to have been also the last. It appeared at Antwerp in 1718, and was the thirteenth of the whole.

**ARCHER, EDWARD (1718-1789)**, physician, was born in Southwark, studied medicine in Edinburgh and afterwards in Leyden, where he graduated M.D. in 1746 with an inaugural dissertation, 'De Rheumatismo.' In 1747 he was elected physician to the Small-pox Hospital, which had just then been founded, and for the remainder of his life devoted the greater part of his thought and activity to the welfare of this institution and to the study and cure of the small-pox. This institution formed originally two establishments, viz. 'The Hospital for the Small-pox' and 'The Hospital for Inoculation,' and was founded chiefly to give the poor the advantages of the practice of inoculation, which had been previously an expensive operation and almost confined to the rich. Dr. Archer was a steady advocate and practiser of inoculation, and died some years before the introduction of vaccination which was destined to supersede it. He does not appear to have written any separate work on that or any other subject, but an account of the Small-pox Hospital, and, incidentally, of Dr. Archer's practice there, is given in a report by a Dr. Schultz, made to the Swedish government ('An Account of Inoculation, presented to the Royal Commissioners of Health in Sweden, by David Schultz, M.D., who attended the Small-pox Hospital in London near a twelvemonth; translated from the Swedish, London, 1758'), to which Dr. Archer prefixed a commendatory letter. Dr. Archer also wrote a very short note on the subject in the 'Journal Britannique' for 1755 (xviii. 485, La Haye, 1755). He is described as having been a 'humane, judicious, and learned physician, and an accomplished classical scholar.' Being possessed of a private fortune, and unambitious, he was never very busily or profitably engaged in practice. When attacked by his last and fatal illness, Dr. Archer gave a singular and almost unparalleled proof of his interest in the Small-pox Hospital by expressing a wish to die within its walls, whither he was accordingly removed. He ended his life 28 March 1789, in the institution which he had served so well for forty-two years, and the success of which was mainly attributed to his zeal and energy. His portrait, by Pine, is in the board-room of the hospital.

[Gent. Mag. 1789, part i. 373; Munk's Roll of College of Physicians, ii. 182.] J. F. P.

**ARCHER, FREDERICK SCOTT (1813-1857)**, inventor of the collodion process in photography, was the second son of a butcher at Bishop Stortford, and was, as a young man,

assistant to a silversmith, Massey, in Leadenhall Street. Showing some talent for sculpture, he was enabled, by the kindness of friends, to start in business as a sculptor, and it was a desire to obtain reproductions of his works that led him to take up the then recently discovered art of photography. Like many other photographers of the time, he made experiments with the view of obtaining a more suitable vehicle for the sensitive silver salt than the waxed paper principally employed. In 1846 Schönbein discovered gun-cotton; in 1847, Maynard, of Boston, prepared collodion, an ethereal solution of gun-cotton, for surgical purposes. In 1850 Archer successfully applied collodion to photography by adding an iodide to the collodion and immersing the glass plate with the film upon it while wet in the solution of nitrate of silver. The first account of the process was published in the 'Chemist,' March 1851. Archer does not seem to have been the first to suggest this application of collodion, but there appears no doubt whatever that he was the first to carry it into effect. He did not patent the invention, possibly because he did not realise its value, though he patented a development of no practical value in 1855 (Patent No. 1914). The process was at first only employed for producing 'positives,' and it was not for some time that it was found to be even more suitable for making 'negatives' from which any number of positive pictures can be obtained. Archer's original process, with certain improvements in the method of 'development' suggested by others soon after its publication, remained until quite recently without a rival, and it is only within the last two or three years that it has given way to the modern 'gelatine' process. Archer himself, soon after his discovery, left his house in Henrietta Street, and went to live in Great Russell Street, Bloomsbury, where he practised, with no great success, as a photographer. Here he produced several other inventions. Of these the more important were a camera, in which the various processes for producing a photographic picture could be carried on; and a 'liquid lens,' that is a lens with glass surfaces of suitable shape, and filled with liquid; though with regard to this invention he can make no claim to originality, such lenses having been patented for telescopes, as long ago as 1785, by a naval officer named Robert Blair. He is also said to have been the first to use a 'triplet' lens, a form of lens very popular until it was superseded by recent improvements. He died in May 1857, and was buried in Kensal Green. A subscription was started for his widow, but as she died in the following year the

amount (over 600*l.*) was devoted to the benefit of his children. A pension of 50*l.* was also granted them by the crown, on the ground that their father had reaped no benefit from an invention which had been a source of large profits to others.

Descriptions of Archer's invention in the various photographic text-books, of which the best is in the Report of the Jurors on Class xiv. (Photography) of the 1862 Exhibition; evidence as to his claims of priority in Notes and Queries (first series), vi. 396, 426, vii. 218; information furnished by Dr. Diamond, F.S.A.] H. T. W.

**ARCHER, JAMES** (1551?-1624?), Irish Jesuit, was born at Kilkenny in 1549 or 1551; entered the Society of Jesus at Rome in 1581; was professed of the four vows in Spain; and became the first rector of the Irish college at Salamanca. Father Archer was a great promoter of education, and was very dear to Irishmen, with whom he possessed unbounded influence. He was a famous missionary in Ireland during the war of Tyrone. He died in Spain between 1617 and 1624.

[Hogan's Chronological Catalogue of the Irish Province S. J., 5; Oliver's Collectanea S. J., 231.] T. C.

**ARCHER, JAMES, D.D.** (A. 1822), was a renowned catholic preacher, of whose personal history little appears to be known. We are informed by Dr. Husenbeth (*Life of Bishop Milner*, 13) that 'the celebrated preacher, Dr. Archer, began his preaching at a public-house near Lincoln's Inn Fields, at which the catholics assembled on Sunday evenings to hear the word of God in a large club-room in Turn Style.' In 1791 he was chaplain to the Bavarian minister in London. Archer published 'Sermons on various Moral and Religious Subjects, for some of the Principal Festivals of the Year,' London, 1789, 8vo; 2nd edit. 4 vols. London, 1794, 12mo; 3rd edit. 2 vols. London, 1817, 8vo; and 'Sermons on Matrimonial Duties, and other Moral and Religious Subjects,' London, 1804, 12mo. Bishop Milner, in a pastoral (1813), denounced the mixture of erroneous and dangerous morality in Archer's sermons, and absolutely forbade them to be publicly read in the chapels of his district. This feud was of old standing, as it appears, by 'A Letter from the Rev. James Archer to the Right Rev. John Milner, Vicar-Apostolic of the Midland District,' London, 1810, 8vo, that the bishop had 'added to the charge of irreligion a charge of immorality.' The nature of the latter charge may be inferred from the following allusion by Archer to his conduct on a certain occasion at the Clarendon Hotel:

'The smallest voluntary aberration from the rules of temperance is certainly never to be justified. Yet, in certain moments of peculiar interest or exultation, and when men meet together to exhilarate their humanity, such a failing will, in liberal minds, meet with a gentle, mild disposition to give it some degree of extenuation.'

Archer continued to preach to crowded audiences, and his pulpit eloquence was greatly admired, though it appears to have been somewhat stilted and artificial, according to the fashion set by Dr. Hugh Blair. Charles Butler, writing in 1822 of his sermons, remarks: 'It has been his aim to satisfy reason, whilst he pleased, charmed, and instructed her; to impress upon the mind just notions of the mysteries and truths of the Gospel; and to show that the ways of virtue are the ways of pleasantness, and her paths the paths of peace. No one has returned from any of his sermons without impressions favourable to virtue, or without some practical lesson which through life, probably in a few days, perhaps even in a few hours, it would be useful for him to remember. When we recollect that this is the fortieth year of Mr. Archer's predication, that he has preached oftener than fifty-two times in every year, and that in the present his hearers hang on all he says with the same avidity as they did in the first, we may think it difficult to find an individual to whose eloquence religion has in our times been so greatly indebted.'

He was created D.D. by Pope Pius VII 24 Aug. 1821, at the same time as Dr. Lingard.

[Butler's Hist. Memoirs of the English Catholics, ed. 1822, iv. 441, 442; Husenbeth's Life of Bishop Milner, 13, 228; Cat. of Printed Books in Brit. Mus.; Notes and Queries, 6th series, viii. 426; Evans's Cat. of Engraved Portraits, i. 9.] T. C.

**ARCHER, JOHN** (1598-1682), judge, son of Henry Archer, Esq., of Coopersale, Theydon Gernon, Essex, by Anne, daughter of Simon Crouch, of London, alderman, was educated at Queen's College, Cambridge, where he graduated B.A. in 1619, and M.A. in 1622. Having entered Gray's Inn as a student in 1617, he was called to the bar in 1620. He appears to have risen very slowly in his profession, as his name is not mentioned by any of the reporters of the time of Charles I. Foss states that 'in 1647 he was selected as counsel for the corporation of Grantham,' but cites no authority; and the corporation of Grantham does not appear as a party to any case reported in that year. In 1651 he was assigned by the court as

one of the counsel for Christopher Love on his trial for high treason in plotting with the Scots to bring about the restoration of the monarchy; but exception was taken to Archer on the ground that he had not subscribed the engagement to be true to the commonwealth, as required by a resolution of the House of Commons passed on 11 Oct. 1649, to be subscribed by public functionaries and by 'all sergeants at law, counsellors, officers, ministers, and clerks, and all attorneys and solicitors.' As Archer had not subscribed, and at the trial declined to subscribe, this engagement, he was not allowed to plead. Whether he subsequently did so does not appear; but in 1656 he was returned to parliament, and his name does not appear in the list of the excluded members. On 27 Nov. 1658 he was made a serjeant, the appointment being confirmed by Charles II on 1 June 1660; but his elevation to the bench, which had occurred in the interim (15 May 1659), was thereby tacitly annulled. On 4 Nov. 1663 he was made a justice of the common bench in succession to Sir Robert Hyde (then raised to the chief justiceship of the same bench), and knighted. As a judge he travelled the western circuit with Sir J. Kelyng. His name occurs in the list of the judges who attended the meeting of the bench summoned in 1666 to confer upon the proper course to be taken in view of the impending trial of Lord Morley for murder by the House of Lords, a case still cited as an authority upon the distinction between murder and manslaughter. Archer is characterised by Roger North as one 'of whose abilities time hath kept no record unless in the sinister way,' as uncertain in his law and afraid of a long and intricate cause. He appears, however, to have held decided and sound opinions on the construction of his own patent; for when the king in the winter of 1672 attempted to remove him from his office he stood stoutly upon his right to hold it on the terms of the patent, 'quamdiu se bene gesserit,' and refused to surrender the patent without a writ of *scire facias*, the proper legal mode of procedure to annul a royal grant; but which was so little to the taste of the king that Archer continued, until his death, legally justice of the common bench, and in receipt of his salary as such, though relieved by royal prohibition from the performance of the duties of the office, which were discharged by Sir William Ellis. He died in 1682, and was buried in Theydon Gernon churchyard, where a monument was raised to his memory. He married (1) Mary, daughter of Sir George Savile, Bart., of Thornhill, Yorkshire, by whom he does not appear to have had any

children; (2) Eleanor, daughter of Sir John Curson, Bart., of Kedleston, Derbyshire, by whom he had one child, viz. John, who died without issue, 7 Nov. 1706, having by his will left the Theydon Gernon estate to W. Eyre, Esq., of Gray's Inn, on condition that he married Eleanor Wrottesley (a niece of the testator), and assumed the name of Archer, which happened in due course. The Archers traced their descent from one Simon de Bois, who came to England with the Conqueror, of whom a namesake and lineal descendant changed his name to Archer at the bidding of Henry V on the occasion of a shooting match at Havering-atte-Bowre, in which he displayed the same skill as had formerly done the king good service at Agincourt, the king at the same time granting him a pension of five marks yearly. There are some inaccuracies in Foss's account of Archer's parentage.

Hist. iii. 1286, 1334, 1480; Whitelocke's Memorials (ed. 1732), 676, 678; Kelyng's Reports, 53; Siderin's Reports, 3, 153; Sir T. Raymond's Reports, 217; Sir T. Jones's Reports, 43; Mercurius Politicus, 16 Feb. 1660; Cal. State Papers, Dom. series (1667), 337; North's Life of Lord Keeper Guildford (ed. 1742), 45; Wotton's Baronetage, i. 162, ii. 246-7, 346; Foss's Lives of the Judges.] J. M. R.

ARCHER, JOHN (fl. 1660-1684), was court physician in the reign of Charles II. Of his origin nothing is certainly known; but he was probably an Irishman, as he speaks of having been in practice in Dublin in 1660. He afterwards lived in London, and was styled 'Chymical Physitian in Ordinary to the King' (1671); afterwards, on his engraved portrait, he is called simply 'medicus in ordinario regi' (1684). He boasts that, on the favourable report of some of his patients, his majesty was pleased to command him 'to help some noble persons afflicted with a fistule.' He was never a member of, or in any way licensed by, the College of Physicians. In fact Archer, although a royal physician, was what would be called in these days an advertising quack. His book, 'Every Man his own Doctor,' purporting to be a manual of health, but really treating of various diseases, reputable and disreputable, especially the latter, was nothing but an advertisement. He promises marvellous cures by secret remedies, sold only by himself, and able even to insure immunity beforehand from the possible consequences of debauchery. It is written in a style at once prurient and hypocritical. The British Mu-

seum copy of this work has written on the fly-leaf, in a contemporary hand—and probably a similar advertisement was written in every copy before it was sold—the following notice: ‘The author is to be spoke with at his chamber in a sadler’s house over against the mawes gate next the Black Horse nigh Charing Cross; his howers there are from eleven to five in the evening, at other times at his house in Knightsbridge.’

His only medicines were certain nostrums of his own preparation, ‘to be had only from the author at his house in Winchester Street, near Gresham College,’ and at prices which seem high. His books were also sold by himself. Archer’s ‘Secrets Disclosed, of Consumption, &c.’ is a book of the same stamp, and in part a repetition of the former. His ‘Herbal’ is worthless. He also boasts of three inventions—a vapour-bath, a new kind of oven, and a chariot which enabled one horse to do the work of two.

The only interest attaching to these discreditable works and their author is the singular fact that a man who might in the present day even be liable to prosecution, should in the reign of Charles II have enjoyed the status of the king’s physician.

The titles of his works, alluded to above, are: 1. ‘Every Man his own Doctor, compleated with an Herbal, &c.’ by John Archer, one of his Majesty’s Physicians in Ordinary. 2nd edition. London, printed for the Author, and are to be sold at his house, 1673 (1st edition 1671). 2. ‘Secrets Disclosed, of Consumption, showing how to distinguish between Sourvy and Venereal Disease, &c.’ by John Archer. London, printed for the Author, 1684.

[Works by John Archer, referred to above.]

J. F. P.

**ARCHER, JOHN WYKEHAM** (1808–1864), artist and antiquary, was the son of a prosperous tradesman of Newcastle-upon-Tyne, where he was born in 1808. At an early age he showed skill in drawing, and copied in a vigorous manner some of the designs of the Bewicks and other artists. After he had received a good general education, he was apprenticed to John Scott, who was a fellow-townsmen, then practising in Coppice Row, Clerkenwell, as an animal engraver. He afterwards returned to his native place, and in conjunction with William Collard, a local engraver, produced a series of large views of Fountains Abbey, in Yorkshire, from drawings by Mr. Carmichael. During his visit to Yorkshire, Archer also engraved several plates for Mackenzie’s ‘History of Durham.’ About 1831 he returned to London, and procured an

engagement in the engraving establishment of Messrs. William and Edward Finden. He was subsequently employed by other publishers; and during the next few years he engraved many plates for the ‘New Sporting Magazine.’ When the introduction of lithography and engraving on wood superseded almost entirely the old-fashioned plates as a means of book illustration, Archer turned his attention to painting in water-colours, and made numerous sketches of the relics of bygone days in the metropolis. Some of these sketches were purchased by Mr. W. Twopeny, of the Temple, who commissioned Archer to produce twenty drawings each year of the relics of antiquity scattered about in the highways and byways of London. Up to the close of the artist’s life this work was carried regularly forward, and the result was that Mr. Twopeny obtained a collection of drawings of the utmost value illustrative of the varied aspects of the great city. This collection was afterwards acquired by purchase for the nation, and is now deposited in the print-room of the British Museum. Archer was a diligent antiquary, and made copious notes descriptive of the sites and objects which he pictorially represented. After the decline of steel engraving he began to draw on wood, and some specimens of his work are to be found in Charles Knight’s ‘London,’ the ‘Illustrated London News,’ and Blackie’s ‘Comprehensive History of England.’ Many of the illustrations in the first series of Dr. William Beattie’s ‘Castles and Abbeys of England’ (1844) are from drawings by Archer. In consequence of an inspection of the drawings in Mr. Twopeny’s possession, the Duke of Northumberland commissioned Archer to make sketches, in the course of each summer, of the interesting antiquities on his grace’s extensive estates. Archer also executed several monumental brasses, particularly one which was ordered for India by Lord Hardinge to the memory of the officers who fell in the battles of the Punjab. He was for many years an associate of the new Society of Painters in Water Colours. His death occurred in London, 25 May 1864.

Archer’s published works are: 1. ‘Vestiges of Old London, a series of Etchings from Original Drawings illustrative of the Monuments and Architecture of London in the first, fourth, twelfth, and six succeeding centuries, with Descriptions and Historical Notices,’ London, 1851, fol. It contains 37 plates. The subjects are very pictorially treated, with numerous figures well introduced. 2. ‘Posthumous Poems,’ London, 1873, 8vo. A pamphlet of 22 pages, pub-

lished by the author's son, George R. Wykeham Archer.

[Pinks's Clerkenwell, 1865, pp. 90, 239, 388, 393, 639-41; The Builder, 4 June 1864, p. 409; Art Journal, N.S. iii. 243; Gent. Mag. ccxvii. 246; Redgrave's Dict. of Artists.] T. C.

**ARCHER, SIR SYMON** (1581-1662), an industrious and learned antiquary, who laid the foundation of Dugdale's 'History of Warwickshire,' was born at Umberslade, near Tanworth, in that county, 21 Sept. 1581, being descended from an old family of that name seated there in the time of Henry III. His life was uneventful. He was knighted on 21 Aug. 1624; sheriff of his county in 1628; and M.P. 1640. He married Ann, daughter of Sir John Ferrars, of Tamworth Castle. He formed one of a body of enthusiastic antiquaries who devoted themselves to the elucidation of the history of their country in its minor details. He was the friend of Burton, Spelman, Cotton, Dodsworth, and others. The first letter of Dugdale to Archer in the published correspondence of that herald is dated 16 Nov. 1635; and the last is 9 Sept. 1657. Very early in the letters a history of Warwickshire was under discussion; it was first intended to be Archer's book, who had collected the materials: it was next arranged that the two friends were to be partners in the undertaking; but it was ultimately published as Dugdale's, who said that he had made special use of Archer's manuscripts on every page of the book.

Sir Symon amassed a large quantity of choice manuscripts and other rarities, which he freely imparted to the younger race of antiquaries, including Fuller, the author of the 'Church History,' and Webb, the editor of 'Vale Royal.' In 1658 he was at the expense of engraving Dean Nowell's monument for his friend's 'History of St. Paul's.' Fuller, in the 'Worthies,' refers to his great age. He died in June 1662, and was buried at Tamworth on the 4th of that month. He had two sons who had the same affection for antiquarian pursuits as distinguished himself.

[Hamper's Life of Dugdale, 1827; Visitation of Warwickshire, 1619 (Harl. Soc.); Colville's Worthies of Warwickshire, 1870.] J. E. B.

**ARCHER, THOMAS** (1554-1630?), divine, was born at Bury St. Edmunds 12 Aug. 1554, and educated at Trinity College, Cambridge, where he was elected to a fellowship. He took his master's degree in 1582, and in November 1584 became chaplain to his kinsman, Dr. John May, bishop of Carlisle. In 1588 he was public preacher to the university, and in May 1589 was inducted rector

of Houghton Conquest and Houghton Gildable, in Bedfordshire. He served as chaplain in 1599 to Archbishop Whitgift, and in 1605 was made one of the king's chaplains in ordinary. In 1623 he made a vault for himself in the chancel of Houghton Conquest Church, and five years later added his epitaph in English and Latin. He kept an obituary of all the eminent persons who died in his time, and also wrote an account (extracts from which are preserved among the Baker MSS. at Cambridge) of the parish and neighbourhood of Houghton Conquest. His manuscripts were lent in 1760 by Dr. Zachary Grey, then rector of Houghton Conquest, to Cole, the author of 'Athenæ Cantabrigienses,' who describes the collection as one of much interest and value. Archer is supposed to have died about 1630, as the obituary notices do not go beyond that date. Cole mentions also a manuscript diary of Archer's, which contained some curious anecdotes.

[Cole's MS. Athenæ; Catalogue of MSS. in the University Library, Cambridge, v. 421.]

A. H. B.

**ARCHER, THOMAS** (d. 1743), architect, was the son of Thomas Archer, M.P. for Warwick in the time of Charles II. He was a pupil of Sir John Vanbrugh, and had considerable practice in the first half of the eighteenth century. He held the office of 'groom porter' under Queen Anne, George I, and George II, and he is so styled in the 'Gentleman's Magazine,' where his death is recorded (23 May 1743). About 1705 he built Heythorpe Hall, in Oxfordshire, said to have been his first work; St. Philip's Church, Birmingham, begun in 1711 and finished in 1719; St. John's Church, Westminster, consecrated in 1728; Cliefden House, which was destroyed by fire; and many other buildings, of which there is sufficient record in the 'Dictionary of the Architectural Publication Society.' The date of his birth is not known; but at his death, in 1743, he must have reached an advanced age. He is said to have left above 100,000*l.* to his youngest nephew, H. Archer, Esq., member for Warwick.

[Redgrave's Dictionary of Artists; Walpole's Anecdotes of Painting; Dictionary of Architectural Publication Society; Gent. Mag. xiii. 275.] E. R.

**ARCHER, THOMAS** (d. 1848), actor and dramatist, was the son of a watchmaker, and acted at Bath and Birmingham. He made his first appearance at Drury Lane in 1823, as the King in the 'First Part of King Henry the Fourth.' In the same season he person-

ated Appius Claudius in 'Virginius,' Polixenes in the 'Winter's Tale,' Gloster in 'Jane Shore,' Bassanio in the 'Merchant of Venice,' and Claudio in 'Measure for Measure,' and other characters; and took part in the melodramas of the 'Cataract of the Ganges' and 'Kenilworth.' He was the original representative of Opimius and Gesler in Sheridan Knowles' plays of 'Caius Gracchus' (1823) and 'William Tell' (1825). He visited the United States, and was engaged in the management of several theatres there. He was afterwards a member of the English company of actors performing in Paris with Miss Smithson. At a later period he led a company to Belgium and Germany, and presented certain of Shakespeare's plays at Brussels, Antwerp, Cologne, Aix-la-Chapelle, Frankfort, Hamburg, &c. He was again a member of the Drury Lane company, under the management of Mr. Hammond, in 1839, and in 1845 was appearing at Covent Garden Theatre, then under the management of M. Laurent, as the blind seer in the tragedy of 'Antigone.' He was the author of many successful dramas, adaptations from the French, including the 'Black Doctor,' the 'Little Devil,' produced at minor theatres, and of one original play of historical interest, 'Blood Royal, or the Crown Jewels,' in which he represented the hero, Colonel Blood.

[Ganest's History of the Stage, 1832; Theatrical Times, 1847.] D. C.

**ARDBRECAIN** (d. 656), Irish saint. [See ULTAN.]

**ARDEN, EDWARD** (1542 ?-1583), high sheriff of Warwickshire in 1576, was a probably innocent victim of the rigorous severity adopted by the ministers of Queen Elizabeth against Roman Catholic supporters of Mary Queen of Scots. He was the head of a family that had held land in Warwickshire for six centuries from the days of Edward the Confessor downwards. His father, William, having died in 1545, Edward succeeded his grandfather Thomas Arden in 1563. 'He kept to the old faith and maintained in his home, Park Hall, near Warwick, a priest named Hall, in the disguise of a gardener. This man, animated with the fierce zeal of his order, inflamed the minds of the Arden household against the heretical queen, and especially influenced John Somerville, Edward Arden's son-in-law. This weak-minded young man had been greatly excited by the woes of the Scottish queen, who had given to a friend of his a small present for some service rendered her when at Coventry in 1569. He talked of shooting the Queen of England, whom he

vituperated as a serpent and a viper, and set out for London on this deadly errand. Betraying himself, however, by over-confident speech, he was arrested, put to the rack, and confessed, implicating his father-in-law in his treason, and naming the priest as the instigator of his crime. All three were tried and sentenced to death. Somerville strangled himself in his cell. Arden was hanged at Tyburn (October 1583), but the priest was spared. Arden's head and Somerville's were set on London Bridge beside the skull of the Earl of Desmond.

Dugdale, who quotes from Camden's 'Annals,' says that Arden was prosecuted with much rigour and violence at the instance of the Earl of Leicester, whom he had irritated, partly by disdaining to wear his livery, but chiefly for galling him by certain harsh expressions touching his private accesses to the Countess of Essex before she was his wife. The language of Camden is very outspoken. 'The woful end of this gentleman, who was drawn in by the cunning of the priest and cast by his evidence, was generally imputed to Leicester's malice. Certain it is that he had incurred Leicester's heavy displeasure; and not without cause, for he had rashly opposed him in all he could, reproaching him as an adulterer, and defaming him as a new upstart.' Much interest is attached to the question of relationship between this Edward Arden and Mary Arden of Wilmcote, the mother of Shakespeare, and second cousin of Edward Arden's father. Ingenious writers have not been wanting who trace the poet's consummate portrayal of high-born dames to his gentle blood and the influence of the Arden ladies, his mother and her six sisters who dwelt at Asbies in Wilmcote.

[Froude's England, vii. 610; Notes and Queries, 3rd ser., v. 352, 463, 492; Dugdale's Warwickshire, ii. 931; Camden's Annals, 1583; Calendar of State Papers, 1583; French's Genealogica Shakspeareana.] R. H.

**ARDEN, RICHARD PEPPER, BARON ALVANLEY** (1745-1804), born at Bredbury, Cheshire, in 1745, was the son of John Arden of Stockport, and was educated at the Manchester grammar school. His two brothers received their earlier instruction at the same institution. The eldest, John, became a country squire, and was resident at Harden and Utkinton Halls in Cheshire, and at Pepper Hall in Yorkshire, and was a feoffee of the grammar school and of the Chetham Hospital at Manchester. The other, Crewe Arden, A.M., of Trinity College, 1776, became rector of Tarporley, and died there in

1787. Richard Pepper Arden entered the Manchester grammar school in 1752, and remained there until 1763. The elder boys acted the play of 'Cato' in 1759, and it is remarkable that of the ten scholars one became lord chief justice of the common pleas (Arden), one vice-principal of Brasenose (Rev. James Heap), two archdeacons of Richmond (Travis and Bower), one senior wrangler (William Arnald), and one recorder of Chester (Foster Bower). It is further noteworthy that the prologue declaimed by Arden in 1761 dealt with the topic of English elocution, and the career of the lawyer and politician. Arden was of the Middle Temple in 1762; he entered Trinity College, Cambridge, in October 1763, and soon distinguished himself by his command of classical literature and by the elegance of his elocution. The year when he came out as twelfth wrangler was one remarkable for the number of young men of ability who took part in the contest. Arnald, the senior wrangler, was another 'Manchester School' boy, and the second wrangler, Bishop Law, the brother of Lord Ellenborough, is said to have remembered with bitterness the defeat he then sustained in the struggle for the highest academical distinction. Arden proceeded M.A. in 1769, and soon after was elected to a fellowship at Trinity College. He was called to the bar in the same year. His legal studies were pursued in the Middle Temple, and when he took chambers in Lincoln's Inn he lived on terms of friendly intimacy with William Pitt, who was on the same staircase. In 1776 he was made judge on the South Wales circuit, and took silk in 1780. In 1783 he became M.P. for Newtown (Isle of Wight), entering the House of Commons two years later than Pitt, the future prime minister, who was fourteen years his junior. He became solicitor-general under Shelburne's ministry in 1782, and again under Pitt's in 1783, and in the following year was attorney-general and chief justice of Chester. He succeeded Kenyon as master of the rolls in 1788, notwithstanding Thurlow's vehement opposition, when he was knighted. He sat successively for Aldborough, Hastings, and Bath, and was M.P. for the last-named from 1794 to 1801, when Pitt resigned. On the formation of the Addington administration Lord Eldon became chancellor, and Arden succeeded him as lord chief justice of the common pleas. He was called to the House of Lords as Baron Alvanley, Cheshire, the title being derived from his brother's estate. He was not a man of great oratorical powers, but possessed the qualities of intelligence, readiness, and wit, which are so important to the de-

bater. Mr. James Crossley says that Alvanley's decisions show him to have been a better equity judge than Thurlow, much as Thurlow would have been surprised at being considered inferior to 'little Peppy,' the man he most condemned. Lord Alvanley's poetical trifles were never collected. The best known of them is an epigram which appeared in the 'Cambridge Verses' of 1763, and was suggested by the circumstance of Dr. Samuel Ogden having written three copies of verses, one in Latin, one in English, and one in Arabic, on the accession of George III. Another of his slighter pieces, the 'Buxton Beggar's Petition,' has been annotated by Mr. J. E. Bailey, and appears in the 'Palatine Note Book,' iii. 255. He married Anne Dorothea, the daughter of Richard Wilbraham Bootle, M.P., and died 19 March 1804. He is buried in the Rolls Chapel. His widow died in 1825. He left two sons, who in turn succeeded to the title. William Arden, second Baron Alvanley, who was born 10 Feb. 1789, adopted the military profession, but after reaching the grade of lieutenant-colonel he retired, and died unmarried in 1849. Richard Pepper Arden, third Baron Alvanley, was born 8 Dec. 1792, and married in 1831 Arabella, the youngest daughter of the first Duke of Cleveland, but died without issue 24 June 1857. He, like his elder brother, had been in the army, and attained the rank of lieutenant-colonel. With him the peerage became extinct.

The only portrait of the first Lord Alvanley is a caricature by Dighton. It would be vain to claim any great distinction for Lord Alvanley. He was a learned lawyer and a successful politician, who doubtless owed much to the friendship of Pitt, without whose patronage his career would have been far more arduous. He retained a keen interest in the fortunes of the school where he had received his early training. If his legal decisions show his learning and sound judgment, the few productions that remain from his pen evince refinement, taste, and facility of expression.

**ARDERNE, JAMES, D.D. (1636-1691),** dean of Chester, belonged to the family of Arderne, which is one of great antiquity in Cheshire, and whose forty-five quarterings are sufficiently indicative of estate and consideration. The seat of the family was at

Harden Hall, near Stockport, and at that mansion, now a ruin, James, son of Ralph Arderne of Harden, was baptised 12 Oct. 1636. He entered Christ's College, Cambridge, 9 July 1653, but afterwards removed to St. John's, and took his B.A. in 1656, and afterwards M.A. Two years later he went to Oxford, and became M.A. in 1658. He was apparently afterwards resident in London; for he is stated to have been a member, in 1659, of a coterie that met nightly at the Turk's Head, New Palace Yard, Westminster, under the chairmanship of Harrington, the author of 'Oceana.' The Restoration brought him within sight of preferment. In April 1666 he was curate of St. Botolph, Aldersgate, and held that post until 1682. Another of his preferments was Thornton-le-Moors. From the double inducement, we are told, of the public library and the society, he became a fellow-commoner of Brasenose, and in 1673 was admitted D.D. This degree he is also said to have had from Cambridge University. He was chaplain to Charles II. and his ministrations to that monarch procured him the rectory of Davenham in 1681 and the deanery of Chester in 1682. He is said to have had the promise of succession to the bishopric of Chester, but the events of the revolution prevented James II from giving him any further promotion.

His writings are the following: 1. 'Directions concerning the Matter and Style of Sermons, written to W. S., a young deacon, by J. A., D.D.,' London, 1671 (B.M.). 2. 'True Christian's Character and Crown, a sermon, London, 1671. 3. 'A Sermon preached at the Visitation of John [Wilkins], Lord Bishop of Chester,' London, 1677 (B.M.). 4. 'Conjectura circa *Ἐπιτομήν* D. Clementis Romani, cui subjiiciuntur Castigationes in Epiphaniū et Petaviū de Eucharistica, de Cœlibatu Clericorum et de Orationibus privātis functis. Autore Jacobo de Ardenna,' 1683 (Bodleian). 5. 'Dean of Chester's Speech to his Majesty, August the 27th 1687,' London, 1687, folio, one leaf (Bodleian).

Arderne, if a courtier, was of the better type. His devotion to the Stuarts is said to have brought him affronts in his own district so vexatious as to have shortened his life. He died in 1691, but the date of his death is variously given, as 18 Aug., 15 Sept., and 18 Sept. He was buried in the choir of his cathedral, with a monument, on which, in accordance with his will, was inscribed: 'Here lies the body of Dr. James Arderne, brother of Sir John Arderne, awhile dean of this church; who, though he bore a more than common affection to his private relations, yet gave the substance of his be-

queathable estate to this cathedral, which gift, his will was, should be mentioned, that clergymen may consider whether it be not a sort of sacrilege to sweep away all from the church and charity into the possession of their lay kindred who are not needy.' The particular intention of Arderne in this bequest was the foundation of a public library. The property was not then large, but was increased by the reversion to the younger branch of the Ardernes of the property of Mrs. Jane Done. Ormerod, in printing the dean's will, observes that it is one 'which the dean would certainly never have executed if he could have imagined that, from subsequent contingencies, it would have been the means of wresting from his family a very large share of one of the most antient estates in the county, and have involved the representatives of two of his brothers in a series of law expenses, which compelled them to alienate a considerable portion of Mrs. Jane Done's bequest, the successive turns of presentation to the rectory of Tarporley.' In the will he desires that the maps of Ortelius should be returned to Sir John Arderne, who had only lent the book for his lifetime. He mentions his collection of the fathers of the first three hundred years, and the common-place book which he had made from them of controversies. This he desired to be placed in the chapter-house for the use of the dean and prebendaries. A portrait of him is preserved in the deanery.

[Ormerod's History of Cheshire, ed. Hilsby; Earwaker's East Cheshire; Wood's Athenæ Oxon. (Bliss), iii. 1120, iv. 255, 864, Fasti, 338; Axon's Cheshire Gleanings.] W. E. A. A.

ARDERNE, JOHN (*fl.* 1370), the first Englishman who displayed much skill in surgery, was a layman, not a doctor of medicine, and practised in the time of Edward III. In the prologue to his 'Practice,' or treatise on the fistula, he says: 'I, John Arderne, from the first pestilence, which was in the year of our Lord 1349, till the year 1370, lived at Newark, in the county of Nottingham.' In 1370 he came to London, and in the same year wrote his book, 'De Arte Medicinæ,' as he tells us in the preface to that work. Arderne gives the names of many patients whom he cured; and among them were persons of distinction, who had served in the French wars; such as Sir Adam Everingham, who was in Gascony with Henry (afterwards Duke) of Lancaster, 'then named Earl of Darby.' His successful treatment of Sir Adam's case, and the consequent favour of the Duke of Lancaster, brought Arderne, as he says, a large practice. He seems also

to have been favoured with the patronage of the Black Prince, who apparently gave him a grant of land in Connaught (*Collections of John Gaillim*, Bibl. Bodl. Col. Rawlinson, B. 102, No. 4). He is said to have been present at the battle of Crécy. Beyond this his career cannot be traced; but he mentions many notable cures which he effected in London, on citizens, clergy, and other persons. Fragmentary as his biography is, the works of Arderne are of great interest, both as showing his own skill as a surgeon and as throwing light on the surgery of the time. They still exist, chiefly in Latin, as manuscripts in public libraries, a portion only of one of them having been printed in 1588, translated into English by John Read. The arrangement of the manuscripts is confused, but there seem to be two books, the best known called either 'Practica Johannis Arderne,' or 'Liber de Fistulis,' containing forty-four chapters in some copies; and the other a treatise 'De Arte Medicina,' chiefly concerned with herbs and simples. Some copies are illustrated with figures of plants and surgical instruments, and with rude pictures of surgical ailments. In his treatise on fistula, which is the most important part of his works, Arderne exhibits a surgical knowledge far in advance of that of his immediate English predecessors, John of Gaddesden and Gilbertus Anglicus, or Gorden of Montpelier (whom he quotes). He may be better compared with his French contemporary, Guy de Chauliac, whose works he does not appear to have known. His operation for the fistula, which he describes with great minuteness, is virtually the same as that of Paulus Aegineta, and of his Arabian copyists, but pronounced to be impossible by most of the mediæval surgeons; so that from whom Arderne derived it is not clear. His chief authorities are Salernitan and 'Arabistic' writers, especially Constantine and John of Damascus; and he quotes the one book of Galen commonly known in mediæval times, the so-called Pantegni (περίων). But in general Arderne quotes little; and his surgical precepts are evidently mainly based on his own experience.

In the entire absence of any parade of second-hand knowledge, Arderne's works were singular in an age when most medical writers were nothing more than copyists. He was probably a better surgeon for not being a learned man; though sufficiently a scholar to write tolerable Latin, and quote Boetius and Cato. His descriptions are clear and concise; his remarks practical and full of common sense; in short, he anticipates in a startling manner those qualities which

have been known in later times as characteristic of the English school of surgery. The prologue to the treatise on surgery contains directions 'for the behaviour of a leech,' which curiously illustrate the professional life of the time. They exhibit Arderne as a shrewd and worldly-wise man, not at all indifferent to the pursuit of wealth. Arderne's reputation must have been great in his own day, and for two centuries afterwards. Even in the seventeenth century the celebrated Sir Theodore de Mayerne took the trouble to copy out for his own use a great portion of Arderne's works. But the fact that only a small portion of these has been printed is probably the reason why the first English surgeon has not occupied a more prominent place in the history of medicine.

[Pits, De Angliæ Scriptoribus, p. 506; Freind's History of Physick, ii. 325 (Engl. Transl. 1726). It is much to be regretted that Arderne's own works are not more accessible. The printed portion is contained in Franciscus Arcæus, on Wounds, translated by John Read, London, 1588. The British Museum contains eighteen or more manuscripts, of which may be mentioned Sloane, 6 (English) 56, 385, 341, 2002, 3844, 1991 (the last copied by Mayerne).] J. F. F.

**ARDERON, WILLIAM (1703-1767),** naturalist, born in 1703, went from Yorkshire to Norwich in the capacity of an officer of excise. His scientific attainments secured for him the friendship of several influential gentlemen in that city, who obtained for him the situation of managing clerk at the New Mills. He became very intimate with Henry Baker, F.R.S., to whose works on the 'Microscope' he largely contributed. Arderon was elected a fellow of the Royal Society in 1745. Notwithstanding the disadvantage of a defective education, he may be regarded as the founder of a school of naturalists and men of science in Norwich. He died 25 Nov. 1767, and was buried in Heigham churchyard, near Norwich. The last letter he wrote was addressed to Henry Baker, and is in these terms: 'My dear friend. When you receive this you may be assured I am no more. I took this interval to take my last farewell of you, which I now do with the utmost affection. A pluresy amongst the many diseases hath laid a heavy hand upon me and is hard to bear. I have finished a life in which I laboured forty years. In which I had some pleasure, but none equal to your correspondence. I have acquired some fortunes which I have left amongst my poor acquaintance without any regard to any thing but merit.' Dawson Turner, after a careful perusal of

Arderson's correspondence, formed a very high opinion of his merits as a naturalist, and considered him superior to Gilbert White, the author of the 'Natural History of Selborne.'

Arderson is the author of: 1. Numerous contributions to the 'Philosophical Transactions.' 2. 'Remains,' 1745-60; a folio volume of 351 leaves, preserved in the British Museum, MS. Addit. 27966. The contents of this bulky volume are almost entirely on subjects connected with natural history and microscopical science. 3. 'Journals and Observations on Nature and Art,' 6 vols. 12mo, 1742-64; manuscript formerly in the possession of Dawson Turner. 4. 'Correspondence with Henry Baker, F.R.S.,' 4 vols. 4to, 1744-67; manuscript formerly in the possession of Dawson Turner.

[MS. Addit. 23107 f. 28; Cat. of Dawson Turner's MSS., i. pref. xiii, 4, 5, 10, 11; Gent. Mag. xxxvii. 610; Chambers's Norfolk, 1306, 1307; Index to Philosophical Transactions; MS. Birch 4439, art. 541; Thomson's Hist. of Royal Soc. Appendix 44.] T. C.

ARDMILLAN, LORD. [See CRAFTURD.]

ARGALL, JOHN (*d.* 1604), was admitted to Christ Church, Oxford, in the latter part of Queen Mary's reign; took the degree of M.A. in 1565, and was afterwards presented to the living of Halesworth, in Suffolk. 'He was always esteemed,' says Anthony Wood, 'a noted disputant during his stay in the university; was a great actor in plays at Christ Church (particularly when the queen was entertained there, 1566), and, when at ripe years, a tolerable theologist and preacher.' Two tracts of his are extant: 1. 'De vera Pœnitentia,' London, 1604, 8vo; 2. 'Introductio ad artem Dialecticam,' London, 1605, 8vo. He died suddenly at table on the occasion of a feast at Cheston, near Halesworth, and was buried in Halesworth Church on 8 Oct. 1606.

[Wood's Athenæ Oxonienses, ed. Bliss, i. 760-1.] A. H. B.

ARGALL, RICHARD (*d.* 1621), is a very shadowy personage. His name is on the title-page of a unique volume of poems (1621, 4to) in Mr. Christie-Miller's library at Britwell. The contents of this volume are: (1) 'The Bride's Ornament, Poetical Essays upon a Divine Subject;' (2) 'A Funeral Élégy consecrated to the memory of his ever honoured lord, John King, late Bishop of London;' (3) 'The Song of Songs metaphorised in English heroicks.' Anthony à Wood, *sub* 'John Argall' (*Athen. Oxon.* vol. i. col. 761, ed. Bliss), writes: 'Now I am got into the name of Argall I must let the

reader know that in my searches I find one Richard Argall to be noted in the reign of King James I for an excellent divine poet, having been much encouraged in his studies by Dr. Jo. King, bishop of London, but in what house educated in Oxon, where he spent some time in study, I cannot now tell you.' After enumerating the works mentioned above, he proceeds: 'He also wrote a book of meditations of knowledge, zeal, temperance, bounty, and joy. And another containing meditations of prudence, obedience, meekness, God's word, and prayer. (These latter unpublished.)' But it is very doubtful whether a poet of the name of Richard Argall ever existed. In 1654 the 'Bride's Ornament,' &c., and the 'Meditations' were included in a collection of the poems of Robert Aylett, one of the masters of the high court of Chancery. It is unlikely that the name Richard Argall had been adopted as a *nom de plume*, and it is equally unlikely that a man in Aylett's position would have had the impudence to reissue another person's verses under his own name. From the fact that only one copy is known of the early edition it might be suggested that Aylett, learning of the attempted fraud, succeeded in calling in the copies that had gone abroad under Argall's name. (A Richard Argall, of Emmanuel College, Cambridge, was rector of Roothing-Aythorp, Essex; he married into the family of the Bramstons: vide 'Autobiography of Sir John Bramston,' p. 23, Camden Society Publications, 1845.)

[Wood's Athenæ Oxoniensis, ed. Bliss, i. 761; Huth Library Catalogue, *sub* 'Aylett, Robert.'] A. H. B.

ARGALL, SIR SAMUEL (*d.* 1626), adventurer and deputy-governor of Virginia, was descended from an old Kentish family who afterwards settled at Walthamstow in Essex. His first appearance in history is among the early adventurers to Virginia, where we find him in July 1609 in charge of a small barque lying at anchor off Jamestown, where he was sent to trade on behalf of a Mr. Cornelis, and to fish for sturgeon. His next task, after his return home, appears to have been that of conducting Lord Delawarre from England to Virginia, where they arrived on 6 June 1610, in time to prevent the abandonment of Jamestown by the colonists, who, under the guidance of Sir Thomas Gates, the governor, had already embarked on board four vessels for Newfoundland. For further relief of the colony, Argall was despatched with Sir George Somers to the Bermudas for hogs to replace the stock which the colonists had

eaten up the previous winter; he was, however, separated by stress of weather from Somers, and driven northward to Cape Cod, where he found good fishing, afterwards returning to Jamestown at the end of August (PURCHAS). In the early part of 1611 he appears to have returned to England with Lord Delawarre, who was in ill health, but not before he had established a trade in corn with the natives above Jamestown. At an early period in his history, Argall appears to have distinguished himself as a skilful seaman by making rapid voyages to Virginia. In September 1612 we find him again at Jamestown after a quick passage of fifty-one days, his course, as he tells us, 'being fifteen leagues northward of the Azores,' the remainder of the year until November being employed in the repair of the ships and boats that he found fast going to decay 'for lacke of pitch and tar,' and in pursuing Indians for their corn with Sir Thomas Dale, the governor, who nearly lost his life. On 1 Dec. Argall set out for his first voyage up the Potomac in search of corn, of which he secured 1,100 bushels for the colony, after giving three men and two boys as hostages to the king of Pastancy. It was while on this business that he devised the well-known stratagem of the abduction of Pocahontas. Argall writes: 'I was told by certaine Indians, my friends, that the great Powhatans daughter Pocahuntis was with the great king Powtowneck, whither I presently repaired, resolving to possesse myself of her by any stratagem that I could use, for the ransoming of so many Englishmen as were prisoners with Powhatan; as also to get such armes and tooles as he and other Indians had got by murder and stealing from others of our nation, with some quantitie of corn for the colonies reliefe.' With this view he went to the king of Pastancy, and told him 'that unless he delivered vp Pocahontas to the English wee would be no longer brothers or friends' (PURCHAS). This threat, backed up, according to another account, by the promise of a copper kettle, proved too much for the fidelity of king Pastancy, her uncle; Pocahontas was beguiled on board Argall's vessel, and found herself a prisoner. It has long been the fashion to regard this as an infamous act of treachery on the part of Argall, but the wisdom of the enterprise was proved by the English captives being restored and peace secured to the colony. As for Pocahontas, she regarded the abduction as the happiest event of her life, declaring that 'she would dwell with the English, who loved her best.' After handing over his fair captive to Sir T. Gates, Argall pro-

ceeded to explore the east shore of Chesapeake Bay, forty leagues to the northward, varied by fishing and trading with the Indians. At this period (12 May 1613) Argall's own narrative ceases (PURCHAS, part iv. p. 1765). Later in the year he proceeded with a vessel of fourteen guns, under orders to reduce the newly established French settlements of Mount Desart, off the coast of Maine, St. Croix, on an island in the river of the same name, and Port Royal, six miles below Annapolis, Nova Scotia, on the opposite shore of the bay of Fundy, settlements which were regarded by the authorities in Virginia as infringements of their charter. In June 1614 Argall left Virginia for England with his French prisoners, where, soon after his arrival, he was put upon his defence for his late proceedings. His dignified and judicious reply, which completely silenced his adversaries, and which has been strangely overlooked, is preserved among the Cotton MSS. in the British Museum (*Otho E. 8, 29*). Of his movements for the next three years we have no certain knowledge. In May 1617 he arrived once more in Virginia as deputy-governor and admiral of the adjacent seas. Few incidents in American colonial history have been more hotly debated than his career during these two years. Recent writers, misled by the apparent but injudicious impartiality of Stith, have hastily and acrimoniously condemned Argall and all his works, in spite of contemporary evidence to the contrary, which has never been gainsaid, of the well-known Captain John Smith and several others. Argall always courted the strictest investigation, while a suit got up mainly by his successor, Sir G. Yardley, who was only too anxious to succeed him, finally collapsed after running a feeble course of four years. On 12 Oct. 1620, Argall served in an expedition against Algiers, under the command of Sir R. Mansell, as captain of a merchant vessel armed with twenty-four guns. The fleet returned in August of the following year without having rendered any real service to the nation. On 26 June 1622 Argall received the honour of knighthood from King James I at Rochester; he was then described as of Walthamstow in Essex (NICHOLS, *Prog. James I*, iv. 770). As admiral of a squadron of twenty-four English and four Dutch ships, Sir Samuel left Plymouth, 6 Sept. 1625, in search of a fleet of Dunkirkers supposed to be sailing along the coast of France towards Spain. Although he failed to find the fleet, he took other prizes, and returned to Plymouth after a cruise of seven days. On 3 Oct. following, this squadron joined the expedition against

Cadiz under the command of Lord Wimbeldon, Argall commanding the Swiftsure as captain, having on board Robert, earl of Essex, as vice-admiral and colonel-general of the land forces. Argall, reconnoitring the town, reported it to be too strongly fortified to be taken except by a regular siege for which no provision had been made, the merchant ships under the command of Argall having been ill supplied and badly paid; the masters, after waiting in vain in hopes of relief from the king (Charles I), refused to serve any longer and returned to Plymouth in December, the expedition proving a failure. We learn from a letter to Buckingham, 28 Jan. 1625-6, that the end of Sir S. Argall was in this wise: 'The master of the Swiftsure being very backward and very cross, as the report was, to his captain Sir Samuel Argall, which broke his heart, and four days since he died.'

C. H. C.

**ARGENTINE, GILES DE** (d. 1283-4), baronial leader, was the son of Richard de Argentine, a justiciar in Normandy, whom he succeeded in 1247. He acted as justice itinerant in 1253, and in 1258 was named by the barons, in the Provisions of Oxford, as one of the twelve permanent representatives of the commonalty, and one of the twenty-four 'a treter de aide le rei' (*Ann. Burt.* 449, 450). In 1263 he was made constable of Windsor, and after the battle of Lewes he appears to have been placed on the supreme council of nine, and to have been one of its three members (acting also as *custodes sigilli*) who were in attendance on the king and Simon de Montfort throughout the campaign of Evesham (*Pat. 49 Hen. III*). His lands were subsequently forfeited.

[Dugdale's Barons of England (1675), i. 614; Foss's Judges (1848), ii. 208.]

J. H. R.

**ARGENTINE, JOHN**, M.D. and D.D. (d. 1507-8), provost of King's College, Cambridge, born at Bottisham, Cambridgeshire, of an ancient and knightly family, was elected from Eton to King's College in 1457. After graduating M.D. he was physician and dean of the chapel to Arthur, Prince of Wales. He also held in succession from 1494 three prebends in Lichfield cathedral; was ap-

pointed master of the hospital of St. John Baptist at Dorchester in 1499, and was elected provost of King's College, Cambridge, in 1501. He took the degree of D.D. in 1504, and, dying 2 Feb. 1507-8, was buried in his chantry in King's College chapel. There is extant from his pen 'Actus publice habitus in Acad. Cantab. contra omnes regentes Universitatis quoad oppositiones,' 1470, MS. in Corp. Chr. Coll. Oxon. This is said to contain verses on all arts and faculties.

[Tanner's Bibl. Brit.; Le Neve's Fasti Ecol. Anglic. ed. Hardy; Cox's Cat. of Oxford Coll. MSS.; Cooper's Athenæ Cantab. i. 12.] T. C.

**ARGENTINE**, alias **SEXTEN, RICHARD**, M.D. (d. 1568), physician and divine, went to Ipswich 'in a serving-man's coat,' and afterwards was successively usher and master of the grammar school in that town, where he also practised as a physician and read a lecture in divinity. He was created M.D. by the university of Cambridge in 1541. In the reign of Edward VI he was a protestant; but in the reign of Queen Mary, having lost his wife, he took orders and made himself conspicuous by his advocacy of catholic principles, and by persecuting the reformers. He was instituted to the rectory of St. Helen with St. Clement, Ipswich, in 1556. Shortly before the death of Queen Mary he removed to London, and in the reign of Elizabeth retained his rectory by again becoming a reformer. In January 1563-4 he appears to have been living at Exeter, but the statement that he was a prebendary of Exeter and Wells is without foundation. He probably died in 1568, when his rectory at Ipswich became vacant.

His works are: 1. 'Certeayne Preceptes, gathered by Hulricus Zuinglius, declaring howe the ingenious youth ought to be instructed and brought unto Christ,' Ipswich, 1548, 8vo; a translation from the Latin. 2. 'A ryght notable Sermon made by Doctor Martyn Luther upon the twentieth chapter of Johan of absolution and the true use of the keyes, full of great comforte,' Ipswich, 1548, 8vo; a translation. 3. 'Sermons of the ryght famous and excellent clerke Master Bernardine Ochins,' Ipswich, 1548, 8vo; a translation. 4. 'De Præstigiis et Incantationibus Dæmonum et Necromanticorum,' Bâle, 1568, 8vo. 5. 'Ad Oxonienses et Cantabrigienses pro lingua Arabica beneficio principum restituenda,' MS. in the Bodleian library. 6. Observations about Rome and the popes.

[Tanner's Bibl. Brit.; Wodderspoon's Memorials of Ipswich, 391; MS. Addit. 5862 f. 48; Cooper's Athenæ Cantab. i. 275; British Bibliogr. i. 504; Ames's Typogr. Antiq. ed. Herbert, 595, 1456.]

T. C.

ARGYLE, or ARGYLL, DUKES, EARLS, and MARQUISES OF. [See CAMPBELL.]

ARKISDEN, THOMAS (fl. 1633), stenographer, was educated at Emmanuel College, Cambridge (B.A. 1629-30; M.A. 1633). While at the university he invented a shorthand alphabet, which has acquired a peculiar interest in consequence of its similarity to other early systems of stenography published somewhat later, especially to those of William Cartwright and his nephew, Jeremiah Rich, the latter of whom lays claim in his 'Art's Rarity' (1654) to absolute originality. Edward Howes, writing from the Inner Temple 23 Nov. 1632 to John Winthrop, jun., 'at the Matachussetts in New England,' says: 'As for my vsual characters, they are that where-with I conceiue you have bin formerly acquainted, viz<sup>t</sup>, Mr. Arkisdens, whoe hath sent you a letter here inclosed in John Samfords. I thought good to send you his character, for feare you should haue forgotten it;' and he adds that 'the characters are approued of in Cambridge to be the best yet invented, and they are not yet printed nor comon.' The alphabet is given in the 'Collections of the Massachusetts Historical Society' (4th ser. vi. 481). Some correspondence with regard to it between Mr. J. E. Bailey and Mr. E. Pocknell appeared in the 'Athenæum' in September 1880.

[Collections of the Massachusetts Hist. Soc.; MS. Addit. 5835 f. 84 b; Pocknell's Legible Shorthand (1881), 75-77.] T. C.

ARKWRIGHT, SIR RICHARD (1732-1792), one of the earliest and principal contrivers of machinery on a large scale as a substitute for hand labour in textile manufactures, was born at Preston 23 Dec. 1732. His parents, if not poor, belonged to the humbler ranks of life, and he is said to have been the youngest of thirteen children. Baines (*History of Lancashire*, 2nd ed. 1870, ii. 453) states that 'there are reasons for believing that he was born in a house afterwards occupied by Mr. Clara, hosier, in Lord Street, pulled down about 1854.' Its site, according to Hardwick (*History of Preston*, 1857, p. 361), is now occupied by the south end of Stanley Buildings, Lancaster Road. Hardwick conveys the impression that Arkwright resided there while practising the trade of a barber (p. 361); but as he elsewhere (p. 650), on the authority of Baines, mentions the house as that in which Arkwright was born, he would seem to have been possessed of no independent information on the subject. Arkwright is said to have served his apprenticeship to one Nicholson

of Preston (WHITTLE, *History of Preston*, 1837, ii. 213), but there is no evidence that he set up in business in that town. Besides his apprenticeship to a barber, all that is known of his early life is that his uncle Richard taught him reading, and that, probably while an apprentice, he attended a school during the winter months (WHITTLE, p. 213). By making the most of his opportunities he perhaps acquired a somewhat better education than was then customary in the lower ranks of life. At the age of fifty he indeed felt its defects so much in conducting his correspondence and the management of his business, that he encroached upon his sleep in order to gain an hour each day to learn English grammar, and another hour to improve his writing and orthography (BAINES, *History of the Cotton Manufacture*, p. 195), but his perseverance in these tasks at such an age would seem to indicate a considerable amount of original training. Soon after the close of his apprenticeship he is supposed to have settled in Bolton, probably about 1750 (CLEGG, *Chronological History of Bolton*, p. 15). In any case his settlement there took place before his marriage, 31 March 1755, in the parish church of the town, to 'Patients, daughter of Robert Holt of Bolton, schoolmaster.' Baines (*History of Cotton Manufacture*, p. 148) states that he established himself at Bolton in the year 1760, but this apparently is a mere misreading of a statement of Guest (*Compendious History*, p. 21) that Arkwright was living in Bolton as a barber at that particular date. There is no information as to when the first wife of Arkwright died, but on 24 March 1761 he was married for the second time in the parish church of Leigh to Margaret Biggins of Pennington. Shortly before or shortly after his second marriage, Arkwright removed from his small shop in Churchgate to a better one at the end of the passage leading up to what was then the White Bear public-house. The small property, 'perhaps of the value of 400*l.*,' possessed by his wife, though settled on herself, was probably advantageous in assisting him to develop his business; for about this time indications of his enterprising spirit become visible in his engaging as his journeyman a workman from Leigh specially skilled in making the strong country wigs then in general use. Shortly afterwards he began to travel through the country to buy human hair, attending for this purpose the hiring fairs frequented by young girls seeking service. He had got possessed of a valuable chemical secret for dyeing it, and thus was enabled to add to his business a new source of profit, by selling the hair dyed and prepared

to the wigmakers (GUEST, *Compendious History*, p. 21).

The gradual disuse of wigs is assigned by some as the reason why Arkwright began to turn his attention to mechanical inventions as likely to afford him a new source of income; but, as during his journeys he was brought into constant intercourse with persons engaged in weaving and spinning, his inquisitive and strongly practical intelligence would in any case have been naturally led to take a keen interest in inventions which were a constant topic of conversation among the manufacturing population. The invention of the fly shuttle by Kay of Bury had so greatly increased the demand for yarn, that it began to be impossible to meet it merely by hand labour. A machine for carding cotton had been introduced into Lancashire about 1760 (BAINES, *History of the Cotton Manufacture*, p. 175), but until 1767 spinning continued to be executed wholly by the old-fashioned hand wheel. It was in that year that Hargreaves had completed his invention of the spinning-jenny, which he patented in 1770. The thread spun by the jenny was, however, suitable only for weft, and the roving process still required to be performed by hand. Probably Arkwright knew nothing of the experiments of Hargreaves, when, in 1767, he asked Kay, a clockmaker then residing at Warrington, to 'bend him some wires and turn him some pieces of brass' (Evidence of Kay, Trial, June 1785, p. 62). Shortly afterwards Arkwright gave up his business at Bolton, and devoted his whole attention to the perfecting of a contrivance for spinning by rollers. After getting Kay to construct for him certain wooden models, which convinced him that the solution of the problem had been accomplished, he is said to have applied to a Mr. Atherton of Warrington to make the spinning-machine, who, from the poverty of Arkwright's appearance, declined to undertake it (AIKIN, *General Biography*, 1799, i. 391). He, however, agreed to lend Kay a smith and watch-tool maker to do the heavier part of the engine, and Kay undertook to make the clock-maker's part of it. Arkwright and Kay then proceeded to Preston, where with the co-operation of a friend of Arkwright, Mr. John Smalley, described as a 'liquor merchant and painter,' the machine was constructed and set up in the parlour of the house belonging to the Free Grammar School. The room seems to have been chosen for its secluded position, being hidden by a garden filled with gooseberry trees; but the very secrecy of their operations aroused suspicion, and popular superstition at once connected them with

some kind of witchcraft or sorcery. Two old women who lived close by averred that they heard strange noises in it of a humming nature, as if the devil were tuning his bagpipes and Arkwright and Kay were dancing a reel; and so much consternation was produced that many were inclined to break open the place (WHITTLE, *History of Preston*, ii. 216). The building has since been changed into a public-house, which is known as the Arkwright Arms. As a proof of the straits to which Arkwright was then reduced and the degree to which he had sacrificed his comfort in order to obtain the means of completing his invention, it is stated that his clothes were in such a ragged state that he declined, unless supplied with a new suit, to go to record his vote at the Preston election of 1768, which took place while he was engaged in setting up his machine. Having thoroughly satisfied himself of the practical value of his invention, Arkwright removed to Nottingham, already an important seat of the stocking trade, whither Hargreaves, the inventor of the spinning-jenny, had the year previously removed, after his machines had been destroyed by a mob at Blackburn. Arkwright entered into partnership with Smalley from Preston, Kay continuing with him under a bond as a workman; and they erected a spinning-mill between Hockley and Woolpack Lane, a patent being taken out by Arkwright for the machine 3 July 1769.

The spinning-frame of Arkwright (see the drawing of the original one in BAINES's *History of the Cotton Manufacture*, p. 153, and UKE's *History of the Cotton Manufacture*, i. 255; and of the water-frame in UKE, p. 276, and GUEST's *Compendious History*, plate 9) was the result of inventive power of a higher and rarer order than that necessary to originate the spinning-jenny. It was much more than a mere development of the old hand-wheel. It implied the application of a new principle, that of spinning by rollers; and in the delicate adjustment of its various parts, and the nice regulation of the different mechanical forces called into operation, so as to make them properly subordinate to the accomplishment of one purpose, we have the first adequate example of those beautiful and intricate mechanical contrivances which have transformed the whole character of the manufacturing industries. The spinning-frame consisted of four pairs of rollers, acting by tooth and pinion. The top roller was covered with leather to enable it to take hold of the cotton, the lower one fluted longitudinally to let the cotton pass through it. By one pair of rollers revolving quicker than another the rove was drawn to the requisite fineness for twisting,

which was accomplished by spindles or flyers placed in front of each set of rollers. The original invention of Arkwright has neither been superseded nor substantially modified, although it has of course undergone various minor improvements.

The first spinning-mill of Arkwright was driven by horses, but finding this method too expensive, as well as incapable of application on a sufficiently large scale, he resolved to call in the aid of water-power, which had already been successfully applied for a similar purpose, notably in the silk mill erected by Thomas Lombe on the Derwent at Derby in 1717. In 1771 Arkwright therefore went into partnership with Mr. Need of Nottingham and Mr. Strutt of Derby, the possessors of patents for the manufacture of ribbed stockings, and erected his spinning-frame at Cromford in Derbyshire, in a deep, picturesque valley near the Derwent, where he could obtain an easy command of water-power from a never-failing spring of warm water, which even during the severest frost scarcely ever froze. From the fact that the spinning-frame was driven by water, it came to be known as the water-frame; since the application of steam it has been known as the throstle. As the yarn it produced was of a much harder and firmer texture than that spun by the jenny, it was specially suited for warp, but the Lancashire manufacturers declined to make use of it. Arkwright and his partners, therefore, wove it at first into stockings, which, on account of the smoothness and equality of the yarn, were greatly superior to those woven from the hand-spun cotton. In 1773 he began to use the thread as warp for the manufacture of calicoes, instead of the linen warp formerly used together with the cotton weft, and thus a cloth solely of cotton was for the first time produced in England. It met at once with a great demand, but, on account of an act passed in 1736 for the protection of the woollen manufactures of England against the calicoes of India, it was liable to a double duty, which, at the instance of the Lancashire manufacturers, was speedily enforced. Notwithstanding their strenuous opposition, Arkwright, however, in 1774 obtained an act specially exempting from extra duty the 'new manufacture of stuffs wholly made of raw cotton wool.' Up to this time more than 12,000*l.* had been expended by Arkwright and his partners on machinery with little or no return, but after the new act the cotton manufacture created by his energy and genius developed with amazing rapidity, until it became the leading industry of the north of England.

While struggling against the mingled inertness and active opposition of the manufacturers, Arkwright had all the while been busily engaged in augmenting the capability and efficiency of his machinery, and in 1775 he brought out a patent for a series of adaptations and inventions by means of which the whole process of yarn manufacture—including carding, drawing, roving, and spinning—was performed by a beautifully arranged succession of operations on one machine. With the grant of this patent every obstacle in the way of a sufficient supply of yarn was overcome, and, whatever might happen to Arkwright, the prosperity of the cotton manufacture was guaranteed. Afterwards the invention was adapted for the woollen and worsted trade with equal success.

Meanwhile Arkwright, besides building several additional cotton mills, sold grants of his patents to numerous cotton spinners in the northern and midland counties. By 1782 he concluded that a business had in this way been formed which employed upwards of five thousand persons and a capital on the whole of not less than 200,000*l.* New difficulties, however, began to arise in his path. In 1779 serious riots occurred in Lancashire, and a mill which Arkwright had erected at Chorley at great expense was completely sacked. Up to this time the incompetency of his workers and mechanics and the slow sale of his yarn had almost daunted his energy. The destruction of his mill, happening when it did, strained his resources, therefore, to their utmost limits, while the increasing infringements of his patent threatened to extinguish one of his most valuable sources of profit. For a time he was baffled in his attempts to proceed against the infringers, on account of the precautions they made use of to conceal their operations, for they took care that none but persons sworn to secrecy should be employed as workmen. At last in 1781 he brought an action against nine firms. The first cause selected for trial was that against Colonel Mordaunt, who at once admitted his use of Arkwright's machine, but pleaded insufficiency of specification in the patent, and on that ground Arkwright was nonsuited. In the following year Arkwright dissolved his partnership with Need and Strutt, retaining in his own hands the mill at Cromford. Shortly afterwards he drew up a statement of his 'Case,' in which, after recording his difficulties and disappointments, he concluded by praying that the 'legislature would be pleased to confirm, connect, and consolidate the two letters patent so as

to preserve to him the full benefit of his invention for the remainder of the term yet to come in the *last* patent.' The one patent would expire in 1783 and the other in 1789. Although the statement was circulated among members of parliament, no further action was taken by him to influence the legislature in the matter. In 1785 he, however, made a new effort to enforce the validity of his second patent, and in the court of Common Pleas an action against its infringement, where the plea of insufficiency of specification was set up, was decided in his favour. This verdict greatly alarmed the cotton-spinners, for, owing to the verdict of 1781, the unauthorised use of the patent had grown so greatly that in 1785 it was calculated that thirty thousand persons were employed in establishments set up in defiance of it, the capital expended on buildings being about 300,000*l*. Several of the manufacturers, therefore, combined in self-defence, and obtained from the lord chancellor a writ of *scire facias* for a new trial. The case was tried in the court of King's Bench before Mr. Justice Buller and a special jury, 25 June 1785, when for the first time Arkwright's claim to the invention was disputed. The points on which the jury had to decide were stated by the judge to be three: '1. Is the invention new? 2. Is it invented by the defendant? 3. Was it sufficiently described in the specification?' To answer any of these questions in the negative was of course fatal to the patent. The judge summed up unmistakably for the crown against Arkwright on every point, and the jury without a moment's hesitation brought in their verdict for the crown. On 10 Nov. Arkwright moved for a rule to show cause why there should not be a new trial, alleging that he had new evidence to contradict that adduced against the originality of the invention; but the application was refused, the mere ability to give more evidence not being regarded as a sufficient reason for the rule. On the 14th of the same month judgment was given to cancel the letters patent.

For deficiency in the specification no amount of new evidence could atone, and the judge was persuaded that on this point as well as the others Arkwright 'had not a leg to stand upon.' It was proved that Arkwright had given directions that the specification should 'be as obscure as the nature of the case would admit;' but besides this he had introduced into it articles intended to render it unintelligible, and some of which, if put into operation, would inevitably have spoiled the cotton. The deficiency of specification he had also in his statement of his

'Case' in 1782 practically admitted, though asserting that, so far from intending to perpetrate 'a fraud upon his country,' he was 'anxiously desirous of preserving to his native country the full benefit of his inventions.' It is to be presumed, however, that he had more reason to dread infringements of his patents at home than abroad; and as this was of itself sufficient reason for his desire to make the specification obscure or misleading, it is not absolutely necessary to suppose either that he wished to utilise to his own special advantage improvements which were not his own invention, or that he designed to preserve to himself the benefits of his patents beyond the legal period of fourteen years.

In regard to the originality of the invention the opponents of Arkwright sought to prove that the whole series of machines included in the patent were stolen by Arkwright from others, his sole title to originality being the combination of them into one machine. This implied the denial of his right to the spinning patent of 1769, which had expired in 1783, but was practically continued to him by the patent of 1775. In support of their allegation in reference to this patent the opponents of Arkwright relied chiefly on two witnesses, Kay, the watchmaker, who had made the models for Arkwright, and Thomas Highs or Hayes, a reedmaker at Leigh, whom Kay asserted to be the original inventor of the models. The evidence of Kay was tainted by the fact that he was confessedly guilty of a fraud in revealing to Arkwright the secret of Highs, that he had fled from Arkwright when threatened with a charge of felony, and that he had in conversation represented himself to be the author of the invention. Further, it does not appear that he was ever treated by Arkwright otherwise than as a mere workman, which may of course have been owing to the superior astuteness and force of character of the latter, although it is scarcely compatible with the supposition that he was indebted to Kay for the whole secret of the invention. The evidence of Kay was confirmed by that of his wife in so far as concerned the assertion that he had made models for Highs. Kay had undoubtedly been employed by Highs to make models, but this does not render it impossible that Arkwright, having some previous acquaintance with Kay at Leigh, employed him at Warrington simply on the ground of this acquaintance, and because, wishing to carry on his experiments secretly, it was easier to do so at a distance from Bolton. The evidence of Highs was on several important points both obscure and

contradictory. He asserted that he had made rollers for spinning in 1767 on the principle of the one set going faster than the other, but confessedly they must have been incapable of performing the operation of spinning, for he admitted that it was not till 1769—that is the year after Arkwright removed to Nottingham—that he had hit on the contrivance of having the one roller fluted and the other covered with leather, a contrivance without which it was impossible that a machine constructed on Arkwright's principles could work. Further, none of the machines by which Higs asserted that he had spun cotton as an experiment were ever produced, and on this ground alone Arkwright—if it be merely a question between his word and that of Higs—must be held to possess the preferable claim to the invention. It has been argued in error that Arkwright misdescribed his occupation in his first patent, but as a matter of fact he merely described himself there as 'of the town of Nottingham in the county of Nottingham,' nor was any trade mentioned in his second patent. A punctilious regard for the rights of inventors was not a characteristic trait of those among whom Arkwright lived, and he may not have considered himself very blameworthy in utilising the ideas of Higs, which, in the words of Higs, had not then 'been brought to bear.' At the same time, even if he were indebted to Higs at all, it may have been for nothing more than a knowledge of the invention of Lewis Paul [q. v.], who had obtained a patent for spinning by rollers in 1738. So radically different, however, were the machines of Paul from that of Arkwright, that probably when the latter constructed it, he possessed no accurate knowledge of what had been done by Paul. Another of Paul's machines, patented in 1758, did not include spinning by rollers. (See drawing of Lewis Paul's spinning machine, patent 1758, in BAINES's *Cotton Manufacture*, p. 139.)

The machine of Arkwright was adapted for roving by means of a revolving can which a witness asserted he had used in 1774, although, as it happened, the can had been made for him by two men in Arkwright's employment. For the process of carding additions and improvements of great ingenuity were affixed to the carding cylinder patented by Paul in 1748, transforming it into an entirely new machine. The most important of these were the crank and comb, said to have been used by Hargreaves, but which, according to the somewhat disputable opinion of Baines, Hargreaves stole from

Arkwright (see BAINES, *Cotton Manufacture*, p. 178); the perpetual revolving cloth called the feeder, said to have been used by John Lees, a quaker of Manchester, in 1772, but which Arkwright had undoubtedly used previously at Cromford; and filleted cards on the second cylinder which also must have been used by Arkwright in 1772, although a manufacturer named Wood claimed to have first used them in 1774 (see URE, *Cotton Manufacture*, ii. 24). Indeed the whole of the complicated self-acting machinery which without the intervention of hand labour performed the different processes necessary to change raw cotton into thread suitable for warp, was substantially the invention of Arkwright; and while each separate machine was in itself a remarkable triumph of inventive skill, the construction of the whole series, and the adaptation of each to its individual function in the continuous succession of operations, must be regarded as an almost unique achievement in the history of invention.

It is from the construction of the mills of Arkwright that we may properly date the origin of the factory system, with its minute division of labour and the regular uninterrupted co-operation of numerous individuals in the different processes of machinery. In overcoming the prejudices of workers, in accustoming them to unremitting diligence during the stated hours of labour, in training them for their particular tasks and inducing them to conform to the regular celerity of the machinery, Arkwright displayed an energy and perseverance perhaps of a higher kind, if less rare, than that which enabled him to originate his inventions. His whole arrangements were framed with the utmost forethought and care, and from the beginning he enforced scrupulous cleanliness and the most systematic order. So admirable were his plans of management that they cannot be said to have yet been in any degree superseded, and their general adoption doubtless rendered the introduction of the factory system much smoother and easier than it would otherwise have been.

The prosperity of Arkwright suffered no serious check from the cancelling of his patents. His experience and extraordinary business capacity, and the start he had obtained, enabled him to retain an advantage over other manufacturers. 'For several years he fixed the price of cotton twist, all other spinners conforming to his prices' (BAINES, *Cotton Manufacture*, p. 198). About 1784 Arkwright had visited Scotland, and assisted David Dale in planning the erection of the New Lanark mills, afterwards associated

with the socialistic experiments of Robert Owen; but if he entered into partnership with Dale this was dissolved after the adverse decision in reference to the patent. Several additional mills were, however, erected by him both in Derbyshire and Lancashire, and, notwithstanding a distressing asthmatic affection, he continued to the last actively interested in their management and the introduction of improvements. In 1790 he erected Boulton and Watt's steam engine in his mill at Nottingham. In 1786 Arkwright received the honour of knighthood from George III on the occasion of presenting him with a congratulatory address from the wapentake of Wirksworth on his escape from assassination by Margaret Nicholson. In the following year Arkwright was chosen high sheriff of Derbyshire. He purchased the manor of Cromford in 1789, and shortly afterwards obtained the grant of a market for the town. He had begun the erection of a church, and also of Willersley Castle for his own residence, when a complication of disorders resulted in his death 3 Aug. 1792.

Carlyle, forming his opinion from the well-known portrait of Arkwright, describes him as 'a plain, almost gross, bag-cheeked, pot-bellied Lancashire man, with an air of painful reflection, yet also of copious free digestion.' Arkwright possessed an energy which would scarcely allow him a moment's rest. He generally laboured 'in his multifarious concerns from five o'clock in the morning till nine at night,' and utilised all his time to the best possible advantage. Bad or careless work roused his stern wrath. For the success of his schemes he was ready to endure any personal inconvenience and suffer the severest sacrifices. From the beginning he was so sanguine of the vast results that would follow his inventions 'that he would make light of discussions on taxation and would say that he would pay the national debt' (BAINES, *Cotton Manufacture*, p. 196).

T. F. H.

ARKWRIGHT, RICHARD (1755-1843), only son of Sir Richard Arkwright by his first wife, Patience Holt, was born at Bolton, 19 Dec. 1755. He was brought up to his father's business, and received from him a mill at Bakewell. On his father's death he removed to Willersley. Possessing good business talents and habits of great punctuality, he carried on the extensive concerns which he inherited, with thorough success, and at his death was probably the richest commoner in England. He was specially careful of the health of his workpeople, and introduced into his mills improved methods of warming and ventilating. From the Horticultural Society he received a medal for a new method of cultivating grapes. In 1780 he married Mary, daughter of Adam Simpson of Bonsall, by whom he had six sons and five daughters. He died at Willersley on 23 April 1843.

ARLINGTON, EARL OF. [See BENNET.]

ARMIN, ROBERT (fl. 1610), actor and dramatist, was living in 1610. From a chapter in 'Tarlton's Jestes and News out of Purgatory,' 1611, headed 'How Tarlton made Armin his adopted son to succeed him,' we learn that Armin was apprenticed to a goldsmith in Lombard Street; that he became acquainted with Richard Tarlton, the famous performer of clowns and jesters in Queen Elizabeth's time; that Tarlton prophesied that Armin should be his successor in clown's parts; and that Armin, from his regard for Tarlton, frequented the plays in which he acted and perhaps acquired something of his humour. Afterwards Armin was able to display his own abilities as an actor at the Globe Theatre on the Bankside. Tarlton died in 1588. If his pupil Armin was then seventeen or so, he was born about 1570, and must have been an actor of some position when, in 1603, James I. granted his patent to the players, wherein the name of Armin comes last but one. He is supposed to be the Robert Armin who was the author of 'A Brief Resolution of the Right Religion,' printed in 1590, and of other publications, and who was described in 'Pierce's Supererogation,' 1593, as one of 'the common pamphleteers of London.' The name of Robert Armin is also attached to a publication in 1604, entitled 'A True Discourse of the practices of Elizabeth Caldwell and others to poison her husband.' Armin was probably a member of the company of actors performing under the patronage of Lord Chandos. He is believed to have joined the Lord Cham-

berlain's players in 1598, and to have accompanied them to Scotland in the following year. In 1608 he published a work called 'A Nest of Ninnies' (reprinted by the Shakspeare Society), and in 1609, styling himself 'servant to the King's most excellent Majesty,' he printed a play: 'The Two Maids of More Clacke, with the Life and simple manner of John in the Hospital,' as it was acted by 'the children of the King's Majesty's Revels.' Armin is enumerated as one of the original representatives of Ben Jonson's 'Alchemist' in 1610. From a passage in Armin's next tract, 'The Italian Tailor and his Boy,' 1609, it has been concluded that Armin had played the part of Dogberry, succeeding to that duty upon the death or the departure from the Lord Chamberlain's players of William Kemp, the original Dogberry. About 1611 John Davies of Hereford published his 'Scourge of Folly,' in which a long 'epigram' was devoted to 'honest gamesome Robin Armin,' and testimony was borne to the worth of his private character, and the excellence of his public performances. In 1615 was published a play, the 'Valiant Welshman,' purporting to have been written by R. A.: the publisher may have wished the public to infer that Robert Armin was the author. The date of his death is not known. The London parish registers have been vainly searched for evidence of his burial. Apparently he left no will, nor were there issued any letters of administration of his estate.

**ARMINE or ARMYNE, MARY, LADY** (*d.* 1675-6), remarkable for her learning, piety, and benevolence, was the daughter of Henry Talbot, fourth son of George, sixth Earl of Shrewsbury, and second wife of Sir William Armyne, baronet, of Osgodby, Lincolnshire [q. v.]. Her first husband was Thomas Holcroft, Esq. Lady Mary's accomplishments included a good knowledge of French and Latin, and wide reading in divinity and history. Her business capacity is applauded at length by her biographer, and her personal beauty and activity, which characterised her old age no less remarkably than her youth, were frequently commented on by her contemporaries. She devoted her wealth to many charitable objects. At the time of the 'ejection of the two thousand' ministers 'on the fatal Bartholomew day [1662] she gave 500*l.* to Mr. Edm. Calamy, to be distributed among the most indigent

and necessitous families of them,' and the 'godly ministers' seldom appealed to her in vain for assistance in pecuniary difficulties. She took a similarly practical interest in the missionaries engaged in converting the Indians of North America. At home, she founded three hospitals, one at Barton Grange, in Yorkshire, and by her will left 40*l.* per annum to be applied to charitable purposes for ninety-nine years. She died 6 March 1675-6, over eighty years of age. Her portrait was painted by Cornelius Jansen, and is now at Welbeck. An elegy 'upon the much-lamented death of the truly honourable, very aged, and singularly pious lady, the Lady Mary Armine' was written by John Sheffield, afterwards Duke of Buckinghamshire.

**ARMINE, RICHARD DE.** [See **AYREMINNE, RICHARD DE.**]

**ARMINE, WILLIAM DE.** [See **AYREMINNE, WILLIAM DE.**]

**ARMINE, or ARMYNE, SIR WILLIAM** (1593-1651), parliamentarian, was the son of Sir William Armine of Osgodby, Lincolnshire, where he was born 11 Dec. 1593. The family was of Yorkshire origin, and has been traced to one Sewal de Armyne, stated to be the grandfather of Richard and William de Ayreminne [q. v.], the well-known ecclesiastics of the fourteenth century. The father of our Sir William was M.P. for Grantham in 1588-89, was sheriff of Lincolnshire in 1603, when he was knighted (23 April) by James I, and died at the age of sixty on 22 Jan. 1620-21. The son was created a baronet on 28 Nov. 1619 on payment of 1,095*l.*, married a fortnight afterwards Elizabeth, daughter of Sir Michael Hicks, Knight, and was in 1620 holding the office of sheriff of Huntingdonshire. He was returned as M.P. for Boston in 1621 and 1624, as M.P. for Grantham in 1625, and as M.P. for the county of Lincoln in 1626, 1628, and 1641. In May 1626 he was one of the assistants to the managers of Buckingham's impeachment. In March 1626-7 he was appointed a commissioner for the collection of the arbitrary loan in Lincolnshire, and on his refusal to lend or enter into bond for his appearance before the council was committed to prison in the Gatehouse, Westminster; he was released, at the same time as John Hampden, early in the following year (*Cal. Dom. State Papers*, 1627-8, p. 81; *NUGENT'S*

*Memorials of Hampden*, 1860, p. 369). In 1630 he became sheriff of Lincolnshire, and in 1639 sheriff of Huntingdonshire. In the latter capacity in February and March 1639-40 he endeavoured to collect ship-money, but declared himself unable to secure one penny of it. He was an intimate friend and supporter of Sir John Eliot, with whom he corresponded frequently until the latter's death in 1632. Many of his letters, in one of which he urged Eliot (20 Dec. 1631) to publish the 'Monarchy of Man,' are among the manuscripts at Port Eliot. In 1641 he was one of the four members of the House of Commons ordered to accompany Charles I to Scotland. In 1643 he was sent to Oxford by the parliament to discuss terms with the king, and on the failure of his mission proceeded to Scotland to urge the advance of a Scottish army into the north of England. On 12 July 1645 he was nominated a member of a commission to revisit Scotland to treat of 'matters concerning the good of both kingdoms' (*Commons' Journal*, iv. 206). Two days later the House of Commons voted its thanks to Sir William for his 'many and great services to parliament.' On 14 Feb. 1648-9 Armine was appointed by resolution of the commons a member of the council of state, and was reappointed to the office 12 Feb. 1649-50 and 7 Feb. 1650-1. He was a fairly regular attendant at the meetings of the council till the end of March 1651, and during that time served on innumerable committees, especially on those that dealt with finance. He died in April 1651. On Thursday, 1 May, it was resolved by parliament, to show its high sense of Armine's services, that the council of state and the parliamentary committees should 'forbear to sit' on the following Monday afternoon, when Sir William's body was to be 'carried out of town.' On 3 May the council of state ordered every one of its members to attend the funeral, and on 5 May an order was issued, that while the body was being carried for interment from Westminster to Osgodby it should be treated 'according to the civilities due to a person of his condition.'

After the death of his first wife, Elizabeth Hicks, Armine married for the second time Mary Talbot, widow of Thomas Holcroft [see *ARMINE*, Lady MARY]. By his first wife he had several sons. The eldest, William, who succeeded to the baronetcy, was born 14 July 1622, entered Gray's Inn 18 Nov. 1639, and died 2 Jan. 1657-8. He has been identified with the William Ermyne who was returned to the Long parliament in 1646 as M.P. for Cumberland. His wife Anne and two daughters, Anne and Susan, survived him. The widow married for the second time

Baron Belasyse [see *BELASYSE*, JOHN]. Susan, the younger daughter, married Sir Henry Belasyse, Baron Belasyse's son and heir. She ultimately shared with her sister Anne all her father's estates at Osgodby, and, in 1674, after the death of her husband, who died in the lifetime of his father, was created Baroness Belasyse of Osgodby; she died 6 March 1712-13. Her only son, Henry, succeeded his grandfather as second Baron Belasyse in 1689, and on his death in 1694 that title became extinct. The first husband of Anne Armine, the elder daughter of the second baronet, was Thomas, eldest son of Sir Nathaniel Barnardiston [q. v.].

Armine's second son, Theophilus, born 25 June 1623, entered Gray's Inn 18 Nov. 1639, became a parliamentary colonel in the civil wars, and was killed at Pontefract in 1644. Michael, the third son, born 21 Sept. 1625, succeeded his eldest brother in the baronetcy, and died in 1668, when the baronetcy became extinct.

[Blome's Rutlandshire, p. 176; Clarendon's History (1849), i. 395, ii. 541, 573, iii. 117; Cal. Dom. State Papers, 1639-40, 1649-51; Forster's Life of Sir John Eliot; Foster's Admissions to Gray's Inn, p. 17.] S. L.

**ARMITAGE, TIMOTHY** (d. 1655), was in the year 1647 'chosen pastor of the first independent [or congregational] church in the city of Norwich.' This was a kind of offshoot or migration from that of the venerable William Bridge's church at Yarmouth. It was erected into a 'separate congregation' on 10 June 1644, 'in the presence of several of their brethren from Yarmouth, who signified their approbation by expressions of the most tender and endeared affection.' The members of both congregations had been exiles in Holland and elsewhere. They returned home on the outbreak of the great civil war. Armitage laboured most unweariedly until his nonconformist congregation was larger than any in the city. He was superintendent (in connection with Bridge) of numerous nonconformist congregations in Norfolk and Suffolk. The following is the title-page of an unusually scarce book by him: 'A Tryall of Faith, or the Woman of Canaan on Matthew xv. 21-24. Together with the Souls Sure Anchor-hold on Hebrews vi. 19, with the Wisedome of timely remembering our Creator on Eccles. xii. 1. In severall Sermons by Timothy Armitage, Late Minister of the Gospel in Norwich' (1661), pp. vi, 479. He died in December 1655.

[Brook's Lives of the Puritans, iii. 254-5; Browne's Engl. Ch. of Norfolk and Suffolk.] A. B. G.

ARMSTRONG, ARCHIBALD (d. 1672), jester at the courts of James I and Charles I, commonly called ARCHIE, was born of Scotch parents either at Arthuret in Cumberland (LYSONS, *Magna Britannia*, iv. 13) or at Langholm in Roxburghshire (STARK, *Biographia Scotica*). After gaining a widespread reputation, according to a well-known tradition, as a dexterous sheep-stealer in the neighbourhood of Eskdale (*Minstreley of the Scottish Border*, iii. 479), he was attached at an early age to the household of James VI of Scotland. On his accession to the English throne, Armstrong accompanied the king, and, during the first years of his reign in England, he took a regular part in the 'fooleries', which the master of the revels prepared each evening for James's amusement, but the performances recorded of him consisted mainly of the roughest horseplay (WELDON, *Court of King James*, p. 92). The king, however, evinced a strong attachment for Armstrong, who was characteristically Scotch, and, making him his official court jester, gave him a permanent place among his personal attendants.

Armstrong rapidly took advantage of the influence he acquired at the English court to treat his royal master and the noblemen in his service with the utmost freedom and familiarity, and he was repeatedly the cause of petty imbroglios. The story is told that on one occasion before 1612, when the king was staying with a large company at Newmarket, Armstrong raised a childish quarrel between James and his eldest son, Henry, by ascribing to the prince a greater popularity than his father commanded in the country, and the prince's friends revenged themselves upon the fool's impudent officiousness by tossing him 'every night they could meet him in a blanket like a dog.' Sir Henry Wotton describes an elaborate contest 'at tilt, torny, and on foot,' that took place in London in 1613 'before their Majesties,' between 'Archy and a famous knight called Sir Thomas Persons,' whom the fool had insulted (*Reliquia Wottoniana*, ed. 1885, p. 406). On another occasion (9 April 1616) Armstrong addressed a boldly familiar letter to the Earl of Cumberland, lord lieutenant of several northern counties, peremptorily demanding a vacant office for 'my cozen, John Woollsen' (*Dartmouth MSS., Hist. MSS. Com. Rep.* ii. 19a). Similarly, in September 1619, when the king was being meanly entertained by the Earl of Northampton, who had recently been promoted in the peerage, Armstrong openly called James's attention to the small account the earl 'made of him' now that 'he had got what he wanted.' But in spite of his un-

ruly speeches, the king treated Archie with increasing favour, and he not only gained great social distinction, but amassed a large fortune. On 16 May 1611 he was granted a pension of two shillings a day during pleasure, which a month later was re-granted for life, and almost every year James presented him with an elaborate uniform. On 20 Aug. 1618 a patent for making tobacco-pipes was secured to him, and rich presents were frequently made him by the king's friends and suitors. In May 1617, when James was hunting near Aberdeen, he was admitted, with other royal attendants, to the freedom of the city, and was given 'one Portugall ducat' (*Keith-Murray MSS., Hist. MSS. Com. Rep.* iii. 409), and the boroughs of Coventry and Nottingham honoured him with gifts of apparel and money when he was visiting those towns in attendance on the king (NICHOLS's *Progresses of James I*, iii. 480-1, 711). The important place that Armstrong held in court society at the time is further attested by John Taylor, the water poet, who dedicated, in 1621, his 'Praise, Antiquity, and Commodity of Beggary,' to 'the bright eye-dazeling mirror of mirth, adelantado of alacrity, the pump of pastime, spout of sport, and regent of ridiculous confabulations, Archibald Armstrong, alias the court Archy.' The dedicatory epistle speaks in no complimentary terms of Armstrong's avarice and of his nimbleness of tongue, which makes 'other men's money runne into your purse;' it is, therefore, significant that in the collected edition of Taylor's poems, published in 1630, the epistle was suppressed (HAZLITT, *Prefaces, Dedications, Epistles, selected from Early English Books*, 1874).

In 1623 Armstrong reached the zenith of his public career. Although he condemned the Spanish match with his customary directness of speech (NEAL, *Hist. of Puritans*, ii. 122), he was included at his own desire in the retinue of Prince Charles and Buckingham on their famous visit to Spain. An 'extra-ordinarie rich coate' for Archie holds an important place in the wardrobe accounts of the expedition (*Denbigh MSS., Hist. MSS. Com. Rep.* vii. 2246), and just before setting out he created much consternation among 'the privy-chamber gentlemen,' who complained bitterly of the favours bestowed on him, by asking permission to take a servant to wait upon him. While in Spain, Armstrong behaved with unprecedented arrogance. He soon ingratiated himself with the royal family at Madrid, and in a letter to James I, dated 28 April 1623, he wrote that the King of Spain received him in audience when neither 'men of your own nor your son's men can come

nere of him' (*Addit. MSS.* 19402, f. 79). According to his own account Philip IV granted him a pension of which he received in 1631 'the arrearages amounting to 1,500*l.*' (*Authentic Documents of time of Charles I.* ii. 104), and we know that Olivarez, the prime minister, gave him a 'rich suit.' James Howell (*Letters*, p. 136), writing from Madrid (10 July 1623), says that 'our cousin Archie hath more privilege than any,' and that he was often invited to amuse the Infanta in her private chamber, and one day twitted her with the defeat of the Armada. To his English companions he made himself repeatedly obnoxious. Sir Tobie Matthew, one of Prince Charles's attendants, unable to endure his blunt taunts, quarrelled openly with him one day at a public dinner, and before the embassy left Madrid he came to very high words with Buckingham. He 'dared to speak his opinion to the duke,' says Fray Francisco, the author of 'the Narrative of the Spanish Marriage' (published for Camden Soc. p. 252), 'with all the force of truth, blaming severely the manner in which the whole negotiation had been carried on without consistency or truthfulness.' Buckingham, unable to silence Armstrong, threatened to have him hanged, and 'the fool replied in a way worthy of one of better sense: "No one has ever heard of a fool being threatened for talking, but many dukes have been beheaded for their insolence."' On his return to England, Armstrong's continued attacks upon the Spanish match and upon Buckingham rendered him highly popular. Ben Jonson made more or less complimentary references to 'the principal fool of state' in a masque prepared for the court revels on Twelfth Night 1623-4, in the 'Staple of News' (iii. 1), written in 1625, and in his 'Discoveries' (vii. 80), and Bishop Corbet in his 'Poems' (p. 68) spoke of the clamorous applause and laughter provoked by 'salt Archy.'

On the accession of Charles I Armstrong retained his office, and, being permitted as much license as before, wielded for a time no little political power. A petition from William Beloe, a Danish pensioner of the king's mother, shows how jealously he was regarded by the other attendants at court. Beloe states, that the king had given so special a direction for the payment of Archie's entertainment, that he was better off than in the late king's time; and another petition of a later date tells us that Charles I gave Armstrong an estate of 1,000 acres in Ireland. In a letter of much political interest addressed at the end of the year 1628 to the Earl of Carlisle, Archie boldly writes in reference to the murder of Buckingham, that 'the greatest enemy of

three kings is gone;' from the same source we learn that Armstrong was married, and that a son had just been born to him whom he named Philip for the 'King of Spain's sake,' and whose godparents comprised five of the highest officials and peeresses in the state. But Armstrong's fall was not far distant. With Archbishop Laud he was, as with Buckingham, never on good terms. The fool openly ridiculed his religious and political principles, and a quarrel between them lingered on for many years. On one occasion Armstrong, having obtained permission to say grace at Whitehall in Laud's presence, blurted out 'Great praise be given to God, and little *laud* to the devil.' The archbishop was at first unable to obtain any redress; his enemies rallied round Armstrong, and the fool continued with impunity to 'belch in his face such miscarriages as he was really guilty of.' But on the Marquis of Hamilton's return from Scotland in 1637 with the news of the rebellion at Stirling in opposition to Laud's new liturgy, the fool, after many expressions of disapproval of the Scotch policy, went a step too far. Meeting the archbishop as he was entering the council chamber at Whitehall on 11 March 1636-7, he shouted out, 'Whoe's feule now? Does not your grace hear the news from Striveling?' Laud at once brought the matter before the council, at which the king and many noblemen were present, and Armstrong was condemned 'to have his coat pulled over his head and be discharged the king's service and banished the king's court.' Armstrong pleaded in vain the privilege of his office; the order was summarily executed, and the post of court-jester was immediately filled up. According to some accounts Laud endeavoured to bring the fool before the Star Chamber, and the mediation of the queen alone prevented the success of this attempt.

For some years after his disgrace Armstrong remained in London. He was seen on one occasion walking disconsolately about Westminster Abbey, dressed in black like a priest, a disguise in which, he said, he could speak with impunity whatever scandal he pleased. But his wealth had enabled him to become a large creditor, and he spent much of his time in mercilessly distraining on his debtors. Many petitions to the privy council and the House of Lords complain of the sharp practices he employed to obtain the repayment of his loans, and from 1638 to 1642 a lawsuit was pending between him and the Dean of York with regard to 200*l.* alleged to be due to him from the latter, and Laud intervened in the clergyman's behalf. One attempt Armstrong made to revenge himself

on the archbishop. In 1641, on Laud's arrest by the order of the commons, he published a small pamphlet entitled 'Archy's Dreams, sometimes Jester to his Majestie; but exiled the Court by Canterburies malice. With a relation for whom an odde chaire stood wide in Hell.' Many instances of Laud's tyrannical cruelty are here adduced, and Armstrong confidently consigns him to hell, to join 'blind Bonner and Woolsey,' whom he introduces 'dancing a galliard.' Almost immediately afterwards Armstrong apparently retired to Arthuret in Cumberland, where, according to a reference to him in a poem on a local topic published in 1656, he became a considerable landowner (*Fatal Nuptials, or the Mournful Marriage; London Magazine*, x. 287, 408). In the parish register of Arthuret there are entries of the baptism of 'a base son' of Archibald Armstrong on 17 Dec. 1643; of his marriage, probably for the second time, with Sybella Bell on 4 June 1646; and of his burial 1 April 1672; but no memorial of him in the churchyard survives.

Besides the pamphlet ascribed to him above, he is credited with the authorship of 'A Banquet of Iests: a Change of Cheare. Being a collection of modern Iests, Witty Ieeres, Pleasaunt Taunts, Merry Tales,' the first edition of which was published in 1630. A portrait of Armstrong forms the frontispiece, with the verses inscribed below:

Archee, by kings and princes graced of late,  
Jested himself into a fair estate.

After the book had passed through three editions, a second part was added in 1633, and a fifth edition of the whole work appeared in 1639. Only a few of the jokes have any claim to originality; the majority are to be found in previous collections. In 1660 there was published in London, 'A choice Banquet of Witty Jests, Rare Fancies, and Pleasant Novels. Fitted for all the Lovers of Wit, Mirth, and Eloquence. Being an addition to Archee's Jests, taken out of his Closet; but never published in his Lifetime.' But the appearance of Armstrong's name on the title-page was probably a bookseller's device; the fact that he was still alive in Cumberland is a certain proof that he was in no way connected with the publication of the work.

[Lysons's *Magna Britannia*, iv. 13; *Calendars of State Papers* from 1611 to 1639; *Strafford Papers*, ii. 133; *Osborne, Memorials of King James in his Works* (1682), p. 474; *Rushworth, Historical Collections*, part 2, vol. i. pp. 470-1; *House of Lords Journal*, v. 372 b, 433 a; *Doran's History of Court Fools*, pp. 196 et seq. (with the supplementary chapter in Chambers's *Book of*

*Days*, i. pp. 181-5); *Gent. Mag.* xci. part ii., ciii. part ii.; *Thoms's Anecdotes and Traditions* (Camden Soc.), p. 67; *Nares's Glossary* (ed. Halliwell and Wright), i. 31.] S. L.

ARMSTRONG, COSMO (A. 1800-1836), line-engraver, was a pupil of Thomas Milton, the landscape-engraver. He was a governor of the Society of Engravers, and he exhibited with the Associated Engravers in 1821. He engraved some plates for Cooke's edition of the *British Poets*, Sharpe's edition of the *British Classics*, Kearsley's edition of *Shakespeare*, Suttaby's edition of the *British Classics*, Allason's 'Picturesque Views of the Antiquities of Pola,' 1819, and the 'Ancient Marbles in the British Museum.' Among his other works may be noticed 'Camaralzaman and Badoura' and 'The Sleeper awakened,' after Robert Smirke, for Miller's edition of the 'Arabian Nights,' published in 1802; 'Don Quixote's Combat with the Giant Malumbruno,' also after Smirke, for Cadell's edition of 'Don Quixote,' issued in 1818; and small portraits of Michelangelo, Shakespeare, Charles I., after Van Dyck, Lord Byron, after Thomas Phillips, and George IV, after Sir Thomas Lawrence. Cosmo Armstrong possessed much power of execution, but was too irregular in his application and too eccentric in character to take the rank in his profession that he might otherwise have done. He was still living in 1836.

[Raimbach's *Memoirs and Recollections*, 1843, p. 36; *Redgrave's Dictionary of Artists of the English School*, 1878.] R. E. G.

ARMSTRONG, EDMUND JOHN (1841-1865), a poet who died in early manhood, was born in Dublin 23 July 1841. As a boy he was distinguished by his adventurous spirit, romantic temper united with humour and love of frolic, and his passionate delight in music and literature. Long rambles among the Dublin and Wicklow mountains gave inspiration and colour to his verse. At the age of 17-18 his religious faith yielded before turbulent moods of scepticism; a disappointment in love added to the gloom of this period. In 1859 he entered Trinity College, Dublin, distinguishing himself highly by his compositions in Greek and Latin verse. Immoderate work and intellectual excitement in the spring of 1860 were followed by severe illness; a blood-vessel in the lung was burst, and the lung seriously injured. A summer of convalescence was passed in Wicklow, and then he found it possible to trace back his way towards christian beliefs. He wintered, 1860-61, in Jersey—a joyous and fruitful season for him, during which much was

seen, felt, and thought. Here began a long correspondence on religious questions with a friend as yet unseen, Mr. G. A. Chadwick. Having returned from a delightful visit to Brittany, he left Jersey reluctantly in mid-summer 1861, and spent the warmer months of the year in Ireland. On the approach of winter he again resorted to Jersey, now accompanied by a younger brother, G. F. Armstrong (since professor of English literature, Queen's College, Cork). In April 1862 the brothers started for Normandy, thence visited Paris, and once more returned to Jersey, to bid it a final farewell. Armstrong had now sufficiently recovered to accept a tutorship in the north of Ireland. During his vacation (summer of 1862) he walked much among the Wicklow mountains, and was engaged in writing his poems, 'The Dargle' and 'Glandalough.' In October 1862, now looking forward to the clerical profession, he continued his college course. In April 1863 he read before the Undergraduate Philosophical Society an essay on Shelley, designed partly as a recantation of his earlier anti-Christian opinions. In May of the same year he was rapidly producing his longest poem, 'The Prisoner of Mount Saint Michael,' a romantic tale of passion and crime in blank verse, the landscape and local colour having been furnished by Armstrong's wanderings in France. This was followed by the idyllic poem 'Ovoca,' partly dramatic, partly narrative in form. In October 1863 he came into residence at Trinity College, Dublin, and attracted much attention by speeches delivered before the Historical Society, and essays read before the Undergraduate Philosophical Society. Of this latter society he was elected president, and in October 1864 delivered his opening address, 'On Essayists and Essay-writing.' In the winter his health broke down, and he went to reside at Kingstown, where, after an illness of several weeks, he died, 24 Feb. 1865. He was buried at Monkstown, co. Dublin. As a memorial of his genius, his college and other friends published the volume 'Poems by the late Edmund J. Armstrong' (Moxon, 1865). It includes the two longer poems named above, with many lyrical pieces which show much ardour of imagination and mastery of verse. A short memoir by Mr. Chadwick is prefixed. His poems appeared in a new edition, with many added pieces, edited by G. F. Armstrong, in 1877 ('The Poetical Works of Edmund J. Armstrong,' Longmans, Green, and Co.) At the same time, and by the same publishers, were issued a volume of his prose ('Essays and Sketches by Edmund J. Armstrong, edited by G. F. Armstrong'), in-

cluding essays on Coleridge, Shelley, Goethe's Mephistopheles, E. A. Poe, Essayists and Essay-writing, &c. In the 'Life and Letters of Edmund J. Armstrong, edited by G. F. Armstrong' (1877), a portrait is given. An article on Armstrong, by Sir Henry Taylor, appeared in the 'Edinburgh Review,' July 1878.

[Memoir as above; personal knowledge.]

E. D.

**ARMSTRONG, GEORGE, M.D. (A. 1767),** brother of John Armstrong, the poet, 1709-1779 [q. v.], after practising pharmacy at Hampstead, qualified himself as a physician, removed to London, and established in 1769 a dispensary, supported by contributions, for the relief of poor children. This beneficent institution continued to exist for more than twelve years, and it was calculated that not less than 35,000 children were relieved during that time. But it met with small pecuniary support, and in December 1781 its career of usefulness was closed. In 1767 he published an 'Essay on the Diseases most fatal to Infants,' a second edition appeared in 1771, and a third edition, dedicated to Queen Charlotte, in 1777. An enlarged edition appeared in 1808, edited by A. P. Buchan, M.D. To the third edition was appended 'A General Account of the Dispensary for the Infant Poor,' which had been printed, in a shorter form, in 1772. Armstrong claimed that 'no charitable institution was ever established whereby so much good has been done, or so many lives saved at so small an expense,' as by the dispensary he had founded. He dwells with emphasis on the fact that it was the only institution where children were received 'without any letters of admission, provided the parents are really indigent, the case dangerous, and requiring speedy relief.' The date of his death is unknown. In 'Rees's Cyclopædia' he is said to have died 'in obscurity.' He left three daughters (to whom their uncle had bequeathed his property) and a widow.

[Rees's Cyclopædia; Works.] A. H. B.

**ARMSTRONG, JAMES, D.D. (1780-1839),** Irish unitarian minister, born in 1780 at Ballynahinch, county Down, was the son of John Armstrong, who married a daughter of Rev. John Strong, for thirty-six years (1744-1780) presbyterian minister of Ballynahinch. He was a descendant of John Livingstone, of Killinchy, one of the founders of Irish presbyterianism [see LIVINGSTONE, JOHN]. He was first trained at the Rademon Academy, under Moses Neilson, D.D., after which he became classical assist-

ant to William Bruce, D.D., in the Belfast Academy, and conducted a special class of sacred history. He graduated at Trinity College, Dublin, and studied philosophy in Edinburgh under Dugald Stewart. He was licensed 11 May 1806 by Antrim Presbytery (non-subscribing). The same year he received calls to Olonmel and Strand Street, Dublin (2 Oct.); choosing the latter, he was ordained 25 Dec. 1806 by Dublin Presbytery (non-subscribing) as colleague to John Moody, D.D. (b. 11 Dec. 1742, d. 15 July 1813), after whose death William Hamilton Drummond, D.D. [see DRUMMOND, W. H.], became (25 Dec. 1815) his colleague. He was one of the founders of the Irish Unitarian Society (1830) and of the Association of Irish Nonsubscribing Presbyterians (1835), and he represented the latter body at the celebration of the tercentenary of the reformation at Geneva in August 1835. In the previous year he had received the degree of D.D. from the university of Geneva. He was a member of the Royal Irish Academy. He died very suddenly at Stonehouse on Wednesday, 4 Dec. 1839, having preached on the previous Sunday, and married a couple that very morning. He married Mary Allman, and left two sons (John Strong Armstrong, A.B., president of the Dublin Historical Society, and Rev. George Allman Armstrong, A.B., originally a barrister, who succeeded him in 1841 at Strand Street) and four daughters. A petition from his widow is printed in *Parl. Debates on the Dissenters' Chapels Bill*, 1844. He published: 1. 'A Discourse on Presbyterian Ordination,' and an 'Appendix, containing some account of the Presbyterian Churches in Dublin,' both included in the 'Ordination Service' for James Martineau, Lond. 1829 (this appendix is one of the most valuable contributions yet made to Irish presbyterian biography, being the fruit of most accurate and extensive research). 2. 'The Sin against the Holy Ghost,' Lond. 1836 (sermon before the British and Foreign Unitarian Association). 3. 'A Sermon vindicating the Principles of Unitarian Christianity,' Dublin, 1838 (a discourse originating in local controversy).

[Appendix (as above), p. 77; Bible Christian, 1839, p. 426; Drummond's Memoir and Funeral Sermon, 1840.] A. G.

**ARMSTRONG, JOHN, or JOHNIE**, of Gilnockie (d. 1528), a famous freebooter of the border-country, lived at the Hollows, a stronghold near Langholm, whence he was accustomed to ride abroad with twenty-four able gentlemen well horsed. He never molested any Scot, but from the borders to

Newcastle he was a name of terror. On 28 March 1528 James V held a parliament at Edinburgh in which he consulted with his lords and barons as to what measures should be taken to 'stanch all theft and reving within his realm;' and proclamation was made that all lords, barons, and gentlemen should appear at Edinburgh, with a month's victual, to accompany the king on an expedition against the freebooters of Teviotdale, Annandale, and Liddisdale. Hoping to gain favour by submission, Armstrong, with thirty-six followers, came into the king's presence. But the king 'bade take the tyrant out of his sight,' saying, 'What wants this knave that a king should have?' Armstrong offered to maintain himself and forty followers always ready at the king's service, without doing injury to any Scot, and undertook to bring any English subject, duke, earl, or baron, before the king within a fixed number of days. Seeing that his offers were vain, he exclaimed proudly, 'It is folly to seek grace at a graceless face. But had I known this, I should have lived in the borders in despite of King Harry and you both; for I know that Harry would downweigh my best horse with gold to know that I were condemned to die this day.' Then he and his followers were hanged on trees at Carlanrigg Chapel, on the high road to Langholm. Such is the account given in Pitscottie's 'History of Scotland,' p. 145. According to the old Scotch ballad, the king wrote to Armstrong 'to cum and speik with him speidly;' whereupon the Eliots and Armstrongs gathered a 'gallant company' and rode out to bring the king on his way to Gilnockie. At their approach the king turned fiercely on Armstrong—

Away, away, thou traytor strang,  
Out of my sight thou mayst sune be.  
I grantit never a traytor's lyfe,  
And now I'll not begin with thee.

He makes large promises to the king, but all to no purpose; and so

John muredred was at Calinrigg,  
And all his galant companie;  
But Scotland's heart was never sae wae  
To see so many brave men die.  
Because they saved their country deir  
Frae Englishmen; nane were sae bauld,  
Quhyle Johnie lived on the border-syde  
Nane of them durst cum neir his hald.

Buchanan represents Armstrong to have been dreaded alike by Scots and English, and says that, being enticed to seek the king, he rode out with fifty unarmed knights, fell into an ambush, and was brought a prisoner before the king. Bishop Leslie adds that his brother,

George Armstrong, saved his life by turning informer.

Armstrong is also the hero of an English ballad and chap-book. These make him to have lived at Giltmock Hall, in Westmoreland, where he entertained eight score followers. After the battle of Bannockburn the king summoned him to Edinburgh under the pretence of conferring honour upon him. Coming, bravely attended, into the king's presence, he was denounced as a traitor. A desperate fight ensued, in which the streets of the city ran with blood; but at length Armstrong and his men were slain. The chap-book opens with an account of Armstrong's early adventures in the Holy Land.

The Scotch ballad was first published by Allan Ramsay in his 'Evergreen,' who says he took it down from the mouth of a gentleman called Armstrong, of the sixth generation from John. It bears every mark of a high antiquity. The English ballad, which no doubt belongs to the middle of the seventeenth century, is preserved among the 'Bagford' and 'Roxburghe Ballads,' and has been published by Ritson and others. There are several editions of the chap-book, which seems to have been composed early in the 18th century.

**ARMSTRONG, JOHN** (1674-1742), 'Chief Engineer of England,' born at Ballyard, King's Co., 31 March 1674, was eldest son of Robert Armstrong, by Lydia, daughter of Michael Howard, of Ballyard. He saw much active service under the Duke of Marlborough and Prince Eugène; he became major-general and colonel of the royal regiment of foot in Ireland, and was elected fellow of the Royal Society on 2 May 1723. He was quartermaster-general from Jan. 1712-13 and 'Chief Engineer of England' from Nov. 1714 till his death on 25 April 1742. In 1716, while Armstrong was surveyor-general of the ordnance, Woolwich Arsenal was founded, but, though the development of the scheme owed much to his co-operation, it is doubtful if it was initiated by him [see SCHALCH, ANDREW]. Armstrong was part author of a work entitled a 'Report with Proposals [by Thomas Badeslade] for draining the Fens and amending the Port of King's Lynn and of Cambridge and the rest of the trading towns in those parts and the navigable rivers that have their course through the great level of the Fens called Bedford Level.' He married, 20 Sept. 1714, Anne Priscilla, daughter of Major Burroughs, and left five daughters, of whom the second, Anne, became second wife of Benjamin Hoadly (1706-1757) [q.v.].

Mag.* xii. p. 219; *London Mag.* 1742, p. 205; Thompson's *History of the Royal Society*, Appendix, p. 35; Badeslade's *History of the Ancient and Present State of the Navigation of the Port of King's Lynn*, &c.] A. S. B.

**ARMSTRONG, JOHN**, M.D. (1709-1779), poet, physician, and essayist, was born in the parish of Castleton, Roxburghshire, about the year 1709. His father was a clergyman. He studied at Edinburgh University, and took his degree of M.D. on 4 Feb. 1732, composing for the occasion a 'Dissertatio de Tabæ Puerulentæ,' which he published at Edinburgh in the same year, with a dedication to Sir Hans Sloane. A Latin letter which the author sent to Sir Hans Sloane with a copy of the thesis is preserved in the British Museum (*MS. Sloane*, 4036). Before 1735 Armstrong was practising medicine in London.

At an early age Armstrong began to cultivate poetry. He tells us that the verses entitled 'Winter' (an 'imitation of Shakespeare'), first published in 1770, were written in 1725. Thomson, Mallet, Aaron Hill, and Young received manuscript copies of the verses from the youthful writer, and expressed to him their congratulations. Mallet promised to print the piece, but afterwards changed his mind.

In 1734 Armstrong published, in vol. ii. of the 'Edinburgh Medical Essays,' an essay on 'Penetrating Topic Medicines,' and in the same year he wrote a paper (read before the Royal Society on 30 Jan. 1735, and preserved among the Sloane MSS., No. 4433) on the 'Alcalescent Disposition of Animal Fluids.' His next production was a satirical pamphlet entitled 'Essay for abridging the Study of Physick,' 1735, 8vo. In the following year he made his first appearance as a poet. The 'Economy of Love,' 1736, 8vo, was published anonymously; and it is indeed a production which not many men would care to claim. A more nauseous piece of work could not easily be found. When the author reissued the poem in 1768, he had the good sense to cancel some of the worst passages. It was followed by a 'Synopsis of the History and Cure of Venereal Diseases.' In 1741 Armstrong solicited Dr. Birch's recommendation to Dr. Mead for the appointment of physician to the troops going to the West Indies (*Sloane MS.* 4300).

Writing many years afterwards, in 1773, he ascribes his limited success in his profession to the fact that 'he could neither tell a heap of lies in his own praise wherever he went; nor intrigue with nurses; nor associate, much less assimilate, with the

various knots of pert insipid, lively stupid, well-bred impertinent, good-humoured malicious, obliging deceitful, waspy drivelling gossips; nor enter into juntos with people who were not to his liking' (*Medical Essays*). Habitual inertness and a splenetic temperament were probably the real drawbacks to his advancement. Dr. Beattie, in a letter to Sir William Forbes, writes: 'I know not what is the matter with Armstrong, but he seems to have conceived a rooted aversion against the whole human race, except a few friends, which it seems are dead.' In Thomson's 'Castle of Indolence' there is a stanza which is supposed to refer to Armstrong:—

With him was sometimes join'd, in silent walk  
(Profoundly silent, for they never spoke),  
One shyer still, who quite detested talk:  
Oft, stung by spleen, at once away he broke  
To groves of pine and broad o'ershadowing oak;  
There, inly thrill'd, he wandered all alone  
And on himself his pensive fury wroke,  
Nor ever utter'd word, save when first shone  
The glittering star of eve—'Thank Heaven!  
the day is done.'

In 1744 appeared the 'Art of preserving Health,' a didactic poem in four books, which sprang at once into popularity, and has passed through several editions down to our own day. In the class of poetry to which it belongs, the 'Art of preserving Health' holds a distinguished place. No writer of the eighteenth century had so masterful a grasp of blank verse as is shown in parts of this poem. The powerful passage descriptive of the plague (book iii.) has been highly praised. As in all didactic poetry, the practical directions are of little interest; but those who value austere imagination and weighty diction cannot afford to neglect Armstrong's masterpiece.

He was appointed, in February 1746, a physician to the Hospital for Lane, Maimed, and Sick Soldiers in London. Five years later (1751) he published 'Benevolence, an Epistle,' which added little to his fame; and in 1753 'Taste, an Epistle to a young Critic,' readable but acrimonious. At this time Dr. Theobald addressed to him two complimentary Latin odes. Armstrong's next venture was a tragedy, 'The Forced Marriage,' written in 1754, but not published until 1770. Much more interesting are the 'Sketches or Essays on various subjects, in two parts,' published in 1758 under the pseudonym of Launcelot Temple. It has been suggested—without evidence—that he was assisted in the composition of these essays by Wilkes, with whom he was nearly acquainted for many years. Always terse, often original, and sometimes

brilliant, Armstrong's prose is undeserving of the neglect into which it has fallen.

In 1760 he received the post of physician to the army in Germany. Writing to Wilkes on 3 Nov. of that year, he enclosed a poetical epistle entitled 'Day,' which was published in the following year. A letter in the 'Public Advertiser' of 23 March 1773 accused Wilkes of having published it against the author's wish. In the following number appeared a reply, signed 'Truth,' denying the charge; and this was followed, on 1 April, by a letter, signed 'Nox,' wherein the writer declared that the verses were published at Armstrong's repeated requests and against Wilkes's advice. Several years afterwards there appeared in the 'Gentleman's Magazine' (January 1792) the notes of a conversation between Wilkes and Armstrong on the subject of the correspondence in the 'Public Advertiser.' According to this report Armstrong accused Wilkes of having written the three letters in question, Wilkes denying the charge with caustic pleasantry. Whether the letters were written by Wilkes, or whether any such conversation ever occurred, is extremely doubtful; but as to the publication of 'Day' we are able to refer to Armstrong's unpublished letters in the valuable 'Wilkes Correspondence' acquired a few years ago by the British Museum (*Add. MS.* 30867). On 3 Nov. 1760, when sending the epistle to Wilkes, he writes:—'I . . . send you letters by the brace. If you approve of that in rhyme, I wish all the people in Britain and Ireland would read it, that I might be indulged in the vanity of being known for your friend. But if you think it worthy of Mr. Bowyer's press, don't submit it to that severe operation till everything you find wrong in it is altered.' Wilkes ruthlessly excised whatever he thought to be inferior, and exposed a tattered version to the public, indicating the cancelled passages by stars. Moreover, after sending the epistle to press, he seems not to have troubled himself to make any communication on the subject with the author; for on 29 Oct. 1762, unaware that the epistle was already in print, Armstrong wrote from abroad to ask Wilkes to hand over to Millar, the bookseller, 'one strayed ode—item one elegy—item one epistle entitled a "Day," which I shall be glad to clear of a few clouds. You must know I kept only the first copy, which is mislaid, or more probably lost.' The next letter broke off, once for all, the connection between the friends. We print it, for the first time, from *Add. MS.* 30867, p. 216:—'London, 17 Sept. 1763. Sir,—I thank you for the honour of a letter, and continue sensible of every mark

of friendship I have received from you, which makes me regret it the more that you have for ever deprived me of the pleasure of your conversation. For I cannot with honour or decency associate myself with one who has distinguished himself by abusing my country. I am with all due sincerity, Sir, your most humble servant, John Armstrong. Had it not been for the publication of the unfortunate 'Day,' he would probably have continued on familiar terms with Wilkes, who (it is supposed) had procured him the post of physician to the army, and to whom he was certainly indebted for much pecuniary help. In some very vigorous lines of Churchill's posthumous satire, 'A Journey,' published in 1764, Armstrong is held up to unsparing ridicule:—

Let them with Armstrong, taking leave of sense,  
Read musty lectures on Benevolence,  
Or con the pages of his gaping Day,  
Where all his former fame was thrown away,  
Where all but barren labour was forgot  
And the vain stiffness of a letter'd Scot.

One writer after another has asserted that Churchill's attack was provoked by some reflections on himself in 'Day,' but the reader must be extraordinarily lynx-eyed to discover any allusion to Churchill in Armstrong's epistle. It is far more probable that the lines were written at the suggestion of Wilkes, who was on terms of close intimacy with the satirist.

At the recall of the troops from Germany Armstrong returned to London, receiving half-pay for the rest of his life. In 1770 he published, in two volumes of 'Miscellanies,' such works in verse and prose as he wished to preserve. He took this opportunity of printing in his own name the four concluding stanzas of the first canto of the 'Castle of Indolence.' Accompanied by Fuseli, he started in the same year for a tour in France and Italy. At Leghorn he visited Smollett, who was fast sinking into his grave. Under the title of 'A Short Ramble through France and Italy,' 1771, he published some desultory notes taken on the journey. In 1773 he published his last work, 'Medical Essays,' in which he coarsely charges his professional brethren with incompetency and servility.

Armstrong died at his house in Russell Street, Covent Garden, on 7 Sept. 1779, from the effects of a fall. He had been staying in Lincolnshire, and as he was preparing to return home his foot slipped when he was stepping into his carriage. To the surprise of everybody he left the sum of 3,000*l.* As his pension and his very small practice were his sole means of support, he must have lived somewhat parsimoniously.

There is a mezzotint portrait of him, from a painting by Sir Joshua Reynolds, inscribed 'John Armstrong, M.D. The suffrage of the wise, the praise that's worth competition is attained by sense alone and dignity of mind.' One who knew him well, Dr. Cuming, of Dorchester, has set down his character briefly as follows:—'He always appeared to me (and I was confirmed in this opinion by that of his most intimate friends) a man of learning and genius, of considerable abilities in his profession, of great benevolence and goodness of heart, fond of associating with men of parts and genius, but indolent and inactive, and therefore totally unqualified to employ the means that usually lead to medical employment, or to elbow his way through a crowd of competitors.'

[The original editions of his works; Nichols's Literary Anecdotes, ii. 275, &c.; Public Advertiser, 23 and 24 March and 1 April 1773; Gentleman's Magazine, January 1792; Add. MSS. 30867 and 30876.] A. H. B.

ARMSTRONG, JOHN (1771–1797), journalist and writer of verses, was born of humble parents, at Leith, in June 1771. After attending the Grammar School of that town and the High School of Edinburgh, he entered Edinburgh University, where he graduated M.A. In 1789 he published 'Juvenile Poems, with remarks on Poetry, and a Dissertation on the best means of punishing and preventing Crimes.' These poems, if stilted in style and hackneyed in sentiment, are characterised by general good taste and some artistic finish. Their publication obtained for him the honour of being invited to compose the words of the songs used in connection with the ceremony of laying the foundation-stone of the Edinburgh University buildings. While tutor in a family in Edinburgh, Armstrong pursued the theological studies necessary to qualify him to become a preacher in the church of Scotland, but in 1790 he removed to London, where he obtained employment on one of the daily papers at a small weekly salary. In 1791 he published a collection of poems, under the title 'Sonnets from Shakspeare.' His literary prospects continued gradually to improve, and he was in receipt of a considerable income, when his health began suddenly to give way. He retired to Leith, where he died of a rapid decline, July 21, 1797.

[Memoir in Edinburgh Magazine, new series, vol. x. pp. 264–5, which contains some additional details to those given in Monthly Magazine, vol. iv. pp. 153–4, and Gentleman's Magazine, vol. lxxvii. part 2, pp. 731–2.] T. F. H.

ARMSTRONG, JOHN, senior (1784-1829), physician, was born, 8 May 1784, at Ayres Quay, near Bishop Wearmouth, county Durham, where his father, George Armstrong, a man of humble birth, was a superintendent of glass works. He was educated at first privately and afterwards studied medicine at the university of Edinburgh, where he graduated M.D. in 1807 with a dissertation, 'De Causis Morborum Hydropicorum.' He practised at his native place and in the adjoining town of Sunderland, and was physician to the Sunderland Infirmary. In 1811 he married Sarah, daughter of Mr. Charles Spearman, by whom he left a family, including a son John, who became bishop of Grahamstown [q. v.]. While at Sunderland he published, besides several memoirs in the 'Edinburgh Medical Journal,' two works, 'Facts and Observations relative to the Fever commonly called Puerperal' (London, 1814), and 'Practical Illustrations of Typhus and other Febrile Diseases' (London, 1816), by which he became favourably known to the medical profession. In 1818 he removed to London and published 'Practical Illustrations of the Scarlet Fever, Measles, Pulmonary Consumption' (London, 1818), which added to his reputation. In the next year he was appointed physician to the London Fever Institution (now called Hospital), an office which he resigned in 1824, and in 1820 became licentiate of the College of Physicians.

Dr. Armstrong rapidly acquired a large practice and also became a very successful and popular teacher of medicine. In 1821 he joined Mr. Grainger, an eminent teacher of anatomy, as lecturer on medicine at the school at that time being founded by the latter in Webb Street, which, before the complete development of the great hospital schools, was one of the most important in London. In 1826 he joined Mr. Bennett in founding another school in Little Dean Street, Soho, and for some time lectured on medicine in both institutions. In 1828 failing health compelled him to give up teaching, and he died of consumption on 12 Dec. 1829, at the early age of 45.

There can be no doubt of Dr. Armstrong's great energy and brilliant talents, though the rapidity of his success and the fact of his being unconnected with any of the greater medical schools caused his career to be watched with much surprise and possibly a little jealousy. His opinion was, however, highly valued by his professional brethren.

Dr. Armstrong's works on fevers became extremely popular in this country and America, and they have the merit of being founded

entirely on his own observations. Their importance has, however, been greatly diminished by later discoveries, and especially by the discrimination of several kinds of fever which were at that time confounded together. The latter consideration probably explains the changes that Armstrong's own views underwent in relation to typhus, which he in his earlier works asserted to be contagious, but in his later memoirs (*Lancet*, 1825) attributed to a malarial origin. In treatment Armstrong was an ardent advocate of the antiphlogistic system, and made a copious use of bleeding.

His controversy with the College of Surgeons arose out of an attempt on the part of that body to discourage private medical teaching by refusing to accept certificates except from the recognised hospitals and their medical schools. With the College of Physicians he was equally displeased on account of his having been rejected when he first presented himself as a candidate for the licentiate ship, an accident which may often happen when a physician established in practice has to undergo examination on subjects with which he was familiar as a student. Dr. Armstrong is described by his friend Dr. Boott as a man of high integrity, absorbed in his profession, of gentle and reserved character, with much power of sympathy. He appears to have had few intellectual interests outside of his daily work, and spoke with some contempt of 'learned physicians.'

Besides the above, Dr. Armstrong was author of: 1. 'An Address to the Members of the Royal College of Surgeons on the injurious conduct and defective state of that Corporation with reference to Professional Rights, Medical Science, and the Public Health,' London, 1825. 2. 'The Morbid Anatomy of the Stomach, Bowels, and Liver, illustrated by a series of plates with explanatory letterpress, and a summary of the symptoms of the acute and chronic affections of the above-named organs,' 4to, London, 1828 (unfinished). 3. 'Lectures on the Morbid Anatomy, Nature, and Treatment of Acute and Chronic Diseases,' edited by Joseph Rix (after the author's death), London, 1834.

[Boott's Memoir of the Life and Medical Opinions of John Armstrong, in 2 vols., 1833; Munk's Roll of College of Physicians (1878), iii. 216.] J. F. P.

ARMSTRONG, JOHN, junior (1818-1856), bishop of Grahamstown, was the son of Dr. John Armstrong, the physician [q. v.]. He was educated at a preparatory school at Hanwell, and at Charterhouse. In 1832 he was elected to a Crewe exhibition at Lincoln

College, Oxford, and having graduated in classical honours (third class) in 1836, he received holy orders in 1837. He was curate for a very short time, first at Alford in Somersetshire, and then at Walton-Fitzpaine in Dorsetshire; but within a year of his ordination he took a curacy at Olifton, where he remained about three years. In 1841 he became a priest-vicar of the cathedral at Exeter, and in 1843 rector also of St. Paul's, Exeter. In the same year he married Miss Frances Whitmore. About this time his convictions became strengthened and his spirituality deepened, chiefly through the influence of the earlier 'Tracts for the Times'; and it is an instance of his peculiar attractiveness that views and practices then very unpopular made him no enemies and raised very little opposition. The 'surplice riots,' e.g., were raging at Exeter, but they were little felt at St. Paul's. In 1845 he exchanged posts with Mr. Burr, vicar of Tidenham, in Gloucestershire. He found Tidenham in a ferment, owing to the introduction of usages which are now all but universal; but Mr. Armstrong soon lived the opposition down, and carried his points with all but universal approbation. Both at Exeter and Tidenham he almost entirely gave up what is called society, and devoted himself exclusively to the labours of a hard-working parish priest. But he was thoroughly happy in his domestic life; he had a truly like-minded wife and children, whom he loved to have about him even in his busiest hours. 'There was, I believe,' writes an eye-witness to the present writer, 'no separate study in the vicarage, so that much of his work was done in the midst of his family. I found him one morning writing a sermon with three of his children climbing over and playing with him; and so far from rebuking them, from time to time the pen was laid aside, and he joined in their frolics, returning again to his graver thoughts and writing; and on my admiring that he could so work, he replied simply, "I would give but little for a man that could not."' Mr. Armstrong made his mark as a preacher far beyond the limits of his country parish. 'He was,' writes a clergyman still living, 'the best all round country congregation preacher I ever knew.' A volume of 'Sermons on the Festivals,' preached at Exeter Cathedral, was published in 1845; another volume of 'Parochial Sermons' in 1854; and the series of 'Sermons for the Christian Seasons,' from Advent 1852 to Advent 1853, were all of them edited, and several of them written, by him. In some interesting sketches of 'successful preachers,' one of 'Bishop John Armstrong' will be found in the 'Guardian' of 20 Dec.

1852. He was also a successful tract-writer. He wrote many of, and was the responsible editor of two series of, the 'Tracts for the Christian Seasons,' the first of which came out monthly from Advent 1848 to Advent 1849, and the second from Advent 1849 to Advent 1850; and these were followed in 1852-3 by 'Tracts for Parochial Use.' Mr. Armstrong's strong common sense and genial humour are conspicuous in these tracts, and their popularity has been very great. Mr. Armstrong had always taken the deepest interest in what are called 'social questions.' He now threw himself with characteristic energy into a scheme of which he was unquestionably the chief originator. The scheme was, to establish a system of penitentiaries, in which the chief agents should be self-devoted and unpaid ladies, working on sound church principles and under the direct superintendence of clergymen. Mr. Armstrong advocated this scheme in articles on 'Female Penitentiaries' in the 'Quarterly Review' in the autumn of 1848; in the 'Christian Remembrancer' in January 1849; in the 'English Review' in March 1849; and in a stirring tract, entitled 'Appeal for a Church Penitentiary,' also in 1849. The interest of the public was awakened. Mr. Armstrong was as indefatigable in his private correspondence on the subject as in his articles for the press. 'I have acres of his letters,' writes a friend to the present writer, 'all on one subject—a House of Mercy for Gloucestershire.' The first church penitentiary was founded in Mr. Carter's parish of Clewer; in the same year (1849) another house of mercy was founded at Wantage; and shortly afterwards another at Bussage, in Mr. Armstrong's own diocese. In 1852 the Church Penitentiary Association was formed, and Mr. Armstrong's day-dream was in a fair way of being realised. Among the rest of Mr. Armstrong's writings may be noticed his 'Pastor in the Closet,' published in 1847; a singularly vigorous article in the 'Christian Remembrancer' on the 'History and Modern State of Freemasonry' from the christian point of view, which can hardly have been acceptable to freemasons; and articles in the 'National Miscellany,' a monthly religious periodical which he founded a little while before he left England.

In 1853 he was offered the new bishopric of Grahamstown, chiefly through the influence of Bishop Gray, of Capetown. His penitentiary scheme was well afloat, and after having consulted some tried friends he accepted the post, and was consecrated at Lambeth on St. Andrew's day; after a few months' delay, during which, in spite of bad

health, he pleaded the cause of Africa in various parts of the country, he set sail for Grahamstown. One of the most interesting presents which he took with him was a set of episcopal robes worked by the Bussage penitents. He regarded his position as that of a missionary as well as a colonial bishop. 'Do you think,' he said at a public meeting, 'I go forth thinking the diocese of Grahamstown is to be the bound and limit of Christian enterprise? God forbid! Africa is given to us if we will first do our part.' The diocese of Grahamstown, however, was in itself no trifling charge; it was almost as large as England, and, owing to bad roads and other hindrances, twenty miles a day was the average of travelling. His first work was to make a visitation tour of his diocese. He won golden opinions wherever he went; and he found or made many able coadjutors. There is little doubt that if his life had been spared he would have been eminently successful; his buoyant temper, his attractiveness, his ardent piety, his definiteness of aim and conviction, his readiness to recognise good wherever he found it, these and other qualities found a larger sphere for development abroad than at home. No one can read Bishop Armstrong's letters home, or his 'Notes on Africa,' a journal published by the Society for the Propagation of the Gospel, without deep interest. In 1856 he began a second visitation tour; but it was too much for him. His health, which had decidedly improved after he left England, failed him; and he died somewhat suddenly in Whitsun week, in the presence of his faithful friend and chaplain, archdeacon Hardie. His last public utterance was an opening lecture on the 'Character and Poetry of Oliver Goldsmith' at the Literary Institute at Grahamstown, which, after some opposition, he had succeeded in establishing on a general basis, and not in connection with any one religious body. He regarded literature and the natural sciences as 'common ground on which churchmen, without resigning one iota of catholic truth, might meet dissenters as brethren and hold kindly intercourse with them.' And even in religion, uncompromising churchman as he was, he was ever ready to acknowledge good christian work done by other bodies. 'The exertions of the Wesleyan body have been very great,' 'The Wesleyan body have been the honoured instrument of converting him'—such like remarks are not infrequent in his letters. But none the less does he deeply regret, over and over again, that the church had not been the first in the field; for he held that to be 'the more excellent way.' His desire to deal with social questions accompanied

him to Africa. He set himself to combat the besetting sin of the colonists, drunkenness; but he was called to his rest before he could effect much in this direction. He was buried in the cemetery at Grahamstown in the rochet made for him by the Bussage penitents; and after the lapse of more than a quarter of a century his memory still remains fresh in the hearts of his many friends. Few men, in the course of a comparatively short life, have had truer popularity. There is a striking heartiness and unanimity in the testimony which numerous correspondents have kindly given to the present writer, to what one of them calls his 'superlative worth'; and few men, without possessing any commanding genius or incurring any unpopularity, have done more thoroughly useful work for the church and for society at large.

[Carter's Memoirs of Bishop Armstrong; information from Archdeacon Hardie, Mrs. Armstrong, H. Woodyer, Esq., Rev. T. Kibble, Rev. Erskine Knollys; Bishop Armstrong's Works, passim.] J. H. O.

ARMSTRONG, ROBERT ARCHIBALD, LL.D. (1788-1867), Gaelic lexicographer, was the eldest son of Mr. Robert Armstrong, of Kenmore, Perthshire, by his wife, Mary McKercher. He was born at Kenmore in 1788, and educated partly by his father, and afterwards at Edinburgh and at St. Andrew's University, where he graduated. Coming to London from St. Andrew's with high commendations for his Greek and Latin acquirements, he engaged in tuition, and kept several high-class schools in succession in different parts of the metropolis. He devoted his leisure to the cultivation of literature and science. Of his humorous articles 'The Three Florists,' in 'Fraser' for January 1838, and 'The Dream of Tom Finiarty, the Cab-driver,' in the 'Athenæum,' are notable examples. His scientific papers appeared chiefly in the 'Arcana of Science and Art' (1837 et seq.), and relate to meteorological matters. But his great work was 'A Gaelic Dictionary, in two parts—I. Gaelic and English, II. English and Gaelic—in which the words, in their different acceptations, are illustrated by quotations from the best Gaelic writers.' London, 1825, 4to. This was the first Gaelic dictionary published, as there previously existed only vocabularies of the language like those of Shaw and others. It is a most meritorious work, the affinities of the Celtic words being traced in most of the languages of ancient and modern times. To it is prefixed a Gaelic grammar, and there is a short historical

appendix of ancient names, deduced from the authority of Ossian and other poets. Armstrong's dictionary will always be prized by Gaelic scholars, but it was partially eclipsed, three years after its appearance, by the publication of the still more comprehensive 'Dictionarium Scotto-Celticum,' compiled under the direction of the Highland Society of Scotland (2 vols. 4to, 1828). Mr. Armstrong sank his small fortune in the publication of his three-guinea quarto, and in a pecuniary sense he was a considerable loser by its publication. For about twenty-two years he maintained his family by establishing the South Lambeth Grammar School, and on his retirement from the head-mastership to Richmond in 1852 a representation of his necessitous condition was sent to Lord Palmerston, who obtained for him a civil list pension of 60*l*. This opportune assistance and a grant from the Literary Fund enabled him to recommence his scholastic business, which, though now of small proportions on account of his great age, he continued till he was struck down by paralysis about a week before he died. In 1826 he had been appointed Gaelic lexicographer in ordinary to the king, but the appointment was honorary and no salary was attached to it. He died in Choumert Road, Peckham Rye, Surrey, 25 May 1867. Lord Derby advised her majesty to cheer the last days of the veteran scholar by a grant of 100*l*. from the Royal Bounty Fund; and in 1869 the queen, on the recommendation of Mr. Gladstone, granted an annual pension of 50*l*. to his widow. Dr. Armstrong married, in 1842, Emma, daughter of Mr. Stephen Dugate, by whom he left issue three daughters.

[Private information; Gent. Mag. cccxiii. 113.] T. C.

ARMSTRONG, SIR THOMAS (1624 ?-1684), royalist, who was executed for his share in what was known as the Rye House Plot, was son of an English soldier serving in one of James's Low Country expeditions, and was born at Niméguen, where his father was quartered, about 1624. He was brought to England young, and served under Charles I; he declared for Charles II (HEATE'S *Chronicle of Civil Wars*, part i. p. 240), for which and similar royalist services he was imprisoned in Lambeth House by Cromwell. There he endured many privations, owing to the inability of his party to provide him with money or help; but he contrived, after a year's imprisonment, to get released. About 1655 he was sent out of England, by the Earl of Oxford and other cavaliers, to Charles, with a considerable sum of money

for the use of the exiled prince. He delivered the gift into the prince's own hands, and returning to England was, on the sixth day, imprisoned by Cromwell in the Gatehouse. In 1658, after another interval of liberty and of fidelity to the royal cause, Armstrong suffered a third imprisonment in the Tower; but on the death of the Protector, on 3 Sept. of that year, was released, and married Katharine, a niece of Clarendon's (OLD-MIXON'S *Hist. of the Stuarts*, vol. i. p. 687). He was one of the signatories to the Royalists' Declaration to Monk, April 1660 (KENNET'S *Chronicle*, p. 122); and on the Restoration, in the following month, he was knighted by the king for his services, made lieutenant of the first troop of guards, and subsequently gentleman, or captain, of the horse. Shortly afterwards Armstrong became intimate with the Duke of Monmouth; and, according to the testimonies of unfriendly authorities, he 'led a very vicious life' (BURNER'S *Hist. of Own Times*, vol. i. p. 577). Sprat says that he 'became a debauch'd Atheistical Bravo' (SPRAT'S *True Account of the Horrid Conspiracy*, p. 29); he fell, at any rate, into disfavour at court, whence he was dismissed; and having 'distinguish'd himself by murdering Mr. Scroop, a considerable Gentleman, in the Play-house' (EACHARD'S *Hist. of England*, p. 1027), he left England for a time in 1679 with the Duke of Monmouth for Flanders, to join some English regiments there.

Armstrong, who was elected M.P. for Stafford in the two parliaments of 1679 and in that of 1681, was frequently a visitor at the house of the disaffected Earl of Shaftesbury in Aldersgate Street (*Copies of the Informations*, 1685, p. 196), and was gradually embroiled in the Rye House plot. He was frequently at Colonel Romsey's house in King's Square, Soho Fields (*Copies of Informations*, p. 28), desiring interviews with Ferguson early in the morning, before Romsey was dressed; he was at West's chambers in the Temple, offering to get admittance to the Duke of York, under the pretence of discovering some plot against him, and then to kill him (*Copies*, p. 61). He was a visitor at all those taverns where the conspirators met, viz. the Fortune at Wapping, the Horse Shoe on Tower Hill, the King's Head in Atheist Alley, the Young Devil Tavern between the two Temple gates (for full list see SPRAT'S *True Account*, p. 52); he was at Sheppard's house in Abchurch Lane with Lord William Russell and the rest, going thence, with the Duke of Monmouth and Lord Grey, to look into the condition of the king's guards, to see if it were possible to break through them to carry the king away, and returning with

the report that the guards were certainly remiss, and the thing quite feasible (*ibid.* p. 150). Evidence was forthcoming also that, on the failure of the Rye House plot, Armstrong offered still to intercept the king and the duke on their homeward journey, provided money and men could be immediately procured. The king himself declared that when Armstrong had come to him abroad, nearly thirty years before, with the gift of money, he had confessed that he had come, employed by Cromwell, to kill him; and on 28 June 1683, a proclamation was issued for his apprehension. Armstrong, being greatly depressed at this turn of events, went to Romsey (*Copies*, p. 109) one night, in fear for him as well as for himself, 'and did importune me to be gone with the first, and in the meantime to keep close, for that I was mightily hunted after.' He himself, assuming the name of Mr. Henry Lawrence, succeeded in escaping and hiding himself in Leyden. But the reward to seize him was heavy, 'equal to the greatest' (EACHARD'S *Hist.* p. 1043), and out of it Chudleigh, the king's envoy, offered 5,000 guilders. In May 1684 a spy at Leyden gave the desired information, the States issued the necessary order of acquiescence, and Armstrong (too much surprised to plead his Dutch birth) was carried to Rotterdam, loaded with irons, and placed on board the yacht Catherine. The Catherine anchored at Greenwich 10 June 1684 (LUTTRELL'S *MS.*, *Brief Historical Relations*, All Souls, Oxford); Sydney Godolphin signed a warrant the same day to Captain Richardson, keeper of Newgate, to receive the prisoner; and thither, still in irons, he was conveyed on the morrow, 11 June. He was stripped of anything he had of value; he was searched; a bill of exchange was found in his pocket between one Hayes, a merchant at London, and another merchant at Leyden, and Hayes was at once committed to Newgate for complicity with a traitor. Armstrong was not allowed to see his family and friends except in the presence of his gaolers; and, all money having been taken from him, he was unable to obtain the assistance of counsel (*State Trials for High Treason*, 35 Charles II). In three days, 14 June, he was taken to King's Bench, Guildhall, attended by his daughter, Jane Mathews, another being repulsed. Titus Oates was one of his accusers; Jeffries was his judge. His claim was for a proper trial, under the statute 5 and 6 Edward VI, c. 11. Jeffries denied his right to be heard on the ground that he was an outlaw and a traitor, and sentenced him to death in spite of his protests and his daughter's shrieks. On the 18th his wife and daughters applied

in vain for a writ of error to Lord Keeper North, Jeffries himself, and other officials. Armstrong was executed on Friday, 20 June 1684. Huggons (*Remarks on Burnet's Hist.* p. 269) relates: 'I saw that unhappy man go to die; . . . he threw about his arms as far as the rope that tied him would permit . . . he turned about his head, shrugged up his shoulders, with convulsions and distortions of his countenance.' At the scaffold he became so resigned as to astonish those who knew his hot temper. He was met by Tenison, who took charge of a written paper he gave him protesting his innocence.

His body was quartered; his head was fixed at Westminster Hall, between the heads of Bradshaw and Cromwell (EACHARD, p. 1043). On 1 July Armstrong's protest was given to the world; a general feeling prevailed, fortified by the legal opinion of Sir John Hawles, Solicitor-General, that a great injustice had been done, since no outlawed person ever was denied his trial before (OLDMIXON, *Hist. of Stuarts*, p. 686); and in 1689, after examination of Dame Katharine Armstrong, the widow, and her daughters, a sum of 5,000*l.* was ordered to be paid to them, and the attainder was reversed. Five years elapsed before this was carried out by William and Mary in 1694.

[True Account and Declaration of the Horrid Conspiracy, published by command of James II, 1685; *Biographia Britannica*, where the Scaffold Paper is *in extenso*; Russell's *Life of Lord Russell*, p. 257; Clarendon's *Hist.*; Kennet's *Chronicle*.] J. H.

**ARMSTRONG, WILLIAM** (*n.* 1596), a famous border mossrooper, was generally known as KINMONT WILLIE, from his castle of Morton Tower or Kinmont, afterwards called Sark, on the Sark water, in the parish of Canonbie, Dumfriesshire. He is said to have been a near relation of the equally famous John Armstrong of Gilnockie, and in the 'Register of the Privy Council of Scotland' (iv. 796) he is mentioned as one of the principals of the clan Armstrong. The earliest notice of him is under date 22 Oct. 1569 as entering a pledge for himself and kin (ii. 44), and he again appears, 5 March, 1570, as making submission in respect of feuds between him and the Turnbulls (iii. 169). Will is said to have been of great size and strength — 'the starkest man in Teviotdale' — and he and his sons brought together as many as three hundred men, who were the dread of the English border. With his followers he accompanied the Earl of Angus to Stirling in 1585 to displace the Earl of Arran, when it is reported that, not satisfied with emptying

the stables and pillaging the town, they tore off the iron gratings from the windows and carried them away. In 1587 his capture and that of Robert Maxwell, natural brother to Lord Maxwell, formed the object of a royal expedition to Dumfries; but the freebooters succeeded in escaping at Tarras Moss. The conjecture of Sir Walter Scott that Armstrong originally held some connection with the Maxwells, the hereditary enemies of the Scotts of Buccleugh, is fully corroborated by the 'Register of the Privy Council,' which shows that in 1569 Lord Maxwell was his surety (ii. 44), while in 1590 he is mentioned as his landlord (iv. 796). On 14 Aug. of the same year, in a proclamation for the peace of the borders, it is declared that lands debatable within the West Marches shall be 'sett heritable or in long takkis or rentale' to certain persons; Willie Armstrong among the number (iv. 799). The effect of this arrangement was only temporary. Armstrong, by his continued depredations, so tantalised the English borderers, that his capture came to be regarded as of prime importance. Accordingly, while returning in 1596 from a warden court held by the English and Scotch deputy wardens, he was pursued by 200 English borderers, brought before the English warden, and by him imprisoned in Carlisle Castle. Scott of Buccleugh, the Scotch warden, demanded his release of Lord Scrope, on the ground that the capture was made during a truce, and, receiving no satisfactory reply, arrived on a dark tempestuous night with two hundred men before the castle, and, undermining a postern gate, carried him off unperceived by the guards. Notwithstanding the bloodless character of the daring exploit, it almost led to a rupture between the two kingdoms, and was the subject of a considerable amount of correspondence, which is given in the State Papers. On account of it Buccleugh had for a time to go into ward in England [see SCOTT, WALTER, first Lord of Buccleugh]. The ultimate fate of Armstrong is not known. The only further notice of him is in the list of border clans in 1597 as, along with Krystie Armstrong and John Shynbank, leader of a band of Armstrongs called 'Sandie's Bairns.' The tombstone of a William Armstrong, discovered in an old churchyard at Sark, is stated by W. Scott, who gives an engraving of it in 'Border Exploits' (1832), p. 329, to be that of Kinmont Willie. The tombstone was presented to the Society of Antiquaries of Scotland, but, as is pointed out in their 'Proceedings' (new series, viii. 234), the Armstrong to whom it refers, having died in 1658 at the age of 56, must be a different person from this noted border

mosstrooper. The rescue of Armstrong from Carlisle Castle is the subject of the ballad of 'Kinmont Willie,' first printed by Sir Walter Scott in his 'Scottish Minstrelsy,' who states that it was preserved by tradition, but has been much mangled by reciters. It is also included in Ayton's 'Ballads of Scotland.'

[Scott, *Minstrelsy of the Scottish Border*; Scot of Satchells, a true history of several honourable families of the name of Scot (1776); Scott, *Border Exploits*, p. 325-329; Spottiswoode, *History of the Church of Scotland*, iii. 1-5; Tytler's *History of Scotland*; Fraser, *The Scotts of Buccleugh* (1878), i. lxxvi, 169, 180-202, 206, 209, 222; Register of the Privy Council of Scotland, ii. 44, iii. 169, iv. 796, 799, 804, 805, v. 290, 298-9, 300, 323-4, 361, 423, 761.] T. F. H.

**ARMSTRONG, WILLIAM** (1602?-1658?), known as **CHRISTIE'S WILL**, a border freebooter, was the son or grandson of the Christie Armstrong referred to in the ballad of 'Johnnie Armstrong' as 'Kristy my son,' and inherited Gilnockie Tower. Having been imprisoned in the Tolbooth, Jedburgh, for stealing two colts during a marauding expedition, he received his release through the interposition of the Earl of Traquair, lord high treasurer, and henceforth became devoted heart and soul to the earl's interests. Some time afterwards a lawsuit, in which the Earl of Traquair was a party, was on for trial in the Court of Session, Edinburgh. The decision, it was supposed, would turn on the opinion of the presiding judge, Lord Durie, who was known to be unfavourable to Lord Traquair. Armstrong, therefore, kidnapped the judge at Leith Sands, where he was taking his usual exercise on horseback, and conveyed him blindfold to an old castle, the tower of Graham, on the Dryfe water, near Moffat. The judge's friends mourned for him as dead, the belief being that his horse had thrown him into the sea; but after the case was settled he was again conveyed blindfold to Leith Sands, whence he made his way home three months later than his horse. As Lord Durie was twice chosen president of the court, namely, for the summer session of 1642, and for the winter session of 1643, his capture must have taken place in one of these years. Armstrong is said also to have been employed by Traquair, during the civil war, in conveying a packet to the king, and on his return to have made his escape at Carlisle from the pursuit of Cromwell's soldiers by springing his horse over the parapet of the bridge that crosses the Eden, which was then in flood. It is not impossible that the tombstone discovered in the churchyard of Sark,

supposed at one time to be that of 'Kinmont Willie,' may really commemorate 'Christie's Will.' The William Armstrong to whom it refers died in 1658 at the age of 56. The ballad of 'Christie's Will,' published by Sir Walter Scott in 'Minstrelsy of the Scottish Border,' is, according to Sir Walter, not to be regarded as of genuine and unmixed antiquity.

[Scott's *Minstrelsy of the Scottish Border*.]  
T. F. H.

ARNALD, RICHARD (1700-1756), a distinguished divine, was born in 1700. He was a native of London, and received his education at Bishop Stortford School, whence he proceeded in 1714 to Corpus Christi College, Cambridge. After graduating B.A., he removed to Emmanuel College, where he was elected to a fellowship on 24 June, 1720, and took the degree of M.A. While resident at Emmanuel he printed two copies of Sapphics on the death of George I. and a sermon (on Col. ii. 8) preached at Bishop Stortford school-feast on 3 Aug. 1726. In 1733 he was presented to the living of Thurstaston in Leicestershire, and was afterwards made prebendary of Lincoln. He published in 1746 a sermon on 2 Kings xiv. 8: 'The Parable of the Cedar and the Thistle exemplified in the great Victory at Culloden;' and in 1760, a 'Sermon on Deuteronomy xxxiii. 8.' The work by which he is remembered is his critical commentary on the Apocryphal books. This learned and judicious work was published as a continuation of Patrick and Lowth's commentaries. It embraces a commentary on the Book of Wisdom, 1744; on Ecclesiasticus, 1748; on Tobit, Judith, Baruch, History of Susannah, and Bel and the Dragon, with dissertations on the two books of Esdras and Maccabees, with a translation of Calmet's treatise on the Dæmon Asmodeus, 1752. An edition was published in 1822 under the care of M. Pitman. Arnald died on 4 Sept. 1756, and was buried in Thurstaston church. His widow died in 1782.

William Arnald, his son, was senior-wrangler in 1766, fellow of St. John's College, Cambridge, in 1767, and head-tutor in 1768, chaplain to Bishop Hurd in 1775, and precentor of Lichfield Cathedral. By Hurd's influence he became in 1776 sub-preceptor to the Prince of Wales and the Duke of York, and was made canon of Windsor in 1779. In Jan. 1782 his mind failed, and he continued insane till his death on 5 Aug. 1802. It was, indeed, an unfortunate family. 'One of his brothers,' says Cole, 'was drowned, and his sisters ill married or worse.' By the directions in his will, a sermon that he had

preached before the university (in 1781) was published in the year after his death.

[Nichols's *Leicestershire*, iii. pt. ii. pp. 1059, 1071; *History of Corpus Christi College, Cambridge*, 1831, p. 456; Cole's *MS. Athenæa*.]

A. H. B.

ARNALL, WILLIAM (1715?-1741?), political writer, was bred as an attorney, but took to political writing before he was twenty. He was one of the authors in Walpole's pay who replied to the 'Craftsman' and the various attacks of Bolingbroke and Pulteney. He wrote the 'Free Briton' under the signature of Francis Walsingham, and succeeded Concanen in the 'British Journal.' One of his tracts, in which he disputes certain claims of the clergy in regard to tithes, is reprinted in 'The Pillars of Priestcraft and Orthodoxy shaken.' 'A letter to Dr. Codex [Dr. Gibson] on his modest instructions to the Crown,' and 'Opposition no proof of Patriotism,' upon Rundle's appointment to the see of Londonderry, are attributed to him. The report of the committee of inquiry into Walpole's conduct states that in the years 1731-41 a sum of 50,077l. 18s. was paid to the authors of newspapers from the secret service money, and from a schedule appended it seems that Arnall received in four years 10,997l. 6s. 8d. of this sum. It does not appear whether he received any part of this on behalf of others or for printing expenses. Arnall is also said to have received a pension of 400l. a year. He is said to have died at the age of twenty-six in 1741, though 'other accounts' say 1736. Pope attacked him in the 'Dunciad' (Bk. ii. 315), where his name was substituted for Welsted's in 1735, and in the epilogue to the 'Satires' (Dialogue ii. 129): 'Spirit of Arnall, aid me whilst I lie!'

[Chalmers's *Biog. Dict.*; Pope's *Dunciad*; Maty's *Miscellaneous Works of Chesterfield*, p. 5.]

ARNE, CECILIA (1711-1789), the eldest daughter of Charles Young, organist of Am-hallows, Barking, was a pupil of Geminiani. Her first appearance at Drury Lane took place in 1730, and in 1736 she married Dr. Arne. She took the part of Sabrina at the first performance of her husband's setting of 'Comus' at Drury Lane, 4 March 1738, and she also sang at Cliveden 1 Aug. 1740, when 'Alfred' and the 'Judgment of Paris' were produced before the Prince and Princess of Wales. In 1742 Mrs. Arne accompanied her husband to Dublin, where she sang with great success both in operas and concerts. On her return, 'Alfred' was performed for her benefit at Drury Lane, 20 March 1745. In the same year she was engaged at

Vauxhall Gardens, where she increased her reputation by her admirable singing of her husband's songs and ballads. Soon after this she seems to have given up singing in public, as her place was taken by Dr. Arne's pupils, of whom Miss Brent was the most distinguished. She survived her husband, by whom she was left badly off, and died at the house of Barthelemon at Vauxhall, 6 Oct. 1789. In the judgment of her contemporaries, Cecilia Arne was one of the most pleasing of the English singers of her day. She was often called 'the nightingale of the stage,' and her voice was said to be 'unequalled for melody, fullness, and flexibility.'

[Grove's Dictionary, i. 84; Dibdin's Musical Tour, 1778; Davies's Memoirs of Garrick, ii. p. 171, 1808; Gentleman's Magazine, 1789; Genest's History of the Stage, 1832.] W. B. S.

**ARNE, MICHAEL** (1741?-1786), musician, the son of Dr. Arne, was born either in 1740 or 1741. His father wished to make him a singer, and his aunt, Mrs. Cibber, brought him on the stage when very young, in the part of the page in Otway's tragedy, 'The Orphan,' but giving evidence of more talent as an instrumentalist than a vocalist he henceforth came before the public principally as a performer on the harpsichord, in which capacity he played at a concert when he was only eleven. His performance of Scarlatti's Lessons and his facility in executing double shakes are noted by his contemporaries. His first published composition was a volume of English songs, 'by Master Arne,' and after producing several similar collections, in 1763 he wrote music for 'The Fairy Tale' and 'Hymen' (performed at Drury Lane). In the following year Michael Arne, in collaboration with Jonathan Battishill, set the opera of 'Almena,' which was produced at Drury Lane 6 Nov. 1764, and was played six times. At this time he was living at 14 Crown Court, Russell Street, Covent Garden. On 20 March 1765 he was elected a member of the Madrigal Society, but in the following year his membership ceased. He was re-elected on 16 Dec. 1767 (*Records of Madrigal Soc.*). On 5 Nov. 1766, he married Miss Elizabeth Wright, who sang in her husband's next work, 'Cymon,' a spectacular drama, written by Garrick, which was successfully produced at Drury Lane 2 Jan. 1767. He was now living 'at Mr. O'Keeffe's, at the Golden Unicorn, near Hanover Street, Long Acre,' but about this time, according to some accounts during a visit to Dublin, he became engrossed in the pursuit of alchemy, and built a laboratory at Chelsea in order to carry on his attempts to discover the

philosopher's stone. Ruined and bankrupt, he was before long forced to return to music. In 1770 he was living 'at Mr. Doron's, facing the Vine, near Vauxhall.' He published several volumes of songs, which were sung at Vauxhall Gardens, where his first wife supported him by singing until her death (which occurred before 1775), and he also supplied music for several dramas. In 1779 he obtained an engagement at Dublin, but in 1784 he was once more in London, and died at South Lambeth, 14 Jan. 1786, leaving his second wife in a state of great destitution. Burney (in 'Rees's Cyclopædia') says of Michael Arne that 'he was always in debt, and often in prison; he sung his first wife to death, and starved the second, leaving her in absolute beggary.'

[Grove's Dictionary, i. 83; Rees's Cyclopædia, vol. ii., 1819; British Museum Catalogue; Dibdin's Musical Tour, 1788; European Magazine, vols. vi. and ix.; Garrick's Correspondence in Forster Bequest at South Kensington Museum; Kelly's Reminiscences, 1826.] W. B. S.

**ARNE, THOMAS AUGUSTINE** (1710-1778), musical composer, was the son of Thomas Arne, an upholsterer, who lived in King Street, Covent Garden, where his shop was known as the 'Crown and Cushion,' or, according to some authorities, as the 'Two Crowns and Cushion.' Thomas Arne is said to have been the upholsterer with whom the 'Indian kings' lodged, as chronicled in the 'Spectator,' No. 50, and the 'Tatler,' No. 171, and some biographers have identified him with one Edward Arne, who was the original of the political upholsterer of Nos. 155, 160, and 178 of the 'Tatler,' although it is sufficiently obvious that the latter do not refer to the same individual as is mentioned in the earlier numbers. Thomas Arne was twice married; by his second wife, Anne Wheeler, to whom he was married at the Mercers' Chapel in April 1707, he had Thomas Augustine, who was born 12 March 1710, Susanna Maria (afterwards celebrated as Mrs. Cibber), and other children. Thomas Augustine was educated at Eton, where he does not seem to have distinguished himself otherwise than as a performer on the flute, and on leaving school was placed by his father in a lawyer's office. During this period of his life, the love of music which had characterised his Eton career speedily developed, although his passion had to be concealed from his father. He privately took lessons on the violin from Michael Festing, and practised the spinet at night on an instrument he had secretly conveyed to his room, the strings of which he muffled with handkerchiefs,

He also devoted himself to the study of harmony and composition, and, disguised in a borrowed livery, used to frequent the opera-house galleries to which servants had free admittance. His musical progress was so marked that he was soon able to lead a chamber band of amateurs, and it was when so engaged that young Arne was one day found by his astonished father. The discovery of his son's musical talents was at first met with a considerable display of wrath on the part of Thomas Arne, but eventually he had the good sense to recognise that the boy was more fitted for a musician than a lawyer, and after some hesitation to allow him to cultivate the talents which he so decidedly displayed. Not content with cultivating his own abilities, Arne henceforward turned his attention to the dormant faculties of his sister and brother, to the former of whom he gave such instruction in singing as to lead to her appearance on the operatic stage in Lampe's opera 'Amelia' in March 1732. Encouraged by the success she achieved, he wrote new music for Addison's opera 'Rosamond,' which was produced at the Lincoln's Inn Fields theatre, on 7 March 1733, with Mrs. Barbier, Miss Arne, Mrs. Jones, Miss Chambers, Leveridge, Corfe, and the composer's younger brother in the principal parts, and was played for ten nights successively. His next work was a version of Fielding's 'Tom Thumb,' altered into 'The Opera of Operas,' a musical burlesque, which was produced at the Haymarket, 31 May 1733, and was acted eleven times. On 12 January 1734 he produced at the same theatre a masque, 'Dido and Æneas,' in which both his brother and sister sang. Shortly afterwards he and his brother and sister were engaged at Drury Lane, Miss Arne and 'young Master Arne' as singers, and the composer in some capacity which is not recorded, though, from the fact of his having benefits on 29 April and 3 June, he must have already had some recognised post. In April 1734 Susanna Arne married Theophilus Cibber [see CIBBER, MRS.], and in 1736 Arne wrote music for the play of 'Zara,' in which she for the first time appeared as an actress. In the same year Arne married the singer Cecilia Young [see ARNE, CECILIA]. On 4 March 1738 Milton's 'Comus,' with additions and alterations by Dr. Dalton, was produced at Drury Lane, the principal parts being performed by Quin, Milward, Cibber jun., Mills, Beard, Mrs. Cibber, Mrs. Clive, and Mrs. Arne. For this performance Arne wrote his well-known and charming music, which still retains the freshness and delicacy of its melody. In this

work Arne already shows himself a master of the peculiarly English style which is the great charm of his music; he entered thoroughly into the spirit of Milton's masque, his setting of the words of some of the songs showing a degree of poetical and musical insight which is surprising at the period at which he wrote. Considering the beauty of the music and the strength of the cast, it is surprising to find that 'Comus' was played only about eleven times, though it was subsequently frequently revived at both houses, and has kept the stage almost until the present day. Arne's next works were settings of two masques, Congreve's 'Judgment of Paris,' and Thomson and Mallet's 'Alfred.' Both of these were performed on Friday and Saturday, 1 and 2 Aug. 1740, on a stage erected in the gardens of the house of Frederick, Prince of Wales, at Cliveden, Bucks, at a fête given in commemoration of the accession of George I and in honour of the birth of the Princess Augusta. The programme also included 'several scenes out of Mr. Rich's pantomime entertainments' (*Gent. Mag.* 1740, p. 411). This performance is memorable in the annals of English music, for it was for 'Alfred' that Arne composed 'Rule Britannia,' perhaps the finest national song possessed by any nation, and for which alone, even if he had produced nothing else, Arne would deserve a prominent place amongst musicians of all countries. Shortly after this performance, 'The Judgment of Paris' was given at Drury Lane, though 'Alfred' was not produced in London until 20 March 1745, when it was performed at Drury Lane for Mrs. Arne's benefit. In about 1740 or 1741 Arne (who was then living at Craven Buildings, near Drury Lane) obtained a royal grant assuring to him the copyright of his compositions for fourteen years. After producing several minor pieces at Drury Lane—amongst which is the beautiful music to 'As You Like It' and 'Twelfth Night'—Arne and his wife, towards the end of 1742, went to Dublin, where they remained until the end of 1744, both husband and wife winning fresh laurels as musician and singer. On their return from Ireland, Mrs. Arne was re-engaged at Drury Lane, and Arne was appointed composer to the same theatre, a post there is reason to believe he had occupied before; somewhat later he was appointed leader of the band of the theatre. At this time Arne was living 'next door to the Crown' in Great Queen Street, Lincoln's Inn Fields, but he seems soon to have removed, first to Charles Street, and eventually to the house in the Piazza, Covent Garden, which

he occupied until his death. In 1745 Mrs. Arne was engaged at Vauxhall Gardens, while Arne was also commissioned to write songs for the concerts held at the same place. For Vauxhall, Marylebone, and Ranelagh he for many years wrote an immense number of detached songs and duets, many of which, though now forgotten, are well worth revival. In 1746 he wrote songs for a performance of 'The Tempest' at Drury Lane, amongst which is the charming setting of 'Where the Bee sucks,' which, after 'Rule Britannia,' is probably now the best remembered of his compositions. Two years later, on the death of Thomson, Mallet determined to remodel 'Alfred;' in its altered form it was produced at Drury Lane in Feb. 1751, on which occasion three additional stanzas were added to 'Rule Britannia;' these extra verses were said to have been written by Bolingbroke a few days before his death (DAVIES, *Memoirs of Garrick*, London, 1808). About this time Mrs. Arne left off singing in public, her place being henceforth taken by the numerous pupils whom Arne brought before the public. As a teacher he enjoyed a great and deserved reputation, one secret of his success being the great importance he attached to the clear enunciation of the words in singing. His most distinguished pupil was Miss Brent, for whom he composed a number of bravura airs, which, being generally written for the display of her remarkable powers of execution, are of less value than the refined and delicate songs he wrote at an earlier period for his wife. For these occasional songs and airs he received twenty guineas for every collection of eight or nine compositions (*Add. MS.* 28959). On 12 March 1755, he produced his first oratorio, 'Abel;' but neither this nor a subsequent work, 'Judith' (produced at the chapel of the Lock Hospital, Pimlico, on 29 Feb. 1764) achieved any success, mainly, it is said, owing to the inadequacy of the forces at his disposal for the performances. On 6 July 1769, the university of Oxford conferred upon Arne the degree of doctor of music. The relations of Arne with Garrick at this period seem to have become rather strained. Garrick was no musician, and Arne, whose talent was beginning to suffer from overproduction, had written one or two works for Drury Lane (then under Garrick's management) which had been decided failures. It is therefore not surprising to find that in 1760 Arne transferred his services to the rival house of Covent Garden, where, on 28 Nov. 1760, his 'Thomas and Sally' was played with Beard, Mattocks, and Miss Brent in the

chief parts. Arne's next venture was a bold one, but, as the result proved, perfectly successful. Determined to give Miss Brent an exceptional opportunity for the display of her powers, he translated the Abbate Metastasio's 'Artaserse,' setting it to music in the florid and artificial style of the Italian opera of the day. The opera was produced at Covent Garden on 2 Feb. 1762, the parts of Mandane, Arbaces, Artabanes, Artaxerxes, Rimenes and Semira being respectively filled by Miss Brent, Tenducci, Beard, Peretti, Mattocks, and Miss Thomas. The work was immediately successful, and long kept the stage, yet Arne, when it was printed, only received from the publisher the trifling sum of sixty guineas for the copyright. 'Artaxerxes' was followed by several works of no great importance, the chief of which were 'Love in a Village,' a successful pasticcio produced in 1762; and a setting, to the original Italian words, of Metastasio's 'Olimpiade,' a work which was produced at the Haymarket in 1764, but was only performed twice. In 1765 Arne was for a short time a member of the Madrigal Society (*Records of the Madrigal Soc.*). In 1769 Garrick, with whom Arne, though never on very good terms, seems to have always kept up some sort of intercourse, commissioned the composer to write music for the ode performed at the Shakespeare jubilee at Stratford-on-Avon. For this setting of Garrick's verses Arne received 63*l.*, and in addition to this a performance of his oratorio 'Judith' at the parish church was somewhat incongruously included in the programme of the festivities in honour of Shakespeare. Arne now remained on tolerably good terms with the managers of both houses, and the record of the rest of his life consists of little more than a chronicle of the production of numerous light operas and incidental music written for different plays. During these years (from 1769 until 1778) he composed and wrote music for the following works: 'The Ladies' Frolic,' 'The Cooper,' 'May Day,' 'The Rose' (said to have been written by 'an Oxford student,' but generally attributed to Arne), 'The Fairy Prince,' 'The Contest of Beauty and Virtue,' 'Phoebe at Court,' 'The Trip to Portsmouth,' and Mason's tragedies of 'Elfrida' and 'Caracacus.' The latter work was published in 1775, with a preface and introduction in which Arne shows a curious insight into the relationship between dramatic poetry and music. He expresses opinions on the subject, the truth of which, though couched in the stilted language of the period, is only beginning to be recognised at the present day. The overture

to the same work is a singular attempt at programme music, and the minute directions as to the constitution of the orchestra and manner of performance almost forestall the similar annotations to be found in the works of Hector Berlioz. During the latter years of Arne's life he achieved but few successes. He was fond of writing his own libretti, which were, unfortunately, anything but good, and the failure of his pupils at one opera-house—particularly if another pupil had been successful at the rival house—caused little bickerings which jarred upon his sensitive nature. In August 1775 he wrote to Garrick, complaining of the latter's neglect: 'These unkind prejudices the Doctor can no other wise account for than as arising from an irresistible Apathy,' a statement to which Garrick replied a few days later: 'How can you imagine that I have an irresistible Apathy to you? I suppose you mean Antipathy, my dear Doctor, by the construction and general turn of your letter—he assur'd as my nature is very little inclin'd to Apathy, so it is as far from conceiving an Antipathy to you or any genius in this or any other country,' in spite of which polite assurance Garrick wrote in the same year: 'I have read your play and rode your horse, and do not approve of either;' endorsing the pithy note, 'Designed for Dr. Arne, who sold me a horse, a very dull one; and sent me a comic opera, ditto' (GARRICK'S *Correspondence*, Forster Collection). These few glimpses of Arne's personal characteristics hardly carry out the statement of a contemporary that 'his cheerful and even temper made him endure a precarious pittance' (DEBEN, *Musical Tour*, letter lxxv.); yet after his death it seems generally to have been considered that during his lifetime his genius was never sufficiently appreciated, and that as a musical hack, expected to supply music for the ephemeral plays produced at both Covent Garden and Drury Lane, he frittered away the talents which ought to have been devoted to better work. His death took place on 5 March 1778. According to the account of an eye-witness (Joseph Vernon, the singer) he died of a spasmodic complaint (*Gent. Mag.* vol. xlviii.) in the middle of a conversation on some musical matter, with his last breath trying to sing a passage the meaning of which he was too exhausted to explain. He was buried in St. Paul's, Covent Garden. The best portrait extant of Arne is an oil painting by Zoffany, now in the possession of Henry Littleton, Esq., but there is also an engraving of him after Dunkarton, and another (published 10 May 1782) after an original sketch by Bartolozzi.

A caricature of Rowlandson's, entitled 'A Musical Doctor and his Pupils,' is also probably meant for Arne. Manuscripts of his music are now rarely found, most of them having been destroyed when Covent Garden theatre was burnt in 1808, but the full autograph score of 'Judith' is preserved in the British Museum (*Add. MSS.* 11515-17).

ARNISTON, LORDS. [See DUNDAS.]

ARNOLD, BENEDICT (1741-1801), American and afterwards English general, was born at Norwich, Connecticut, 14 Jan. 1740-1. (The date usually given of 1740 seems to have originated from a confusion between the new and old styles.) His family, of respectable station in England, had emigrated from Dorsetshire; his great grandfather had been governor of Rhode Island; his father, a cooper, owned several vessels in the West Indian trade. From his infancy he manifested a mischievous and ungovernable disposition, of which several characteristic traits are recorded. On attaining man's estate he entered into business as a bookseller and druggist at New Haven, Connecticut, married, adventured like his father in the West Indian trade, and acquired considerable property, partly, there is reason to suspect, by smuggling. Upon the outbreak of the dissensions between the colonies and the mother country he took a leading part upon the side of the patriots, and immediately on receiving the news of the battle of Lexington (19 April 1775) put himself at the head of a company of volunteers, seized the arsenal at New Haven, and marched to Cambridge, Massachusetts, where, with true military instinct, he proposed to the committee of public safety an expedition to capture Ticonderoga, on Lake George, and Crown Point, on Lake Champlain, the keys to the communications between Canada and New York. The plan was approved, and Arnold was despatched to Western Massachusetts to raise troops. While thus engaged he learned that another expedition, under the direction of Ethan Allen, was proceeding from Vermont with the same design. He hurried to join it, and claimed the command, which was refused him, and he had to be

content with accompanying it as a volunteer. He took part in the successful surprise of Ticonderoga, 11 May, and a few days later, having obtained some troops of his own, anticipated Allen in surprising and capturing St. John's, also on Lake George. Differences with the Massachusetts committee occasioned him to resign his command; but shortly afterwards Washington adopted a plan proposed by him for an expedition against Quebec by way of the river Kennebec and the mountains of Maine, to co-operate with another expedition under Schuyler proceeding by way of the northern lakes. After enduring extreme hardships, aggravated by the desertion of one of his officers who marched back with a part of the commissariat, Arnold brought his troops successfully under the walls of Quebec, but was too weak to attack the city until the arrival of Schuyler's column, now commanded by Montgomery. On 31 Dec. 1775 the two leaders assaulted Quebec, but were disastrously repulsed, Montgomery being killed and Arnold severely wounded. He nevertheless maintained the blockade of Quebec, 'with such a handful of men,' wrote his successor, 'that the story when told hereafter will scarcely be believed.' He subsequently commanded at Montreal, and when at last want of supplies, discontent among the troops, and inferiority of force, compelled the Americans to evacuate Canada, he was literally the last man to leave the country. His next appointment was to the command of a flotilla on Lake Champlain, where, after two desperate actions and one dexterous escape, he was compelled to run his vessels ashore, but saved himself and the men under his command. Shortly afterwards he was, as he conceived, unjustly treated by Congress, which promoted five brigadiers to the rank of major-general over his head. This conduct was probably occasioned by charges then pending against him with reference to the seizure of property at Montreal; and when he was ultimately acquitted, Congress, though consenting to his promotion, refused to restore his seniority. The disgust thus occasioned was probably the first motive to his subsequent treachery. He fought, however, at Ridgefield, where he escaped death as though by miracle; relieved Fort Stanwix, blockaded by Indians; and, placed nominally under Gates's orders, but in reality the life and soul of the American army, took the most conspicuous part in the two battles at Saratoga which occasioned the surrender of Burgoyne (October 1777). Congress now restored him to his precedence; but this was the term of his good fortune. A severe wound received at

Saratoga disabled him from active service, and he was appointed governor of Philadelphia. While filling this post he exposed himself to charges of extortion and speculation, the truth of which it is difficult to ascertain. He resigned his command, and claimed an investigation. After vexatious delays he obtained a partial acquittal, but incurred a reprimand which Washington, who had always protected him, administered with evident reluctance (January 1780). Arnold was now thoroughly disgusted; his fortunes were desperate. The second wife he had recently married had strong loyalist sympathies; the sentiment of military honour, apart from military glory, had probably never been a very strong one with him, and he easily allowed himself to be persuaded by British agents that he would serve his country by an act of treachery putting an end to the war. A paper published by Barbé-Marbois, purporting to be addressed to Arnold by Colonel Beverley Robinson, is of doubtful authenticity, but probably represents the nature of the arguments to which, rather than to pecuniary temptation, his fidelity succumbed. In August 1780 he solicited and obtained the command of West Point, the key of communication between the northern and southern states, and the depository of the American stores of gunpowder, with the deliberate intention, it cannot be doubted, of betraying it to the enemy. Negotiations were immediately entered into with the British commander Clinton, being conducted on the latter's part by his adjutant, the gallant and unfortunate Major André. On Sept. 21 Arnold and André had an interview at which the surrender of West Point was arranged, and the latter departed, carrying with him particulars of the defences and other compromising documents. The circumstances of his arrest have been related under his name. The news reached Arnold on the morning of 25 Sept., only one hour before the arrival of Washington. After a hasty interview with his wife, who fell senseless at his feet, he mounted his horse, galloped down to the riverside, called a boat, and found safety on board of the British sloop Vulture, which had brought André on his fatal errand.

On joining the British, Arnold received the rank of brigadier-general. His first act was to publish a vindication of his conduct and an appeal to the American army to imitate his example; but these documents, though ably composed, failed to produce the slightest effect. He subsequently commanded expeditions against Richmond in Virginia and New London in Connecticut;

both succeeded, but were mere marauding forays, without influence on the general course of operations. In 1782 he proceeded to England, where he was consulted by the king on the conduct of the war, and drew up a very able memorandum, but the suggestions it contained obviously came too late. He also obtained upwards of 6,000*l.* as compensation for his losses, and a pension of 500*l.* for his wife. Though much caressed at court, he found it impossible to procure active employment in the British army, and was even obliged to vindicate his honour by fighting a duel with Lord Lauderdale. He again entered into business, first in New Brunswick and afterwards in the West Indies. Though not in actual service, he so distinguished himself at Guadaloupe as to be rewarded by a large grant of land in Canada; he also evinced political prescience in framing a plan for the conquest of the Spanish West Indies, by exciting insurrection among the creoles. His commercial enterprises proved unfortunate, and his latter days were embittered not only by self-reproach for his treason, but by pecuniary embarrassments and the dread of want. He died in London on 14 June 1801. The threatened ruin was averted by the exertions and business ability of his devoted wife. All his four sons by her entered the British service, and one, James Robertson Arnold, an officer of engineers, rose to the rank of lieutenant-general. Descendants of his third son George still exist in England. He had had three sons by his first marriage, whose posterity survive in Canada and the United States.

'It should excite but little surprise that an ambitious, extravagant man, with fiery passions and very little balance of moral principle, should betray his friends and plunge desperately into treason.' This remark of the historian of Arnold's native town leaves little further to be said on the cardinal event of his life. Under provocation and temptation he acted infamously, but his character does not deserve the exceptional infamy with which it has been not unnaturally loaded in America. A civilian soldier, he had imperfectly imbibed the traditions of military honour; and, with his loyalist connections, his desertion may have seemed to him rather a change of party than the betrayal of his country. He was eminent for courage and the strength of domestic affection, and his memoirs contain instances of generosity and humanity which better men might envy. With all these redeeming qualities he was still essentially a bad citizen, turbulent, mercenary, and unscrupulous. Washington's exclamation on hearing

of his defection showed that he had no belief in his probity, though he had tolerated his vices in consideration of his military qualities. These were indeed eminent. Arnold's intrepidity, ingenuity, promptitude, sagacity, and resource are even more conspicuous in his miscarriages than in his successes. When his almost total want of military instruction is considered, he deserves to be ranked high upon the list of those who have shown an innate genius for war.

[The principal authorities for Arnold's life are the dry but clear narrative of Jared Sparks in the *Library of American Biography*, vol. iii., Boston, 1835; and the more copious *Biography* by Isaac N. Arnold (Chicago, 1880). The latter extenuates everything, the former sets down not a few things in malice, but between the two it is easy to arrive at a just estimate of Arnold's character and actions. See also Miss F. M. Caulkin's *History of Norwich, Conn.*, pp. 409-415; Irving's and Marshall's *Lives of Washington*; Sargent's *Life of André*; and the historians of the American war of independence in general.]

R. G.

**ARNOLD, CORNELIUS** (1711-1757?), poetical writer, was born 13 March 1711, and entered Merchant Taylors' School in 1723. The statement that he became one of the ushers in the school is incorrect. In the latter part of his life he was beadle to the Distillers' Company. His works are: 1. 'Distress, a poetical essay,' dedicated to John, Earl of Radnor, London [1750?], 4to. 2. 'Commerce, a poem,' 2nd edit. London, 1751, 4to. 3. 'The Mirror. A Poetical Essay in the manner of Spenser,' dedicated to David Garrick, London, 1755, 4to. 4. 'Osman,' a tragedy. In a volume of poems published in 1757.

T. C.

**ARNOLD, JOHN** (1736?-1799), an eminent mechanic and one of the first makers of chronometers in this country, was born at Bodmin in 1736, and not in 1744, as is generally given; his tombstone in Chislehurst churchyard positively states that he died in 1799, *ætat.* 63. He was apprenticed to his father, a watchmaker in Bodmin, but a quarrel with him led to his going to Holland. In that country he is said not only to have acquired most of his knowledge of watchmaking, but to have learned German, a language which was afterwards of much use to him at court. Leaving the Hague, he came to England, and appears to have made a scanty living as an itinerant mechanic. By the help of a gentleman who was struck

with his mechanical powers, he was enabled to set up in business in Devereux Court, Strand, whence he afterwards removed to the Adelphi. He was introduced at court, and received assistance from King George III towards the cost of his experiment. Afterwards he presented the king with a very curious and very small watch, set in a ring. A full account of this ingenious toy is given in Wood's 'Curiosities of Clocks and Watches,' p. 327. The chronometer of Harrison had not long before Arnold's establishment in London been perfected, and had received the reward offered by parliament for a method of ascertaining the longitude at sea; Arnold took up the manufacture of chronometers (first so named by him), and, besides introducing certain improvements in them, he so systematised the arrangements for their production that he was able to reduce very considerably their originally high price. He made chronometers not only for the government, but also for the East India Company, then a still better customer than the government. Without going into technicalities, it would be impossible to describe Arnold's improvements in the chronometer; they are, however, set out very fully in the article on the chronometer in Rees's 'Encyclopædia.' The chief improvements with which he is credited are the expansion balance, the detached escapement, and the cylindrical balance spring. All these, however, have been claimed for Earnshaw, and how much of the credit is due to each of the two rivals cannot be said. After Arnold's death the Board of Longitude, which had granted various sums to him during his life, awarded to his son, J. R. Arnold, and to Earnshaw amounts which, with the former grants, made up 3,000*l.* apiece to each inventor.

[There is a very full account of Arnold in the Biographical Dictionary commenced by the Useful Knowledge Society; a short account of him, with a full list of authorities, is given in Boase and Courtney's *Bibliotheca Cornubiensis*, iii. 1034; for his improvements in the chronometer see Rees's *Cyclopædia*, s. v.; Frodsham on the Marine Chronometer; also Arnold's own Works and his two Patent Specifications (No. 1113, A.D. 1775, and No. 1328, A.D. 1782).] H. T. W.

ARNOLD, JOSEPH, M.D. (1782–1818), naturalist, was born 28 Dec. 1782 at Beccles, was apprenticed to a local surgeon named Crowfoot, and graduated M.D. Edin. 1807. In his youth he had directed much attention to botany, and made some communications to the 'Gentleman's Magazine.' He entered the British navy as surgeon in 1808, and, the navy being reduced after the war, in January 1815 we find him in medical charge

of the Northampton, bound with female convicts to Botany Bay. Returning by way of Batavia in the *Indefatigable*, of Boston, the ship was burnt by carelessness on 22 Oct. 1815, destroying many of his journals, and his collection of insects from South America, New Holland, and the Straits of Sunda. After some excursions in Java with Sir Stamford Raffles, of which interesting accounts are preserved in the memoir by Mr. Dawson Turner, he returned home in 1816, but, longing for further opportunities of research in travel, he obtained employment as naturalist with Sir Stamford Raffles when he was appointed governor of Sumatra. He prepared himself for research on an extensive scale by study in London. Arriving at Bencoolen 22 March 1818, his second excursion to Passumah produced the discovery of the remarkable plant without stem or leaves named, after the governor and himself, *Rafflesia Arnoldi*, which is parasitic upon a species of wild vine, and has a huge flower three feet in diameter, and weighing 15*lbs.* This was described by Robert Brown in *Trans. Linn. Soc.* xiii. He made a rich collection of shells and fossils, but was cut off by fever at Padang, Sumatra, on one of the last days of July 1818. Sir T. S. Raffles, in recording his death, says: 'It is impossible I can do justice to his memory by any feeble encomiums I may pass upon his character. He was in every respect what he should have been; devoted to science and the acquisition of knowledge, and aiming only at usefulness.' He was elected F.L.S. 1815, and bequeathed his collection of shells and fossils to the Linnean Society.

[Memoir by Dawson Turner, Ipswich, 1849; Memoir of Sir T. S. Raffles, London, 1830; *Trans. Linn. Soc.* xiii. 201.] G. T. B.

ARNOLD, RICHARD (*d.* 1521?), antiquary and chronicler, was a citizen of London, dwelling in the parish of St. Magnus, London Bridge. It would appear from his own book that he was a merchant trading with Flanders. He was an executor of the will of John Amell the elder, citizen and cutler of London, which was drawn up in 1473, and he is there described as a haberdasher. He was in the habit, for purposes of business, of paying visits to Flanders, and was in 1488 confined in the castle of Sluys on suspicion of being a spy. He was apparently hard pressed by creditors at one period of his life, and sought shelter in the sanctuary at Westminster. He had a wife named Alice and a son Nicholas. The date of his death is uncertain. Douce, who fully investigated the matter, concluded that he

died shortly after the publication of the last edition of his book, in 1520-1.

Arnold's work is merely a commonplace book dealing with London antiquities. It contains the chief charters granted to the city, accounts of its customs, and notes on a variety of topics chiefly but not entirely connected with commerce. Hearne called it a chronicle; but its only claim to that title rests on its opening section, which gives, with occasional historical notes, a list of the names of the 'Balyfs, Custos, Mayers, and Sherefs' of London between 1189 and 1502. The greater part of this list was evidently borrowed direct from a manuscript now in the Cottonian Library at the British Museum. Arnold himself gives the book no name; Douce, its latest editor, christens it the 'Customs of London.' Its most interesting feature is its introduction of the 'Ballade of y<sup>e</sup> Nottesbrowne Mayde,' which occurs, without any explanation, between an account of the tolls payable by English merchants sending merchandise to Antwerp, and a statement of the differences between English and Flemish currencies. No earlier version of the ballad is known, and according to Capel, Warton, Douce, and Collier, it is probable that it had been composed only a few years before Arnold transcribed and printed it. Hearne, however, assigns it to the time of Henry V, and Bishop Percy to the early part of Henry VII's reign. Its authorship is unknown; but Douce assumes, on very just grounds, that it was translated from an old German ballad by some Englishman whom Arnold met at Antwerp. It was frequently reprinted separately in the sixteenth century, and enjoyed very great popularity for many years; interest in it was revived by its republication in the 'Muse's Mercury' for June 1707, where it was first seen by Prior, who paraphrased it in his 'Henry and Emma' about 1718.

From typographical evidence it is clear that Arnold's book was first published at Antwerp in 1502 by John Doesborowe, who published other English books. This edition is without date, place, or printer's name. A second edition, in which the list of the mayors and sheriffs is brought down to 1520—doubtless the date of publication—is ascribed by typographical experts to Peter Treveris, the first printer who set up a press at Southwark. It is also without date, place, or printer's name. A third edition, with introduction by Francis Douce, appeared in 1811. Copies of the two original editions, which are now of excessive rarity, are in the British Museum. Stowe and Holinshed both mention Arnold's compilation among their

authorities; Bale and Pits pay it exaggerated respect as an original historical work. But its want of arrangement and heterogeneous contents, in most cases borrowed from readily accessible sources, give it little value for the modern historical writer.

[Douce's edition of Arnold's Customs of London; Corser's *Collectanea Anglo-Poetica*, i. 54; Collier's *Early English Literature*, i. 30; Ames's *Typog. Antiq.*, ed. Herbert and Dibdin, iii. 34; Percy's *Folio MS.*, ed. Hales and Furnivall, ii. 174; Percy's *Reliques*, ed. Wheatley, 1876, ii. 31-47.] S. L.

ARNOLD, SAMUEL (1740-1802), musical composer, the son of Thomas Arnold, was born on 10 Aug. 1740. Through the patronage of the Princesses Amelia and Sophia he was admitted to the Chapel Royal, where he was educated under Gates and Nares; he is said also as a boy to have been noticed and advised by Handel. Before 1763 he was engaged by Beard as composer to Covent Garden, where in 1765 he brought out his opera, the 'Maid of the Mill,' the first of the long series of compilations from the works of other composers, which, by a judicious combination with a small amount of original work, sufficed to win him a considerable reputation as an operatic composer. Arnold became a member of the Royal Society of Musicians 4 March 1764 (*Records of Roy. Soc. of Musicians*). In 1767 he set Browne's ode, the 'Cure of Saul,' as an oratorio. This work achieved some success, and was followed by 'Abimelech,' the 'Resurrection,' and the 'Prodigal Son,' which were performed during Lent in 1768, 1773, and 1777 at Covent Garden and the Haymarket. In 1769 he took a lease of Marylebone Gardens, where he produced many operas and burlettas, amongst others Chatterton's 'Revenge;' but, owing to the dishonesty of one of his subordinates, during the three years of his tenancy he lost by the speculation a sum of nearly 10,000*l.* In 1773 the university of Oxford asked Arnold's permission to perform his oratorio, the 'Prodigal Son,' at the installation of Lord North as chancellor, and on the request being granted the honorary degree of Mus. Doc. was offered the composer. This was declined by Arnold, who preferred to take the degree in the ordinary manner, and accordingly composed as an exercise Hughes's ode on the Power of Music. On tendering this composition to the Oxford professor, Dr. Hayes, the latter returned it to Arnold unopened, with the remark that it was unnecessary to scrutinise an exercise composed by the composer of the 'Prodigal Son.' The accumulated degrees were conferred on him on 5 July 1773. In

1783 Arnold succeeded Nares as organist and composer to the Chapels Royal, and in the following year he was one of the sub-directors of the Handel commemoration. In 1786, at the request of George III, he undertook the editing of an issue of Handel's works, an edition which, though both incomplete and inaccurate, was for long the only one accessible to musicians. He was appointed conductor of the Academy of Ancient Music in 1789, and on the death of Stanley joined Linley in carrying on the oratorios at Drury Lane Theatre. On 24 Nov. 1790 'the Graduates' Meeting, a society of musical professors established in London,' was founded at a meeting at Dr. Arnold's house, 480, Strand. In the same year he published his valuable collection of cathedral music, the work by which he is now best remembered. Three years later he succeeded Dr. Cooke as organist to Westminster Abbey. A few years afterwards he fell from his library steps, breaking a tendon of his leg and sustaining internal injuries which eventually resulted in his death, which took place on Friday, 22 Oct. 1802, at his house, 22, Duke Street, Westminster. He was buried in Westminster Abbey on 29 Oct. His grave is in the north aisle, next to that of Purcell, whose leaden coffin was exposed to view at the time of the funeral. Arnold married in 1771 Mary Anne, the daughter of Dr. Archibald Napier, who survived him, and by whom he had a son, Samuel James [q. v.], and two daughters. The son was afterwards well known as the manager of London theatres. The eldest daughter, Caroline Mary, died on 13 Dec. 1795, and was buried in Westminster Abbey; the youngest, Marianne, was married to Mr. William Ayrton, second son of Dr. Ayrton. Dr. Arnold, besides being an industrious musician, wrote several political squibs in the tory papers. His generosity and good-fellowship rendered him very popular in his day, but as a composer his merits were inferior to many of his contemporaries, and little, if any, of his music has survived.

[The Harmonicon for 1830; Busby's Concert-room Anecdotes, 1825; Parke's Musical Memoirs, 1830; Chester's Registers of Westminster Abbey, 1876; Add. MS. 27693.] W. B. S.

**ARNOLD, SAMUEL JAMES** (1774-1852), dramatist, son of Samuel Arnold, Mus. Doc., was educated for an artist. He produced, however, at the Haymarket, in 1794, 'Auld Robin Gray,' a musical play in two acts; and this was followed by other works of the same class: 'Who pays the Reckoning?' produced at the Haymarket in 1795; the 'Shipwreck,' produced at Drury Lane in 1796;

the 'Irish Legacy,' produced at the Haymarket in 1797; and the 'Veteran Tar,' produced at Drury Lane in 1801. 'Foul Deeds will rise,' first played at the Haymarket in 1804, is described by Genest as 'an unnatural mixture of tragedy and farce.' The 'Prior Claim,' produced at Drury Lane in 1805, was a comedy written in conjunction with Henry James Pye, the poet laureate, whose daughter Arnold had married in 1803. 'Man and Wife, or More Secrets than One,' a comedy produced at Drury Lane in 1809, enjoyed some thirty representations. In this year Arnold obtained from the Lord Chamberlain a license to open as an English opera house the Lyceum in the Strand, a building previously devoted to subscription concerts, picture exhibitions, feats of horsemanship, conjuring, &c. Upon the destruction of Drury Lane by fire in the same year, the company moved to the English Opera House, and remained there three seasons. The license had been originally granted in the belief that the house would be open only for four months in the summer, and would become a nursery of singers for the winter theatres. 'Up all Night, or the Smuggler's Cave,' 'Britain's Jubilee,' the 'Maniac, or Swiss Banditti,' 'Plots, or the North Tower,' are the titles of musical plays by Arnold presented by the Drury Lane company during their occupancy of the English Opera House. The theatre was afterwards open under his own management, when his operas of the 'King's Proxy,' the 'Devil's Bridge,' the 'Americans,' 'Frederick the Great,' 'Baron Trenck,' 'Broken Promises,' and dramas entitled 'Two Words,' 'Free and Easy,' &c., &c., were produced in succession. Hazlitt wrote in 1816 of Arnold's 'King's Proxy,' that it was 'the essence of four hundred rejected pieces . . . with all that is threadbare in plot, lifeless in wit, and sickly in sentiment . . . Mr. Arnold writes with the fewest ideas possible; his meaning is more nicely balanced between sense and nonsense than that of any of his competitors; he succeeds from the perfect insignificance of his pretensions, and fails to offend through downright imbecility.' Arnold's 'Two Words,' however, Hazlitt pronounced 'a delightful little piece. It is a scene with robbers and midnight murder in it; and all such scenes are delightful to the reader or spectator. We can conceive nothing better managed than the plot of this.' In 1812 Arnold had been invited to undertake the direction of Drury Lane Theatre; he resigned his office on the death of Mr. Whitbread by his own hand in 1815. In 1816 the English Opera was reopened by Arnold, having been rebuilt upon an enlarged scale

by Samuel Beazley, the architect, at a cost of 80,000*l*. In 1824 Arnold produced for the first time in England a version of Weber's 'Der Freischütz,' which had been previously refused by the two patent theatres. Other foreign operas of note, the 'Tartare' of Salieri, the 'Freebooters' of Paer, the 'Robber's Bride' of Ferdinand Ries, and Marschner's 'Der Vampyr,' were afterwards produced at the English opera house for the first time in England. In 1830 the theatre was destroyed by fire. In 1833 the present Lyceum, also rebuilt by Samuel Beazley, was opened to the public. The English operas of 'Nourjahad,' by Edward Loder, and the 'Mountain Sylph' by John Barnett, were produced under Arnold's management. Arnold was a magistrate and a fellow of the Royal Society.

ARNOLD, THOMAS (1679-1737), captain in the navy, was descended from a family which had been settled for many generations in Lowestoft, and was, in 1718, first lieutenant of the *Superb*. He distinguished himself in the battle off Cape Passaro by heading the boarders and carrying the Spanish flagship, the *Real Felipe*, and in this service he was severely wounded, and lost the use of one arm. His gallantry was rewarded by his promotion, probably by Sir George Byng, to the rank of commander; in 1727 he was advanced to be a captain, appointed to the *Fox*, and sent to the coast of Carolina, where he was for some time under the orders of Captain Anson. On his return to England he retired from active service and settled at Lowestoft, where he died 31 Aug. 1737. A monument in Lowestoft church still keeps alive his memory, which, throughout the last century, was further distinguished by a local custom now obsolete. 'It is customary,' wrote Gillingwater in 1790, 'at Lowestoft to hang flags across the streets at weddings. The colours belonging to the Royal Philip taken by Lieutenant Arnold have frequently been made use of upon these occasions.'

[Gillingwater's Historical Account of the ancient Town of Lowestoft (1790), pp. 410-15.]

J. K. L.

ARNOLD, THOMAS, M.D. (1742-1816), physician and writer on insanity, was born in the town of Leicester, educated at Edinburgh, where he took the degree of M.D., became a fellow of the Royal College of Physicians, and of the Royal Medical Society of Edinburgh. He practised in Leicester,

where he was deservedly popular, and became owner and conductor of a large lunatic asylum.

His principal works are: 1. 'Observations on the Nature, Kinds, Causes, and Prevention of Insanity, Lunacy, or Madness,' London and Leicester, 1782, 1786. 2. 'A Case of Hydrophobia successfully treated,' 1793. 3. 'Observations on the Management of the Insane,' 1809. In the first of these he examines and compares the opinions of ancient and modern writers on the subject. It is a work of great learning and research, and abounds with interesting cases related from the author's experience. He died at Leicester 2 Sept. 1816.

[Gent. Mag. lxxxvi. pt. ii. p. 378.] G. V. B.

ARNOLD, THOMAS (1795-1842), head master of Rugby, was born on 13 June 1795, at East Cowes, in the Isle of Wight, where his family, originally from Suffolk, had been settled for two generations, and where his father, William Arnold, was collector of customs. There, as a child, he learned to delight in the sea, to know the flags of half Europe that floated on the Solent during the great war, and to feel something of its stir. When he was hardly six years old his father died suddenly of spasm of the heart (3 March 1801; there is a tablet to his memory in Whippingham church). Thomas's education for the next two years was committed by his mother to her sister, Miss Delafield. In 1803 he went to a school at Warminster, and thence in 1807 to Winchester. He appears to have been a shy and retiring boy, somewhat stiff and angular in character and manners, but high-principled and warm-hearted; with remarkable powers of memory; devoted to history, geography, and poetry, especially ballad poetry.

In 1811, at the early age of sixteen, he was elected scholar of Corpus Christi College, Oxford, where a small society of picked students, under an easy rule, were left in great measure to educate themselves and one another, the two most prominent members of it at the time being John Keble, the author of the 'Christian Year,' and John Taylor Coleridge, afterwards one of the judges of the court of Queen's Bench, the lifelong friend to whom Arnold loved to say that he 'owed more than to any living man.' Here, in a little Oxford within Oxford, he spent the next three years, his whole nature expanding in an atmosphere of venerable institutions and youthful friendships, of keen study of the great classical authors, especially Thucydides and Aristotle, varied by 'skirmishings' over the surrounding country and discussions in the undergraduates' common room on every variety of

subject—political, literary, and philosophical. In these he is said to have been eager and vehement, but always candid and ingenuous, and ‘never showing, even then, a grain of vanity or conceit.’ In 1814 he obtained a first class in classics, and the next year a fellowship at Oriel, and he gained the chancellor’s prizes for the Latin and English essays in 1815 and 1817. For four years he resided on his fellowship, amidst a group of the ablest men then in the university—Copleston, Davison, Whately, Keble, Hawkins, and Hampden; using this ‘golden time’ to store his mind and fill many manuscript volumes with the results of wide and independent reading, chiefly of original authorities, in the libraries of the place. In 1818 he was ordained deacon, and in the following year he settled at Laleham, a village on the Thames, to take a few private pupils preparing for the universities. In 1820 he married Mary Penrose, daughter of the Rev. John Penrose, and sister of an early friend. His mother resided with him. She died at Laleham 14 April 1829.

The eight years of active growth at Oxford had traced the general lines of character and opinion which were to be his through life; and these were deepened and developed during the eight quiet years which followed, spent chiefly in continued study, in working and playing with the pupils whom he made part of his peaceful and industrious home, and in assisting in the care of the parish. Here he learned to know the poor, and to feel that sympathy with the humbler classes which afterwards so strongly marked his views of duty, both individual and social. It was during this time that his mind came under an influence by which it was powerfully affected, that of Niebuhr’s ‘History of Rome,’ which not only inspired him with new views of historical criticism, but, by introducing him to German literature, opened to him new realms of thought. And it was now that, under the elevating influence of a happy marriage and increased responsibilities, his religious convictions and feelings were brought, so to speak, to a focus, and he came to be possessed with that vivid sense of the reality of the invisible world, and that personal devotion to Jesus Christ, which formed henceforth the basis of his spiritual life. From this time he became more and more remarkable for that close interpenetration of all parts of his being—spiritual, moral, intellectual, and emotional—which was the key to his character, and reflected itself in all his opinions and habits of thought. Thus—to give a few characteristic instances—the central truth of life to him,

not as a dogma accepted from without, but as the satisfaction of a craving within, was the union of the divine and the human in the person of Jesus Christ; to speak of a Christian’s body as the temple of the Holy Spirit was hardly a metaphor; the church and the state were one; the natural and the supernatural, things secular and religious, were inextricably blended; every act of a Christian’s life was at once secular as done on this earth, and religious as done in the presence of God; and every act was of importance, as affecting the great struggle everywhere and at all times going on between good and evil. This solidarity of the whole nature, ‘moving altogether if it move at all,’ is not without its drawbacks. There must be a danger that the lower parts, instead of adding strength to the higher, may usurp their place; that sympathies or antipathies may be mistaken for moral judgments, and a hasty temper for righteous indignation. The uncompromising earnestness which belongs to it is apt to give offence; but if it provokes opposition it gives the force necessary for overcoming it; and in Arnold’s case, being absolutely free from all taint of self-seeking, it won for him, in a singular degree, the confidence of all with whom he was brought into close contact.

In 1827 the mastership of Rugby fell vacant, and he was urged to be a candidate for it. He hesitated, chiefly from doubt whether he should be free to make such changes as he might find necessary. This doubt removed, at the eleventh hour he sent in his name, and he was elected, chiefly on the strength of a letter from Dr. Hawkins, prophesying that if Mr. Arnold were appointed ‘he would change the face of education all through the public schools of England.’ In August 1828 he removed to Rugby, where he remained till his death in 1842. He became B.D. and D.D. in 1828.

The humble grammar school of Lawrence Sheriff had before this expanded into a prosperous public school, with ample funds and commodious buildings, including (what was not then usual) a chapel; but it was still, as compared with such foundations as Eton or Winchester, limited in numbers, without marked character or time-honoured traditions, and therefore all the better fitted for the hand of the reformer. And it was no doubt a time when reforms were needed in public schools; but, viewed by the light of the present day, there was nothing startling in those which were introduced by Dr. Arnold, nor was there anything recondite in his system. If, as is now acknowledged, he verified his friend’s prediction by regenerating public

school education in England, it was mainly by very simple means—by treating the boys with confidence, and by impressing upon them his own sense of the value of knowledge and the sacredness of duty: in short, it was by the force of his personal character, touched, according to his habitual prayer, by the ‘spirit of power, and of love, and of a sound mind.’

As a teacher his aim was not so much to impart information as to awaken thought and stimulate industry. While insisting, somewhat sternly, on a careful preparation of the prescribed lesson, if any difficulty arose in connection with it, instead of giving the explanation at once, he would place himself, so to speak, by the side of his pupils and help them to find it for themselves. Though not what is called a finished scholar, he had a strong turn for philology in its wider aspects, and a rare power of terse and spirited translation; and the ever fresh delight which he took in his favourite authors, such as Homer and Thucydides, Cicero and Virgil, was in itself a lesson to his scholars. While maintaining the old pre-eminence of the classics as the best vehicle for the study of language—a study which seemed to him as if ‘given for the very purpose of forming the human mind in youth’—he was the first to add mathematics, modern history, and modern languages to the ordinary school course. Into the classical lessons he put fresh life by constantly directing attention to the general questions, literary, moral, or historical, which they opened up; and perhaps nothing in his method of teaching was more remarkable than the manner in which he habitually made different parts of knowledge illustrate one another. The ‘Divinity’ lessons, apt in those days to be few and meagre, were with him very frequent, and always marked by special fulness of interest and a peculiar reverence of tone and manner. In these, as well as in the lessons on modern history, it was impossible but that his own views should find some expression; but he made it quite clear to his hearers that they were not desired to accept those views, but to examine and think for themselves.

In his government of the school he was undoubtedly aided by a natural sternness of aspect and manner, which, making all his relations with his pupils rest on a background of awe, gave the greater effect to his perfect frankness and simplicity, his entire freedom alike from ‘donnishness’ and from suspicion. The quick insight of boys soon discovered that his anger, if easily roused, had nothing in it of personal resentment, and that the severest sense of the sinfulness of an act did not exclude the most fatherly tenderness

towards the offender. Sensitive alive to the peculiar evils incident to the free life of public schools, where a low tone may so easily be set by a few bad boys, he felt also their unique advantages if only a good tone could be infused into them. This he sought to do mainly through the medium of the sixth-form boys, with whom he was in hourly contact, and who were entrusted with much authority over the rest; and wherever he saw an evil influence at work—a boy, and still more a knot of boys, doing harm to themselves and others—it was his practice to require their parents to remove them quietly from the school. But as in intellectual so in moral matters, it was to promise rather than to attainment that he looked, and it was by stimulating to good, rather than by repression of evil, that he acted. He made boys feel that each individual was an object of personal interest to him, and they learned to think that he had an insight almost supernatural into their thoughts and feelings. At the same time the manliness, the independence, the buoyant cheerfulness of his own temperament, his hearty interest in the school games, which he looked upon as an integral part of education, put him in sympathy with all that was good, even in the least intellectual of his scholars.

As a moral and religious teacher, the special engine of his influence was the weekly sermon. Written generally with great rapidity, but expressing what was habitually in his mind, and delivered with singular earnestness and feeling, these discourses conveyed to his hearers, with a power exceeding that of the most finished compositions, the spirit that was in him. But more potent perhaps than any sermon was the impression habitually conveyed, with all the force of his powerful character, that in everything that he said or did, whether in the pulpit or out of it, he was seeking to do all to the glory of God.

The result of the new influence at work in the school soon began to attract attention. At the universities many of its scholars attained distinction, while very few (a point to which the head master himself attached even greater importance) failed to pass their examinations. Not in the universities only, but in the army and elsewhere, it came more and more to be observed that Arnold’s pupils were, to a degree unusual at that time, ‘thoughtful, manly-minded, and conscious of duty and obligation.’ For some years, however, the increase in the numbers of the school did not keep pace with the rise in its reputation, being checked by the unpopularity of the head-master’s utterances on public matters. In 1829 he published a pamphlet on the ‘Chris-

tian Duty of conceding the Roman Catholic Claims,' in the course of which he ruthlessly exposed the incompetence of the clergy as a body to deal with such questions. In 1831 he started a newspaper, chiefly to plead for more generous treatment of the lower classes; and though this paper failed, he continued to write on similar subjects in the same outspoken style, almost to the end of his life. In 1833, when the very existence of the national church seemed to be in peril, he issued, in the 'Principles of Church Reform,' a powerful appeal for comprehension, as at once right in itself, and the only escape from the 'calamity' of disestablishment. And when, in 1836, the dominant party in Oxford attempted to keep Dr. Hampden out of a professorship on the ground of alleged heresy, he assailed them with unmeasured vehemence in the 'Edinburgh Review.'

The first of these publications so irritated the clergy that some years afterwards the Archbishop of Canterbury objected to Arnold's preaching Bishop Stanley's consecration sermon, on the ground of the offence that it would give them. For years his principles, tenets, and proceedings at Rugby were the subject, in certain tory papers, of abuse little short of libellous. The article in the 'Edinburgh Review' nearly led to the abrupt termination of his mastership. Disturbed by the stir which it created, the trustees wrote formally to ask whether he was the author; and when he declined to give any answer to the question a motion of censure, which would have led to his resignation, was all but carried. To these annoyances was often added the worse pain of feeling that as to many of the objects nearest to his heart he stood practically alone. With the exception perhaps of Chevalier Bunsen, the eminent Prussian minister, whose friendship, made at Rome in 1827, he counted as one of the chief blessings of his life, he knew no man altogether like-minded. Many who admired his freedom of thought could not understand his firm adherence to the old faith; many who shared his reverent spirit were shocked by his liberal opinions. Thus in labouring to liberalise the national church he displeased alike his liberal friends who wished to destroy it, and his church friends who wished to keep it narrow. Thus, having joined the new university of London, chiefly in the hope of making it an engine of education at once religious and unsectarian, he found that he could get no support in this design, and withdrew in bitter disappointment.

But for all this he found ample solace in his school duties and his literary labours in connection with them, in frank and friendly intercourse with old pupils, in his own happy

family circle, and especially in the seclusion of the home which he had made for himself at Fox How, in a beautiful nook among the Westmoreland hills.

At length, about the year 1840, the tide turned. The merits of the schoolmaster, the high character of the man, came to be generally recognised, even where his opinions could find no acceptance. The numbers of the school rose beyond the limit within which he had wished to keep. Nowhere was the change of feeling towards him more marked than at Oxford; and when, in 1841, he was appointed regius professor of history at that university, the delight with which he returned to his old haunts to deliver his inaugural lecture was greatly enhanced by his finding himself treated with cordial respect by those whose alienation he had most deeply regretted. At the same time a change came over his own spirit. Not that he bated one jot of his devotion to 'that great work,' the extension of Christ's church, or of his hostility to everything which seemed to retard it, whether toryism or jacobinism, sectarianism or indifferentism, superstition or unbelief; while to the last he continued to denounce tractarianism as a revival of the very judaizing spirit against which St. Paul fought. But the impatient fervour passed away. It was not only that some of his views on particular subjects underwent modification, but there came a general relaxation of tension, a disposition to trust more to time, and to bring his own immediate efforts and aspirations more within the bounds of what was practicable.

On this more tranquil phase of life he had hardly entered when, in the fulness of life and activity, on 12 June 1842, the last day of his forty-seventh year, he was suddenly cut off by an attack of angina pectoris. A slight previous illness had passed away without causing any alarm; but those nearest and dearest to him remembered afterwards to have observed a 'visible ripening for heaven;' and a touching entry in his private diary, written late on the night of the 11th, seems to indicate something of a foreboding that his work on earth was drawing to a close. He left a widow, who survived him for thirty-one years, and nine children, of whom the eldest son, Matthew, is the distinguished poet and critic, and the eldest daughter is the wife of Mr. W. E. Forster.

Dr. Arnold's chief published works are as follows:—1. An edition of Thucydides, especially valuable for its geographical notes, and for the light thrown on the constitutional history of the period of the Peloponnesian war. The first volume of the first edition

was printed in 1830, and the third and last in 1835; two volumes of the second edition, which was left incomplete, appeared in 1841. (Professor Jowett, in his translation of *Thucydides* (i. ix.), gives a general estimate of the value of Arnold's edition.) 2. The early history of Rome, in three volumes, of which the two first were mainly based on Niebuhr (London, 1838-43). 3. A history of the later period of the Roman commonwealth, from the end of the second Punic war to the reign of Augustus, with a life of Trajan, published posthumously in 1845, and consisting of reprints of articles that had appeared in the *'Encyclopædia Metropolitana.'* 4. Lectures on the study of modern history, delivered at Oxford in 1841 and 1842 (Oxford, 1842). 5. A collection of sermons in three volumes published between 1829 and 1834. The third volume was republished separately in 1876, and the whole series, together with *'Christian Life'* (1841) and two posthumously-published volumes of sermons (edited by Mrs. Arnold in 1842 and 1845), was re-issued in 1878 (6 vols., edited by Mrs. W. E. Forster). Arnold's biographer, Dean Stanley, collected and republished his *'Miscellaneous Works'* in 1845, and his *'Travelling Journals, with Extracts from his Life and Letters,'* in 1852. But it is chiefly through Stanley's *'Life and Correspondence,'* first published in two volumes in 1844, and reaching its twelfth edition in 1881, that the *'hero of schoolmasters,'* the champion alike of reverent faith and of independent thought, is and will be known to the world.

In person he was a little above the middle height; spare, but vigorous, and healthy without being robust. A slightly projecting underlip, and eyes deep set beneath strongly marked eyebrows, gave to his countenance when at rest a somewhat stern expression, which became formidable when he was moved to anger; but the effect was all the greater when, in the playful or tender moods which were frequent with him, or on meeting in a book or in conversation with a noble sentiment or a striking thought, his eye gleamed, and his whole face lighted up. Simple in his tastes and habits, never idle and never hurried, he made his home a *'temple of industrious peace,'* and he rarely left it except to travel occasionally on the continent, with an eye enlightened by lifelong studies in history and geography. He had an intense delight in beautiful scenery, and took pleasure in the fine arts and in some of the natural sciences, but chiefly as bearing on the life and history of man. For science as such, for art as such, he cared comparatively little; for music not at all. *'Flowers,'* he used to say, *'are my*

*music,'* and his love for them was like that of a child. Walking by the side of his wife's pony—his daily habit during term time—he half forgot the dullness of the flat and featureless country about Rugby in spying them out along the hedgerows and in the copses; and they added to the enjoyment of the rambles over hill and dale which were a marked feature in his life at Fox How. Nothing, perhaps, gives a better idea of the man than the description of *'his delight in those long mountain walks when they would start with their provisions for the day, himself the guide and life of the party, always on the look-out how best to break the ascent by gentle stages, comforting the little ones in their falls, and helping forward those who were tired, himself always keeping with the laggards, that none might strain their strength by trying to be in front with him; and then, when his assistance was not wanted, the liveliest of all—his step so light, his eye so quick in finding flowers to take home to those who were not of the party.'* It is by the aid of imagery taken from these walks that the lesson of his life is summed up for us and for posterity by his son in the lines on *'Rugby Chapel,'* where he has drawn the striking picture of a strong, hopeful, helpful soul, cheering and supporting his weaker comrades on their upward and onward way.

[Arnold's *Life and Correspondence* by Stanley; personal knowledge.] T. W.

ARNOLD, THOMAS JAMES (1804 ?-1877), barrister and man of letters, was son of Samuel James Arnold [q. v.] and was born about 1804. He was called to the bar in 1829, was appointed magistrate at the Worship Street police-court in 1847, and transferred to the Westminster court in 1851. He died, still holding this appointment, on 19 May 1877, being then senior London police magistrate. He wrote legal manuals on the law of municipal corporations, the labour laws, and other subjects. As a translator he is known by his versions of Goethe's *'Reineke Fuchs'* (1860), of *'Faust'* (1877), and of *Anacreon* (1869). The translation of *'Reineke Fuchs'* is a very creditable work; that of *'Faust'* is respectable, but inferior to some other recent versions, and, having been published in folio form as an accompaniment to a volume of illustrations, is but little known. The translator of *Anacreon* has only the alternative of baldness or of infidelity, and Arnold chose the former. He also translated Schiller's *'Song of the Bell,'* and wrote an able review of the controversy respecting Mr. Collier's annotated Shakespeare folio in *'Fraser's Maga-*

zine' for January 1860. Translations from Euripides, Aristophanes, Xenophon and Ovid also came from his pen. He was a man of great culture and accomplishments, an intimate friend of Shelley's friend, Thomas Love Peacock, and the son-in-law of Shelley's biographer, Thomas Jefferson Hogg.

[Annual Register, 1877; private information.]  
R. G.

**ARNOLD, THOMAS KERCHEVER** (1800-1853), voluminous writer of educational works and theologian, was born in 1800. His father, Thomas George Arnold, was a doctor of Stamford. He was educated at Trinity College, Cambridge, was seventh junior optime in the mathematical tripos of 1821, and was elected fellow of his college shortly afterwards. He took his degree of B.A. in the same year, and that of M.A. in 1824. In 1830 he was presented to the living of Lyndon, in Rutlandshire, where his parishioners only numbered one hundred. He at first devoted his ample leisure to theology, and showed himself an obstinate opponent of the views advanced by the leaders of the Oxford movement. From 1838 until his death he applied himself mainly to the preparation of school books, which procured him a very wide reputation. He died at Lyndon Rectory of bronchitis after a few days' illness on 9 March 1853. A writer in the 'Guardian' at the time of his death describes him as 'remarkable for an almost feminine gentleness of manner, and for the unaffected simplicity of his life.'

Arnold began his career as an educational writer with the publication of the 'Essentials of Greek Accidence' in 1838, and this work was followed almost immediately by his 'Practical Introduction to Greek Prose Composition,' which had an unprecedented success, and was 'the keystone of his literary fortunes.' The book reached a fourth edition in 1841, and a seventh in 1849, when its sale had exceeded 20,000 copies. It was at once adopted as a text-book in the higher classes of the chief schools of England. Its leading merit consisted in its author's judicious use of the system and researches of recent German scholars—in applying the method of Ollendorff to the syntax of Buttmann. In 1839 Arnold issued a 'Latin Prose Composition' on a similar plan, and it met with a welcome little less warm than that accorded to its forerunner, and in the succeeding years he prepared a whole library of classical school-books, which included translations and adaptations of many German and American works. In association with the Rev. J. E. Riddle he published in

1847 an 'English-Latin Lexicon,' based on a German work by Dr. C. E. Georges, which cost him, he wrote in the preface, 'many years of labour.' Between 1848 and 1853 he edited, in twenty-five volumes, portions of all the chief Latin and Greek authors, and published handbooks of classical antiquities, an 'Anticleptic Gradus,' and similar works. Nor did he confine himself to the classics. He superintended the publication of English, French, German, Italian, and Hebrew grammars, and aided in the preparation of a 'Handbook of Hebrew Antiquities' and a 'Boy's Arithmetic.' Almost all his educational writings bear the distinct impress of German influence. In his classical work he depended largely on Madvig, Krieger, Zumpt, and other less known scholars; his treatment of modern languages was also based on German models, and Arnold was generally ready to acknowledge his obligations to foreign writers.

As a theological writer Arnold was almost equally voluminous. His earliest published work was a sermon on the 'Faith of Abel,' which appeared in the third volume of a collection of 'Family Sermons' in 1833, and four years later he projected and edited a periodical under the title of the 'Churchman's Quarterly Magazine,' which soon perished. Subsequently he made two similar attempts to further the interests of the church of England by means of periodical literature. In January 1844 he published the first number of the 'Churchman's Monthly Companion,' which succumbed to popular indifference eight months later, and in 1851 he started another monthly magazine, entitled the 'Theological Critic,' which lived on until his death in 1853. Arnold's contributions to theological literature also included five pamphlets on ecclesiastical questions raised by the Oxford movement; an abridgment of an American version of Hengstenberg's 'Christology'; two volumes of sermons, one published in 1845, and the other posthumously in 1858; and 'Short Helps to Daily Devotion' (1847). He likewise issued controversial treatises criticising well-known theological works like Taylor's 'Interpretations of the Fathers,' Elliott's 'Horæ Apocalypticæ,' and Dean Close's sermons, in all of which, according to a sympathetic critic in the 'Guardian' of 1853, 'his critical eye discerned unsoundness . . . which, if not exposed, was likely to do extensive mischief.'

Of the value of Arnold's educational writings, by which alone he is now remembered, more than one opinion has been held. The multifarious character of his literary work necessarily rendered it of very unequal

quality, and a very small part of the classical portion of it has alone stood the test of time. In an article in 'Fraser's Magazine' for February 1853, which was afterwards published in pamphlet form, and has been attributed, correctly, as we believe, to Dr. J. W. Donaldson, the author of the 'New Cratylus,' the attempt was made in very forcible language to throw discredit on the whole of Arnold's classical schoolbooks. But the unmeasured vituperation of the criticism, which attracted considerable attention at the time, is only very partially justified. In a temperate reply, written a few weeks before his death, Arnold successfully rebutted some of the more sinister imputations on his character introduced into the article; and he justly remarks, in reference to the multiplicity of his works, that 'regular industry with a careful division of time and employment, carried on, with hardly any exception, for six days in every week, will accomplish a great deal in fifteen years.' The popularity of a few of the books that Donaldson specially denounced has, moreover, survived his fierce attack, and his Latin and Greek 'Prose Compositions,' new editions of which, revised by leading scholars, appeared in 1881, are valued highly at the present day by many teachers of eminence.

[Gent. Mag. (new series), xxxix. 667; Athenæum for 1853, i. 353; Brit. Mus. Cat.; Arnold's Few Words in Answer to the Attack on my Classical School Books (1853).] S. L.

**ARNOLD, WILLIAM DELAFIELD** (1828-1859), Anglo-Indian official and novelist, the second son of Thomas Arnold, D.D., was born at Laleham, 7 April 1828, and was educated at Rugby. He was elected a student of Christ Church, Oxford, in 1847, and in the following year proceeded to India as ensign in the 58th regiment of native infantry. He soon became an assistant commissioner in the Punjab, and in 1856 was appointed by Sir John Lawrence director of public instruction. The department was new, and its organisation fell entirely upon Arnold, who, after much invaluable service, was obliged to quit India on sick leave, and died at Gibraltar on his way home, 9 April, 1859. His wife, Frances Anne, daughter of Major-general Hodgson, had died shortly before in India. Their joint memories are celebrated by his brother Matthew in 'A Southern Night,' one of the most beautiful memorial poems in our language. Arnold's name is further perpetuated by an annual distribution of medals, bearing his likeness, to the best pupils in the schools which he founded, provided from a fund subscribed by his fellow-

workers in the Punjab. He is the author of 'Oakfield, or Fellowship in the East,' a novel in two volumes, published in 1853 under the pseudonym of 'Punjabee.' It depicts the struggles of a young officer of exceptional culture and seriousness to elevate the low tone of the military society about him, and the trials and problems forced upon him by this peculiar form of quixotism. It is well written and deeply interesting, imbued in every line with the spirit of the author's illustrious father; but, as is usually the case when the ethical element largely predominates, is open to the charge of insufficient sympathy with types of character alien from the writer's own. He also translated Wiesse's 'Letters on English Education' (1854), and published in 1855 four lectures, treating respectively of the Palace of Westminster, the English in India, Caste, and the Discovery of America.

[Prospective Review, x. 274-303; information from Miss Frances Arnold.] R. G.

**ARNOT, HUGO** (1749-1786), historical writer, was son of a merchant at Leith, where he was born 8 Dec. 1749. He changed his name from Pollock to Arnot on succeeding to his mother's property of Balcormo, Fifeshire. He became an advocate 5 Dec. 1772. In 1776 he published a satirical paper, called an 'Essay on Nothing,' read before the Speculative Society, and made himself unpopular by his sarcasms. In 1779 he published his 'History of Edinburgh' (a second edition appeared in 1816), and in 1785 a 'Collection of Celebrated Criminal Trials in Scotland.' Both works were pirated in Ireland. He published the second at his own expense in defiance of the Edinburgh booksellers, and the gross proceeds were 600*l*. His books show reading and shrewdness. He became prematurely old from asthma, and his irritability and caustic language hindered his success at the bar. Many anecdotes are told of his eccentricity. He wrote many papers on local politics, opposed local taxation, and is said to have retarded for ten years the erection of the South Bridge in Edinburgh. He died 20 Nov. 1786, and left eight children. He was a favourite subject with John Kay, the Edinburgh caricaturist, who took full advantage of the extreme slimness of his figure.

[Kay's Edinburgh Portraits, with biographic sketches, Nos. v, viii, lxvi, cxxxi, and pp. 16, 25, 157, 324, ed. 1877; Anderson's Scottish Nation.]

• **ARNOT, WILLIAM** (1808-1875), preacher and theological writer, was born at Scone, where his father was a farmer, 6 Nov. 1808. In early life he was apprenticed to a

gardener; but the deep impression made on his mind by the death of a religiously minded brother led him to study for the ministry. In his university career in Glasgow he gained distinction in spite of his poverty, especially in the Greek classes. He had for classfellows two men, whose biographies he afterwards wrote: James Halley, who died quite early, and James Hamilton, afterwards minister of the National Scotch Church in Regent Square, London. Arnot was of an honest, joyous, unconventional, hearty nature, with a dash of originality almost amounting to eccentricity. Writing to his father he revealed the true secret of his character: 'I love, in a greater or less degree, every person whom I know, and also all that I do not know; and this is one grand source of my happiness.'

Soon after completing his theological studies he was called, in 1838, to be minister of St. Peter's Church in Glasgow, one of the new churches built under the extension scheme of Dr. Chalmers. He soon became one of the most popular ministers of the city. His ministry, which after 1843 was carried on in connection with the Free Church, was marked by an intense love of nature, united with a poetical temperament; by sympathy with young men; by ardent advocacy of temperance, and a strong appreciation of ethical christianity. He strongly sympathised with all movements fitted to advance the welfare of the working class.

In the year 1863, on the appointment of Dr. Rainy to a professorship, Arnot was called to be minister of one of the leading congregations of the Free Church in Edinburgh, where for the last ten years of his life he was a conspicuous figure. During that time he edited a monthly religious magazine, called the 'Family Treasury.' He thrice visited America: in 1845, to render important ministerial service in the dominion of Canada; in 1870 as a delegate from the Free Church of Scotland to congratulate the presbyterian churches in the northern states on their happy reunion; and for the third time, in 1873, as a member of the Evangelical Alliance, to attend its meetings at New York. Having been a steady sympathiser with the northern states and the anti-slavery movement, he was received in the United States with extraordinary cordiality.

The degree of D.D. was virtually offered to Mr. Arnot by the university of Glasgow, and afterwards formally by the university of New York; but for personal reasons he declined to avail himself of it in either case. He died after a short illness at Edinburgh, 3 June 1875.

His chief works were the following:

1. 'Life of James Halley.'
2. 'The Race for Riches, and some of the Pits into which the Runners fall: six lectures applying the Word of God to the traffic of man.' It had a wide circulation both in this country and America, as following up the principles of Chalmers's 'Commercial Discourses.'
3. 'The Drunkard's Progress, being a panorama of the overland route from the station of Drouth to the general terminus in the Dead Sea, in a series of thirteen views, drawn and engraved by John Adam, the descriptions given by John Bunyan, junior.'
4. 'Laws from Heaven for Life on Earth; Illustrations of the Book of Proverbs.' 2 vols. This was one of his most characteristic and successful books, treating of the maxims of Hebrew wisdom viewed from a christian standpoint in the nineteenth century.
5. 'Roots and Fruits of the Christian Life.'
6. 'The Parables of our Lord.'
7. 'Life of James Hamilton, D.D.'
8. 'This Present World.' Some thoughts on the adaptation of man's home to the tenant.
9. A posthumous volume of sermons.

[Autobiography, with Memoir by his daughter, 1877.] W. G. B.

**ARNOTT, GEORGE ARNOTT WALKER** (1799-1868), botanist, was born at Edinburgh, 6 Feb. 1799. His early years were spent at Edenshead and Arlary, on the borders of Fife and Kinross; in 1807 he went to Edinburgh, entering the university in 1813, where he took his A.M. degree in 1818. He studied for the law, and was admitted to the faculty of advocates in 1821; but the profession was uninteresting to him, and he soon abandoned it. His attention some three or four years previously had been turned to botany, and to this study he now devoted himself, becoming acquainted with Wight and Greville, and a little later with Dr. (afterwards Sir William) Hooker. In 1821 he went to France, where he worked in the Paris herbaria, and published two papers on mosses. He afterwards visited Spain and Russia, and, on his return to Scotland, married in 1831 Miss Mary Hay Barclay, of Paris, Perthshire. From 1830 to 1840 he was engaged with Sir William Hooker upon an account of the plants collected in Captain Beechey's voyage to the Pacific and Behring's Straits, which formed a quarto volume published in 1841. During these ten years he was very active in publishing descriptions of new plants from South America, India, and Senegambia, in various periodicals; he co-operated with Wight in his 'Illustrations of Indian Botany,' and in the 'Prodromus Floræ peninsulæ Indiæ Orientalis.' In 1839 he temporarily took Dr.

Hooker's place as botanical lecturer at Glasgow, and in 1845 was appointed professor of botany in that university, leaving Arlary in 1846, and taking up his residence in Glasgow. In 1850 he was associated with Sir William Hooker in the sixth edition of the 'British Flora.' About this time he took up the study of Diatoms, of which he formed a large and valuable collection, publishing several memoirs on the subject. In 1868 his health, which had previously begun to fail, gave way, and the delivery of his university course had to be abandoned. Jaundice set in, and he died on 17 April 1868, and was buried in the Sighthill cemetery, Glasgow. He left three sons and five daughters. His large collections subsequently became the property of the university of Glasgow. He was a good correspondent, an esteemed professor, an accurate observer, and a zealous worker.

[Trans. Bot. Soc. Edinburgh, ix. 414-26.]

J. B.

**ARNOTT, NEIL** (1788-1874), physician and natural philosopher, was born at Arbroath, in Scotland, where his father held a valuable farm. His father had become a catholic in early life; and his mother, Ann, daughter of Maclean of Boteray, was of the same faith. Misfortunes compelled the father to give up his farm and settle first at Blair and afterwards in Aberdeen. Neil was taught by his mother and at the parish school of Lunan, and in November 1798 entered Aberdeen grammar school. In 1801 he was entered as a student in the Marischal College, with a small bursary, where he remained during four sessions, and was especially interested by the lectures of Patrick Copland on natural philosophy. He graduated M.A. in 1805, and at once commenced the study of medicine in Aberdeen. He supported himself partly by acting as shop-assistant to a chemist. In September 1806, he went to London, and became a student at St. George's Hospital, under Sir Everard Home. A year later Home's favour obtained him an appointment as surgeon in the East India Company's service, and he sailed for China in April 1807. During the long and stormy voyage he appears to have made a number of physical and meteorological observations regarding ocean currents, tides, winds, and other atmospheric phenomena, waves, &c., many of which are recorded in his 'Elements of Physics.' He learned languages and gave lectures to the captain and officers. He also turned his attention to sanitary matters, clothing, and ventilation. In 1809, he returned to England, and

in the following year made a second voyage to China. He performed a novel operation for stricture, which saved the life of the captain, and devised new modes of ventilating the ship.

On his return to London, in 1811, he commenced practice in Hunter Street, Brunswick Square, in partnership with a friend named Darling, and he soon afterwards began a course of lectures on Natural Science applied to Medicine at the Philomathic Institution, which, in 1827, were published under the title of 'Elements of Physics.' In 1813 he obtained the diploma of the College of Surgeons, and in 1814 the university of Aberdeen conferred upon him the degree of M.D. He continued to practise as a physician till the year 1855, and enjoyed a large and lucrative practice.

Arnott's catholic connections and knowledge of languages helped him in his profession. Many foreigners consulted him. In 1816 he became physician to the French, and some time afterwards to the Spanish embassy. In the same year he dissolved his partnership with Darling, who had married, and took up his residence in a large house, No. 38 Bedford Square, where he remained to the end of his professional life—more than forty succeeding years. During the next seven or eight years but few changes appear to have taken place in his career.

About 1823 he began to prepare his 'Physics.' Sir David Barry was at this time propagating his views concerning the circulation of blood through the capillary tubes and the veins; and he attributed this to atmospheric pressure. The view was opposed by Dr. Armstrong, who begged Arnott to take up his cause. This led to the delivery of lectures on medical physics in 1825 in Arnott's house. Professor Bain says: 'The lectures made a great impression, and there was a strong desire expressed that he should repeat them.'

The first volume of Arnott's 'Physics' appeared in 1827, and it was received with enthusiasm. A second edition was printed in the same year, a third in 1828, and a fourth, together with Part I. of the second volume, in 1829. In 1833 appeared a fifth edition of the first volume, with a second of vol. ii. Part I. It was speedily translated into Spanish, French, Dutch, and German. The book went out of print, and Arnott spent much time upon a sixth edition, half of which appeared in 1864, and a second half, with new chapters, in 1865; a seventh edition has appeared since his death.

About the year 1855, he gave up his practice, and turned his attention more especially to scientific and sanitary matters. His name

had become well known many years earlier in connection with the invention of a smokeless grate, known as 'Arnott's Stove,' which combined economy of fuel and consumption of the smoke with uniformity of combustion. For this he was awarded the Rumford medal of the Royal Society in 1854. He devised the water-bed in 1832, and in 1838 he published an important essay on 'Warming and Ventilation,' in which both his stove and ventilator are fully described. He declined to patent any of his inventions, and was never more happy than when he could devise or apply any means of lessening human suffering, or extending man's dominion over nature. For his various inventions he was awarded a gold medal by the jurors of the Paris Exhibition of 1855, and Napoleon III. gave him the cross of the Legion of Honour. He was one of the founders of the university of London in 1836, and an original member of the senate. In the following year he was appointed one of the physicians extraordinary to the queen; in 1838 he was elected a fellow of the Royal Society, and in 1854 a member of the Medical Council. In 1861, he published a 'Survey of Human Progress,' which reached a second edition in 1862. It was well received, though criticised as representing a 'narrow utilitarianism.' In 1867 he wrote a small tract on arithmetic, and in 1870 a pamphlet on national education.

To a great age Dr. Arnott retained clear faculties, and his old spirit of inventiveness never forsook him. Among his last devices was a chair-bed for preventing sea-sickness. Having a large circle of scientific friends, and being a prominent member of the Royal Institution, he lived much in the society of the most progressive men of science in London. His benefactions were widely spread. In 1869 he gave 2,000*l.* to the university of London, and 1,000*l.* to the universities of Edinburgh, Aberdeen, Glasgow, and St. Andrews. In 1865 Mrs. Arnott gave 1,000*l.* to each of two ladies' colleges in London, and after her husband's death carried out his wishes by giving 1,000*l.* to each of the four Scotch universities.

In 1859 he caught cold, which brought on a deafness, gradually increasing, and ultimately limiting greatly his sociable habits. A fall in 1871 produced a concussion of the brain and weakened his mind. He died 22 March 1874, and was buried in Edinburgh. His wife, whom he married in 1856, survived him two years. She was the widow of one of his oldest friends, Mr. Knight, and the daughter of Mr. G. H. Holley, of Blickling, in Norfolk.

Dr. Arnott was physically a very strong

man. He was perfectly sound in health, and for more than sixty years he lived in the heart of London, and rarely sought or required a holiday. In many manual exercises, such as handicraft and games, drawing, and playing upon musical instruments, he excelled. He possessed a great aptitude for languages. As an inventor he possessed many resources. He was a very sociable man, was extremely amiable, and always full of philanthropic aims and objects. There is a crayon drawing of Arnott by Mrs. W. Carpenter in the Royal Society, and a portrait by Partridge in Marischal College, Aberdeen.

[Obituary notice of Dr. Neil Arnott, in the Proceedings of the Royal Society, vol. xxv. 1877; Bain's Biographical Memoir of Dr. Neil Arnott, read before the Aberdeen Philosophical Society, 1881.] G. F. R.

ARNOUL, or ARNULF, bishop of Rochester. [See ERNULF.]

ARNULF, EARL OF PEMBROKE. [See under ROGER DE MONTGOMERIE, EARL OF SHREWSBURY (*d.* 1093).]

ARNWAY, JOHN (1601-1653), royalist divine, was of a Shropshire family and heir to a considerable estate. He was a commoner of St. Edmund's Hall, Oxford, and in 1635 rector of Hodnet and Ightfield. (For difficulties connected with these appointments see *State Papers*, Dom. 1634-5). His abounding charity and devoted loyalty were conspicuous. When he repaired to the king at Oxford in 1642, the parliament garrison at Wem plundered his house so completely that (according to his own account) they left him neither bible, nor money, nor clothes. He was promoted to be archdeacon of Coventry and prebendary of Woolvey. Resuming his activity in the royal service, his estate was sequestered and he imprisoned till after the king's death. He was then exiled, and took refuge at the Hague, where (in 1650) he published two pamphlets, (1) the 'Tablet,' a vindication of the king against Milton's 'Eikonoclastes,' and (2) 'An Alarm to the Subjects of England,' an account of the oppressions which he and others had suffered. He was compelled by poverty to accept an invitation to exercise his function among the English in Virginia, where he died, it is supposed in 1653. Both his tracts were reprinted in 1661 by William Rider of Merton College.

[Wood's *Athenæ Oxon.* (Bliss), iii. 307; Fasti, i. 397, 415.] R. C. B.

ARRAN, EARLS OF. [See HAMILTON and STEWART.]

ARROWSMITH, AARON (1750-1823), geographer, the head of a well-known family of cartographers, was born in Winston, Durham, 14 July 1750. His father dying while he was young, his mother married again, the stepfather being a dissipated man, who soon wasted the children's patrimony. Young Arrowsmith was thus early in life thrown on his own resources for a livelihood. The only instruction he ever received beyond the mere elements of reading and writing was in mathematics, from the eccentric Emerson [see EMERSON, WILLIAM], who was so taken by the boy's anxiety to learn that he taught him for one winter.

Arrowsmith came to London about 1770. One authority states that he commenced his career under W. Faden, but of this there is no evidence extant; another authority, apparently better informed from private sources, states that he first found employment with John Cary, for whose county maps Arrowsmith made all the pedometer measurements and drawings. We find him in 1790 established in Castle Street, Long Acre, where, at great cost and labour, he brought out his first effort in map-making, 'A Chart of the World upon *Mercator's* Projection, showing all the New Discoveries, . . . with the Tracts [*sic*] of the most distinguished Navigators since 1700.' This chart, now rare, was published 1 April 1790. There is a copy preserved in 'Brit. Mus. Gren. Lib. 20273.' In 1794 he published his large 'Map of the World' on the *Globular* projection, on the same scale as the *Mercator* chart, viz. five equatorial degrees to one inch. With the map of 1794 he published a 'Companion' in quarto, from which we learn that these two maps were published 'in order to exhibit the contrast between the two best projections upon which general maps of the world can be constructed.' The materials used in the second map were mainly the collections of A. Dalrymple and the manuscripts of the Hudson's Bay Company, which last were used to much greater advantage in his 'Map of North America,' published in 1796. In 1802 Arrowsmith appears to have removed westward to Rathbone Place, where, we learn from the London directories of the period, he remained until 1808. In 1807 he brought out his 'Map of Scotland, constructed from original materials obtained by the authority of the Parliamentary Commissioners for Making Roads and Bridges in the Highlands,' engraved on four sheets, on the scale of four miles to one inch. The valuable 'Mémorial' for this map was published in 1809. The 'original materials' referred to were mainly the large manuscript 'Military

Survey of Scotland,' on the scale of 1000 yards to an inch, executed at the instance of the Duke of Cumberland, 1745-55, by the engineers under the command of General Watson. The greater part of the hill-shading was done by Paul Sandby, the well-known landscape draughtsman. This Survey, but little known, is preserved in the King's Library, British Museum. In 1814 Arrowsmith removed to Soho Square, where he carried on his business of map publishing until his death. Up to this period all our maps of India had been based upon route surveys only. In 1822 Arrowsmith produced his 'Atlas of Southern India,' on the scale of four miles to one inch, in eighteen sheets, which was based upon the triangulations of Colonel Lampton and the 'Madras Survey Maps.' This was his last important work, which became the model for the well-known 'Indian Atlas,' afterwards issued by the directors of the East India Company in 1827.

Arrowsmith died at his house in Soho Square, 23 April 1823, aged 73 years. After his decease the business was carried on by his two sons, Aaron and Samuel. A fairly complete list of the maps and charts made and published by the elder Arrowsmith might be compiled from the newly-printed catalogue of maps in the British Museum, and the catalogue of the map-room of the Royal Geographical Society, 1882. Considering the period at which they were published, it is remarkable that sufficient patronage should have been found for such large and costly maps and charts. They were evidently remunerative, as they obtained a high reputation throughout Europe for their correctness, distinctness, and good engraving. Although Arrowsmith never received the scientific training of a Berghaus or a Ritter, his work never deserved the adverse comments bestowed upon it by Klaproth, than whom a more fanciful geographer never made a map. Arrowsmith's merits were rather those of a well-trained map-maker than a scientific geographer. He understood the projection of maps in all its branches thoroughly, which enabled him to utilise, in a way peculiarly his own, all the vast store of information and material placed at his disposal by his friends Dalrymple and Rennell, and the Directors of the Hudson's Bay and the East India Companies. His elephantine maps, as compared with those of to-day, will always remain monuments of his untiring industry and unshaken faith in honest work. The maps published after his death bearing his name are either new editions corrected to date, or new ones made by his son Aaron, who with his brother Samuel

carried on the business until the death of the latter in 1839. To this period may be assigned the 'Geometrical Construction of Maps and Globes,' 1825, 4to. The Atlas to accompany the 'Edinburgh Dictionary of Geography,' 6 vols. 8vo, 1827; 'Atlas of Ancient Geography,' 1829, 8vo; 'Atlas of Modern Geography,' 1830, 8vo; and the 'Bible Atlas,' by Samuel, 1835, 4to.

[Dict. Biog. S. D. U. K.; Ocean Highways, 1873-4, p. 124; Markham's Indian Surveys, 2nd ed. 1878.] C. H. C.

**ARROWSMITH, EDMUND** (1585-1628), Jesuit, sometimes known as **BRADSHAW** and **RIGBY**, was born in 1585 at Had-dock, in the parish of Winwick, near Warrington, Lancashire. His father was Robert Arrowsmith, a yeoman, and his mother Margery was a lady of the ancient family of Gerard. Both his parents were catholics, and great sufferers for their religion, as were also their fathers before them. He was baptised as Brian, but took the christian name of Edmund at confirmation, and used it exclusively afterwards. Crossing the seas in 1605 he was received into the English college at Douay; was ordained priest in 1612; and sent back upon the English mission in 1613. He pursued his missionary labours in his native county of Lancaster with great zeal and success. In 1624 he entered the Society of Jesus. Previously to this he had been apprehended, probably in 1622, and imprisoned at Lancaster, but he was released afterwards upon pardon, with divers others. His second apprehension took place a little before the summer assizes of 1628, at which he was tried before Sir Henry Yelverton, on a charge of having taken the order of priesthood beyond the seas in disobedience to the king's laws. He was found guilty, and suffered at Lancaster, 28 Aug. 1628. He was drawn to the place of execution on a hurdle, and after having been hanged, his body was cut down, dis-membered, embowelled, and quartered. His head was also cut off, and with the quarters boiled in the cauldron; the blood, mixed with sand and earth, was scraped up and cast into the fire. Lastly, his head, as the sentence directed, was set up upon a pole amongst the pinnacles of Lancaster castle, and the quarters were hung on four several quarters of the building. The incidents of the trial and the repulsive particulars of the execution are given in 'A True and Exact Relation of the Death of Two Catholicicks, who suffered for their Religion at the Summer Assizes, held at Lancaster in the year 1628. Republished with some additions, on account of a wonderful Cure wrought by the Interces-

sion of one of them, F. Edmund Arrowsmith, a Priest of the Society of Jesus, in the Person of Thomas Hawarden, son of Caryl Hawarden of Appleton, within Widness in Lancashire. The death of the generous Layman, Richard Herst, was not to be omitted, that the happy Cause, which united them in their Sufferings, may jointly preserve their Memories.' Lond. 1737. This octavo volume contains two excellent portraits of the martyrs, the second of whom, Richard Herst, a farmer, suffered the day after Father Arrowsmith. Most probably its compiler was Father Cornelius Morphy.

The miraculous cure is alleged to have been wrought by Father Arrowsmith's intercession, through the application of the famous relic, the martyr's hand, which is now preserved in the catholic church of St. Oswald at Ashton, Newton-le-Willows. Attestations respecting another miracle said to have been wrought by means of this relic are printed in Foley's 'Records of the English Province of the Society of Jesus.' That the relic is still an object of popular veneration is obvious from the following intimation relating to the church at Ashton, given in the 'Catholic Directory,' published in 1883, *permissu superiorum*:—"Those who wish to visit "the Holy Hand" will have an opportunity of satisfying their devotion on Sunday after the Masses, and after service; on week-days after Mass, and on Friday at 1.30."

**ARROWSMITH, JOHN, D.D.** (1602-1659), puritan divine, was born near Newcastle-on-Tyne on 29 March 1602. In 1616 he entered St. John's College, Cambridge, and graduated B.A. in 1619, and M.A. in 1623. In 1623 he became fellow of St. Catherine's Hall. He married in 1631, and became incumbent in the same year of St. Nicholas Chapel, King's Lynn. He was nominated on 25 April 1642 one of the two Norfolk

divines to be consulted on church affairs. He sat as a member of the Westminster Assembly in 1643. In 1644 he was made D.D. and master of St. John's College, in the room of Dr. Beale, removed by the Earl of Manchester. On the sequestration of the Rev. Edward Sparke, D.D. (author of 'Scintilla Altaris'), Arrowsmith obtained the rectory of St. Martin's, Ironmonger Lane, in 1645, and became a member of the Sixth London Classis, as soon as the presbyterian form of government was set up. In 1647 he was vice-chancellor of Cambridge University, in 1651 regius professor of divinity at Cambridge, and in 1653 became master of Trinity. His writings are sternly puritanical, but candid and clear. He must have had rich and endearing qualities and some breadth to secure for him at Cambridge the deep attachment of Whichcote, who speaks of him as 'my friend of choice, a companion of my special delight, whom in former years I have acquainted with all my heart,' and further bears testimony to 'the sweetness of his spirit and the amiableness of his conversation.' He died in February 1659, being buried 24 Feb. He published sermons: 1. 'Covenant-avenging Sword brandished,' 1645. 2. 'England's Ebenezer,' 1645. 3. 'A great Wonder in Heaven,' 1647 (all preached before parliament). Also (4) 'Tactica Sacra; sive, de militie spirituali pugnante, vincente et triumphante Dissertatio. Accesserunt Orationes aliquot anti-Weigelianæ,' 1657; and (5) 'Armilla Catechetica: a Chain of Principles . . . wherein the chief heads of Christian Religion are asserted,' 1659. Posthumously appeared his (6) *Θεὸς ἄνθρωπος* or God-man; being an exposition of John i. 1-18, 1660.

[Coles' MS. Athenæ Cantab. in Brit. Mus.; Tulloch's Rat. Theol. and Christ. Philos. in England in the Seventeenth Century, 1872, ii. 76-7.]  
A. G.

**ARROWSMITH, JOHN** (1790-1873), geographer, nephew of the elder Aaron Arrowsmith, came to London in February 1810, and for many years, with his cousins Aaron and Samuel, aided his uncle in the construction of his large collection of maps and charts. After his uncle's death in 1823 he commenced business on his own account in Essex Street, Strand, but finally succeeded to the honours of the house in Soho Square on the death of his cousin Samuel. His first publication was the well-known 'London Atlas' in 1834, fol., which has passed through three editions, thus reverting to the practice of Ortelius and Mercator of the sixteenth century. In constructing the sixty-eight maps for the latest edition of his 'Atlas' in 1858, he informs us

in the preface that 'he examined more than 10,000 sheets of private maps, charts and plans, thereby rectifying all the labours of his predecessors.' His large maps and charts are:—India, in twenty sheets; England and Wales, in eighteen; Spain, twelve; World, ten; Pacific, nine; Atlantic, British Channel, Canada, and Ceylon, each in eight sheets; America, Australia, France, Germany, Wilkinson's Thebes, each in six sheets; Africa, America, Asia, Bolivia, East Indies, West Indies, and Italy, each in four sheets. To these may be added numerous smaller maps, illustrating expeditions in various parts of the globe, many of which are to be found in books of travel and the Royal Geographical Society's Journals. He retired from the more active pursuit of publication of his maps in 1861, but devoted some of his time to the improvement of his old maps, or to the illustration of other geographical work. Among the maps left unpublished at his death were some very fine ones of each of the Australian colonies, of Ceylon, and of other countries. Arrowsmith's last labour was a small map of Central Asia, on the scale of about ninety geographical miles to the inch, upon which he was working at the India Office up to the last week of his life. Arrowsmith died at his house in Hereford Square, South Kensington, 1 May 1873, aged 83. He was one of the fellows who aided in founding the Royal Geographical Society in 1830, and for many years was one of the council, and in 1863 he received the patron's gold medal for the important services he had rendered to geographical science.

By an order of the Court of Chancery the vast collections of the Arrowsmiths, consisting of maps, plates and manuscripts, were dispersed by public auction on 28 July 1874, and have since fallen into the hands of one of our most eminent map publishers.

**ARSDEKIN, RICHARD**. [See **ARCHDEKIN, RICHARD**.]

**ARTAUD, WILLIAM** (fl. 1776-1822), portrait painter, was the son of a jeweller. In 1776 he gained a premium from the Society of Arts; in 1780 exhibited his first work, a 'St. John,' in the Academy; in 1784 and 1786 he sent portraits in oil to the same place. He gained the gold medal of the Academy for a picture from 'Paradise Lost,' and (in 1795) the travelling studentship. In 1822 his name appears as an exhibitor at the Academy for the last time. He painted portraits of Bartolozzi, Samuel Parr, Priest-

ley, and other well-known characters. Nagler gives a list of engravings after his paintings. The date of his death is not known. 'His portraits were cleverly drawn, and painted with great power. They have individuality of character, but want expression.'

[Nagler, 2nd ed.; Redgrave's Dict. of Eng. Painters.] E. R.

ARTHUR, the real or fabulous king of Britain, and a favourite hero of romantic literature from the middle ages down to our own days, is not mentioned by any contemporary writer; unless, indeed, we accept as contemporary with him certain anonymous Welsh poems in which his name occurs. It is probable that all these pieces are of a much later date. The earliest writing in which Arthur is spoken of at any length is the 'Historia Britonum' assigned to Nennius, and probably written in the eighth century. He is incidentally mentioned in the 'Annales Cambriae,' a compilation of the tenth century. The story as told by Nennius was taken up and enlarged by the addition of a mass of fabulous material from the hands of Geoffrey of Monmouth (Gruffydd ap Arthur), whose 'Historia Britonum,' in which this expanded history of Arthur occurs, was written in 1147. Geoffrey professed to have gathered his materials in Brittany. Whether he really did so, or adopted Welsh traditions which were current in his day, or whether he simply invented the fabulous details which he inserted, may be matter of dispute. Few have now any doubt that his account is worthless for any historical purpose. And though it is by no means a settled question whether Arthur is to be regarded as a purely mythical or as fundamentally an historical personage, it is pretty generally agreed that if there be any historical element in his biography this element is confined almost entirely to what we learn from Nennius. In adopting the second of these two theories and treating Arthur as originally an historical personage, we must not be thought to prejudge the matter in dispute, for it is only upon this second supposition that Arthur can be entitled to a place in this Dictionary.

Arthur was probably born towards the end of the fifth century, and, according to the most generally accepted theory, the scene of his actions lay generally in South Britain. At this time the Saxons were, with all the power they could muster, pushing their victorious arms towards the west. In their endeavours the principal resistance they met with seems to have come from that section of their opponents which was composed of men either really of Roman descent or deeply im-

bued with Roman civilisation. At the head of this body stood Ambrosius Aurelianus, who is spoken of as long waging a doubtful war against the Saxons, obtaining frequent successes over them, but, owing to the ever-increasing hordes by which the invaders were recruited, unable to draw much profit from his victories. Ambrosius claimed descent from Constantine the Tyrant, the last Roman who ever wore the purple in Britain. The later histories of Arthur represent him as the nephew of this Ambrosius, and the son of Ambrosius's brother, Uther Pendragon. Uther is certainly a mythical personage, and there is no reason to suppose a nearer connection between Arthur and Ambrosius than that Arthur succeeded to the command of the same body of Britons and in the same part of Britain as had been formerly held by Ambrosius. If we adopt an ingenious identification first proposed by Carte and supported by Dr. Guest (*Origines Celticae*, ii. 181 seq.), Ambrosius died in A.D. 508. It may have been that Arthur thereupon obtained the command of the British army. The date generally given for that event is 516. That he owed this elevation not to blood but to merit is clearly stated by Nennius in the first mention of Arthur which occurs in any extant historical document: 'Then it was that the warlike Arthur with all the kings and military force of Britain fought against the Saxons. Albeit there were many more noble than himself, yet was he twelve times chosen their commander, and was as often victorious' (Vat. MS.).

Nennius then enumerates Arthur's twelve victories, which are as follows:—1. At the mouth of the river Glein. 2, 3, 4, 5. On a river called by the Britons Dugblas [Duglas] in the region of Linnuis (Geoffrey of Monmouth converts this Linnuis into Lincolnshire, and most writers have followed his lead in determining the locality). 6. On the river Bassas (according to the Harleian MS., according to the Vatican MS. Lusas). 7. In the wood Celidon, 'which is called in British cat coit Celidon' (that is to say, Cat Celidon is the British for 'the wood of Celidon'). 8. At Guinnion Castle, 'where Arthur bore the image of the Holy Virgin, the Mother of God, upon his shoulder, and through the power of our Lord Jesus Christ and the Holy Mary put the Saxons to flight and pursued them the whole day with great slaughter. 9. At the city of Leogis (or 'legionis,' of the legion), which is called Kairleon (Caerleon on the Usk, says Geoffrey. Chester would answer to the name quite as well, and in fact many other places would do so, Kairleon simply meaning 'Camp of the Legion').

10. At the river Tribruit (Treuroit). 11. At the mountain Agnet, which is also called cat Bregon (or Breguoin. Here, again, 'cat' is simply wood. The wood of Breguoin or Bregon). A marginal gloss says that this was in Somersetshire. 12. The twelfth was the hardest fight of all, in which Arthur penetrated to the hill Badon. In this contest 960 (940 other MSS.) fell by his hand alone, no one but the Lord giving him aid.

The battle of Mons Badonicus is the only one of these mentioned by Gildas (*Hist.* c. 26), though he nowhere connects Arthur with the victory. In the 'Annales Cambriæ' it is again mentioned, and, whatever may be thought about the other eleven battles, there can be little doubt that this one is historical. Historians are not agreed with what place this Mons Badonicus is to be identified. In a gloss to Gildas it is said to be upon the Severn, and by Geoffrey of Monmouth and all who follow him it has been identified with Bath. This theory is almost irreconcilable with other ascertained facts of the Saxon conquests in the south, which show that they could not possibly have penetrated so far at this date. Carte suggested Baydon Hill, on the road between, Silchester and Chichester; Dr. Guest suggests Badbury in Dorsetshire. Roger of Wendover assigned 520 as the date of this battle, which would thus be one year after that in which, according to the Saxon chronicle, Cerdic and Cyric assumed the kingship among the West Saxons. Other writers give 516 as the date. Arthur by his later biographers is always placed as the opponent of Cerdic (Cheldric: Geoffrey).

These are really all the facts of Arthur's life for which we have any distinct historical authority. We shall speak presently of new attempts to identify the sites of Arthur's twelve battles. The first difficulty must be to reconcile the account of Nennius with the complete silence of Gildas upon the deeds of Arthur. And it must be acknowledged at once that there is much to be said for the view which would make Arthur a purely mythical personage, possibly an ancient divinity among the Britons. The large number of places connected with the name of Arthur and scattered over all the most Celtic portions of the country tells in favour of this theory. Such localities are to be found in Wales, Somersetshire, Devonshire, Cornwall, and in Scotland, as well as in Brittany. Even Nennius's account, though on the whole strongly marked with signs of sobriety and trustworthiness, is not quite above suspicion. In especial the number *twelve* for the number of Arthur's victories, taken in connection

with the twelve knights of the round table, the twelve paladins of Charlemagne, is rather suspiciously appropriate. None of these objections can be considered conclusive. The likeliest theory in support of Arthur's historical character is that he was in the eyes of his contemporaries in a far less conspicuous position than that to which he was afterwards raised by the *vox populi* of myth and ballad. In this respect his case would be only parallel to that of two other famous epic heroes, whom we are by no means bound to look upon as purely mythical creations. Could we have had accounts written by the contemporaries of Achilles, there is every reason to believe that in their eyes he would have appeared only as a petty chieftain in command of an insignificant band of auxiliaries. Something the same is actually the impression given us by the only contemporary mention of Roland, the popular hero of the 'Chansons de Geste.' Later generations would invent for Achilles his divine descent and for Roland his kinship with Charlemagne, just as for Arthur they invented the half-miraculous descent from Uther and Igera, and the kinship to Ambrosius Aurelianus.

Gildas is our witness that after the battle of Badon Hill a long peace was established between the Saxons and the Britons, and in the 'Polychronicon' we read the additional statement that Arthur 'made peace with Cerdic and gave him Hampshire and Somersetshire, which was called Wessex' (*Polychr.* cap. 6). Dr. Guest, acting upon this hint, has tried with great ingenuity and considerable success to define the limits of the two kingdoms, and thus to show the actual region over which Arthur's power extended (*Or. Celt.* ii.).

Nennius has nothing further to tell us of Arthur except the fact of his death at the battle of Camlan; and the 'Annales Cambriæ' tell us just as much, but no more. It is in the period following the battle of Badon Hill that the later biographers introduce the most extravagant portions of the Arthurian legend, the conquests of Ireland, Denmark, Norway, Gaul, Spain, and finally of the armies of the (long defunct) *Roman Republic* itself. What we learn from Gildas is more to the point, namely, that the Britons, after enjoying peaceably for some time the benefits of this 'unhoped-for succour,' did presently again break out into civil war, which raged as fiercely as if there were no external foe at their gates.

This last picture is at all events not inconsistent with what all the biographers represent as the final act in the Arthurian drama. By these accounts the king, just

when his arms had been crowned by the completest success abroad, found himself beset by treachery at home. His nephew Mordred seduced Arthur's queen Guenevere and raised a rebellion against him. Arthur thereupon turned homewards, and at his approach Guenevere fled from Mordred and hid herself in a convent; while Mordred, after being long chased from place to place, was at length brought to bay at Camlan (Cambula) 'in Cornwall' (Geoffrey).

Then took place that last and fatal battle of Camlan, which has left its echo in all the subsequent Arthurian romance. The later writers imagined the field, in the words of Malory, 'upon a down beside Salisbury not far from the seaside.' And the story went on to tell how Arthur, finding himself wounded to death, gave his sword Excalibur to Sir Bedevere, and bade him throw it into the water. And when he threw it 'there came an arm and a hand out of the water and met it and caught it, and so shook it thrice and brandished. And then the hand vanished away.' Anon came 'a little barge with many fair ladies in it, and among them a queen.' The barge came to take Arthur to the vale of Avalon, where men said that he still waited and (as they said of Charlemagne and of Frederick Barbarossa) would one day return, would 'once more place himself at the head of his countrymen, and lead them to victory. Avalon, once the mythical paradise of the Celts, came to be identified with Glastonbury, and in the middle ages men showed the inscription which had stood over the place where Arthur lay, and which expressed the history and the hope which in popular belief attached to his name—

Hic jacet Arthurus,  
Rex quondam, rexque futurus.

We have here given the generally accepted and what may be called the orthodox theory of the historic Arthur. It is impossible to give the variants upon this which the speculations of different writers have suggested. One very important theory must not, however, remain unmentioned. According to this view Arthur was not a king in South Britain, or rather South Wales, as later writers, from Geoffrey downwards, have always supposed, but a king of the North Britons of southern Scotland and of Cumbria. The sites of all his battles, say these theorists, can be identified with places which lie in the region which now forms the south of Scotland and the English border. Thus Glein, they say, is Glen in Ayrshire (or it may be in Tweeddale). Dubglas, in Linlithgow, far from being, as Geoffrey imagined, in

Lincolnshire, is Douglas in Lennox, a stream which falls into Loch Lomond; Coit Celidon is a wood on the banks of the Carron in Upper Tweeddale; Castle Guinnion is found in Wedale; Leogis, instead of being Caerleon, is (they say) at Dumbarton, that is to say, upon the Leven which flows from Loch Lomond into the Clyde. Treuroit may be identified with a place on the banks of the Forth near Stirling, where, we remember, Arthur's round table is still preserved. Agnet, or Mynydd Agnet, is a name for Edinburgh; and, finally, Badon Hill is not Bath on the English Avon, nor yet Badbury in Dorset, but Bowdon Hill, in Linlithgow, on the Scottish Avon. The history of Nennius, it is urged, is almost exclusively concerned with the doings of the invaders in the north of the island; his account ends with the accession of Ida to the Northumbrian throne.

The arguments by which this theory is supported may be studied to best advantage in Mr. W. F. Skene's 'Four Ancient Books of Wales,' and in Mr. Stuart Glennie's 'Arthurian Localities.'

If this theory should ever be established, the life of Arthur would form part of an epoch in history of which the memory has now been almost completely lost. For it must be noticed that the foes against whom the British king fought were Angles and not Saxons; and, in fact, the Angles did not come into Northumbria until after the death of Arthur. The armies over which Arthur gained his victories, then, supposing these victories to have lain in the north, were not those of the ultimate founders of the Northumbrian kingdom, but an earlier body of Saxon or Frisian invaders, whose very existence was at one time unsuspected by historians. Among the few traces which these Frisians have left behind them is Dumfries, the fort of the Frisians, as opposed to Dumbarton, the fort of the Britons. We have seen that, according to Mr. Skene, one of Arthur's victories was gained at Dumbarton.

[The bibliography of the historic Arthur is small, but that of the mythic Arthur is almost infinite. Among Welsh poems of uncertain date he is mentioned by several anonymous ones published in the 'Myvyrian Archaeology,' as well as in the 'Historic Triads.' Gildas, in his 'Historia,' as we have seen, without mentioning the name of Arthur, refers to one or two events which are connected with his history. Nennius's 'Historia Britonum' is our one authority who possesses any degree of trustworthiness, save, perhaps, the 'Annales Cambriae,' where Arthur is only twice spoken of. The mythical history of Arthur begins (in literature) with the 'Historia Britonum' of Geoffrey of Monmouth, whose contemporary, William of Malmesbury, adds one or two minor

details not given by Geoffrey. In rhyme the history was repeated about the same time by Wace and Gaimar in Anglo-Norman, and by Layamon in English. In the course of the next century several new narratives were incorporated with the history of Arthur by Walter Mapes, Geoffrey de Borron, &c., until the romantic history acquired the completeness which we find in Sir T. Malory's 'Mort d'Arthur.' Of the development of the same myth in French romantic literature it is impossible to speak here. See Guest, *Origines Celticae*; Skene, *The Four Ancient Books of Wales*, introd., *The Dean of Lismore's Book*, introd., and *Celtic Scotland*; Glennie, *Arthurian Localities*; Burton, *Hist. of Scotland*, i. ch. 5; Probert, *The Ancient Laws of Cambria* (for a translation of the Historical Triads). Lady Guest's 'Mabinogion' is a translation of the Red Book of Hergest, also published by Mr. Skene in his 'Four Ancient Books of Wales.' De Villemarqué has published numerous Breton ballads upon Arthur, which are of doubtful authenticity.] C. F. K.

**ARTHUR**, duke or count of Brittany (1187-1203), for whose death King John was responsible, was the son and heir of Geoffrey, third son of Henry II, who was killed in a tournament at Paris 19 Aug. 1186. His mother was Constance, daughter and heiress of Conan le Petit, count of Brittany. He was born after his father's death, on 29 March 1187. The Bretons hailed his birth with enthusiasm, and the bestowal upon him of the name of their national hero excited in them new hopes of independence, which was at the time seriously threatened by the ambitious designs of the kings of France and England.

The death of his grandfather, Henry II, in 1189 gave the infant Arthur a momentous political position. The principle of strictly hereditary succession made him the heir presumptive of his uncle, Richard I, to the exclusion of John, Henry II's fourth son. In order to repress John's dangerous ambition, Richard was anxious to assert Arthur's claim. In October 1190 he opened negotiations for the young prince's marriage with a daughter of Tancred of Sicily, and in a letter to Pope Clement III, dated 11 Nov. 1190, he distinctly declared his nephew his heir in case he should die childless. From that date John, who was plotting to supplant Richard I, viewed Arthur as his most dangerous enemy, and, according to one account, in 1191 entered into alliance with Philip II of France, who was willing to employ any means to injure English influence in France, to dispossess Arthur of all his rights (*Annales Monastici*, iii. 26). But this scheme proved for the present abortive; in March of the same year Philip agreed that Arthur should do homage to Richard as duke of Normandy,

and, so as to gain a more effectual control over him later, for the five years following abstained from molesting him. In April 1196 the king of France had obtained sufficient influence with the prince and his mother to insure their open support in one of his constantly recurring quarrels with Richard, and the Breton nobles aided his policy by refusing to acknowledge the king of England as Arthur's guardian. But in August 1198 Richard contrived to reverse the position of affairs, and Arthur entered into an agreement with him to follow his guidance in his relations with France.

Eight months later Richard died, and Arthur was left face to face with John, who was resolved to succeed his brother in both France and England, and was crowned king of England 27 May 1199. The nobles of Anjou, Maine, and Touraine immediately declared for Arthur, as the son of Geoffrey, John's elder brother. Constance sent the boy to Philip II, who placed him at Paris under the care of his eldest son Lewis, a lad of exactly Arthur's age. At the same time Philip took possession of several castles, forming part of the dominions claimed by Arthur, on the plea of protecting them from John. He shortly afterwards knighted Arthur, and formally invested him with Brittany and with all Richard's French dominions—Anjou, Poitou, Maine, Touraine, and Normandy. John arrived in Normandy without delay, and with an army endeavoured to establish his power in France. A conference between Philip and himself took place on 16 and 17 Aug., but no terms were made, and in the hostilities that followed in October the French king's forces were driven from Maine. But Philip's high-handed treatment of those who acknowledged Arthur's sovereignty occasioned a breach between himself and the Bretons, and William des Roches, the leader of Arthur's forces, arranged a pacification between John and his nephew. This step was an unhappy one. John is said to have imprisoned Arthur, and to have so ill-used him and his mother that they fled from him with all haste to Angers, a town already in Arthur's possession. On 22 May 1200, while the dispute was still unsettled, Philip and John met at Vernon, and Arthur did homage to his uncle for Brittany and other lands, which do not appear to have been specified; but he remained in Philip's keeping, and took part in the tournament held at the time to celebrate the betrothal of Prince Lewis to Blanche of Castile. For the greater part of the year John was in England, and Arthur was at peace, but Philip was busy preparing an attack on Normandy. In 1201

Arthur's mother died; in 1202 Philip affianced him to his daughter Marie, who was not six years old; and before many months had passed Arthur found himself forced by Philip to reopen the strife with John. The nobles of Poitou had risen in insurrection against the king of England, and Arthur was set at their head. John arrived in France and summoned his nephew, who had just been knighted for a second time by Philip, to do him homage at Argentan. He replied by marching with an army from Poitou to besiege the castle of Mirabel, where Eleanor, his grandmother, who had persistently supported John, was staying. On 1 Aug. 1202 John suddenly surprised the attacking force by night and captured Arthur. The prince was placed in the custody of William de Braose at Falaise, who treated him kindly. In the following year Braose is said to have delivered him 'safe in life and limb' to John, who removed him to Rouen. There, in the seventeenth year of his age, he was murdered, on 3 April 1203. His sister Eleanor, known as the Maid of Brittany, had also fallen into John's hands, and she was kept by him in close confinement in England.

Great uncertainty exists as to the manner in which Arthur met his death. We learn from an itinerary of the reign that John was at Rouen on 3 April 1203 (*Archæologia*, xxii. 126). There is therefore every probability, when this fact is combined with the current rumours of the time, that he was immediately responsible for the murder, but whether, as many writers have asserted, it was the work of his own hands, is doubtful. Of the contemporary chroniclers of the event, the author of the 'Annales Margam,' who alone gives the exact date of the occurrence, states that John, in a fit of frenzy, struck Arthur dead with a huge stone, and flung his body into the Seine, that it was recovered by fishermen, and subsequently buried secretly at the priory of Ste Marie des Prez, near Bec. Walter of Coventry, in his 'Memoriale,' says that Arthur suddenly disappeared, and that his burial-place is unknown. According to the circumstantial account of Ralph, abbot of Coggeshall, who wrote his 'Chronicon Anglicanum' soon after the death of John, Hubert de Burgh was ordered by the king, with the consent of his council, to put out Arthur's eyes and otherwise mutilate him, in order to incapacitate him for succeeding to the throne. Hubert, however, yielding to his appeal, spared the prince, although he announced to his master not only his death, but his burial at the Cistercian abbey of St. André de Gouffern. Later, the fact that

Arthur was still living in concealment reached John, who apparently, so far as the chronicler knew, took no steps to authenticate it. Matthew Paris and Thomas Wikes both assert that John had Arthur murdered. Early French annalists and Breton historians have no hesitation in attributing the crime immediately to the king of England, and state that fifteen days after its commission the Bretons assembled in force at Vannes, and sent Peter, bishop of Rennes, to ask Philip II to summon John before his peers to take his trial on the charge. It is agreed that Philip acceded to this request; but there seems no doubt that John refused to appear, was pronounced by an assembly of his peers guilty of the murder, and that all his lands in France were declared forfeited. It was after this declaration that Philip invaded and conquered Normandy. In the proclamation made by Prince Lewis on his arrival in England in 1216 the murder of Arthur, for which John, it is there said, was tried and condemned by his peers, is reckoned among his chief offences. This is the only direct reference to the fact in a document of state (RYMER's *Fœdera*, i. 140).

Later historians between the thirteenth and the sixteenth centuries have added a few unauthenticated details to the old stories of Arthur's death, most of which have been adopted by Holinshed. The account given by the abbot of Coggeshall forms the groundwork of Holinshed's, as of all the later narratives. It seems, therefore, uncertain whether Hubert de Burgh, whom the abbot alone connects with John's murderous project, was in any way concerned with it. The differences in detail which characterise the evidence we have cited from contemporary writers, lead to no more definite conclusion than that in April 1203 Arthur suddenly disappeared, and that his disappearance was contrived by John. Shakespeare, in his play of 'King John,' has closely followed Holinshed in his treatment of Arthur, with a few unhistorical variations, in which he followed an older and anonymous drama on the same subject. It should be noted that Shakespeare erroneously represents Arthur at the time of his death as a very young child, although he was actually in his seventeenth year, and makes him claim of John not only the English dominions in France, but the crown of England itself, to which Arthur himself never asserted his right.

**ARTHUR** (1486–1502), the eldest son of Henry VII, was born at Winchester on 19 Sept. 1486. His mother was Elizabeth of York, the eldest daughter of Edward IV, whom his father, after he obtained the crown, had married in fulfilment of a promise that he had made in exile. The marriage was intended to have the effect of putting an end to the wars of the Roses by uniting the rival houses of York and Lancaster, and the firstborn was naturally an object of great solicitude. He was baptised in Winchester Cathedral the Sunday after his birth, and was named Arthur after the famous British hero whose fabulous exploits fill the pages of Geoffrey of Monmouth. His descent was traced by industrious genealogists from Cadwallader and the ancient British kings; so that while on the mother's side he was the heir of the house of York, the defects of his father's title were compensated by a pedigree carried back to the fabled Brutus. In 1489, when only three, he was created knight of the Bath, and in 1491 knight of the Garter. His education was looked to with peculiar care. His first master after he had learned the elements was one John Rede, who, it seems, was also his chaplain (Wood's *Fasti Oxon.*, ed. Bliss, i. 3); but after a time—apparently when he was in his tenth year—he was placed under the tuition of the blind poet laureate, Bernard André, who gives a glowing account of his proficiency. Before he was sixteen he had not only studied the leading grammarians, but was familiar with all the best Greek and Latin authors, whose names the enraptured tutor proudly enumerates in his life of Henry VII.

But the interest of his brief life turns altogether upon the story of his marriage with Katharine of Arragon. Negotiations had already taken place with a view to that marriage as early as 1488, when he was not yet two years old, Ferdinand and Isabella perceiving that, notwithstanding the uncertainty of the succession in England created by the recent civil wars, Henry might be a valuable ally against France, and one that it was desirable to win, while on the other hand the friendship of a recently united Spain was an equally important object to secure on the part of England. The marriage project, of course, was no more at first than a prospec-

tive link between the two kingdoms in a comparatively remote future; but, as Lord Bacon remarks, 'the very treaty itself gave abroad in the world a reputation of a strait conjunction and amity between them, which served on both sides to many purposes that their several affairs required, and yet they continued still free.' Ferdinand was too great a politician to conclude the arrangement definitely till he was sure that no future Simnels or Warbecks could do much to shake Henry's throne. Henry, on the other hand, was continually on his guard lest by virtue of the treaty he should make himself a mere catspaw to carry out the designs of Ferdinand. At length, however, all difficulties were removed. Katharine landed at Plymouth on 2 Oct. 1501, and was married to Arthur, at St. Paul's, on 14 Nov. following. Three times had the prince gone through a form of marriage with her already before her arrival in England, the Spanish ambassador acting as her proxy—all to satisfy the doubts of Ferdinand lest there should be some evasion on the part of England. Now all was secure; and though Arthur was weak and sickly, and the English council objected to the cohabitation of the young couple on this account (Arthur having only just completed his fifteenth year), Henry wrote to Ferdinand that he had risked his son's health for the love he bore to Katharine. The prince and his bride were sent down to the borders of Wales to keep court at Ludlow, where, in less than five months, the bridegroom died on 2 April 1502. A touching account is given by a contemporary pen of the manner in which the news was received by his bereaved father and mother.

[Gairdner's *Memorials of Henry VII*; Bergenroth's *Spanish Calendar*, vol. i. and supp. to vols. i. and ii.; Leland's *Collectanea*, iv. 204, 250–7, v. 373–4; Somers Tracts, i. 26–31; Letter of Henry VII to Ferdinand and Isabella in the Duke of Manchester's Court and Society, i. 59.] J. G.

**ARTHUR, ARCHIBALD** (1744–1797), librarian and professor of moral philosophy at the university of Glasgow, was the eldest son of Andrew Arthur, a considerable farmer, and was born at Abbot's Inch, in Renfrew, 6 Sept. 1744. He entered the university of Glasgow in his thirteenth or fourteenth year, and in due course took his degree of M.A. Both before and after his appointment to a professorship he lectured with success in logic, botany, humanity, and church history. In October 1767 he received from the presbytery of Paisley his preacher's

license, not, however, without some opposition on the ground of want of orthodoxy in the doctrines of the church of Scotland. He was soon afterwards appointed chaplain to the university of Glasgow, and assistant minister with Dr. Craig of that city. He was also chosen librarian to the university, and held the office until nearly the close of his life. For some years he was usefully employed in compiling a complete catalogue of the books, arranged in two parts, one under an alphabet of authors, and the other according to the position of the volumes on the shelves. The catalogue was printed in 1791, and described 20,000 volumes. It gave much satisfaction. Arthur was appointed assistant professor in moral philosophy through the influence of Dr. Thomas Reid, who was obliged to give up his full professorial duties on account of increasing years. This took place in May 1780, and Arthur taught the class for fifteen years in return for part of the salary. On the death of Reid he was elected full professor, but held the office only for one session, dying on 14 June, 1797. He never married, and died worth a considerable sum of money, which he left to his brothers and sisters. They devoted part of it to the publication of his posthumous 'Discourses on Theological and Literary Subjects,' which were edited, with a pompous memoir, by his friend William Richardson. The theological discourses include one on the argument for the existence of God, another on the goodness of God, and others on objections to David Hume, and similar topics; among the literary discourses are two upon theories of beauty, one on the arrangement of ancient and modern languages, and others on the study of ancient languages as a necessary branch of liberal education. They are fairly well-written and well-reasoned essays. Arthur had a shy and hesitating manner, but possessed liberal opinions to which he always had the courage to hold firm. A. F. Tytler (*Life of Lord Kames*, iii. 89), in a note upon a letter of Dr. Reid, remarks: 'Mr. Arthur, a man of learning, abilities, and worth, filled the chair of moral philosophy . . . with a reputation which did not disappoint the hopes of his respectable predecessor.' The Discourses 'give a very favourable idea of his talents, the justness of his taste, and the rectitude of his moral and religious principles.'

His works are:—1. 'Catalogus impressorum Librorum in Bibliotheca Universitatis Glasguensis, secundum literarum ordinem dispositus. Impensis Academiæ, labore et studio A. Arthur,' Glasguæ, 1791, 2 vols. folio. 2. 'Discourses on Theological and Literary

Subjects, by the late Rev. A. Arthur, with an account of some particulars in his life and character, by William Richardson, M.A., Professor of Humanity in the University of Glasgow,' Glasgow Univ. Press, 1803, 8vo.

[Memoir by Richardson, prefixed to Discourses; Edinburgh Review, iv. 168; Reid's Works, by Sir W. Hamilton, 1846.] H. R. T.

ARTHUR, SIR GEORGE, baronet (1784–1854), lieutenant-general, the youngest son of John Arthur, of Norley House, Plymouth, entered the army in the 91st Argyllshire Highlanders on 25 Aug. 1804. Having been promoted to a lieutenancy in the 35th foot, he served with that regiment in Sir James Craig's expedition to Italy in 1806, and in the following year proceeding to Egypt with the force under the command of General Fraser, he was engaged in the attack upon Rosetta, and was severely wounded. In 1808 he served as a captain in Sicily under Sir James Kempt, and in 1809 in the expedition to Walcheren, where, in command of the light company of his regiment, he was employed in the attack upon Flushing, and was again wounded, he with his single company taking prisoners five officers and three hundred men. For his services on this occasion Captain Arthur was thanked in general orders, and was appointed on the field deputy assistant adjutant-general. On his return to England he received the freedom of the city of London and a sword. A similar distinction was conferred upon him by his native town of Plymouth. He subsequently served as military secretary to Sir George Don, the governor of Jersey, and having obtained his majority in the 7th West India regiment in 1812 joined that regiment in Jamaica, and was shortly afterwards appointed assistant quartermaster-general of the forces in that island. Major Arthur was subsequently appointed, in 1814, lieutenant-governor of British Honduras, which office he held with the rank of colonel on the staff, exercising the military command, as well as the civil government, until 1822. During this period Colonel Arthur suppressed a serious revolt of the slave population of Honduras. His despatches on the subject of slavery in the West Indies attracted the attention of Mr. Wilberforce, and of Mr. (afterwards Sir James) Stephen. Returning to England on leave of absence in 1822 for the purpose of furnishing the government with further information on the subject of emancipation, Colonel Arthur was appointed, in 1824, to the lieutenant-governorship of Van Diemen's Land, together with the command of the military forces in that colony, then our principal penal settlement. The ill-regulated

system of transportation which was in force had led to terrible abuses, and the object of Colonel Arthur's appointment was the introduction of an improved system. His strong good sense and humanity indicated the possibility of a middle course between the extreme severity of the system which would make transportation simply deterrent, and the over-indulgence of the system which aimed at reforming the convict by gentle treatment. He held that it was possible to make transportation a punishment much dreaded by criminals, whilst offering every facility for reform to those who were not hardened in crime; but he entertained no quixotic expectations of frequent reformation. His plans were never allowed a fair trial. The colonists and their friends in England were bent on putting an end to the transportation system, and their views ultimately prevailed. Colonel Arthur's administration of Van Diemen's Land lasted for twelve years, and was marked throughout by a rare combination of humanity with firmness and courage, and, above all, by a shrewd common sense and practical judgment, which secured for him alike the respect of the colonists abroad and the confidence of statesmen at home. While holding this government Colonel Arthur discerned the advantage which would accrue to the Australian colonies from adopting a system of confederation. It is believed that he was the first person to suggest this important colonial reform.

On his return to England in March 1837 Colonel Arthur received the Hanoverian order, and at the end of that year was sent to Upper Canada as lieutenant-governor, with the military rank and command of a major-general on the staff. The state of Canada at that time was such as to demand the services of a firm and judicious administrator. Both the provinces of Upper and Lower Canada had recently been the scene of attempts to subvert the authority of the British crown. These had been suppressed, but Lord Durham's mission and the lenity with which the rebels were treated, had caused much dissatisfaction among the loyal section of the population in both provinces, and especially among the militia in Upper Canada. On the eve of Lord Durham's departure a fresh revolutionary attempt had been made in Lower Canada, and shortly after Sir George Arthur had taken charge of his government, Upper Canada was invaded by bands of American sympathisers. Sir George Arthur's arrangements for the defence of the colony were well planned, and were perfectly successful; but his difficulties were great. 'I much fear,' he

wrote, 'from the discontent prevailing among many of the militia, that even the most loyal of them will feel a reluctance to come forward until the very hour of emergency, and when it may be too late to prevent a great deal of mischief.'

In 1841 the two provinces were united under a governor-general, in the person of Lord Sydenham, at whose special request Sir George Arthur continued for a time to conduct the administration of Upper Canada as deputy governor, but upon his own express stipulation that he should receive no emolument or remuneration whatever for that duty. Sir George Arthur's services in Canada were rewarded with a baronetcy, which was conferred upon him shortly after his return to England in the summer of 1841. The general election, which resulted in Sir Robert Peel's return to power, was then in progress, and Sir George Arthur received from two constituencies offers to return him to parliament free of expense; but he declined both these offers, and shortly afterwards entered upon an entirely new sphere of duty, having been appointed governor of the Indian presidency of Bombay, which office he assumed on 8 June 1842. Reference has already been made in the memoir of Sir George Anderson [see ANDERSON, SIR GEORGE, K.C.B.] to the critical position of affairs in India at the time when Sir George Arthur entered upon his new duties, and to the responsibilities which devolved upon the government of Bombay in connection with our military forces in Afghanistan, Beluchistan, and Sind. A few years previously, under the provisions of the East India Company's charter act of 1833, a material change had been made in the relations of the minor governments of Madras and Bombay with the supreme government of India. Previous to the passing of that enactment, although in all matters of imperial policy the governor-general was supreme, the two minor governments had retained a large share of administrative independence. The increase in the statutory powers of the governor-general and his council was speedily followed by minute interference on the part of the supreme government with administrative details which had been previously left to the discretion of the governments of Madras and Bombay. The result was frequent and constantly increasing friction between the supreme and local administrations. These difficulties were experienced in an intensified form by Sir George Arthur, succeeding, as he did, at a crisis which required considerable power of independent judgment and yet loyal obedience by the local governments to the final decisions of the governor-general. Moreover, the unavoidable difficul-

ties of the situation were greatly increased by the individuality of Lord Ellenborough, who had recently assumed the governor-generalship. Lord Ellenborough had studied Indian questions as president of the board of control, and had formed an exaggerated view of the weakness and defects of the company's government. Arriving in India at a juncture when the Indian administration seemed stunned and paralysed by the loss of the greater portion of the army in Afghanistan, he found himself in hopeless discord with many a time-honoured institution and recognised principle of Indian administration. Sir George Arthur had before his appointment to Bombay won the confidence of Lord Ellenborough, which he never afterwards lost. Still, to avoid friction with the government of India under such circumstances was not easy, and it is much to Sir George Arthur's credit that during that brief but eventful period he succeeded in retaining the esteem of the court of directors and of his own colleagues in the government of Bombay, as well as that of Lord Ellenborough, who recorded the name of Sir George Arthur upon a monument which he erected in England to those who had best seconded his efforts for the maintenance and extension of the British empire in India.

It would be beyond the scope of this memoir to discuss the policy of Lord Ellenborough in connection with Afghanistan. Sir George Arthur was entirely opposed to the measure, at one time contemplated by the governor-general, of withdrawing the garrisons from Candahar and Jellalabad without striking a blow for the rescue of the prisoners in the hands of the Afghans, or for the re-establishment of our military reputation. Eventually the beleaguered garrison of Jellalabad was relieved, Cabul was reoccupied, the captives were released, and conclusive proof was afforded that it was not owing to want of power that we evacuated Afghanistan and allowed Dost Mahomed to return as ruler to the realm from which he had been driven.

The withdrawal of the troops from Candahar involved the return of the Bombay portion of the Candahar garrison through Sind, and was followed in the course of a few months by the annexation of that country and the deposition of its rulers, the Talpur amirs. Sir Charles Napier, then commanding a division of the Bombay army, had been selected by the governor-general to command the troops in Sind. He arrived in that country greatly prejudiced against the amirs. Nearly the whole of the troops in Sind belonged to the Bombay army, the general

commanding was a major-general on the staff of that army, and up to that time the troops in Sind had been practically as well as theoretically under the orders of the government of Bombay; but from the date of Sir Charles Napier's appointment to the Sind command the governor-general departed from the established practice of sending orders through the government of Bombay, and entered into a direct correspondence with Sir Charles Napier. Such a state of things could hardly have failed under any circumstances to produce official and departmental friction, even if the policy of the governor-general and of the general commanding in Sind had been in accordance with the views of the Bombay authorities and of the court of directors. But the reverse was the fact, and the antagonism was intensified by the differences which arose between Sir Charles Napier and Major (afterwards Sir James) Outram. Throughout this embarrassing juncture Sir George Arthur kept himself studiously aloof from all personal partisanship, and, ignoring the irregularity of Lord Ellenborough's proceedings, rendered a loyal obedience to the decisions of the governor-general and a cordial and energetic support to Sir Charles Napier in his difficult task of establishing British rule in Sind; whilst he retained the respect and esteem of Outram and of the many other Indian officials who regarded the annexation of Sind as an unjustifiable act.

The military operations against Gwalior, which took place not long before the close of Lord Ellenborough's government, indirectly affected the presidency of Bombay by leading to an outbreak of hostilities in Kolapur, a small southern Mahratta state, the head of which was closely connected by marriage with Gwalior. The suppression of this insurrection, which, but for Sir George Arthur's judicious and prompt measures, might have assumed serious proportions, and that at a time when so large a portion of the Bombay army was employed in Sind, was by no means an easy task.

Lord Ellenborough, having been recalled by the court of directors, was succeeded by Sir Henry Hardinge, upon whom it devolved in the succeeding year to repel the invasion of British India by the Sikhs. The arduous struggle which then took place, when the governor-general deemed it his duty to offer his services to the commander-in-chief as second in command, led Sir H. Hardinge to recommend to the home authorities the appointment of a provisional governor-general. His choice fell upon Sir George Arthur, and, the recommendation having been approved by the court of directors and the ministry,

Sir George Arthur received in due course his appointment as provisional governor-general in the event of the death or departure from India of Sir Henry Hardinge. But he was not destined to assume the office for which he was thus selected, being compelled by ill-health to leave India before Sir Henry (then Lord) Hardinge vacated the governor-generalship.

The principal measures of internal administration which engaged Sir George Arthur's attention at Bombay were the Deccan survey, the object of which was to equalise and lighten the pressure of the land assessment upon the cultivators of the Deccan, and the improvement of the communications and means of irrigation. The first of these measures had been commenced before the arrival of Sir George Arthur at Bombay; but it was during his administration that the plan which has since been carried out was elaborated, and the rules which relieved the cultivators from arbitrary and excessive taxation were fixed.

The hindrances which the want of roads and of means of irrigation offered to the commerce and industry of Western India had attracted the notice of Sir George Arthur's predecessor, Sir Robert Grant; but little progress had been made when Sir George Arthur arrived and took up the subject with characteristic energy. The project of a line of railway from Bombay to Calian, which was to be extended in the direction of Calcutta and through Central India to Hindustan, was suggested by Mr. G. T. Clark, a trusted assistant of Brunel, and received the cordial support of Sir George Arthur. This line may be regarded as the germ of the Great Indian Peninsular Railway. Other engineering questions, upon which the same engineer was employed by Sir George Arthur, were the improvement of the manufacture of salt by mechanical appliances, and the drainage and sanitary improvement of Bombay, both of which important works have since been carried out. Mr. Clark's report on the conservancy of Bombay was not only the starting point of such improvements in that city and in other cities in India, but was not without its influence on the sanitary improvement of our English towns, which about the same time was first taken up in earnest in this country.

Another material improvement, first projected during Sir George Arthur's administration, was the reclamation of the foreshore of the island of Bombay. Sir George Arthur also took a great interest in promoting the education of the natives, which at that time, under the impulse given to it some years previously by Mr. Mountstuart Elphin-

stone, was somewhat more advanced in Bombay than in other parts of India.

Sir George Arthur retired from the Bombay government in 1846, and on his return to England was made a privy councillor and was honoured by the university of Oxford with the honorary degree of D.C.L. He received the colonelcy of the 50th Queen's Own regiment in 1853, was promoted major-general in 1846 and lieutenant-general in 1854, and died 19 Sept. 1854. Arthur married in 1814 Eliza Orde Usher, second daughter of Lieutenant-general Sir John Frederick Sigismund Smith, K.C.B., and had five daughters and seven sons, of whom five survived him.

The career of Sir George Arthur is at once remarkable and instructive. Entering the army as a young man with little or no interest to push him on, he speedily established a reputation for bravery and sound judgment, which led to his being selected at a comparatively early age for civil employment. This he continued to hold until within a few years of his death, rising without solicitation from post to post, and in every position which he filled justifying by his administrative ability and capacity for government the confidence which had been reposed in him. Ultimately he was nominated at a time of difficulty and danger to the responsible office of governor-general of India, a post which he only failed to fill in consequence of his failing health. He was an eminently unselfish man, imbued with a deep sense of religion, and as much respected for his unswerving integrity in private as in public life.

[Hart's Army List; Annual Register for 1838 and 1854; United Service Gazette, 30 Sept. 1854; Parliamentary Papers on Afghanistan, Sind, and the Southern Mahratta Country; Family papers.]  
A. J. A.

ARTHUR, JAMES (*d.* 1670?), divine, was born at Limerick, and professed himself a Dominican friar in the abbey of St. Stephen, Salamanca. He was professor of divinity at Salamanca University for many years. He went thence to Coimbra, but after the separation of Portugal from Spain in 1640 was expelled for refusing an oath imposed upon all the professors to defend the immaculate conception of the Virgin. In 1642 he retired to the convent of St. Dominic in Lisbon, and there, according to Quetif and Echard, died on 1 Feb. 1644. Ware says that he survived till about 1670, referring to Nicolas Antonio, who, in the *'Bibliotheca Hispana Nova'* (1672), says that he died *'non dudum'*. The first volume of a commentary by Arthur upon the first part of Aquinas's *'Summa'* was printed in 1655; another volume had been completed,

but seems never to have been printed. Arthur was also preparing at the time of his death a commentary on the whole of Aquinas's work in ten volumes.

[Ware's *Writers of Ireland*, ed. Harris, p. 160; Quetif and Eehard's *Scriptores Ordinis Prædicatorum*, ii. 536 b; N. Antonius, *Bibliotheca Hispana*, (1672) ii. 358, (edition of 1688) ii. 368.]

**ARTHUR, THOMAS** (d. 1532), divine and dramatist, a native of Norfolk, was educated at Cambridge, probably in Trinity Hall, and imbibed protestant opinions from his fellow-countryman, Thomas Bilney. He was admitted a fellow of St. John's College in February 1517-8, being then a master of arts, and in 1518 he occurs as principal of St. Mary's Hostel. In 1526 he and Bilney were charged with heresy, and compelled to take an oath abjuring Luther's opinions. In November 1527 they were brought as relapsed heretics before Cardinal Wolsey and other bishops in the chapter-house at Westminster. Both of them recanted and did penance, though Bilney afterwards had the courage of his opinions and suffered for them at the stake. Arthur died at Walsingham in 1532.

He wrote: 1. '*Microcosmus*,' a tragedy. 2. '*Mundus plumbeus*,' a tragedy. 3. '*In quosdam Psalmos*.' 4. '*Homelie Christianæ*.' 5. A translation of Erasmus, '*De Milite Christiano*.'

[Tanner's *Bibl. Brit.*; Fox's *Acts and Monuments*; Cooper's *Annals of Cambridge*, i. 325; Baker's *Hist. of St. John's Coll. Camb.* ed. Mayor, i. 282; Cooper's *Athenæ Cantab.* i. 46.] T. C.

**ARTHUR, THOMAS, M.D.** (1593-1666?), Irish catholic physician, was born of an ancient family settled at Limerick, many members of which had filled municipal offices in that city in early times. His father's name being William, he often styled himself Thomas Arthur Fitz-William. He was educated at Bordeaux, and afterwards studied medicine at Paris. In May 1619, having returned to his native country, he began a successful practice in Limerick, and soon gained the reputation of a skilful physician. In April 1624, on the invitation, as he himself tells us, of persons of influence, he opened practice in Dublin, where he spent the greater part of his time, but still attended patients in Limerick during occasional visits. In 1630, however, he moved his household to the capital. His manuscript entry-book (*Brit. Mus. Add. MS. 31885*) contains a complete list of his patients and fees from 1619 to 1666, the last date being probably the year of his death. Among the various cases which he treated the most important one, or at

least the one in which he took most pride, was that of Archbishop Usher, 'pseudo-primas Ardmachanus,' whose complaint had baffled the English physicians. Arthur effected a cure in 1626, and received a fee of 51l. His success brought him the patronage of the lord deputy, Viscount Falkland. His entry-book also contains an exact record of his gradual accumulation of landed property, and also a few pieces in ponderous Latin verse. Among the latter is an 'Anagramma physiognomicum in nomen Thomæ Wentworth, Proregis Hiberniæ, truculenti et nefarii hominis.' But his greatest literary effort is a genealogical account, '*Edyllum genealogicum*,' of the family of Arthur, in Latin elegiacs, in which, besides the glory of his ancestors, he gives some particulars of his own life.

[*Brit. Mus. Additional MS. 31885*; Lenihan's *History of Limerick*.] E. M. T.

**ARTLETT, RICHARD AUSTIN** (1807-1873), engraver, was born 9 Nov. 1807. He was a pupil of Robert Cooper, and afterwards of James Thomson. He engraved in the dotted manner a few figure-subjects, including 'Boulogne in 1805' and 'Boulogne in 1855,' after Absolon, and several portraits, among which are those of Lord Ashburton, after Sir Thomas Lawrence; Lord Lyndhurst, after A. E. Chalon; the Right Hon. Henry Goulburn and Sir James Emerson Tennent, after George Richmond; George Macdonald, after George Reid; Lady Clementina Villiers, after F. Winterhalter; and Mrs. Gladstone, after W. Say. He was, however, most distinguished as an engraver of sculpture, his plates of which in the '*Art Journal*' are executed with great taste and delicacy. Among them may be mentioned 'The Fawn,' a statue by C. B. Birch; 'The Virgin Mother,' a group by Carrier-Belleuse; 'The Leopard-Hunter,' a statue by Jerichau; 'The Day-Dream,' a statue by P. MacDowell; 'The Veiled Vestal,' a statue by R. Monti; 'Boadicea,' a group by J. Thomas; the equestrian statue of Viscount Hardinge, and 'Asia,' one of the groups of the Albert Memorial, by J. H. Foley; 'Christ giving sight to the Blind Man,' a group by J. D. Crittenden; and 'Perdita and Florizel' and 'The Siren and the drowned Leander,' groups by J. Durham. He died 1 Sept. 1873.

[*Art Journ.* 1873, p. 377.] R. E. G.

**ARUNDALE, FRANCIS** (1807-1853), architect, born in London 9 Aug. 1807, was a pupil of Augustus Pugin; he accompanied his master to Normandy, and helped him with his '*Architectural Antiquities of*

Normandy.' With Pugin he stayed seven years. In 1831 he went to Egypt, and in 1833 with Mr. Catherwood and Mr. Bonomi to Palestine. He was nine years in the East, and then travelled in Greece, Sicily, Italy, and France. In Rome he spent several winters. He never actually practised as an architect, but he painted some large pictures from his oriental studies, and published a number of books, amongst which may be mentioned the 'Edifices of Palladio' in folio, 1832; 'Illustrations of Jerusalem and Mount Sinai,' 4to, 1837; and, in conjunction with Mr. Bonomi, 'Selections from the Gallery of Antiquities in the British Museum,' 4to, 1842.

Arundale married a daughter of Mr. Pickersgill, R.A., and had six children. He died at Brighton on 9 Sept. 1853.

**ARUNDEL, EARLS OF.** [See **ALBINI**, **FITZALAN**, and **HOWARD**.]

**ARUNDEL, THOMAS** (1353-1414), archbishop of Canterbury, was the third son of Richard Fitzalan, earl of Arundel, the title of his father being, according to a very common custom, used as a family surname. His mother was Eleanor, daughter of Henry Plantagenet, earl of Lancaster, and was his father's second wife. The Fitzalans were an old Norman family whose ancestor Alan, the son of Fleald, came in with the Conqueror. The earldom of Arundel had come to them by marriage in the reign of Henry III. The influence they possessed is shown by the singularly early age at which young Thomas Arundel attained high preferment in the church. He was archdeacon of Taunton in 1373, was promoted by papal bull to the bishopric of Ely on 13 Aug. in the same year, was consecrated in April following, and received full possession of the temporalities on 5 May 1374, when he was only in his twenty-second year. On 24 Jan. 1376 he lost his father (**DUGDALE**, i. 318), and Richard, the elder of his two brothers, succeeded to the title of Earl of Arundel. With the subsequent career of this brother, who became a leading actor in the turbulent times of Richard II, a considerable part of his own life is very closely connected.

The first occasion on which we find him taking a prominent part in public affairs is in the year 1386, when parliament demanded of Richard II the dismissal of the chancellor Michael De la Pole, duke of Suffolk. The king at first replied that he would not at their request discharge the meanest servant of his

kitchen. Nevertheless he afterwards lowered his tone, and was willing to hear the complaints of the commons if forty members of the lower house were sent to represent them. It was then agreed between lords and commons that the king's uncle, the Duke of Gloucester, and the Bishop of Ely (Arundel) should go to him at Eltham, and persuade him to come to Westminster. Richard accordingly came to the parliament, when he presently found himself compelled to dismiss Suffolk and make Arundel chancellor in his room (24 Oct.—**RYMER**, vii. 548). On 20 Feb. following an assignment was made to him of the towns and parishes of Hackney and Leyton for the support of his household as chancellor (*ib.* 553).

This was the beginning of that first great struggle between Richard and his parliament for which, in the latter part of his reign, he so unwisely revenged himself. A council of regency was appointed, consisting of eleven lords, of whom the Earl of Arundel, the new chancellor's brother, was one of the most prominent. Next year Richard took counsel with his judges at Nottingham as to the validity of what had been done in parliament, and obtained from them a unanimous opinion that the commission of regency was invalid, the statutes unconstitutional, and those who had procured them guilty of treason. The result was that five confederate lords marched up to London at the head of 40,000 men, and brought accusations against Richard's councillors, which they offered to prove by single combat. By the advice of Bishop Arundel and the Earl of Northumberland Richard again put himself into the hands of those whom he distrusted, and the councillors who had hitherto supported him took to flight. This paved the way for the Wonderful parliament, in which the fugitives were pronounced guilty of treason. Among these was Archbishop Nevill of York, who, being a churchman, could not be put to death. Application, however, was made to Rome for his translation to St. Andrew's, by which he was in effect deprived of any benefice whatever, as Scotland adhered to the schismatic pope, Clement VII, and did not acknowledge the bulls of Urban VI. The see of York being thus vacated, Arundel was made archbishop in Nevill's place by a bull procured from Pope Urban on 3 April 1388 (**RYMER**, vii. 573).

Next year the king declared himself of age, and finally dismissed the council of regency. Arundel was required to give up the great seal (3 May), and William of Wykeham, bishop of Winchester, was made chancellor in his room next day (**RYMER**, vii. 616).

But the king exercised his new powers with moderation for some years, and in 1391 (when William of Wykeham resigned) actually made Arundel chancellor again on 27 Sept. (*ib.* 707). Next year, on 30 March, an order was issued by him as chancellor for the removal of the courts of King's Bench, Common Pleas, and Exchequer from London to York (*ib.* 713). This was perhaps either the cause or the effect of the disaffection shown towards the king by the city of London that year; and it appears to have been attributed by some to Archbishop Arundel's desire to promote the interest of his own cathedral city. London, however, was reconciled to the king in the course of the following summer, and after Christmas justice returned to its old haunts. In 1394, after the king had gone over to Ireland, the archbishop, along with the Bishop of London and others, was sent over to him on behalf of the clergy to request his speedy return, in order that they might better withstand the attacks of the Lollards, who aimed at the complete disendowment of the church; and their remonstrances were so effectual that the king returned from Ireland after Easter.

In 1396 Arundel was promoted to Canterbury, on the death of Archbishop Courtney, by a papal bull dated 25 Sept. It was in anticipation of this promotion (for the bull was only received at Lambeth on 10 Jan. following, and published at Canterbury next day) that he on 27 Sept. resigned the great seal once more (RYMER, vii. 840). He received the pall from William of Wykeham, bishop of Winchester, on 10 Feb. 1397, and was enthroned at Canterbury on the 19th. The very next day, if we may trust the date in the register, he presided over a synod in London, which had assembled the day before, and received an address from the faculty of law at Oxford, requesting him to vindicate his right of visitation against their chancellor, who had procured from the reigning pope, Boniface IX, a bull of exemption for the university. Arundel was nowise reluctant, and, backed by a letter from the king, endeavoured to enforce his right next year. Nevertheless, the dispute seems only to have terminated fifteen years later by the archbishop obtaining another bull from Pope John XXIII recalling that of Boniface (Wood's *Antiq. Ox.* i. 365-6).

In the London synod above referred to, the Oxford doctors also took action against the Wycliffites, and asked for the formal condemnation of a number of their opinions. In this matter too it might reasonably be supposed they had Arundel's hearty sympathy; for in no character is he better

known (at least in later days) than that of an opponent of the Lollards. But he adjourned the synod till next day, and we have no record of its further proceedings. Soon after he made new statutes for the court of Arches, and proceeded to an almost complete visitation of his province, hearing appeals everywhere from the judgment of his suffragans, whose jurisdiction he seems to have set aside to an extent altogether unusual by delegating causes to his own commissaries. He also issued two monitions to the citizens of London against withholding of tithes and other offerings, renewing an old constitution of Roger Niger, bishop of London in the days of Henry III, which appears to have fallen into neglect.

At this time, if we may trust some French accounts (and the incident might have occurred during the archbishop's visitation of his province), a new conspiracy against Richard II was hatched at Arundel by the king's turbulent uncle, Gloucester, and the Earls of Arundel and Warwick, to whom the archbishop administered the sacrament to secure their fidelity to each other. The story has been generally discredited—perhaps on insufficient grounds—because no reference to any such conspiracy is made in the proceedings soon afterwards taken in parliament against the earl and archbishop. But, whatever may have been the occasion, it is clear that there was a new outbreak of distrust on the king's part as regards the three noblemen in question. The surrender of Brest to the Duke of Brittany, and Richard's recent marriage to the daughter of the King of France, were little relished by perhaps the majority of Englishmen, least of all by the Duke of Gloucester. What the archbishop's sentiments about them were we do not know; but he himself had performed the marriage ceremony at Calais (1 Nov. 1396), and been present at the conferences with the French king which immediately preceded it. And, whether he deserved the king's confidence or not, there was no appearance that it had yet been withdrawn from him. But a sudden storm in the political world changed the position of matters for him as for others. The king, suspecting the designs of Gloucester and the Earls of Arundel and Warwick, invited these three noblemen to dine with him on 10 July. Gloucester excused himself on the ground of ill health; Arundel thought it best to remain in his castle of Reigate, which was strongly fortified; Warwick alone accepted Richard's hospitality. He was agreeably entertained, and quite thrown off his guard: but after the banquet he was arrested by the king's orders.

That same night Richard urged the archbishop to endeavour to persuade his brother, the Earl of Arundel, to come to him of his own accord, swearing by St. John the Baptist (his usual oath) that no injury should be done to him if he would only come peacefully. The earl at first hesitated, but the archbishop, trusting to the king's oath, induced him to put himself in Richard's power; on which he was apprehended and sent to the Isle of Wight until the meeting of parliament in September. That done, the king, procuring a body of men from the mayor of London, and taking with him also some of the noblemen of his court, paid an unexpected visit to his uncle Gloucester at Pleshy, in Essex, and caused him also to be arrested and sent over to Calais, where he was some little time afterwards murdered.

The archbishop never saw his brother again. He took his place beside the king in the parliament which met in September, and was appointed one of the triers of petitions; but on 20 Sept. 1397—almost exactly a year after the date of the bull appointing him archbishop, but only seven months since he had begun really to exercise an archbishop's functions—he was impeached by the House of Commons. The charge against him was that he, being then chancellor, had assisted in procuring the commission of regency eleven years before in derogation of the king's authority. He was about to reply, but the king, with a motion of his hand, caused him to be silent and sit down, and made answer to the commons himself that, as the matter touched so high a person, he would take counsel upon the subject apart. Meanwhile he privately encouraged the archbishop to believe that the cloud would soon disperse. But next day the archbishop's brother, the earl, was brought into the House of Peers in the custody of the constable of the Tower, and an appeal of treason was lodged against him. The charges against him likewise had reference to acts done many years before, and he had since obtained the king's pardon, but it was disallowed. For the king had explicitly demanded of the assembled peers whether charters of pardon granted under compulsion might not be revoked, and all but the archbishop himself agreed that they might be. The earl was therefore summarily condemned and executed the same day. On the 24th the earl marshal, who was to have produced his prisoner, the Duke of Gloucester, before the peers, reported that he had died in prison at Calais. On the 25th the commons prayed judgment on the archbishop, when the king related that he had examined him in the presence of some other

lords, and that he had confessed his offence. Sentence of banishment was then pronounced against him, six weeks being allowed him from Michaelmas day during which to take his passage from Dover into France.

These occurrences were the beginning of the despotism of Richard's later days. He had obtained a subservient parliament, but he had already lost the hearts of many of his subjects. The Earl of Arundel was looked upon as a martyr. The archbishop, undisturbed by his sentence, seems to have continued at least part of the time allowed him in the vigorous discharge of his functions; and on 14 Oct. issued an order from Lambeth in confirmation of one he had already issued in August defining the rights and duties of two officials in the court of Arches (WILKINS, iii. 233). At last he left England and fled to Rome, where he sought the intercession of Boniface IX with the king his master. But Richard wrote in strong terms to his holiness of his seditious and intriguing character; and the pope, though he had favoured him at first, consented, at Richard's request, to deprive him of his see by translating him to St. Andrew's, as his predecessor Urban had translated Archbishop Nevill of York.

It is said by one authority that he absolutely refused to go abroad till the king assured him privately that he would soon be recalled, and that no one else should be archbishop while he lived; on which he told the king that before his departure he had something to say to him, and proceeded to deliver a long denunciation of the luxury and avarice of the court (*Eulogium*, iii. 376-7). To this account we may attach what weight we think proper; but it shows, at all events, the opinion entertained by many of his independence of character. The pope, at the king's request, not only translated him to St. Andrew's, where the authority of Boniface was not respected, but filled up the vacancy in the see of Canterbury by the appointment of Roger Walden, at that time dean of York, who had the temporalities restored to him on 21 Jan. 1398, and kept possession of the see during the brief remainder of Richard's reign.

There is no record—nor is the thing at all probable in itself—that Arundel returned to England, in spite of the decree of banishment, before he came back with Henry of Lancaster in 1399. Yet we are told most minutely by Froissart that just before that occasion he was sent over to Henry in France by the Londoners to represent to him the gross misgovernment of Richard, and to invite him to come and assume the crown;

that he embarked in the Thames at London, passed through Sluys, Aardenborg, Ghent, Oudenarde, and various other places in the Low Countries, and at length, disguised as a monk going on a pilgrimage, came to Henry in the outskirts of Paris. The story, however, requires but a slight correction to bring it into harmony with the statements of other writers. The archbishop's nephew and namesake, Thomas, now Earl of Arundel, eager to avenge his father's death, escaped from the custody of his guardian, John Holland, duke of Exeter, and with the aid of a London merchant fled abroad to join his uncle at Cologne. It was he, in all probability, whose itinerary is given in Froissart, and who conveyed through his uncle the message of the city of London to Henry of Lancaster. There is no doubt, at all events, that the archbishop and the young earl were together with Henry abroad, and landed with him at Ravenspur. The archbishop accompanied Henry to the siege of Bristol, and afterwards into Wales, to intercept Richard's return from Ireland; and it was alleged that Richard's first offer to resign the crown was made to him and the Earl of Northumberland at Conway. Such was the statement of the archbishop himself in Henry's first parliament, and it must be owned it has rather the look of a political fiction, like the other assertion, made at the same time, touching Richard's formal abdication in the Tower, that it was an act done with perfect willingness and with a cheerful countenance. It is certain that the archbishop had no interview with Richard at Conway, though he had one afterwards at Flint. At Conway it was still possible for the unhappy king to escape by sea, and the archbishop, instead of receiving from him then an offer to resign the crown, was plotting with Henry how to lure Richard into the power of the invader and cut off his retreat.

Soon after his return Arundel took possession again of his see of Canterbury, Roger Walden being regarded as an intruder. He took his place at once in parliament as archbishop, and was one of the lords who witnessed the abdication of Richard in the Tower. This being reported next day to the assembled peers, and Henry having challenged the crown as his right, he took the new king by the right hand, and led him to the throne; then, after he was seated, delivered a sermon in parliament on the text 'Vir dominabitur populo' (1 Samuel ix. 17).

Henry was crowned by Arundel at Westminster on 13 Oct. At the feast in Westminster Hall the same day he sat on the king's right hand, and the Archbishop of

York upon his left (FABYAN). For a few days he continued to discharge the duties of chancellor, which seem to have been again imposed upon him from the time that Richard fell into Henry's hands; but he presently resigned the great seal to John de Scarle, master of the rolls, afterwards archdeacon of Lincoln. He was lord chancellor again for the fourth time 1407, and for a fifth time in 1412. But his life after the accession of Henry IV is comparatively uneventful, being chiefly remarkable for two things: first, for his successful opposition to the demand of the Lacklearning parliament (1404) and the parliament of 1410 for a general disendowment of the church; and second, his proceedings against the Lollards. He seems also to have been sent on an embassy abroad in the year 1411, but of the particulars of this mission we have no information. The great business of his later life was to resist the tide of Lollardy. In 1401 he passed sentence of degradation upon Sawtree, and handed him over to the secular arm, when he was burned under the new statute against heresy. In 1408 he summoned a provincial council at Oxford, in which certain constitutions against the Lollards were drawn up, but not immediately published. In 1410 another heretic was brought before him, Badby, a tailor of Evesham, who denied transubstantiation, and, as he could not be induced to recant, was committed to the flames. In 1411 the old question arose again about the visitation of the university, and was settled in the manner we have already shown. In 1413, just after the accession of Henry V, arose the more important case of Sir John Oldcastle, Lord Cobham, whom the archbishop examined at great length, and finally condemned as a heretic, though he was not brought to the flames till some years after the archbishop's death. For Arundel died on 19 Feb. following of a sudden attack of some complaint in the throat. He was buried in his own cathedral, where he had caused a tomb to be erected in his lifetime, but it has been since destroyed.

It is difficult fully to appreciate the character and motives of any leading actor in those turbulent times. But we may well believe that Arundel's conduct throughout life was governed by a standard of duty which, though we may not always approve it, was in accordance with the general feeling and the principles of his own day. Nor does it appear that he was by any means unmerciful in his treatment of the unhappy heretics brought before him, whose ultimate doom, indeed, did not rest with him. His inhibitions of unlicensed preachers displeased

even the reputed orthodox of another generation; and Dr. Gascoigne tells us how he was struck dumb, unable to speak or swallow for days before his death, which was believed to be a judgment on him for having tied up the word of God in the mouths of preachers (*Loci e Libro Veritatum*, 34, 61). It does not appear that Arundell's own bigotry was of this narrow description. He was a man of princely tastes, built fine edifices for himself at Ely and Canterbury, and was a munificent benefactor of the churches in which he had any interest.

**ARUNDELL OF CORNWALL.** The Arundells are amongst the few Cornish families of Norman origin, and there are still fewer of French extraction who have for so long a period as at least five or six centuries been, like them, traceable in that county. It will be convenient, before referring to the more celebrated members of the family, to briefly sketch the history of the three principal stems—viz. the Arundells of Lanherne, Trevice, and Tolverne—and to add a few words about the minor Arundells.

THE ARUNDELLS OF LANHERNE—‘the Great Arundells’ as they were styled—appear to have settled in Cornwall, about the middle of the thirteenth century, at the place so called (now the site of a nunnery), situated on the western slope of a wooded valley, lying between St. Columb Major and the sea; or possibly before that time at a place in the adjoining parish of St. Ervan, named Trembleath (*Journal of Royal Institution of Cornwall*, September 1876, pp. 285–93). A very early member of the family, Roger, was marshal of England; and according to the Exeter Cathedral ‘Martyrologium,’ William de Arundell, who died in 1246, was a canon of that cathedral; about the same time a Roger Arundell lived opposite St. Stephen's church in that city. In 1260 a Sir Ralph Arundell was sheriff of Cornwall; and a few years later we find a John Arundell holding lands at Efford, near Bude, and other Arundells were landowners in the eastern part of the county. Of the Sir John Arundell, the story of whose expedition against the Duke of Brittany in 1379 is recorded by the chroniclers, a separate and fuller account is given below. His grandson, Sir John Arundell, K.B., ‘the Magnificent,’ was

a great church benefactor (notably to the celebrated lost church of St. Piran-in-the-Sands—Perranzabuloe), and, according to his will, dated 18 April 1433, possessed no less than fifty-two complete suits of cloth of gold (cf. *Harl. MSS.* 1074, art. 203, fo. 3228). He was a naval commander, and was sheriff of Cornwall four times, and M.P. for the county in 1422–3. The Arundells intermarried with most of the old Cornish families—nearly all of them now extinct—thus adding considerably to their vast possessions, until at length, in the twenty-ninth year of Henry VI, John Arundell, born about 1421, had become the largest free tenant in Cornwall, his estates being of the value of 2,000*l.* per annum. He was sheriff and admiral of Cornwall, and a general for Henry VI in his French wars, but was attainted in 1483. The Arundells acquired Lanherne by marriage with the heiress of that family; and they also formed, at different periods, alliances with the Carminows, the Grenvilles, the Bevils, the Lambournes, the Carews, the Trevanions, the Erisys, and other Cornish families. Another John Arundell was bishop of Exeter (1502–4); and of him too, as well as of another member of the Lanherne family, who became bishop of Chichester in 1458, fuller accounts will appear below. A grandson of the above-named admiral—also a Sir John Arundell—was made knight-banneret on the field of Therouenne, died in 1545, and was buried in the church of St. Mary Wolnoth, Lombard Street. He was the father of the erudite Mary Arundell. Another Sir John Arundell, who died in 1589—or, according to the Isleworth Register (*OLIVER's Collections*), in 1591—at Isleworth, was converted to catholicism, as Dodd tells us in his ‘Church History,’ by Father Cornelius (a native of the neighbouring town of Bodmin). In defence of Cornelius Sir John Arundell lost his own liberty, and was confined for nine years in Ely Palace, Holborn (cf. *MORRIS's Troubles of our Catholic Forefathers*, 1875; *SIMPSON's Edmund Campion*, 1867; and *CHALLONER's Memoirs of Missionary Priests*, 1803). The next prominent members of the Lanherne family are Sir Thomas (d. 1552) and Humphry Arundell (1513–1549–50), of both of whom accounts are given below. From Sir John Arundell, the knight-banneret of Therouenne, descended the Arundells of Wardour Castle; and by the marriage of Mary Arundell, in 1739, to Henry, seventh Baron Arundell of Wardour, the Lanherne and Wardour branches of the family were, after a separation of more than two centuries, reunited.

THE ARUNDELLS OF TREEICE were seated in the parish of Newlyn, about five miles

south of Lanherne; and some fine portions remain of their mansion of the sixteenth century. At an early period they had another residence at Allerford in West Somerset, but they were seated at Trerice at least as early as the reign of Edward III. At first they bore different arms from the Lanherne Arundells, apparently owing to a difference of opinion as to which was the elder branch; but ultimately they adopted the same, viz. sable, six swallows argent. However this may be, 'precisely to rip up the whole pedigree,' as Richard Carew, the Cornish historian, who married into the Tolverne branch of the family, observes, 'were more tedious than be-hooveful.' The earliest Trerice Arundell of note seems to have been a Sir John, vice-admiral of Cornwall early in the fifteenth century. When sheriff of Cornwall he was sent by King Edward IV to retake St. Michael's Mount, which had been seized by the Earl of Oxford. Sir John had removed from Efford, by the seaside, to Trerice (an inland abode), owing, it is said, to a prophecy (HALS) that 'he would be slain in the sands.' Yet he did not avert his fate; for, on the strand near Marazion, he lost his life in 1471 in a skirmish; and his remains lie in the chapel of St. Michael's Mount (cf. CAREW, 1811, p. 281). The Arundells of Trerice evidently continued in royal favour, for one of them received an autograph letter from the queen of Henry VII, announcing to him the birth of a prince, her son. Henry VIII appointed another Sir John Arundell (grand-nephew of him who was killed at the Mount) his esquire of the body. He was known as 'Jack of Tilbury.' He is noticed below, as well as his grandson, 'John Game to the Toes'—'John for the King'—and his great-grandson, Richard Arundell, first Baron Arundell of Trerice. Carew is full of information as to this branch of the family. The male line of the family became extinct by the death of the fourth baron, John, in 1768; and Trerice ultimately passed into the hands of its present possessor, Sir Thomas Dyke Acland, Bart. An uncle of the last baron, the Hon. Richard Arundell, who died in 1759 without issue, was M.P. for Knaresborough, clerk of the pipe, surveyor of works, master and warden of the mint, and a commissioner of the treasury. Amongst the legal representatives of the Arundells of Trerice in 1829, was the Hon. Ada Byron, daughter of the poet (*Gent. Mag.* xcix. pt. ii. p. 215).

The ARUNDELLS OF TOLVERNE were seated at a very early date at the place on the left bank of the Fal which gives them their distinctive name; but no trace remains of their abode, though in Carew's time (about

three hundred years ago) 'amongst all of the houses on that side of the river, Tolverne, for pleasant prospect, large scope, and other housekeeping commodities, challengeth the pre-eminence.' They seem to have separated from the main stem of Lanherne at an earlier date than the Arundells of Trerice, and to have settled at Tolverne in the reign of Edward I, in consequence of Sir John Arundell of Trembleath (son of Sir Ralph Arundell of Lanherne, who was sheriff of Cornwall in 1260) marrying Joan le Soor of Tolverne. Sir Thomas Arundell, who died in 1443, is another of the early Arundells who appears upon the scene. Like the Arundells of Lanherne and Trerice, the Arundells of Tolverne intermarried with good Cornish blood, but this branch chose generally the western families for their alliances, such as Reskymmer, Trefusis, St. Aubyn, Godolphin, and Trelawny. The grandson of Thomas Arundell, who died in 1552 (who was also called Thomas, and who was knighted by James I), having seriously impaired his fortune by endeavouring to discover an imaginary island in America, called 'Old Brazil,' sold Tolverne, and afterwards lived at Truthall in the parish of Sithney. John Arundell, son of Sir Thomas, one of the Truthall Arundells, was a colonel of horse for Charles II, and a deputy governor of Pendennis Castle, in 1665, under his relative Richard, Baron Arundell of Trerice; he died in 1671.

Of the MINOR ARUNDELLS, the branch which settled at Menadarva, in the parish of Illogan, appears to have been founded by one Robert Arundell, a natural son of 'Jack of Tilbury.' Hals has, as usual, some odd gossip about him (*Hals MSS.* 433, art. 651). 'One of his descendants (a great-grandson?), Francis Arundell of Trengwainton near Penzance, was born about the year 1620, and died in 1697. He followed that unusual course amongst the Cornish gentry of taking up arms for the parliament, holding the rank of captain. The Arundells sold Menadarva in 1755 to the Bassetts of Tehidy.

Another branch settled at Trevithick, about two miles west of St. Columb Major.

Various others of the minor Arundells appear from time to time (but fallen from their high estate) in the church registers in the eastern part of Cornwall: one of the line, William, more than two centuries ago, married Dorothy, a descendant of that Theodoro Paleologus who was buried at Landulph in 1637. She is described in the parish register as being 'ex stirpe imperatorum;' so that there probably still flows in the veins of many a rustic in the neighbourhood of Callington and Saltash the mingled blood of those Arun-

dells who came over to England with the Conqueror, and that of the Byzantine emperors of the East (*Notes and Queries*, 4th series, vols. iii. and iv.)

[Col. Vivian's annotated edition of *Heralds' Visitations to Cornwall*; Harl. MSS. Brit. Mus.; *Collectanea Topographica et Genealogica*, vols. i., iii., iv., and vi.; Add. MSS. Brit. Mus. 5524, fol. 160.] W. H. T.

**ARUNDELL, BLANCHE, LADY** (1583-1649), defender of Wardour Castle, was daughter of Edward, earl of Worcester, and Elizabeth, daughter of Francis Hastings, earl of Hungerford. She married Thomas, second Lord Arundell, of Wardour, Wilts. She is chiefly remembered for her gallant defence of Wardour Castle against Sir Edward Hungerford and Colonel Strode, commanders for the parliament. Though her husband was at Oxford, and she had but twenty-five men against thirteen hundred, she replied to the summons to surrender the castle that she had a command from her lord to keep it, and she would obey his command. Quarter being offered for the women and children only, she refused it, and held out from Tuesday, 2 May 1643, till Wednesday of the next week. The battery of the besiegers played on the castle night and day, and the maidservants loaded the muskets for the garrison, who were worn out for want of sleep. Resistance ceased when two mines were sprung beneath the fortress, but honourable terms were obtained. All were admitted to quarter; but the stipulation against plunder was shamelessly broken. Outbuildings were burnt, deer killed, ponds cut, fish sold, fruit trees rooted up, and the leaden pipes, two miles long, supplying the castle with water, were sold at 6*d.* a yard. When to this was added the damage to choice pictures and books, the total loss was estimated at 100,000*l.* The castle was occupied by Ludlow, but recovered (after a siege from September to March 1644) by the son of Lady Blanche [see **ARUNDELL, HENRY**]. Lady Arundell, on leaving the castle, 'had not a bed to lie on, nor means to provide herself a house or furniture' (*Hist. MSS. Comm. Report*, v. 89). She went to Salisbury, where she was provided with a lodging by the charity of Lord Hertford. Thence she petitioned the parliament for protection. She died at Winchester 28 Oct. 1649, and was buried with her husband at Tisbury.

**ARUNDELL, FRANÇOIS VYVYAN JAGO** (1780-1846), antiquary and oriental traveller, was born at Launceston in July

1780, being the only son of Thomas Jago, a solicitor in that town, who married Catherine, a daughter of Mr. Bolt, a surgeon at Launceston. He was educated at Liskeard grammar school and at Exeter College, Oxford, where he took the degree of M.A. in 1809, and after having been ordained in the English church he took a curacy at East Antony in his native county. From youth to old age Mr. Jago was imbued with a love of antiquarian study, and after his institution in 1805 to the rectory of Landulph on the banks of the Tamar, he threw himself with avidity into the history of Cornwall. When Nicholas Condy, an artist at Plymouth, published a series of views of Cothelie, the ancient seat of Lord Mount Edgcumbe, Mr. Jago supplied the description of the house which accompanied them. In the church of Landulph is a brass to the memory of Theodoro Palæologus, descended from the last of the christian emperors of Greece, who died on 21 Jan. 1636-7, and an account of this inscription, and of the person whom it commemorated, was printed by Mr. Jago in the volume of the '*Archæologia*' for 1817, and reprinted in Davies Gilbert's '*Cornwall*' (iii. 365). This paper was afterwards amplified into 'Some Notice of the Church of Landulph,' which was published in 1840, and a reprint of which, with additions by Mr. Polsue of Bodmin, was announced some years ago. One of Mr. Jago's ancestors married a co-heiress of John Arundell of Trevarnoe, and Mr. Jago assumed that name in addition to his own on 25 Feb. 1816. Next year (17 Oct.) he married Anna Maria, second daughter of Isaac Morier, consul-general at Constantinople, and sister of James Morier, the author of '*Hajji Baba*.' After this marriage Mr. Arundell turned his thoughts towards the East, and became in 1822 the chaplain to the British factory at Smyrna, where he remained for fourteen years. With characteristic energy he began, very soon after settling at Smyrna, to arrange a tour of exploration in Asia Minor. The months from March to September 1826 were spent in a pilgrimage to the seven churches of Asia and an excursion into Pisidia, a narrative of which was issued in 1828. This book was very favourably received, and with this encouragement he ventured in 1833 upon another tour of 1,000 miles through districts the greater part of which had hitherto been undescribed by any European traveller, when he made an especial study of the ruins of Antioch in Pisidia. Two volumes describing these discoveries were published in 1834. Although he made a third tour in 1835 and 1836 through Palestine, no account of his

travels was published. Whilst residing at Smyrna Mr. Arundell made large collections of antiquities, coins, and manuscripts; on his return to England the coins were sold to the British Museum. He gave great assistance to the brothers Lysons in their history of Cornwall, and at one time contemplated the publication of a history of that county on his own account. It has even been said that some plates were engraved for it. The materials which he collected for histories of Smyrna and of his native town of Launceston were never used, and are probably lost. He died at Landulph on 5 Dec. 1848, and was buried in its church, not far from the tomb of Paleologus. His widow died in Osnaburgh Street, London, on 2 June 1869, aged 80.

[Gent. Mag. vol. lxxxvi. pt. ii. 462 (1816), 27 N.S. 206-8 (1847); C. S. Gilbert's Cornwall, ii. 4, 162, 446-7; Bibliotheca Cornub. i. 7-8, iii. 1037.] W. P. C.

ARUNDELL, HENRY (1606?-1694), third BARON ARUNDEL OF WARDOUR, was the only son of Thomas, second Lord Arundell of Wardour, by his wife, Lady Blanche [q. v.]. On the death of his father (19 May 1643) he succeeded to his estates and to his titles, which included that of Count of the Holy Roman Empire. Throughout his life a devoted catholic, he fought on the side of Charles I in the civil wars. In May 1643 the parliamentarians wrested the family castle of Wardour, in Wiltshire, from his mother, who bravely defended it. In the following September Arundell laid siege to the castle and its new occupiers. By springing a mine and ruining the building, he finally dislodged the enemy under General Ludlow in March 1643-4 (EDMUND LUDLOW'S *Memoirs* (1751), pp. 23, 38). Early in life he had married Cecily, daughter of Sir Henry Compton, knight, of Brambletye, Sussex, and widow of Sir John Fermor, and in 1652 he acted as one of the seconds of his wife's brother, Henry Compton, in a duel with Lord Chandos. Compton was slain, and a warrant was issued by the council of state to arrest Arundell, with others who had taken part in the engagement. In 1653 Arundell appears to have petitioned Cromwell for pardon, and in 1656 to have received permission to take refuge in France. At the restoration of Charles II, Arundell, on paying 35,000*l.*, was confirmed in all his family estates, many of which had been sold by the Commonwealth to one Humphrey Weld. On 7 March 1662-3 he was nominated master of the horse to the queen-mother, Henrietta Maria. In January 1668-9 he was

summoned by Charles II, with other Roman catholic peers, to a secret council, and was commissioned to proceed to France to inform Louis XIV of the English king's desire to be reconciled to Roman catholicism, and of his want of ready money. In June 1669 Arundell returned with Louis's assent to a secret treaty with Charles, which was signed in the following year, and is known as the treaty of Dover. In 1678 Titus Oates and his associates announced that Arundell was a chief mover in the popish plot against Charles II, which they professed to have discovered. According to the evidence of these informers, attempts had been made by the catholics of England, in league with Louis XIV, to raise an army of 50,000, which was to be placed under the command of Lords Arundell, Powis, and Belasyse. Some of the witnesses asserted that the pope had issued a commission to Arundell to be lord chancellor as soon as the present ministers had been removed, and that Arundell had for many years been actively employed in arranging the details of the plot. On 25 Oct. 1678 Arundell was arrested at the instance of the House of Commons and committed to the Tower, with Lords Stafford, Powis, Petre, and Belasyse. On 1 Nov. the House of Commons resolved to proceed by impeachment against 'the five popish lords.' On 23 Nov. all Arundell's papers were seized and examined by the lords' committee; on 3 Dec. the Middlesex grand jury found the five peers guilty of high treason; and on 5 Dec. the lower house announced that they were ready to impeach Arundell. A month later parliament was dissolved, and the proceedings were interrupted. After some discussion, in March 1678-9, it was resolved by both houses that the dissolution had not invalidated the motions for the impeachment. On 10 April 1679 Arundell and three of his companions (Belasyse was too ill to attend) were brought to the House of Lords to put in pleas against the articles of impeachment. Arundell complained of the uncertainty of the charges brought against him, and implored the peers to have them 'reduced to competent certainty.' But this plea was on 24 April voted irregular, and on 26 April the prisoners were again brought to the House of Lords and ordered to amend their pleas. Arundell replied by briefly declaring himself not guilty. The trial of the five lords was soon afterwards fixed for 13 May; but a quarrel between the two houses as to points of procedure, and as to the legality of admitting the bishops to a capital trial, followed by a dissolution, delayed its commencement till 30 Nov. 1680. On that day

it was decided to proceed first against Lord Stafford, who was condemned to death on 7 Dec. and beheaded on 29 Dec. On 30 Dec. the evidence against Arundell and his three fellow-prisoners was ordered to be in readiness, but there public proceedings stopped. Petre died in the Tower in 1683. His companions remained there till 12 Feb. 1683-4 (i.e. for five years and nearly four months), when an appeal to the court of Queen's Bench to release them on bail was successful. On 21 May 1685 Arundell, Powis, and Belasyse came to the House of Lords to present petitions for the annulling of the charges against them, and on the following day the petitions were granted. On 1 June 1685 their liberty was formally assured them on the ground that the witnesses against them had perjured themselves, and on 4 June the bill of attainder against Stafford was reversed.

After the death of Charles II, his successor, James II, admitted Arundell, although a catholic, to the privy council 17 Aug. 1686, and appointed him keeper of the privy seal in place of Lord Clarendon in March 1687. By royal dispensation he was relieved of the necessity of taking the customary oaths on accepting office (SIR JOHN BRAMSTON'S *Autobiog.* (Camden Soc.), p. 283). In the following June Arundell presented an address to the king on behalf of the Roman catholics, thanking him for the declaration of indulgence, but, although evincing as a rule little tact, he strongly opposed the admission of the unpopular Jesuit, Father Petre, to the privy council (BUENER, *History*, iii. 218 n.). He received, on 24 June 1687, a 'bounty' of 250*l.* from the king for secret service (*Secret Services of Charles II and James II* (Camden Soc.), p. 156). On the abdication of James, Arundell retired to his house at Breamore, Hampshire, and took no further part in public life. He received a legacy of 1,000 crowns from Cardinal Howard in July 1694, and died at Breamore 28 Dec. 1694, at the age of eighty-eight. He was buried with his ancestors at Tisbury. His wife had died in 1675, but three children survived him. The elder son, Thomas, became the fourth Lord Arundell of Wardour, was in the retinue of Lord Castlemaine on his visit to Pope Innocent XI as James II's ambassador, and died 10 Feb. 1711-12. Lord Arundell's only daughter, Cecily, entered 'the order of Poor Clares of Rouen' in 1662, and died at Rouen 13 June 1717, at the age of eighty-two.

During his imprisonment in 1679 Arundell wrote five short religious poems, published in a single folio sheet in 1679, and reissued in 'A Collection of Eighty-six Loyal Poems' in

1685. His piety and generosity to poor catholics are commended in 'The Liturgical Discourse' of Richard Mason (*Angelus à Sancto Francisco*), and in the 'Divine Pedagogue,' by F. Weldon (cf. extracts from these books in G. OLIVER'S *Catholic Religion in Cornwall, Devon, &c.*, pp. 82-3). He was a noted gambler and sportsman, and kept at Breamore a celebrated pack of hounds, which became the property of the Earl of Castlehaven, and subsequently of Hugo Meynell. From them the Quorn pack is descended. Portraits of Lord Arundell, of his wife, and of his daughter are preserved in the dining-room of the modern Wardour Castle.

ARUNDELL, HUMPHRY (1513-1550), rebel, was the son of Roger Arundell of Lanherne by Johanna, daughter and heir of Humphry Calwodeley, both of whom belonged to the principal Cornish families of the time. He was born in 1513, and on the death of his parents in 1536 came into possession of extensive estates in his native county. On the dissolution of the priory of St. Michael's Mount in Cornwall in 1539 he received a grant of its revenues, and its government was placed in his hands. In June 1549 a serious insurrection broke out in Cornwall and Devon, partly through the indignation of the poor at the numerous enclosures of common-lands, but more especially through their sympathy with the Roman catholic religion. Humphry Arundell was the chief Cornishman who sided with the insurgents, and he became their leader. Unfortunately for the ultimate success of his cause, which was at first triumphant, he stopped to besiege Exeter, in the belief that it would soon capitulate. Contrary to his expectation the city held out bravely, and Lord Russell had time to collect the royal forces. For two days (4 and 5 Aug.) a fierce battle raged round St. Mary Clyst, when the insurgents were beaten. The contest was resumed with the same result at Sampford Courtenay, when Arundell fled to Launceston. In compliance with the directions of the council, he was seized and sent to London, and, after having being tried at Westminster, was executed at Tyburn on 27 Jan. 1550. Spirited narra-

tives of the rebellion of 1549 are printed in Froude's 'History' (v. 169-200), and in Cotton and Woolcombe's 'Gleanings from Records of Exeter.' Arundell's estates were forfeited and granted to others; his wife, Elizabeth, daughter of Sir John Fulford of Devon, subsequently married Thomas Cary of the same county.

[Maclean's Trigg Minor, ii. 9, 39; Hals's Hist. of Cornwall in Davies Gilbert's Hist. ii. 191-8; Bibliotheca Cornub. iii. 1037, 1468, col. 1.]

W. P. C.

**ARUNDELL, SIR JOHN**, of Lanherne (d. 1379), naval commander, whose descent illustrates the great difficulties in genealogies of the earlier Arundells, is celebrated for his repulse of the French fleet off the coast of Cornwall in 1379, when he commanded an expedition fitted out by King Richard II in aid of the Duke of Bretagne. Having, according to Thomas Walsingham's story, profaned a convent at or near Southampton, and carried off '*vi vel sponte*' many of its occupants, the fleet was pursued by a violent tempest, when the wretched nuns who had been carried off were thrown overboard to lighten the ships. The vessels were, however, wrecked on the Irish coast, according to some authorities near Scariff, but according to others at Cape Clear. Sir John Arundell, together with his esquires, and other men of high birth, were drowned, and twenty-five ships were lost with most of their crews. Froissart's account of the event differs essentially from Walsingham's, in the omission of the story of the desecration of the convent.

[Walsingham's *Historia Anglicana* (Riley's ed. Rolls Series), pp. 418-25.]

W. H. T.

**ARUNDELL, JOHN** (d. 1477), bishop of Chichester, was a native of Cornwall, and probably a member of the Lanherne family. For rather more than nine years, from the summer of 1421 to the autumn of 1430, he enjoyed a fellowship at Exeter College, Oxford, and in 1426 he was proctor to the university. Several members of this college were closely connected with the Lancastrian party; Arundell himself was domestic chaplain and confessor to Henry VI, and from a passage in Johnson's '*Life of Linacre*' (p. 164), it appears that he was one of the three physicians entrusted with the care of their king's health. He became precentor of Hereford in 1432, and held prebendal stalls at Wells, Lichfield (1443), Lincoln, Hereford (1446), York (1457), and St. Paul's (1456), the arch-deaconry of Richmond in Yorkshire (1457), and a canonry of Windsor (1444). The king pressed his claims for the see of Durham,

but his elevation to the episcopal bench was delayed until his consecration in 1458 as bishop of Chichester. He died 18 Oct. 1477, and was buried in his cathedral church of Chichester. At his cost there was erected in that edifice the shrine or oratory which until 1860 used to stand between the easternmost piers of the nave.

Boase's *Exeter Coll.* p. 17; Stephens's *See of Chichester*, pp. 166-8; *Bibliotheca Cornub.* iii. 1038.]

W. P. C.

**ARUNDELL, JOHN** (d. 1504), successively bishop of Lichfield and Coventry and of Exeter, was the younger son of Humphry Arundell of Lanherne, by Joanna, sister and heir of Sir John Coleshill of Tremoderet. After having enjoyed 'the first taste of the liberal arts and sciences' in a college of Augustine monks at St. Columb, Cornwall, he remained at Exeter College, Oxford, until he took the degree of M.A., when he was immediately presented by his father to the rich rectory of St. Columb, and during his residence there built a parsonage house and moated it round with rivers and fish-ponds. A variety of preferences quickly followed his presentation to this family living. He became treasurer of Hereford in 1464, and chancellor and prebendary in 1476; rector of Duloe in Cornwall in 1474, and of Sutton Courtney about 1479, when he was appointed to a canonry at Windsor; and a few years later prebendary of York and Salisbury. From 1483 to 1496 he held the deanery of Exeter, when he vacated it to become bishop of Lichfield and Coventry, a bishopric which he resigned for that of Exeter in 1502. His death took place in the episcopal palace within the parish of St. Clement Danes, London, on 15 March 1504, and he was buried on the south side of the altar of the parish church, under a tomb of marble inlaid with brass. A fragment of the inscription to his memory is printed in Weever's '*Ancient Funeral Monuments*' (p. 444). Bishop Arundell is said to have been conspicuous for his love of learning and his hospitality towards the poor.

[Wood's *Athenæ Oxon.* (ed. Bliss), ii. 692-3; Oliver's *Bishops of Exeter*, pp. 116-17; *Bibliotheca Cornub.* iii. 1038.]

W. P. C.

**ARUNDELL, SIR JOHN**, of Trevice (1495-1561), knight, twice sheriff of Cornwall, and vice-admiral of the west under Henry VII and Henry VIII, was esquire of the body to the latter king, and known as 'Jack of Tilbury.' He was knighted at the battle of Spurs in 1513; and in 1520 the king entrusted him with the preparations for the reception of the emperor at Canterbury. In 1523 he captured, after a long sea

fight, a notorious Scotch pirate, Duncan Campbell, who had for some time scourged our coasts. The Duke of Norfolk wrote shortly afterwards to Sir John Arundell, requesting him to bring his prisoner to the king's presence, and thanking him in the king's name for his 'valiant courage and bolde enterprise in the premises.' It was apparently to the same Sir John Arundell that Henry VIII wrote in 1544 requesting his attendance in the wars against the French king—an order which was, however, countermanded in order that Arundell 'with his servants, tenants, and others within his rooms and offices, especially horsemen,' might be held in readiness for other services. In the following reign he was vice-admiral of the king's ships in the west seas; and in 1553, when he was sheriff of Cornwall, Queen Mary wrote requiring that he, with his friends and neighbours, 'should see the Prince of Spain most honourably entertained, if he fortun'd to land in Cornwall.' By his first wife, a coheir of Bevil, he had two children, Roger, who married a Dinham, and Katherine, who married a Prideaux. By his second wife, an Erisy, he had a son John, who succeeded him at Trerice, and was, like him, sheriff of Cornwall, 'whose due commendation' Carew desired not to give 'because another might better deliver than myself, who touch him as nearly as Tacitus did Agricola.' Sir John Arundell was born in 1495, died in 1561, and is buried at Stratton Church, Cornwall, where there is a monument to his memory.

[Collectanea Topographica et Genealogica, iv. 172; Archaeological Journal, viii. 94 (1851).]

W. H. T.

ARUNDELL, SIR JOHN, of Trerice, (1576–1656?), 'Jack for the King,' was grandson of Henry VIII's 'Jack of Tilbury,' and was born about 1576. He was the son of John Arundell of Trerice by Gertrude Dennys of Holcombe in Devon; Richard Carew, the historian of Cornwall, married his half-sister Julian. He was amongst the Cornish gentry present in 1643 at the battle of Braddock Down, near Lostwithiel, when the king's army obtained so decided a victory over the forces of the parliament. He was M.P. in 1597 for Michell, a now disfranchised borough situated within their manor of Medeshole (Michell?), which the Arundells had held at least as early as the time of Edward I; in 1601 and 1621 for Cornwall; in 1624 for St. Mawes; and in 1628 and the Short parliament of 1640 for Tregony. About 1643 he was appointed governor of Pendennis Castle, which, with St. Mawes Castle, commands the entrance of Falmouth harbour, a place of strategic importance.

He succeeded in office Sir Nicholas Slanning; and at Pendennis in 1644 he harboured for a night or two Queen Henrietta Maria on her flight from Exeter into France, and also Charles II in February 1646. The story of Fairfax's five months' siege of Pendennis Castle and its gallant defence by old Sir John Arundell and his colleagues is told in Clarendon, and in greater detail by Captain Oliver, R.A., in his 'Pendennis and St. Mawes, an Historical Sketch of two Cornish Castles.' Sir John Arundell's reply (dated 18 May 1646) to Fairfax's summons to surrender within two hours (preserved among the Clarendon State Papers) closes thus: 'And, having taken less than two minutes' resolution, I resolve that I will here bury myself before I deliver up this castle to such as fight against his majesty, and that nothing you can threaten is formidable to me in respect of the loss of loyalty and conscience.' On the 16th of the following August, however, Pendennis was starved out, and became the last castle but one (Raglan) to surrender to the parliament. The surrender was conducted with the full honours of war (Original Articles of Surrender, *Egerton MSS.* Brit. Mus. 1048, fol. 86). Sir John Arundell did not live to see the Restoration and reap his well-earned honours. The fall of Pendennis and the defeat of the king's cause ruined his estates, and probably hastened his death; he was even reduced to the necessity of suing Cromwell himself for assistance, urging that the Trerice Arundells 'had once the honour to stand in some friendship, or even kinship, with your noble family' (*Tanner MSS.* Bod. Lib. 54, fol. 18). He was buried at Duloe in Cornwall; and Richard, his second son, who, like many other members of his family, was a staunch royalist, was ennobled in 1664, partly in recognition of the loyalty and sufferings of his father [see ARUNDELL, RICHARD].

[Forster's Life of Eliot (1872), ii. 383, 396; Cary's Memorials of the Civil War (1842), ii. 258; Carlyle's Cromwell, iii. App. 20.]

W. H. T.

ARUNDELL, MARY (d. 1691), daughter of Sir John Arundell of Lanherne, knight-banneret of Therouenne, and his second wife Catherine, daughter of Sir Thomas Grenville of Stow, was one of the learned ladies of her time, and is included in George Ballard's 'Celebrated British Ladies' (ed. 1775, p. 85). She is chiefly known by her translations from the Latin, especially of the 'Sayings and Doings of the Emperor Severus,' dedicated to her father, and the 'Select Sentences of the Seven Wise Men of Greece' (*King's*

MSS. Brit. Mus. 12 A. iii. and iv.). Some of her MSS. are preserved in the royal collections at Windsor. She married, first, Robert Radcliff, earl of Essex, and, secondly, Henry, seventeenth earl of Arundel. She is buried at the east end of the south aisle of Newlyn Church, Cornwall, in the vault of the Trerice Arundells; and, according to Davies Gilbert (*Parochial History of Cornwall*), it was through her that the Trerice estates passed to the Dyke Acland family.

[King's MSS. Brit. Mus. 12 A. iii. and iv.]

W. H. T.

**ARUNDELL, RICHARD** (d. 1687), first **BARON ARUNDELL OF TRERICE**, Clarendon's 'Dear Dick,' was second son of Sir John Arundell of Trerice [q. v.]. He was present at the battles of Edgehill and Lansdowne. He was M.P. for Lostwithiel in the Short and Long parliaments of 1640, but was expelled for putting into execution the commission of array in 1642. He was a colonel in the king's army, and Clarendon describes him as 'a stout and diligent officer.' His estates, much impoverished during the civil war, were confiscated by the parliament in 1647, but on the Restoration were recovered by him. He was elected M.P. for Beeralston in 1680 and again in 1662, and on 23 March 1664-5 he was created a baron. Charles I., writing from Oxford in January 1643, had promised William Killigrew that Richard Arundell should succeed his father in the government of Pendennis Castle, and accordingly in 1662 Charles II. redeemed his father's promise. He died 7 Sept. 1687.

[Of. Harl. MSS. 1079, art. 9, and 3319, art. 22; Ashmolean MSS. (Bod. Lib.) 838, art. 51; Tanner MSS. (Bod. Lib.) 59, fol. 193.] W. H. T.

**ARUNDELL, SIR THOMAS** (d. 1552), alleged conspirator, was the second son of Sir John Arundell, knight-banneret of Lanherne. He was sheriff of Dorsetshire 1531-2, gentleman of the privy chamber to Cardinal Wolsey, and was knighted at the coronation of Anne Boleyn in 1533. He was appointed in 1535, with Sir John Tregonwell and others, as a commissioner for the suppression of religious houses. The reception which he met with at Exeter may be read in Dr. Oliver's 'Monasticon Diocesis Exoniensis,' p. 116. In 1545 Henry VIII. granted to him a church at Trescoo, one of the Scilly islands, and addressed to him a remarkable letter concerning the papists in Cornwall (*MS. Westminster Abbey and Stowe MSS. Cat.* 1849). In January 1549-50, the year in which he was made receiver-general of the duchy of Cornwall, he and his elder brother John (vice-admiral of the king's

ships in the west seas, and sheriff of Cornwall) were committed to the Tower on suspicion of being implicated with their cousin, Humphry Arundell, in the Cornish rising in favour of 'the old religion.' Sir Thomas, although released in October 1551, was again committed to the Tower in the same month for being concerned in the Duke of Somerset's 'conspiracy,' wherein, Bishop Pouet says, 'Arundell conspired with that ambitious and subtil Alcibiades, the Earl of Warwick, after Duke of Northumberland, to pull down the good Duke of Somerset, King Edward's uncle and protector;' but, as Mr. Doyne Bell has pointed out, in his history of the church of St. Peter ad Vincula in the Tower (1877), pp. 149-153, if this be correct it is singular that Arundell should have afterwards been re-arrested on 28 Jan. 1551-2 for conspiring with Somerset against Northumberland. Nevertheless, this change of sides may have been the price of his release. It is, however, possible that there were two contemporaries of the same name, one of the Lanherne (a Roman catholic), the other of the Trerice (a protestant) branch. Sir Thomas was brought to trial with Sir Ralph Vane on the day following his arrest; when Machyn records that 'the quest qwytt ym of tresun, and cast hym of felonye, to be hanged.' The less degrading death by beheading was, however, ultimately allotted to him; and the sentence was carried into effect on Tower Hill on 26 Feb. The writer of the 'Chronicon ex registro Fratrum Minorum Londoniæ,' as given in Mr. Richard Howlett's 'Monumenta Franciscana,' vol. ii., records that Sir Miles Partridge, Sir Ralph Vane, and Sir Miles Stanhope were executed at the same time; and declares that 'theis iiiii knyghtes confessyd that the war neuer gylte for soche thynges as was layd vn-to their charge, and dyde in that same oppinioun.' 'The commission for seizing on the possessions of Sir Thomas Arundell, 'rebel and traitor,' is in Harl. MS. 433, art. 557; and an interesting catalogue of his plate, together with a list of that portion which was returned to his widow Margaret (a sister of Queen Katharine Howard), will be found in the Add. MS. 5751, fol. 209. Richard Carew, the historian of Cornwall, says of him that 'he was in Edward VI.'s time made a privy counsellor; but cleaving to the Duke of Somerset, he lost his head with him.'

[Of. also Fourth Report of Dep. Keeper of Public Records (1843), pp. 231-2; and Hutchins's Dorset (the new edition), iii. 556.] W. H. T.

**ARUNDELL, THOMAS**, first **BARON ARUNDELL OF WARDOUR** (1560-1639), was

a grandson of Sir John Arundell, the friend of Father Cornelius. When about thirty-five years of age, he was made count of the Holy Roman Empire in 1595 by the Emperor Rudolph II, for his valour in the wars against the Turks in Hungary; on one occasion he captured the enemy's banner with his own hand, whilst forcing the water-tower at Gran or Esztergom. He was a great favourite of Queen Elizabeth, who recommended him to the emperor in an autograph Latin letter, said to be still preserved at Wardour Castle. He was made first Baron Arundell of Wardour by James I in 1605. His eldest son, THOMAS, second BARON OF WARDOUR (born 1584), was (according to CLARENDON, iv. 125, ed. 1820) amongst the royalists of Cornish extraction who were present at the bloody battle of Lansdowne near Bath on 5 July 1643, where he was wounded. But this statement seems to be erroneous, for his monument in Tisbury Church, Wilts, records that he died at Oxford on 19 May 1643, probably of wounds received in some other engagement during the civil war. Lady Blanche Arundell, whose gallant defence of Wardour Castle against the parliament is a familiar matter of history, was the wife of the second baron.

[See ante, sub Arundells of Lanherne.]

W. H. T.

**ASBURY, FRANCIS** (1745-1816), Wesleyan bishop, was born 20 or 21 Aug. 1745, at Hamstead Bridge, in the parish of Handsworth, Staffordshire, four miles from Birmingham. He was the only son of Joseph Asbury and Eliza Rogers, both methodists. He began to preach, as a local preacher, at the age of eighteen, and was admitted as an itinerant preacher at the age of twenty-one. In August 1771, when preachers were wanted by the Bristol conference to go to America, Asbury offered himself; he embarked in September, and landed at Philadelphia 27 Oct. 1771. The American methodists, especially after the war of independence, were troubled by the want of the sacraments and of confirmation. Wesley, then in his eighty-second year, with the Revs. Thomas Coke, D.C.L., and James Creighton, ordained at Bristol, in 1784, Richard Whatcoat and Thomas Vasey as presbyters for America; subsequently Wesley, by himself, ordained Coke as superintendent, explaining his views in a mandate dated 10 Sept. 1784. Following its terms, Coke and Asbury were elected joint superintendents by the Baltimore conference at Christmas, 1784. Coke and the two presbyters ordained Asbury deacon and elder on

Christmas day; and superintendent, with the further assistance of the Rev. William Philip Otterbein, a Lutheran clergyman, on 27 Dec. Coke suggested the use of the title of bishop, and the conference agreed to constitute the 'Methodist Episcopal Church of the United States of America.' The remainder of Asbury's life was spent in organising and extending the church thus formed. Its germ had been planted by the emigration of Philip Embury and Paul and Barbara Heck from Ireland to New York. Its existing constitution dates from 1786, its form of discipline from 1787; its two superintendents have since grown to thirteen bishops. Asbury's 'Journal' shows him to have been a man of simple and winning character, administrative power, and pithy expression; his piety is both frank and deep. He died unmarried, 31 March 1816.

[Asbury's Journal, N.Y., 1852; Jones's Character and Career of Francis Asbury, N.Y., 1872, with portrait; Larrabee's Asbury and his Coadjutors, Cincinnati, 1854; Strickland's Pioneer Bishop, London, 1860, with portrait; Briggs's Bishop Asbury, London, 1874, with portrait.]

A. G.

**ASCHAM, ANTHONY** (fl. 1553), astrologer, studied at Cambridge, became M.B. in 1540, and in 1553 was presented by Edward VI to the vicarage of Burneston, Yorkshire. He is probably to be identified with Anthony, the brother of Roger Ascham (cf. GRANT's *Vita Aschami* in *ASCHAM's Works*, ed. Giles, iv. 307). His works are as follows: 1. 'A Little Herbal,' by Ant. Askam, 1550. 2. 'Anthonie Ascham his Treatise of Astronomie, declaring what Herbs and all Kinde of Medicines are appropriate, and also under the influence of the Planets, Signs, & Constellations,' 1550. 3. **ASCHAM, ANTONY** (d. 1650), parliamentary ambassador at Madrid, was 'born of a genteel family, educated in Eton school, and thence elected into King's College, Cambridge, 1638.' He took the parliamentary side in the civil war, and was appointed tutor to James, duke of York. In 1648 he published his 'Discourse of what is lawful during confusions and revolutions of government,' a treatise determining within what time allegiance might be transferred from a sovereign to those who had conquered him. It was answered by Dr. Sanderson (whose tract on the subject was formerly printed with Walton's 'Lives'), and republished in 1689 without the author's name. In August 1649 Ascham was the Hamburg agent of the republic, and in the following June he was appointed resident at Madrid, at a salary of 800*l.* a year. Clarendon (then Sir Edward Hyde and ambassador for Charles II) sneers at his rival's incompetence; but Milton, some years after, recommending Marvell to Bradshaw, thinks it sufficient commendation to say that 'Mr. Marvell will do as good service as Mr. Ascham.' The dignity of the new resident was jealously guarded by a formal introduction to the Spanish ambassador, and by a special commission under the great seal. At Madrid Hyde was assured that no embassy was in question; it was only that a gentleman had come with letters from the parliament to the king. The letters were never delivered, for the day after his arrival Ascham and his interpreter, De Rivas, were murdered at their inn by John Guillim and William Spark, who, with their four accomplices (Henry and Valentine Progers, John Halsal, and William Arnet), took sanctuary immediately afterwards. The parliament not only demanded their punishment, but ordered that six persons, who had been in arms for the king and had not been admitted to compound, should be at once seized and tried by the high court of justice, an order repeated in November. The Spaniards, to save appearances, took the assassins out of the church, tried, condemned, and restored them to sanctuary, where they were maintained by the contributions of 'persons of quality' till they all had opportunity to escape. Spark, the only protestant among them, was alone recaptured and executed. In 1652 the murderers were excepted from the

act of oblivion, and provision was made for Ascham's relations, and so late as 1655 the topic of the murder is urged in Cromwell's declaration against Spain. The pleadings for the punishment of the murderers, translated from the Spanish, were published in 1651, and are reprinted in the 'Harleian Miscellany' (iv. 280, ed. Park).

**ASCHAM, ROGER** (1515-1568), author, was born in 1515 at Kirby Wiske, near Northallerton. His family appears to have been of considerable antiquity, and to have taken its name from the villages known as East and West Askham, near York. A Roger de Askham is mentioned as an adherent of Thomas, earl of Lancaster, in 1313, and as receiving pardon for his complicity in the murder of Piers Gaveston (RYMER, *Fœdera*, iii. 444). Hamond Askham was appointed master of Balliol College, Oxford, in 1397 (WOOD, *Antiquities*, p. 82). In 1406 William Askham became an alderman of London, and was sheriff in 1398, when Richard Whittington was mayor (RILEY, *Memorials of London*, 546, 548, 565). The will of another William Askham, dated 7 Nov. 1390, preserved at York, proves the members of the family who remained in Yorkshire to have belonged to the yeoman class. At the date of Roger's birth his father, John Ascham, was house-steward to Lord Scrope, of Bolton, and bore a high reputation for uprightness of life. A mention of him in the will (20 Feb. 1507-8) of Robert Lascelles, a substantial Yorkshire landowner, proves him to have then held the tithes of Newsham, near Kirby-Wiske, and to have lately sustained heavy losses (cf. *Testamenta Eboracensia*, published by Surtees Soc. i. 129-30, ii. 28, iv. 271). The maiden name of Roger's mother, Margaret Ascham, has not been preserved; but it has been stated that she was of an important Yorkshire family. Roger was the third son. The eldest son, Thomas, was fellow of St. John's College in 1523 (BAKER, *Hist. of St. John's Coll.* ed. Mayor, i. 282), and died before 1544 (ASCHAM, *Epistles*, ed. Giles, No. xxi.). He apparently married, and left three sons, Roger, Thomas, and John, of whom the first was promoted, in 1573, from the office of ordinary yeoman of Elizabeth's chamber to that of yeoman of the bears, and the last was the author of an unprinted pamphlet entitled 'A Discours against the Peace with Spayne, 1603' (*Harl. MSS.* 168, art. 117; 295, art. 231 b). Anthony, Roger's

second brother, was an astrologer [see ASCHAM, ANTHONY, *fl.* 1553].

Roger received his earliest education from his father, to whom he refers in his letters as 'the wisest of men,' and whose advice he frequently sought and acted upon in early manhood. But while still a child he was received into the family of Sir Anthony Wingfield, who 'ever loved and used to have many children brought up in learnynge in his house' together with his own sons (ASCHAM, *Tocophilus*, ed. Arber, p. 140). R. Bond was the name of the tutor employed by Sir Anthony, and under his guidance Roger made rapid progress in English as well as in classical studies. His physical education was not neglected, and Sir Anthony himself taught the boys archery, which was always Ascham's favourite exercise (*ibid.*). At the age of fifteen (1530) Roger, by the advice and at the expense of his patron, who recognised his promise, proceeded to St. John's College, Cambridge, where the best education of the day was to be obtained. His first tutor was Hugh Fitzherbert, who had become fellow of the college in 1528, but of him little is known (COOPER, *Athen. Cantab.* i. 64). Ascham appears to have developed his special aptitude for Greek under Robert Pember, another fellow of St. John's (cf. *Epist.* cxxxiv.). During his undergraduate days he wrote a letter to Pember in Greek, which the tutor described as fit to have been written at Athens. But to John Cheke, afterwards tutor to Edward VI, and to John Redman, afterwards first master of Trinity College—both of whom were admitted fellows of St. John's during his first year of residence—Ascham always ascribed the chief advantages he derived from his academic training. With them, and especially with the first, he lived throughout their lives on terms of peculiar intimacy, and in his latest work he praised 'their onely example of excellency in learnynge, of godnes in liuyng, of diligence in studyng, of counsell in exhorting, of good order in all thyng' (*Scholemaster*, p. 67). Other friends that he made at St. John's at the same time were George Day and John Christopherson, both afterwards bishops of Chichester, Robert Horne, afterwards bishop of Winchester, Thomas Watson, afterwards bishop of Lincoln, James Pilkington, afterwards bishop of Durham, and John Seton, afterwards well known as the chaplain of Gardiner, bishop of Winchester. Among members of other colleges with whom he became acquainted were Edmund Grindal, afterwards archbishop of Canterbury, Walter Haddon, afterwards the eminent civilian, Thomas Wilson, who sub-

sequently wrote on logic, and Nicholas Ridley, the martyr bishop of London. Besides devoting himself to Greek, which he taught as an undergraduate to students younger than himself, Ascham made himself master of almost all extant Latin literature, paid some attention to mathematics, became an accomplished musician, and acquired singular skill in penmanship. On 18 Feb. 1533-4 he took the degree of B.A., and on 23 March following was admitted to a fellowship at St. John's, which, as he wrote later, was 'the whole foundation . . . of all the furderance that hitherto else where I have obteyned' (*Scholemaster*, p. 134). Although Ascham's proficiency well merited a fellowship, his open avowal of the reformed religion imperilled his election. In 1533-4 a public disputation as to the authority of the pope in England took place at Cambridge, and Ascham so violently opposed the catholic champions as to offend many of his friends, among them George Day, a subsequent bishop of Chichester, to whom in later years he apologised for his 'imprudence' (*Epist.* cxxxvi.). His fellowship was only bestowed on him owing to the 'goodnes and fatherlie discretion' of Dr. Metcalfe, master of his college, who was himself a catholic, but came from the neighbourhood of Ascham's birthplace (*Scholemaster*, p. 134). Early in July 1537 Ascham proceeded M.A. In the meantime he had been studying hard and gathering pupils about him, in whom he took an affectionate interest: among them he has made special mention of William Grindal, John Thomson, Edward Raven, and William Ireland, the last three of whom became fellows of St. John's, and to Raven and Ireland Ascham addressed some of his most charming letters in later life (*Epist.* ci. cii. civ. cxvi. cxx. cxxx. cxxxiv.). About 1538 Ascham was appointed Greek reader at St. John's, with a good salary. His success was remarkable. In five years, he afterwards asserted, Sophocles and Euripides had become at his college as familiar as Plautus had been previously; and Demosthenes was as much discussed as Cicero in former times (*Epist.* xii.). Students from other colleges regularly attended his lectures. In 1539 he apparently sought, through the influence of William Buckmaster, vice-chancellor, a mathematical lectureship (*Epist.* iv.), although he candidly confessed in later life that, compared with the classics, 'Euclid's pricks and lines' had little educational value (*Epist.* ii. liv.; cf. *Scholemaster*, p. 34). The beauty of his handwriting also brought him much employment as the writer of official letters in behalf of the university; but although he said in

1544 that he had been employed in that capacity for twelve years, the earliest extant letter from him of the kind cannot be dated earlier than 1541 (*Epist.* viii. xxii.). But petty quarrels soon disturbed his academic career. He was working hard in 1539 to procure the election of his pupil Thomson to a vacant fellowship at St. John's (*Epist.* v. vi. viii.), and his zeal in the matter, which proved successful, brought him into collision with his friend Redman, who was interesting himself in another candidate (*Epist.* xx.). Soon after this dispute Ascham paid a visit to his parents in Yorkshire, whom he had not seen for several years (*Epist.* ii.). At the time he apparently attended archery meetings at Norwich and York, and increased his enthusiasm for the sport, which he had practised habitually from youth (*Toxophilus*, p. 159). It is of interest to note that the statutes of St. John's, adopted in 1530 and reaffirmed in 1545, allowed him to pursue the recreation at Cambridge (*Scholemaster*, ed. Mayor, p. 258). While in Yorkshire he was seized with a severe illness—a quartan fever—which prevented his return to Cambridge for two years, and exhausted his pecuniary resources (*Epist.* ix. x. xii.). His poverty compelled him to appeal for money to Robert Holgate, bishop of Llandaff, who had had some connection with St. John's (*Epist.* x.), and to Edward Lee, archbishop of York, of whom he requested employment either in epitomising books which the archbishop had not time to read, or in translating into Latin Greek patristic literature (*Epist.* ix.). Lee replied by awarding him an annual pension of forty shillings, and Ascham, to show his gratitude, set himself to translate into Latin Œcumenius's commentaries on St. Paul's Epistles to Titus and Philemon, gathered out of Cyril, Chrysostom, and other Greek fathers. At the close of 1541, while Ascham was apparently still in Yorkshire, the work was completed. It was published at Cambridge, after his return there, in 1542. He presented a copy to the archbishop (*Epist.* xiii.), but it did not satisfy his patron. Lee was displeased with the approval Ascham had bestowed on the married clergy, and there seemed some likelihood of his pension being discontinued. With the humility which invariably characterised Ascham whenever money matters were in question, he implored pardon, and promised to abandon theology for pure classics, and to translate Sophocles into Latin (*Epist.* xv.). In a second letter to the archbishop on the subject he declared that he was not self-opinionated, nor a seeker after novelties, as his lectures on Aristotle, Plato, and Cicero would plainly show, and

that his knowledge of Christianity was solely derived from the Psalter and the Greek Testament (*Epist.* xvii.). On 13 Sept. 1544 the archbishop's death brought Ascham's pension to an end, and he contemplated seeking a new patron in George Day, the bishop of Chichester (*Epist.* xvii. xxiv.). At the time he was involved in many misfortunes. His brother Thomas died early in the year, and shortly afterwards both his father and mother after nearly fifty years of married life. Dissensions in the university disheartened him. In a controversy as to the correct mode of pronouncing Greek he had played an active part. Cheke had attempted to introduce a system of pronunciation resembling that in use in England at the present time, and opposed to the continental practice. Ascham, having at first resisted the innovation, finally supported it; but to his chagrin Gardiner, bishop of Winchester, issued (15 May 1542) a decree, at the instance of Cheke's enemies, forbidding the teaching of the new pronunciation (*Epist.* xii.; A. J. ELLIS, *English Pronunciation of Greek*, p. 5). His father had advised him to escape the contentions caused by the discussion of this and other questions by abandoning the university, and in July 1542 he appears, in pursuit of this counsel, to have supplicated for incorporation at Oxford, but he does not seem to have persisted in this application (Wood, *Fasti*, ed. Bliss, i. 114). He had also entertained proposals to become tutor to Lord Mountjoy's son (*Epist.* xix. xx.), and about Lady-day 1544 he wrote to Redman that, deep as was still his interest in his Greek lectureship at St. John's, he longed for nothing more than foreign travel in the suite of an English ambassador (*Epist.* xx.). He was not, however, willing to forego very hastily his chances of preferment in the university, and, with his customary shrewdness, he wrote to Sir William Paget, secretary of state, early in the same year (*Epist.* xxii.), demanding his influence with the king to obtain for himself the regius professorship of Greek at Cambridge, soon to be vacated by Cheke on his appointment as tutor to Prince Edward.

But, fortunately for his future reputation, Ascham looked for advancement in one other direction. In 1543 and 1544 he was engaged on his famous treatise on archery, which he believed would secure him the favour of Henry VIII, and 'would be no doubtful sign of his love of his country nor a mean memorial of his humble learning' (*Epist.* xxii.). During 1544 he was seeing it through the press, and he desired permission to present it personally to the king before his departure

for the siege of Boulogne. But Henry left England in July 1544 before the book was completed, and it was not till 1545 that he found his opportunity of offering it to the king in the gallery at Greenwich. Henry VIII, according to Ascham's own account, 'did so well like and allow it, as he gave me a living for it' in the shape of a pension of 10*l*. (*Epist.* ii. lxxxvii.). Shortly before, he had obtained personal introductions to Bishop Gardiner, who was beginning to show a kindly interest in him on account of his literary ability, and to the Duke of Norfolk, and his favourable reception by the king was owing mainly to their influence. The book, dedicated to Henry VIII, and printed at London in 1545, was cast in the form of a dialogue between Toxophilus (Ascham himself) and Philologus, a Greek tutor of Cambridge (doubtless Sir John Cheke). The first part formed an argument in favour of archery as a recreation for students and as an instrument of war; the second part contained practical hints for becoming proficient in the art. The most remarkable characteristics of the work are its vigorous, flexible, and pure English prose, and its plea for the literary use of the 'Englyshe tonge,' as opposed to Latin or Greek, which is set forth in an introductory address 'to all gentle men and yomen of Englande.' Of translators Lord Berners, and of original writers William Tyndale and Sir Thomas More, alone of preceding writers, had exhibited a comparable command of 'the speech of the common people,' and they did not always exhibit the ease which is here habitual to Ascham. Walter Haddon prefixed Latin elegiacs, in which he praised Ascham's own skill as an archer and a scholar. Ascham was justly proud of his performance, and sent copies of the 'Toxophilus,' with autograph letters, to the queen (*Epist.* xxxii.), the Earl of Essex (*ibid.*), Lord Chancellor Wriothesley (*Epist.* xxxiii.), Bishop Gardiner (*Epist.* xxxiv. xxxv.), and to a large number of noblemen at court (*Epist.* xxxviii.).

Soon after the publication of this work Ascham fell ill again, and was unable to reside at Cambridge. In 1545 he asked Archbishop Cranmer, on account of his ill health, to permit him to eat flesh instead of fish on fast days, and the dispensation was granted (*Epist.* xxvii. xxviii. xxix.). In 1546 he had sufficiently recovered from his sickness to succeed Cheke as public orator of the university (*Epist.* xlv.), and in that capacity conducted for the next few years a voluminous correspondence for the university. He repeatedly sought the influence of all the great officers of state to keep the privileges and property of the colleges intact. In 1547

troubles again appear to have come upon him. Late in that year he complained in two letters, one (*Epist.* lxxxiii.) addressed to Sir William Cecil, to whom he had been introduced by Cheke, and the other (*Epist.* lxxxii.) to the master of St. John's (William Bill), that he had been treated with scant courtesy in the matter of a public disputation on the mass to which he had looked forward as a means of utterly reducing the catholic champions at Cambridge. To give the discussion greater publicity and importance, its scene during its progress had been removed at his suggestion from St. John's College to the public schools, but it was there suddenly closed by order of the vice-chancellor Madew. He consoled himself for this disappointment by writing a treatise on the mass, which was published posthumously in 1577. About the same time (1548) the death of his pupil and friend, William Grindal, appointed through Cheke's influence in 1544 tutor to the Princess Elizabeth, caused him intense grief (*Epist.* lxxxiv. cxvii.).

But this last event was not without a brighter side. Ascham had, doubtless through Cheke, already made the acquaintance of the Princess Elizabeth, and had been as favourably impressed with her zeal for learning as she had been impressed with his skill as a teacher. From 1545 onwards he frequently wrote to encourage her in her studies (cf. *Epist.* xxxi.), and on one occasion mended her silver pen for her, and presented her with an Italian book and a book of prayers (*Epist.* xxxix.). He had also been intimate with her attendants, John Astley and his wife (*Epist.* lv.), and he had urged in 1545 the appointment of the latter as the princess's governess (*Epist.* xl.). Sir Anthony Denny, at whose house at Cheshunt the princess lived for many years, had also shown Ascham marks of special favour since the days that the latter was a poor and he a rich student of St. John's. On Grindal's death Ascham wrote to Elizabeth, condoling with her on the loss of her tutor, urging her to persevere in her studies, and vaguely expressing his anxiety that he might place his abilities at her service, while he recommended her to find another tutor in 'that other Grindal (i.e. Edmund, afterwards archbishop), who resembles William in gentleness' (*Epist.* lxxxiv.). But to Sir John Cheke he openly stated his desire to succeed Grindal himself (*Epist.* lxxxv.). Before July 1548 his wishes were fulfilled, and he took up his residence at Cheshunt. He found there a congenial companion in a young man named John Whitney, whom he had known before (*Epist.* xxxvii.), and to whom he now taught Latin

on the system afterwards recommended in the 'Scholemaster.' The death of this 'worthie young gentleman' within a few months of Ascham's settlement at Cheshunt gave him a new grief, for which he sought expression in some poor English verses 'of disorderlie meter,' printed in the 'Scholemaster' (p. 91). Ascham found his royal pupil as apt as he had anticipated. According to his account she talked French and Italian as well as English; she could hold her own in Latin conversation, and fairly well in Greek; she was a shrewd critic of style in Latin, Greek, and English. Her handwriting was admirable, and, like Ascham himself, she delighted in music. During the two years he taught her at this time, he read all Cicero with her, and the greater part of Livy; every morning she devoted some hours to the Greek Testament, and some to Isocrates and Sophocles. To Cyprian and Melancthon Ascham also introduced her, to confirm her in good doctrine (*Epist.* xcix.). But none the less he found the life he led in the princess's service an irksome one. He could rarely visit Cambridge; he had to go to court, and mixed with men whose frivolity or dishonesty disgusted him. Finally, he quarrelled over a trifle with Elizabeth's steward; a coolness sprang up between himself and his mistress (*Epist.* cxi.), and he hastily resigned his post in 1549-50, to resume his own studies and his official duties as public orator at Cambridge. Among his pupils on his return were Lords Henry and Charles Brandon, to both of whom he taught penmanship, and to the latter Greek (*Epist.* cviii.). To the sad deaths of these youths on 16 July 1551 Ascham frequently makes mournful reference in his later letters. But Ascham was still restless. He paid a visit to his friends in Yorkshire in 1550; and hinted to Cheke, whose influence he freely claimed for his own advancement, that he should be glad to spend two years in foreign travel (*Epist.* cv.). While still in Yorkshire, he heard from Cheke that he had been appointed secretary to Sir Richard Morysin, recently nominated English ambassador to the emperor Charles V. On his journey south to Billingsgate to embark, Ascham visited Lady Jane Grey at her father's house at Bradgate, Leicestershire, and in a memorable passage in the 'Scholemaster' (p. 46) he has described how he found her reading Plato's 'Phædo' in her chamber while all the household was out hunting. Before leaving her, he obtained a promise from her of a Greek letter (*Epist.* xcix.). Ascham also visited the Princess Elizabeth, and effected a reconciliation (*Epist.* cxi.). While in London he met Cheke, and spent nine hours on the day before his depar-

ture talking with him of old days at Cambridge (*Epist.* civ.). On 21 Sept. 1550 he set out from Billingsgate. He landed at Gravesend to visit Archbishop Cranmer at Canterbury, who escorted the party to Dover. In the passage to Calais Ascham and a young man alone escaped sea-sickness. On 30 Sept. Antwerp was reached; on 6 Oct. the embassy arrived at Louvain, whose university teaching he thought far inferior to that given at St. John's; afterwards he visited Cologne, where he heard a lecture on Aristotle's 'Ethics' in Greek which he says he could not admire, and travelled on to Mainz, Worms, Spire, and Ulm. On 28 Oct. Sir Richard Morysin fixed his headquarters at Augsburg. There Ascham stayed with a few intervals till the end of 1552. It was probably at the close of 1551 that he spent nine days in Italy and visited Venice, where he bitterly lamented the absence of 'all service of God in spirit and truth' (*Scholemaster*, p. 84). He paid occasional visits to Halle in the Tyrol (17 Nov. 1551, and 29 Jan. 1551-2), to Innsbruck (18 Nov. 1551), and to Villach in Carinthia (12 July 1552). Early in 1553 he was staying at Brussels, and in July of that year he returned to England, when the embassy was recalled on the death of Edward VI. Ascham throughout these years regularly corresponded with his friends in England, and especially with his old pupils, Raven and Ireland, besides writing all Sir Richard Morysin's official despatches. In one very long English letter to Raven (20 Jan. 1550; *Epist.* cxvi.) he gives an entertaining account of his interviews with Charles V. To Sir William Cecil and to Cheke he sent, shortly before his return, some Roman coins; he mentioned to the latter that he had accustomed himself to write all his letters in English instead of Latin (*Epist.* cl.), a statement that his collected correspondence fully supports, and he informed Cecil (*Epist.* cxlix.) that he had ceased to feel interest in strange countries or courts, and longed for peace at Cambridge to keep company with the Bible, Plato, Aristotle, Demosthenes, and Tully. The most interesting portion of his correspondence in Germany is that with the learned John Sturm, rector of the gymnasium at Strasburg and editor of Cicero. For his classical attainments Ascham had had from an early date the most sincere respect. He had apparently heard much of him from Martin Bucer, whose acquaintance Ascham had made as soon as Bucer had arrived in England, and had written a long letter from Cambridge introducing himself to the scholar on that ground early in 1550 (*Epist.* xcix.). He went to Strasburg

to see him in 1552, but Sturm was from home (*Epist.* cxl.), and the two friends never met, although they continued to correspond in terms of the utmost intimacy from 1550 till a few days before Ascham's death. On the death of Martin Bucer on 28 Feb. 1550-1, Ascham offered to aid Sturm in writing his life. With Sir Richard Morysin Ascham seems to have lived on excellent terms; he read Greek with him five days a week, and between 12 Oct. 1550 and 12 Aug. 1551 they went through all Herodotus with five tragedies (probably of Sophocles) and seventeen orations of Demosthenes. He kept a diary in English throughout his foreign sojourn, in which he described the German princes he met and the political questions at issue in Europe. The greater part of it he forwarded in 1552 in a letter to his friend, John Astley, in attendance on Princess Elizabeth at Hatfield, and this document was published at London in 1553 under the title of 'A Report . . . of the Affaires and State of Germany.'

On the accession of Queen Mary, Ascham's prospects in England looked very gloomy. His pension of 10*l.*, which had been renewed and increased by Edward VI, had again terminated. While in Germany he had, through the influence of Cheke and William Cecil, been nominated Latin secretary to the king and his librarian, but he had never exercised these functions, and the appointments now ceased to have effect. He still retained the public oratorship at Cambridge and a fellowship. Before the close of 1553 his fortunes improved. He sought the favour of his old friend Gardiner, and through him was appointed Latin secretary to Queen Mary, with an annual salary of twenty pounds. The bishop, on hearing how he had lost his pension, bade him have the patent written out again, and Ascham brought the document to him, leaving a blank space for the sum of money. He showed Gardiner that, through the carelessness of the scrivener, the space was too wide for 'the old word *ten*,' and begged him to use his influence with the queen to obtain twenty pounds a year for him. In one letter to Gardiner (*Epist.* clxx.) he naively wrote: 'The space which is left by chance doth seem to crave by good luck some words of length, as *viginti* or *triginta*, yea, with the help of a little dash, *quadraginta* would serve best of all.' He told the same story to Queen Elizabeth in 1567, with some variations to give it a more avowedly amusing tone (ii. lxxxvii.). But his device succeeded, and Queen Mary gave him twenty pounds a year. Through the favour of Sir William Petre he obtained a grant from the crown of the lease of a farm at Walthamstow, Essex, called Salisbury

Hall, at the low rent of twenty pounds. He soon afterwards gave proof of his industry as the queen's Latin secretary by writing with his wonted skill forty-seven letters for her to persons of exalted rank, of whom cardinals were the lowest, within three days. One other exceptional favour was bestowed on him at the time. While his friend Cheke was compelled to renounce the reformed religion, and Ridley suffered for his adherence to it with his life, Ascham was permitted to continue in its profession, and Gardiner's friends incited him in vain to interfere with his religious liberty (*Epist.* cxci.). This exemption has been attributed to various causes, but Ascham was doubtless worldly-minded enough, as Dr. Johnson has suggested, to avoid any obnoxious display of his opinions, and thus escaped notice. It is noticeable that in his voluminous correspondence, while he bestows approval on Gardiner's policy (*Epist.* clxxv.), to whose personal kindness he repeatedly refers, keeps Pope Paul IV informed, in the exercise of his official duties, of the progress that the Roman catholic revival makes in England (*Epist.* cxciv.), and seeks with success the patronage of Cardinal Pole (*Epist.* clxxxix.), he preserves an ominous silence as to the fate of Lady Jane Grey, to whom he had last written with friendly familiarity from Germany in 1551 (*Epist.* cxiv.), and makes no mention of his friends, Ridley and Cranmer. But Ascham in the early part of Mary's reign continued on intimate terms with Elizabeth, who never concealed her religious opinion, and found leisure to read with her Demosthenes and Æschines (*Epist.* cxci.).

On 1 Jan. 1554 Ascham married Margaret Howe, and he consequently resigned his fellowship and public oratorship at Cambridge. The lady was a niece by marriage of Sir Henry Wallop. Ascham, writing to Sturm at the time, speaks in high praise of his wife's beauty (*Epist.* cxci.), and in a later letter to Queen Elizabeth (ii. lxxxvii.), describes her as very young compared with himself, who was now 'well stept into years.' Elsewhere (ii. clxxi.) he writes of her under date 18 Jan. 1554-5: 'God, I thancke him, hath given me such an one as the lesse she seeth I doe for herr the more loveing in all causes she is to me,' and adds that 'hitherto she hath founde rather a loveing than a luckye husband unto her.' The close of Mary's reign saw Ascham steadily at work in her service, but his private letters are full of complaints of his poverty and his inability to maintain on his income his wife and his son Giles. The accession of Elizabeth did not appreciably improve his fortunes. He was

continued in the various offices he held under Mary, and was installed anew in the office of the queen's private tutor. He read Greek with her until his death, and sometimes played chess with her. On 5 Oct. 1559 the queen bestowed on him the prebend of Wetwang in York Cathedral, to which he was admitted on 11 March 1559-60. But a long lawsuit followed, apparently with the former holder of the preferment, who had been deprived for nonconformity, and he only won the case in 1566, after the queen had bidden the archbishop of York to give him his assistance (*Epist.* ii. lxxv.), and thus enjoyment of the emoluments of the office was long delayed. In 1562 a second son was born to him, and he christened him Sturm after his friend at Strasburg (*Epist.* ii. xxxviii.). 'Household griefs' were still oppressing him. The death of his wife's father in 1559 left her mother almost destitute, and he mortgaged his farm at Walthamstow in her behalf. He made few friends at the court, with which he was always out of sympathy; and although Sir William Cecil still offered him aid in suits for advancement, the Earl of Leicester, who had been well disposed to him as a young man, and stood godfather to his third son Dudley in 1564 (*Epist.* lix.), apparently contrived later that his connection with the queen should give him no very substantial advantage (*Epist.* ii. lxxv.). He may be the Roger Ascham who was returned to parliament for Preston in 1563. Before 1567 he borrowed a small sum of the queen, the repayment of which she excused (*cf.* *Epist.* ii. lxxxvi.), and about the same date he received, on the death of his mother-in-law, a lease of Wickyford parsonage. His severest trouble for the last nine years of life was his precarious health and fortune. After hinting to many noblemen from 1559 onwards that his official services deserved a fuller recognition than they had received, in 1567 he boldly applied to the queen to make some permanent provision for his family (*Epist.* ii. lxxxvii.). In a half-humorous tone he reminded her of the favour shown him by her father, brother, and sister, and asked her as his friend to intercede in his behalf with herself as queen. He had never solicited any previous favour, except a gift of venison to make some friend merry. He expected death very soon, and pathetically entreated her to enable him to settle twenty pounds a year on each of his sons. No answer to this appeal is extant, and no favourable one seems to have been given. In the course of the following year his son Sturm died, and he sent his wife soon afterwards, while temporarily absent from her, a very touching letter of condolence (*Epist.* ii. xcviii.)

But between 1563 and the date of his death Ascham found some relief from his cares in the composition of his 'Scholemaster.' In 1563, the year of a plague, Ascham dined at Windsor with Sir William Cecil, and among the guests were Sir Richard Sackville and his friends Haddon and Astley. After dinner Ascham was informed that certain scholars had run away from Eton for fear of a flogging, and the conversation turned on educational discipline, in which Ascham strongly condemned corporal punishment. Sir Richard Sackville was so well impressed with Ascham's remarks that he offered to educate Ascham's son with his own under a master instructed in Ascham's system, and others of the company begged him to write a practical treatise on education. He at once set to work, chiefly with a view to the bringing up of his own children. He freely confessed that his method was borrowed mainly from Sturm and from his old tutor Cheke, who had died in 1557, and whose memory he believed he might best honour by putting posterity in possession of the secrets of his teaching. For five years he was filling in a plan of the work, of which he sent a sketch to Sturm in the last letter he ever wrote, about December 1568. Of the greater portion, which he had then completed, the first book contained, with many autobiographical reminiscences, a general disquisition on education, arguments in favour of alluring a child to learning by gentleness rather than by force, a statement of the evils attendant on foreign travel, and an account of the immoral training acquired by young men at court. The second book detailed Ascham's method of teaching Latin by means of a 'double translation,' which subsequent writers on education have invariably praised. He advised the master in the first place to explain in general terms the meaning of a selected passage, and afterwards to let the pupil construe it and parse each word in two successive lessons. After an interval the child was to write out his translation, and after a further interval was to turn his translation back into Latin. The teacher should then show him how the various constructions employed corresponded with, and were explained by, examples in the grammar-book. The first reading-book Ascham recommended was Sturm's selection from Cicero, and the second a play of Terence. The advance to more difficult authors was to be gradual, and the boy was not to attempt to speak Latin until he was master of the grammar. Ascham added remarks on Latin prosody, which he looked forward to seeing adopted in English verse, and criticised the style of many Latin authors.

But before the book had gone further Ascham died. In November 1568 he sat up many nights to finish a Latin poem which he desired to present to the queen on 17 Nov., the anniversary of her accession; some of these verses are printed in the various editions of Ascham's letters, excepting that of 1703. He had long suffered from sleeplessness and a kind of continuous fever. But on 23 Dec. his habitual ill-health assumed a fatal form. He lingered for a week in the utmost pain, and could give little attention to the ministrations at his bedside of William Gravet, vicar of St. Sepulchre's, London, in whose parish he was living, and of Alexander Nowell, dean of St. Paul's. He died in his fifty-fourth year on 30 Dec. 1568. His last words were: 'I desire to depart and be with Christ.' He was buried quietly in St. Sepulchre's Church, and Dean Nowell preached his funeral sermon, in which he declared that 'he had never seen or heard of any one who had lived more virtuously or died more christianly.' Queen Elizabeth, on hearing of his death, exclaimed that she would rather have cast 10,000*l.* into the sea than have lost her Ascham. His widow published the 'Scholemaster' in 1570 as her husband had left it, only adding a graceful dedication to Sir William Cecil, recently elected chancellor of Cambridge University.

All scholars in England and on the Continent lamented Ascham's death, and many of them expressed their grief in Latin verses to his memory. George Buchanan, who had dined with him at his house some years before (BUCHANAN *Opera*, ii. 762), and had already addressed him in complimentary Latin epigrams (bk. i. No. 29) wrote on his death—

Aschamum extinctum patriæ Graiæque Camcenæ

Et Latine vera cum pietate dolent.

Principibus vixit carus, jucundus amicis,

Re modica, in mores dicere fama nequit.

A short time afterwards (1577) Gabriel Harvey panegyrised the style and matter of Ascham's 'Scholemaster' in his 'Ciceronianus,' p. 55; and in many of his letters Harvey refers to him as worthy of a place beside Chaucer and Spenser, More and Sidney. His 'period' he called 'the siren of Isocrates.' Others of the century who honoured Ascham's memory by flattering mention of him in their works were Mulcaster, Camden, Thomas Nash, and Bacon; and Mr. J. E. B. Mayor has collected their testimonies in an appendix to his edition of the 'Scholemaster,' pp. 268-80. All scholars who were personally acquainted with him speak of his affectionate and gentle nature; but Camden

adds in his 'Annals,' under date 1568: 'Nevertheless, being too much given to dicing and cockfighting, he lived and died a poor man.' Upon this passage much discussion has arisen, and several writers have attributed the poverty of Ascham's later years to his habit of gambling. In the 'Toxophilus,' however, he especially denounces 'cardes and dyse,' but he complains that 'those which use shooting be so much marked of men, and oftentimes blamed for it, and that in a manner as moche as those which play at cardes and dise' (p. 49). Camden's accusation may therefore rest on a confusion of the kind here indicated. As to the charge of cockfighting, thought by few of his contemporaries to be a discreditable pastime, Ascham, in the 'Scholemaster,' acknowledged his interest in the sport, and his intention, which was never fulfilled, of writing 'a book of the Cockpitte,' in which 'all kinde of pastime fitte for a gentleman' should be fully declared (p. 65). Ascham's undoubted love of sport is an interesting trait: it distinguishes him from the over-diligent students of the Renaissance, with whom he has much in common. His letters show him to have shared much of their irritability, and more than their customary freedom in demanding money of their patrons. But his treatment of his wife, of friends like Cheke and Sturm, and of his pupils, wholly relieves him of the charge of undue selfishness. His place in English literature depends less on his efforts to extend the knowledge of Greek at Cambridge, or to improve the method of teaching Latin—labours which were attended with eminent success—than on the simple vigour of his English prose. He precedes the Euphuistic period; his style, as Gabriel Harvey suggested, knows no tricks: its easy flow and straightforwardness, at a time when literary composition in English was seldom attempted, constitute the grounds of Ascham's reputation. As a letter-writer, both in English and in fluent Ciceronian Latin, he takes rank with the most eminent literary men.

Of the career of Ascham's widow after his death little is known. An unprinted letter from her to Queen Elizabeth at Hatfield, dated March 1582, proves her to have been still living then (*Hist. MSS. Com. Rep.* iv. 221). Of his surviving sons no information of Dudley, the younger, is extant. Giles, the elder, was given a pension in 1569, at Sir William Cecil's intercession; but its payment was delayed, and several letters from him to the lord treasurer are extant petitioning for money. It is clear from these and later letters among the Lansdowne MSS. that his life was, like his father's, a long struggle

with poverty. He was in 1573 admitted to Westminster School, of which Grant, his father's friend and biographer, had just become head master. In 1578 he went to Trinity College, Cambridge, proceeded B.A. 1582-3, and was admitted a fellow under royal mandate 2 Oct. 1583. He proceeded M.A. 1586 and B.D. 1593, and was presented by his college to the vicarage of Trumpington 1590-1, which he resigned the same year. About 1595 he obtained the rectory of Duxford St. Peter, Cambridgeshire, and died shortly afterwards, his will being dated 15 June 1596 (COOPER, *Athen. Cantab.* ii. 207).

No contemporary portrait of Ascham is known; but an engraved portrait of him reading a letter to Queen Elizabeth, by Michael Burghers, was prefixed to Elstob's edition of his letters, published in 1703.

The separate editions of Ascham's English works are as follows: 1. 'Toxophilus,' with engraved title-page, was first published in quarto in 1545 (London, Edw. Whytchurch); second and third editions appeared in 1571 and 1589. In 1788 and again in 1821 the Rev. John Walters reprinted, with a preface, the edition of 1571, and the original edition has since been reprinted by Dr. Giles in 1865, and by Professor Arber in 1868. The copy of the first edition, presented by Ascham to Edward VI, is in the library of the Rev. Sir William Cope, at Bramshill House, Hampshire (*Hist. MSS. Com. Rep.* iii. 244). 2. 'A Report and Discourse written by Roger Ascham of the Affaires and State of Germany and the Emperour Charles his Court, duryng certain years while the sayd Roger was there,' was first printed about 1553 (the volume is undated). It was republished in 1572. 3. 'The Scholemaster, a plaine and perfite way of teachyng children to vnderstand, write, and speake in Latin tong,' was first published in 1570, republished in 1571, and again, according to the bibliographers, in 1572, 1573, 1579, and 1583. An edition of 1589 is well known. A carefully edited reprint was issued, with introduction and notes, by the Rev. James Upton in 1711, and again in 1743. Professor J. E. B. Mayor published the best extant edition, with elaborate notes, in 1863, and Professor Arber reprinted the first edition in 1870. Extracts from the 'Scholemaster,' with critical remarks, appear in Sabourn's 'Epitome of Grammar' (1733) and in Lefèvre's 'Compendious Way of teaching ancient and modern Languages' (1750). The best analysis of Ascham's educational system is that by Mr. R. H. Quick, in his 'Essays on Educational Reformers' (1868).

Of Ascham's Latin works, (1) the 'Expositiones antiquæ in Epistolam Divi Pauli ad Titum et Philemonem ex diversis sanctorum Patrum Græcæ scriptis Commentariis ab Œcumenico collectæ et Cantabrigiæ Latine versæ' (1542) was published in his lifetime. In 1577 it was reprinted by Edward Grant, with Ascham's (2) 'Apologia pro Cena Dominica contra Missam et ejus præstigias,' which was then published for the first time. (3) A little volume, printed at Strasburg in 1551, contained Ascham's 'Epistola J. Sturmio de Nobilitate Anglicana, 4 Apr. 1550,' with 'Conradi Hertsbachii de laudibus literarum Græcarum Oratio.'

Of his letters, Edward Grant, his biographer, who was a sizar of St. John's College in 1563, and afterwards head-master of Westminster School, published a selection, with a very full life in Latin, and several of his Latin poems, under the title of 'Familiarium Epistolarum libri tres magna orationis elegantia conscripti, nunc denuo emendati et aucti,' in 1576. The book was dedicated to Queen Elizabeth, and was republished in London in 1578 and 1590, at Hanover in 1602 and 1610, and at Nuremberg in 1611. In 1703 William Elstob published a new and much enlarged edition at Oxford under the title 'Rogeri Aschami Epistolarum libri quatuor: accessit Joannis Sturmii aliorumque ad Aschamum Anglosque alios eruditos Epistolarum liber unus.' A number of Ascham's English letters were printed for the first time in Whittaker's 'Richmondshire' in 1823 (i. 265-90).

Of collected editions of Ascham's English works, James Bennet issued the first in a single volume in 1771. Besides the three English books, many letters are added, and a life by Dr. Johnson is prefixed, in which he states (p. xxi) that Ascham 'was scarcely known as an author in his own language till Mr. Upton published his "Scholemaster"' in 1711. A second collected edition, limited to 250 copies, appeared in 1815, edited by J. E. Cochrane. In 1864-5 Dr. Giles published, in three volumes, the completest edition of the kind. It included 295 Latin and English letters, many of which were printed for the first time from British Museum and Cambridge manuscripts, besides six letters of Giles Ascham from the Lansdowne MSS. and Grant's Latin life. The references to Ascham's letters in this article are to the numbers given them in Dr. Giles's collection.

[Materials for Ascham's life are abundant. Grant's *Oratio de Vita et Obitu Rogeri Aschami*, published with an *Epistola Dedicatoria* to Elizabeth in 1576, is the original source, and with

Ascham's many letters gives very detailed information. The notice in Cole MS. Athen. Cantab. i. 13 is of little value. Dr. Johnson chiefly depended on Grant, and Hartley Coleridge's sketch of Ascham in his *Worthies of Yorkshire and Lancashire* is a loose translation of the *Oratio*. His letters are little utilised by either of these writers. Dr. Katterfeld, in *Roger Ascham, sein Leben und seine Werke*, 1879, gives a very full and scholarly account of Ascham. See also Cooper's *Athen. Cantab.* i. 263-8; Cooper's *Annals of Cambridge*; Baker's *Hist. of St. John's College*; *Biog. Brit.*; Fuller's *Worthies*; Mayor's edition of the *Scholemaster*.]

S. L.

ASGILL, SIR CHARLES (1762 or 1763-1823), general, was the only son of the first Sir Charles Asgill, who had risen from a clerkship to a partnership in a bank; was alderman 1749-77; sheriff and knighted 1752; lord mayor 1757; baronet 1761; and died 15 Sept. 1788. The son entered the army on 27 Feb. 1778, as ensign in the 1st foot guards, and became lieutenant in the same regiment with the rank of captain on 3 Feb. 1781. In that year he was ordered to America, joined the army under the Marquis of Cornwallis, and on the capitulation of York Town, Virginia, in the following October, he was taken prisoner. Some months afterwards, a Captain Huddy, an officer in the American army, was taken prisoner by some American loyalists, and, in retaliation for the death of a loyalist named Philip White, was hanged by a party under the command of Captain Lippincot. On this coming to the ears of Washington, he demanded of the British general, Sir Henry Clinton, that he should give up Lippincot. Sir Henry, in reply, disavowed and reprobated the act 'with unmeasured severity,' but declined to give up Lippincot, and referred the matter to a court martial. On this, Washington directed that a British captain should be taken by lot from among the prisoners to suffer death, should Lippincot not be executed, and wrote to Sir Henry to that effect. The lot fell on Asgill. The court martial which tried Lippincot acquitted him, on the ground that the guilt of the act rested mainly on the Board of Associated Loyalists at New York, the president of which had verbally ordered Lippincot to execute the prisoner. Sir Henry sent the proceedings of the court martial to Washington, who, 'considering the ground taken by the British commander in disavowing and censuring the act, added to the irresponsible nature of Lippincot's conduct,' was inclined to release Captain Asgill (SPARK'S *Life of Washington*, p. 352). When Asgill's mother heard what had happened,

she sent a pathetic appeal to the Comte de Vergennes, the French prime minister, entreating him to intercede in behalf of her son. The Comte laid the matter before Louis XVI. and his queen, and, directed by them, sent an urgent appeal to Washington, who forwarded the letter to the American Congress. On 7 Nov. an act was passed by Congress releasing Asgill, who at once returned on parole to England.

On the death of his father in 1788, Asgill succeeded to the baronetcy, and in the same year he married Sophia, daughter of Admiral Sir Charles Ogle, Kt. Soon afterwards he was appointed equerry to the Duke of York, and on 3 March 1790 was promoted to a company in the Guards with the rank of lieutenant-colonel. Towards the end of 1793 he was ordered to the Continent, where he joined the army of the Duke of York, served through the campaign in Flanders and the retreat through Holland, and afterwards returned to England. On 26 Feb. 1795 he was promoted to the rank of colonel; to that of brigadier on the staff of Ireland in 1797; and to that of major-general on 1 Jan. 1798, during which year he was actively engaged in suppressing the rebellion. On 9 May 1800 he was appointed colonel of the 46th foot, and placed in command of the garrison of Dublin, and occasionally in that of the camp of instruction formed on the Curragh. He obtained the rank of lieutenant-general on 1 Feb. 1805, the colonelcy of the 3rd West India regiment, and of the 85th foot in 1806, and 11th foot on 25 Feb. 1807, for which regiment he raised a second battalion. He remained on the staff till 1812, and was promoted general on 4 June 1814. He died in 1823, leaving no issue, and the baronetcy became extinct.

S. B.

ASGILL, JOHN (1659-1738), an eccentric writer, was born at Hanley Castle, Worcestershire, and baptised 25 March 1659 (*Notes and Queries*, 4th ser. v. 569). He became a student of the Middle Temple in 1686, and was called to the bar in 1692. He was patronised by Eyre, one of William III's judges, and became the friend and executor of Dr. Barbon, speculator and

author [see BARBON, NICHOLAS]. As Barbon's heir, Asgill acquired an interest in the borough of Bramber. Barbon selected Asgill for his executor, it is added, in order that his debts might never be paid—a fact which Asgill announced to the creditors, adding that he should religiously observe his friend's wishes. He naturally got into difficulties. In 1696 he published a pamphlet, suggested by the abortive scheme of the land bank, proposing the issue of 'another species of money than gold or silver,' or in other words a kind of *assignats*. In 1698 he published another pamphlet, advocating a registry of titles of lands in a quaint mixture of scriptural and legal arguments. The next year, when he was first elected for Bramber (retiring at the dissolution of 1700), appeared his best known work, an argument to prove that death was not obligatory upon Christians. Asgill was just starting for Ireland, where the act for resuming to the public the forfeited estates which had been given away by William was providing work for lawyers. Asgill's printers had thought him mad, and the reputation was, as he says, useful to him in Ireland by increasing his notoriety. He obtained business enough to encourage him to a speculative purchase. He bought, in 1703, the forfeited life-interest in certain estates of the second Lord Kenmare, an adherent of James II. About the same time, presumably, he married Kenmare's eldest daughter, who had been brought up as a protestant by her grandmother. He was consequently elected member for Enniscorthy in the Irish House of Commons, but got into ruinous entanglements. The house ordered his pamphlet on death to be burnt by the hangman, and a fortnight afterwards (11 Oct. 1703) expelled him and declared him incapable of sitting again. The guardian of Lord Kenmare's children complained in a petition to the house that Asgill had bought the estates as agent for the children and now refused to convey them. The petition was rejected (10 Nov. 1703), but Asgill seems to have got nothing but trouble from his purchase. A catholic, he tells us (*Postscript to Defence upon his Expulsion*), became protestant enough to be qualified as 'leasetaker' for some of the land, and then got Asgill outlawed in Ireland on an action for debt, to prevent him suing for rent, and never paid any rent afterwards. Asgill returned to England, where he had been re-elected member for Bramber in July 1702. He sat in the next parliament from May 1705, served on several committees, and obtained an act of relief (14 Feb. 1705-6) for not having paid at the right time an instalment of the purchase money for the Kenmare estates. After the prorogation of 1707 he was arrested

for debt of near 10,000*l.* 'at the procurement,' he says, of Colonel John Rice, though the debt was due to other persons, and petitioned for his release. After an elaborate investigation of precedents by a committee, the House ordered his release; but another committee was appointed to examine his book; and on 18 Dec. 1707 the book was ordered to be burnt, and Asgill, having appeared in his place and made his defence (published in 1712), was expelled.

Asgill declares that the Irish difficulties were the real cause of his expulsion, though the story is not clear. Colonel Rice, formerly in James's army, had obtained, in 1705-6, a sum of 11,000*l.* in debentures on the forfeited estates for his services at the capitulation of Limerick in preventing the regiment which he had commanded under James from taking foreign service. He pledged part of these debentures to various persons, and invested part in the purchase of some of the lands in which Asgill had invested his money. Complaints having been made, a commission was appointed to force Rice to account for the sum. A report was made by the commission, and Asgill petitioned the house, after his expulsion, to take it into consideration. A day was appointed for the purpose, but after repeated adjournments the business seems to have fallen through at the end of the session. The report, preserved at the House of Lords, shows that Asgill and the guardian of Kenmare's children had conveyed certain lands and woods to two persons named Matthews and Wetton, in consideration of debentures for 2,500*l.* handed over by Rice. Asgill says that Matthews and Wetton had prosecuted him, and that he was accused of a breach of trust, though the Irish House of Commons had rejected the accusation as ridiculous. The facts seem to be unascertainable. Asgill surrendered to his creditors and passed the rest of his life in the Fleet or within the rules of the King's Bench. He lost his wife some time between 1707 and 1712; but he retained his vivacity to the last, and supported himself by writing pamphlets and drawing legal papers. He was commonly called 'translated Asgill,' as claiming to have been 'translated' without dying, but finally died in his eightieth year, though reported to be twenty years older, in Nov. 1738.

Asgill's seriousness in the pamphlet on death was doubted at the time. A German traveller in 1710 (OFFENBACH's *Merkwürdige Reisen*, ii. 200) gives a report that it was written in answer to a lady's challenge to show his skill in maintaining paradoxes. The book itself indicates no want of sincerity, though some ludicrous phrases were very

unfairly wrested by the committee of the English House of Commons to colour the charge of blasphemy. It interprets the relations between God and man by the technical rules of English law. Death being the penalty imposed by Adam's sin, and Christ having satisfied the law, death could no longer be legally inflicted, and all who claim their rights will be exempt. Asgill professes that, having claimed his discharge, he expects 'to make his exit by way of translation.' The book is written in pithy detached sentences. Coleridge declares that there is no 'genuine Saxon English' finer than Asgill's; thinks his irony often finer than Swift's; and calls him 'a consummate artist in the statement of his case.' The praise seems excessive, though not groundless; but we may accept Coleridge's conclusion that Asgill was a humorist who did not himself know how far he was serious. Full extracts may be found in Southey's 'Doctor.' In recent years Asgill found a disciple in a Mr. Tresham Gregg, an Irish clergyman, who republished the pamphlet with some introductory notes.

Asgill's pamphlet on Registration, with a sequel, is published in the collection of State Tracts for the reign of William III (ii. 693, 704). His chief writings are: 1. 'An Argument proving that according to the covenant of eternal life revealed in the Scriptures, man may be translated from hence into that eternal life without passing through death, although the human nature of Christ himself could not so be translated until he had passed through death,' London, 1700. 2. 'Mr. Asgill's Defence upon his Expulsion from the House of Commons of Great Britain in 1707,' London, 1712. 3. 'The Metamorphosis of Man by the Death and Resurrection of Jesus Christ from the Dead,' London, 1727. 4. 'De Jure Divino, or an assertion that the title of the House of Hanover to the succession of the British monarchy (on failure of issue from her present majesty) is a title hereditary and of divine institution,' 1710. 5. 'Asgill upon Woolston,' 1730; and other trifling pamphlets.

ASH, JOHN, LL.D. (1724 ?-1779), lexicographer, was born in Dorsetshire about 1724. He studied for the ministry at Bristol, under Folkett; became pastor of the baptist church at Loughwood, Dorsetshire, and while there contributed to periodicals. He settled in the ministry at Pershore, Worcestershire, 1746, as the result of a compromise between different parties in the congregation. He obtained the degree of LL.D. from Scotland, 1774, and died at Pershore in March or April 1779, aged 55. He was author of 'Introduction to Lowth's English Grammar,' 1766; 'New and Complete Dictionary of the English Language,' 2 vols. 1775, 2nd edition 1795 (incorporates most of Bailey's collection of canting words, and many provincial terms, with no nice discrimination; best known for the blunder under 'curmudgeon,' which Johnson derived from *cœur méchant*, on the authority of an 'unknown correspondent'; Ash gives it as 'from the French *cœur* unknown, *méchant* correspondent'); 'Sentiments on Education,' 2 vols. 1777; Sermon, 1778; 'Dialogues of Eumenes.'

[Funeral Sermon, by Dr. John Evans; and Walter Wilson's Manuscripts at Dr. Williams's Library.] A. G.

ASH, JOHN (1723-1798), physician, was born in Warwickshire, and educated at Trinity College, Oxford; was B.A. in 1743, M.A. in 1746, M.B. in 1750, and M.D. in 1754. He settled at Birmingham, and soon acquired a large practice. The general hospital at Birmingham was founded chiefly through his influence, and he was its first physician. While actively engaged in practice he became affected with temporary mental derangement, for which it is said he found a cure in the study of mathematics and botany. He was admitted a candidate of the Royal College of Physicians 22 Dec. 1786, and in the following year resigned his office in Birmingham and removed to London. He became fellow of the College of Physicians 22 Dec. 1787, and afterwards practised with success in London. He filled the offices of censor of the college in 1789 and 1793; was Harveian orator in 1790, Gulstonian lecturer in 1791, and Croonian lecturer in 1793. He died 18 June 1798, and was buried in Kensington church. His portrait, by Sir Joshua Reynolds, is preserved in the hospital at Birmingham, and was engraved by Bartolozzi in 1791.

Dr. Ash is described as a man of great skill in his profession, and of considerable

general attainments. He was the founder of a social and literary club, called the Eumelian, from a punning allusion to his own name (Greek *εὐμελίας* or more correctly *εὐμμελίας*, *i.e.* with an ashen spear, referred to in Boswell's 'Johnson,' note to the last chapter), and was F.R.S. He wrote: 1. 'Experiments and Observations to investigate by Chemical Analysis the properties of the Mineral Waters of Spa, Aix,' &c. 12mo, London, 1788. 2. *Oratio Harveiana*, 4to, 1790.

ASH, SIMON OF, poet. [See SIMON.]

ASHBORNE, THOMAS OF, theologian. [See THOMAS.]

ASHBURNHAM, JOHN (1603-1671), royalist, was the eldest son of Sir John Ashburnham by Elizabeth, daughter of Sir Thomas Beaumont. Sir John died in 1620, having wasted his estate, and leaving his family in penury. But within two years his heir had so far repaired their broken fortune, that (says the epitaph in Ashburnham church, Sussex) 'there were none of them but were in a condition rather to be helpful to others than to want support themselves.'

Elizabeth Beaumont was of the same family as Lady Villiers, mother of the Duke of Buckingham, and under Buckingham's patronage began the court career of John Ashburnham. In 1627 he was already known to the king, who styled him 'Jack Ashburnham' in his letters to the duke. In 1628 he was elected M.P. for Hastings. The murder of Buckingham in that year did not injure his fortunes; he was in November 'sworn into the place of groom of the bedchamber.' The Calendars of State Papers contain ample evidence that he and his friend, the secretary Nicholas, omitted few of the many opportunities given them by their position at court to enrich themselves by money-lending or by the purchase of land at easy rates. In 1638 the Star-chamber fine of two thousand marks, inflicted on Sir Walter Long and his brother, was assigned to Ashburnham 'in satisfaction of so much due from his majesty to him,' and in December of the next year a warrant under the privy seal enabled him to regain his ancestral estate of Ashburnham, which had become a ruinous burden to its actual possessors. If the dates assigned in the printed calendars be correct, Ashburnham had not obtained the favour of this warrant until six years after his petition for it. His friends, Nicholas and Goring, were 'very careful of his interest' (as

he himself acknowledges), in promoting his appointment as 'provided' to the army then in preparation for Scotland (January 1640). Their success prevented his election for Hastings when the commons were summoned in April, only to be dissolved in May; but he was returned for that place in November, when the failure of the war, the necessities of the king, and the exasperation of the people, had rendered inevitable the meeting of another—the Long—parliament. No speech of his is recorded, but his name frequently occurs as on committees, or as a teller on divisions, during the earlier sessions of that assembly. As time went on, his two functions of member of parliament and servant of the king became incompatible, and when his attendance on his master prevented his obeying the summons of the house, he was proceeded against for contempt (6 May 1643). The king wrote a letter to the commons in his justification, but the house maintained its prior right to the obedience of its member. Ashburnham was 'discharged and disabled' (5 Feb. 1643-4), his estate was sequestrated (14 Sept.), and his wife's petition for some allowance for his children was rejected. He became the treasurer and paymaster of the king's army. For the next three years his name occurs in several negotiations for peace. He was one of the commissioners at Uxbridge (1644), and one of the four appointed to lay the king's proposals before parliament (December 1645). When Fairfax prepared to besiege Oxford, and Charles determined upon flight, Ashburnham and Dr. Hudson were the sole attendants of the king in the perilous journey to the Scotch camp. Hudson was released, and his troubled life was ended by his barbarous murder (6 June 1648). Ashburnham was positively commanded by the king to fly before confirmation of the order to send him up to London as a delinquent could be received. He got safely to Holland, and thence to the queen at Paris. In 1647 the king's fortune seemed upon the turn. The army had taken possession of him at Holmby, had treated him with respect, and allowed him 'to have what servants about him he pleased.' Ashburnham resumed his attendance on his master at Hampton Court. But the army leaders changed their tone. Charles was haunted by the dread of assassination. He was constantly receiving warnings, anonymous and avowed, that his murder was resolved upon. At Ashburnham's suggestion he made proposals to the Scotch commissioners for his sudden journey to London and personal treaty with the parliament. But the arrangement fell through, the commissioners dreading the responsibility. Charles, resolved to stay no longer in Hamp-

ton Court and impatient to be gone, commanded Ashburnham and his other confidants, Sir John Berkeley and Legge, to propose some place for him to go to. Ashburnham mentioned Sir John Oglander's house in the Isle of Wight as a place where the king might be concealed till the disposition of the governor of the island, Colonel Robert Hammond, could be ascertained. If Hammond were not to be trusted, the fugitive could secretly take ship for France. There was nothing impracticable in the plan, but its success depended upon keeping the royal whereabouts from the knowledge of Hammond, until the governor had fully engaged himself to respect the king's liberty of action. This particular was neglected, and the secret divulged by Berkeley. The governor, having given assurances of loyalty, was taken to the house wherein Charles was awaiting the result of the interview. When informed of his approach, the king exclaimed, 'O Jack, thou hast undone me!' The foreboding was true. Refusing the desperate offer of Ashburnham to make all safe by killing Hammond, Charles again became virtually a prisoner.

His share in this transaction exposed Ashburnham to the suspicions of the royalists, and his explanation, printed in 1648, was of necessity so guarded as to be ineffective. A full narrative drawn up by him and shown to many of his contemporaries—Clarendon among the rest—remained unpublished until 1830, when his descendant, Lord Ashburnham, printed it with full elucidation, and accompanied it with a complete, caustic commentary on all the passages wherein Clarendon has made mention of the writer. The reputation of Ashburnham is cleared, and the treachery and malevolence of the noble historian are exposed with unsparing severity. Ashburnham was parted from his master by order of the parliament 1 Jan. 1648, was imprisoned in Windsor Castle (May), and when the second civil war broke out was exchanged for Sir William Masham. He was not allowed to attend the king during the treaty at Newport (August), and was included among the delinquents who were to expect no pardon (13 Oct.). His position after the king's death was unenviable. He had acquired an estate by his second marriage with the Dowager Lady Poulett (1649), and Charles II gave him permission to stay in England to preserve it. The loyal party suspected his fidelity, and (March 1650) in a memorial to the king asked whether they might trust him. He was harassed by the victors. He was sued for debts contracted for the late king. He was forced to compound for one half of his estate, an unparalleled severity. He was

bound in heavy securities to appear, when required, before the council of state. His private journeys were licensed by a 'pass' from the same authority. For three years he was so persecuted by committees to discover who had lent the king money during the wars that 'I had scarce time to eat my bread.' 'Five years more,' he continues, 'were spent in close imprisonment at London, and three banishments to Guernsey Castle, the cause being for sending money to his majesty.' In a list of the Tower prisoners furnished by Colonel Barkstead (2 June 1654), 'John Ashburnham' appears as prisoner for high treason; but this is probably a slip for 'William,' who was at that time in custody for complicity in the plot of Gerard and Vowel. John's case was (27 Dec. 1655) referred to the major-generals of the counties where his estate lay. At the Restoration Ashburnham came back to his old place of groom of the bedchamber. Of his zeal therein Pepys makes a half-pathetic record (2 Sept. 1667), recalling Shakespeare's 'Adam' and 'the goodly service of the antique world.' The same authority elsewhere mentions him as 'a pleasant man, one who hath seen much of the world and more of the court.' Of the Hampton Court business, Pepys notes that, 'after solemnly charging each other with its failure, and being publicly at daggers drawn about it,' Ashburnham, Berkeley, and Legge 'are now the best friends in the world.' Besides his place Ashburnham received what acknowledgment of his loyalty the royal treasury, impoverished by many claimants, could afford. He was (September 1661) the head of a commission to inquire into the abuses in the post office. His house at Chiswick, with its contents, was purchased by the king for the Duke of Monmouth, of whom (January 1665) he was made one of the guardians. His loans to Charles I were paid by grants of crown leases, but his schemes for the acquisition of land do not appear to have run so smoothly as in the former reign. The dean and chapter of Exeter are menaced (November 1662) with the royal displeasure if they carry out their projected lease 'to John Ashburnham or to any other.' He was M.P. for Sussex from 1661 till his expulsion in 1667 for taking a bribe of 500*l.* from French merchants. He and his brother William shared in an enterprise for reviving the manufacture of tapestry at Mortlake (1667). Ashburnham died in 1671. His grandson was raised to the peerage in 1689. His portrait by Mytens has been engraved as a frontispiece to his 'Narrative' quoted above. [Narrative, edited by Lord Ashburnham, 1830; Cal. State Papers, Dom.] R. C. B.

**ASHBURNHAM, WILLIAM** (d. 1679), royalist, younger brother of John Ashburnham [q. v.], was M.P. for Ludgershall in both the parliaments of 1640. In 1644 he was governor of Weymouth; which he kept four months for the king. On 3 June 1654 he was arrested and examined on the charge of complicity in that plot to murder the Protector for which Gerard and Vowel afterwards suffered. He does not appear to have been sent before the high court of justice. After the Restoration he was made cofferer of the household, and was re-elected M.P. for Ludgershall in 1661, sitting till the dissolution of 1678. He was frequently a fellow-guest and a sharer in treasury business with Pepys, who styles him an 'experienced man and a cavalier.' His 'odd stories' are noted, and there was one touching the lease of Ashburnham House from the dean and chapter of Westminster, wherein the 'devilish covetousness' of Dr. Busby was commemorated.

[The Tryal of Colonel Ashburnham, London, 1654; Pepys's Diary.] R. C. B.

**ASHBURTON, LORD.** [See **BARING.**]

**ASHBURTON, LORD.** [See **DUNNING.**]

**ASHBURY, JOSEPH** (1638-1720), actor and theatrical manager, born in London in 1638, of good family, was educated at Eton, and entered the army. Quartered in Ireland when the protectorate of Richard Cromwell came to an end, he was one of the officers who were dismissed under the *régime* of the revived Rump Parliament, and he was also one of those who, in the royalist interest, seized Dublin Castle in the December of 1659. At the Restoration he was rewarded by the lieutenantancy of a company of foot which Charles II granted to the city of Dublin, and the new lord-lieutenant, the Duke of Ormond, made Ashbury in 1662 one of the gentlemen of his retinue and deputy master of the revels. In 1682 he became master of the revels and patentee. The duties or privileges of the latter post seem to have been nominal, since for years the only playhouse in Dublin, the Smock Alley or Orange Street Theatre, had been closed. But Ashbury, whose first wife was the sister of an actor, seems at this time to have turned his attention to professional acting and to have given instructions in the art with eminent success. About 1674 both he and Mrs. Betterton are mentioned as teaching the Princess Anne, afterwards queen, to play *Semandra* in Lee's 'Mithridates,' when acted at Whitehall by persons of high rank (cf. Miss STRICKLAND'S *Queens of England* (1852), vii. 15). When, in celebration of the over-

throw of the Stuart cause in Ireland, 'Othello' was acted (December 1691) at Dublin by amateurs, most of them officers of the garrison, Ashbury, who superintended the performance and played Iago, is spoken of as the only professional actor among the performers. About the same time he engaged in London a company which included Wilks, and attempted to revive the drama in Ireland by reopening the theatre in Orange Street with 'Othello' on 23 March 1692. By skilful management and by encouraging promising histrionic talent—Booth and Quin were introduced by him to the boards—Ashbury secured for the Dublin stage a great reputation. He himself was an excellent actor, and his second wife, also an actress, gave him material assistance. Colonel Careless in the 'Committee,' and Don Quixote were among his best parts. In his 78th year he continued to act with success, and he survived to the age of 82, dying in the summer or autumn of 1720.

[Chetwood's General History of the Stage (1749); Hitchcock's Historical View of the Irish Stage (1738); Genest's Account of the English Stage (1832), vol. x.; Carte's Ormond (1736).] F. E.

**ASHBY, GEORGE** (d. 1475), poetical writer, was born about 1390. Little is known of him till late in life, when he appears to have owned an estate named 'Breakspeares' in Harefield, Middlesex, and to have been clerk of the signet, first to Henry VI from the beginning of his reign, and afterwards to Margaret of Anjou, in whose service he evidently travelled abroad. His earliest extant poem, written in English and preserved in manuscript at Trinity College, Cambridge (R. 3, 19), describes him as a prisoner in the Fleet, and begins with a 'prohemium vnus Prisonarii.' Ashby there says that he has been

Wrytyng to theyr sygnet full fourty yere  
As well beyond the see as on thys syde.

A former owner of the book has, from internal evidence, assigned its production and its author's imprisonment to 1463. Ashby was perhaps confined in the Fleet at the time by the Yorkist conquerors of Henry VI, who was deposed in 1461. Subsequently the poet would seem to have directed the education of the young Prince Edward, Henry VI's son, until his murder in 1471. For his use Ashby prepared two English poetical treatises—one entitled 'De Activa Pollecia Principis,' which opens with an address to 'Maisters Gower, Chaucer, and Lydgate,' and the second called 'Dicta et

*Opiniones Diversorum Philosophorum*, with translations into English verse. Both these compositions, Ashby states, were produced when he had attained the age of eighty. The manuscripts of these poems passed from the library of John More, bishop of Norfolk about 1700, to the Cambridge University Library, where they are still preserved. According to Warton, Ashby was likewise the translator into English of several 'French manuals of devotion,' ascribed by Robert Copland to Andrew Chertsey in his prologue to Chertsey's 'Passyon of our Lord Jesu Christ' (printed by Wynkyn de Worde in 1520); but no positive authority is given for this statement. None of Ashby's works are known to have been printed.

Ashby died on 20 Feb. 1474-5, and was buried at Harefield. The inscription on a brass to the memory of himself and his wife in the church there has been printed in Nichols's *Collectanea Topographica et Genealogica* (v. 132). Ashby left a son John, who died in 1496. A grandson George was clerk of the signet to Henry VII and Henry VIII, and died on 5 March 1614-5.

[Ritson's *Bibliographia Poetica*, p. 43; Cat. of MSS. in Cambridge University Library, iv. 299; Warton's *History of English Poetry* (ed. Hazlitt), iv. 76; Nichols's *Collectanea Topographica et Genealogica*, v. 128-138; information from W. Aldis Wright, Esq.] S. L.

ASHBY, GEORGE (1724-1808), a learned antiquary and sometime president of St. John's College, Cambridge, was born in Red Lion Street, Clerkenwell, in 1724. Educated at Croydon, Westminster, and Eton, he entered St. John's College, Cambridge, on 30 Oct. 1740, and took the degree of B.A. in 1744, of M.A. in 1748, when he was admitted fellow of St. John's, and of B.D. in 1756. He was presented by a relative to the rectory of Hungerton, in Leicestershire, in 1754, and in 1759 to that of Twyford in the same county; he held both benefices in conjunction till 1767, when he resigned the former, and in 1769 he gave up the latter on his election to the presidency or vice-mastership of St. John's College. About 1775, when he became a fellow of the Society of Antiquaries, he appears to have resigned his official connection with Cambridge, where he supported academic reform too vigorously to obtain further preferment. Among other changes, he advocated the right of the fellows to marry. At the same time he accepted the college living of Barrow in Suffolk, to which Dr. Ross, the bishop of Exeter, an intimate friend and patron of Ashby, added the rectory of Stansfield in 1780. In 1793 his sight

began to fail, and shortly afterwards he became totally blind. He died of paralysis at Barrow on 12 June 1808, and was buried in the parish church, where a monument was erected to his memory.

Although Ashby published little, his varied learning was the admiration of the best known literary antiquaries of the last century, all of whom he reckoned among his friends. He was intimate for some years with the poet Gray, and portions of his voluminous correspondence with Bishop Percy, Richard Gough, John Nichols, William Herbert, and the Rev. James Granger, have been printed in Nichols's *Illustrations of Literature* (vii. 385 et seq.) and in Granger's *Letters*. Very various are the antiquarian topics he there deals with; in one letter he proposes an emendation of a line in 'Hamlet,' in another he points out errors in the *Biographia Britannica*, which he had read from end to end, and in a third he discusses some vexed questions of numismatics. He was a regular contributor to the *Gentleman's Magazine*; he added notes to Nichols's *Literary Anecdotes* under the initials of T. F. (Dr. Taylor's Friend); he greatly aided Nichols in his *History of Leicestershire*, to which he contributed an elaborate essay on the Roman Millary at Leicester (i. pp. cix-clviii); and he gave material assistance to Daines Barrington, when preparing his *Observations on the Statutes*. In the *Archæologia* (iii. 165) appears a dissertation by him on a coin of Nerva newly discovered at Colchester. Some volumes of his manuscript collections, together with numerous letters on antiquarian themes, are preserved among the Cole, the Egerton, and the Additional Manuscripts at the British Museum. They include interesting notes on archery, an essay on parish registers, and extracts and notes on old English and French plays, of which the English plays are mainly early sixteenth-century interludes. His valuable library, which was bequeathed to Thomas Lyas, his amanuensis, was sold soon after his death to a bookseller at Bury, and was rapidly dispersed.

[Gent. Mag. lxxviii. 653; Nichols's *Literary Anecdotes*, i. 577-8; Baker's *Hist. of St. John's College* (ed. Mayor), vols. i. ii.; Cole MSS. 20, 41, &c.; Egerton MSS. 2371 f. 240, 2374 ff. 287-92; Addit. MSS. 22596 f. 95, 29790 ff. 92b-100b, 109, 111, 112, 29793.] S. L.

ASHBY, HARRY (1744-1818), an eminent writing-engraver, born April 17, 1744, at Wotton-under-Edge, Gloucestershire, was apprenticed to a clockmaker in that town, who also engraved dial-plates, spoons, and

tankards. Here Ashby imbibed a taste for engraving. On the termination of his apprenticeship he removed to London, where, following the bent of his inclination for writing-engraving, he entered into an engagement with Mr. Jefferies, geographer, of Charing Cross, his principal employment being to engrave titles for maps and charts. Subsequently his services were secured by Mr. Spilsbury, writing-engraver, of Russell Court, Drury Lane, to whose business he eventually succeeded, and whose widow he married. Ashby was much employed by provincial, colonial, and foreign bankers, to engrave notes and bills, in the execution of which he displayed rare skill and ingenuity. Some able penmen also gave scope to his higher qualifications as an engraver of specimens of calligraphy. Among the works for which he engraved the plates are Hodgkin's '*Calligraphia Græca*,' 1794; Milns' '*Penman's Repository*,' 1795; Hodgkin's '*Specimens of Greek Penmanship*,' 1804; Genéry's '*Geographical and Commercial Copies*,' 1805; Langford's '*Beauties of Penmanship*,' 1825 (?); and some of the plates in Tomkins's '*Beauties of Writing*,' 1809. In his later years Mr. Ashby lived in retirement at Exning, Suffolk, where he died Aug. 31, 1818.

[MS. Addit. 19095 f. 102, 19170 f. 4; *Gent. Mag.* lxxxviii. 283-285; *Europ. Mag.* lxxiv. 207, 208; *Annual Biog.* v. 306, 307.] T. C.

ASHBY, SIR JOHN (*d.* 1693), admiral, a native of Lowestoft, and presumably a follower of Sir Thomas Allin, was, in 1665, appointed lieutenant of the *Adventure*, and in October 1663 captain of the *Deptford* ketch. From that time onward he seems to have served without intermission, and in September 1668 was appointed to the *Defiance*, a third-rate vessel. The revolution made no change in his position, and, still in command of the *Defiance*, he led the van of the fleet in the battle of Bantrey Bay [see HERBERT, ARTHUR], 1 May 1689. For his good service on this occasion Captain Ashby was knighted, and presented by the king with a gold watch set with diamonds. In July he was made rear-admiral of the blue, and the following year he was vice-admiral of the red, in the fleet under Lord Torrington off Beachy Head on 30 June. After Torrington's disgrace the command of the fleet was assigned to a committee of three—Richard Haddock, Killigrew, and Ashby—who hoisted their joint flag on board the *Royal Sovereign*, and, together with a body of land forces under the Earl of Marlborough, reduced Cork and Kinsale. In 1691 the command was given to Admiral Russell, with whom Sir John Ashby served as vice-admiral of the red, and

the next year as admiral of the blue; in that rank he commanded the rear of the fleet at Barfleur on 19 May, and, by taking timely advantage of a slight shift of wind, placed the French in such a position that they would be forced either to surrender or fly. They scattered and fled; some to La Hogue, where they were burnt by Russell; some to Cherbourg, where they were burnt by Delavall; and many through the Race of Alderney, where none of the English pilots would venture to take the pursuing ships under Ashby. They thus got safely into St. Malo, where they were blockaded through the rest of the summer. In England there was a strong feeling that more might have been done, and on 19 Nov. Sir John Ashby was called to the bar of the House of Commons to render an account of his conduct; but with his own, and Russell's further explanation, the house expressed itself satisfied (*Parl. Hist.*). The following year, 1693, the command was again put in commission, in which, however, Ashby had no part. When the fleet sailed, he remained at Portsmouth, where on 12 July he died. He was comptroller of the storekeeper's accounts in the Navy from 1690 till his death. His body, first buried at Portsmouth, was afterwards removed to Lowestoft, where there is a mural monument.

[Charnock's *Biographia Navalis*, i. 302; *Brit. Mus. MSS.* Add. 19098, p. 418.] J. K. L.

ASHBY, RICHARD (1614-1680), a Jesuit, whose real name was THIMELBY, was the fifth son of Richard Thimelby, Esq., of Irnham, Lincolnshire, by his wife Mary, daughter of Edward Brookesby, Esq., granddaughter of Lord Vaux of Harrowden. He was born in Lincolnshire in 1614, entered the Society of Jesus in 1632, and was professed of the four vows in 1646. After having taught philosophy and theology at Liège for sixteen years, he was sent on the English mission about 1648 and laboured chiefly in his native county. He was rector of the house for novices at Watten, near St. Omer, from 1666 till 1672, when he was appointed rector of St. Omer's College. He died at St. Omer on 7 Jan. (or Sept.) 1680.

Father Ashby was the author of: 1. '*Purgatory Surveyed*, or a particular account of the happy, yet thrice unhappy, state of the souls there; also of the singular charity and ways to relieve them. And of the devotion of all ages for the souls departed, with twelve excellent means to prevent purgatory and the resolution of many curious and important points,' Paris, 1663, 8vo; reprinted, with a preface, by Father W. H. Anderdon, London,

1874. It is a translation from Father Estienne Binet. 2. 'Remarks on Stillingfleet.' Southwell gives the title in Latin as follows: 'Observationes generales in Librum Doctoris Stillingfleeti, cum vindicatione S. Ignatii et Sociorum eius à fœdis maculis quibus eos ille aspergit,' London, 1672, 4to.

[Preface to Anderdon's edition of Purgatory Surveyed; Oliver's Collections S. J. 47; Foley's Records, ii. 643, v. 597, vii. 768; Southwell's Bibl. Scriptorum Soc. Jesu, 718; Backer's Bibl. des Ecrivains de la Compagnie de Jésus (1869), i. 300.] T. C.

ASHDOWNE, WILLIAM (1723-1810), unitarian preacher, was born at Tunbridge Wells in 1723, where his father, a tradesman, was pastor of the General Baptist (otherwise Unitarian) Society, meeting at Mount Ephraim (W. WILSON, *Various Congregations*, ii., art. 'Dover' in MS.). Becoming a probationer for the ministry, William Ashdowne removed to Dover in 1757, married the daughter of the Rev. Robert Pyall, pastor of the General Baptist Church (*Monthly Repository*, v. 258); and on Pyall's death in 1759 he took his pulpit, occupying it without pay for twenty-two years. In 1781 he was elected pastor, with the Rev. Stephen Philpott as his associate; and though he preached but seldom in his later years, he filled this position till his death, 2 April 1810, aged 87. His publications are: 1. 'On the True Character of John the Baptist,' published anonymously, the signature being 'By an Impartial Hand,' 1767. 2. 'The Distinction between the Ordinary and Extraordinary Gifts of the Holy Spirit,' also anonymous, and with the same signature, 1767. 3. 'A Dissertation on St. John iii. 5,' 1768. 4. 'A Scripture Key to the Evangelists,' 1777. 5. 'On Baptism,' 1784. 6. 'The Unitarian, Arian, and Trinitarian Opinions Examined,' 1789. 7. 'Satan,' 1794. 8. 'Two Letters to the Bishop of Llandaff,' 1798. The last six works bear Ashdowne's name, and at the end of the 'Unitarian' is a list of his publications, which were printed chiefly at Canterbury.

[*Monthly Review*, June 1757, p. 285; *Monthly Repository*, v. 480; Kippis's *Doddridge's Lectures*, ii. 175 note, 390 note.] J. H.

ASHE, JOHN (1671-1735), dissenting minister, was son of a grocer at Tideswell, Derbyshire. After being taught at Chesterfield by Mr. Foxlow, at Wirksworth by Mr. Ogden, he was sent in 1688 to Mr. Frankland's dissenting academy at Rathmilo. He was chaplain for a time to Lady Sarah Houghton of Houghton Tower, Lancashire,

but returned to the Peak and was a minister at Ashford. He published an account of the life of his uncle, the Rev. William Bagshaw, 'the Apostle of the Peak' (1704); a few sermons; and prepared for the press eleven volumes of sermons, of which only one appeared. A life of Ashe was published by John Clegg, presbyterian minister of Chapel-en-le-Frith, in 1736.

[Lysons's *Magna Britannia*, v. 74-5; Glover's *History of Derbyshire*, pt. i. vol. i., Append. p. 105.]

ASHE, JONATHAN (*fl.* 1813), a masonic writer, was born at Limerick in 1766, entered Trinity College, Dublin, 26 March 1783, took B.A. degree in ordinary course, and became D.D. in 1808. Very little is known of him except that he commenced and perfected his masonic studies in Dublin. While in Bristol in 1813 he published a work entitled 'The Masonic Manual, or Lectures on Freemasonry, containing the Instructions, Documents, and Discipline of the Masonic Economy,' and asserts in the introduction that he 'plainly and completely tells the craft its eternal and temporal obligations, and affords the uninitiated a fair review and estimate of masonry.' This work was dedicated to the Duke of Sussex, then grand master of the order. In many portions it is a mere copy of William Hutchinson's 'Spirit of Masonry,' published in 1775.

Ashe's work was edited, with annotations and remarks by the Rev. George Oliver, D.D., in 1843, and again in 1870 by the Rev. John Edward Cox, D.D.

[Ashe's Works; Mackenzie's *Royal Masonic Cyclopædia*.] J. W.-G.

ASHE, ROBERT HOADLEY (1751-1826), divine, born about 1751, was son of a prebendary of Winchester, educated at Pembroke College, Oxford, compounded for M.A. 1793, and B.D. and D.D. 1794, and from 1775 to 1826 he held the living of Crewkerne, Somersetshire. He took the name of Hoadley upon inheriting a property from his aunt, who had married a son of Bishop Hoadley. He edited in 1787 a volume of poetical translations by 'Master John Browne of Crewkerne, a boy of twelve years old,' and in 1799 published a letter to Dr. Milner, author of the history of Winchester, vindicating Bishop Hoadley from Milner's 'false and illiberal aspersions.' He died on 3 May 1826. Several letters of his are printed in Nichols's 'Illustrations.'

[Nichols's *Illustrations*, v. 729-49; *Gent. Mag.* xvi. pt. ii. p. 181.]

ASHE, ST. GEORGE (1658 ? - 1718), Irish bishop, descended from a Wiltshire family which had settled in Ireland, was born at Roscommon, educated at Dublin, and became a fellow of Trinity College in 1679. During the Revolution he left the country, and was chaplain to Lord Paget, the ambassador of William III at Vienna. He returned, and became provost of Trinity in his thirty-fourth year in 1692. He was made bishop of Cloyne in 1695; was translated to Clogher in 1697, and to Derry in 1716-17. He died at Dublin 27 Feb. 1717-18, and left his mathematical books to Trinity College. He published three sermons and contributed some papers upon modes of geometrical demonstration and observations on natural phenomena to the Royal Society, of which he was a fellow (*Phil. Transactions*, Nos. 116, 162, 164, 171, 176, 220, 228, 243). He also succeeded Molyneux as secretary to the Irish Philosophical Society. He is best known from his intimacy with Swift, who was his pupil at Trinity College, and who became his lifelong friend. Frequent references to him in the 'Journal to Stella' show that Swift was his constant correspondent, and consulted him on many matters of business. He was one of three brothers; Tom Ashe, the eldest, was a squire with an estate of 1,000*l.* a year in Meath; Dillon Ashe, a clergyman, was vicar of Finglas from 1694 to 1716, when he was succeeded by the poet Parnell. All three were friends of Swift, and joined in his favourite amusement of making execrable puns at Lord Pembroke's viceregal court; their slang language constructed of puns being called Castilian (FORSTER, *Life of Swift*, p. 191). Dillon seems to have been an undignified and claret-loving priest. Swift says that 'Dilley's' red face will 'whiz' in the Bath waters; and that the rabble will say, 'There goes a drunken parson,' and, 'which is worse, will say true' (*Journal to Stella*, 10 April 1711). The bishop was a man of high character; Addison was charmed with him; and Sir A. Fountaine said to Swift that there was not a bishop in England with half his wit. He was intimate with Hester Johnson (Stella); the younger Sheridan says (*Life of Swift*, p. 280), on the authority of Mrs. Sican, that Ashe, at Swift's desire, inquired into the cause of Stella's melancholy in 1716, and performed the marriage ceremony which was the consequence of her explanation. The statement that Swift and Stella were married by Ashe in 1716 is also made by Lord Orrery, by Dr. Johnson on the authority of Dr. Madden, and by Monck Berkeley on the authority of his grandmother, the widow of

Bishop Berkeley. The bishop was travelling on the continent as tutor to Ashe's only son, St. George Ashe, from 1715 to 1720. He could hardly have received the statement from Ashe himself; and it is still doubtful whether the marriage took place. It is plain, however, that Ashe was one of Swift's most trusted and valued friends, and had the confidence of Stella.

[Ware's Bishops of Ireland (ed. Harris); Swift's Works; Forster's and Craik's Lives of Swift.] L. S.

ASHE, SIMEON (d. 1662), a nonconformist divine, was educated at Emmanuel College, Cambridge. He began his ministration in Staffordshire, but was soon ejected from his living on account of his refusal to read the 'Book of Sports' and to conform to other ceremonies. On his dismissal Sir John Burgoyne befriended him and allowed him the use of an 'exempt' church at Wroxhall; and he was afterwards under the protection of Lord Brook. When the civil war broke out, he became chaplain to the Earl of Manchester; and in 1644 joined with William Goode, another chaplain of the Earl of Manchester, in writing a pamphlet entitled 'A particular Relation of the most Remarkable Occurrences from the United Forces in the North.' This was followed by another pamphlet, for which Ashe alone was responsible, entitled 'A True Relation of the most Chief Occurrences at and since the late Battell at Newbery.' The writer's object in both cases was to vindicate the conduct of his patron. In Vicars's 'Parliamentary Chronicle' there is a letter of his, describing the proceedings of the Earl of Manchester in reducing several garrisons after the battle of Marston Moor. At the close of the war he received the living of St. Austin, and was also one of the Cornhill lecturers. Although he had joined the side of the parliament, Ashe was strongly opposed to the extreme party of the Cromwellians; and when the time was ripe for the restoration he was among the divines who went to Breda to meet Charles II. He died a few days before the passing of the Act of Conformity, and was buried on 24 Aug. 1662. Had he lived to see the passing of the act, he would have vacated his living. Ashe was a man of some property, and while he held the living of St. Austin, his house was always open to his clerical brethren. Walker charges him with exercising severity against the conforming clergy.

Ashe was the author of several sermons, among which may be mentioned: 1. 'A Sermon on Ps. ix. 9,' preached before the

House of Commons on 30 March 1642. 2. 'A Sermon before the House of Lords,' 26 Feb. 1644. 3. 'A Funeral Sermon on the Death of the Countess of Manchester,' 12 Oct. 1658, &c. He also edited some treatises of John Ball, the puritan divine, J. Brinsley, Ralph Robinson, and others.

[Calamy's Nonconformist's Memorial, ed. 1802, i. 94-96; Neal's Hist. of the Puritans, ed. 1822, iv. 344; Reliquiæ Baxterianæ, ed. Sylvester, pt. ii. 430.] A. H. B.

ASHE or ASH, THOMAS (fl. 1600-1618), legal writer, was entered a student of Gray's Inn in 1574, was called to the bar 24 Jan. 1582-3, and became pensioner of his inn 17 Oct. 1597. He was the author of the following works: 1. 'Abridgment des touts les cases reportez alarge per Monsieur Plowden . . . compose & digest par T. A[sh], 1600?' of which another edition appeared in 1607. 2. 'Επιτομὴ: et table generall à les annales delley per quel facilement troveres tous les cases contenus in yceux; queux concerne le exposition des statutes per equitie,' 1609; with an appendix of cases reported by G. Dalison and G. Bendloes, in Queen Elizabeth's reign. 3. 'Le Primer Volume del Promptuaire; ou repertory de les annales et plusieurs auters livres del common ley Dengleterre,' 1614. 4. 'Fasciculus florum; or a Handfull of Flowers gathered out of the severall bookes of the Right Honorable Sir E. Coke,' 1618. 'A Generall Table' to Coke's reports, issued in 1652, has been attributed to Ashe, but if that be so, its late date shows it to have been published posthumously.

[Foster's Register of Admissions to Gray's Inn, p. 18; Brit. Mus. Cat.] S. L.

ASHE, THOMAS (1770-1835), novelist and miscellaneous writer, traced his descent from the younger branch of a family whose ancestors accompanied William the Conqueror to England. A cadet of this younger branch served with William of Orange in Ireland, and obtained one of the forfeited Irish estates. Ashe was the third son of a half-pay officer, and was born at Glasnevin, near Dublin, 15 July 1770. He received a commission in the 83rd regiment of foot, which, however, was almost immediately afterwards disbanded, whereupon he was sent to a counting-house at Bordeaux. There he suffered a short imprisonment for wounding in a duel a gentleman whose sister he had seduced, but, the wound not proving fatal, the prosecution was not persisted in. Returning to Dublin, he was appointed secretary to the Diocesan and Endowed Schools Commission, but, getting into debt, resigned his office and retired

to Switzerland. He then spent several years in foreign travel, living, according to his own account (*Memoirs and Confessions*, 3 vols. 1815), in a free and unconstrained fashion, and experiencing a somewhat chequered fortune. Besides recording in his 'Memoirs' his impressions of the countries he visited, he published separately 'Travels in America in 1806,' 1808; 'Memoirs of Mammoth and other Bones found in the vicinity of the Ohio,' 1806; and 'A Commercial and Geographical Sketch of Brazil and Madeira,' 1812. He was also the author of several novels, including the 'Spirit of the Book,' 1811, 4th edition 1812; the 'Liberal Critic, or Henry Percy,' 1812; and the 'Soldier of Fortune,' 1816. In his later years Ashe was in rather indigent circumstances. He died at Bath 17 Dec. 1835.

[Ashe's Memoirs, 1815.]

T. F. H.

ASHFIELD, EDMUND (fl. 1680-1700), a portrait-painter, descended from a good family, was a pupil of Joseph Michael Wright. He worked both in oil and in crayons, but excelled most in the latter method. Vertue mentions a neatly painted head by him of Sir John Bennett, afterwards Lord Ossulston. He appears to have been also a copyist, for there are at Burghley House portraits of Frances, Countess of Warwick, and of Mary, Lady Herbert, afterwards Duchess of Richmond and Lennox, after Van Dyck, which are finished with extreme delicacy. His crayon drawings were highly finished, and characterised by the harmonious blending of the tints, of which he multiplied the number and variety, black and white only having hitherto chiefly been employed, the paper forming the middle tint. He practised from about 1680 to 1700, about which time he died. He was the instructor of E. Lutterell, whose works in crayons are superior to those of his master.

[Walpole's Anecdotes of Painting, ed. Wornum, ii. 475; Redgrave's Dictionary of Artists of the English School, 1878; Waagen's Treasures of Art in Great Britain, iii. 408.]

E. E. G.

ASHFORD, WILLIAM (1746?-1824), landscape painter, was born at Birmingham. In 1764 he went to Ireland and settled in Dublin. At first he held a situation under Mr. Ward in the ordnance department of that city. He abandoned it, however, for art. He contributed to the early exhibitions of the Incorporated Society of Artists in London, and in 1783 and 1790 to the Royal Academy. At this time he lived in London, and, in conjunction with Dominic Serres, R.A., made a

public exhibition of his works. The Royal Hibernian Academy was incorporated in 1823, and Ashford was its first president. His work was at one time highly esteemed, but he died neglected. His early pictures, many of which were ably engraved by Thomas Milton, preserve the manner of Claude. In the committee-room of the Dublin Society there is a fine example of his style; another, 'Orlando under the Oak,' is in the Hibernian Gallery, and there are five in the Fitzwilliam Museum at Cambridge. Anthony Pasquin, writing 1794, remarks on his work: 'He amused himself in his leisure hours with studying drawing and painting, which he succeeded in so far as to justify his becoming a professor. This gentleman is more happy in his trees and his foregrounds than his figures and skies, the former of which are too inaccurate, and the latter have too green a hue.' In later life he retired to Sandymont, near Dublin, where he died 17 April 1824, aged 78.

#### ASHHURST. [See ASHURST.]

ASHLEY, SIR ANTHONY (1551-1628), clerk of the privy council, was descended from an ancient family which had settled, from the time of Henry VI, at Wimborne St. Giles, in Dorsetshire. Of Ashley's early career we have no information; but we gather from his epitaph that he added to his studies, probably pursued at Oxford, the usual accomplishments of a gentleman of the period, namely, martial exercises and a mastery of several languages acquired in foreign travel. He certainly became clerk of the council before 1588. The earliest account of his services in that office known to us is to be found among the 'State Papers' (Domestic series), under date of 12 Nov. 1588, where we find him at Ilton, drawing up, by order of the council, 'A Schedule of the Names, etc. of the Spaniards on board the St. Peter the Great (one of the ships of the armada), driven into Hope Bay, near Salcombe.' Early in 1589 he received instructions from Lord Burghley to assist and 'be in company with Sir John Norris and Sir Francis Drake in their journey towards Spayne' (*Lansd. MS.* 104, 46). An account of this expedition is given by Camden. About this period probably he received the grant of the office of clerk of the castle and county court of York. We next hear of him at

Oxford, where, with seventeen others, he received the degree of M.A. on the queen's visit, 27 Sept. 1592. He was M.P. for Tavistock in 1588 and for Old Sarum in 1593. Perhaps his most distinguished foreign service was that of secretary for war in the famous 'honourable voyage unto Cadiz.' On this occasion, in June 1596, he was knighted, with others, at the hands of the two 'Lords-generall' of the expedition, Lord C. Howard and the Earl of Essex (HAKLUYT, i. 617). Like all other men in high positions he was not without enemies. On 3 Feb. 1611, more than a year after he had resigned his public offices, rewarded by two pensions, he was summoned before the Star-chamber to answer charges that could not be sustained by those who preferred them. His services were never wholly dispensed with or forgotten, as he was made a baronet by King James I, 3 July 1622 (NICHOLS's *Prog. James I*, iv. 771). By Nichols he is credited with having been the first to introduce cabbages into England. Sir Anthony Ashley died in London, probably at his house in Holborn, 13 Jan. 1627-8, aged 76 years, and was buried at Wimborne St. Giles, where his fine monument is preserved. He was twice married, first to the only daughter of P. Okeover, Esq., of Staffordshire; second, to Dame Phillipa Sheldon, a kinswoman of G. Villiers, Duke of Buckingham, who survived him. By the marriage of his daughter and heiress with Sir J. Cooper, Bart., the grandson of Sir Anthony Ashley became the first Earl of Shaftesbury.

Ashley was undoubtedly the author of an important naval work, although the identity of Ashley, its writer, and Ashley, the clerk of the council, has not been previously pointed out. Four years before the defeat of the Spanish armada in 1588 there was published, in Holland, the first known collection of 'Sea Charts' for sailors, afterwards known as a 'waggoner,' the title of which was: 'Spiegel der Zeevaardt vande navigatie der Westersche Zee,' by Lucas Janz Waghenar, Leyden, 1584, folio. It would appear that in the following year Lord Charles Howard, of Effingham, lord admiral of England, drew the attention of the privy council to the work, which met a great want of our early seamen under the Tudors. The work being 'esteemed by the chief personages of the grave counsell worthy to be translated and printed into a language familiar to all nations,' the task of translating it into English from the Dutch was committed into the hands of Anthony Ashley. The title of the work in its English dress runs thus: 'The Mariners Mirrour . . . of Navigation, First made and set forth in divers exact Sea Charts by that famous Navigator Luke

Wagenar of Enchuisen, and now fitted with necessaries additions for the use of Englishmen by Anthony Ashley. Heerin also may be understood the exploits lately atchieved by the right Honorable L. Admiral of England with her Ma<sup>ties</sup> Navie, and some former services done by that worthy knight S<sup>r</sup> Fra. Drake, fol. London, 1588. The exploits of the lord admiral referred to his pursuit of the armada up the Channel into the North Sea; the services of Sir Francis Drake relate to 'The Voyage to Cadiz in 1587,' mentioned by Hakluyt, 1599, vol. ii. pt. 2, p. 121. The book was dedicated by Anthony Ashley to Sir Christopher Hatton, the then newly appointed lord chancellor, his friend and patron, whose arms and crest adorn the work. In the dedication the author apologises for the delay in its publication 'by reason of my daylie attendance on your L. and the rest of my Lordes of her Maisties most Honourable privie counsell;' which words serve to show beyond all dispute that the clerk of the council and the author of the 'Mariners Mirrour' are one and the same person. One letter from Ashley to Cecil is printed by Strype in his 'Memorials.' Among the Cecil MSS. at Hatfield are three series of thirty-five letters from Ashley to the Earl of Essex, Cecil, and others, ranging from 26 Sept. 1591 to 12 Dec. 1600, temp. Elizabeth, and from 13 April 1603 to 1 July 1615, temp. James I.

**ASHLEY, CHARLES JANE** (1773-1843), third son of John Ashley [see **ASHLEY, JOHN**, 1734?-1805], was well known for many years as a performer on the violoncello, and also for some time carried on the Covent Garden oratorios with his brother. On 2 May 1811 he was elected secretary of the Royal Society of Musicians, of which he had been a member since 4 May 1794. In the latter part of his life he was for some seasons manager of the Tivoli Gardens at Margate, where he died on 29 Aug. 1843.

[Gent. Mag. for 1843; Records of Roy. Soc. of Musicians.] W. B. S.

**ASHLEY, GENERAL CHARLES** (1770?-1818), eldest son of John Ashley [see **ASHLEY, JOHN**, 1734?-1805], obtained some celebrity as a violinist. He was a

pupil of Giardini and Barthelemon, and with his three brothers took part in the Handel commemoration in 1784, on which occasion the young musicians distinguished themselves by nailing the coat of an Italian violinist to his seat and filling his violin with halfpence, proceedings of which he complained so loudly that George III sent to the orchestra to find out what occasioned the disturbance. G. C. Ashley led his father's orchestra at the Covent Garden oratorios, of which, after John Ashley's death, he became joint manager with his brother Charles Jane. He became a member of the Royal Society of Musicians 3 April 1791 (*Records of Roy. Soc. of Musicians*). On 2 March 1804 he married a Miss Chandler, and, having no family and an independent fortune, shortly afterwards retired from his profession. He died at King's Row, Pimlico, on 21 Aug. 1818.

[Gent. Mag. for 1818; Burney's Commemoration of Handel, 1786.] W. B. S.

**ASHLEY, JOHN** (1734?-1805), was the father of a remarkable family of musicians who flourished towards the end of the eighteenth century. He became a member of the Royal Society of Musicians 7 April 1765. At the Handel commemoration in 1784 he was assistant conductor to Joah Bates. On the same occasion the double bassoon was played by a 'Mr. Ashley of the Guards,' who is sometimes supposed to have been the same individual, but was more probably another member of the family, possibly his brother Jane, who was born in 1740 and died at Westminster on 5 April 1809. John Ashley in 1795 undertook the management of the oratorio concerts at Covent Garden. He died in Abingdon Street, Westminster, on 2 March 1806, where also his wife died on 22 Dec. 1809, aged 75. **RICHARD ASHLEY** (1775-1836), one of John Ashley's sons, was a performer on the violin, but he does not seem to have made any mark as a musician. He became a member of the Royal Society of Musicians 17 April 1796, and died in October 1836.

[Gent. Mag. for 1806; Burney's Commemoration of Handel, 1786; Gardiner's Music and Friends, 1838; Records of Roy. Soc. of Musicians.] W. B. S.

**ASHLEY, JOHN JAMES** (1772-1815), second son of John Ashley [see **ASHLEY, JOHN**, 1734?-1805], a pupil of Schroeter, was for several years organist at Covent Garden Theatre. He was one of the most successful singing masters of his day, some of his most celebrated pupils being Mrs.

Vaughan, Mrs. Salmon, and Charles Smith. He composed some pianoforte music and a few sets of songs. He became a member of the Royal Society of Musicians 5 Aug. 1792, and died on 5 Jan. 1815.

[Gent. Mag. for 1815; Records of Roy. Soc. of Musicians.] W. B. S.

**ASHLEY, ROBERT** (1565–1641), a miscellaneous writer of the reign of Elizabeth and James I, is called by Wood, in his 'Athenæ Oxonienses,' 'an esquire's son and Wiltshire-man born,' and from notes on his life, written by himself, to be found in the Sloane MSS. in the British Museum (*Addit. MS. No. 2105*), it seems that he was born at Damerham, on the confines of the counties of Wiltshire, Hampshire, and Dorset, seven miles from Salisbury; that his father was Anthony Ashley, or Astley, of a knightly family in Dorset, and his mother Dorothy Lyte, of Lytes Carey, in Somerset. He further tells us that when a boy he delighted in reading 'Bevis of Hampton,' 'Guy of Warwick,' 'Valentine and Orson,' 'Arthur and the Knights of the Round Table,' and afterwards the 'Decameron of Boccace' and the 'Heptameron of the Queen of Navarre.' He was at school under Hadrian Saravia, at Southampton. Wood says he became a fellow commoner of Hart Hall in 1580, and does not speak of his being a member of any other college in Oxford; but from his autobiography it appears that he was of Alban Hall and also of Magdalen College. He left the university without a degree, and was called to the bar by the Middle Temple. He was elected M.P. for Dorchester in 1597. His main interest was the study of Dutch, French, Spanish, and Italian. 'Finding the practice of law,' says Wood, 'to have ebbs and tides, he applied himself to the learning of the languages of our neighbours, to the end that he might be partaker of the wisdom of those nations, having been many years of this opinion, that as no one soil or territory yieldeth all fruits alike, so no one climate or region affordeth all kind of knowledge in full measure.' In the preface to his 'Almansor' he speaks of having been in the library of the Escorial, where, he says, he saw a glorious golden library of Arabian books. He lived for many years in the Middle Temple, where he died, without issue, Oct. 1641. He was buried in the Temple Church, and gave many books to the Temple Library.

His principal works are 'Urania,' in Latin verse, London, 1589, 4to, translated from the French of Du Bartas; 'The Interchangeable Course,' 1594, fol., translated from the French of Louis le Roy; 'Almansor, the

learned and victorious King that conquered Spain, his Life and Death,' London, 1627, 4to, translated from the Spanish; 'Relation of the Kingdom of Cochin-China, containing many admirable rarities and singularities of that country,' London, 1633, 4to, translated from the Italian of Christ. Barri; 'David Persecuted,' translated from the Italian of Malvezzi, London, 1637.

[Biog. Brit.; Watt's Bibl. Brit.; Brit. Mus. Catal.; Wood, Ath. Oxon. ed. Bliss, iii. 19; Bibl. Univ. des Voyages, v. 109.] J. M.

**ASHMOLE, ELIAS** (1617–1692), 'the greatest virtuoso and curioso that ever was known or read of in England before his time,' was born at Lichfield 23 May 1617. His father, though following the trade of a saddler, was a man of good family, who had seen much service in Ireland. His mother, whose maiden name was Bowyer, was nearly related to James Pagitt, a baron of the exchequer. A boyish intimacy with Pagitt's son procured Ashmole's reception into the judge's family after having received a fair education at Lichfield grammar school, and as a chorister in the cathedral. Through the patronage of Baron Pagitt he became a solicitor in 1638, 'and had indifferent good practice.' In the same year he married Eleanor Mainwaring, of Smallwood in Cheshire, who died suddenly in 1641. In 1642, having embraced the royalist side in the civil war, he left London and retired into Cheshire, and in 1644 was appointed by the king commissioner of excise at Lichfield. Business connected with this employment brought him to Oxford, where he was long detained soliciting the royalist parliament assembled in that city. He there made the acquaintance of Captain (afterwards Sir) George Wharton, who procured him a commission in the ordnance, and imbued him with the love of astrology and alchemy which, next to his antiquarianism, became the leading feature of his intellectual character. He entered himself at Brasenose College, and studied physics and mathematics; but about the end of the year became commissioner of excise at Worcester, to which he soon added the employments of captain of horse and comptroller of the ordnance. In July 1646 Worcester surrendered to the parliament, and Ashmole again retired into Cheshire. In October he came to London and mixed much in astrological circles, becoming acquainted with Lilly and Booker, and finding himself a guest at 'the mathematical feast at the White Hart.' He was also one of the earliest English Freemasons, having been initiated in or about 1646, in which year the first formal meeting of the body in England was

held. His marriage must have been prudent or his employments profitable, for about this time 'it pleased God to put me in mind that I was now placed in the condition I had always desired, which was that I might be enabled to live to myself and studies without being forced to take pains for a livelihood in the world.' This did not, however, prevent his seeking to improve his fortunes still further by marriage with a lady twenty years older than himself, the widow of three husbands, the mother of grown-up sons, and in all probability a relative of his first wife. On 1 March 1647 'I moved the Lady Mainwaring in the way of marriage, and received a fair answer, though no condescension.' In July the lady's second son, disapproving of the match, 'broke into my chamber, and had like to have killed me.' He was not deterred, however, from prosecuting his suit, the progress of which is amusingly recorded in his diary. At length, on 16 Nov. 1649, his perseverance was triumphant, and he 'enjoyed his wife's estate, though not her company for altogether;' and notwithstanding family jars, subpoenas, sequestrations, and frequent sicknesses, all faithfully noted, he vigorously pushed forward his studies in astrology, chemistry, and botany. In 1650 he edited an alchemical work by Dr. Dee, together with an anonymous tract on the same subject, under the anagram of James Hasolle. In 1652 he published the first volume of his 'Theatrum Chemicum,' a collection of ancient metrical treatises on alchemy. He procured his friend Wharton's deliverance from prison, and made him steward of the estates in Berkshire which he had acquired by his second marriage. He also formed the acquaintance of Master Backhouse, a venerable Rosicrucian, who called him son [see BACKHOUSE, WILLIAM], and 'opened himself very freely touching the great secret;' as well as that of John Tradescant, keeper of the botanic garden at Chelsea, an intimacy which has indirectly contributed more than anything else to his celebrity with posterity. He studied Hebrew, engraving, and heraldry, and manifested in every way an insatiable curiosity for knowledge, justifying Selden's opinion of him as one 'affected to the furtherance of all good learning.' On 13 May 1653 Backhouse 'told me, in syllables, the true matter of the philosopher's stone, which he bequeathed to me as a legacy.' But Ashmole has omitted to bequeath it to us. His domestic troubles came to a head in October 1657, when his wife's petition for a separation and alimony, though fortified by eight hundred sheets of depositions, was dismissed by the court, and she returned to live with him. The Restora-

tion marks a great turning-point in his life. His loyalty had entitled him to Charles II's favour, and being introduced to the king by no less influential a person than Chiffinch, he was appointed Windsor herald, 'and had Henry VIII's closet assigned for my use.' From this time antiquarian pursuits predominated with him, and we hear comparatively little of astrology, in which, however, he never lost his belief or interest, and nothing of alchemy. His favour at court continued to grow, and places were showered upon him. He successively became first comptroller, and then accountant-general of excise, and held at the same time the employments of commissioner for Surinam, and comptroller of the White office. He was about this time engaged in litigation with the widow of his old friend Tradescant, who had bequeathed his museum to him. A friendly arrangement was at length concluded, and Ashmole became possessed of the curiosities which formed the nucleus of the institution by which he is best remembered. In 1668 his wife died, and in the course of the same year he married a much younger lady, the daughter of his friend the herald Dugdale. All this time he was diligently engaged upon his great work, the 'Institution, Laws, and Ceremonies of the Order of the Garter,' which was published in 1672, and brought him many tokens of honour both from his own and foreign countries. It is certainly a noble example of antiquarian zeal and research. He soon afterwards retired from his post as Windsor herald, receiving a pension of four hundred pounds secured upon the paper duty; and he subsequently declined the appointment of Garter king-at-arms in favour of his father-in-law, Sir William Dugdale. In 1677 he determined to bestow the museum he had inherited from Tradescant, with his own additions to it, upon the university of Oxford, on condition of a suitable building being provided for its reception. The gift was accepted on these terms, and the collection was removed to Oxford upon the completion of the building in 1682, Dr. Plot being appointed curator. According to Anthony à Wood the curiosities filled twelve wagons. Ashmole quaintly notes in his diary, 17 Feb. 1683: 'The last load of my rarities was sent to the barge, and this afternoon I relapsed into the gout.' In 1685 he was invited to represent his native city in parliament, but desisted from his candidature to gratify James II. In 1690 he was magnificently entertained by the university of Oxford, which had conferred upon him the degree of M.D., and to which he ultimately bequeathed his library, invaluable as regards manuscripts, but greatly damaged in

printed books by a fire at the Temple in 1679, which had also destroyed his collection of medals. He closed his industrious and prosperous life on 18 May 1692, and is interred in South Lambeth church under a black marble slab with a Latin inscription, promising that his name shall endure as long as his museum.

The Ashmolean Museum, though really formed by Tradescant, has indeed secured its donor a celebrity which he could not have obtained by his writings. Ashmole was nevertheless no ordinary man. His industry was most exemplary, he was disinterestedly attached to the pursuit of knowledge, and his antiquarian researches, at all events, were guided by great good sense. His addiction to astrology was no mark of weakness of judgment in that age; he can hardly have been more attached to it than Dryden or Shaftesbury, but he had more leisure and perseverance for its pursuit. Alchemy he seems to have quietly dropped. He appears in his diary as a man by no means unfeeling or ungenerous, constant and affectionate in his friendships, and placable towards his adversaries. He had evidently, however, a very keen eye to his own interest, and acquisitiveness was his master passion. His munificence, nevertheless, speaks for itself, and was frequently exercised on unlooked-for occasions, as when he erected monuments to his astrological friends, Lilly and Booker. He was also a benefactor to his native city.

Ashmole's principal work is his 'Institution, Laws, and Ceremonies of the Order of the Garter,' London, 1672, one of those books which exhaust the subject of which they treat, and leave scope only for supplements. The edition of 1693 is a mere reprint; but in 1715 a new edition was published under the title of 'The History of the Order of the Garter,' with a continuation by T. Walker. 'The Antiquities of Berkshire, with a particular account of the Castle, College, and Town of Windsor,' was published in 1719, and again in 1736. It consists merely of Ashmole's notes during his official visitation as herald, and the genealogical papers transcribed by him; but these form together a very copious collection. It is prefaced by a memoir of the author. His own memoirs, drawn up by himself by way of diary, were published in 1717, and reprinted along with the autobiography of his friend Lilly in 1774. They are a quaint and curious record, narrating matters of great personal importance to him in the same dry style as the most trivial particulars of his numerous ailments: how he cured himself of an 'ague by hanging three spiders about his neck, and how on the ever-

memorable 14 Feb. 1677 'I took cold in my right ear.' His alchemical works are merely editions or reprints, and the only one of importance is the 'Theatrum Chemicum' (1652), which contains twenty-nine old English poems on the subject, some very curious. The extent of his collections in genealogy, heraldry, local and family history, astrology, and alchemy, may be estimated from the admirable catalogue of Mr. W. H. Black and the index by Messrs. Macray and Gough (Oxford, 1845-66).

[The principal authority for Ashmole's life is his own diary. A brief memoir is prefixed to his *Antiquities of Berkshire*. See also Wood's *Athenæ Oxon.* (Bliss), iii. 354-64; Allen's *History of Lambeth*, pp. 124, 393-8; and the list of papers relating to him in the *Index to the Catalogue of Ashmolean MSS.*, pp. 8-9.] R. G.

ASHMORE, JOHN (*n.* 1621), was the first who attempted a translation into English of selected odes of Horace. In 1621 he published 'Certain selected Odes of Horace Englished, and their Arguments annexed.' To the translations are added a number of epigrams and anagrams. The translations show considerable facility of versification, and are by no means devoid of grace; but the translator's choice is for longer measures, and there is a want of light lyric speed. Samuel Pulein, in a copy of Latin elegiacs prefixed to the translations, is enthusiastic about his friend's achievement:—

Flaccus adest, eadem mens est et carminis idem  
Sensus: forma eadem est ingenique decus.

Many of the epigrams and anagrams are addressed to distinguished personages, such as Charles, Prince of Wales, George Villiers, Marquis of Buckingham, and Sir Francis Bacon. In others the writer puns vileyly on the names of private friends. One epigram is addressed 'Ad insignem Poetam, D. Ben. Johnson.' From many references throughout the book to the Fairfaxes and others, it appears that the author was a native of Ripon in Yorkshire.

[Corser's *Collectanea* (Chetham Soc.), i. 66-70.] A. H. B.

ASHPITEL, ARTHUR (1807-1869), architect, the son of William Hurst Ashpitel, was born in Hackney. In boyhood he had an accident which made him a cripple for life. He was trained by his father to the architect's profession, and in 1842 he began work on his own account. He built the church of St. John's at Blackheath, and that of St. Barnabas at Homerton, as well as many other buildings. In 1850 he entered into partnership with Mr. Whichcord,

and was then for some years engaged in large practice. His health failed, and in 1854 he left England with David Roberts, R.A., for a travelling companion, and lived for some time at Rome. As a result of his studies in that city he exhibited a drawing at the Royal Academy, a 'Restoration of Ancient Rome,' and another called 'Rome as it is.' Latterly Mr. Ashpitel retired from active practice and occupied himself as a dilettante in literary work. He contributed papers on various cathedrals to the Archaeological Association, and some articles to the 'Encyclopædia Britannica.' He was a good scholar and linguist, and these qualifications made him (a tory of the old school) able to write some tolerably effective political pamphlets and squibs in verse. Some translations and *vers de société* from his pen appeared in the 'Owl' and attracted some attention. Mr. Ashpitel died on 18 Jan. 1869, having left a valuable collection of vases and books to the Society of Antiquaries, and his two drawings of Rome to the nation. These latter form part of the collection at South Kensington.

[Builder, 30 Jan. 1869; Redgrave's Dictionary of Artists of the English School.] E. R.

**ASHPITEL, WILLIAM HURST** (1776-1852), architect, was a pupil of Daniel Asher Alexander. He assisted his master in the designs for the London Docks, and in the execution of the works connected with that undertaking. Afterwards a pupil of John Rennie, he was largely concerned in the Kennet and Avon canal, and in the work of tunnelling under the town of Bath. Later he was in partnership with James Savage, and then last in practice on his own account. Amongst other buildings he designed Sir Charles Talbot's house at Deepdene. He left his profession rather early in life, and died 20 April 1852.

[Dictionary of Architectural Publication Society.] E. R.

**ASHTON, CHARLES** (1665-1752), a distinguished scholar and divine, was born on 25 May 1665, at Bradway, in the parish of Norton, Derbyshire. He was admitted to Queens' College, Cambridge, on 18 May 1682, took the degree of B.A., and on 30 April 1687 was elected to a fellowship. After serving for a time as chaplain to Bishop Patrick, he was presented on 10 March 1698-9 to the living of Rattenden, in Essex, which he exchanged in the following June for a chaplainship at Chelsea Hospital. On 3 July 1701 he was collated to a prebendal stall in Ely Cathedral, and was elected on the

next day to the mastership of Jesus College, Cambridge, both offices being vacant by the death of Dr. Saywell. In the same year he took the degree of D.D., and in 1702 was elected vice-chancellor of the university. His life was spent in scholarly seclusion, and he seldom left Cambridge, except when his attendance was required at Ely. He died in March 1752, at the age of 87, and was buried in the college chapel. Ashton's published works are not numerous. He contributed to Wasse's 'Bibliotheca Literaria,' 1724, an article, 'Tully and Hirtius reconciled as to the time of Cæsar's going to the African war;' also an emendation of a passage of Justin Martyr. Reading's editions of Origen 'De Oratione' (1728) and 'Historiæ Ecclesiasticæ Scriptores' (1746) are said to have been in great part the work of Ashton. 'His edition of Hierocles's excellent commentary on the golden verses of Pythagoras is without his name, or, it should rather be said, with another person's, R. W. (Warren). . . . Mr. Wakefield also has particularly noticed a Tertullian as being replete with notes by Dr. Ashton. I have also myself perused a dictionary marked in the same manner' (DYER, *Hist. of Univ. of Camb.*, 1814, ii. 80). In 1768 appeared an edition of Justin Martyr's 'Apologiæ' prepared by Frederick Keller, fellow of Jesus College, from papers that Dr. Ashton left at his death. All Ashton's manuscripts had been bequeathed to Keller. Bowyer writes: 'The Bishop of Ely has advised him (Keller) to ask leave of the Bishop of London to inscribe Tertullian's Apology, which the doctor left to his lordship. . . . Ashton destroyed all his sermons; for the Bishop of London inquired after some he had heard preached, which were not found.' Among the Cole MSS. in the British Museum there are transcripts of some of Ashton's letters to Dean Moss (vol. xxx.); of his additions to Sherman's 'History of Jesus College' (vol. xlii.); and of his large 'Collections relating to the University.' In Chishull's 'Antiquitates Asiaticæ' (1728) Ashton showed much acuteness in restoring satisfactorily a corrupt inscription to Jupiter Urios.

[Nichols's Literary Anecdotes, i. 262, 271, iv. 226, 227, viii. 502, ix. 766; Dyer's Hist. of Cambr. Univ. ii. 80; Cole MSS. vols. xxx., xlii., li.; Add. MS. 6396. There is a good account of Ashton by J[ohn] H[ill] B[urton] in S.D.U.K. Biographical Dictionary.] A. H. B.

**ASHTON, EDWARD** (d. 1658), was a colonel in the army. He was deeply implicated in the plot against the lord protector

set on foot by Ormond and other agents of Charles II in 1658, and for complicity in which Sir H. Slingsby and Dr. Hewet suffered. Ashton's part was to set fire to the city, throw open all the prisons, and seize all moneys and plate at the goldsmiths', but it was to be 'death for any to touch any man's private goods.' He was tried with six of his fellow-conspirators before the commissioners of the high court of justice, was found guilty, and on 7 July 1658 was hanged, drawn, and quartered in 'Tower Street, London, over against Mark Lane end.' Four of his fellow conspirators suffered similar penalties in different parts of the city.

[*Mercurius Politicus* for the year 1658, No. 423 (No. 48 in Brit. Mus. Catalogue); Clarendon's Hist. xv. 102.] G. V. B.

**ASHTON, HENRY** (1801-1872), architect, born in London, was a pupil of Sir Robert Smirke. Afterwards, and till death, he was employed by Sir Jeffrey Wyattville. He erected the stables at Windsor and the kennels at Frogmore. About 1831 he was employed by the King of Holland to build the summer palace at the Hague. He was the architect of the improvements in Victoria Street, and designed the thoroughfare which connects Belgravia with the Houses of Parliament. Some of the best examples of his work are found in Victoria Street. He exhibited many designs at the Academy. 'His work possessed many good characteristics—good in construction, simple yet tasteful in its design and proportions.' In competition 'for some of the most important works of his day' he was not successful. He died on 18 March 1872.

[*Redgrave's Dictionary of Painters of the English School.*] E. R.

**ASHTON, HUGH** (d. 1522), archdeacon of York, was a younger son of one of the Lancashire families of Ashton. He attracted the notice of the Lady Margaret, countess of Derby, who made him comptroller of her household. It has been conjectured on that account that he belonged to the West Lancashire Ashtons, and perhaps to that branch settled at Penketh, in the parish of Prescot; but nothing certain is known as to his origin. He commenced M.A. at Oxford 13 Oct. 1507, but soon after had a grace from Cambridge to enter the canon law. He subsequently became canon and prebendary in St. Stephen's, Westminster, 1509; prebendary of Strensall, in the church of York, 1515; archdeacon of Winchester, 1511 (resigned in 1519); archdeacon of Cornwall, 1515; archdeacon of West Riding

York, 1516. Before 1511 he was rector of Grasmere, Ambleside, and he was also rector of Barnake, Lichfield. In 1522 he was instituted rector of Burton Latimer, Northamptonshire. He had been one of the executors of the will of his early patroness, and like her was interested in the fortunes of St. John's College, Cambridge. Baker says: 'The last chapel was Mr. Hugh Ashton's, well known by his monument and his rebus upon it, a thing then much in fashion, and must be forgiven to the humour of the age. It has long since lost the face of religion. Many years after its desecration, in Dr. Beal's time, it was restored to sacred use; but the times coming on when little regard was had to sacred things, and less to sacred places, it was again desecrated, and has not since been restored to such uses as the other two chapels yet standing have been. It may, 'tis hoped, one day recover the right; and might I choose my place of sepulture I would lay my body there, that as I owe the few comforts I enjoy to Mr. Ashton's bounty, so I might not be separated from him in my death.' This is an allusion to Ashton's foundations. The building accounts are given by Cooper and Mayor. 'Whilst at Cambridge he was 'very serviceable' in the business of the college; but having to be away a great deal he made up for his non-residence by his benefactions. 'What was wanting in that more public capacity he made up and supported in his private station by founding four fellows, who were his chaplains, and as many scholars, together with an annual dirge to be observed for him on the day of his interment.' According to Baker, who followed the inscription on his tomb at York, and copied in Queen Mary's reign by Dr. Bullock, then master of St. John's, he died 23 Nov. 1522, but Cooper and Mayor state that his will was dated 7 Dec. 1522, and proved 9 March following. 'Hic situs est,' runs the inscription, 'Hugo Ashton archidiaconus Ebor., qui ad Christianæ religionis augmentum socios 2 ex Lancastria, totidemque scolares, sociumque et scholarem Eboracensis sociumque et scholarem Dunelmensis diocesis oriundos, suis impensis pie instituit, atque singulis a se institutis sociis consuetum sociorum stipendium solidis 40 adauxit. Obiit nono cal. Decemb. an. Dni. 1522.' It is impossible to reconcile this date with that of the will. Ashton's Lancashire foundations were made available to candidates from the entire diocese of Chester. There was an inscription in the hospital of St. Leonard's at York recording Ashton's gift of a window. In addition to the prose tribute, some eulogistic verses, occasioned by a portrait of Ashton, were written by Baker,

who bequeathed the picture to Dr. Newcome, master of St. John's.

W. E. A. A.

ASHTON, SIR JOHN DE (*fl.* 1370), military commander, was the son of Thomas de Ashton, who had distinguished himself at the battle of Nevill's Cross. The dates of his birth and death are unknown, but in 1370 he figured as the hero of one of those picturesque incidents which Froissart delighted to describe. Lord Berners has thus translated the passage: 'The lande of the Lord of Coucy abode in peace, for ther was nother man nor woman that had any hurt, the value of a penny, yf they sayd they belonged to the lorde of Coucy. And so atlast the englysshmen came before the cyte of noyon, the whiche was well furnished with men of warre; ther the englysshmen taryed, and aproched as near as they might, and aduysed to se yf any maner of assaut might preuayle them or not, and there they sawe that the towne was well aparelled for defence. And sir Robert Canoll was loged in the abbey of Dolkens, and his people about him; and on a day he came before the cyte, raynged in maner of batayle, to se yf they of the garyson and comontie of the towne wolde yssue out and fight or not; but they had no wyll so to do. There was a scottysch knyght dyde there a goodly feate of armes, for he departed from his company, his speare in his hande, mounted on a good horse, his page behynde hym, and soo came before the barryers; this knyght was called sir Johan Assueton, a hardy man and a couragious; whan he was before the barryers of Noyon he lighted afote, and sayd to his page, Holde, kepe my horse and departe nat hens; and so went to the barryers. And within ye barryers ther were good knyghtes, as sir Johan of Roy, sir Launcelot of Lowrys, and a x. or xii. other, who had great marueyle what this sayde knight wolde do. Than he sayd to them, Sirs, I am come hyder to se you, I se well ye wyll nat yssue out of your barryers, therefore I wyll entre and I can, and will proue my knyghthode agaynst yours: wyn me and ye can; and therwith he layed on rounde about hym, and they at hym, and thus he alone fought against them more than an hour, and dyd hurt two or thre of thē; so that they of the towne on the walles and gerettes stode styll and behelde them, and had great pleasure to regarde his valiañtesse, and dyde him no hurt,

the whiche they might haue done, if they hadde lyst to haue shotte or cast stones at hym, and also the frenche knyghtes charged them to let hym and them alone togyder. So long they fought that at last his page came nere to the barryers, and spake in his language and sayd, Sir, cōe away, it is tyme for you to depart, for your company is departyng hens: the knight herde him well, and then gaue a two or thre strokes about him, and so, armed as he was, he lept out of the barryers, and lepte upon his horse, without any hurt, behynde his page, and sayd to the frenchmen, Adeu, sir, I thank you, and so rode forthe to his owne company; the whiche dede was moche praysed of many folkes' (FROISSART, 1812 edit. i. 417). The term 'Scottish knight' is somewhat perplexing, and has led Mr. Johnes to suppose that one of the Setons is meant; but Froissart applies the term generally to all who were in that army, although Sir Robert Canoll—that is, Sir Robert Knolles—was of Cheshire birth. Sir John Ashton was knight of the shire for his native county in the parliament of Westminster in 1389. He married Margaret, daughter of Perkin Legh of Lyme, and was succeeded in the lordship of Ashton by his son, Sir John, who was drowned at Norham.

[Froissart; Baines's *Lancashire*; Axon's *Lancashire Gleanings*.] W. E. A. A.

ASHTON, SIR JOHN DE (*d.* 1423), seneschal of Bayeux, was the son of Sir John de Ashton and his wife, Margary Legh. He was one of forty-six esquires who were summoned to attend the grand coronation of Henry IV, in honour of which event they were solemnly admitted to the order of the Bath. He served in the parliament of 1413 as knight of the shire for Lancashire. In 1416 he was with the Duke of Clarence at the taking of Bayeux, and was entrusted by the king with the office of seneschal of the city. There is in the 'Fœdera' a document sent to him by Henry IV from Falaise, commanding him to give special protection to the inhabitants of the religious houses. He was also captain of Hadupais and bailiff of Constance. He was twice married and left many children, including Sir Thomas de Ashton, the alchemist [q. v.]. Sir John died in 1428.

[Baines's *Lancashire*; Rymer's *Fœdera*, vii. 186, 504, 525, 530, 589, 614, x. 61, 91, xiii. 712; Axon's *Lancashire Gleanings*.] W. E. A. A.

ASHTON, JOHN (*d.* 1691), Jacobite conspirator, of the family of Ashton of Penketh, Lancashire, was clerk of the closet to Mary of Modena, wife of James II, and, after the revolution of 1688, showed himself ardently

devoted to the interests of his exiled master and mistress. He appears to have held a commission of captain or major in the army, and to have been an intimate friend of Dr. Thomas Cartwright, who was bishop of Chester from 1686 to 1689, and a zealous supporter of the Stuart dynasty (cf. CARTWRIGHT'S *Diary*, pub. by Camden Soc.). By religion Ashton was a protestant, and late in 1690 he attended a meeting of protestant Jacobites, at which it was resolved to invite Louis XIV to forcibly restore James II. Viscount Preston undertook to visit St. Germans with the papers requisite to obtain support for the conspiracy, and Ashton promised to arrange the journey and bear him company. He and a young friend, Major Elliott, hired a boat at London to convey themselves and Lord Preston to France, but the owner, whose suspicions were roused by their injunctions of secrecy, gave information to the government, and on 31 Dec. 1690, when Preston, Ashton, and Elliott embarked with their treasonable papers about them at the Tower, they were narrowly watched, were arrested off Tilbury, and a few hours later brought back to Whitehall. On Ashton's person alone incriminating documents were found. The three prisoners were brought to trial a fortnight later, but each was tried separately. Ashton, who was described in the indictment as 'late of the parish of St. Paul's, Covent Garden,' declared that he was about to visit France to learn from the exiled queen how she proposed to settle certain unpaid debts with her London tradesmen, for many of which he, as her late clerk, was held responsible, and he called witnesses in support of his assertion. All the conspirators were condemned to death, and Ashton, upon whom alone the sentence was executed, was hanged at Tyburn on 28 Jan. 1690-1, being buried at St. Faith's under St. Paul's on the same day. Several non-juring clergymen attended him after his conviction, and were present at the gallows, where he behaved with fortitude, and handed to the sheriff a paper declaring himself a protestant, and happy in losing his life in James II's service, from whom he had received favours 'for sixteen years past.' This document, which exemplified the sincerity of James's supporters in England, was published in England, France, and Holland, and greatly alarmed the authorities. An answer to it was written anonymously by Dr. Edward Fowler, bishop of Gloucester, who represented Ashton's paper as the manifesto of the Jacobite party, and tried to confute in detail his arguments against the lawfulness of William III's accession to the throne:

the bishop's pamphlet evoked a reply in the 'Loyal Traitor,' an elaborate defence of Ashton by a Jacobite.

Ashton married in 1685 Mary, daughter of Edward Rigby, of Covent Garden. After her husband's death she sought refuge at St. Germans with her son, upon whom James II conferred a baronetcy. But her protestantism offended the exiled court, and Mrs. Ashton was harshly used on her refusal to become a Roman Catholic. She died in 1694, and her body was sent to England for burial (*View of the Court of St. Germans* (1696), in Harl. Misc., vi. 395).

[State Trials, xii. 645 et seq.; Luttrell's Brief Relation of State Affairs, vols. ii. iii. Burnet's History of my own Time, iv. 121 (Oxford edit.); Macaulay, iii. 723, 727, iv. 16-8; Brit. Mus. Cat.; Ashton's paper is printed in Tindal's Continuation of Rapin's History of England (i. 171), in the State Trials, and in Dr. Fowler's pamphlet.] S. L.

ASHTON, PETER (d. 1548), translator, was prebendary of Lincoln in 1542 and died in 1548 (*LE NEVE'S Fasti*). He translated into English, in 1546, the 'Turcicarum rerum Commentarius' of Paulus Jovius, under the title of 'A Shorte Treatise upon the Turkes Chronicles, compyled by Paulus Jovius, byshop of Nucerne, and dedicated to Charles V, Emperour. Drawen out of the Italyen tong in to Latyne by Franciscus Niger Bassianates. And translated out of Latyne into Englysh by Peter Ashton.' In the dedicatory epistle to Sir Rafe Sadler the translator informs us that he has 'studied rather to use the most playn and famylier English speche the ether Chaucers wordes (which by reason of antiquite be almost out of use) or els inkhorn termes (as they call them) which the common people for lacke of Latin do not understand.'

[Ames's Typographical Antiquities (ed. Dibdin), iii. 488-9.] A. H. B.

ASHTON, SIR RALPH DE (fl. 1460-1483), an officer of state under Edward IV, was the half-brother of Sir Thomas de Ashton the alchemist [q. v.], and the son of Sir John de Ashton (d. 1428) [q. v.]. His mother was Margaret, daughter of Sir John Byron of Clayton. In his seventeenth year he was one of the pages of honour to Henry VI, and at the same early age he married Margaret, the heiress of the Bartons of Middleton, and became the founder of the family that held the lordship there until the 18th century, when it passed by the female line to the holders of the Suffield peerage. Ralph Ashton was a man of influence, and in the reign of Ed-

ward IV he held various offices. He was sheriff of Yorkshire, and for his courage at the battle of Huttonfield he was made a knight banneret. When his commander, the Duke of Gloucester, became Richard III, he rewarded Sir Ralph's adhesion to the Yorkist cause by extensive grants of land. In 1483 he was appointed vice-constable of England and lieutenant of the Tower. The date of his death is unknown, but he is traditionally said to have been shot at Ashton-under-Lyne, and the yearly ceremony known as the 'Riding of the Black Lad' is regarded as a commemoration of that event. There is a very full rent-roll or custumal of the manor of Ashton in 1422, in which the various names and obligations of the tenants are set forth. Ralph Ashton is mentioned in a passage which Dr. Hibbert-Ware has explained with much ingenuity, though not with absolute certainty. According to this, corn marigold (*Chrysanthemum segetum*) grew so extensively in the low wet land about Ashton as to be inimical to the crops, and the lord of the manor had an annual inspection and levied fines on those tenants on whose lands it was seen. This power, delegated to Ralph Ashton and his brother Robert, is said to have been made the pretext of such tyrannical exactions that on one of these visitations the tenants rose in desperation and the 'Black Knight' was slain. Others hold that it was whilst exercising in the northern parts his despotic powers as vice-constable that he excited the terror expressed in the legendary rhyme:—

Sweet Jesu, for thy mercy's sake  
And for thy bitter passion,  
Save us from the axe of the Tower,  
And from Sir Ralph of Ashton.

The effigy of the Black Knight is still paraded through the town of Ashton on Easter Monday.

[Hibbert-Ware's Customs of a Manor in the North of England, Edinburgh, 1822, and again by the Chetham Society, vol. lxxiv.; Rymer's *Fœdera*, xi. 715, xii. 118, 205, 268; Axon's Lancashire Gleanings.] W. E. A. A.

ASHTON, SIR ROBERT DE (d. 1385), civil, military, and naval officer under Edward III, was of the great northern family of Ashton or Assheton, of Ashton-under-Lyne, in the county of Lancaster. The house claims descent from Emma, the daughter of Albert de Gresley, the first baron of Manchester; she married Orm, the son of Ailward, and received from her father as a dowry a portion of the lands he had received from Roger of Poitou. From this union, probably of Norman heiress and Saxon thane, descended

Sir John Ashton, who was twice married. The date of the birth of his son Robert is not known, nor are there records of his career until we find him, in 1324, a member of the parliament of Westminster, and afterwards occupying positions of great importance and trust. In 1359 he was governor of 'Guynes' near Calais; in 1362 he was lord treasurer of England; in 1368 he had the custody of the castle of Sandgate near Calais with the lands and revenue thereto belonging; in 1369 he was admiral of the Narrow Seas; in 1372 he was justiciary of Ireland; and in 1373 again lord treasurer of England and king's chamberlain. In 1375 he became chancellor of the exchequer, and held that office until the death of Edward III in 1377, when he was succeeded by Simon de Bureley. The new king did not discard his father's old servant, and in 1380 Ashton was appointed constable of Dover and warden of the Cinque Ports. He died at Dover Castle 9 Jan. 1384-5, and was buried in the church there, to which he had previously presented a large bell. He was twice married. By his first wife, Elizabeth, whose surname is not known, he left a son, Thomas, and a daughter, Eleanor. His second wife was the widow of Lord Matthew de Gorney, and after Ashton's death married Sir John Tiptoft, knt., and died in 1417. Such are the scanty details of the career of a man who, going from a then remote and little-known district, achieved distinction alike in court and camp, by land and by sea.

[Rymer's *Fœdera*, 3rd edit. 752, 820, 822, 824, 844, 845, 862, 924, 930, 942, 977, 978, 979, 990, 1010, 1052, 1062, 1069, 1076, 1077; Baines's Hist. of Lancashire; Axon's Lancashire Gleanings.] W. E. A. A.

ASHTON, THOMAS DE (d. 1346), warrior, was the son and heir of Sir Robert de Ashton, and it is remarkable that, although the chief recorded event of his life shows him to have been a man of conspicuous military courage, he does not appear to have received the honour of knighthood, or to have been employed in any of the offices in which his father had distinguished himself. Whilst Edward III was fighting in France, David, king of Scotland, entered Northumberland with a force estimated at 50,000 men, and wasted and pillaged the country as far as Durham. Queen Philippa, the heroic wife of Edward III, marched against the invaders with a force of about 12,000, whom she encouraged to the unequal conflict. Battle was joined at Neville's Cross, near Durham, 17 Oct. 1346, and the result was a decisive victory for the English. Thomas de Ashton, who fought under Lord Neville, captured the royal stan-

dard of Scotland. Shortly after King David was made prisoner by John de Coupland, variously described as a Lancashire esquire and as a Northumberland gentleman, who was knighted when the king returned from France, but Ashton was still an esquire when, in 1385, he formed one of the retinue of John of Gaunt in his expedition to Spain. William de Ashton, doctor of laws, who was also with 'the serene prince, Lord John, king of Castile and Leon,' was his uncle.

W. E. A. A.

**ASHTON** or **ASSHETON**, **SIR THOMAS DE** (fl. 1446), alchemist, born in 1403, was the son and heir of Sir John de Ashton, of Ashton-under-Lyne [see **ASHTON**, **SIR JOHN DE**], who died in 1428. Permission was granted by Henry VI to Sir Thomas to transmute the precious metals, and on 7 April 1446 a special order was issued (*Rot. Pat.* 2, No. 14), encouraging two Lancashire knights, Ashton and Sir Edmund de Trafford, to pursue their experiments in alchemy, and forbidding any subject of the king to molest them. Sir Thomas married Elizabeth, daughter of Sir John Byron, by whom he had eleven children. The eldest son, John, was knighted before the battle of Northampton, 10 July 1460, and died in 1503.

[Fuller's Worthies (ed. Nicholls), i. 555; Biographia Britannica; Foster's Lancashire Pedigrees; Baines's History of Lancashire (ed. Harland), i. 133.]

**ASHTON**, **THOMAS** (d. 1578), school-master, was educated at Cambridge, where he graduated B.A. in 1559–60, and M.A. in 1563. He was elected a fellow of Trinity College in that university, entered into orders, and in 1562 was appointed the first head master of Shrewsbury school, which he raised to a high position; there being, while he presided over it, as many as 290 scholars at a time. Among his pupils were the illustrious Sir Philip Sidney and Sir Fulke Greville, Lord Brooke. Camden, in his 'Britannia,' remarks that 'Shrewsbury is inhabited both by Welsh and English, who speak each other's language; and among other things greatly to their praise is the grammar school founded by them, the best filled in all England, whose flourishing state is owing to provision made by its head master, the excellent and worthy Thomas Ashton.' At Whitsuntide 1568 a noble stage play, in which Ashton was the principal actor, was performed at Shrewsbury in connection with the school. It lasted all the holidays, and was attended

by a large number of people, including several noblemen and many gentry residing in the neighbourhood. Soon afterwards, however, in the same year Ashton resigned the mastership of the school. About October 1574 he was sent to Ireland to Walter, Earl of Essex, who despatched him to parley with Tyrlogh Lynogh, and subsequently employed him in confidential communications with the queen and the privy council of England. The same nobleman by will gave him 40*l.* a year for life, and he was one of the feoffees of the earl's estates. Ashton returned to England in 1575. One of his latest acts was to visit Shrewsbury, where he preached a farewell sermon to the inhabitants. The 'godlie Father,' as he is styled in a contemporary manuscript, then returned to Cambridge, in or near which town he died a fortnight later, in 1578.

[Camden's Britannia, ed. Gough, ii. 399; Owen and Blakeway's Shrewsbury, i. 353, 365, 384; The Devereux Earls of Essex, i. 77, 78, 88, 106, 107, ii. 485, 486; Murdin's State Papers, 776; Cooper's Athenæ Cantab. i. 396, 567; Carlisle's Grammar Schools, ii. 375.] T. C.

**ASHTON**, **THOMAS**, D.D. (1716–1775), divine, son of Dr. Ashton, usher of the Lancaster grammar school, was born in 1716. After being educated at Eton, he proceeded in 1733 to King's College, Cambridge, where he made the acquaintance of Horace Walpole. He is the 'Thomas Ashton, Esq., tutor to the Earl of Plymouth,' to whom Walpole addressed his Epistle from Florence (*DODSLEY, Poems*, iii. 75). In a letter to Richard West, dated 4 May 1742, Walpole speaks in high terms of Ashton's success in the pulpit: 'He has preached twice at Somerset Chapel. . . I am sure you would approve his compositions, and admire them still more when you heard him deliver them' (*Letters*, ed. Cunningham, i. 161). In less than a month West was dead; and in a letter to Sir Horace Mann, dated 30 June 1742, Walpole encloses an elegy on his death by Ashton. For some time Ashton held the living of Aldingham, Lancashire; in May 1749 he was presented to the rectory of Sturminster Marshall in Dorsetshire; and in 1752 to the rectory of St. Botolph, Bishopsgate. Meanwhile his acquaintance with Walpole had come to an end. Writing to Sir Horace Mann on 25 July 1750, Walpole says: 'I believe you have often heard me mention a Mr. Ashton, a clergyman, who, in one word, has great preferences and owes everything upon earth to me. I have long had reason to complain of his behaviour; in short, my father is dead, and I can make no bishops. He has at last quite thrown off

the mask, and in the most direct manner, against my will, has written against my friend Dr. Middleton. . . . I have forbid him my house' (*Letters*, ii. 216). Cole (*MS. Athenæ*) mentions that Ashton owed his Eton fellowship to Walpole's influence. In 1759 Ashton took the degree of D.D.; in December 1760 he married a Miss Amyand; and in May 1762 was elected preacher at Lincoln's Inn, which office he resigned in 1764. He died on 1 March 1775, after 'having for some years survived a severe attack of the palsy.'

Ashton was the author of a number of sermons, among which may be mentioned 'A Sermon on the Rebellion,' 1745; a 'Thanks-giving Sermon' on the close of it in 1746; a 'Sermon preached before the House of Commons' on 30 Jan. 1762; a 'Spital Sermon' at St. Bride's on Easter Wednesday of the same year. These, with others, were collected in a volume of 'Sermons on several Occasions,' 1770, 8vo. Prefixed to this volume is a mezzotint portrait of Ashton from a painting by Sir Joshua Reynolds. In 1754 he had an altercation with a methodist minister of the name of Jones, to whom he addressed 'A Letter to the Rev. Thomas Jones, intended as a rational and candid answer to his sermon preached at St. Botolph, Bishopsgate.' He also wrote some pamphlets against the admission of aliens to Eton fellowships.

[Nichols's *Literary Anecdotes*, iii. 88-90; Walpole's *Letters*, ed. Cunningham, i. 161, 184, ii. 216-17; Cole's *MS. Athenæ*.] A. H. B.

**ASHURST, HENRY** (1614?-1680), a wealthy and benevolent merchant of London, noted for his gifts of money to pious or charitable purposes, the founder of the family of Ashurst or Ashhurst of Waterstock, Oxfordshire, was descended from an old Lancashire family, seated at Ashurst, in the township of Dalton and parish of Wigan, distant five miles north-west of that town. His father, Henry, a justice of the peace, is described as a wise and pious gentleman, zealous for the reformed religion in a part of the country where Roman Catholics abounded. His mother was one of the Bradshaws of Bradshaw, near Bolton. Of the sons of this marriage William engaged in politics, becoming M.P. for Newton, Lancashire, in 1641, and for the county in 1654; John became a colonel in the civil war; and Henry, born about 1614, entered into trade; all being very zealous in the interests of the parliamentarians and presbyterians. A daughter, Mary, became the wife of Dr. Theophilus Howorth, of Manchester. Henry was apprenticed at the age of fifteen to a London draper; and his prospects were

much advanced by a loan of 300*l.* from the Rev. James Hiet, of Croston, Lancashire, and by his marriage with Judith Reresby. He became a successful merchant, entered the common council, and, though ejected in 1662, subsequently became an alderman. In 1667 he was living at Lauderdale House, but at the time of his death, which occurred in November 1680, he is called of Hackney. He had the intimate acquaintance of Henry Newcome, of Manchester, Richard Baxter, who preached his funeral sermon, Matthew and Philip Henry, and others; and the writings of all these divines abound in references to him. His charities to his Lancashire countrymen were very extensive; he allowed needy ejected ministers in that county 100*l.* per annum, and liberally relieved the widows of ministers. He was deeply interested in Elliot's missionary efforts in North America, and that apostle to the Indians termed him his worthy and true friend. Ashurst acted as treasurer for the Society for the Propagation of the Gospel, was a trustee of Boyle's Lecture, and was a great patron of religious literature. Baxter describes him as 'the most exemplary person for eminent sobriety, self-denial, piety, and charity that London could glory of, as far as public observation, and fame, and his most intimate friends could testify.' His son Henry, also a tried friend of Baxter's, became a baronet; he was the builder of Waterstock. The second son, William, was knighted in 1689, and was lord mayor of London in 1693. Each brother received 20*l.* by bequest of Robert Boyle.

[Dugdale's *Visitation of Lancashire*, p. 9; Burke's *Visitation of Seats*, ii. 11; Baxter's *Funeral Sermon*, London, 1681, 4to; Sylvester's *Reliquiæ Baxterianæ*, ii. 290, iii. 17, 189; Le Neve's *Knights*, 414; Newcome's *Autobiography and Diary*; Matthew Henry's *Life*; *Life of Antony à Wood*, 8vo, 157-8.] J. E. B.

**ASHURST, JAMES** (d. 1679), divine, whose christian name was unknown to Calamy and Palmer, was vicar of Arlesey, in Bedfordshire, and had been episcopally ordained, but he could not comply with the new impositions of the Act of Uniformity, and hence quitted his living. He was very old, and his vicarage slender. Samuel Browne, the judge [q.v.], was one of his parishioners, and a great friend. 'The whole parish,' says Palmer (after Calamy), 'was well affected towards him for his worthy behaviour amongst them, and was entirely under the influence of the judge . . . and so, though he was legally silenced, he continued in his church a non-conformist. He read part of the morning and

evening service, viz. the confession, scripture-hymns, the creed, and some of the collects. He was a considerable scholar and a hard student to the last; greatly esteemed and loved by all sober persons who knew him, for his extraordinary piety, humility, meekness, self-denial, and integrity. His contempt of the world and contentedness on a very small income were very remarkable. He took for his small tithes just what his parishioners were pleased to give him.' From the register-book of births, deaths, and marriages of the parish of Arlesey, it is found that Ashurst became vicar between 27 Oct. 1631 and 4 Oct. 1632, and that he was married to 'Mary Baldocke, relict of Daniel Baldocke,' on 20 Nov. 1660. The same register informs us that 'James Ashurst, minister, was buried December y<sup>e</sup> 16, 1679' ('buried in woolen'). His neighbour, Read, of Henlow, preached his funeral sermon.

[Palmer's Nonconf. Memorial (1802), i. 281; local researches at Arlesey.] A. B. G.

**ASHURST or ASHHURST, WILLIAM HENRY** (1725-1807), judge, belonged to the Lancashire family, the Ashhursts of Ashhurst or Ashurst. One of his ancestors was Henry Ashurst, the philanthropist [q.v.], and another was lord mayor of London in 1693. Sir William Ashurst was born at Ashhurst, near Wigan, 25 Jan. 1725, and was educated at Charterhouse. He was admitted of the Inner Temple on 19 Jan. 1750. He practised for some years as a special pleader; and Mr. Justice Buller was one of his pupils. He was called to the bar on 8 Feb. 1754, and was made a serjeant in 1770. On 25 June of the same year, on the removal of Sir William Blackstone to the Common Pleas, he succeeded him as a judge of the King's Bench, in which court Lord Mansfield then held undisputed sway. Mr. Justice Ashurst's judgments, which are reported in Loffts and Douglas's 'Reports' and Chitty's 'Practice Cases,' are remarkable for their clearness and good sense. A contemporary writer thus describes his qualities as a judge: 'Sir William Ashurst is a man of liberal education and enlarged notions. His language has no peculiar neatness nor brilliancy, but it is perspicuous, pointed, and clear. He reasons logically, and knows well how to winnow the chaff and eloquence from argument and law.' Mr. Justice Ashurst is best remembered by his charge to the grand jury of Middlesex on 10 Nov. 1792. The charge was delivered shortly after the massacres of September in France, and at a time when the name of reform had become odious to a multitude of Englishmen. Mr. Justice Ashurst, giving expression to the

fears of the hour respecting the French revolution, attacked as 'absurd, nonsensical, and pernicious' the doctrines of its English admirers. 'There is no nation in the world that can boast of a more perfect system of government than that under which we live. . . . I trust that your minds will be impressed with these ideas, and that you will be assiduous in supporting our present form of government.' This charge was printed by the Society for preserving Liberty and Property against Republicans and Levellers as an opportune warning to the nation. It called forth several replies, one of the best-known being a pamphlet 'Justice to a Judge.' It also elicited from Bentham one of his most incisive pamphlets, 'Truth versus Ashhurst,' which was written in 1792, but was not printed until August 1823. Bentham's strictures are somewhat too sweeping. Sir William Ashurst was an admirer of what Bentham terms in this pamphlet 'the rubbish' of the common law. But he co-operated in some degree with Mansfield in introducing a spirit of equity into its administration. His personal appearance is recorded in the lines attributed to Erskine—

Judge Ashhurst with his lanthorn jaws  
Throws light upon the English laws.

Being highly esteemed as a lawyer, Sir William Ashurst was twice one of the commissioners entrusted with the great seal, which he held from 9 April 1783 to 23 December of the same year and from 15 June 1792 to 28 Jan. 1793. On 9 June 1799 he resigned his office, and retired to his house at Waterstock, in Oxfordshire, where he died on 5 Nov. 1807.

[Foss's Judges, viii. 234; Bentham's Works, v. 231; Strictures on the Lives and Characters of the most Eminent Lawyers (1790), p. 71; Baines's History of Lancashire, ii. 187.]

J. M.-L.

**ASHURST, WILLIAM HENRY** (1792-1855), solicitor, was born in London 11 Feb. 1792. His father had led an aimless existence, under the impression—due to rumours about his infancy and his likeness to the eminent judge of the name—that he would be some day recognised as belonging to a distinguished family. William Henry's perception of his father's weakness stimulated his spirit of independence. After some education at a dame school he entered a solicitor's office, where his employer rewarded his industry by giving him his articles. He gained a good practice as a solicitor, though his marriage at the age of nineteen compelled him to increase his income by copying work at night and by writing for the press. He read much,

and for a time belonged to a small sect called 'Freethinking Christians.' He ceased to be a member of any sect, though he regarded his political principles as the logical outcome of the doctrine of human brotherhood. He was much influenced by the political writings of Paine and Franklin. He was an enthusiastic radical, spending both money and labour to advance the cause. His house was one of the first to announce upon its walls that it would pay no taxes till the Reform Bill (of 1832) was passed. He was an active member of the common council, and, as undersheriff for one year, witnessed an execution, which intensified his horror of capital punishment. In 1832 he published the 'Corporation Register,' advocating reforms in the city, and especially in the court of aldermen. He took an active part in the agitation against church rates. He refused to pay them himself. He published pamphlets in 1835, 1837, and 1839, denouncing the imprisonment of Mr. Childs at Bungay, supporting an agitation in Southwark, and attacking a petition for the imprisonment of John Thoroughgood, who had refused to pay at Chelmsford. He also conducted the well-known Braintree case to a successful result.

Ashurst supplied the funds and the labour of procuring the evidence in favour of Rowland Hill's scheme of postal reform when before the parliamentary committee. He was a warm supporter of co-operation, and for a time carried on the 'Spirit of the Age,' founded under Robert Owen's influence, till he disapproved of the spirit in which it was written. The friendship with Owen remained unbroken. Ashurst defended many men whom he believed to have been the victims of injustice or oppression, amongst others Mr. G. J. Holyoake on his imprisonment in 1842, who afterwards owed much to his friendship.

He was an outspoken advocate of the political and social equality of the sexes. He brought up his daughters in habits of independent thought and action. When asked why he had taken up the cause of women's rights, he would say that he had seen a girl tried for child-murder, who had been betrayed by a man, was convicted by men, sentenced by a man, and hanged by a man. 'It made me think.' The cause represented his strongest convictions.

The opening of Mazzini's letters in 1844 led to a friendship with Ashurst. In 1851 and 1852 Ashurst was a founder of the society of the 'Friends of Italy' and of the 'People's International League.' He cordially welcomed many of the refugees at that time. He was a warm admirer of American institutions and of the principles of the Declaration of In-

dependence. He had long been a friend of Garrison, Lucretia Mott, and other abolitionists. He paid a visit to America, and saw Garrison in his home. His health suffered from the journey, and broke down completely on the death of his wife soon after. He died on 13 Oct. 1855.

[Private information.]

ASHWARDBY, JOHN (fl. 1392), a follower of Wycliffe, is described by Tanner (*Biblioth. Brit.-Hib.* p. 53), no doubt by an inference from his surname, as a Lincolnshire man. He became fellow of Oriel College, Oxford, 'master of theology,' and vicar of St. Mary's church. Attaching himself to Wycliffe's party, he appears to have been active in preaching, lecturing, and writing, as an opponent specially of the mendicant orders, and he engaged in controversy with the Carmelite, Richard Maydeston, a chaplain of John of Gaunt. In spite of this, however, he filled the office of 'commissary' or vice-chancellor of the university in 1392 (Woon, *Fasts Oxon.* p. 33).

[The sole authority for Ashwardby's biography, with the exception of the particular last mentioned, is Bishop Bale, in his Script. Illust. Catal., cent. vi. 85, and in an autograph notice in one of the blank leaves of the Fasciculus Zizaniorum, MS. Bodl. e Mus. 86 f. 55, col. 1. The former contains a list of Ashwardby's writings, none of which are otherwise known.]

R. L. P.

ASHWELL, ARTHUR RAWSON (1824-1879), canon residentiary and principal of the Theological College, Chichester, was born at Cheyne Walk, Chelsea. In 1843 he entered at Trinity College, Cambridge, and in 1846 was elected foundation scholar of Caius College. In 1847 he graduated as fifteenth wrangler, and in 1848 he received holy orders, and became curate of Speldhurst, Kent. In the following year he returned to Cambridge as curate of St. Mary the Less, in order that he might study theology under the direction of the late Professor Blunt. In 1851 he was appointed vice-principal of St. Mark's College, Chelsea, and in 1853, partly through the instrumentality of Canon Butler of Wantage, he was appointed by Bishop Wilberforce principal of the newly-founded Oxford Diocesan Training College at Culham. Here he remained for several years, and, besides his work in the college, assisted the bishop in organising a system of diocesan inspection. In 1854 he married Miss Elizabeth Fixsen, of Blackheath, who survives him. In 1862 his health compelled him to retire to lighter work, and for two

years he was minister of Holy Trinity Church, Conduit Street, Hanover Square; but in 1865 he returned to his old occupation, accepting the principalship of the Training College, Durham. The fame of his success at Durham led Bishop Durnford, an entire stranger to him, to offer him in 1870 the principalship of the Theological College, Chichester, with a canonry attached, and he also held for a short time the rectory of St. Martin's (1871-5), and that of St. Andrew's (1872-5), in that city. Canon Ashwell was active in literature. In 1864 he became editor of the 'Literary Churchman,' which office he held for twelve years, when he became (1876) editor of the 'Church Quarterly Review,' and a little while before his death he also resumed the editorship of the 'Literary Churchman.' To both these periodicals he was a regular contributor. He was also a contributor to the third series of 'Tracts for the Christian Seasons,' and he wrote occasionally for the 'Quarterly Review' and the 'Monthly Packet.' He was also in great request as a preacher in his own cathedral and elsewhere. He was, moreover, a frequent reader and speaker at church congresses, and an effective conductor of mission services. It is no wonder that his constitution was impaired by this excessive work, and that he succumbed to an attack of congestion of the lungs, which prematurely cut short a most active and useful life on 23 Oct. 1879. A window and a lectern in Chichester Cathedral perpetuate his memory in a spot of which he had been a distinguished ornament.

Canon Ashwell achieved reputation as a writer, a preacher, and a teacher. Some of his periodical essays excited much attention. His articles upon Dr. Farrar's 'Life of Christ' in the second number of the 'Church Quarterly Review,' and upon the 'State of the Church' in the July number of the 'Quarterly Review,' 1874, excited much interest. His article on Samuel Wilberforce in the April number, 1874, of the same Review was the main cause of his being asked to write the bishop's life; and several of his educational articles attracted unusual attention. His longest consecutive work was the first volume of the 'Life of Bishop Wilberforce' (1880).

As a preacher Canon Ashwell was extremely acceptable, especially among the more thoughtful and educated congregations. His little volume of printed sermons, entitled 'God in Nature,' is full of striking and original ideas, expressed tersely and incisively, and evidently with a view to arrest or even force attention.

As a trainer, first of future schoolmasters, and then of future clergymen, Canon Ash-

well made his influence deeply felt. His clear, epigrammatic style was the very style to command the attention of young men. He was a very strict disciplinarian, and the kindest of friends and counsellors to all pupils who sought his aid in confidence, as many of them have testified to the present writer. Canon Ashwell was a staunch and very definite English churchman. Besides the writings already mentioned, he published 'The Schoolmaster's Studies' (1860), 'The Argument against Evening Communion' (1875), 'Lectures on the Holy Catholic Church' (1876), and 'Septuagesima Lectures' (1877), all small works.

[Canon Ashwell's writings, passim; obituary notices in the Church Quarterly Review and Literary Churchman; information from the Rev. Prebendary Teulon, Rev. S. J. Eales, Rev. Canon Gregory, Rev. Canon Butler, Rev. Prebendary W. R. W. Stephens, and Miss C. M. Yonge.] J. H. O.

ASHWELL, GEORGE (1612-1695), Anglo-catholic controversialist, born in the parish of St. Martin Ludgate, 8 Nov. 1612, was the son of Robert Ashwell, of Harrow. He was a scholar of Wadham College, Oxford, 1627; graduated B.A. 4 Dec. 1632, M.A. 1635, and became fellow of his college. He was tutor in the family of Thomas Leigh, a nonconformist, but his own sympathies were of another sort. He was the friend of Heylin, who wrote, at his suggestion, on 'Parliament's Power in Laws for Religion,' which was published in 1645. He was made B.D. on 23 June 1646, and became chaplain to Sir Anthony Cope, lord of the manor of Hanwell, Oxfordshire. On the death of Dr. Robert Harris, 1658, he succeeded him in the rectory of Hanwell, where he died on 8 Feb. 1694-5. He published: 1. 'Fides Apostolica, or a Discourse asserting the received authors and authority of the Apostles' Creed . . . with a double appendix, the first touching the Athanasian, the second touching the Nicene Creed,' 1653 (this was attacked by Baxter, in his 'Reformed Pastor,' 1656, for which Baxter expresses regret in his 'Catholic Theologie,' 1675). 2. 'Gestus Eucharisticus, or a Discourse concerning the Gesture at the receiving of the Holy Eucharist,' 1663 (dedicated to his patron, Sir A. Cope). 3. 'De Socino et Socinianismo Dissertatio,' 1680 (suggested by the wide diffusion of English translations of Socinian books, and remarkable for its high tribute to the genius and character of Lelio and Fausto Sozzini). 4. 'De Ecclesia Romana Dissertatio,' 1688 (this and the foregoing were portions of a much larger work in manuscript, 'De Judice

*Controversiarum et Catholicæ Veritatis Regula*; they were published at the suggestion of Dr. Gilbert Ironside, warden of Wadham). 5. 'The History of Hai Eb'n Yockdan, an Indian Prince, or the Self-taught Philosopher,' 1686, at the end of which is 'Theologia Ruris . . . or the book of Nature leading us by certain degrees to the knowledge and worship of the God of Nature.' The Yokdan fiction was translated by Ashwell from Edward Pococke's Latin version from the Arabic of Abû Bakr ibn Al-Tufail (Abû Jafar); it is remarkable as having supplied Robert Barclay (*Apology*, prop. v. vi. § xxvii.) with a proof of his doctrine of the Inner Light; the passage was withdrawn by the Society of Friends, 1779. Ashwell left behind him in manuscript, 'An Answer to [Hew Nevill's] *Plato Redivivus*.'

[Wood's *Athenæ Ox.* (Bliss), ii. 911-2; Smith's *Catalogue of Friends' Books*.] A. G.

ASHWELL JOHN (d. 1541 P), prior of Newnham Abbey, in Bedfordshire, best known for his opposition to the principles of the Reformation, was a graduate of Cambridge University. In 1504 it is probable that Ashwell, who was then a bachelor of divinity, became rector of Mistley in Essex, and held in subsequent years the benefices of Littlebury and Halstead in the same county. In 1515 we know him to have been appointed chaplain to Lord Abergavenny's troops in France (BREWER's *Letters of Henry VIII.*, ii. part i. 137), and six years later a prebendal stall in St. Paul's Cathedral was conferred upon him. He became prior of Newnham Abbey about 1527. In the same year he addressed a secret letter, written partly in Latin and partly in English, to John Longland, the Bishop of Lincoln, bitterly complaining of the heretical opinions held by George Joye, a bold advocate of Lutheranism, with whom he had lived on terms of great intimacy [see JOYE, GEORGE]. The epistle unhappily fell into Joye's hands, and the reformer withdrew to Strasburg to escape the effects of the bishop's displeasure. There, however, he published Ashwell's letter, together with an elaborate reply to all the charges preferred against him. The pamphlet, of which very few copies are now extant, bears the title 'The Letter whyche Johan Ashwell, Priour of Newnham Abbey besydes Bedforde, sente secretly to the Byshope of Lyncolne in the yeare of our Lord MDXXVII. Where in the sayde Priour accuseth George Joye, that tyme beyng fellow of Peter College in Cambridge of fower opinions; with the Answer of the sayde George unto the same opinions.' The

colophon runs: 'At Strazburge 10 daye of June. Thys lytell boke he delyvered to Johan Ashwell at Newnham Abbey besyde Bedforde with spede.' One of the most singular passages in the book is Ashwell's earnest entreaty to the bishop 'that no creature maye know that I or any of mine do shew you of these thinges, for then I shal leusse the favor of many in my contree'—a passage clearly showing that the Reformation in England was eagerly expected by the prior's neighbours. A second edition of the pamphlet was published by Joye at Antwerp in 1531. Ashwell apparently somewhat modified his opinions with the times, and in 1534 he was among the first to take the oath of supremacy to Henry VIII as head of the church. But he appears to have resigned the post of prior of Newnham before 1539, when the monasteries were finally dissolved. His death took place shortly before 23 Aug. 1541, when the prebendal stall in St. Paul's Cathedral, which he had held for twenty years, was declared vacant and filled up.

S. L.

ASHWOOD, BARTHOLOMEW (1622-1680), puritan divine, was 'a Warwickshire man,' son of a clergyman of the same name (who matriculated at Magdalen College, Oxford, in 1591, also as a Warwickshire man, aged 13, and proceeded M.A. in 1601). He became a batter or commoner of St. Alban's Hall in the latter end of 1638, aged 16 years, and so was born 1621-2. But Anthony à Wood informs us: 'Having been puritanically educated, he was translated, after some continuance in the said hall, to Exeter College, and there put under a tutor puritanically then esteem'd, and took one degree in arts as a member of that college, and was soon beneficed and became a man of the times.' His 'benefice' was Bickleigh, Devonshire, and he is enrolled by Walker as one of the 'loyalist sufferers' (p. 182) of that parish. Walker assumes that he 'died under the usurpation,' i.e. the Commonwealth. But he lived to form one of the 'two thousand' by being 'ejected' in 1662 from Axminster in Devonshire. He continued to preach for many years, in spite of the severe restrictions imposed on nonconformists. In his old age he seems to have been left in sore straits, and died 'about 1680.' His three books are: (1) 'The Heavenly Trade, or the Best Mer-

chandizing, the only way to live well in impoverishing Times, a Discourse occasion'd from the Decay of earthly Trades and visible Wastes of practical Piety in the Days we live in, offering Arguments and Counsells to all, towards a speedy Revival of dying Godliness,' &c. (1679); (2) 'The Best Treasure, or the Way to be truly Rich, being a Discourse on Ephesians iii. 8, wherein is opened and commended to Saints and Sinners the personal and purchased Riches of Christ as the best Treasure to be possessed' (1681); and (3) 'Groans for Sin' (1681). Rarely to be met with now, they prove him to have been a thinker of considerable originality, not without touches of graceful imaginativeness. Dr. John Owen wrote an admirable preface to the 'Best Treasure.'

[Calamy and Palmer's *Nonconf. Mem.* (1802), ii. 3; Reynolds's *Life of John Ashwood*; Walker's *Sufferings*; Wood's *Athenæ* (Bliss), iii. 1272-3.]  
A. B. G.

**ASHWOOD, JOHN** (1657-1706), nonconformist minister, was born at Axminster in 1657, and was the son of Bartholomew Ashwood [q.v.]. In his youth he was extremely delicate. He was educated by his father, and admitted 'as a member of his father's church.' Soon after he was sent to London, where he was received into the family of the learned Theophilus Gale, who acted as his instructor. Before he began to preach he taught a school at Axminster, and afterwards at Chard. Being driven from the latter as a conscience-ruled nonconformist by high-church intolerance, he determined along with some friends to emigrate to Carolina in January 1683, but was prevented by a sudden attack of smallpox. He then appears to have resided successively at Ilminster, Haveland, and Buckland, until he received a 'call' to Exeter, where, his biographer tells us, he was 'a vigilant and faithful minister for about the space of ten years.' He subsequently returned to London. For about two years he was evening lecturer at Spitalfields, and morning preacher at Hoxton, when he received a 'call' from a congregation at Peckham, Surrey. He died there on 22 Sept. 1706. His 'Life' was for long a favourite fireside companion among devout nonconformists, circulating as a chap-book, viz. 'Some Account of the Life, Character, and Death of the Rev. Mr. John Ashwood,' by Thomas Reynolds (1707). Added to the 'Account' are two very admirable sermons 'preached a little before he died.'

[Authorities given under **BARTHOLOMEW ASHWOOD**; Reynolds's *Account of Life*.] A. B. G.

**ASHWORTH, CALEB, D.D.** (1722-1775), dissenting tutor, was born at Clough-Fold, Rossendale, Lancashire, in 1722. The date rests on Palmer's statement that he was 'but fifty-three years of age' at death, and on the monumental inscription given in Baker's 'Northamptonshire' (i. 332). His father, Richard Ashworth, who died in 1751, aged eighty-four, was a lay preacher among the Particular Baptists; he had three sons—Thomas, Particular Baptist minister at Heckmondwike; Caleb; and John, General Baptist minister,\* colleague of Dr. James Foster (Pope's 'modest Foster'), who preached his funeral sermon in 1742. Caleb was originally a carpenter; he probably was not in sympathy with his father's views, and thus did not at first turn to the ministry. He was afterwards educated for the independent ministry, under Doddridge, at Northampton, where he first took up his quarters in 1739; and settled at Daventry in 1746, originally as assistant to James Floyd. Under Doddridge's will the management of the academy was left to Ashworth, and, as the Northampton congregation did not elect him their minister, he removed it to Daventry in 1752. He obtained the degree of D.D. from Scotland in 1759. He had married a Miss Hemings, by whom he had three sons and three daughters. His son John entered Daventry academy in 1760, but became a grazier. Ashworth died on 18 July 1775. Under him Daventry academy became a chief seat of culture among the liberal independents and presbyterians, who at that time were closely fused, and partook of the same type of theology and church polity. A list of his students may be found in 'Monthly Repository,' 1822. His most distinguished scholar was Priestley, who says that Ashworth took 'the orthodox side of every question' in theology and philosophy, the sub-tutor, Samuel Clark, 'that of heresy.' Doddridge's plan of referring to authors on all sides of every question, and requiring his students to give an account of them, was faithfully pursued by his successors, with the result of much independence of judgment. A pupil (Rev. T. Thomas, in *Month. Rep.*, 1814, p. 79) says: 'Under Dr. Doddridge there was a more popular exterior; under Dr. Ashworth a more disciplined interior.' The defect of the academy was the neglect of languages [see **ALEXANDER, JOHN**, 1736-1765], biblical criticism, and ecclesiastical history; its staple was dogmatics and philosophy, including psychology (then called pneumatology), ethics, and physics. Ashworth published for his academy a Hebrew Grammar, and a treatise on 'Plane Trigo-

nometry,' for his congregation, a book of 'Tunes,' and Funeral Sermons for Dr. Isaac Watts 1749, Rev. James Floyd 1759, and Rev. S. Clark, his coadjutor, 1770.

A. G.

**ASHWORTH, SIR CHARLES** (d. 1832), major-general, was appointed ensign in the 68th foot in 1798; lieutenant in 1799; captain 55th foot in 1801; major 6th West India regiment in 1808; major 62nd foot in 1808; a lieutenant-colonel with the Portuguese army in 1810; and served as brigadier-general at the battles of Vittoria, Pyrenees, Nivelle, Nive, and St. Pierre, where he was badly wounded. He took part in the combat of Buena and succeeding engagements, for which he was honoured with a cross, and allowed, 14 Nov. 1814, to accept the order of the Tower and Sword from the Prince Regent of Portugal. He attained the rank of colonel in 1814, and major-general in 1830; was nominated a companion of the Bath in 1815; a knight commander on the occasion of the coronation of William IV in September 1831; and died at Hall Place, St. John's Wood, on 13 Aug. 1832.

**ASHWORTH, HENRY** (1785-1811), lieutenant in the navy, was born in London, December 1785. In November 1799 he entered on board the 38-gun frigate Hussar, under the immediate patronage of the first lieutenant, and four years later was serving as midshipman on board the same ship when she was lost on the Saintes, near Brest, on 8 Feb. 1804. Whilst prisoner of war, Mr. Ashworth made several remarkable attempts to recover his freedom; and at last, having escaped from Bitche in December 1808, he succeeded in passing through Germany to Trieste, where he got on board the English frigate L'Unité. In the October following he was promoted to be a lieutenant, and was serving in that rank in the Centaur of 74 guns, on the coast of Spain, when the French took Tarragona, on 28 June 1811, and drove a number of the panic-stricken inhabitants, literally, into the sea. Lieutenant Ashworth had command of one of the boats sent to rescue these drowning wretches, and, whilst so employed, received a wound, of which he died a month later, at Minorca, 25 July 1811.

[His very curious evasions and adventures as a midshipman in company with a master's mate named O'Brien, are recounted at very full length in the Naval Chronicle, vols. xxviii.-xxxi., and xxxiii., and must be considered as, to a great extent, the original of the well-known episode in 'Peter Simple.']  
J. K. L.

**ASHWORTH, HENRY** (1794-1880), friend of Cobden and vigorous supporter of the Anti-Corn Law League, was born at Birtwistle, near Bolton, Lancashire, on 4 Sept. 1794, and coming of quaker parentage was in due course sent to Ackworth school. After leaving that famous academy of the Friends he, in partnership with his brother Edmund, managed their extensive mills at Turton, where they distinguished themselves by their careful provision for the well-being of those whom they employed, and for whose benefit they established excellent schools, library, and reading room. Ashworth was a staunch nonconformist, and resolutely refused to pay church rates. He was a founder of the Anti-Corn Law League, and was one of its warmest supporters both by money and personal influence and exertion. He had made Cobden's acquaintance in 1837, and was ever after his firm friend. In 1840 he was one of a deputation that waited upon Lord Melbourne to urge the repeal of the corn laws. 'You know,' said the premier, 'that to be impracticable.' Sir Robert Peel was equally unpleasant. In answer to Mr. Ashworth's plea that the import of food should not be restricted in order to uphold rents, Sir James Graham called out, 'Why, you are a leveller!' and asked whether he was to infer that the labouring classes had some claim to the landlords' estates. The prosperous manufacturer was naturally somewhat startled at this unexpected phrase, and protested against its injustice. In dismissing the deputation Sir James told them that if the corn laws were repealed great disasters would fall upon the country, the land would go out of cultivation, church and state could not be upheld, the national institutions would be reduced to their elements, and the houses of the leaguers would be pulled about their ears by the people they were trying to excite. In 1843, in company with Bright and Cobden, he visited Durham, Northumberland, Cumberland, and East Lothian, to obtain information as to the position of agriculture, and they were sometimes mentioned as the A B C of the league gone to study farming. Mr. John Bright, speaking at the opening banquet at the Manchester Town Hall in 1877, described a visit in company with Ashworth and others to the ruins of Tanton Castle: 'As we walked amongst those

ruins, my friend Mr. Henry Ashworth said, with a look of sadness almost, "How long will it be before our great warehouses and factories in Lancashire are as complete a ruin as this castle?" I have thought of that scores of times since, and I thought of it then with sadness, as I think of it now. One thing is certain: if ever they come to ruin they will never be so picturesque a ruin as is the ruin of Tantallon Castle.' At the great meeting held in Manchester 23 Dec. 1845, Ashworth proposed that 250,000*l.* should be raised for the purpose of the agitation. Their strenuous and zealous efforts were crowned with success, the corn laws were repealed, and the final meeting of the league was held in the Manchester Town Hall on 2 July 1846. Ashworth gave valued assistance to Cobden in the negotiation of the French treaty. His most important work is 'Recollections of Richard Cobden and the Anti-Corn Law League' (two editions, London 1876 and 1881), which is full of important historical and biographical matter. Ashworth defended Cobden at the great indignation meeting held in Manchester after the lamentable incident in the House of Commons, when Peel, who was harassed, unwell, and suffering from the depression brought on by the murder of Thomas Drummond, charged the leader of the league with connivance at assassination. The accusation was eagerly repeated by excited partisans.

Ashworth's action in connection with the Anti-Corn Law League is that by which he will be remembered, but during a long life he was a steady advocate of peace, retrenchment, and reform. In addition to the work named he wrote: 1. 'Statistical Illustrations of Lancaster,' 1842. 2. 'A Tour in the United States and Canada,' 1861. 3. An account of the 'Preston Strike' of 1853, and some pamphlets. He was a member of the Society of Friends, but had a most unquakerly passion for the gun, which he used with great dexterity on the moors. His hardy frame and careful life gave him unusual advantages, so that at eighty he was as sure in his aim as at twenty. He made several continental tours, and in February 1880 left his house, The Oaks, Turton, to winter in Italy, as he had usually done for some years. Whilst travelling from Rome he caught a chill, and at Florence was laid up with Roman fever, and, after about two weeks' illness, he died at Florence, 17 May 1880.

[Ashworth's Recollections of Cobden, with a portrait of the author; Prentice's History of the League; Morley's Life of Cobden; Manchester Guardian, 19 May 1880; Times, 20 May 1880; Academy, 1880, i. 401.] W. E. A. A.

**ASHWORTH, JOHN (1813 - 1875)**, preacher, manufacturer, and author, was born on 8 July 1813 at the hamlet of Cutgate near Rochdale, and was the eighth child of his parents, who were poor woollen weavers. He has himself told the story of his mother manufacturing a 'bishop' (pinafore) for him out of a pack-sheet, from which all her exertions could not wash away the indelible word 'Wool,' which therefore formed his breast-plate. The poverty of the family was further embittered by the intemperance of the father, who, however, reformed later in life. John Ashworth had no more education than could be gleaned at a Sunday school, and he married before he was twenty. The union, however imprudent, was a happy one, but he and his first wife had years of struggle with poverty and care. His position somewhat improved, and in 1851, when visiting the Great Exhibition, he formed the resolution of founding a chapel for the destitute in Rochdale, but the proposal was so much discouraged by his friends that he abandoned it for a time, and did not put it into execution until 1858. As minister of this chapel he was brought into close contact with the poorest people of a great factory town. He was a vigorous preacher of the orthodox type, and understanding the people's way of life, and speaking a language which they understood, he gathered a great congregation. He was a liberal in politics, a staunch teetotaler, and an uncompromising advocate for the Maine Law and the observance of the Sunday after a rigid puritanical fashion. He visited the United States and the Holy Land, and for many years had a busy life as preacher, manufacturer, lecturer, and author. He wrote 'Walks in Canaan' and 'Back from Canaan,' and had begun an account of his 'Rambles in the New World' when death overtook him; but his chief work was 'Strange Tales,' followed after a time by a similar gathering of 'Simple Records.' These were printed as separate tracts, and have had a circulation that is to be counted by millions. Some have been translated into Welsh, French, Dutch, Russian, and Spanish. Yet the publisher to whom the first one was offered only undertook to print it on being guaranteed from any risk. These narratives have no literary polish, but are good examples of plain straightforward narrative, and are interesting for the glimpses they give of the life of the poor of the manufacturing districts. They mostly relate incidents that had come to his knowledge during his work amongst the poor. The accuracy of one was challenged, but for most of them sufficient vouchers could be adduced. Ashworth's intimate knowledge of the class

he describes gives his 'Strange Tales' a value to which most 'religious tracts' have no claim. Ashworth died on 26 Jan. 1875, and was followed to his grave in the Rochdale cemetery by a procession of those amongst whom he had laboured.

[Ashworth's own writings; Calman's *Life and Labours of John Ashworth*, 2nd edit. (Manchester, 1875).] W. E. A. A.

**ASKE, ROBERT** (d. 1537), leader of the insurrection called the 'Pilgrimage of Grace,' was of an old Yorkshire family, which took its name from Aske, in Richmondshire, though the branch to which he belonged had been long settled at Aughton, in the East Riding (WHITAKER'S *Richmondshire*, i. 117). Of his personal history nothing is known apart from that movement, except that he was an attorney and fellow of Gray's Inn. It appears, by papers in the Record Office, that he had at least two brothers, John and Christopher, who were to some extent compromised by his proceedings. The rebellion which brought him into so much notoriety began in Lincolnshire in October 1536. In the beginning of that year parliament had passed an act for the suppression of those monasteries whose revenues fell below 200*l.* a year. Some months later a book had been published by authority affecting the received doctrine of the Sacraments, and injunctions had been issued for the abrogation of a number of old holidays. These things touched at once the faith, the privileges, and the social life of the people generally; while another statute, called the Statute of Uses, bore hard upon the gentry, and the increase of taxation was an additional subject of complaint. The first outbreak was at Louth, in Lincolnshire, where the commissioners for the subsidy had arranged to sit in the beginning of October. Here the leaders were Dr. Mackerel, prior of Barlings, and one who called himself Captain Cobbler. The number who followed them was reckoned at twenty thousand. But the Earl of Shrewsbury caused them to disperse, exhibiting an answer to their complaints from the king, showing that none of the things objected to had been done without the sanction of parliament.

The Lincolnshire rising, however, had scarcely been quelled when another, and a far more serious one, broke out in Yorkshire, and here Aske took the lead. The malcontents displayed banners with a picture of Christ upon the cross, and on the other side of a chalice and wafer. They took prisoners Lord Darcy and the Archbishop of York, and compelled them (not unwillingly, as it

was generally believed) to swear fidelity to the common cause. Even a herald sent to them in the king's name was compelled to kneel before Aske at Pomfret, who forbade him to read the proclamation with which he was charged, and said that he himself and his company would go up to London and have all the vile blood removed out of the king's council. The whole north of England seemed to be as one man in this matter, and the lords sent by the king to put down the rebellion would fain have temporised. But no terms could be arranged, and a day of battle was agreed upon, which was to be 27 October, the eve of St. Simon and St. Jude. The result, had it taken place, might probably have been a slaughter not inferior to that of the bloody field of Towton. But a rain which fell the night before swelled all the rivers, and made the tiniest streams impassable, so that the armies could not approach each other. Meanwhile the king had been prevailed on, as a matter of prudence, to send a conciliatory message, promising pardon and a hearing for all grievances, which, when announced, had the best effect. The rebels at once disbanded and returned to their homes.

At Christmas general pardons were sent down into the north, according to the king's promise; and Aske came up to London, being expressly invited by the king to declare to him personally the causes of complaint. He was received by Henry with marked attention and courtesy, and on his return into the north took with him assurances calculated to pacify the minds of the community. The king promised that he himself would shortly visit the country, cause a parliament to be held at York, and bring his queen, Jane Seymour, thither to be crowned. These pledges were not more than sufficient; for a new insurrection in the east of Yorkshire had broken out in January under Sir Francis Bigod, which Aske and Lord Conyers contrived to set at rest. Aske received the king's thanks for his conduct in this matter, and it might have appeared that he had fairly won his pardon. But the country was still in an anxious and unsettled state; and whether or no Aske himself had done anything once more to forfeit the king's favour, he was in May a prisoner in the Tower of London. He was arraigned at Westminster before a special commission, along with a number of others who had joined in the rebellion, and sentenced to be hanged, drawn, and quartered. More than a month elapsed before the sentence was carried out, and the king determined that the leading rebels should suffer in the districts where they had

raised commotions. On 28 June, accordingly, Lord Hussy, Sir Robert Constable, and Aske were carried on horseback from the Tower into the north. Hussy was beheaded at Lincoln, Constable was hanged in chains at Hull, and Aske suffered the like fate within the city of York.

On the tower of the church of Aughton, in the East Riding, is a rather ambiguous inscription below a shield: 'Christofer le second filz de Robert Ask ch'r oblier ne doy A° D'i 1536.' This, as Pegge remarks, might be translated, 'I, Christopher, the second son of Robert Ask, knight, ought not to forget the year of our Lord 1536.' But it may be, as he also suggests, that the tower itself is supposed to speak: 'I ought not to forget Christopher,' and that 1536 is to be read merely as the date of the inscription (ALLEN'S *County of York*, ii. 231). Under any circumstances it is a very striking memorial of that terrible year. This Christopher may have been the brother, and Sir Robert Ask the father, of the insurgent. They were certainly near relations.

[Hall's Chronicle; Wriothsley's Chronicle; State Papers; Unpublished Papers in the Record Office.] J. G.

ASKEW, ANNE (1521-1546), protestant martyr, was the second daughter of Sir William Askew, or Ayscough, knight, who is generally stated to be of Kelsey in Lincolnshire. But according to family and local tradition she was born at Stallingborough, near Grimsby, where the site of her father's house is still pointed out. The Askews were an old Lincolnshire family, and the consciousness, of this fact may have had something to do with the formation of Anne's character. She was highly educated and much devoted to biblical study. When she stayed at Lincoln she was seen daily in the cathedral reading the Bible, and engaging the clergy in discussions on the meaning of particular texts. According to her own account she was superior to them all in argument, and those who wished to answer her commonly retired without a word.

At a time when she was probably still a girl a marriage was arranged by her parents for her elder sister, who was to be the wife of one Thomas Kyme of Kelsey. It was one of those feudal bargains which were of constant occurrence in the domestic life of those days. But the intended bride died before it was fulfilled, and her father, 'to save the money,' as we are expressly told, caused Anne to supply her place against her own will. She accordingly married Kyme, and had two children by him. But having,

as it is said, offended the priests, her husband put her out of his house, on which she, for her part, was glad to leave him, and was supposed to have sought a divorce. Whether it was with this view that she came to London does not appear; but in March 1545 she underwent some examinations for heresy, of which she herself has left us an account, first at Sadler's Hall by one Christopher Dare, then before the lord mayor of London, who committed her to the Counter, and afterwards before Bishop Bonner and a number of other divines. It is unfortunate that we have no other record of these proceedings than her own, which though honest was undoubtedly one-sided, and is not likely to have been improved in the direction of impartiality by having been first edited by John Bale, afterwards bishop of Ossory, during his exile in Germany.

The subject on which she lay under suspicion of heresy was the sacrament. The severe Act of the Six Articles, passed some years before, had produced such a crop of ecclesiastical prosecutions that parliament had been already obliged to restrict its operation by another statute, and Henry VIII himself at the end of this very year thought it well to deliver an exhortation to parliament on the subject of christian charity. In such a state of matters Anne Askew had little chance of mercy. It is, however, tolerably clear, notwithstanding the gloss which Bale, and Fox after him, endeavoured to put upon it, that one man who sincerely tried to befriend her was the much-abused Bishop Bonner. He did his utmost to conquer her distrust and get her to talk with him familiarly, promising that no advantage should be taken of unwary words; and he actually succeeded in extracting from her a perfectly orthodox confession (according to the standard then acknowledged), with which he sought to protect her from further molestation. But when it was read over to her, and she was asked to sign, although she had acknowledged every word of it before, instead of her simple signature she added, 'I, Anne Askew, do believe all manner of things contained in the faith of the Catholic Church, and not otherwise.' The bishop was quite disconcerted. In Anne's own words, 'he flung into his chamber in a great fury.' He had told her that she might thank others, and not herself, for the favour he had shown her, as she was so well connected. Now she seemed anxious to undo all his efforts on her behalf. Dr. Weston, however (afterwards Queen Mary's dean of Westminster), contrived at this point to save her from her own indiscretion, representing to the bishop that

she had not taken sufficient notice of the reference actually made to the church in the written form of the confession, and thought she was supplying an omission. The bishop was accordingly persuaded to come out again, and after some further explanations Anne was at length liberated upon sureties for her forthcoming whenever she should be further called in question. She had still to appear before the lord mayor, and did so on 13 June following, when she and two other persons, one being of her own sex, were arraigned under the act as sacramentaries; but no witnesses appeared against her or either of the others, except one against the man, and they were all three acquitted and set at liberty.

The accusers of Anne had for the time been put to silence, but unfortunately within a year new grounds of complaint were urged, and she was examined a second time before the council at Greenwich. Her opinions meanwhile seem to have been growing more decidedly heretical, and her old assurance in the face of learned disputants was stronger than ever. She was first asked some questions about her husband, and refused to reply except before the king himself. She was then asked her opinion of the sacrament, and, being admonished to speak directly to the point, said she would not sing a new song of the Lord in a strange land. Bishop Gardiner told her she spoke in parables. She replied that it was best for him, for if she showed him the open truth he would not accept it. He then told her that she was a parrot, and she declared herself ready to suffer not only rebuke but everything else at his hands. She had an answer ready for each of the council that examined her. Indeed, she sometimes seemed to be examining them, for she asked the lord chancellor himself how long he would halt on both sides.

Nevertheless, she was more closely questioned this time than she had been the year before. She was five hours before the council at Greenwich, and was examined again on the following day, being meantime conveyed to Lady Garnish. On the following Sunday she was very ill and desired to speak with Latimer, but was not allowed. Yet in the extremity of her illness she was sent to Newgate in such pain as she had never suffered in her life. But worse awaited her. On Tuesday following she was conveyed from Newgate to the sign of the Crown, where Sir Richard Rich endeavoured to persuade her to abandon her heresy. Dr. Shaxton, also, late bishop of Salisbury, urged her to make a recantation, as he had just lately done himself, but all to no purpose. Rich accordingly sent

her to the Tower, where a new set of inquiries were addressed to her, for it seems some members of the council suspected that she received secret encouragement from persons of great influence. She denied, however, that she knew any man or woman of her sect, and explained that during her last year's imprisonment in the Counter she had been maintained by the efforts of her maid, who 'made moan' for her to the prentices in the street, and collected money from them. She did not know the name of any one who had given her money, but acknowledged that a man in a blue coat had given her ten shillings, and said it was from my lady Hertford. More than this even the rack could not get from her, which by her own statement afterwards (if we may trust a narrative which could scarcely in such a case have been actually penned by herself) was applied by Lord Chancellor Wriothesley himself and Sir Richard Rich, turning the screws with their own hands. Yet even after being released from this torture she 'sat two long hours reasoning with my lord chancellor upon the bare floor,' but could not be induced to change her opinion.

So far we have followed the account given as that of the sufferer herself. But it should be noticed that on 18 June 1546 she was arraigned for heresy at the Guildhall along with Dr. Shaxton and two others, all of whom confessed the indictment, and were sentenced to the fire. Dr. Shaxton and one of the others recanted next day, and it was either that day or a few days later that Anne Askew was racked in the Tower. On 16 July she and three others guilty of the same heresy were brought to the stake in Smithfield, she being so weak from the torture she had already undergone that she had to be carried in a chair. She was tied to the stake by a chain round the waist which supported her body. On a bench under St. Bartholomew's Church sat Lord Chancellor Wriothesley, the Dukes of Norfolk and Bedford, the lord mayor, and others, to witness the shameful tragedy; and, to complete the matter, Dr. Shaxton, who had so recently recanted the same heresy, was appointed to preach to the victims. Anne still preserved her marvellous self-possession, and made passing comments on the preacher's words, confirming them where she agreed with him, and at other times saying 'There he misseth and speaketh without the book.' After the sermon the martyrs began to pray. The titled spectators on the bench were more discomposed, knowing that there was some gunpowder near the faggots, which they feared might send them flying about their

ears. But the Earl of Bedford reassured them. The gunpowder was not under the faggots, but laid about the bodies of the victims to rid them the sooner of their pain. Finally Lord Chancellor Wriothlesley sent Anne Askew letters with an assurance of the king's pardon if she would even now recant. She refused to look at them, saying she came not thither to deny her Master. A like refusal was made by the other sufferers. The lord mayor then cried out 'Fiat justitia!' and ordered the fire to be laid to the faggots. Soon afterwards all was over. Anne is said by Bale to have been twenty-five years old when she suffered. She must therefore have been born in the year 1521.

There cannot be a doubt that the memory of this woman's sufferings and of her extraordinary fortitude and heroism added strength to the protestant reaction under Edward VI. The account of her martyrdom published by Bale in Germany, Strype tells us, was publicly exposed to sale at Winchester in 1549, in reproach of Bishop Gardiner, who was believed (whether justly or not is another question) to have been a great cause of her death. 'Four of these books,' says Strype (*Memorials of Cranmer*, 294), 'came to that bishop's own eyes, being then at Winchester; they had leaves put in as additions to the book, some glued and some unglued, which probably contained some further intelligences that the author had gathered since his first writing of the book. And herein some reflections were made freely, according to Bale's talent, upon some of the court, not sparing Paget himself, though then secretary of state.' We ought certainly to make some allowance for bias in testimony that could be manipulated after such a fashion, but we need not be sparing in sympathy for the devoted sufferer.

[Bale's two tracts, viz. 'The First Examynacyon of Anne Askewe,' and 'The Lettre Examynacyon,' both printed at Marburg in Hesse, the former in November 1546, the second in January 1547. The contents of the second, Bale says, he 'received in copy by certain Dutch merchants coming from thence,' who had been present at her execution. Bale's *Scriptores*; Foxe's *Acts and Monuments*; Strype's *Eccles. Memorials*, I. i. 698; Wriothlesley's *Chronicle* (Camden Soc.).] J. G.

ASKEW, ANTHONY, M.D. (1722-1774), was born at Kendal, Westmoreland, and was the son of Dr. Adam Askew, a well-known physician of Newcastle. Anthony Askew went from Sedbergh school to the grammar school at Newcastle-upon-Tyne, and thence to Emmanuel College, Cambridge, where he took his degree of M.B. in

1745. 'He told me,' says Dr. Parr, 'that he received part of his education from Richard Dawes of Newcastle, and described the terror which he felt at seeing a schoolmaster whose name was a *μορμολυκειον* in the North of England.' In those days the birch was allowed, and the father of Anthony is said to have stipulated with Dawes that his son should be only liable to strictly limited castigation.

Being intended for the medical profession, Askew studied for one year at Leyden. Alexander Carlyle, who met him there, says that he had come to collate manuscripts of Æschylus, and describes him as having some drollery, but little sense (*Autobiography*, p. 174). He then visited Hungary, Athens, Constantinople, Italy, and other countries. By the purchase at home and abroad of a great number of valuable books and manuscripts he laid the foundation of the extensive library, the *Bibliotheca Askeviana*. He commenced practice at Cambridge in 1750, in which year he took his degree of M.D., and afterwards established himself in London. He had a good practice, and was physician to St. Bartholomew's and to Christ's Hospitals, and Registrar of the College of Physicians. He was married twice, the second time to Elizabeth Halford, 'a woman,' says Dr. Parr, 'of celestial beauty and celestial virtue,' by whom he left twelve children. He died at Hampstead, 27 Feb. 1774.

He is far better known as a classical scholar than as a physician. He helped to develop the taste for curious manuscripts, scarce editions, and fine copies. Of the classical attainments of Askew Dr. Parr, his friend, speaks in high praise.

Askew appears to have contemplated a new edition of Æschylus, for a complete collection of the various published editions of this author was found in his library, some copies of which were enriched with manuscript notes by himself. In 1746, while a medical student at Leyden, he put forth a specimen of this intended edition, in a small quarto pamphlet, *Novæ Editionis Tragediarum Æschyli specimen, curante Antonio Askew, 1746.* This was dedicated to Dr. Mead. It contained only twenty-nine lines of the 'Eumenides' (568-591, Schütz ed.), accompanied with variæ lectiones. In Butler's edition of Æschylus most of Askew's collections were made use of, and a volume in his handwriting, which contained a collation of five codices, is referred to as Askew's. Bishop Blomfield discovered the volume to be a transcript from one in the handwriting of Peter Needham, and takes notice of the fact in the prefaces to his editions of the 'Prometheus' and the

'Seven against Thebes' in terms little complimentary to the learning or honesty of Askew. Askew's house was crowded with books up to the garrets. The collection was chiefly classical, and it was its possessor's aim to have every edition of a Greek author. The sale of his library lasted twenty days in the year 1775, and produced 3,993*l.* 6*s.* 6*d.* The principal purchasers were Dr. Hunter, Mr. Cracherode, the British Museum, and the kings of England and of France. The sale of Askew's manuscripts did not take place till 1785. Among the lots were the manuscripts of Mead and Taylor. An appendix to Scapula's Lexicon, edited by Dr. Chas. Burney in 1789, is described as taken 'à codice manuscripto olim Askewiano.' A verbal index to Aristophanes, by John Caravella, an Epirote, published at Oxford in 1822, is one of a series formerly in Askew's library. John Caravella was Dr. Askew's librarian.

Askew's regard for Mead was great; he engaged Roubiliac to execute his friend's bust in marble. Like Mead, he received many visitors, among them Archbishop Markham, Sir William Jones, Dr. Farmer, Dr. Samuel Parr, and Demosthenes Taylor. With the last he was very intimate, and subsequently became his executor. As Askew had travelled in the East, he was conjectured to be learned in all the oriental tongues, and in accordance with this remarkable hypothesis a Chinese, named Chetqua, was on one occasion brought to him. It is said that Askew made himself very agreeable to Chetqua, but Chetqua did not understand him, nor did he understand Chetqua. The Chinaman was, however, sufficiently grateful to Askew to make a model of him in his robes in unbaked potter's clay, coloured, about a foot high. This model may be seen in the College of Physicians, to which it was given by Sir Lucas Pepys, who married Askew's daughter. In the same college is the gold-headed cane which Radcliffe gave to Mead, Mead to Askew, and which, after passing through the hands of Pitcairn and Baillie, was finally placed by Joanna Baillie in its present domicile. He is the author of a manuscript volume of Greek inscriptions, now preserved among the Burney MSS. in the British Museum. An engraved portrait of Askew is given in the 2nd volume of Dibdin's enlarged edition of Ames's 'Typographical Antiquities.'

[Watt's Bibl. Brit.; Brit. Mus. Catal.; Nichols's Lit. Anec. 3, 494; Dibdin, Bibliom. p. 515; Hirschung, Hist.-Lit. Handb. i. 65; Cantab. Grad. p. 12.] J. M.

**ASKEW, EGEON** (b. 1576), divine, was a native of Lancashire. His family was

originally of Mulcaster, in Cumberland, and subsequently of Kirby Ireleth, in North Lancashire, at which latter place one Thomas Askew, M.A., was instituted vicar in 1606. At the age of seventeen Egeon Askew became a student of the university of Oxford; he was B.A. April 1597, chaplain of Queen's College 1598, and M.A. June 1600. About the time of the accession of James I, having the reputation of a noted preacher, he was minister of Greenwich, Kent. He was the author of one book only, which was entered by George Bishop on the registers of Stationers' Hall 27 March 1605, said to be by Egeon *Acton* Askew, of Queen's College. This work is made up of college sermons, and is somewhat scarce. When Dr. Bliss edited Wood, there was no copy in the Bodleian Library; and the copy which Wood saw is wrongly described, being made into two books, after his manner. It was entitled 'Brotherly Reconciliation; preached in Oxford for the union of some, and now published with larger meditations for the union of all in this church and common-wealth. With an apologie of the use of the Fathers and secular learning in sermons.' Lond. 4to, 1605. The dedication to King James is dated from Greenwich, 27 April that year. The book shows traces of very wide reading, the margins being filled with references to ancient authorities. Hence Wood described him as 'a person as well read in the fathers, commentators, and schoolmen, as any man of his age in the university.' The second portion of the book is in strict keeping with the style of composition in which he indulged; it is a discussion 'whether Humanitie, i.e. anything beside the words of scripture, be lawful *quoad esse* or *quoad gradum* at all, as some deny, or only against adversaries, as some hold, in sermons academic or popular.' It is not known when or where Askew died. Evelyn assured Wood that he did not die at Greenwich.

[Wood's Athen. Oxon. (Bliss), i. 756; Fasti, i. 274, 285.] J. E. B.

**ASPINALL, JAMES** (d. 1861), miscellaneous writer and popular preacher, had first under his care a church in Cheshire, about fifteen miles from Manchester. He then became curate of Rochdale, where he remained for five years. He afterwards resided at Liverpool, and in 1831 was the incumbent of St. Luke's, where he preached a remarkable sermon called 'The Crisis, or the Signs of the Times with regard to the Church of England.' He then went to live in Lincolnshire, on the banks of the Trent, and in 1844 he was rector of Althorpe, a place which he held till his death. On 26 Jan. of that year he

delivered an address at the great free-trade meeting, held at Hull, at which Bright and Cobden both spoke. In 1853, after the celebrated Roscoe centenary at Liverpool, he published 'Roscoe's Library, or Old Books and Old Times,' dedicated to the Earl of Carlisle, 'the representative of the intelligence of the aristocracy and of the aristocracy of intelligence.' In this little work he holds up Roscoe as an example to the youth of the 'Mechanics' and Literary Institutes throughout the country, in whom he felt a profound interest. Aspinwall had great sympathy with the free-trade party, and generally with the educational movements of his time. This is perhaps due in a great measure to the acquaintance he made with the working-class operatives at Rochdale at the commencement of his clerical career. He was domestic chaplain for a period of over thirty years to the Right Hon. Lord Clonbrock. On 17 Jan. 1861, when J.P. for Lindsey, he married, at West Butterwick, Annie, widow of W. Hunter, Esq., of the Ings, E. Butterwick. On 15 Feb. of the same year he died. His works, besides those already mentioned, consist of various sermons, parish, doctrinal, and practical.

[C. W. Sutton's *Lancashire Authors*, p. 5; *The Hull Rockingham*, 27 Jan. 1844; *Catal. Brit. Mus.*; *Gent. Mag.*, third series, vol. x. pp. 202, 467.] J. M.

ASPINWALL, EDWARD, D.D. (*d.* 1732), a polemical divine, received his education at Cambridge, and was appointed chaplain to the Earl of Radnor. Afterwards he became sub-dean of the Chapel Royal, and in 1729 was instituted prebendary of Westminster. He is the author of a 'Preservative against Popery,' 1715, and an 'Apology,' being a series of Arguments in Proof of the Christian Religion, 1731. The 'Apology' is prefaced by an address 'To all Impartial Freethinkers,' in which the author states: 'I have made it my sincere and labour'd concern to divest myself of every bias or influence that interest or blind passion might bring upon me, to the end that my mind, being (I think) perfectly disengag'd from all partial and unworthy motives, might remain absolutely free to determine itself by solid reason in the choice of reveal'd religion.' The arguments are clearly put, and the language is in the main temperate. But while he is willing to tolerate free discussion in religious matters, the author protests against his opponents' use of the weapon of ridicule. 'Let all men,' he says (p. 12), 'have an unbounded freedom to express their sentiments for or against religion; but let

their words and writings stand clear of any scurrilous reflections, sneer, or sarcasm against it, or let the author be severely chastis'd by publick authority.' His arguments are chiefly directed against Antony Collins, the well-known deist. Aspinwall died on 3 Aug. 1732.

[*Le Neve's Fasti Ecclesiae Anglicanae*, ed. Hardy, iii. 365; *Gent. Mag.* ii. 929.]

A. H. B.

ASPINWALL, WILLIAM (*n.* 1648–1662), one of the nonconforming ministers ejected in 1662, was of the Lancashire Aspinwalls, and so has a gleam on his name in relation to Spenser's 'Rosalind' (*Grosart's Who was Rosalind?* in his edition of Spenser's Works, iii. pp. cvi–cvi). He was of Magdalen College, Cambridge, and had for tutor Joseph Hill. He proceeded B.A., but having obtained orders, went no further. His first living was Maghull, in Lancashire. In the Lancashire 'Harmonious Consent' of 1648, which denounces 'endeavours used for the establishing an universal toleration,' his name appears ('William Aspinwall, preacher of God's word at Mayhall') in a long list of signatories, headed by 'Richard Heyrick, warden of Christ Colledge in Manchester,' and including Hollingworth, Alexander Horrocks, John Angier, and indeed the foremost ministers of the county and time. These men had come to persuade themselves that 'the establishing of a toleration would make us [the English people] become the abhorring and loathing of all nations.' [See under *ANGIER, JOHN*.]

Aspinwall left his cure in 1655–6 to be ordained at Mattersey, Nottinghamshire, and was in that year inducted to Mattersey, in the church at Claworth, in the same county, along with a more notable man, John Cromwell, B.A., and two others (*Le Neve's Fasti Ecclesiae Anglicanae*, ed. Hardy, ii. 35). He was ejected by the Act of Uniformity in 1662. Upon his ejection he turned farmer at Thurnsco, in Yorkshire. There was 'a good house,' and it became a nonconformist meeting-place. Two other ejected ministers, Tricket and Grant, sojourned with him. Whether farming did not prosper, or the usual persecution drove him away, is uncertain, but in a short time he is traced once more in his native Lancashire. There Calamy states he died; but Samuel Palmer (*Nonconf. Mem.* iii. 99) corrects this, and gives extracts from a letter dated Cocker-mouth, 16 April 1724, by which it would seem that he became minister of a 'dissenting congregation' in that town. The old presbyterian congregation there was after-

wards merged in the 'congregational,' but in Lewis's 'History of the Congregational Church, Cockermouth, being Selections from its own Records' (1870), Aspinwall's name nowhere occurs; nor have recent inquiries succeeded in finding the slightest memorial of him in Cockermouth, although the existence of the presbyterian church there has been thoroughly verified. Unluckily the date of his death is not given. The following books were published by him: 1. 'A Discourse of the Principal Points touching Baptism, so far as Scripture Light directs.' 2. 'The Legislative Power Christ's Peculiar Prerogative.' 3. 'A Presage of sundry Sad Calamities yet to come.' 4. 'The Abrogation of the Jewish Sabbath or the Sabbath of the 7th Day of the Week.' Palmer is strangely inaccurate in the following addition to Calamy: 'There is a small folio volume of sermons on the whole Epistle of Paul to Philemon, with the name of William Aspinwall prefixed, which the editor supposes to be by the same person. It is a valuable work' (*Nonconf. Mem.* iii. 100). 'Valuable' certainly; but it does not consist of 'sermons,' and the author was not Aspinwall, but William Attersoll [q. v.]. Our William Aspinwall (as also Peter Aspinwall, of Heaton, Lancashire) is sometimes confounded with William Aspinwall, the ejected minister of Formby, who afterwards conformed, as well as with a contemporary quaker divine (of the same names) who had been persecuted in New England, and wrote vehemently of his wrongs and tenets.

[Halley's Lancashire, its Puritanism and Non-conformity, 1872, p. 370; Tillinghast's *Elijah's Mantle or Remains*, 1658, book-catalogue at end.]

A. B. G.

**ASPLAND, ROBERT** (1782-1845), unitarian divine, son of Robert Aspland by his second wife, Hannah Brook, was born at Wicken, Cambridgeshire, 13 Jan. 1782. His first schooling was obtained at the Soham grammar school under John Aspland, a relative. In his twelfth year, 1794, he was placed first at Islington, then at Highgate, and in August 1795 was sent to Well Street, Hackney, where he stayed till midsummer 1797. In April 1797 Aspland was publicly baptised at the baptist chapel, Devonshire Square, and was elected to a Ward scholarship at the Bristol Academy as a student for the baptist ministry. He was placed in November under the Rev. Joseph Hughes (afterwards founder of the Bible Society), then residing, not in the academy, but at Battersea, in charge of a small baptist congregation. Staying at Battersea only a few months,

but long enough to give his tutor reasons for doubting the 'soundness' of his doctrine, Aspland went home to Wicken in the summer of 1798, becoming popular there and in the adjacent villages as the boy-preacher, and reached Bristol on 31 July to find himself assigned to Dr. Ryland, the theological tutor. He proceeded in due course, October 1799, to Marischal College, Aberdeen; but, his 'unsoundness' becoming more and more manifest, he was excised from membership at the chapel at Devonshire Square 29 Oct. 1800, and he quitted the university and relinquished his scholarship at the same moment.

Aspland at this juncture was offered a share in a trade. He knew a prosperous dealer in artists' colours in St. Martin's Lane, London, whose daughter, Sara Middleton, he afterwards married; and taking a part in his future father-in-law's business in the week, he devoted his Sundays to preaching for any London preacher in want of sudden help. Amongst the pulpits thus opened to him was that of the General Baptists (otherwise Unitarians) in Worship Street, City; the pastor of this church, the Rev. John Evans, recommended him to the General Baptists at Newport, Isle of Wight, then unprovided with a minister; Aspland visited them 17 April 1801, and was requested to remain. His marriage followed in May; he became secretary to the South Unitarian Society in 1803; he published a sermon, entitled 'Divine Judgments,' in 1804; and he left Newport February 1805 to take charge of a larger congregation at Norton, Derbyshire. Passing through London on his way thither, however, he was invited to be minister at the Gravel Pit chapel, Hackney; and merely going to Derbyshire till he could be honourably released from his engagement there, he returned to Hackney for 7 July 1805, taking possession on that day of a pulpit which he retained for forty years.

Aspland established, or aided in the establishment of, several unitarian periodicals and societies. The first of these was the 'Monthly Repository,' containing biographical sketches, theological disquisitions, political criticism, &c. This Aspland edited, and he had the opening number ready for February 1806. In the same month he was instrumental in establishing the Unitarian Fund, with himself as secretary. He took an additional secretaryship in 1809, when he succeeded in forming the Christian Tract Society. In 1810 he brought out 'A Selection of Psalms and Hymns for Unitarian Worship,' used subsequently in his own chapel, though not without some opposition. In 1811 he became one of the trustees

of Dr. Williams's charities, and was active in opposing the alteration of the Toleration Act. In 1812 he was a member of the committee of the Protestant Society for the Protection of Religious Liberty, being one of a deputation, in that capacity, which had an interview with Perceval 11 May, only two hours before he was shot. In 1813 Aspland set up the Hackney Academy at Durham House for training unitarian ministers; he was helping also, by letters of exhortation, by sermons delivered and printed, in the agitation for an act to relieve from certain penalties persons who impugn the doctrine of the Holy Trinity. The act received the royal assent 21 July. In 1814 Aspland brought out 'British Pulpit Eloquence,' and some sermons of his own. In 1815 he established the 'Christian Reformer, or New Evangelical Miscellany,' a work the editorship of which he never relinquished. In the July of 1817 he formed the Non-con Club at his own house, Talfourd, Southwood Smith, W. J. Fox, and Walter Wilson being among the members; and on 18 December of the same year he was at Hone's side in the court of King's Bench, Guildhall, finding authorities and furnishing hints for his six hours' speech of defence, and he had previously been to Hone in prison, providing him with books from Dr. Williams's library, so that the defence might be prepared.

In 1818 Aspland was compelled by ill-health to relinquish his unitarian academy and the secretaryship of the Unitarian Fund. On his recovery in 1819, he brought about the formation of the Association for protecting the Civil Rights of Unitarians; and that being the year of the conviction of R. Carlile for publishing Paine's 'Age of Reason,' Aspland was engaged in some controversy on the subject in the columns of the 'Times.' In 1821 he became trustee of the Presbyterian Fund, drawing up likewise the 'Christians' petition to parliament against the prosecution of unbelievers,' and being active in sending it all over the country for signature, till it was presented to parliament, 1 July 1823, by Joseph Hume. In 1825 Aspland worked at the fusion of the three societies, the Unitarian Association, the Unitarian Fund, and the Unitarian Book Society, into one body, the British and Foreign Unitarian Association. In 1826 he broke off his connection with the 'Monthly Repository' after an unremunerative editorship of twenty-one years; and in 1827 he edited the 'Test Act Reporter' till, on the bill for the repeal of the Corporation and Test Acts passing, 9 May 1828, the publication was no longer needed. Aspland also presented and read an address

to the throne on 28 July 1830, and another on the accession of Victoria in 1837.

He was also secretary to the British and Foreign Unitarian Association from 1835 to 1841, and retained the acting editorship of the 'Christian Reformer' till 1844. His health beginning to fail in 1843, he was provided with an associate in his pastorate. On 4 Feb. 1844 he preached for the last time, and after being confined to his house for many months, he died 30 Dec. 1845, aged 63. Aspland published many Sermons, a Catechism, Prayers, Tracts for the People, and other works, a complete list of which is given in his 'Memoirs' (pp. 607-611).

[Memoirs of the Life, Works, and Correspondence of the Rev. Robert Aspland of Hackney, by R. Brook Aspland, M.A.; Christian Reformer, 1846, ii. 103-108.] J. H.

**ASPLAND, ROBERT BROOK** (1805-1869), unitarian divine, son of Robert Aspland [see **ASPLAND, ROBERT**], was born at Newport, Isle of Wight, 19 Jan. 1805. He was placed first with Mr. Potticary of Blackheath (where Disraeli was his schoolfellow), next with Mr. Evans of Tavistock, then at Glasgow University, where he graduated as M.A. in 1822, and lastly at Manchester College, York, finishing his studies in 1826. Crook's Lane, Chester, was his first chapel, whither he went in August 1826. He left in 1833 to be co-pastor with Dr. Lant Carpenter at Lewin's Mead chapel, Bristol, where, on 21 October of that year, he married Jane Hibbert, and established a boarding-school. In 1836 he moved to Dukinfield; in 1858 to Hackney. He took up the editorship of the 'Christian Reformer' on his father's death, 1845 (keeping it till the publication ceased in 1863). In 1846 he was made one of the secretaries of Manchester College (holding the post till 1857). In 1850 he collected from the 'Christian Reformer' memoirs of his father's life. Some smaller publications also came from his pen. 'A Brief Memoir of the Rev. Paul Cardale,' extracted from the 'Christian Reformer,' 1852; some Sermons, and 'Paul Best, the Unitarian Confessor,' 1853; and 'Mr. Richard Frankland and Dr. Henry Sampson,' reprinted in pamphlet form, 1862. Brook Aspland became secretary to the British and Foreign Unitarian Association in 1859; he was helped by a colleague in 1867; and having fallen into a precarious state of health, he died suddenly 21 June 1869, aged 65.

[In Memoriam, Notices of the Life of the late Rev. R. B. Aspland, M.A. (Dr. Williams's Library); the Inquirer, 3 July 1869.] J. H.

**ASPLEY, WILLIAM** (fl. 1588-1637), stationer and printer, son of William Aspley, clerk deceased, late of Raiston (?), Cumberland, was apprenticed to George Bishop for nine years from 5 Feb. 1588, and admitted a freeman of the Stationers' Company on 11 April 1597. He lived at the sign of the Tiger's Head in St. Paul's Churchyard, and afterwards at the Parrot. The first appearance of the name of Shakespeare in the registers is in connection with Aspley and Andrew Wise, who obtained license 23 Aug. 1600 for 'Much Ado about Nothing' and the second part of 'Henry IV,' 'wrytten by master Shakespeare' (ARBER, *Transcript*, iii. 170). They were printed by V. S. for the two booksellers. It is worth noticing that while both the quartos have 'Shakespeare' on their title-pages the name is transcribed as above. Aspley dealt largely in plays, as may be seen by the numerous licenses obtained by him down to 1627, when his business appears to have declined. In 1637 he was made warden.

[Arber's *Transcript of the Stationers' Registers*, ii.-iv.; Ames's *Typogr. Antiq.* ed. Herbert, iii. 1384.] H. R. T.

**ASPLIN, WILLIAM** (1687-1758), theological writer, was born in 1686-7, was educated at Trinity College, Oxford, and, on taking his B.A. degree in 1707, removed to St. Alban's Hall, and became vice-principal. He was ordained in 1709, became chaplain to a regiment, and in 1717 vicar of Banbury. In 1721 he became vicar of Horley, and in 1733 vicar of Burthorpe, Gloucestershire. He died 1758. He married Mary, daughter of John Myster, of Horton, Oxfordshire. Asplin was a man of considerable learning, and corresponded with Dr. John Ward, the Gresham professor of rhetoric, on matters relating to archæological lore and natural history. His works are:

1. *'Alkibla. A Disquisition upon Worshipping towards the East. Wherein are contain'd the General Antiquity, the Rise, and Reasonableness of this Religious Ceremony in the Gentile World: It's early Adoption into the Church of Christ; with a Free and Impartial Examination of the Reasons assigned for it by the Antient Fathers. By a Master of Arts of the University of Oxford.'* London, 1728, 8vo. With a dedication to Sir Richard Steele. The second part, dedicated to Lord Chancellor King, appeared in 1735, 'With a serious and impartial Examination of the Reasons assign'd for the Practice' of worshipping towards the east 'by our Modern Divines: in order to obviate Superstition in our Publick Devotion, to remove from it all Party-Distinction, and unneces-

sary Objections, and to assert the Principles of the Reformation; by reducing the Ceremonies of Churchmen to the Standard of the Church. To which are prefix'd, Some Thoughts by way of Preface concerning the proper Use of Ridicule in Controversies still'd Religious.' A second edition of both the parts appeared in 1740. An answer was published by the Rev. John Andrews, vicar of South Newington, Oxfordshire, under the title of 'The Kebla: or, a Defence of Eastward Adoration,' London, 2 parts, 1728-9; and this in turn was 'dissected' in 'The Anatomy of the Kebla, by a true Son of the Church of England,' 1729. Perhaps it may not be superfluous to mention that *kebla* is an Arabic word which signifies a turning. 2. 'The Impertinencies of Modern Antiquaries display'd; or a Refutation of Mr. Wise's Letter to Dr. Mead concerning the "White Horse," &c.' London, no date, 4to.

[Beesley's *Hist. of Banbury*, 513; Bigland's *Collections relating to the County of Gloucester*, i. 546; MS. Addit. 6210 ff. 1-11, 6226 p. 42; *Gent. Mag.* xlvii. 221, 305; Rawlinson MSS. fol. 16, 98; Cat. Lib. Impress. Bibliothecæ Bodleianæ (1843); Cat. of Oxford Graduates.] T. C.

**ASPULL, GEORGE** (1813-1832), musician, born at Manchester in June 1813, was the ninth of ten sons of Thomas Aspull, a merchant who had failed in business and gained his living by teaching music and playing the violin. George Aspull began to learn the piano under his father's instruction on 1 Feb. 1821, and soon made such rapid progress that he both played and sang at a concert in January 1824. In February of the following year Kalkbrenner, having heard him play at Liverpool, advised his father to take him to London, which was accordingly done in April. Here he played to Clementi, who was struck by the extraordinary genius and poetry of his playing, although at this time he was so small that he generally stood at the piano. Aspull soon became quite the rage in London. On 20 Feb. 1824 he went to Windsor to play before George IV, and he gave numerous concerts which attracted large audiences. At a concert at Brighton he played (for the first time in England) Weber's 'Concertstück.' In April 1825 Aspull and his father went to Paris, where they met Hummel and Moscheles. On his return he began a series of concert tours in Great Britain and Ireland, which lasted, almost without intermission to the end of his life. On Clementi's death in 1832 Aspull came up to London to attend the funeral, on which occasion he caught a cold which eventually caused his death. In spite of his illness he

played at Chesterfield and Newark, and then drove up to London in an open gig to attend concerts given by John Field, Moscheles, and Mendelssohn. He was able to go to the first of these concerts, but his illness increased so alarmingly that he was immediately afterwards taken to Tunbridge Wells, where he was prostrated by fever. Becoming slightly better he was brought back to London and then taken to Leamington, but he gradually sank and died on Sunday, 19 Aug. 1832. He was buried at Nottingham. Besides his performances on the piano, Aspull used to sing at his concerts, being possessed of a sweet, if not very powerful, tenor voice. Rossini—who heard him more than once—advised that he should not sing much, 'for his soul is too much for his body.' He wrote a small amount of pianoforte music and some songs; these were published after his death by his father, together with a prefatory memoir and a charming portrait of the ill-fated boy.

[The Posthumous Works of George Aspull, 1837; the Harmonicon, vol. ii.; article by E. Taylor in S.D.U.K. Dictionary.] W. B. S.

ASSER (*d.* 909?), bishop of Sherborne and author of the 'Life of Ælfred the Great,' was a monk of St. David's (Menevia), and related to Bishop Novis of that see. According to Giraldus Cambrensis (*Itiner. Camb.*), Asser was at one time bishop of St. David's, but the statement rests on no contemporary authority. Like Grimbald and John, 'the Old Saxon,' Asser, who had a high reputation for learning, was invited by Ælfred about 885 to enter his household. He appears to have been encouraged to accept the invitation by his fellow-monks, who had recently suffered from the hostility of Hemeid, king of South Wales, and hoped to secure, through Asser, Ælfred's protection. The monk and the king met in the first instance at Dene, near Chichester. Asser refused to leave his home permanently, but promised to reply to Ælfred's offer after six months. On his journey to Wales he fell sick at Winchester, where he remained for a year and a week. Ælfred sent for him again on his recovery, and an arrangement was made between them, by which Asser was to spend six months of each year in Ælfred's household and six months in his own country. His first visit extended to eight months, and Asser regularly studied with the king throughout that period. Before Asser's departure Ælfred presented his tutor with the minsters or monasteries (*monasteria*) of Amesbury (? Congresbury) and Banwell, a silk pall, and as much incense as a strong man could carry. In later years Asser received a grant of Exeter and all its

district in Saxon-land and Cornwall, and before 900 he seems to have become bishop of Sherborne. He signs many charters between 900 and 904 as bishop of Sherborne (KEMBLE'S *Cod. Dipl.* 335, 337, 1077, 1083, 1087). In Ælfred's introduction to his translation of Gregory's 'Pastorale' he refers to 'Asser, my bishop;' and since the book is dedicated to Wulfsgie, whom Mr. Thomas Wright identified with a preceding bishop of Sherborne, it has been inferred that Asser was a bishop before his appointment to Sherborne. This, however, is open to question. According to the Anglo-Saxon Chronicle, Asser died in 910, but 909 is the date given by Stubbs in his 'Registrum Anglicanum.'

Asser's 'Life of Ælfred' ('De Rebus gestis Ælfredi Magni') consists of (1) a chronicle of English history between 849 and 887, largely drawn from an early version of the Anglo-Saxon Chronicle, and (2) a personal and original narrative of Ælfred's career down to 887. Throughout are signs of the author's Celtic birth. The English are invariably called Saxons, and Celtic names of places are often preferred to the English or Latin ones. But with Asser's 'Life,' as it is commonly met with, have been interpolated passages from later and untrustworthy works. The authentic Asser is preserved almost intact in only one edition, that of 1722, which was printed from a tenth-century Cottonian MS. (Otho A. xii.), unfortunately destroyed by fire in 1731. Florence of Worcester borrowed freely from the authentic Asser, although he never mentions Asser's work by name, and copied him in many places word for word. From the late additions, and not from Asser's work in its authentic shape, are drawn the famous stories of the burning of the cakes, the references to St. Neot, and the foundation by Ælfred of the university of Oxford. Florence of Worcester makes no mention of these legends. Thomas Wright, in his 'Biog. Literaria,' questioned the authenticity of any part of the work attributed to Asser; but his arguments have been refuted by Pauli and Lappenberg.

The *editio princeps* of Asser's 'Annales' was issued by Archbishop Parker in 1572. It presents the 'Life' with a variety of interpolations. In Camden's 'Anglica' (Frankfort, 1603), Parker's errors are not corrected, and a long episode is introduced from a Savilian manuscript, which had been recently tampered with, detailing Grimbald's mythical connection with Oxford. Francis Wise's edition, published at Oxford in 1722, gives Asser's work in the most authentic form attainable, and in Petrie's 'Monumenta Hist. Brit.' (1848) Wise's edition is followed.

[Asser's *De Rebus Gestis* is the main authority. Asser's authorship of the *Life* is impugned by Mr. Thomas Wright in the '*Archæologia*,' *xxix.*, and in the '*Biograph. Brit. Lit.*' The whole question is very thoroughly discussed by Pauli in the introduction to his '*Life of Ælfred the Great*,' and by T. D. Hardy in the introduction to Petrie's *Monumenta*.]

ASSHETON. [See ASHTON.]

ASSHETON, NICHOLAS (1590-1625), a country squire who lived at Downham, near Clitheroe, Lancashire, is not worthy on account of a brief diary which he left illustrating the character of the country life of that part of West Lancashire which is associated with the poet Spenser. He belonged to a branch of the Assheton family of Middleton, in the same county, and was the son of Richard Assheton, of Downham. He probably had his education at Clitheroe grammar school; he married Frances, daughter of Richard Greenacres, of Worston, near Downham; and he died 16 April 1625, leaving issue. His journal, which extends from 2 May 1617 to 13 March 1619, records his intercourse with his tenants and neighbours, with all their 'businesses, sports, bickerings, carousings, and (such as it was) religion.' It includes some interesting notices of James I's visit to Lancashire in August 1617, when the petition which originated the '*Book of Sports*' was presented to that king (*NICHOLS'S Progresses*, iii. 396-403). The original journal has been lost. It was first printed by Rev. T. D. Whitaker in his '*History of Whalley*.' It was next edited in 1848 by Canon Raines, in vol. xiv. of the Chetham Society series, from the third or 1818 edition of '*Whalley*,' and was accompanied by some excellent notes and an account of the Assheton family. In 1876 the diary was re-edited in the fourth edition of '*Whalley*,' ii. 122-142. Harrison Ainsworth introduced Assheton into his novel of the '*Lancashire Witches*,' book ii. chap. iii., as 'a type of the Lancashire squire of the day,' but both Whitaker and the novelist were mistaken in considering him a puritan.

[Assheton's Diary, as above.] J. E. B.

ASSHETON, WILLIAM (1641-1711), divine, was born at Middleton, Lancashire, in the year 1641. His father, who was rector of the parish, was one of the ancient knightly family of the place. After a preliminary education at a private country school he entered Brasenose 3 July 1658, where he is said by Wood to have had a presbyterian tutor, and to have been an attendant at the religious meetings held at the house of old Bessie Hampton,

a laundress, whose piety was not of the antiquary's pattern. Wood hints that his change of views was due to the Restoration; but it is surely hypercriticism to discuss the consistency of a youth of eighteen, which would be Assheton's age at the Restoration. He gained a fellowship of his college in 1663, when he was B.A. Having entered holy orders and taken his master's degree, he became a frequent preacher. James, duke of Ormond, who was chancellor of the university, appointed him chaplain, and in that capacity he served both in England and Ireland. He had the degree of D.D. in 1673, 'at which time,' Wood is careful to remind us, 'he had nine terms granted to him by virtue of the said chancellor's letters.' Next month he had the prebend of Knaresborough in the church of York. The interest of his patron procured him the livings of St. Antholin's, London, and Beckenham, Kent, where he settled in 1676. A few years before his death he was solicited to become master of his college, but advancing age and infirmity forbade his acceptance. He died at Beckenham in September 1711, and is buried in the chancel of that church. He was a voluminous writer, and by no means free from the prejudices and superstitions of his own time; yet in one respect he was keensighted beyond his time, and the modern system of life insurance must own him as a forerunner.

His writings are: 1. '*Toleration Disapproved*,' Oxford, 1670; there were two editions in the same year, one of which was anonymous (B.M.), Oxford, 1671 (B.M.), 1736 (B.M.). 2. '*Danger of Hypocrisy*,' London, 1673 (B.M.). 3. '*Seasonable Apology for the Honours and Revenues of the Clergy*' (*Judicium Carolinum*), London, 1674, 1676 (B.M.). 4. '*The Cases of Scandal and Persecution*,' London, 1674 (B.M. and 1676); this was answered by Baxter. 5. '*The Royal Apology*,' London, 1684 (B.M.). 6. '*An Admonition to a Deist*,' London, 1685, anonymous (B.M.). 7. '*A Seasonable Vindication of their Present Majesties*,' 1688. 8. '*An Explanation of his Reasons for taking the Oath of Allegiance to William and Mary*.' 9. '*Country Parson's Admonition to his Parishioners against Popery*,' London, 1686, 1689, 1706 (B.M.). 10. '*A Defence of the Plain Man's Reply to the Catholic Missionaries*,' London, 1688; two editions with some variations in the title. 11. '*The Substance of a late Conference with M. S. concerning* (1) the Rudeness of Atheistical Discourse; (2) the Certainty and Eternity of Hell Torments; (3) the Truth and Authority of the Holy Scriptures,' London, 1690. (B.M.). 12. '*Discourse against Blasphemy*,' London,

1691, 1694 (B.M.). 13. 'Discourse against Drunkenness,' London, 1692. 14. 'A Discourse against Swearing and Cursing,' London, 1692; these three were published at twopence each, in order that they might be extensively circulated as an aid to the royal proclamation for the reformation of manners. 15. 'Directions in order to the Suppression of Debauchery and Prophaneness,' London, 1693. 16. 'Conference with an Anabaptist,' pt. i., London, 1694; this was the worthy churchman's move against a baptist meeting which had arisen in his parish, but it did not flourish, and its removal or dissolution saved him from the necessity of further argumentation. 17. 'A Short Exposition of the Preliminary Questions and Answers of the Church Catechism, being an introduction to a Defence of Infant Baptism,' London, 1694 (B.M.). 18. 'Discourse concerning a Death-bed Repentance,' London, 1696 (B.M.), 1765 (B.M.), 1800 (B.M.), 1802 (B.M.), 1807 (B.M.); this is said to have been preached before Queen Mary, and after her death enlarged and dedicated to the king. It was reprinted in 1872 with Baxter's 'Call to the Unconverted.' 19. 'Theological Discourse of Last Wills and Testaments,' London, 1696 (B.M.). 20. 'Seasonable Vindication of the Blessed Trinity, collected from the works of Tillotson and Stillingfleet,' London, 1697 (B.M.). 21. 'Method of Daily Devotion,' London, 1697 (B.M.). 22. 'Brief State of the Socinian Controversy, collected from the works of Isaac Barrow,' London, 1698. 23. 'The Plain Man's Devotion,' London, 1689, 1698. 24. 'A Full Account of the Rise, Progress, and Advantages of Dr. Assheton's Proposal, as now improved and managed by the Company of Mercers, London, for the benefit of widows of clergymen and others by settled jointures and annuities at the rate of thirty per cent., London, 1699 (B.M.), 1700 (B.M.), 1710 (B.M.), 1711 (B.M.), 1713 (B.M.), 1724 (B.M.). 25. 'Sermon preached before the Sons of the Clergy,' London, 1699. 26. 'Sermon preached before the Hon. Society of the Natives of Kent,' London, 1700 (B.M.). 27. 'Vindication of the Immortality of the Soul,' London, 1703. 28. 'Brief Exhortation to the Holy Communion,' London, 1705, 1775 (B.M.). 29. 'Method of Devotion for Sick and Dying Persons,' London, 1706 (B.M.), 2nd ed. 1745. 30. 'The Possibility of Apparitions,' by a Divine of the Church of England, London, 1706 (B.M.); this book has an interesting place in literary history, for it was occasioned by Defoe's fabricated story of the appearance of the ghost of Mrs. Veal. 31. 'Occasional Prayers from Taylor, Cosins, Ken, &c., and a collection of Hymns,'

London, 1708. 32. 'A Seasonable Vindication of the Clergy, by a Divine of the Church,' London, 1709. 33. 'Directions for the Conversation of the Clergy, collected from Stillingfleet,' London, 1710. In the above list such writings of Assheton's as are in the British Museum are indicated by the letters B.M. attached to them.

Assheton was more a compiler than an original writer. He was a man of learning, 'readily subscribed to the publishing all critical, learned, and laborious works,' and had a good library, the duplicates from which he gave for the use of ministers in Wales and in the highlands of Scotland. He dealt easily with his parishioners on the sore point of tithes, preached regularly, kept hospitality, and, though trying to live peaceably, was not afraid to rebuke those whose conduct seemed to deserve it. It is noted as a sign of his moderation that he did not set up a coach until the ill-health of his wife required it. At one time he preached extemporaneously, but afterwards resorted to written discourses, because on one occasion a woman swooned in his congregation, and the commotion so upset the good man that he was unable to recover the thread of his thoughts.

Assheton's scheme for providing annuities for the 'widows of the clergy and others' was the earliest attempt in England on a large scale in the direction of modern life insurance. His plan was offered in vain to the Corporation of the Sons of the Clergy, and to the Bank of England, but was eventually adopted by the Mercers' Company in 1698. Its failure was due to the then incomplete knowledge of vital statistics. Something like a scale was formed. Married men under thirty were allowed to subscribe but 100*l.*; under forty they might not subscribe more than 500*l.*; under sixty they were limited to 300*l.* 'When this was commenced,' says Francis, 'it was considered a very notable plan. It was thought that it would prove a good business speculation; and on considerable sums being subscribed the corporation rejoiced greatly. It was soon discovered, however, that the undertaking was founded on a mistake; so the first breach of faith was in lowering the annuity. This proved insufficient, and the company became unable to meet their engagements. They had fixed payments to their annuitants at the rate of thirty per cent., and now they saw their funds almost annihilated by the error. At last they stopped payment altogether; but the distress was so acute that, recollecting one or two forced loans they had made to the monarchs of England in the troublous times of old, they petitioned parliament in 1747 for assistance.

Their tale was a pitiable one: 'At Michaelmas 1745 they found themselves indebted to the said charities and their other creditors 100,000*l.*; they were liable for present annuities to the extent of 7,620*l.*; for annuities in expectancy, 1,000*l.* a year; the whole of their income being 4,100*l.*' The parliamentary aid amounted, according to Price, to 3,000*l.* per annum, and thus they were enabled to meet their engagements.

#### ASSIGNY. [See D'ASSIGNY-MARIUS.]

ASTBURY, JOHN (1688?–1743), potter, was a clever mechanic, who introduced himself disguised as an idiot to the works of two brothers named Elers, of Nürnberg, who had settled at Bradwell, Staffordshire, about 1690. He discovered the secrets of their manufacture of red ware, and, obtaining his discharge on pretence of sickness, set up a rival establishment at Shelton, also in the potteries. He introduced the use of Bideford pipeclay, and in 1720, happening to notice an ostler blowing powder from a red-hot flintstone pulverised into the eyes of a horse as a remedy, hit upon the application of calcined flint in pottery, which greatly improved his ware. He died in 1743, aged 55, as his tombstone in Stoke churchyard testifies, having made a fortune, and leaving several sons. One of these, Thomas, had begun business at Lane Delph in 1725, and was the first English manufacturer of cream-coloured ware. Samuel Astbury, also a potter, a brother of John Astbury, married Elizabeth, the sister of Thomas Wedgwood, father of Josiah Wedgwood, and was in 1744 one of the witnesses to the deed of Josiah's apprenticeship to pottery-making. Wedgwood's latest biographer attributes his success to his adoption of the important inventions described above, with which she credits Samuel Astbury. Possibly Samuel Astbury contributed to John's improvements of his art, but there seems no reason for doubting that it was John and not Samuel who was their discoverer.

VOL. I.

ASTELL, MARY (1668–1731), authoress, was the daughter of a merchant at Newcastle-upon-Tyne. Her uncle, a clergyman, observing her excellent abilities, undertook to educate her himself. She passed the first twenty years of her life at Newcastle; she then settled in London, and afterwards at Chelsea, where she was a neighbour and acquaintance of Dean Atterbury. She was the intimate friend, to the end of her life, of the excellent Lady Elizabeth Hastings, and the esteemed correspondent of Norris of Bemerton.

Mary Astell is now chiefly known as the authoress of a 'Serious Proposal to Ladies' (1694). It was published anonymously 'by a Lover of her Sex;' but the authorship appears to have been an open secret. The proposal was, in her own words, 'to erect a *monastery*, or, if you will (to avoid giving offence to the scrupulous and injudicious by names which, tho' innocent in themselves, have been abus'd by superstitious practices), we will call it a *Religious Retirement*, and such as shall have a double aspect, being not only a retreat from the world for those who desire that advantage, but likewise an institution and previous discipline to fit us to do the greatest good in it.' There were to be 'no vows or irrevocable obligations, not so much as the fear of reproach to keep the ladies longer than they desired.' It was to be conducted strictly on the principles of the church of England; the daily services were to be performed 'after the cathedral manner, in the most affecting and elevating way;' the 'Holy Eucharist was to be celebrated every Lord's day and holy day;' there was to be 'a course of solid, instructive preaching and catechizing,' and the inmates were to 'consider it a special part of their duty to observe all the fasts of the church.' But it was intended quite as much for mental as for moral and religious training; or, rather, the two were to go hand in hand, for 'ignorance and a narrow education lay the foundation of vice.' The proposal, she tells us, met with a favourable reception from 'the graver and wiser part of the world,' and therefore she published in 1697 a second part, much longer than the first, 'wherein a method is offered for the improvement of their minds;' and this she dedicated to the Princess of Denmark, afterwards Queen Anne. The proposal, however, met with unmerited obloquy from more than one quarter. 'A certain great lady,' supposed by some to have been the Princess Anne herself, by others the Lady Elizabeth Hastings, was so attracted by the scheme that she purposed giving 10,000*l.* towards the erection of a 'sort of

Z

college for the education and improvement of the female sex, and as a retreat for those ladies who, nauseating the parade of the world, might here find a happy recess from the noise and hurry of it. But the design coming to the ears of Bishop Burnet, he immediately went to that lady, and so powerfully remonstrated against it, telling her it would look like preparing a way for popish orders, and would be reputed a nunnery, that he utterly frustrated that noble design' (BALLARD). The alarm was surely unfounded. Mrs. Astell observes with perfect truth, in the 'conclusion' of her second part: 'They must either be very ignorant or very malicious who pretend that we would imitate foreign monasteries, or object against us the inconveniences that they are subject to. A little attention to what they read might have convinced them that our institution is rather *academical* than *monastic*.' However, the project fell to the ground; but not without drawing upon its well-intentioned proposer a still more unmerited and, unfortunately, a more widely circulated aspersion. In the 32nd number of the 'Tatler' appeared what the annotator of the edition of 1797 justly terms a 'gross misrepresentation' of Mrs. Astell under the name of 'Madonella.' There is not a shadow of foundation for the insinuation against Mrs. Astell's personal character, and the account of the proposed college betrays a profound ignorance of the whole scheme which that good lady projected. The slander was repeated in the 59th and 63rd numbers of the same periodical; and in the latter it is stated (no doubt with the intention of turning the whole affair into ridicule) that Mrs. Manley, authoress of that vile work, the 'New Atlantis,' was to be the directress of the new institution. The whole story would be unworthy of mention, were it not that it appeared in so famous a paper as the 'Tatler,' and that the great names of Swift and Addison are supposed to be connected with the writing of it. 'Madonella' is called 'Platonette,' but the next point to be noticed in her literary career is her controversy with one of the most distinguished of English Platonists, John Norris, of Bemerton, about one of the pivot doctrines of Platonism, the pure love of God. She again wrote anonymously, but her name was soon discovered. If Mrs. Astell met with unmerited obloquy for her 'Serious Proposal,' the balance was partly redressed by the extravagant eulogy which her antagonist, and editor of the 'Letters,' lavished upon her. As a matter of fact, the 'Letters' are full of pertinent inquiries, and prove the writer to have been,

at any rate, a very intelligent woman. In 1705 Mrs. Astell published an octavo volume entitled 'The Christian Religion, as professed by a Daughter of the Church of England,' which gives a clear exposition of Church teaching, according to the type of the great Caroline divines; it strongly advocates the doctrine of non-resistance, and protests strongly against Romanism. It was published anonymously, but everybody knew who the 'Daughter of the Church of England' was. Another anonymous work, entitled 'Occasional Communion' (1705), is attributed to Mrs. Astell by Dean Hickeys, who describes it as being 'justly admired so much.' As its title implies, it deals with what was the burning question of the day. In 1706 we find her engaged in a controversy with her neighbour, Dean Atterbury, who sends her 'Remarks' to his friend Smalridge, 'taking them to be of an extraordinary nature, considering they come from the pen of a woman;' 'had she,' he adds, 'as much good breeding as good sense, she would be perfect. She attacks me very home.' She also wrote against Locke's 'Reasonableness of Christianity,' against Tillotson's famous sermon on the eternity of hell torments, and against a sermon of Dr. White Kennett, and on each occasion proved herself an acute controversialist. Henry Dodwell speaks of her as 'that admirable gentlewoman, Mrs. Astell,' and she deserved the title; for her life was blameless, and her writings show that her abilities and attainments were considerably above the average, though she may not have been so extraordinary a genius as her admirers imagined.

[Mrs. Astell's Works, passim; Ballard's Memoirs of British Ladies, &c.; Folkestone Williams's Memoirs and Correspondence of Bishop Atterbury.] J. H. O.

ASTELL, WILLIAM (1774-1847), director of the East India Company, was second son of Godfrey Thornton, director of the Bank of England. He assumed the name of Astell in 1807. He was elected a member of the court of directors of the East India Company in 1800, and after an unsuccessful contest in 1806, was in 1807 returned to the House of Commons as conservative member for Bridgewater, which borough he represented during seven successive parliaments. He subsequently sat for the county of Bedford from 1841 until his death. Being a director of the East India Company for the unprecedented period of forty-seven years, he filled each of the offices of chairman and deputy-chairman four times, and was actively engaged in the discussion and settlement of the many

important questions bearing upon Indian administration which arose during that lengthened period. He was chairman of the court at the commencement of the negotiations between that body and the government which preceded the enactment of the East India Company's Charter Act of 1833. Although at first opposed to the abolition of the monopoly which the company enjoyed in respect of its trade with China, Astell eventually acquiesced in the settlement of the question made by Lord Grey's government. As chairman again in 1844 he took a leading part in the recall of Lord Ellenborough, whose policy as governor-general he considered to be highly detrimental to the good government of that country. He was averse to annexation, unless clearly required for the safety of the British possessions, and was a staunch advocate of the policy of respecting the religious feelings of the natives of India.

Astell was a deputy-lieutenant of the county of Bedford, lieutenant-colonel of the Bedfordshire militia, and colonel of the Royal East India volunteers. He was chairman of the Russia company and of the Great Northern railway, besides filling other offices in the city of London. He died 7 March 1847.

[India Office Records; Annual Register, 1847.]  
A. J. A.

**ASTLE, THOMAS** (1735-1803), antiquary and palæographer, was born on 22 Dec. 1735 at Yoxall on the borders of Needwood Forest in Staffordshire, and was the son of Daniel Astle, keeper of the forest, a descendant of an old family of the county. He was in early youth articled to an attorney, but having more taste for antiquarian pursuits did not follow up his profession, and went to London, where he was employed to make an index to the catalogue of the Harleian MSS., printed in 1759, 2 vols. folio. He was elected a fellow of the Society of Antiquaries in 1763, and about the same time gained the notice of the Right Hon. George Grenville, then first lord of the treasury and chancellor of the exchequer, who employed him in the arrangement of papers and other matters which required a knowledge of ancient handwriting, and nominated him, with Sir Joseph Ayloffe and Dr. Ducarel, as members of a commission to superintend the regulation of the public records at Westminster. On the death of the two colleagues, Mr. Topham was substituted, and he and Astle were removed under Pitt's administration. The same persons were appointed by royal commission in 1764 to superintend the methodising of the records of state and council pre-

served in the State Paper Office at Whitehall. In 1765 Astle was made receiver-general of sixpence in the pound on the civil list, and on 18 Dec. of the same year he married the only daughter and heiress of the Rev. Philip Morant, the historian of Essex. In 1766 he was admitted a fellow of the Royal Society, and in the same year he was consulted by a committee of the House of Lords on the subject of printing the ancient records of parliament. He suggested the employment of his father-in-law in this work, and succeeded him upon his death in 1770. The preparation of the text and notes of the edition of the 'Rotuli Parliamentorum ut et petitiones et placita in Parlamento, etc. [1278-1503],' London, 1767-77, 6 vols. folio, was undertaken by Morant and John Topham down to 2nd Henry VI, and after that period by Topham and Astle. 'Dr. John Strachey saw the volumes through the press. 'The Will of Henry VII' was reproduced by Astle in 1775 from the original in the chapter house at Westminster, with an interesting preface. After the death (1775) of Henry Rooke, chief clerk of the Record Office in the Tower, Astle was appointed to his place; and on the decease of Sir John Shelley, keeper of the records, in 1783, obtained the higher office. Astle was an efficient and zealous keeper, as is proved by his additions to the collections under his charge, and the indexes he caused to be made. A 'Catalogue of the MSS. in the Cottonian Library . . . with an account of the damage sustained by fire in 1781 and a catalogue of the charters preserved' was published by Samuel Hooper in 1777, with a dedication 'To T. Astle, Esq., to whom I am indebted for the MSS. from which the following work is printed.' He had no literary connection with the 'Will of King Alfred' (1788) usually said to have been translated by him. Sir Herbert Croft was the editor of this work; the translation and most of the notes were furnished by the Rev. Owen Manning.

In 1784 appeared Astle's chief work, 'The Origin and Progress of Writing,' a most important contribution to the English literature of palæography. The oriental part is of course quite out of date now, but the chapters devoted to mediæval handwriting are still of use to the student, as they are based upon the author's personal investigations. The numerous plates, which greatly enhance the value of the work, are well engraved by Pouncey. In 1800 a royal commission was appointed to carry out the recommendations of a select committee of the House of Commons which had inquired into the state of the records. Astle was consulted throughout

this inquiry, and presented a report on the documents at the Tower. Astle was a member of sundry foreign academies and a trustee of the British Museum. He travelled on several occasions upon the continent with literary objects. Upon the death of Morant in 1770 he came into possession, through Mrs. Astle, of his father-in-law's library of books and manuscripts as well as of a considerable fortune. Astle had long been an industrious seeker after literary rarities, and eventually brought together the most remarkable private collection of manuscripts in the country. He carried on an extensive correspondence and freely placed his great knowledge and wonderful collection at the disposition of his friends. Dr. Percy acknowledges his help while investigating ballad literature. He was a conductor of 'The Antiquarian Repertory,' and contributed to the 'Archæologia' and 'Vetusta Monumenta' of the Society of Antiquaries. In the latter appeared his valuable contribution on unpublished Scottish seals, in consequence of a committee of the society having been directed to investigate the subject. The editorship of the 'Taxatio Ecclesiastica,' and the 'Calendarium Rotulorum Patentium' (Record Commission, 1802, 2 vols. folio), has been ascribed in error to Astle; John Caley edited the former work, and the same person and Samuel Ayscough the latter one. Astle died at his house at Battersea Rise, near London, on 1 Dec. 1803, of dropsy, in his sixty-ninth year. By his wife he had nine children, and he is now represented by the family of the second son, Philip, who took the name and arms of Hills, of Colne Park, Essex.

All his printed books, chiefly collected by Morant, were purchased from the executors in 1804, for the sum of 1,000*l.*, by the founders of the Royal Institution, where they are now preserved. The collection is particularly rich in history and biography; many volumes in the latter class are enriched with the notes of their former owners. The famous collection of manuscripts was left by will to the Marquis of Buckingham, in token of the testator's regard for the Grenville family, upon payment of the nominal sum of 500*l.* Had the offer been declined, the British Museum was to enjoy the right of purchase at the same price. The offer was, however, accepted by the marquis, who caused a beautiful gothic room to be erected by Mr. (afterwards Sir) John Soane for their reception at Stowe, where they remained until they were transferred, with O'Connor's Irish codices and other manuscripts, to the sale rooms of Messrs. Sotheby in 1849. But the

sale did not take place, as the entire collection was privately purchased by the late Earl of Ashburnham for 8,000*l.* In the autumn of 1879 the present holder of the title offered his late father's library and collection of manuscripts, the latter consisting of four distinct collections, known as the Stowe, the Barrois, the Libri and Appendix, to the British Museum for 160,000*l.* After a prolonged negotiation the nation became in 1883 the possessors of the Stowe division at the price of 45,000*l.*; the most valuable and interesting of the codices being those which had once belonged to Astle, and which are now at the British Museum. Among the chief treasures bequeathed to the Marquis of Buckingham may be mentioned a volume of Anglo-Saxon charters, unrivalled for number, beauty, and preservation; King Alfred's Psalter; the original wardrobe-book of Edward II.; the register of Hyde Abbey near Winchester, and many other documents relating to the history of the most celebrated abbeys and monasteries of Great Britain; the original inventories of Queen Elizabeth's wardrobe, plate, and jewels; the Hanoverian state papers; the original accounts of Wolsey and papers connected with the navy and ordnance of Henry VIII.; the rich collections of Anstis, Garter king-at-arms; the correspondence of Lord Chancellor Macclesfield and Bishop Lyttelton, &c.; and papers from the libraries of Spelman, Twysden, Thoresby, Le Neve, Ducarel, &c.

Besides many contributions to the 'Archæologia' between 1763 and 1802, Astle published the following works: 1. 'The Will of King Henry VII,' London, 1775, 4to. 2. 'The Origin and Progress of Writing, as well Hieroglyphic as Elementary, illustrated by engravings taken from marbles, manuscripts, and charters, ancient and modern: also some account of the origin and progress of printing,' London, 1784, 4to, with 31 plates; the 'second edition, with additions,' London, 1803, 4to, 31 plates and portrait, contains 'Appendix on the Radical Letters of the Pelasgians' (published separately in 1775); a reprint by Messrs. Chatto & Windus appeared in 1876, with poor impressions of the plates. 3. 'An Account of the Seals of the Kings, Royal Boroughs, and Magnates of Scotland,' London, 1792, folio, 5 plates; also published in 'Vetusta Monumenta,' 1796, iii.

theca MS. Stowensis, 1818; Smith's Catalogue of the Stowe Collection, 1849; Ashburnham MSS., copy of papers relating to purchase of Stowe Coll. (Parliamentary Return, 1883).]

H. R. T.

ASTLEY, SIR JACOB, BARON ASTLEY (1579-1652), royalist, was the second son of Isaac Astley of Melton Constable, Norfolk. From the age of nineteen he served with reputation in the Netherlands under the Counts Maurice and Henry, and subsequently under the Palatine and Gustavus Adolphus. He was present at the battle of Newport (1599) and the siege of Ostend. It is on record that, though he was absent in the service of Christian IV of Denmark for a year and a half, and again in Germany for two years, his company was kept for him in the States army. In 1638, having been made governor of Plymouth and the isle of St. Nicholas, he was summoned to the council of war (21 Feb.), and he was one of the committee that made report (7 May) on some vexed questions as to the fortification of the isle of Scilly. The next year, after taking the musters in the midland and northern counties, he went to Newcastle as sergeant-major to provide against the expected Scotch invasion. He had to overcome the objections of the trainbands to serve beyond their own county; but at last they agreed to 'refer all to the king, and to serve wherever he pleased.' He diligently attended to all the minutiae of war, and kept a constant correspondence with the council. His patience was much tried by the puritans, whose sympathies were naturally with his covenanting foes. He broke up their meetings; but as they were poor men ('mostly bancroftes,' as he says), he did not think persecution advisable, though 'if a fat puritan could be laid hold of it were best to punish him.' He so wrought upon the corporation of Berwick that they sent him a protestation of their loyalty—a service worthy of the 'thanks' minuted to him by the council in days when the Scotch were encouraged by the dissensions of the English peers and their half-hearted prosecution of the war. At York the prevalent disaffection gave fresh scope to Astley's diplomacy. 'I am fain to single out some of the discreetest of the leading men, to bring them to reason.' And so the ill-fated expedition ran its course to the pacification of Berwick, when Astley was left free to other cares. In November he petitioned for the arrears of the Plymouth garrison, and obtained 400*l.* out of 1,500*l.* due.

In January 1640 'huge preparation' was making for another Scotch war. Though Astley was then 'not talked of' for any of the great posts (to obtain which, says one

letter-writer, 'we are all ready to scratch each other's faces'), yet his practical knowledge made him indispensable. He was appointed on the council of war (14 Feb.), and was one of its active members, reporting on stores and weapons, and contriving a defence for Newcastle by arming the miners. By this time he was again sergeant-major. The war was soon ended by the pacification of Ripon, and its immediate result was the assembling of the Long Parliament. In 1641 Astley was examined before a committee of the house as to the king's alleged tampering with the army, especially with reference to a petition signed by many officers and shown to the king, who, in token of his approbation, wrote C. R. upon it. This petition, reflecting upon the leaders of parliament, was highly resented by that assembly, and some incautious speeches of Astley to the unstable Earl of Holland were reported by the latter, so that 'what had been imparted to him in the greatest secrecy his informants had now publicly to testify.'

In August 1642, when the war broke out, Astley left Plymouth for Nottingham to join the king, who made him major-general of the foot—'a man as fit for that office as Christendom yielded,' says Clarendon, whose commendations are in this case unqualified by any after disparagement.

During the first civil war Astley is a notable figure. He was among those 'hurt' at Edgehill (18 Oct. 1642). His prayer before the battle is recorded by Warwick (*Memoirs*, 229). He commanded a division at the siege of Gloucester. When Essex, after relieving that city, had fought the battle of Newbury (20 Sept. 1643), and had continued his retreat to London, Sir Jacob possessed himself of Reading. In 1644 he assisted Lord Hopton in the capture of Arundel (soon retaken by Waller), and shared in the defeat at Alresford (29 March). Clarendon records in detail his gallant defence of Gosworth Bridge against Essex, and of the purlieus of Shaw House against the repeated attacks of Manchester during the second battle of Newbury (27 Oct.). Astley commanded the infantry in that expedition (or escape) of Charles from Oxford, when the armies of Essex and Waller were closing on the city. At Naseby (14 June 1645) 'the main body of the foot was led by Lord Astley, whom the king had lately made a baron.' His patent is dated 4 Nov. 1644. When the king called out the Welsh levies for the relief of Hereford, the discontented gentlemen of those counties insisted on the dismissal of the general Gerrard, 'and his charge was presently conferred upon Lord Astley, who was most acceptable to them.'

Not long after Astley had the honour to play the last stake for the king. From Oxford was sent a party of fifteen hundred to meet the remnant of the royal army gathered under his banners. But all intelligence as to his movements was intercepted, till his friends learned that he had been routed after a stubborn resistance by Sir Thomas Brereton and Colonel Morgan at Stow-on-the-Wold (21 March 1646). Morgan, though second in command, bore the main brunt of the engagement, and was allowed to announce its success in a letter to the speaker. Lord Astley's speech to Brereton's officers—'You have now done your work and may go to play, unless you will fall out among yourselves'—has 'something of prophetic strain,' prompted by the veteran's 'old experience.' The conquerors (who ordered a special thanksgiving for their victory) seem to have borne him no lasting ill-will. His release from Warwick Castle (June) was one of the terms of capitulation granted to Oxford on its surrender to Fairfax. An ordinance (passed 8 March 1648) cleared him of his delinquency. But he had his share of the inconveniences then attaching to conspicuous loyalty. The council of state, in the anxious months before Worcester battle, wrote to Colonel Dixwell (a regicide and ex-state councillor commanding in Kent), to arrest 'and secure in one of your garrisons furthest from their houses, and from the places where they have any influence,' certain old cavaliers. Among them was Astley—'Sir Jacob Astley'—his title not being acknowledged by the parliament. He was brought to London, and on 15 May 1651 order was made that he should be allowed the liberty of the Fleet. On 31 May he was called before the council and allowed to return to his residence in Kent on giving bail in 1,000*l.*, with two sureties in 500*l.* each. He died (February 1651-2) in the old palace of Maidstone (granted by Elizabeth to Sir John Astley). His wife, Agnes Imple, a German lady, brought him two sons and a daughter. One son, Sir Bernard, fell in the siege of Bristol. The barony became extinct in 1668 by the death of Lord Astley's grandson without issue. A portrait of Astley (the property of Mrs. Branfell) was in the National Portrait Exhibition of 1866.

[Clarendon's Hist. of Rebellion; Rushworth's Hist. Collections; Calendars of State Papers, Domestic.] R. C. B.

ASTLEY, JOHN (*d.* 1595), master of the Jewel House, was the eldest son of Thomas Astley, Esq., by his second wife Anne (Wood). He held a confidential position in the household of the Princess Eliza-

beth, on whom his wife Catherine was in attendance, although she was for a time removed from that charge by a special order of the privy council. In a letter to his friend Roger Ascham (1552) he refers to their friendly fellowship at Cheston, Chelsey, and Hatfield, and their pleasant studies in reading together Aristotle's 'Rhetoric,' Cicero, and Livy. Leaving England in the reign of Queen Mary, he played a conspicuous part in the troubles of the English church at Frankfort. On the accession of Elizabeth he returned to this country, and in December 1558 was appointed master of the jewel house and treasurer of her majesty's jewels and plate, with the annual fee of 50*l.* His wife was appointed chief gentlewoman of the privy chamber, and he was also one of the grooms of the chamber. Soon afterwards he obtained from the crown a grant of the mastership of the game in Enfield chace and park, with the office of steward and ranger of the manor of Enfield. Accompanying her majesty on her visit to the university of Cambridge in 1564, he was created M.A. In or about 1568 the queen granted him a lease in reversion of the castle and manor of Allington in Kent, and he also had an estate at Otterden in the same county. He represented Lyme Regis in the parliament of 1570, and Maidstone in those of 29 Oct. 1586 and 4 Feb. 1588-9. He seems to have died about July 1595.

By his first wife Catherine, daughter of Sir Philip Champernowne of Devonshire, he had no issue. His second wife was Margaret, daughter of Thomas Lord Grey, by whom he had a son, afterwards Sir John Astley, and three daughters.

Astley was the author of 'The Art of Riding, set foorth in a breefe treatise, with a due interpretation of certein places alledged out of Xenophon, and Gryson, verie expert and excellent Horsememen: Wherein also the true use of the hand by the said Grysons rules and precepts is speciallie touched: and how the Author of this present worke hath put the same in practise, also what profit men maie reape thereby: without the knowledge whereof, all the residu of the order of Riding is but vaine. Lastlie is added a short discourse of the Chaine of Cauzezan, the Trench and the Martingale: written by a Gentleman of great skill and long experience in the said Art,' London, 1584, 4to.

[Cooper's *Athenæ Cantab.* ii. 182; Letter prefixed to Ascham's Report and Discourse of the Affairs of Germany; Tanner's *Bibl. Brit.*; Wotton's *Baronetage*, iii. 16; Ames's *Typogr. Antiquities*, ed. Herbert, 694, 959, 1111; Calendars of State Papers.] T. C.

**ASTLEY, JOHN** (1730?–1787), portrait painter, was born at Wem in Shropshire, was sent to London and placed under the portrait painter, Hudson. Leaving him, perhaps in 1749, he visited Rome, where he was the companion of Reynolds (from whose accounts a little later it appears that Astley was indebted to him in the sum of 12*l.* 15*s.* 6*d.*), of Richard Wilson and other well-known English artists. James Northcote is the author of the story that at Rome Astley was so poor that he was forced to patch the back of his waistcoat with a canvas of his own painting which represented a magnificent waterfall. Returning from Rome, probably with Reynolds, he secured the patronage and high favour of Horace Walpole. In 1759 he left London for Dublin, and in three years of portrait-painting made a large sum of money. Painting his way back to London, he revisited his birth-place, and met, in that neighbourhood, a rich widow, Lady Duckenfield Daniell, whom he married. This lady and her daughter died shortly after the marriage, and Astley, who was now a wealthy man, married a second time. He bought Schomberg House in Pall Mall (afterwards Gainsborough's), and fantastically re-arranged it for his convenience. 'He was a gasconading spend-thrift, and a beau of the flashiest order. When the Dublin ladies sat to him, he is said, by way of flourish, to have used his sword as a maulstick.' He had slight gift as a painter, and little merit as a man, but his good fortune never failed him. He had wasted much money in speculation, when the accidental death of a brother put 10,000*l.* in his pocket. Quite late in life he married his third wife: it is recorded that at this time he experienced a strange moral quickening and reflected with gravity on the past. He left a son and two daughters. Leslie enumerates Astley, 'a clever, conceited, out-at-elbows, and reckless fellow,' amongst the forgotten artists who were Sir Joshua's companions in youth. His best works, according to one writer, were copies from Italian pictures.

[Edward's *Anecdotes of Painters*, where Michael Adams's 'Biographical History' (Hogg, Paternoster Row) is referred to as the ultimate source of information about Astley; Leslie's *Life of Reynolds*; Northcote's *Life of Reynolds*; Redgrave's *Dictionary*; Nagler, 2nd ed.]

E. R.

**ASTLEY, PHILIP** (1742–1814), equestrian performer and theatrical manager, was born at Newcastle-under-Lyme. Receiving little education, he was brought up to his father's trade of cabinet-making and veneer-

cutting. About 1759 he joined General Elliott's regiment of light horse, became rough-rider and breaker-in, and rose to the rank of sergeant-major. Having distinguished himself at the battles of Emsdorff and Friedburg and upon other occasions, he obtained his discharge, and opened an exhibition of horsemanship in an open field in Lambeth, his only horse being his regimental charger, given him by General Elliott. He travelled through the country, performing at fairs and markets, resorting sometimes to his old trade as a cabinet-maker. In 1770 he opened a wooden theatre, with sheltered seats, but with an unroofed circus, in a timber-yard at the foot of Westminster Bridge. In 1775 Mr. and Mrs. Astley appeared on horseback at Drury Lane in the jubilee in honour of Shakespeare. The theatre in Lambeth was gradually enlarged and improved, and called the Amphitheatre Riding House. In 1781 the theatre was opened in the evening, and a candle-light exhibition first attempted, the earlier performances having been presented in the daytime. He had no license from the magistrates, but he pretended that his theatre was under the special protection of a royal patent. In 1783 he was committed to prison for performing illegally, but he was released upon the intervention of Lord Chancellor Thurlow, whose daughters had been taught to ride by Astley. Presently the magistrates granted him a license; he now called his theatre the Royal Grove, having painted the interior to resemble foliage, and added a stage to his circus, to vie with the attractions of a rival establishment of like kind opened on the site of the present Surrey Theatre. He carried his performers to Dublin and Paris, and established equestrian theatres in both those cities. In Paris he instituted the cirque known in later times as Franconi's. He endeavoured to establish floating baths in the Thames off Westminster Bridge. The French Revolution interrupted his performances in Paris, and his amphitheatre was converted into barracks. He re-entered the army, and served with distinction under the Duke of York. In 1794 the Royal Grove Theatre was burnt to the ground. Astley obtained leave of absence from the duke, hurried home to rebuild his theatre, and meanwhile engaged the old Lyceum building in the Strand for equestrian performances. His new theatre was opened in 1794, under the patronage of the Prince of Wales and Duke of York, and in 1798 he was permitted to designate his establishment Astley's Royal Amphitheatre. After the peace of Amiens he returned to Paris, presented his claims before the First Consul, regained pos-

session of his premises, and obtained payment of rent for the whole period of their occupation by the troops of the Revolution. With great difficulty he made his escape from Paris upon the issue of the decree for the detention of all English subjects in France. In 1803 the amphitheatre was again destroyed by fire, Astley's loss being estimated at 25,000*l*. Forthwith he laid the first stone of a new building, which was completed in time to open on Easter Monday, 1804. Astley now retired from active management in favour of his son, receiving, however, one clear half of the annual profits. He next attempted to establish an amphitheatre on the Middlesex side of the Thames, and obtaining a license through the influence of Queen Charlotte for 'music, dancing, burlettas, pantomimes, and equestrian exhibitions,' he opened the Olympic Pavilion on the site of the present Olympic Theatre. By this venture he lost 10,000*l*. In 1812 he sold the Olympic Pavilion to Elliston for 2,800*l*. and a small annuity to be paid during the life of Astley. There was but one payment of the annuity. Astley died in Paris, aged 72, and was buried in the cemetery of Père-la-Chaise. His son, 'Young Astley,' also an admired equestrian performer, to whom he had bequeathed the interest arising from his somewhat encumbered property, survived seven years only. He also died in Paris, and was interred beside his father in Père-la-Chaise. Philip Astley was the best horse-tamer of his time. He usually bought his horses in Smithfield, caring, as he said, 'little for shape, make, or colour: temper was the only consideration.' He rarely gave more than five pounds for a horse. He was a man of violent temper, peremptory of speech and rude of manner, but of great energy and notable integrity; and he was regarded with affection by the members of his company. He constructed in all nineteen amphitheatres for equestrian exhibitions.

[De Castro's Memoirs, 1824; Brayley's Theatres of London, 1833.] D. C.

ASTON, ANTHONY (*d.* 1712-1731), dramatist and actor, was the son of a gentleman who had been master of the Plea Office in the King's Bench, and was educated as an attorney. He is said to have played in all the London theatres, but never continued long in any. In a pamphlet of 24 pages, entitled 'A brief Supplement to Colley Cibber, Esquire, his Lives of the Famous Actors and Actresses,' and written apparently about 1747, Aston states that he came on the stage at the latter end of the reign of William III. With his wife and son he travelled through Eng-

land, and at the chief towns presented a medley entertainment of humorous scenes from various plays, with songs and dialogue of his own composition 'to fill up the chinks of the slender meal.' The 'Spectator' for 1 Jan. 1712 contained the advertisement of the popular comedian, Richard Estcourt, that he was about to open the Bumper Tavern in James Street, Covent Garden, and that his wines would be sold with the utmost fidelity by his old servant, Trusty Antony—it has been presumed that Aston was referred to—'who had so often adorned both the theatre in England and Ireland.' In 1717 he is said to have performed three times a week at the Globe and Marlborough Taverns in Fleet Street. In 1735 he petitioned the House of Commons to be heard against the Bill introduced by Sir John Barnard for restraining the number of theatres, and for the better regulating of common players of interludes, when he was permitted to deliver a ludicrous speech upon the subject, which was afterwards published in folio. Chetwood, whose history was published in 1749, believed that Aston was then living and 'travelling still, and as well known as the post-horse that carries the mail.' Aston's 'Brief Supplement' contains interesting mentions of Betterton, Mrs. Bracegirdle, and others. He was the author of 'Love in a Hurry,' a comedy performed without success at the Smock Alley Theatre, Dublin, about 1709; and of 'Pastora, or the Coy Shepherdess,' an opera performed by the Duke of Richmond's servants at Tunbridge Wells in 1712. The 'Fool's Opera, or the Taste of the Age,' printed in 1731, 'written by Matthew Medley and performed by his company in Oxford,' has also been attributed to Aston.

[Chetwood's History of the Stage, 1749.]

D. C.

ASTON, SIR ARTHUR (*d.* 1649), royalist general, was the younger of the two sons of Sir Arthur Aston, knight, of Fulham, Middlesex, by his first wife, Christiana, daughter of John Ashton, of Penrith, Cumberland, and grandson of Sir Thomas Aston, knight, of Aston, in Bucklow hundred, Cheshire, in which county the 'ancient and knightly family' of Aston had long flourished. Probably he was a native of Fulham, but nothing is recorded concerning his birthplace or education. He went to Russia during the unsettled state of that kingdom which preceded and followed the assumption of the throne by Michael Federowitz in 1613. He was accompanied by a certain number of men, captains, and commanders, and furnished with letters of recommendation from James I, and he pro-

bably remained there till a truce was concluded between this power and its belligerent neighbours, the Poles, in 1618. Returning to England, he again procured letters from King James, and repaired to the camp of Sigismund III, King of Poland—the enemy against whom he had lately striven—with the view of aiding that monarch in his war against the Turks. In this service he consequently witnessed the total overthrow of the Moslem army. With Christopher Radzivill, general-in-chief of the Lithuanian forces, he served throughout the war, attending the invasion of Livonia by Gustavus Adolphus, in 1621; and as a proof of his meritorious services obtained from that general letters testimonial, dated at Vilna, 1 Jan. 1623, in which his military bearing is highly extolled, especially in recovering the castle of Mittivva, which had been captured by the Swedes. For this and other services Sigismund, in a deed dated 23 April 1625, granted him a yearly pension of 700 florins. Upon peace being restored in 1631 to the dominions of Sigismund, Lieutenant-colonel Aston, for he had now attained that rank, once more returned to England.

Having raised here a regiment of native soldiers, he again departed for the continent. Once more he drew his sword in the service of a former adversary. Joining Gustavus Adolphus with his newly raised company, he attended that celebrated commander in his expedition against the Austrian Count Tilly, and probably throughout that splendid campaign which terminated on the plain of Lützen.

At the commencement of the Scottish rebellion he returned home with as many soldiers of note as he could bring with him. On 8 April 1640 he was appointed by the Earl of Northumberland sergeant-major-general of the regiments under Viscount Conway, then lying at Newcastle, and, after the rout at Newburn, retired with that body first to Durham, and then into Yorkshire. On Northumberland's sickness, the command of the army devolving on the Earl of Strafford, he was by that nobleman appointed (7 Sept.) colonel-general of one of the brigades serving against the Scots, who now occupied Newcastle; and on the 17th of the same month sergeant-major of the newly raised train-bands of Yorkshire, in which capacity he served until the return home of the Scots and the disbandment of the English army.

Dodd relates (*Church History*, iii. 57) that on the breaking out of the civil war Sir Arthur Aston—who had been knighted on 15 Feb. 1640—was offered his services to King Charles, but was refused; his majesty alleging that the cry of popery already ran so

high against him that it would certainly inflame matters if he admitted so many persons of that communion. Afterwards, as 'tis said, Sir Arthur, by way of trial, made the same offer to Sir Thomas Fairfax, general of the parliament's forces, who immediately embraced it. The king, being made acquainted with this passage, not only granted a commission to Sir Arthur, but gave a general invitation to all other catholics to come in to him. The appointment he received was that of colonel-general of the dragoons, with which regiment he did his majesty good service at Edgehill, beating off the field the right wing of the parliamentary army.

Upon the king's removal to Oxford from Reading (21 Nov. 1642), where he had lain since the attack on Brentford, he left Sir Arthur, who had now succeeded Mr. Wilmot as commissary-general of the horse, governor of that town, with a garrison of about three thousand foot, and a regiment of horse of about as many hundreds. Whilst governor of Reading he hanged one or two of his own men who had been guilty of some notorious crimes, 'to stop the mouths of the people,' said a contemporary journalist, 'for his murdering Master Boys, an honest citizen of London, by a seeming act of justice.' In the 'Weekly Intelligencer' (No. 18) it is stated that this Boys, who was executed in the town, was suspected of being a spy.

During the siege of Reading he three times repulsed the parliament forces under the Earl of Essex; but afterwards, whilst standing under a shed near the enemy's approaches, he received an injury on the head, occasioned by the fall of a tile—an accident which deprived him of his senses for the remainder of the siege. Accordingly, he resigned the command to Colonel Richard Fielding, the senior officer of the garrison. Clarendon, speaking of this accident, says that it 'was then thought of great misfortune to the king, for there was not in his army an officer of greater reputation, and of whom the enemy had a greater dread.' The siege terminated on 27 April 1643, by the garrison evacuating the town with the honours of war. Sir Arthur, in a horse-litter, led the procession, which made for Wallingford, and the next day joined the king at Oxford. Sir Arthur's wound did not long deprive the king of his assistance; for on 27 July following he came post from Bristol—at the taking of which city he was probably present—to the king at Oxford, informing him of the state of things in the west. In the following month, at the particular request of the queen, who resided in the city, and who imagined herself safer under the protection of a catholic, he

was appointed governor of Oxford on the death of Sir William Pennyman. Here, on 1 May following, the degree of M.D. was conferred upon him by the university. On 19 Sept. 1644 he was thrown from his horse and broke his leg; gangrene set in, and amputation was performed on 7 Dec. This accident was regarded by the puritans (VICARS, *Looking-glass for Malignants*, 1645) as a judgment of God against Aston for an act of revolting cruelty which he had perpetrated a short time before in adjudging that a soldier, against whom he bore a grudge, should have his right hand sawn off. As Sir Arthur thus became incapable of discharging the active duties of his office, the king removed him from the command (25 Dec.), conferring upon him a pension of 1,000*l.* a year. He was removed, says Anthony à Wood, 'to the great rejoycing of the soldiers and others in Oxford, having expressed himself very cruel and imperious while he executed that office.'

In November 1646 we find Aston in Ireland with the Marquis of Ormonde, with whom he probably returned to England on the delivery of Dublin to the parliament. It seems likely that, after the execution of the king, he joined the marquis in Ireland on his resuming the government there. Certain it is, that on 27 July 1649 he sat on a council of war convened by the lord-lieutenant. Being left with a garrison of 3,000 men in defence of Drogheda or Tredagh, Sir Arthur three times repulsed the army of General Cromwell, which approached the works 8 Sept. 1649. This determined perseverance, however, eventually proved unsuccessful. The town was entered on the 10th. No quarter was given, and only about thirty persons escaped, who, with several hundreds of the Irish nation, were shipped off as slaves to the island of Barbadoes (Down, *Church History*, iii. 58). Aston perished in the butchery. He was hacked to pieces, and his brains were beaten out with his wooden leg.

Clarendon remarks that the king, in all his armies, had but one general officer of the catholic religion, 'Sir Arthur Aston, whom the papists, notwithstanding, would not acknowledge for a papist.' The same writer, referring to Aston's appointment as governor of Oxford, says he 'had the fortune to be very much esteemed where he was not known, and very much detested where he was; and he was at this time too well known at Oxford to be beloved by any.' Clarendon adds that he was 'a man of a rough nature, and so given up to an immoderate love of money that he cared not by what unrighteous ways he exacted it.'

C.

ASTON, or ASHTON, JOHN (A. 1382), one of Wycliffe's earliest followers, is described as M.A. and 'scholar' (or, once, 'bachelor') in theology at Oxford, and, according to Anthony à Wood (*History and Antiquities of the University of Oxford*, i. 492, ed. Gutch), was a member of Merton College. He appears first to have been engaged as one of Wycliffe's band of itinerant priests, and by the year 1382 had become conspicuous for his advocacy of his master's views, particularly of those relating to the sacrament of the Lord's supper. Knighton (col. 2658, sq.) describes the zeal with which he carried on his mission as a preacher of the new doctrine, and the author of the '*Fasciculi Zizaniorum*' (p. 274) makes the well-known rebel, John Ball, in his confession, name Aston in company with Nicholas Hereford and Lawrence Bedeman as the leaders of Wycliffe's party. In 1382 these three men, together with Philip Repyngdon, were singled out among the Oxford Wycliffites as the subjects of a prosecution at the hands of Archbishop Courtenay, who first issued, 12 June, an ineffectual mandate restraining them from public functions in the university, and then summoned them to an examination to be held before him at the Blackfriars Priory in London. Wycliffe's specific doctrines had, in fact, been already condemned at the 'earthquake' council of Blackfriars in the preceding month, and there was little difficulty in implicating his disciples in them. Aston appeared on 18 June. He circulated a broadsheet declaring his allegiance to the faith of the church, and won so much sympathy that his final hearing on the 20th was interrupted and nearly broken up by the invasion of a friendly mob. He was, however, condemned, and, by virtue of a subsequent royal patent, dated 13 July, was expelled from his university. By the archbishop's order a search was then made for him and his companions, and at length, in October, Aston was seized. On 27 Nov. he followed the example of Bedeman and Repyngdon (Hereford had left the country), recanted, and returned to Oxford. His recantation, however, was transient. In 1387 Bishop Wakefield of Worcester denounced him as a dangerous Lollard, and prohibited

him from preaching. According to Foxe (*Acts*, iii. 47, ed. Townsend) he was cited and condemned later by Archbishop Arundel; but this statement seems to rest upon the notice in the *St. Albans Chronicles* (WALSINGHAM, ii. 65 sq., ed. Riley; *Chronicon Angliae*, 1328-1388, p. 350, ed. Thompson) of the popular disturbance at his trial, which evidently relates to that held by Archbishop Courtney (cf. *Fasc. Ziz.* p. 329).

A few writings by Aston are enumerated by Bale (*Scriptorum Illustrum Catalogus*, p. 495, ed. Basle, 1559).

The name is spelled variously. The authorities last mentioned give 'Astone'; the 'Fasciculi Zizaniorum' alternate between 'Astone' and 'Aston'; while the Lambeth registers (see *Fasc. Ziz.*, p. 310, n. 8) have 'Ashton', and Wilkins prints 'Asshton'. Other forms are 'Ayston' (Wood, *l. c.*) and 'Ayshton' (TANNER, *Bibl. Brit.-Hib.*, p. 54).

[*Fasciculi Zizaniorum*, pp. 273-90, 309-14, 329-33 (ed. Shirley, Rolls series); Knighton, *De Event. Angl.*, coll. 2656-9 (in Twysden's *Decem Scriptores*); Wilkins's *Concil. Magn. Brit.* iii. 157-69, 202 et seq. (1737); J. Lewis's *Life of Wiclif*, pp. 262-6, ed. Oxford, 1820; Lechler's *John Wiclif and his English Precursors*, pp. 215-22, 433-9, Engl. tr., ed. 1881.]

R. L. P.

ASTON, JOSEPH (1762-1844), journalist, dramatist, and miscellaneous writer, was born in 1762, the son of William Aston, gunsmith, of Deansgate, in Manchester. In 1803 he opened a stationer's shop at 84 Deansgate, where, on 1 Jan. 1805, he issued the prospectus of the 'Manchester Mail,' published at sixpence, and professing 'no political creed.' From 1809 till 1825 he was publisher and editor of the 'Manchester Exchange Herald,' a conservative journal. Afterwards he removed to Rochdale, where he started the 'Rochdale Recorder.' He died at Chadderton Hall, 19 Oct. 1844, and was buried at Tonge, adjoining Middleton. Aston was the friend and executor of Thomas Barritt, the antiquary. For about thirty-four years he also enjoyed the closest intimacy with James Montgomery, the poet, and editor of the 'Sheffield Iris,' who submitted to him most of his manuscripts for revision and criticism. He himself was a facile writer of verses, the majority of which appeared in his own paper. Of his dramatic pieces, 'Conscience,' a comedy, was performed at the Theatre Royal, Manchester, in 1815, with moderate success; and he also wrote 'Retributive Justice,' a tragedy, and 'A Family Story,' a comedy. His published works nearly all relate to Manchester. They include 'The Manchester Guide,' 1804, 2nd

edition, 1815, 3rd, with plates, 1826; 'History and Description of the Collegiate Church of Christ, Manchester,' 'Lancashire Gazetteer,' 1st edition 1808, 2nd 1822; 'An Heroic Epistle from the Quadruple Obelisk in the Market Place to the New Exchange,' 1809; 'A Descriptive Account of Manchester Exchange,' 1810; 'Metrical Records of Manchester, in which its History is traced (currente calamo) from the days of the ancient Britons to the present time,' 1822.

T. F. H.

ASTON, SIR RICHARD (d. 1778), judge, was a younger son of Richard Aston, Esq., of Wadley, Berks, by Elizabeth, daughter of John Warren, Esq., of Oxfordshire, grandson of Sir Willoughby Aston, Bart., and great-grandson of Sir Thomas Aston, created baronet by Charles I., sheriff of Cheshire in 1635, who exerted himself energetically on the side of the king in the constitutional struggle, and lost his life through a wound received in a skirmish in 1645. The Astons derived their name from Aston in Cheshire, where the family had been settled since the time of Henry II. It is not known at what date Richard Aston began practice as a barrister. His name appears with tolerable frequency in the first volume of Sir James Burrow's 'Reports of Cases in the King's Bench' (1756-8), but seldom in connection with cases of first-rate importance. He became king's counsel in 1759, and in 1761 was made lord chief justice of the court of Common Pleas in Ireland, on the resignation of Sir William Yorke. In this office he seems to have displayed considerable energy. Discovering that it was the practice of grand juries in that country to find bills of indictment upon the mere perusal of depositions without examining any witnesses, he set himself to reform so scandalous an abuse. He failed, however, to carry his colleagues with him, only two out of nine disapproving of the practice, which remained unaltered until 1816, when a bill making the examination of witnesses obligatory was introduced into the House of Commons by Horner and passed into law. Few English judges have been popular in Ireland, and Aston was not one of the few. Accordingly, on the resignation of Sir Thomas Denison, one of the judges of the King's Bench in England, which happened in 1765, he resigned his Irish post, and was

transferred to the English court and knighted. In 1768 Aston was a member of the court presided over by Lord Mansfield, which unanimously decided that the writ of outlawry issued against Wilkes upon his conviction for publishing two seditious libels in No. 45 of the 'North Briton' and in the 'Essay on Woman,' was bad by reason of two formal defects. Wilkes, who had kept out of the country until the writ was issued, voluntarily surrendered himself to the sheriff of Middlesex before the execution of it, and then appeared before the court upon a writ of error, claiming to have the writ of outlawry declared invalid upon certain technical grounds. The judges disallowed all the objections urged by the counsel for Wilkes, but the result of a careful examination of precedents conducted by the junior members of the court (Yates, Aston, and Willes) was to show that in the days when the writ of outlawry (*capias utlagatum*) was in common use 'a series of judgments required that . . . after the words "at my county court" should be added the name of the county, and after the word "held" should be added "for the county of —" (naming it).' The writ being faulty in these respects, the court held that it was invalid. A decision based upon a ground so purely technical, overlooked by the counsel for the applicant, and only discovered by the judges after careful research, excited in the minds of those hostile to Wilkes suspicions of corrupt motives, and a report was circulated to the effect that the judges, or at any rate Willes and Aston, had been bribed by a gift of lottery tickets, that Aston had been seen selling them on 'Change, and had remarked that he had as good a right to sell his tickets as his brother Willes. In 1770, on the sudden death of Yorke, which occurred on 20 Jan., immediately after his acceptance of the office of lord chancellor in succession to Lord Camden, Lord North's administration, being unable to find any lawyer of ability and character to succeed him, determined to put the great seal in commission; and Sir Sidney Stafford Smythe of the Exchequer, Sir Richard Aston of the King's Bench, and the Hon. Henry Bathurst of the Common Pleas, were selected as commissioners. These three judges, having had no experience of chancery business, in the space of a year (1770-1) committed so many blunders that a change was plainly necessary. Accordingly, on 21 Jan. 1771, the three commissioners delivered up the great seal, and on the same day it was redelivered to one of them, the Hon. Henry Bathurst. It was by Aston, sitting with Lord Mansfield in the court of King's Bench at Westminster, that in 1777

sentence of fine and imprisonment was passed upon Horne (afterwards Horne Tooke) for a seditious libel in advertising a subscription in relief 'of the widows, orphans, and aged parents of our beloved American fellow-subjects, who, faithful to the character of Englishmen, and preferring death to slavery, were, for that reason only, inhumanly murdered by the king's troops at or near Lexington and Concord in the province of Massachusetts.' Aston was married twice, first to a Miss Eldred, and then to Rebecca, daughter of Dr. Rowland, a physician of Aylesbury, and widow of Sir David Williams, Bart., of Rose Hall, Herts. He is said to have been brusque in his manners. He died in 1778, leaving no issue by either of his wives.

J. M. R.

ASTON, SIR THOMAS (1600-1645), royalist, was the heir of an ancient Cheshire family which had been settled at Aston in that county for many generations, and showed undoubted descent from the time of Henry II. Several of these early Astons were knighted, and one of them was treasurer to Philippa, the wife of Edward III, and joined in the wars in Spain. Thomas Aston was born on 29 Sept. 1600. His father, John Aston, who had been sewer to the wife of James I, died in 1615, and presumably his children remained under the care of his widow. Thomas was educated at Brasenose College, Oxford. He was made a baronet by Charles I in July 1628, and served as high sheriff of Cheshire in 1635. In this year died his first wife, Magdalene, daughter of Sir John Poulteney, but their four children all died young. She lies buried in the family chapel at Aston Hall, with an epitaph which may have been the work of her husband, and is certainly characteristic of the period. In 1639 Sir Thomas took as his second wife Anne, the heiress of Sir Henry Willoughby, and his only son was named Willoughby.

Sir Thomas was a staunch churchman and loyally attached to the monarchy. He was M.P. for Cheshire in the Short parliament of 1640. The portentous rise of nonconformist sentiment excited his fear and anger. When what was known as the Cheshire petition against episcopacy was in circulation,

Sir Thomas and his friends set about the preparation of a counter-petition or remonstrance. Sir Thomas was attacked as the framer of the document in an 'answer' which he denounces as the work of 'some brain-sick anabaptist,' and this appears to have provoked him to the hasty compilation of a quarto which is sufficiently described on its title-page: 'A Remonstrance against Presbytery, exhibited by divers of the nobilitie, gentry, ministers, and inhabitants of the County Palatine of Chester, with the motives of that Remonstrance, together with a short survey of the Presbyterian discipline, showing the inconveniences of it, and the inconsistency thereof with the constitution of this state, being in its principles destructive to the laws and liberties of the people. With a brieffe review of the institution, succession, jurisdiction of the ancient and venerable order of bishops found to be instituted by the Apostles, continued ever since, grounded on the lawes of God and most agreeable to the law of the land. By Sir Thomas Aston, Baronet. . . . Printed for John Aston, 1641' (B.M.), 4to. Sir Thomas includes in his book the petition to which it is an answer, and also 'certain positions' maintained by Samuel Eaton in his sermons at Chester and Knutsford. Eaton had been resident in New England, and had brought thence a keen appreciation of the congregational form of church government. Aston also made 'A Collection of Sundry Petitions presented to the King's most excellent Majesty, as also to the two Houses now assembled in Parliament. And others already signed by most of the gentry, ministers, and freeholders of several counties,' 1642 (Bodleian). When the war broke out between the king and parliament, Sir Thomas took part with the royalists, and was in command at Middlewich in March 1642-3, when he was defeated by Sir William Brereton. The royalists lost their two cannons and five hundred stand of arms. Few were slain, but the prisoners included many of the principal cavaliers engaged, and the town suffered at the hands of the roundheads, who made free with the property of burgesses and the plate of the church. Sir Thomas escaped, but when a few days later he returned to Chester he was placed under arrest at Pulford, where he wrote a defence of his conduct which furnishes a very minute account of the affair and is an interesting picture of the civil war. Sir Thomas apparently freed himself from censure and rejoined the king's army, and indeed is said to have suffered a second defeat from Brereton at Macclesfield in 1643. He was afterwards captured in a skirmish in

Staffordshire. When in prison at Stafford he endeavoured to escape, but the attempted evasion was discovered by a soldier who struck him on the head. This and other wounds received in the war brought on a fever, of which he died at Stafford on 24 March 1645. He was buried at Aston chapel, and is fairly entitled, as Wood says, 'to the character of a stout and learned man.'

[Ormerod's History of Cheshire, ed. Helsby, 1882, ii. 82-3; Earwaker's East Cheshire, 1880, i. 470, ii. 657; Wood's Athenæ Oxonienses; Axon's Cheshire Gleanings.] W. E. A. A.

ASTON, WALTER, BARON ASTON OF FORFAR (1584-1639), ambassador, was the eldest son of Sir Edward Aston, of Tixall in Staffordshire, whose rental has been estimated at 10,000*l.*, so that he must have been one of the richest men in England. Walter was one of the knights of the Bath, created at the coronation of James I, and was one of the first baronets. He was sent as ambassador to Spain in 1620, where he remained till diplomatic relations between Spain and England were broken off at the beginning of 1625. James I did not, however, repose sufficient confidence in him to entrust him with the delicate negotiations relating to the Palatinate and the marriage treaty, and in 1622 he was overshadowed by Lord Digby, who at the end of that year became Earl of Bristol, and was appointed extraordinary ambassador to conduct those negotiations. When Prince Charles and Buckingham were in Spain, he gained their confidence by expressing a strong opinion, in opposition to Bristol, against the Spanish proposals for securing the Palatinate to the family of the elector palatine by educating the two eldest sons at the emperor's court. Charles took a liking to him probably on this ground, and in his subsequent letters always addressed him as 'Honest Wat.' In 1627 he created him Lord Aston of Forfar, in the Scottish peerage. From 1635 to 1638 he again served as ambassador in Spain. Shortly after his return he died, on Aug. 13, 1639. He is well known in literary history as the patron of Drayton. His wife was Gertrude Sadler, granddaughter of the Sir Ralph Sadler who played a part in politics in the reign of Henry VIII and his successors.

[Douglas, Peerage of Scotland; MSS., Despatches in State Papers, Spain.] S. R. G.

ASTON, WILLIAM (1735-1800), a Jesuit, whom Dr. Oliver believed to be the son of Edward Aston, by Ann Bayley his wife, was born in London 22 April, 1735. He made his early studies in the college at St. Omer, and at the age of sixteen he joined

the Society of Jesus at Watten (7 Sept., 1751). In 1761 he was professor of poetry at St. Omer. He was admitted to his solemn profession in his order 2 Feb. 1769. His commanding talents and accomplished manners recommended him for the presidency of the Little College at Bruges. On its violent suppression by the Belgic-Austrian privy council of Brussels, he was detained a close prisoner for eight months; but he and his companions were ultimately released, owing to the exertions of Henry, the eighth Lord Arundell of Wardour, who interceded with Prince Staremberg, the Austrian prime minister, on their behalf. A few years later Father Aston established an academy at Liège, and he obtained a canonry in the collegiate church of St. John in that city. He died 15 March, 1800. Besides writing for reviews and journals, Father Aston published D'Azaïs' 'Compte-rendu,' 'Lettres Ultramontaines,' and 'Le Cosmopolite.'

[Oliver's Collectanea S. J.; Foley's Records of the English Province of the Society of Jesus, vols. v. and vii.] T. C.

ASTRY, RICHARD (1632?-1714), antiquary, was born in Huntingdonshire in or about 1632. He was admitted of Queens' College, Cambridge, on March 14, 1647-8; proceeded B.A. in 1651; and in 1654 obtained from his college a grace for M.A., though that degree is not recorded in the university registers. After leaving the university he was elected an alderman of Huntingdon, and he was buried at St. Mary's in that town on Aug. 11, 1714, aged 83. He is the author of a quarto volume of collections, heraldic and topographical, relating to the county of Huntingdon, preserved in the Lansdowne MS. 921. The authorship of this MS., which is the only systematic attempt towards a history of Huntingdonshire, has hitherto been erroneously ascribed to Sir Robert Cotton. Mr. Thomas Baker has made copious extracts from this work in the thirty-sixth volume of his MSS. now deposited in the University Library, Cambridge. Astry also drew up 'Alphabetical Catalogues of English Surnames, with the arms belonging to them, and the particular times that the persons recorded lived; forming three small but rather thick oblong folio volumes, formerly in the possession of the Rev. Henry Freeman, of Norman Cross.

[MS. Baker, 36; MS. Lansd. 921.] T. C.

ASTY, JOHN (1672?-1730), dissenting clergyman, was son of Robert Asty of Norwich and grandson to the 'ejected' of Stratford, whose christian name was John, not Robert (HARMER, *Ancient and Present State of Con-*

*gregational Churches of Norfolk and Suffolk*, p. 45). He was born at Norwich 'about 1672.' Of his early education, and of his education altogether, little or nothing has been transmitted; but in his funeral sermon by Guyse (1730) he is shown to have made 'thankful acknowledgments for his privilege in descending from godly parents' and for 'the advantages received from a religious education.' He spent several years during the earlier part of his ministry in the historic family of the Fleetwoods of Stoke Newington, then outside London. It does not appear that he undertook any pastoral charge proper until 1713. In that year he was 'ordained' as 'pastor' to a congregation at Ropemaker's Alley, Moorfields. Here he laboured most devotedly and self-denyingly until the date of his death. He was involved in a somewhat passionate controversy with a fellow dissenting minister named Martin Tomkins, also 'settled' in Stoke Newington. Tomkins was among the earliest of the originally 'evangelical' protestant dissenters who came to hold Arian-Socinian conceptions of the 'divinity' of Jesus Christ. This touched nearly Asty's beliefs, and he fearlessly and faithfully asserted the Biblical-Athanasian doctrine. Even Tomkins admitted ultimately that his opponent contended not against him as an individual, but for what he believed to be truth necessary to salvation. Later Asty signed the declaration 'on the doctrine of the blessed Trinity,' as promulgated in the first article of the Church of England and in the answer to the fifth and sixth questions of the Assembly's catechism, agreed upon at the Salters' Hall synod, 7 April 1719. He was a great admirer of the practical writings of the illustrious Dr. John Owen, and in his earnest sermons was never weary in setting forth 'the unsearchable riches of Christ.' 'And yet,' witnesses Guyse, 'in my freest converse with him I have with pleasure observed a remarkable tenderness in his spirit as to judging the state of those who differed from him, even in points which he took to be of very great importance' (as before, p. 81). He died on 20 Jan. 1729-30. He is one of the many venerable men laid to rest in Bunhill Fields, not far from John Bunyan's grave. He published only a single sermon, on the death of Mrs. Elizabeth Fleetwood and preached at Stoke Newington on 23 June 1728 from Job ix. 12. He also prefixed to the collective folio volume of the 'Sermons and Tracts of Dr. John Owen' (1721) a well-weighed and loving account of this second greatest of the later puritans. It may be added that among the 1662 farewell sermons is one by John

Asty, the 'ejected' clergyman of Stratford, and that Robert Asty of Norwich published a singularly bright and consolatory book called 'Treatise of Rejoicing in the Lord Jesus in all Cases and Conditions' (1683).

[Calamy and Palmer's Nonconf. Mem. iii. 288; W. Wilson's Dissenting Churches, ii. 537-45; Dr. John Guyse's Funeral Sermon; Harmer, ut supra; for full details on the Asty family, see Browne's History of Congregationalism in Norfolk and Suffolk, Appendix, p. 614.] A. B. G.

#### ATHELARD OF BATH. [See ADELARD.]

**ATHELM** (d. 923), archbishop of Canterbury, is said by William of Malmesbury (*Gesta Reg. ii.* 184) to have been a monk of Glasstonbury. This statement has been disputed (*Anglia Sacra*, i. 556), but there is no conclusive evidence against it. In 909 Athelm was made the first bishop of Wells. Since 705 there had been two West-Saxon sees, at Winchester and at Sherborne [see **ALDHELM**]. William of Malmesbury (*Gesta Reg. ii.* 129) says that Pope Formosus sent a letter to King Edward, excommunicating him and his subjects, because the West-Saxon country had been left without a bishop for seven years; that the king held a synod of great men, who divided the land into five instead of two dioceses, and chose five new bishops; and that, in 909, Archbishop Plegmund consecrated seven bishops in one day, one of these being Athelm to the church of Wells, one of the new dioceses. The story is full of anachronism, for Formosus died in 896, and the names of some of the bishops suggest other difficulties. The division of the dioceses, the creation of the see of Wells, and the consecration of Athelm may, however, be accepted. In 914 Athelm was made archbishop of Canterbury, and obtained the pall from John X. Athelm was the brother of Heorstan, the father of Dunstan. He is said to have been Dunstan's patron, but he died about the time of the birth of that saint. Athelm is said by Florence of Worcester to have crowned Æthelstan. This, however, is a mistake, for he died 8 Jan. 923, and was succeeded by Wulfhelm, who must have officiated at the coronation, which took place the next year.

[William of Malmesbury, *Gesta Reg. ii.* (Eng. Hist. Soc.); *Gesta Pontiff. i.* (Rolls Ser.); Florence of Worcester; Wharton, *Anglia Sacra*, i.; Adelard, *Vita Dunstani*; Stubbs, *Reg. Sac. Anglic.* p. 13, note.] W. H.

**ATHELSTAN** or **ÆTHELSTAN** (895-940), king of the West-Saxons and Mercians, and afterwards of all the English, was the son of Eadward the Elder, and of a noble lady Ecgwyn, according to Florence of Worcester;

but another and later story represents his mother as a shepherd's daughter, and not the lawful wife of Eadward. In all probability he was illegitimate, but by a recognised mistress of noble birth. Born during the lifetime of his grandfather Ælfred, Æthelstan was a favourite of the great West-Saxon king, who gave him as a boy a purple cloak, a jewelled belt, and a sword with a golden scabbard, no doubt to mark him out, in spite of his illegitimacy, as a right ætheling. When the young prince was six years old, Ælfred died, and during the stormy years when Eadward was slowly recovering the overlordship of Mercia and Northumbria from the Danish hosts, Æthelstan was sent to be brought up by his aunt Æthelflæd, the Lady of the Mercians, and her husband the ealdorman Æthelred. Probably he took part in the great series of campaigns by which Æthelflæd and Eadward gradually extended the power of the West-Saxon dynasty over the whole of northern England. His education seems to have been sound and literary; the catalogue of his later library (among the Cottonian MSS.) included several good Latin works. In 925, when Æthelstan was aged thirty, Eadward the Elder died, and the ætheling was at once chosen to succeed him. The Anglo-Saxon Chronicle specially mentions that he was elected by the Mercians, who still retained their separate national gemót. The West-Saxon election apparently came later. Æthelstan was crowned at Kingston in Surrey (perhaps as being near the borders of Mercia and Wessex), as were most succeeding kings till the building of Eadward the Confessor's abbey at Westminster. Doubts, however, were cast upon the election, on the ground of Æthelstan's dubious legitimacy; and an ætheling named Ælfred (whose exact relationship to the kingly house is unknown) endeavoured to upset the arrangement. A legendary tale in William of Malmesbury states that Ælfred, being accused of conspiracy against the king, went to Rome to clear himself, and there, having sworn a false oath, at once fell down in the pope's presence, and died three days later at the English college. The materials for Æthelstan's personal and regnal history are somewhat deficient. The 'Anglo-Saxon Chronicle' and Florence of Worcester (translating from a lost copy of the 'Chronicle') are here very meagre, while William of Malmesbury, who is very full on this reign, is uncritical, and evidently derives much of his information from ballads and other legendary sources. It is quite clear, however, that 'glorious Æthelstan' was a personally vigorous and able king, a worthy successor of Ælfred and Eadward, and

a precursor of Edward I, definitely pursuing an imperial policy, by which he hoped to unite all Great Britain under the overlordship of a single West-Saxon king. In the year following his accession he had a conference at Tamworth (the royal burgh of Mercia) with Sihtric, Danish king of Northumbria, to whom he gave his sister in marriage, and whom he apparently compelled to acknowledge his suzerainty. A year later Sihtric died, whereupon Æthelstan drove out his son Guthfrith, and annexed Northumbria to his own immediate dominions. A coalition of the minor kings was then formed to resist Æthelstan's imperial policy, and was joined by Howel, king of the West-Welsh (perhaps the Cornish, but more probably Howel Dda of Dyfed), Owen, king of Gwent (Monmouthshire), Constantine, king of the Scots, and Ealdred, lord of Bamborough, and leader of the English remnant in the modern county of Northumberland. Æthelstan crushed this coalition, and compelled all the underkings to acknowledge his supremacy 'with pledge and with oaths,' at a congress held at Emmet in 926. He thus perhaps deserves the title of first king of all the English far more fully than Ecgbert or any other prince before Eadgar. At the same time his overlordship was of a loose character; he did not attempt to govern the whole kingdom directly, but left the native princes everywhere as his vassals (to use the language of later feudalism), it being one of his favourite sayings that it was more glorious 'regem facere quam regem esse.' Still he expelled Ealdred of Bamborough altogether, as well as Guthfrith, so that he became direct king of all English and Danish Britain, leaving only the Celtic princes of the west and north as underkings. Towards the Welsh his policy was one of mixed firmness and conciliation. He made the princes of Wales proper do homage to him at Hereford, paying him a stipulated tribute of coin and cattle; and he fixed the Wye as the political boundary between the two races. In West Wales or Damnonia he also pushed forward the West-Saxon boundary, subjugating the Welsh in the northern half of Exeter city, which they had previously held as their own, while the English held the southern half, and fortifying the town as a border fortress with stone fortifications—the earliest mentioned in Anglo-Saxon history. He then conquered the western half of Devonshire, and restricted the Cornish princes to the country beyond the Tamar. At the same time he adopted a conciliatory tone to the conquered Welsh in Wessex itself, dedicating churches and colleges in Dorset and Devon to Welsh saints, and holding his *gemót* at Exeter, whence some of his laws are dated.

As a legislator his enactments are mainly of the nature of amendments of custom, and do not (like those of Ælfred and Cnut) aspire to the character of a code. In 933, according to the 'Chronicle,' or in 934, according to Simeon of Durham (a safer guide on northern matters), Constantine, king of Scots, rebelled (William of Malmesbury says by receiving the banished Guthfrith), and Æthelstan then invaded Scotland 'with land host and ship host, and overharrid much of it.' On his way he destroyed the Danish tower at York, which Guthfrith had endeavoured to occupy. In 937 occurred the final grand victory of Æthelstan's life, the campaign and battle of Brunanburh. A dangerous rebellion and coalition of the subject princes with the Danish pirate kings then took place, and threatened seriously to overthrow the newly founded West-Saxon supremacy. One Anlaf, of whom nothing certain is known, came from Ireland with a fleet of long-ships, and stirred up Constantine of Scotland, Owain, Celtic king of Cumberland, and all the Northumbrian Danes and Welshkind to a great revolt. Æthelstan and his brother the ætheling Eadmund led a hasty levy against the combined host, and defeated them with great slaughter at a place called Brunanburh, the exact locality of which is uncertain, but it is probably somewhere in Northumbria. This battle practically established for the time the unity of England and the supremacy of the West-Saxon house. It is commemorated by a fine alliterative ballad, inserted in the 'Chronicle,' and frequently translated into modern English. The battle is there described as the greatest of English victories over the native Welshkind since the first invasion of Britain. The great personal popularity of Æthelstan is shown; not only by the tone of this fine war-song, but also by the numerous ballads and legends implied in William of Malmesbury's narrative. Three years later, on 27 Oct. 940, Æthelstan died at Gloucester, after a reign of fourteen years and ten weeks. We have no record that Æthelstan was ever married or had any children. But the splendour of his family alliances on the continent, unexampled in the case of any other English king before the Norman conquest, specially marks the unusual dignity of his position. Five of his sisters married continental princes, including Charles the Simple, king of the West Franks, Louis, king of Arles, and Hugh the Great, duke of the French; while Henry, king of the East Franks, actually sent ambassadors to ask of Æthelstan one of his sisters in marriage for his son Otto, afterwards the Emperor Otto the Great. Æthelstan royally sent a selection of two, one of whom Otto kept, and

passed on the other to a nameless German princeling. After the murder of Charles the Simple, his widow and her son Louis (d'Outremer) took refuge with Æthelstan, at whose court Louis was brought up. Later on his uncle Hugh sent for Louis to return, and he acquired his familiar surname (Ultramarinus) from this sojourn beyond the sea with his English relations. Æthelstan was buried in Malmesbury Abbey, to which (as to other Celtic shrines) he had been a great benefactor, and where a later mediæval tomb (perhaps remade) is still shown as his. He was succeeded by his brother Eadmund, the hero of Brunanburh. Another brother, the ætheling Eadwine, is said by Simeon of Durham (a late authority) to have been drowned at sea by Æthelstan's orders. William of Malmesbury expands this story, by obviously legendary additions, into an ugly romance; but the 'Chronicle' merely mentions briefly that Eadwine was drowned in 933, an entry which Henry of Huntingdon amplifies by adding (after his usual groundless fashion) that it was much to Æthelstan's sorrow. We may probably acquit the king's memory of the doubtful fratricide.

[The Anglo-Saxon Chronicle (here contemporary, but slight); Florence of Worcester (translating a contemporary, but almost equally meagre); William of Malmesbury (full but untrustworthy); Simeon of Durham; Henry of Huntingdon—all under dates 924-940; Kemble's *Codex Diplomaticus Ævi Saxonici* has many of Æthelstan's charters; Thorpe's *Ancient Laws and Institutes of the Anglo-Saxons* contains Æthelstan's Laws; Freeman's *Old-English History* (the chief modern critical authority), p. 145; Freeman's *Norman Conquest*, vol. i.; Palgrave's *History of the Anglo-Saxons*, p. 165; Sharon Turner's *History of the Anglo-Saxons*, ii. 177; Lappenberg; Thomas Kerslake, *The Welsh in Dorset*, and other pamphlets (Bristol, 1870 and onward).] G. A.

**ATHERSTONE, EDWIN** (1788-1872), a voluminous writer in verse and prose, was born on 17 April 1788. His first work was a poem entitled 'The Last Days of Hercules', 1821. This was followed, in 1824, by 'A Midsummer Day's Dream.' In 1828 appeared the first six books of his chief work, 'The Fall of Niniveh.' Seven more books were published in 1847; and finally, in 1868, the whole work appeared complete in thirty books. Atherstone was a friend of John Martin, the painter; and the poet and painter worked in friendly rivalry. In 1830 he published an historical romance, 'The Sea Kings in England,' dealing with the times of Ælfred. His other romance is 'The Hand-writing on the Wall,' 1858. Afterwards he returned to the writing of epics, and in 1861

was delivered of 'Israel in Egypt,' a poem not far short of twenty thousand lines. The grandiose scale on which his poems were planned attracted some ephemeral notice and applause. Atherstone died at Bath on 29 Jan. 1872. At the time of his death he was in receipt of a pension of 100*l.* a year.

[*Athenæum*, 10 Feb. 1872; *Brit. Mus. Cat.*] A. H. B.

**ATHERTON, JOHN** (1598-1640), bishop of Waterford and Lismore, is believed to have been born at Bawdripp, in Somersetshire, in 1598, where his father, Rev. John Atherton (a canon of St. Paul's), was rector of the parish. At sixteen he went to Gloucester Hall (subsequently Worcester College); but after taking his bachelor's degree he removed to Lincoln College, of which he was a member when he took his master's degree. He entered holy orders, and became rector of Huish Comb Flower in his native county. He acquired a great reputation as a skilful canonist and one learned in ecclesiastical law, and on this account is said to have attracted the notice of Thomas Wentworth, afterwards Earl of Strafford, then lord lieutenant of Ireland, and to have been appointed prebendary of St. John's, Dublin, 23 April 1630. This he held by dispensation with his previous preferment. In 1635 he became chancellor of Christ Church, and held also the rectories of Killaban and Ballintubride, in the diocese of Leighlin. He was chancellor of Killaloe in 1634. His highest promotion was reached in 1636, when (4 May) he became bishop of Waterford and Lismore. In this situation he is said to have 'behaved himself for some time with great prudence, though forward enough, if not too much, against the Roman catholics in that country' (Wood's *Athen. Oxon.*). He was in 1640 accused of unnatural crime, and being found guilty was first degraded and afterwards hanged at Dublin, 5 Dec. 1640. His body, by his own desire, was buried in the obscurest part of St. John's churchyard, Dublin.

A theory has been set forth that he was in reality innocent of the crime imputed to him, and a victim to the vindictive feelings of powerful enemies. Wentworth, in his position as lord deputy, had recovered from the Earl of Cork some of the great tithes which he had appropriated, and had compelled the earl to compound for some church lands in his possession. Bishop Atherton sued for the remainder of those lands belonging to the see of Waterford which were still retained by the Earl of Cork; and Carte wishes us to believe that the bishop 'fell a sacrifice to that litigation rather than to justice, when he

suffered for a pretended crime upon the testimony of a single witness that deserved no credit. The bishop absolutely denied the fact; and the fellow who swore against him, when he came to be executed himself some time afterwards for his crimes, confessed at the gallows that he had falsely accused him.' Carte's statement is much too strong. Dr. Nicholas Bernard attended him from the time of his sentence to that of his execution, and at the request of Archbishop Usher wrote 'A Relation of the Penitent Death of Bishop Atherton.' From this we learn that Atherton's attitude during the trial was 'by all condemned;' but when the fatal issue became manifest his manner changed. Three times daily Bernard visited the prisoner, and after a time he became penitent, and faced the penalty with equanimity. 'The magnanimity of the man,' says Bernard, 'I did much admire.' When the news of the lord-deputy's death brought some hope of a reprieve, 'it moved him not, as rather choosing a present deserved death than the prolonging of an ignominious life; whereby the scandal would but increase. He did so abhor himself that once a thought rising within him to have petitioned, to have been beheaded, he told me he answered himself with indignation "That a dog's death was too good for him," and so judged himself to the last.' Dr. Bernard tells us that the father of Atherton had foretold the shortening of life as a penalty for disrespect to his mother. He had, when a youth, threatened her that he would hang himself with his horse's bridle on a common gallows by which they were riding. On the day of his execution he read the morning service to his fellow-prisoners, and was then escorted by the sheriff of the county, a Roman catholic, who is said to have behaved with much unnecessary harshness. Bernard nowhere expresses an opinion of Atherton's innocence, although he reports his denial 'of the main thing in the indictment, which the law laid hold of, and which hath been since confirmed by the confession of his chief accuser at his execution also, yet in his own conscience applauded and magnified God's justice in it; and so burned a bundle of papers, which he wrote out of law books, in his own defence.' These quotations are clearly incompatible with the idea that Atherton was the innocent victim of a vile conspiracy. It is to be noted that none of his accusers were Roman catholics. His execution was witnessed by an immense crowd, and his last speeches and prayers were broken by a wretch who had climbed upon one end of the gallows in order to interrupt and deride the unhappy

man. A penitent and pious letter to his wife, and another to his children, are printed by Bernard.

E. A. A.

**ATHERTON, WILLIAM (1775-1850)**, Wesleyan minister, was born at Lamberhead Green, near Wigan in Lancashire, in 1775. At the age of 21 he entered the Wesleyan ministry on the Grimsby circuit, and his fresh and original style of preaching gave him a place among the most famous preachers of England in the first half of this century. He worked under the direction of the Wesleyan Conference for more than fifty years, and was chosen in 1846 the president of that assembly.

After spending some years in London, Atherton became in 1849 superintendent of the Wakefield circuit and chairman of the Leeds district, a position which he held until his death on 26 Sept. 1850, in his 74th year.

Atherton published several works, among which were the following: a sermon on the 'Insecurity of Life,' in 1818; an abridged 'Life of Lady Maxwell,' in 1838; and an 'Address on the Character, Agencies, and Religious Effectiveness of Wesleyan Methodism,' in 1839.

[Minutes of the Methodist Conferences; Dr. Osborn's *Outlines of Wesleyan Bibliography*.] W. B. L.

**ATHERTON, SIR WILLIAM (1806-1864)**, lawyer, was born at Glasgow in 1806, being the son of the Rev. William Atherton [q. v.], a well-known Wesleyan preacher, by Margaret, daughter of the Rev. Walter Morison, a minister of the Established Church of Scotland. He was educated in England, adopted the legal profession, and practised from 1832 to 1839 as a special pleader below the bar. In the latter year he was called to the bar at the Inner Temple. He chose the northern circuit, and was not long in securing a high reputation. He was returned to parliament as one of the members for the city of Durham in 1852, and was re-elected by the same constituency in 1857 and 1859. In politics he was an advanced liberal; opposed to the repeal of the Maynooth grant; in favour of the ballot, a large reform in the law, and the

removal of all religious disabilities. He was appointed a queen's counsel in 1851, and became a bencher of his inn the same year. He was judge-advocate of the fleet and standing counsel to the admiralty from 1855 till December 1859, when he succeeded Sir H. S. Keatinge as solicitor-general, and received the honour of knighthood. In June 1861, on the elevation of Sir R. Bethell (Lord Westbury) to the lord chancellorship, Sir William Atherton succeeded to the vacant post of attorney-general. He resigned his office in the autumn of 1863 on account of ill-health; and died at his residence, Westmoreland Terrace, Hyde Park, London, 22 Jan. 1864. He married, in 1843, Agnes Mary, daughter of Mr. Thomas James Hall, chief magistrate at Bow Street. While practising below the bar he published 'An Elementary and Practical Treatise on the Commencement of Personal Actions, and the Proceedings therein to Declaration, in the Superior Courts at Westminster. Comprising the Changes effected by the Uniformity of Process Act (2 W. 4. c. 39) and recent Rules of Court.' Lond. 1833. 12mo.

**ATKINE, ATKINS, or ETKINS, JAMES** (1613?-1687), Scottish bishop, born at Kirkwall about 1613, was the son of Harie Atkine, sheriff of Orkney. He graduated M.A. at Edinburgh, 23 July 1636; and studied divinity at Oxford, 1637-8, under Dr. John Prideaux, then regius professor and rector of Exeter College. He became chaplain to James, marquis of Hamilton, high commissioner to the strongly anti-prelatical general assembly at Glasgow, 1638. He was presented to the living of Birsay, Orkney, 27 July 1641; admitted 26 June 1642, but deposed by the Orkney presbytery, July 1649. In 1650, however, we find Atkine, as moderator of the presbytery, presenting an address to James, marquis of Montrose, expressive of loyalty to Charles II.; for this the whole presbytery was deposed by the assembly, and the council of state issued an order for At-

kine's apprehension. Warned of this by the clerk of the council, Sir Archibald Primrose, his kinsman, he took refuge in Holland in 1650-3. We find him in Edinburgh in 1653-60, and on 15 May 1661 he received a grant of 100*l.* on account of his sufferings in the loyal cause. He went to London with Thomas Sydserf (the only survivor of the old hierarchy, and now made bishop of Orkney), and obtained the rectory of Winiffrith, Dorset. On 1 Nov. 1676, he was elected bishop of Moray; the patent was issued 5 June 1677, but he was not consecrated till 28 Oct. 1679. He was translated to the see of Galloway, 6 Feb. 1680, by a patent dated 6 March. His loyalty was not servile; in 1686 he took a firm stand in parliament against rescinding the acts against popery; the Earl of Moray, royal commissioner, who opened the parliament, and the chancellor, Lord Perth, had both joined the church of Rome. The obnoxious measure was withdrawn. Atkine died of apoplexy, 15 Nov. 1687, aged seventy-four. He married Anna Rutherford, and had four daughters.

**ATKINS.** [See ATKYNS.]

**ATKINS, HENRY** (1558-1635), physician, born in 1558, was son of Richard Atkins of Great Berkhamstead, Hertfordshire. Matriculating at Trinity College, Oxford, in 1574, he graduated there and afterwards proceeded M.D. at Nantes. In 1588 he became fellow of the College of Physicians, and in 1606 president. He was re-elected in 1607, 1608, 1616, 1617, 1624, and 1625. In 1697 he sailed as physician to the Earl of Essex in the Spanish expedition, but was so seasick that he had to be put on shore and resigned the appointment. In 1604 Dr. Atkins was sent by James I to Scotland to bring back his son Charles. A letter of Dr. Atkins' on the child's health, written from Dunfermline, is extant (THOMAS, *Historical Notes*, p. 485). In 1612 he was called into consultation during the last illness of Henry, Prince of Wales, and his opinion (MAYERNE, *Opera*, p. 119) was that the disease was a putrid fever 'without malignity, except that attending putridity.' He suggested bleeding. His signature, as one of the king's physicians, stands next to that of Mayerne in the original report of the post-mortem examination (*Original State Papers*, vol. lxxi. No. 29). In 1611 the king is said to have offered Dr. Atkins the first baronet's patent. In 1618, under the presidency of Dr. Atkins, the College of Physicians issued the first 'London

Pharmacopeia.' The doctor married Mary Pigot of Dodershall, Bucks. He lived in Warwick Court, enjoyed a large practice, and died rich on 21 Sept. 1635. He left an only child, afterwards Sir Henry Atkins, and is buried in Cheshunt church, where his monument remains. He was a benefactor of the College of Physicians.

[Munk's College of Physicians, i. 93.]

N. M.

ATKINS, JOHN (1685-1757), naval surgeon, received his professional education as a surgeon's apprentice, and immediately entered the navy. He records wounds which he treated in Sir George Rooke's victory off Malaga (1703). In 1707 he was in some small actions with the French in the Channel, and in 1710 he served in the Lion man-of-war at the battle of Vaia Bay. The ship was commanded by Captain Galfridus Walpole, whose right arm was severely wounded. Atkins cut it off above the elbow and sat up two whole nights with the patient afterwards, 'supposing a tenderness and respect would engage his good opinion and consequently his interest.' This interested attention did not gain its object, for Captain Galfridus gave no thanks for it, being, as Atkins bitterly observes, 'the reverse of his brother (Sir Robert), loving cheapness in all jobs' (*Navy Surgeon*, 187). In February 1721 Atkins sailed from Spithead for the coast of Guinea with the Swallow and the Weymouth, sent to put down piracy on the west coast of Africa. They visited Sierra Leone, Wydah, the Gaboon, Elmina, and captured at Cape Lopez 270 pirates and 10,000*l.* in gold dust. When the pirates were tried, Atkins was made registry, and complains that for twenty-six hard days' work he only received as many pounds. Three or four of the crew died every day for six weeks, and the surgeon became purser for want of another survivor fit for the office. They sailed to Brazil and the West Indies, where at Port Royal a hurricane carried off the masts. In April 1723 the vessels returned to England and were paid off. Atkins was unsuccessful in getting another ship, and took to writing books. He published two, both of which have had more than one edition. The '*Navy Surgeon*' was published first (1732). It is a general treatise on surgery, with remarks on mineral springs, empirics, amulets, and infirmaries. It shows the author to have been an observant but somewhat prejudiced practitioner. The cases are clearly related, and are the best part of the book. Many surgical books are quoted, and enough of other books to show that Atkins was widely

read. Horace, Juvenal, Pope, and Milton were known to him, and he admired also Stephen Duck. This book appeared in a shorter form as '*A Treatise on the following Chirurgical Subjects*,' &c., without date. In 1735 he published '*A Voyage to Guinea, Brazil, and the West Indies*.' This describes the voyage of the Swallow and the Weymouth, and is full of interesting information about the slave trade and the natural history of the Gold Coast. He describes the manatee accurately, and tells much about fetish worship. He shows that there was no evidence of a general cannibalism in any negro tribe, but mentions how an English captain made one slave eat the liver of another as a punishment. He gives full accounts of the winds and currents, and leaves the impression that he was intelligent and truthful. An edition of the '*Navy Surgeon*' in 1742 contains several additions.

[*Navy Surgeon*, 1742.]

N. M.

ATKINS, RICHARD (1559?-1581), martyr, was born at Ross in Herefordshire. According to his own confession 'till he was nineteen years old he was a catholic, after that a protestant,' but whether for another nineteen years or only three is not quite clear from the narrative. About Midsummer 1581 we find him at Rome armed with his 'little new testament turned out of Beza' into English, and an unbounded faith in his mission against the church, the pope, and the city of Rome. After having addressed himself in an unknown tongue to an audience in St. Peter's, who thought him 'distract of his wit,' he was confronted with some of his fellow-countrymen in the English college. For his language towards them on the 'misorder of their lives,' and his denunciations against the church, he was imprisoned for a short time by the Inquisition. Upon his release he proceeded to a series of acts that finally brought him to torture and the stake. He was charged with exclaiming against the catholic religion and the pope in public places of resort, and with an act of sacrilege in attempting to throw down the sacrament while being carried through the streets by a priest. It was also stated that a few days later, he had gone to St. Peter's once again, while divers gentlemen and others were hearing mass, he stepped forward to the altar 'and threw down the chalice with the wine,' and strove to pull the cake out of the priest's hand before its consecration. Being committed to prison a second time and examined, his reply was 'that he came purposely to rebuke the pope's wickedness and their idolatry.' After many exhortations by his own country-

men to recant, but in vain, he was brought to the stake with many tortures and burned before St. Peter's, 2 Aug. 1581.

[Copie of a Double Letter . . . containing the true Advices of the Causes and Maner of the Death of one Richard Atkins, executed by Fire in Rome, 2 Aug. 1581, 12 leaves, sine l. et d.; The English Romaine Life (cap. 8); Report of the Christian Suffering of Richard Atkins, written by A[nthony] M[unday], London, 1582, 4to; to this is added a curious woodcut showing two of the incidents mentioned above, and 'the order of the marderdom of the aforesaid R. A. at Roome;' see also Lansd. MS. 982, 13.] C. H. C.

**ATKINS, SAMUEL** (A. 1787-1808), marine painter, contributed to the Royal Academy between 1787 and 1796. From 1796 to 1804 he was in the East Indies, when he returned to England, and continued to exhibit until 1808. He worked in oil and water colour. The water-colour collections of South Kensington and the British Museum have each an example of his work. It is rather early in manner, low in tone, quiet, and truthful. A picture of 'Shakespeare's Cliff, Dover,' has been engraved after him by R. and D. Havell. Nagler attributes to this Samuel Atkins the originals of two engravings of sea-subjects after '— Atkins:,' 'Ships in Sight of Harbourn,' engraved in aquatint by H. Merke; and 'A Sea Piece,' by F. Janinet. A water-colour drawing also, 'Seascape with Ships,' he gives to this painter.

[Nagler's *Künstler-Lexicon*, 2nd ed., and Redgrave's *Dict. of Painters*.] E. R.

**ATKINS, WILLIAM** (1601-1681), a Jesuit, was born in Cambridgeshire in 1601. He became a secular priest, and was sent on the English mission in 1631. Four years later he entered the Society of Jesus. In 1653 he was chosen rector of the 'College of St. Aloysius,' which at that period comprised the counties of Lancaster and Stafford. Father Atkins was one of the most remarkable of the victims of Titus Oates's plot. In 1679 he was living at Wolverhampton, being almost an octogenarian, and for six years he had been completely paralysed, bed-ridden, and nearly speechless. Nevertheless he was charged with high treason in inciting the people to rebellion. The pursuivants dragged him from his bed, and, forcing him into a most incommodious vehicle, conveyed him to Stafford gaol, eleven miles distant. He was tried at the assizes before Lord Chief Justice Scroggs, 18 Aug. 1679, and condemned to death on account of his sacerdotal character. The sentence was not, however, carried out, and the aged ecclesiastic was

allowed to languish in Stafford gaol, where he died, 17 March, 1681.

[The Trial, Conviction, and Condemnation of Andrew Brommich and William Atkins for being Romish Priests, Lond. 1679, fol.; Dodd's *Church History*, iii. 314; Oliver's *Collectanea S. J.* 48; Foley's *Records*, vols. v. and vii.] T. C.

**ATKINSON, HENRY** (1781-1829), mathematician, the son of Cuthbert Atkinson, a schoolmaster, was born at Great Bavington, in Northumberland, 28 June 1781. He was educated by his father, and at an early age he began to assist in conducting Bavington school. When he reached his thirteenth year his father, considering him capable of managing that school, resigned it to his charge, and opened another at West Woodburn. These two schools were superintended by the father and son alternately. About Henry's sixteenth year his father and he quitted the school at Bavington, and opened another at West Belsay, which they continued to superintend alternately with the school at Woodburn. Henry afterwards removed to Stamfordham, where he kept a school, conjointly with his sister, for upwards of six years. Then, with his sister, he removed to the adjoining village of Hawkwell. Finally, on 14 Nov. 1808, he settled in Newcastle-on-Tyne, where he passed the remainder of his days. In that large town he speedily attained the highest rank in his profession.

Atkinson devoted his leisure to the study of scientific subjects, on which he submitted some remarkable papers to the Literary and Philosophical Society of Newcastle. His earliest contribution was entitled 'A New Method of extracting the Roots of Equations of the Higher Orders.' The discovery was first made by himself in 1801, and the essay was read to the society in August 1809. Many years afterwards this paper formed the basis on which its author rested his claim of priority in discovering the mode of handling equations which has been pursued by Holdred Nicholson and Horner with such marked success. In the following year Atkinson read an elaborate essay 'On the Eclipses of Jupiter's Satellites, and on the Mode of Determining the Longitude by these Means.' In 1811 he produced two papers—one containing 'An Ingenious Proof of Two Curious Properties of Square Numbers,' which Dr. Hutton spoke of in terms of high approbation, and the other 'Demonstrating that no sensible error can arise in the theory of Falling Bodies from assuming Gravity as an uniformly accelerating Force.' In 1813 he read an elaborate paper 'On the Comet of

1811,' and 'An Essay on Proportion;' in 1814 a paper 'On the Difference between the Followers of Newton and Leibnitz concerning the Measure of Forces;' and in 1815 an essay 'On the Possibility and, if possible, on the Consequences of the Lunar Origin of Meteoric Stones.'

About this period he embraced a wider field in the course of his inquiries, and read in 1816 an essay on the 'Nature and Connection of Cause and Effect.' In 1818 he composed a valuable essay 'On Truth,' and in 1819 'A New Mode of investigating Equations which obtain among the Times, Distances, and Anomalies of Comets moving around the Sun, as their Centre of Attraction, in Parabolic Orbits.' In 1821 Atkinson, who meanwhile had studied Smith's 'Wealth of Nations' and other treatises on political economy, read an essay 'On the Effects produced on the different Classes of Society by an Increase or Decrease of the Price of Corn.' In 1824 he produced a paper 'On the Utility and probable Accuracy of the Mode of determining the Sun's Parallax by Observations on the Planet Mars near his opposition.' This paper was subsequently presented to the Astronomical Society of London. Another paper, submitted to the Newcastle Society, was 'On the true Principles of calculating the Refractive Powers of the Atmosphere.' This he afterwards greatly enlarged, entitling it 'An Essay on Astronomical and other Refraction, with a connected Enquiry into the Law of Temperature in different latitudes and at different altitudes.' In its revised form the paper was presented to the Astronomical Society of London (1825), and it elicited very high encomiums from several of the most learned men in Europe. In 1826 Atkinson read before the society at Newcastle a long paper 'On Suspension Bridges, and on the Possibility of the proposed Bridge between North and South Shields.' The following year he delivered a course of lectures on astronomy. Atkinson likewise contributed solutions of many of the abstruse mathematical questions propounded in the 'Gentlemen's Diary' and the 'Ladies' Diary.'

He died at Newcastle 31 Jan. 1829, and was buried in St. Andrew's churchyard.

[Memorials of his life, by Robert White, in Richardson's Local Historian's Table Book (Legendary Division), iii. 363-75; also the Historical Division of the same work, iv. 8.] T. C.

**ATKINSON, JAMES** (1759-1839), surgeon and bibliographer, son of a medical practitioner and friend of Sterne in York, is chiefly known by his 'Medical Bibliography,'

of which the dedication is thus worded: 'To all idle medical students in Great Britain sit—,' with a picture of that part of the human spinal column known as the 'sacrum.' The author's reason for attempting the work was: 'Wanting better amusement, and through mere accident, I stumbled upon the dry, dusty, tedious, accursed, hateful bibliography (see p. 365).' The subject undoubtedly deserves all these epithets, but Atkinson managed to write a book to which none of them can be truly applied. It is full of anecdote, humour, and out-of-the-way information. The scientific value is, however, small, the bibliography consisting of a simple list of editions arranged alphabetically under names of authors. The notes are merely excuses for the compiler's discursive and amusing remarks on things in general. The book is usually spoken of as unfinished, as it is only devoted to letters A and B; but there is nothing to show that it was the intention of Atkinson to go any further. Dibdin made his acquaintance in York in the course of his bibliographical tour, and speaks of him (p. 213) as 'a gentleman and a man of varied talent: ardent, active, and of the most overflowing goodness of heart. . . . The heartiest of all the octogenarians I ever saw, he scorns a stretch and abhors a gape. . . . His library is suffocated with Koburgers, Frobens, the Ascensii, and the Stephens.' On the title of his book Atkinson is described as 'surgeon to H.R.H. the Duke of York, senior surgeon to the York County Hospital and the York Dispensary, and late V.P. to the Yorkshire Philosophical Society.' He was also an enthusiastic member of the Musical Society. He collected portraits of medical writers, and projected a catalogue with memoirs. For many years he was the chief medical man in York, and remained in practice to within a few years of his death, which took place at the age of eighty, at Lendal, in the city of York, on 14 March 1839. He was buried at St. Helen's, Stonegate. The 'York Herald' observed on 16 March 1839 of Atkinson: 'Ever prominent with his aid at every benevolent institution, he possessed the blessing of the poor and afflicted whilst among them, and will live in their grateful remembrance beyond the grave.' In addition to his other acquisitions Atkinson had a genuine talent for portraiture, and no fewer than eight portraits by him, variously in oils, water-colours and pen-and-ink, are in the National Portrait Gallery.

His only work is 'Medical Bibliography, A and B,' London, 1834, 8vo. The 'Description of the New Process of perforating and destroying the Stone in the Bladder

... in a Letter addressed to the Medical Board of Calcutta, London, 1831, 8vo, usually ascribed to our James Atkinson, was by James Atkinson (1780-1852) [q. v.].

[Notes and Queries, 5th series, x, 474; Dibdin's Bibliographical Tour.] H. R. T.

**ATKINSON, JAMES** (1780-1852), an accomplished Persian scholar, was born in the county of Durham, 9 March 1780. After studying medicine at Edinburgh and London, he accepted the post of medical officer on board an East Indiaman, and in 1805 was appointed an assistant surgeon in the Bengal service, and placed in medical charge of the station of Backergunj, near Dacca. In the leisure afforded by his not very arduous duties he devoted himself with considerable success to the study of Persian and other oriental tongues; and his linguistic attainments having attracted the attention of the governor-general, Lord Minto, with whom learning was ever a strong recommendation, Atkinson was invited to Calcutta in 1813, and given the appointment of assistant assay master at the mint, which he retained till 1828, with a brief intermission in 1818, when he filled the deputy chair of Persian in Fort William College, and another interval in 1826-7, when he revisited England. In addition to his appointment at the mint, he held the post of superintendent of the 'Government Gazette' from 1817; and when the official connection of the government with that print was discontinued in 1823, the proprietors were induced by the success which had attended Atkinson's management to confide both the 'Gazette' and the 'Press' to his sole charge. Under his editorship the 'Gazette' was supplied with valuable statistical and topographical information on little-known parts of India. After a second visit to England in 1828-33, Atkinson returned to his original profession, as surgeon to the 55th regiment of native infantry. In 1838 he was appointed superintending surgeon to the army of the Indus, and accompanied it on its march to Kabul; but was relieved in ordinary course of routine shortly after the surrender of Dost Mohammad, and, returning to Bengal in 1841, escaped the fate which awaited the army of occupation. He was appointed a member of the medical board in 1845, retired in 1847 after forty-two years of service, and died of apoplexy 7 Aug. 1852.

Atkinson's Persian translations are his chief title to fame, and of these his selections from the 'Shâh Nâmeh' of Firdausi are the most notable, inasmuch as they were the first attempt to make the great Persian 'Epic of

Kings' familiar to English readers. He first published the episode of 'Sohrab,' in Persian with a free English translation, in 1814, and after a long interval 'The Shah Nameh, translated and abridged by James Atkinson,' was issued in the publications (and won the gold medal) of the Oriental Translation Fund in 1832, to which the earlier excerpt was appended. Next in importance stands his verse translation of Nizâmi's 'Leyla and Mejnûn' (Orient. Trans. Fund, 1836). The 'Expedition into Afghanistan: Notes and Sketches made in the Campaign 1839-40' (London, 1842), is a valuable and interesting personal narrative, and the supplementary 'Sketches in Afghanistan' (fol. 1842), containing a series of lithographed drawings, serve to complete the picture of what was then an unexplored country. From early youth Atkinson had shown a talent for rhyming. His first published poem was a romance called 'Rodolpho' (Edinburgh, 1801). His selections from the 'Shâh Nâmeh' are partly in verse. He also wrote 'The Aubid: an Eastern Tale,' in verse, 1819; 'The City of Palaces, a Fragment, and other Poems,' 1824; translations from the Italian, Ugo Foscolo's 'Ricciarda,' 1823, and Alessandro Tassoni's 'La Secchia Rapita,' 1825. An edition of the popular Persian romance of 'Hatim Tæe,' 1818; 'The Customs and Manners of the Women of Persia,' an amusing translation of a Persian essay on harim life, 1832; his one professional treatise, 'Description of the New Process of perforating and destroying the Stone in the Bladder,' 1831; contributions to the 'Calcutta Annual Register,' 1821-2; and a solitary political squib, 'Prospectus of the Calcutta Liberal,' 1824, complete the list of Atkinson's publications. Accomplished both in literature and art, at once a scholar and a popular writer, James Atkinson holds an honourable place among the pioneers of oriental research.

S. L. P.

**ATKINSON, JOHN AUGUSTUS** (b. 1775), painter, was born in London. At the age of nine he was taken by his uncle to St. Petersburg. He studied in the royal galleries, and gained the patronage successively of the Empress Catherine and her son, the Emperor Paul. Kotzebue celebrates two pictures by Atkinson, which in 1799 hung in the palace of St. Michael—the 'Victory of the Cossacks of the Don over the Tartars,' and the 'Baptism of Count Wladimir' (NAGLER). In Russia he made many drawings illustrative of native manners and costume,

and furnished designs for a Russian edition of 'Hudibras,' which appeared at Königsberg in 1798. He returned to England in 1801, and first exhibited here at the Academy in 1802. In 1803-4 he prepared the plates for 'A Picturesque Representation of the Manners, Customs, and Amusements of the Russians,' which seems not to have actually appeared till 1812, when it was published by Bulmer in 3 folio volumes. In 1807 he published 'A Picturesque Representation, in one hundred coloured plates, of the Naval, Military, and Miscellaneous Costumes of Great Britain,' and in the same year a set of soft-ground etchings to illustrate the misery of human life. The two first-named of these works will be found in the print-room of the British Museum. The plates are all etched (in soft ground) by the artist himself, and printed in colours. We have few better examples of aquatint engraving than these supply, and no collected specimens of Atkinson's work so readily accessible. In 1805 Boydell published a 'Panorama of St. Petersburg' drawn by Atkinson, and a portrait of Suwarrow, both of which were engraved by Walker. In 1819 he exhibited in London, amongst other pictures, the 'Battle of Waterloo,' some of the portraits in which are by A. W. Devis. The two artists made their studies for the picture upon the battle-field in 1815. It was engraved by John Burnet, on the anniversary of the battle, in 1819. A fine water-colour study for this picture in the print-room attests its merit. Composition and colouring are excellently good, the figure-drawing is spirited and lifelike, though seldom faultless. In the drawing of horses Atkinson was no master. There are various differences between this water-colour study and the engraving from the finished picture. In 1808 he exhibited as an 'associate' at the Water-Colour Society. In 1812 he sent Shakespeare's 'Seven Ages' to the same gallery. He ceased, after 1813, to be a member of the society, but continued to exhibit till 1818. To the Royal Academy he sent many pictures, his last in 1829. The date of his death is not known. At the South Kensington Museum are four good water-colours, which show skilful composition and a fine feeling for colour. His figures, artistically arrested in movement, show rather an actor's sensibility than a draughtsman's skill; they are spirited and interesting, if sometimes faulty. His rustic groups, his soldiers and sailors, are charming, and pleasantly reminiscent of Morland. In 1817, according to Nagler, Atkinson essayed authorship, and published 'Incidents of English Bravery during the late Campaigns on the Conti-

nent.' Füssli (*Neue Zusätze zu dem allgemeinen Künstler-Lexikon*, 1824) gives an account of the painter which is largely occupied with a consideration of his masterpiece, the 'Battle of Waterloo.' He comments upon the prominence given to Wellington in the picture, and rather drily remarks (quoting the *Tübinger Morgenblatt für gebildete Stände* for 1820) that the rearward position assigned Blücher is not an ungraceful tribute to Germany! the intention undoubtedly being 'der deutschen Bescheidenheit ein Compliment zu machen.'

[Füssli's *Neue Zusätze*; Nagler's *Künstler-Lexicon*, 2nd ed.; Redgrave's *Dict. of Painters*; *Tübinger Morgenblatt*, 1820.] E. R.

ATKINSON, JOSEPH (1743-1818), dramatist, was born in Ireland, and served in the army until he obtained a captain's commission. In 1785 he produced a comedy in Dublin, the 'Mutual Deception,' which, in the following year, was altered by Colman, the serious scenes being omitted, and, under the title of 'Tit for Tat,' presented at the Haymarket. Atkinson professed himself indebted to an Italian original for the comic portion of his play, which was found closely to resemble the earlier comedies of the 'Double Deceit' and 'Love's Metamorphosis,' first performed in 1735 and 1776 respectively. In 1786 Atkinson produced in Dublin 'A Match for a Widow, or the Frolics of Fancy,' an opera in three acts, the music by Dibdin, founded upon a French comedy which Mrs. Inchbald had previously converted into the English play of the 'Widow's Vow,' and of which Miss Sheridan had availed herself in writing her farce of the 'Ambiguous Lover.' In 1800 Captain Atkinson produced at the Cork Street Theatre a comic opera called 'Love in a Blaze,' borrowed from a French play, which had done duty in an English form as 'Gallic Gratitude' at Covent Garden in 1779. The music to 'Love in a Blaze' was composed by Dr. (afterwards Sir) John Stevenson, to whose assistance the production is said to have been indebted for the success it obtained.

[Thespian Dictionary, 1805; Genest's *History of the Stage*, 1832.] D. C.

ATKINSON, MILES (1741-1811), divine, second son of the Rev. Christopher Atkinson, rector of Thorp Arch, Yorkshire, was born at Ledsham 28 Sept. 1741, and educated at Peterhouse, Cambridge (B.A. 1763). He became curate of the parish church of Leeds; head-master of the school of Drighlington, near Leeds (1764-70); lecturer of the parish church of Leeds, 1769;

vicar of Kippax, near Leeds, 1783; minister of St. Paul's Church, Leeds, 1793, which he founded at a cost of nearly 10,000*l.*; and died 6 Feb. 1811. He published several pulpit discourses, and a collection of his 'Practical Sermons' was published at London in two volumes, 1812. In Whitaker's 'Loidis and Elmete' there is a fine portrait of him, engraved by W. Holl from a painting by J. Russell, R.A.

[Memoir prefixed to his Practical Sermons; Whitaker's Loidis and Elmete, p. 69.] T. C.

**ATKINSON, PAUL** (1656–1729), Franciscan friar, was a Yorkshireman by birth, and after holding several important offices in his order, including that of definitor of the English province, was infamously betrayed to the officers of the law by his maid-servant for a reward of 100*l.* under the penal statute of 11 and 12 William III. He was apprehended in London in 1698, and condemned, on account of his priestly character, to perpetual imprisonment, which he underwent in Hurst Castle in Hampshire, where he lived with cheerful composure, beloved and respected by the keeper of the castle and the whole neighbourhood as an ill-fated amiable man. The governor at one time allowed him the privilege of walking out beyond the walls of his prison until some bigots complained of this indulgence being granted, and Father Atkinson voluntarily confined himself ever afterwards to his own miserable apartment, wherein, after thirty years of strict incarceration, he died 15 Oct. 1729. He was buried at St. James's, Winchester, where the following epitaph was placed over his grave:—'H. S. E. R. P. Paulus Atkinson, Franciscanus, qui 15 Oct. 1729 ætat. 74 in castro de Hurst vitam finivit, postquam ibidem 30 peregerat annos. R. I. P.'

His portrait has been engraved.

[Gent. Mag. ix. 234, 332, 412; Oliver's Collections illustrating the History of the Catholic Religion in Cornwall, &c., 565; Noble's Continuation of Granger, iii. 172; Bromley's Catalogue of Engraved British Portraits, 274; Evans's Catalogue of Portraits, i. 13, ii. 18.] T. C.

**ATKINSON, PETER** (1725–1805), architect, was born at Ripon, trained for a carpenter, became the assistant of John Carr, an architect of York, and was engaged upon many works in his employ. He afterwards succeeded to Carr's practice. He erected a large mansion for Sir John V. B. Johnstone at Hackness, near Scarborough.

[Dictionary of Architectural Publication Society, 1853.] E. R.

**ATKINSON, PETER** (1776–1822), architect, son of the above, was educated in his profession by his father, and succeeded to his business. He built the bridge over the Ouse, begun in 1810. For many years he was steward and surveyor to the corporation of York. To him that city remains grateful for its house of correction and gaol. He erected many churches in the service of the church commissioners. During the last years of his life he resided abroad.

[Dictionary of Architectural Publication Society, 1853.] E. R.

**ATKINSON, STEPHEN** (*A.* 1619), metallurgist, was a native of London. After serving an apprenticeship to Francis Tiver, a refiner of gold and silver, he was admitted a 'finer' in the Tower of London about 1586, and subsequently he was engaged in refining silver in Devonshire, from lead brought from Ireland. He tells us that he was taught his mining skill 'by Mr. B. B., an ingenious gent' (i.e. Mr., afterwards Sir Bevis, Bulmer); that he spent his 'golden time' in different shires in England; and that he was for two years in Ireland with Bulmer, who died in his debt 340*l.*, having left him there 'much in debt for him.' By a grant of the privy council of Scotland in 1616, confirmed by James I, he obtained leave to search for gold and silver in Crawford Muir, on paying the king one-tenth of the metals found. It appears that he was unsuccessful in his mining operations, and consequently he wrote 'The Discoverie and Historie of the Gold Mynes in Scotland.' This was edited by Mr. Gilbert Laing Meason for the Bannatyne Club in 1826, from a manuscript in the Advocates' Library, Edinburgh. Another manuscript is in the Harleian collection, 4621. The author proposes to the king 'the opening of the secrets of the earth—the gold mines of Scotland, to make his majesty the richest monarch in Europe, yea, in all the world.' This measure was to be accomplished by moving 'twenty-four gentlemen of England, of sufficient land, to disturb 300*l.* each,' by creating them 'for ever Knights of the Golden Mynes, or Golden Knights.' Atkinson failed to make any impression on the king, who had already expended 3,000*l.* on the gold mines of Crawford Muir, and had obtained not quite three ounces of gold.

[Meason's introd. to the Discoverie; Lowndes's Bibl. Man. ed. Bohn, App. 9.] T. C.

**ATKINSON, THOMAS** (1600–1639), divine and dramatist, entered Merchant Taylors' School in August 1608. Seven years later he was elected scholar of St. John's

College, Oxford, during the presidency of Laud, and, graduating in 1619, proceeded to the degree of B.D. in 1630. After filling the office of senior proctor of the university, Atkinson accepted the living of South Warnborough in Hampshire, to which he was inducted 20 Jan. 1637-8. Towards the end of the same year, by virtue of an exchange with Dr. Peter Heylin, he became rector of Islip, near Oxford, and, dying a few weeks later, was buried in St. John's College chapel 6 Feb. 1638-9.

Atkinson is not known to have published anything; but he wrote two Latin poems, directed against Andrew Melvin, and styled 'Andrei Melvini Anti-Tami-Cunicategoria' and 'Melvinus delirans' respectively. A Latin tragedy entitled 'Homo,' bearing the signature Thomas Atkinson, may (almost certainly) be ascribed to the same author on these grounds: (1) It was dedicated to Laud in his capacity of president (*Præses colendissime*), which implies that a member of St. John's College wrote it; (2) There was at St. John's, during Laud's time, only one Thomas Atkinson of any note as a scholar. The MS. of 'Homo' is preserved in the Harleian library of the British Museum, No. 6925.

[Wood's *Athenæ Oxon.* (Bliss), iii. 556, iv. 444; *Fasti* (Bliss), i. 239, 386, 450, 456; *Registers of St. John's Coll. Oxford*; *Parish Registers of South Warnborough and Islip*.] J. M. H.

**ATKINSON, THOMAS** (1801?-1833), poet and miscellaneous writer, was a native of Glasgow, where he carried on business as a bookseller. He published, under his own editorship, the 'Sextuple Alliance' and the 'Chameleon,' and also a weekly periodical, the 'Ant.' After the passing of the Reform Bill, he became a candidate in the liberal interest for the representation of the Stirling burghs in parliament, but was unsuccessful. Over-exertion during the contest brought on a dangerous illness, which assumed the character of consumption, and he died on the passage to the Barbadoes, 10 Oct. 1833. Daniel Macmillan, founder of the publishing house of Macmillan & Co., was for some time Atkinson's shopman.

[Charles Rogers, *Scottish Minstrel*, 1870, pp. 272-73; J. Grant Wilson, *Poets and Poetry of Scotland*, vol. ii. 1877, pp. 230-33; Thomas Hughes, *Memoir of Daniel Macmillan*, 1882, pp. 10-16.] T. F. H.

**ATKINSON, WILLIAM, D.D.** (d. 1509), translator, a native of the diocese of York, was M.A. and fellow of Pembroke Hall, Cambridge, in 1477, B.D. in 1485, and D.D. in

1498. He became a prebendary of Southwell in 1501, canon of Lincoln 7 March 1503-4, and canon of Windsor 25 Feb. 1506-7. He died 8 Aug. 1509, and was buried in St. George's chapel, Windsor. At the command of Margaret, countess of Richmond and Derby, mother of King Henry VII, Dr. Atkinson translated from the French three books of the 'Imitation of Jesus Christ' attributed to John Gerson. This translation was published in 1502, and again in 1503 and 1517, under the title of 'A full deuoute & gostely treatyse of y<sup>e</sup> Imytacion & folowyng y<sup>e</sup> blessyd Lyfe of our most mercifull Sauour Cryst.'

[*Le Neve's Fasti Eccl. Anglicæ*; Ames's *Typographical Antiquities*, ed. Herbert, 138, 231, 249, 322; Tanner's *Bibl. Brit.* 55; Cooper's *Athen. Cantab.* i. 13.] T. C.

**ATKINSON, WILLIAM** (1773?-1839), architect, was born at Bishop's Auckland, near Durham. He began life as a carpenter. Through the patronage of the then bishop of Durham, he became a pupil of James Wyatt. In 1795 he obtained the Academy gold medal for designs for a court of justice. In 1805 he published 'Picturesque Views of Cottages,' 4to, London. He had many pupils, and was practically and theoretically an able architect. He was engaged on many important works, and built several large mansions, amongst them Lord Mansfield's house at Scone. 'He died 22 May 1839, aged 66, at his residence at Cobham, Surrey . . . and is buried at Walton-on-Thames, Surrey. He was a most excellent chemist, geologist, and botanist, excelling in the latter science to an extraordinary degree. The well-known Roman cement, called, from himself, Atkinson's cement, was introduced by him to the London market.'

[Redgrave's *Dict. of Painters*; the *Architectural Publication Society's Dictionary of Architecture*, 1853.] E. R.

**ATKINSON, WILLIAM** (1757-1846), poetical writer, was born at Thorpe Arch, in the ainsty of the city of York, in 1757, and was the son of a clergyman. He was admitted a sizar of Jesus College, Cambridge, 29 Dec. 1775, graduated B.A. in 1780, was elected a fellow of his college, and proceeded to the degree of M.A. in 1783. Having taken orders he was appointed lecturer at the parish church of Bradford, in Yorkshire, and subsequently, in 1792, he was presented by the lord chancellor to the rectory of Warham All Saints, in Norfolk. He died at Thorpe Arch 30 Sept. 1846. Mr. Atkinson published a small volume of 'Poetical Essays,' Leeds, 1786, 4to, which was most sarcastic-

cally reviewed by a writer calling himself 'Trim' (Edward Baldwin), in 'A Critique on the Poetical Essays of the Rev. William Atkinson,' London, 1787. 'Trim' also published another pamphlet, abounding in the coarsest personalities, and entitled 'A Congratulatory Letter to the Rev. William Atkinson, M.A., Fellow of Jesus College, Cambridge, on his appearance in the character of a printer, with remarks on the several papers that have issued from his press,' London, 1790.

[Notes and Queries, 3rd ser. iii. 166; Norfolk Benefices, 17, 30; Gent. Mag. N. S. xxvi. 662; Hotten's Topographical Catalogue, 1861, No. 3099.] T. C.

ATKYNs, SIR EDWARD (1587-1669), baron of the exchequer, was the third son of Richard Atkyns, and was born in 1587, apparently at Bensington in Oxfordshire (*Harl. MS.* 5801 f. 9; *Cal. State Papers*, 1653-4, p. 398). Admitted, 5 Feb. 1600-1, a student of Lincoln's Inn, where his father and grandfather had both attained legal honours, he was called to the bar 25 Jan. 1613-14, became governor of the society in 1630, and was two years later nominated 'autumn reader.' On 7 Feb. 1622-3 Atkyns appeared before the Star Chamber as counsel for William Prynne, charged with libelling the queen in his 'Histriomastix,' and defended his client's character from his personal acquaintance with him 'in a society of inns of court, where he has lived.' It is probable that he gave similar aid to Henry Burton and Dr. John Bastwick when brought before the same tribunal in 1637; for in 1640 Burton and Bastwick, while petitioning the Long parliament to reconsider their sentence of imprisonment, requested permission to obtain Atkyns's legal assistance in stating their case. Atkyns had so far identified himself with the popular cause that his promotion to a serjeanty by the king on 19 May 1640—a fortnight after the dissolution of the Short parliament—must be regarded as an endeavour either to conciliate the parliamentarians or to alienate Atkyns from them. Atkyns, however, accepted the honour, and made no change in his conduct. But a royal patent, issued on 7 Oct. 1640 (*Rymer, Fœdera*, xx. 447), appointing Atkyns a baron of the exchequer, did not, for reasons that we have been unable to ascertain, take effect. In 1643, when the Commons entered into negotiations with Charles I, they demanded that 'Mr. Serjeant Atkyns should be made justice of the King's Bench' (*Clarendon*, ii. 478), and on 28 Oct. 1645, despairing of any settlement with the crown, they created him, by their own order, baron of the exchequer.

That post Atkyns held till 4 Aug. 1648, when, by an order of the Lords (*Journal*, x. 419 a), he was removed to the court of Common Pleas. After the king's death, Atkyns, according to Foss, refused to accept a commission from the provisional council of state continuing him in his office, but on 9 Dec. 1650 he was nominated, without any protest on his part, one of the judges to try disturbers of the peace in the eastern counties, and was consulted by Cromwell on legal business. On 16 Jan. 1653-4, he delivered before the protector and his council the opinion of the judges stating the liability of an alien, Don Pantaleone, the brother of the Portuguese ambassador, to be tried in an English court of law on a charge of murder alleged to have been committed during a riot in the New Exchange, London, and at Pantaleone's trial Atkyns was one of the presiding judges. The only instance in which Atkyns openly refused to act with the Commonwealth authorities was in June 1654 at the trial, by special commission, of Gerard and others for conspiracy to murder Cromwell, an offence described in the indictment as high treason. An ordinance of the council had in the previous January brought the crime within the legal definition of treason, and before the trial commenced, Atkyns, with the other judges, was requested to bind himself by oath to give the ordinance effect. But this he declined to do: 'By the law,' he said, 'no man indicted for treason but ought to be tried by a jury; by this ordinance it is otherwise; and therefore this oath [seems] contrary to the other oaths I have taken.'

This episode did not affect Atkyns's position. In succeeding years he continued on the bench, and maintained his former relations with Cromwell. He was renominated a judge on the first return of the Long parliament to Westminster in May 1659, but on its second return in the following year his name was omitted from the list of duly appointed judges. After the Restoration, in May 1660, Atkyns, however, was created anew (23 June) a baron of the exchequer and knighted. On 9 Oct. following, he was one of the presiding judges at the trial of the regicides, but took no prominent part in the proceedings. On 9 March 1660-1 he fell seriously ill on the midland circuit; on 20 April 1661 he arranged, with others, the procedure to be followed at the trial of Lord Morley for murder; and on 1 April 1668 he took part in an important trial of certain rioters charged with high treason. He died 9 Oct. 1669, at Albury Hall, Hertfordshire, an estate that he had purchased in 1661. He is described by Chauncy as 'a grave and

learned judge,' and in spite of his political conduct, which was somewhat variable, as 'a most just and charitable man.'

Atkyns married (1) Ursula, daughter of Sir Thomas Dacres, by whom he had two sons, Robert and Edward, who both became judges of eminence, and three daughters; and (2) Frances, daughter of John Berry, of Lydd, Kent, by whom he had no issue. His first wife died 26 June 1644, and was buried in Cheshunt Church, Hertfordshire (Cussons's *Hertfordshire*, ii. 225). His second wife, whom Atkyns married 16 Sept. 1645, long survived him, and died 2 March 1703-4, at the reputed age of 100.

**ATKYNs, SIR EDWARD** (1630-1698), baron of the exchequer and younger son of Sir Edward Atkyns, who held a similar office, was born in 1630. He became a student at Lincoln's Inn at the age of 18, and five years later was called to the bar. In 1675 he was appointed 'autumn reader' at his inn of court, and in Easter term, 1679, was made a serjeant-at-law. A few weeks afterwards (22 June 1679) Atkyns, who had secured some reputation for legal learning and for hospitality, was raised to the bench as one of the barons of the exchequer, and knighted. He took a prominent part in the trial of Thomas Twining and Mary Presicks, who were charged on 29 July 1680, at the instigation of the anti-catholic agitators of the day, with compassing the death of the king and seeking the overthrow of the protestant religion; in his summing up Atkyns placed the case before the jury with becoming impartiality. At the close of the same year he was one of the judges appointed to try Lord Stafford and other catholic peers on a charge of high treason, but he there supported his colleagues in their contention that the law, which demanded two witnesses to every overt act of treason, might on occasion be waived. On 21 April 1688, when lord chief baron Montagu was removed from the bench for refusing to certify to the legality of the dispensing power exercised by James II, Atkyns was promoted to his place. After the revolution of 1688 he consistently refused to take the oaths of allegiance to William III, and consequently resigned his office, to which Sir Robert Atkyns, his elder brother, was immediately appointed [see **ATKYNs, SIR RO-**

**BERT**]. Shortly afterwards Atkyns retired from public life, and withdrew to his country seat at Pickenham, in Norfolk. Although he continued to hold Jacobite opinions, he showed no bitterness of spirit to those who differed from him, and earned the gratitude of all classes of his neighbours by his tact in settling their disputes. He died of the stone in London during October 1698.

[Foss's *Judges of England*, vii. 210-11; *State Trials*, vii. 1179, 1258; *Noble's Continuation of Granger*, ii. 296; *Chauncy's Hertfordshire*, p. 149; *Blomefield's History of Norfolk*, vi. 71, viii. 349, ix. 69, 70.] S. L.

**ATKYNs, JOHN TRACY** (d. 1773), barrister-at-law, was the third son of John Tracy, of Stanway, Gloucestershire, and great-grandson of the third Viscount Tracy, of Toddington. His mother was a daughter of Sir Robert Atkyns, lord chief baron, and it was probably on account of the legal eminence of his grandfather that he adopted the name of Atkyns. He entered Lincoln's Inn in 1724, and was called to the bar in 1732. In 1755 he was appointed cursor baron of the exchequer. He had taken notes of the cases in the court of Chancery from Hilary term 1736 to Michaelmas term 1754, and he published condensed reports of them in three volumes, 1765-7-8; a second edition appeared 1781-2, and a third, edited by Francis William Sanders, in 1794. In 1768 he made a codicil to his will under the name of Tracy. By his wife, whose name was Katherine Lindsay, he left no children. He died 25 July 1773. Lord Chief-Justice Wilmut describes him in his diary as 'a cheerful, good-humoured, honest man, a good husband, master, and friend.'

[*Britton's Graphic Illustrations of Toddington, Gloucestershire*; Foss's *Judges of England*, viii. 101, 238; *Wilmut's Life of Chief-Justice Wilmut*, p. 199.] T. F. H.

**ATKYNs, RICHARD** (1615-1677), writer on typography, was descended from an old Gloucestershire family that for upwards of a century leased from the dean and chapter of Gloucester the manor of Tuffley, two miles south-south-east from the cathedral city. After receiving a home education at the hands of two inefficient clerical tutors, he was sent to the Free (Crypt) Grammar School in Gloucester. Thence, at the age of fourteen, he proceeded to Balliol College, Oxford, as a gentleman commoner, where he remained two years, probably without taking a degree, as he afterwards informs us 'that he was not so well grounded as he ought to have been to read a Greek or Latin

author with pleasure.' Several members of his family on his father's side having already distinguished themselves in the study of the law, it was resolved to send him to Lincoln's Inn, where several of them 'had anciently been and some of them there; but receiving some disgust at his entrance' he was recalled thence and sent to travel abroad with the only son of Lord Arundel of Wardour, who was about his own age. The Arundels being staunch Roman catholics, while Atkyns was a protestant, each youth was accompanied by a tutor of his own faith. The party left Dover in October 1636 or 1637, and travelled, by way of Calais, to Douay, where they stayed some time at the English College; thence they set out, by way of Cambray and St. Quentin, to Paris. Before the winter was ended the three years' travel was abruptly terminated by the death of young Arundel, who, 'getting a heat and cold at tennis,' probably in Paris, died from fever at Orleans. Soon afterwards Atkyns returned to England and betook himself to country affairs. On the death of his father, in 1636, he succeeded to the family estates at the age of twenty-one. After the days of mourning for his father were ended, 'he put off his hounds,' came to London, 'and kept his coach,' and made his bow at court, where he was invited by the queen to assist at masques. He does not appear to have shone as a courtier, having, as he informs us, 'found himself guilty of three imperfections, a blushing modesty, a flexible disposition, and no great dilIGENCE.' These festive scenes at the court of Henrietta Maria were, however, soon to terminate in the turmoil of the civil war. In 1642 we find him engaged in raising a troop of horse for the king at his own expense. His first skirmish appears to have taken place with Sir William Waller at Little Dean near Newnham-on-Severn. In the following year he was engaged at Reading and Bath, also at the taking of Bristol and at the raising of the siege of Gloucester in September. For his loyalty to the royal cause his estate was sequestered by the parliament. In 1646, however, both houses passed an ordinance pardoning his delinquency after imposing a fine of 140*l*. (*Commons' Journal*, 4, 530; *Lords' ib.* 9, 5<sup>b</sup>, 11<sup>b</sup>). After the Restoration he was made deputy-lieutenant for Gloucestershire, and was also re-appointed to an agency for the crown connected in some way with printing, a post which he appears to have held originally as early as 1631, as he had already involved himself 'in several great and chargeable suites against the Company of Stationers at the cost of more than 1,000*l*.'

About 1660 there was discovered in the public library of Cambridge an early work, said to have been printed at Oxford in 1468, on the Apostles' Creed. Its title ran 'Exposicio sancti Jeronimi in symbolum apostolorum ad papam Laurentium. Impressa Oxonie et finita anno Domini 1468; 4to (copy in Roy. Lib. Brit. Mus., show case viii. 15). Shortly after its appearance Atkyns printed and published an anonymous broadside entitled 'The Original and Growth of Printing,' with what object will be shown in the sequel. This was afterwards, in 1664, enlarged, with answers to objections, and published in his own name in quarto. It is to this broadside and its reprint that Atkyns owes his fame, and by means of which, it is supposed, he hoped to repair his shattered fortunes by proving that the right and title of printing belonged to the crown alone, and by securing for himself the office of patentee for the printing of law books. He first endeavoured to establish that printing in England began at Oxford; and that Stow, Sir Richard Baker, and Howell, in asserting that the art of printing was introduced into England in 1472, 'do most erroneously agree together,' although their error might have arisen 'through the mistake of the first writer only.' His discovery of the 'Exposicio' is his leading argument. 'A Book came into my hands,' he writes, 'Printed at Oxford in 1468, which was three years before any of the recited authors would allow it to be in England.' 'The same most worthy Person,' he continues, 'who trusted me with the aforesaid Book, did also present him with a copy of a Record and MS. in Lambeth House, heretofore in his custody, belonging to the See, and not to any particular Archbishop of Canterbury, the substance whereof was (of which the following is an outline) "That Thos. Bouchier, Archbishop of Canterbury, moved the then King (Hen. VI) to use all possible means for procuring a Printing Mold" . . . to which the King readily harkened and committed the Management of the Design to Mr. R. Turnour . . . who took to his assistance Mr. Caxton.' After having spent 1,500 marks in gifts and expenses they succeeded in bringing over from Harlem one of Cuthenburg's (*sic*) under-workmen, whose name was Frederick Corsellis, or rather Corsellis, and brought him safe to London. It not being thought prudent to set him on work there, 'Corsellis was carried with a guard to Oxford, which guard constantly watched, to prevent Corsellis from any possible escape till he had made good his Promise in teaching how to Print. So that at Oxford Printing was first set up in England.' Atkyns naively adds that he

would not have undertaken this work were it not for a double notion that he was too much a friend to truth and a friend to himself 'not to love one of my best arguments of Instituting the King to this Art [of printing] in his private capacity,' for which of course Atkyns was to be one of the agents. Atkyns's story has long since been discredited. It is only by implication that Atkyns himself infers from the manuscript that the printer of the 'Exposicio' was one Corsellis; the researches of a host of bibliographers, from the learned Dr. Conyers Middleton downwards, have proved, moreover, that the book was antedated by ten years, probably by the omission of an X by the printer by design or accident; it has also been shown that no other book was printed at Oxford until 1479. As to 'the Record and MS. in Lambeth House,' one fatal objection to the story of Caxton and Corsellis contained in it is, that the former has not made the slightest allusion to it even in his 'Polychronicon,' which is brought down to the end of the reign of Henry VI. Again, Dr. Ducarel, the librarian at Lambeth, one of the greatest antiquarians of his time, and who made complete indexes to the registers and manuscripts under his care, after fruitless research for the record alluded to by Atkyns, declared its existence to be a myth, and the whole story of Corsellis 'a mere fable.' Whether Atkyns was the inventor of it, or a dupe of others, cannot now be determined; but one thing is clear, that he was an interested person, and had it not been from a private motive he would not have advanced such a story, which has in almost every sentence a ring of falsehood and improbability. Whatever immediate advantage he may have gained by its publication, misfortune swiftly overtook him; within three years he was committed to the Marshalsea in Southwark for debt, brought about partly by his own imprudence, partly by the vagaries and extravagances of his wife. He died without issue on 14 Sept. 1677, and was buried two days later by relatives in the adjoining church of St. George-the-Martyr without any religious ceremony.

The writings of Atkyns are: 1. 'The Original and Growth of Printing, collected out of History and the Records of this Kingdom,' &c., London, 1664, 4to, 24 pp. 2. 'The King's Grant of Privilege for Sole Printing of Common Law Books Defended,' &c., London, 1669, 4to, 17 pp., b.l. (anonymous, ascribed to Atkyns from internal evidence). 3. 'Vindication of Richard Atkyns, Esq., as also a Relation of several Passages in the Western War wherein he was concerned, together with certaine Sighs or Ejaculations

at the end of every chapter,' London, 1669, 4to, 80 pp. This last work has been wholly misunderstood by his biographers, the three paragraphs in the title having been taken for three separate works. It is an exceedingly curious 'Apologia,' with only one reference to his printing troubles, 'dedicated to his particular Friends and intended to no other.'

[Biog. Britannica, vol. ii. art. 'Caxton,' Singer's Account of the Book printed at Oxford in 1468, 1812; Timperley's Encycl. of Literary and Typographical Anecdote, 1842; Encycl. Brit. 8th edition, art. 'Printing' by Hansard, x. 534; Bigmore and Wyman's Bibliography of Printing, 1880, part i. p. 21.] C. H. C.

ATKYNs, SIR ROBERT (1621-1709), lord chief baron of the exchequer, was the eldest son of Sir Edward Atkyns, one of the barons of the exchequer during the Commonwealth, and the elder brother of Sir Edward Atkyns, who preceded him as lord chief baron. There had been lawyers in the family for many generations: 'He himself, and his three immediate ancestors, having been of the profession for near two hundred years, and in judicial places; and (through the blessing of Almighty God) have prospered by it' (Epistle dedicatory to his *Enquiry into the Jurisdiction of the Chancery*). In his son's 'History of Gloucestershire' the record of the family is carried still further back, in an unbroken legal line, to a Richard Atkyns who lived at the beginning of the fifteenth century, and 'followed the profession of the law in Monmouthshire.' Robert Atkyns was born in Gloucestershire in 1621. It is not certain whether he went to Oxford or to Cambridge, Chalmers (i. 60) including him among the famous men of Balliol College, and Dyer (ii. 437) among those of Sidney Sussex College. Chalmers's statement may have originated in the fact that in 1663 Atkyns received from Oxford the degree of master of arts (*Catalogue of Oxford Graduates*; Wood mentions this, but does not connect him otherwise with Oxford (*Fasti*, ed. Bliss, ii. 273)). In 1638 he was admitted to Lincoln's Inn, and was called to the bar in 1645. Mention of his name is made in some reported cases, but beyond that nothing is heard of him until 1659, when he entered Richard Cromwell's parliament as member for Evesham. Probably he was already known to sympathise with the king's party, for we find him among the sixty-eight who were made knights of the Bath at Charles's coronation (KENNET, *Register*, 410). His name does not appear in the list of members of Charles's first parliament, but in that of 1661 he sat for Eastlow, speaking frequently

upon legal questions, and, as appears from the record of the debates, with acknowledged authority. In 1661 he was made a bencher of his inn, and about the same time was appointed recorder of Bristol (3 *Mod. Rep.* 23; but see WILLIS'S *Not. Parl.*, where he is mentioned as a recorder in 1659). On the death of Sir Thomas Tyrrell in 1672 he became a judge of the court of Common Pleas. Along with Scroggs he was engaged in some of the trials for the popish plot, but there is little trace of the part which he took. He shared in the opinion that papists should be sternly dealt with (see trial of Lewis the Jesuit, 7 *St. Tr.* 249); yet, to judge from his writings and his later life, it is inconceivable that he could have shared in the passion of the time. The chief civil case in which Atkyns took part during this period was that brought by Sir S. Barnardiston against Sir W. Soame, the sheriff of Suffolk, which led ultimately to the passing of the act 7 & 8 Wm. III, c. 7, declaring it illegal for a sheriff to make a double return in the election of members of parliament. The points of the case are technical, but it excited keen political interest, and Atkyns's judgment, in which he differed from the majority of the court, marks the beginning of his separation from the party in power (reprinted in his *Tracts*, and in 6 *St. Tr.* 1074; see case in BROOM'S *Const. Law*, 796; also NORTH'S description of the trial, *Examen*, 521). In 1679 he retired from the bench in circumstances which lead one to believe that he was practically dismissed. Being questioned before a committee of the House of Commons in 1689, he mentioned several causes for his enforced retirement. His judgment in 'Barnardiston v. Soame' had given offence; he had declared against pensions to parliament men; he had quarrelled with Scroggs about the right to petition; and he had offended North by speaking against the sale of offices. 'As to pensions, Lord Clifford took occasion to tell me "that I had attended diligently in parliament, and was taken from my profession, therefore the king had thought fit to send me 500*l.*" I replied: "I thank you. I will not accept anything for my attendance in parliament." . . . I did take occasion upon this to advise my countrymen "that those who took pensions were not fit to be sent up to parliament again"' (GREY'S *Debates*, ix. 307-9). In fact Atkyns was marked out as a disaffected man. He settled in Gloucestershire, with the intention of abandoning the law, but his political opinions again brought him into trouble. When the Oxford parliament was summoned, he was persuaded, though unwillingly, to stand for Bristol, but

was defeated by Sir R. Hart and Sir T. Earle, both Tories. A strong party in the city, not content with his defeat, sought to force him to resign the recordership. The occasion was found in an illegality of which Atkyns along with others was said to be guilty in proceeding to the election of an alderman in the absence of the mayor, who was the same Sir R. Hart. The prosecution failed, but 'Sir Robert Atkyns, on the Lord Pemberton's and his brother's persuasion, resigned his recordership; which was all that the city of Bristol aimed at by their indictment' (2 *Shower*, 238; see Atkyns's argument, which is ingenious and learned, in 3 *Mod. Rep.* 3). In the following year came the trial of Lord Russell; he could not appear by counsel, but his friends exerted themselves in the preparation of his defence, and applied to Atkyns, who wrote to them a statement of the law. 'And the like assistance being afterwards desired from me, by many more persons of the best quality, who soon after fell into the same danger, I, living at some distance from London, did venture by letters, to find the best rules and directions I could, towards the making of their just defence, being heartily concerned with them' (*Tracts*, 334; and see Braddon's case, 9 *St. Tr.* 1127, 1162). Five years afterwards he published the letters, together with 'A Defence of the late Lord Russell's Innocency,' a spirited and eloquent reply to an anonymous pamphlet called 'An Antidote against Poyson.' To a rejoinder from the same pen, 'The Magistracy and Government of England vindicated,' he wrote in answer 'The Lord Russell's Innocency further defended,' assailing his opponent with merited abuse and almost expressly naming him as Sir Bartholomew Shower. In point of legal criticism Atkyns's letters and pamphlets are effective and still worth reading, but they do not shake the received opinion that the law of treason was not strained against Lord Russell. They are reprinted in his 'Tracts,' and, along with Shower's 'Magistracy' and Sir J. Hawle's 'Remarks on Lord Russell's Trial,' in 9 *St. Tr.* 719. In 1684 we find his name associated with another great case, when Sir William Williams, the speaker of the House of Commons, was indicted for printing and publishing Dangerfield's narrative of the popish plot. Williams had acted under the orders of the house, so that the case raised the whole question of the powers and privileges of parliament. Atkyns's argument in his defence (*Tracts*: reprinted 13 *St. Tr.* 1380) is an elaborate review of the authorities, to show that the actions of parliament, itself the highest court of the nation,

were beyond the jurisdiction of inferior courts. Judgment was given against Williams, but in later cases the decision has been described as disgraceful (see *R. v. Wright*, 8 *Term Rep.* 297). The report in the 'State Trials' says that Atkyns took part in the case, and even notices that he had to borrow a wig for the purpose; but in the other reports (2 *Shower*, 471; *Comb.* 18) there is no mention of his name as counsel. His steady attitude of resistance during these years of misgovernment met with recognition at the revolution. In 1689 he succeeded his brother as chief baron, and in October of the same year, the great seal being in commission, he was appointed speaker of the House of Lords in the place of the Marquis of Halifax. He held the speakership until 1693, and for his services was recommended by the house to the king's favour. Towards the end of the following year he retired from the bench—through disappointment, it has been said, at not being chosen master of the rolls, but more likely owing to advancing age. Yet he still gave proof of continued vigour. In a pamphlet published in 1695, and 'humbly submitted to the consideration of the House of Lords, to whom it belongeth to keep the inferior courts within their bounds,' he renewed Coke's protest against the insidious encroachments of the court of Chancery, tracing the growth of equitable jurisdiction, and suggesting how the common law might be restored. This was followed a few years afterwards by another tract, addressed as a petition to the House of Commons, in which, while repeating his complaint against the court of Chancery, and lamenting the uncertainty of the law, he argued from the history of parliament that the exercise of judicial functions by the lords was a usurpation. It should be read along with Skinner's case, in which the lords failed in their attempt to exercise an original jurisdiction, and Dr. Shirley's case, in which they maintained their right to an appellate jurisdiction. An account of the whole struggle, in the first part of which Atkyns himself, while in parliament, had taken a vigorous part, will be found in Hargrave's preface to Hale's 'Jurisdiction of the House of Lords,' and in Hatsell's 'Precedents,' vol. iii. After 1699 we hear nothing more of him till his death. He spent his later years at Sapperton Hall in Gloucestershire, and died 18 Feb. 1709. After Hale, there was no more learned lawyer of his time, and there was none more honest. Lord Campbell calls him a 'virtuous judge,' and he merited the praise in an age of judicial scandals. His political attitude moreover displayed a moderation and an in-

dependence of spirit which make him a type of what was best in the period of the revolution.

1. 'Parliamentary and Political Tracts,' collected 1734, 2nd ed. 1741. Besides those already mentioned it contains other tracts published in Atkyns's lifetime: 'An Enquiry into the Power of dispensing with Penal Statutes,' which sums up the whole history of dispensations and denies their antiquity; a reply to Chief-Justice Herbert's review of the authorities in Hale's case, which raised the question of the dispensing power (see both tracts, 11 *St. Tr.* 1200); a discourse on the ecclesiastical commission of 1686 (in 11 *St. Tr.* 1148); and his speech as chief baron to the lord mayor in 1693 (also in 2 *St. Tr.* 361), a word of warning as to Louis XIV's designs for a universal and arbitrary monarchy. 2. 'An Enquiry into the Jurisdiction of the Chancery in Causes of Equity,' 1695. 3. 'A Treatise of the True and Ancient Jurisdiction of the House of Peers,' 1699. In many copies of this work is included the case of 'Tooke v. Atkyns,' in which he was defendant, and which, as he allows, makes him write warmly on the subject of equitable jurisdiction.

ATKYNs, SIR ROBERT (1647-1711), topographer, was the only son of Sir Robert Atkyns, chief baron of the Exchequer, and sometime speaker of the House of Lords [see ATKYNs, SIR ROBERT, 1621-1709]. Thomas Atkyns, who died in London 1401, was succeeded in the fourth generation by one David, an eminent merchant in Chepstow, who removed before his death in 1552 to Tuffley, near Gloucester, which continued to be the family seat until the purchase of Sapperton by Baron Atkyns in 1660. Sir Robert was born in 1647; he was knighted by Charles II on his visit to Bristol 5 Sept. 1663 (SEYER, *infra*), and was elected M.P. for the borough of Cirencester (33 *Car. II*) 1680-1, and afterwards for the county of Gloucester (1 *Jac. II*) 1684-5. He died at his house in Westminster of dysentery, at the age of sixty-five, and was buried at Sapperton, where his monument is preserved. He is the author of the 'Ancient and Present State of Gloucestershire,' London, 1712, fol. 2nd edition, 1738.

The first edition, now scarce, contains a

fine portrait of the author by Van der Gucht, together with a series of views of seats in the county, drawn and engraved by J. Kip in his earliest manner.

C. H. C.

**ATMORE, CHARLES** (1759–1826), Wesleyan minister, was born at Heacham, near King's Lynn, Norfolk, 17 Aug. 1759, his father being the captain of a ship belonging to Lynn. In June 1779 he turned his attention to the Wesleyan ministry, and in February 1781 he was sent forth by the venerable John Wesley as an itinerant evangelist. At the conference which met in the following August, he was appointed a regular preacher. Wesley formed so high an estimate of his character that three years afterwards he caused his name, although he was then only twenty-four years of age, to be inserted in the deed of declaration as one of the members of the legal conference. In the discussions on the polity and position of Methodism which took place immediately after Wesley's death, Atmore bore a leading part, and his influence and prudent counsels largely contributed to the consolidation of the Wesleyan methodist church.

His ministry until 1825 was exercised in the following towns: York, Edinburgh, Halifax, Bristol, London, Birmingham, Manchester, Wakefield, Liverpool, Leeds, Hull, Salford, Sheffield. In 1811, while stationed in Hull, he was elected to the presidency of the Wesleyan conference.

He was author of the 'Methodist Memorial' (a perfect treasury of information on early methodism), first published in 1801, and since re-issued; 'Discourses on the Lord's Prayer,' 1807, also republished; besides several pamphlets and occasional sermons.

Atmore, who was twice married, died in Fountain Court, Cheapside, London, on 30 June 1826, aged 66 years.

W. B. L.

**ATSLOWE, EDWARD, M.D.** (d. 1594), a well-known physician in Elizabeth's reign, was educated at Winchester and New College, Oxford. After being elected to a fellowship at his college he was created 'doctor of physic' at Oxford on 27 Aug. 1566, and was one of the four doctors appointed by convocation to dispute before Queen Elizabeth when she was entertained at the uni-

versity in September of that year. Shortly afterwards Atslowe settled in London and was admitted a fellow of the College of Physicians, and between 1569 and 1583 he filled successively most of the offices of distinction connected with the society. Among his patients Atslowe reckoned the chief noblemen of his time, and he was probably attached for some years as physician to the household of the Earl of Sussex. But he did not wholly confine himself to the practice of medicine. If not a catholic himself, he strongly sympathised with the professors of that faith, and he proved himself an ardent supporter of Mary, Queen of Scots. As early as December 1570 he paid her a visit at Tutbury (WALSINGHAM'S *Journal* (1570–83), p. 1, in Camden Soc. *Miscellanies*, vi.). For many years he is alleged to have aided the Earls of Arundel, Northumberland, and others, in a conspiracy to obtain assistance in her behalf from the continent, and in 1579 he was arrested on that charge, but released. In 1585 he was again sent to the Tower; but on being privately examined by the lord chancellor and other officials as to his relations with the papists he vehemently denied having had any treasonable 'intelligence' with any of them. A spy of the Queen of Scots wrote to her, however, in July of the same year: 'I heare that Dr. Atslowe was racked twice almost to the death in the Towre about the Earl of Arundell his matters and intentions to depart Englande, wherein he was betrayed' (MURDIN'S *State Papers*, ii. 452). Atslowe was apparently released soon afterwards, for we find him in attendance on a son of the Earl of Northumberland during a fatal illness in 1587. His death occurred some seven years later; a private letter describes him as 'newly deade' on 2 May 1594. On 2 Nov. 1573 Atslowe married Frances Wingfield at Stoke Newington, and upon her the Earl of Arundel settled an annuity after her husband's death.

S. L.

**ATTAWELL, HUGH.** [See **ATWELL**.]

**ATTERBURY, FRANCIS** (1662–1732), bishop of Rochester, was born at Milton or Middleton Keynes in Buckinghamshire. His father, Lewis Atterbury, was rector of the parish, and educated both Francis and his elder brother Lewis until they were old enough to go to Westminster, then in the zenith of its fame under Dr. Busby. From

Westminster Francis proceeded to Christ Church, Oxford, being at the head of the four Westminster students elected in 1680. After he had graduated, he continued to reside at Oxford, taking part in the tutorial work at Christ Church, and acting as a sort of right-hand man to Dean Aldrich. In 1682 he published a translation into Latin verse of Dryden's 'Absalom and Achitophel,' in 1684 an 'Anthologia,' or selection of Latin poems, and about the same time two or three little treatises on classical subjects. But he was soon engaged in more important literary work. The attempt of James II to force his creed upon an unwilling university called forth many champions of the faith, and among others the able young tutor of Christ Church. One of the chiefs of the romanising party at Oxford, Obadiah Walker, who had been elected to the mastership of University College in 1676, had printed an attack upon the Reformation from the pen of Abraham Woodhead [q.v.]. In reply to this Atterbury published (1687) 'An Answer to some Considerations on the Spirit of Martin Luther, and the Original of the Reformation,' which Bishop Burnet pronounces to be one of the ablest of the many vindications of the church of England which were about that time issued from Oxford. Atterbury's next essay at controversy, though its contemporary reputation was much higher, was in reality very far from being so successful. It was a defence of the genuineness of the 'Epistles of Phalaris' against the great Dr. Bentley, and was nominally written by Atterbury's pupil, the Hon. Charles Boyle, but in reality in great part by Atterbury himself. It was not published until 1698, and for Atterbury's sake it would have been well if it had never been published at all. It is now universally acknowledged that Bentley was in the right, but that was by no means the opinion even of the ablest contemporaries. Swift in his 'Battle of the Books' describes Boyle as 'advancing immediately against his trembling foe clad in a suit of armour given him by all the gods,' and ending the battle very quickly by 'transfixing Bentley and Wotton.' 'The gods' were the Christ Church wits, chief among whom was Atterbury, who accordingly figures as Apollo, the god of wisdom. About 1687 Atterbury received holy orders, and he soon won considerable reputation as a preacher. He was in the habit of preaching occasionally in London, and his sermons were so well appreciated that he was appointed, over the heads of many candidates, lecturer of St. Bride's by the Bishop of London in 1691; he was next made chaplain to King William and Queen

Mary, and preacher at Bridewell Hospital. While at Oxford he married Miss Katherine Osborn, who, in the words of his biographer, 'was the inspiration of his youth and the solace of his riper years.' After his marriage he left Oxford for London. In 1700 Atterbury again came prominently before the public as a controversialist. For ten years convocation had not been suffered to meet for the despatch of business; by a series of successive prorogations the church's parliament had practically become a dead letter. But not without remonstrance. Among other protests 'A Letter to a Convocation Man' (1697) attributed the irreligion and immorality, of which there was so general a complaint, to the virtual suppression of convocation. The 'Letter' caused a great sensation, and was answered in a 'Letter to a Member of Parliament' and also in a work by Dr. Wake, afterwards archbishop of Canterbury, entitled 'The Authority of Christian Princes over their Ecclesiastical Synods.' In opposition to Dr. Wake, and in defence of the 'Letter to a Convocation Man,' Atterbury published his 'Rights and Privileges of an English Convocation stated and vindicated,' in which he roundly charged Dr. Wake with subjecting the liberties both of church and state to the arbitrary will of one man. The subject is treated historically, so that it is impossible to describe the work in detail; but its general object is stated in the preface, 'to perpetuate to the church the use of her parliamentary assemblies, and of that free debate which is inseparable from such assemblies.' Dr. Wake was supported by Dr. White Kennett and Dr. Edmund Gibson, both men of learning and ability, and both afterwards bishops. The most contradictory opinions have been expressed as to the side on which the victory lay; but the general mass of the clergy gratefully recognised Atterbury as an able champion of their order against Erastianism in high places both in church and state; and it really is difficult to controvert the assertion of Warburton, who was no friend to convocation, but whose lawyer-like mind at once grasped the real gist of the dispute. 'Atterbury,' he writes to Hurd, 'goes upon *principles*, and all that Wake and Kennett could possibly oppose are *precedents*.' One result of Atterbury's work was that he was made in 1701 archdeacon of Totnes, and in the same year a prebendary of Exeter Cathedral by his faithful and lifelong friend, Sir Jonathan Trelawney, then bishop of Exeter, 'in reward,' writes Atterbury himself, 'for my honest endeavours to retrieve the synodical rights of the clergy.' The lower house of convo-

cation passed a vote of thanks to him, and his own university conferred upon him the degree of D.D. without the usual fees.

Atterbury did not lose his favour at court through his bold advocacy of the rights of the clergy. He had long been a favourite preacher at the Chapel Royal, and on Queen Mary's death in 1694 he was the only royal chaplain who was still retained. The Princess Anna and her husband highly esteemed him, and when the former succeeded to the throne she made him her chaplain in ordinary, and in 1704 dean of Carlisle. In 1709 he was appointed preacher at the Rolls Chapel, where several of his printed sermons were delivered. The tory reaction which marked the last four years of Queen Anne's reign naturally brought Atterbury into still greater prominence. In fact, if the tradition be true (and there is no reason to doubt its truth) that he took a chief part in the composition of Dr. Sacheverel's speech before the House of Lords in 1710, he had no small share in bringing about that reaction. Queen Anne consulted him largely about church matters, and in Aug. 1711 appointed him as successor to his old friend and chief, Dr. Aldrich, in the deanery of Christ Church. Since the time when convocation, largely through Atterbury's means, had resumed its active functions, he had been a most prominent figure in the assemblies of the lower house. He was the life and soul of the party which carried on its long warfare against the latitudinarian bishops. In 1709 he was associated with the excellent Archbishop Sharp's scheme to bring before convocation the question of providing bishops for the plantations. In 1710 he was elected prolocutor of the lower house by a large majority, and in that capacity, in 1711, he drew up by the queen's command that famous 'Representation of the State of Religion' which has been so often quoted in histories of the times, but for which the bishops insisted upon substituting a less unfavourable report. No doubt Atterbury took a gloomy view of the situation in this 'Representation,' but he expressed his honest convictions, and did not pen it for mere political purposes; his tone is quite as desponding in his charges as archdeacon of Totnes. In 1713 he was made bishop of Rochester and dean of Westminster, two posts which, according to the objectionable custom of the times, always went together. 'Thus,' says his enemy, Bishop Burnet, 'he was promoted and rewarded for all the flame he had raised in our church.' As a debater and public speaker he had long held the highest rank among the representatives of the clergy in convocation, and he soon be-

came almost as prominent a figure in the House of Lords. A fine person and graceful delivery contributed to his success, and, to judge by the almost unanimous testimony of contemporaries, he must have been one of the greatest orators of his day.

There is no doubt that, during the lifetime of Queen Anne, Atterbury had, like a vast number of his contemporaries, shown a leaning to the Jacobite cause; but the oft-repeated story, that he offered to head the procession in his lawn sleeves to proclaim King James III at Charing Cross, rests on doubtful authority. At any rate, he submitted to the new *régime*, and took part officially, as dean of Westminster, at the coronation of George I. He was entitled to the throne and canopy as his perquisites, but gracefully offered them to the king. The present was rejected, and Atterbury could scarcely help regarding this as a studied affront. Again, the declaration of confidence in the government after the rebellion of 1715 contained many reflections upon the high-church party, the very party of which Atterbury was the undoubted chief. He refused to sign it, and became more and more alienated from the ruling powers, which he attacked frequently and vehemently, and at last drifted away entirely into the service of him whom he considered to be the rightful monarch. It was about the year 1717 that Atterbury began to hold direct communication with the Jacobites. The climax was reached about five years later. The birth of a son to the exiled 'Chevalier' in 1720 raised the hopes of the Jacobites in England. The bursting of the South Sea bubble increased the prevalent disaffection to the reigning dynasty, and the conjuncture was regarded as favourable for another attempt to restore the ancient line. That Atterbury was involved in this attempt there can be no doubt; but whether the mode of proceeding against him was justifiable is another question. He was arrested in 1722 and imprisoned in the Tower, and a bill of pains and penalties was brought against him in the House of Commons. He declined to plead his cause before the house, declaring, with some dignity, that he was 'content with the opportunity (if the bill went on) to make his defence before another house, of which he had the honour to be a member.' After the bill had passed its third reading in the Commons, it was sent up to the Lords, and Atterbury was sent for from the Tower, where he had been confined for seven months, to plead his cause. The evidence which chiefly contributed to condemn him was curious. A Mrs. Bates, being examined by the crown,

admitted that a little spotted dog, named Harlequin, was sent by the Earl of Mar as a present to the Bishop of Rochester. This dog was often mentioned in correspondence which contained treasonable matter, and thus the bishop was compromised. He employed his wonted eloquence in making his memorable defence, but all to no purpose. He was condemned by a majority of 83 to 43, and the sentence pronounced against him was that he should be deprived of all his ecclesiastical offices, be incapacitated for holding any civil offices, and be banished for ever from the realm, and that no British subject should hold any intercourse with him, except by the royal permission. In the majority were all his brother prelates except one (Bishop Gastrell, of Chester, an 'old Westminster'), and so strong was the feeling against him that Lord Bathurst (Pope's, and therefore Atterbury's, firm friend) declared that the inveterate hatred could only be accounted for on the principle of the 'wild Americans, who fondly hoped to inherit not only the spoils but the abilities of him whom they should destroy.' But outside the walls of parliament the deepest sympathy with him was displayed, especially among the clergy. He was publicly prayed for in the London churches 'as one afflicted with the gout;' verses were written in his honour; and a print was circulated representing him as looking through the bars of his prison, and holding in his hand a portrait of the martyred Laud. An attempt was made to raise a prejudice against him as a papist in disguise; but his life and opinions were too well known to allow reasonable people long to doubt his attachment to the church of England. In fact, from first to last he was conspicuously and aggressively anti-Roman. The sympathy with him was heightened by the rumour that he had been harshly treated in the Tower. For some time his dearly loved and loving daughter had not been allowed to see him, except in the presence of the officers; but this restriction was removed through the kindness of Lord Townshend.

In the summer of 1723 he left England never to return, accompanied by his daughter and her husband (Mr. and Mrs. Morice) and a kind clergyman, the Rev. B. Hughes. By a curious coincidence he met at Calais Lord Bolingbroke returning from the exile to which he himself was condemned, and exclaimed, 'Then we are exchanged!' To appreciate the severity of his sentence, it must be remembered that he was verging upon old age, that he was a constant martyr to the gout and the stone, that his health was generally delicate, and that he had an unusu-

ally large circle of friends in England. To add to his sorrows, he had just lost his wife.

Atterbury was regarded as indisputably the best preacher of his day. To this reputation no doubt his manner and person contributed greatly. The 'Tatler' (No. 66, by Steele), in a well-known passage, contrasts the apathy of the greater part of the clergy in the pulpit with 'the dean we heard the other day,' who 'is an orator. He has so much regard to his congregation that he commits to his memory what he has to say to them, and has so soft and graceful a behaviour that it must attract your attention. His person, it is to be confessed, is no small recommendation; but he is to be highly commended for not losing that advantage, and adding to the propriety of speech, which might pass the criticism of Longinus, an action which would have been approved by Demosthenes.' The writer then goes on to praise the matter of the dean's sermons, a point on which a reader may judge for himself, as many of them are still extant. They are not for a moment to be compared with the sermons, e.g., of Jeremy Taylor, or South, or Barrow; but they are written in plain and lucid English; the preacher adheres closely to his text, and is always earnest and sensible. His sermon on the power of charity to cover sin brought him into controversy with Hoadly, and that on the 'Scornor incapable of True Wisdom' gave offence as containing a supposed reflection on Tillotson's orthodoxy.

Atterbury was far more intimate with the great men of letters who adorned the reign of Queen Anne than most of the clergy of his day. He held constant intercourse with Swift, who for some time lodged near him at Chelsea, and frequently alludes in his correspondence to 'my neighbour over the way.' The letters between these two celebrated men are singularly courteous and interesting. His intimacy with Pope was still closer; and when Atterbury became bishop of Rochester, the poet was a frequent guest at Bromley. Atterbury strove to convert Pope from Romanism, and though he did not succeed he elicited from the poet expressions of a deeper sense of religion than he has been sometimes credited with. Pope gave evidence in favour of Atterbury at his trial, and to the last believed him innocent. One of the most touching of all Atterbury's letters was that which he addressed to Pope 'from the Tower, 19 April 1723,' which he concludes with the fine lines of his favourite poet—

Some natural tears he dropped, but wiped them soon.

The world was all before him, where to choose  
His place of rest, and Providence his guide.

Atterbury was also on terms of intimacy with Sir Isaac Newton and with Arbuthnot, Gay, and Prior; and in spite of political and religious differences, he was friendly with Addison, who describes him as 'one of the greatest geniuses of his age.' Atterbury officiated, as dean of Westminster, at Addison's funeral, and was observed to be deeply affected during the ceremony. Bolingbroke also was a friend of Atterbury, and so was Dr. South, whose funeral sermon he preached. But the man for whom, next to his own family, Atterbury had the deepest affection, and of whose kindness and sympathy he is never tired of speaking, was Sir Jonathan Trelawney, bishop of Exeter, and subsequently of Winchester. His intimacy with Bishop Trelawney enabled him to do a service to one of the most learned and least appreciated clergymen of the day, Joseph Bingham, to whom he had the honour of first drawing the bishop's attention. He was also a friend to another learned clergyman of retiring habits, John Strype, the antiquary; and among his most enthusiastic admirers was Samuel Wesley the younger, who knew him when Atterbury was dean and Wesley one of the masters at Westminster. Lastly, he numbered among his most intimate friends the amiable and able Dr. Smalridge, the 'Favonius' of the 'Tatler.' Smalridge succeeded him both at Carlisle and Christ Church, and is reported to have said: 'Atterbury comes first, and sets everything on fire, and I follow with a bucket of water.'

Atterbury lived in exile nearly nine years. His first residence was at Brussels, but his health was so bad there that he removed to Paris, his faithful daughter acting as 'the kindest of nurses to the best of fathers,' as her husband expressed it. At Paris she left him, recovered in health, and the bishop threw himself heart and soul into James's cause, acting as a general adviser and supervisor of his affairs at home and abroad. The service was not a smooth one, owing partly to the impracticable character of the master, and partly to the petty jealousies and self-seeking of the followers. James, in 1725, described Atterbury as 'one in whose fidelity and ability he placed the greatest trust and confidence,' but he acted towards him in so different a spirit that in 1728 Atterbury quitted his service. The lonely old man had other troubles. His only surviving son, Osborn, was a constant source of anxiety to him. His brother Lewis, whom he had declined to appoint archdeacon of Rochester, never quite forgave the slight, and behaved shabbily in money transactions between them [see ATTERBURY, LEWIS, 1656-1731].

He was once nearly involved in trouble with the French police, being suspected of having helped Père Courayer in his escape to England. Courayer's offence was simply an inclination towards the Anglican in preference to the Gallican church, and it is highly probable that Atterbury, who was from first to last a staunch Anglican, may have influenced the father, with whom he had certainly been intimate. But Atterbury's great sorrow was the loss of that daughter who, with her husband, had been his greatest earthly comfort and support. After Atterbury's rupture with James he left Paris for the south of France, in the hope of restoring his failing health, and settled at Montpellier. His daughter in England, whose health was also failing, felt a longing desire to see her father once more; and as he could not go to her she determined at all hazards to go to him. Unfortunately, the weather proved most unfavourable for a sea voyage; and when Bordeaux was at length reached, Mrs. Morice was all but a dying woman. Her father had been as anxious to see her as she to see him. 'I live only,' he writes with real pathos, 'to help towards lengthening your life, and rendering it, if I can, more agreeable to you. I see not of what use I can be in other respects.' The meeting took place at Toulouse, it being found impossible to convey the dying woman as far as Montpellier. The bishop was just in time to administer to her the last rites of the church: she died within twenty hours after her arrival. A most interesting correspondence between the bereaved father and his faithful friend Pope on the sad subject is extant. Atterbury had not many friends left; his Jacobite helpers in England had dropped off one by one; his son-in-law, Mr. Morice, was most faithful to him; and the old man took the greatest interest in his grandchildren, who paid him a visit. He had also a most devoted friend in the Dowager Duchess of Buckingham. He survived his daughter two years, and actually entered once more into James's service, and his last letter was one of advice to that very impracticable master. He also wrote in his last days a dignified vindication of himself against the aspersions of Oldmixon, who accused him of tampering with the new edition of Lord Clarendon's 'History of the Rebellion.' The end came suddenly at last, on 22 Feb. 1731-2. His body was conveyed to England, and buried privately in Westminster Abbey.

Atterbury cannot be regarded as a perfect character or as a great divine; but he was a very able man, and in his way a brave and faithful son of the church. If he mingled

politics too much with religion, it must be remembered, in justice to him, that the two subjects were so strangely mixed up in that eventful time that it was all but impossible for a public character to disentangle the one from the other. His name will always be a prominent one in the complicated history of the church and nation of England in the latter part of the seventeenth and the early part of the eighteenth century.

H. O.

**ATTERBURY, LEWIS, D.D.**, the elder (d. 1693), was the son of Francis Atterbury, rector of Middleton-Malsor, Northamptonshire. He became a student of Christ Church in 1647; submitted to the authority of the visitors appointed by the parliament; took the degree of B.A. on 23 Feb. 1649, and was created M.A. on 1 March 1651, by dispensation from Oliver Cromwell, at that time chancellor of the university. In 1654 he was made rector of Great or Broad Risington in Gloucestershire, and in 1657 received the living of Middleton-Keynes, near Newport Pagnell, Bucks. At the Restoration he was careful to have his titles to these benefices confirmed by taking a presentation under the great seal. On 25 July 1660, he became chaplain to Henry, Duke of Gloucester, who died at the end of the year; and on 1 Dec. 1660 he proceeded D.D. He seems to have been, in his later years, involved in litigation, which necessitated frequent attendance in town. From 1690 he was prebendary of Lincoln. On 7 Dec. 1693, while returning home from London, he was drowned near Middleton-Keynes, and there buried. Atterbury married and left two sons—Lewis Atterbury the younger, and the famous Francis Atterbury, Bishop of Rochester. He published the following sermons: 1. 'A Good Subject, or the Right Test of Religion and Loyalty' (on Prov. xxiv. 21, 22), 17 July 1684. 2. 'The Grand Charter of Christian Feasts, with the right way of keeping them' (on 1 Cor. v. 8), 30 Nov. 1685. 3. 'Babylon's Downfall, or England's Happy Deliverance from Popery and Slavery' (on Revelation xviii. 2), preached at Guildhall Chapel on 28 June 1691, and published at the desire of the court of aldermen.

[Yardley's Preface to the Sermons of Lewis Atterbury the younger, 1743; Wood's Athen. Oxon. ed. Bliss, iv. 395.] F. H. B.

**ATTERBURY, LEWIS, LL.D.**, the younger (1656–1731), the eldest son of Lewis Atterbury the elder, and brother of Bishop Atterbury, was born at Caldecot, in the parish of Newport Pagnell, Buckinghamshire, on 2 May 1656. After being educated at Westminster School, under Dr. Busby, he proceeded to Christ Church, Oxford, where he matriculated on 10 April 1674. He was ordained deacon by Dr. John Fell, bishop of Oxford, on 21 Sept. 1679, when he had already taken his bachelor's degree; and on 5 July 1680 he proceeded M.A., taking priest's orders on 25 Sept. of the following year. In 1683 he became chaplain to Sir William Pritchard, then lord mayor of London; and in February 1684 he was appointed rector of Sywell, Northamptonshire. On 8 July 1687 he took by accumulation the degrees of bachelor and doctor of civil law. He was appointed, in 1691, lecturer of St. Mary Hill, London, and on 16 June 1695 he became preacher of Highgate Chapel, where he had been officiating for some time previously, during the illness of his predecessor. Before this date he had been appointed one of the six chaplains to Princess Anne of Denmark at Whitehall and St. James's, a position which he continued to hold after she came to the throne, and during part of the reign of George I. On coming to reside at Highgate, struck with the difficulties against which the neighbouring poor had to contend in obtaining good medical advice, he applied himself to the study of medicine, and used his knowledge gratuitously for the benefit of his parishioners. In 1707 he was presented by the queen to the rectory of Shepperton, in Middlesex, the incumbent having been deprived for neglecting to take the oaths within the time required by law; and in 1719 he was collocated by the Bishop of London to the rectory of Hornsey, continuing at the same time to hold the office of preacher at Highgate. The archdeaconry of Rochester becoming vacant by the death of Dr. Sprat in 1720, Atterbury wrote to his younger brother, the bishop, applying for the post. Archdeacon Yardley printed (in the preface to Atterbury's 'Sermons,' 1743) the correspondence that passed on the subject. The bishop thought that such an appointment would be 'the most unseemly, indecent thing in the world;' to which the elder brother replied that he could not see where the 'indecent' lay, and that, though there might be 'some show of reason for the non-acceptance,' there was 'none for the not giving it.' At the age of seventy, up to which time he had enjoyed good health, he was compelled by the in-

firmities of age and an attack of the palsy to pay frequent visits to Bath. Here he died 20 Oct. 1731, in his seventy-sixth year. He was buried in Highgate Chapel. He left a collection of pamphlets, in some two hundred volumes, to the library of Christ Church, Oxford, and a few books to the libraries at Bedford and Newport-Pagnell. To his brother, the bishop, 'in token of his true esteem and affection,' he left one hundred pounds; and the remainder of his property, first to his granddaughter (who survived him but a short time), and afterwards to his nephew Osborn, the bishop's son. He also left ten pounds a year for the support of a schoolmistress for girls at Newport-Pagnell. In 1688 he had married Penelope, sister of Sir Robert Bedingfield, lord mayor of London in 1707. Two of his sons died in infancy; a third, Bedingfield Atterbury, who was educated at Oxford, died in 1718; a married daughter died in 1725; and his wife in 1723.

A list of Atterbury's works is given in Yardley's preface to the 'Sermons,' 1743. Among them may be mentioned:—1. 'The Penitent Lady, or Reflections on the Mercy of God, from the French of Madame de la Vallière,' 12mo, 1684. 2. 'Ten Sermons preached before her Royal Highness the Princess Anne of Denmark, at the chapel of St. James's,' 8vo, 1699. 3. 'Twelve Sermons preached at St. James's and Whitehall: dedicated to the Queen,' 8vo, 1703. 4. 'Some Letters relating to the History of the Council of Trent,' 4to, 1705. 5. 'An Answer to a Popish Book intitled "A True and Modest Account of the Chief Points of Controversy between the Roman Catholics and the Protestants," &c.,' 8vo, 1709. 6. 'The Reunion of Christians; translated from the French,' 8vo, 1708. 7. 'Sermons on Select Subjects; now published from the originals,' two vols., 8vo, 1743. A portrait, engraved by Vertue, is prefixed to vol. i.

**ATTERBURY, LUFFMAN** (d. 1796), a carpenter and builder by trade, but a musician by inclination, studied the harpsichord, composition, and harmony in the leisure time he could spare from his business, which was carried on in Turn Again Lane, Fleet Market. He acquired considerable proficiency in music, and on the death of his father, being left tolerably well off, gave up his business and retired to Teddington. He obtained several prizes from the Catch Club for his glees, and was appointed a

musician in ordinary to George III. On 15 May 1765 Atterbury was elected a performing member of the Madrigal Society (*Records of Madrigal Soc.*). In 1770, he seems to have been connected with Marylebone Gardens, as he paid Chatterton five guineas for the copyright of 'The Revenge' on 6 July of the same year in which the burletta was performed. On 5 May, 1773, he produced at the Haymarket theatre an oratorio, 'Goliath,' which failed disastrously, though it was afterwards repeated at West Wycombe on 13 Aug. 1775, on the occasion of the burial of the heart of Paul Whitehead in the mausoleum of Lord Le Despencer. In 1784 Atterbury sang in the chorus of the Handel commemoration, and in 1787, on the establishment of the glee club at the Newcastle Coffee House, Castle Street, Strand, his name occurs as one of the original members. In September 1790 he married Miss Ancell, of Downing Street. He was at this time still living at Teddington, but his improvidence forced him to remove to Marsham Street, Westminster, and to give concerts in aid of his finances. It was in the middle of one of these concerts that he is said to have died, 11 June, 1796.

**ATTERSOLL, WILLIAM** (d. 1640), puritan divine and author, was apparently for a time a member of Jesus College, Cambridge, when, as he writes in his 'Historie of Balak' (1610), his patron of later years, Sir Henry Fanshawe, was 'a chiefe and choise ornament' there. But in that case he must have early passed from it; for he proceeded A.B. 1582 at Clare Hall, and A.M. 1586 at Peterhouse. Attersoll succeeded William Bishoppe in the living of Isfield, in Sussex, soon after 18 Jan. 1599–1600, the date of Bishoppe's burial. In the Epistle-dedicatory to Sir Henry Fanshawe, knight, the king's remembrancer in his highness's court of Exchequer, prefixed to Attersoll's 'Historie of Balak,' he speaks, among other of Fanshawe's acts of kindness shown towards him, 'of the fauour you shewed me at my repaire vnto you, in that trouble which befell me about the poore living that now I enioy.' Succeeding sentences state that the 'trouble' was occasioned by a suspicion on the part of Attersoll's parishioners that the new parson was too much of a scholar, and unlikely to be a preacher after the type of their former.

Attersoll was the author of many biblical commentaries and religious treatises. His earliest works were entitled 'The Pathway

to Canaan' (1609) and 'The Historie of Balak the King and Balaam the false Prophet' (1610). These, with others of the same kind, all in quarto, were, severally, expositions of portions of the book of Numbers, and were ultimately brought together in a noble folio of 1800 pages in 1618. In the quartos and folio alike there is abundant evidence of wide if somewhat undigested learning, penetrative insight, and felicitous application in the most unexpected ways of old facts and truths to present-day circumstances and experiences. All this applies especially to his 'New Covenant' (1614), and to his next important work, which reached a second edition in 1633, viz. 'A Commentarie vpon the Epistle of Saint Pavle to Philemon. Written by William Attersoll, Minister of the Word of God, at Isfield in Sussex. The second edition, corrected and enlarged' (1633). It is this volume that has been wrongly assigned to William Aspinwall [q. v.]. In 1632 Attersoll published a volume called the 'Conversion of Nineveh.' In the Epistle-dedictory to Sir John Rivers he writes of himself as an old man: 'Having heretofore upon sundry occasions divulged sundry bookes which are abroad in the world, whereby I received much encouragement, I resolved, notwithstanding being now in yeares, and as it were *donatus rude* (Horat. lib. i. epist. 1), preparing for a *nunc dimittis*, utterly to give over and to enioyne myselfe a perpetuall silence touching this kind of writing, and content myselfe with performing the other more necessary duty of teaching. Nevertheless, being requested, or rather importuned, by friends to publish some things which had been a long time by mee . . . I deliuered into their hands these three treatises.' The other two treatises (besides 'Nineveh') are 'God's Trvmptet sovyndg the Alarme' (1632) and 'Phisicke against Famine, or a Soueraigne Preseruatiue' (1632).

As shown by the Isfield Register, Attersoll was buried '30 May 1640,' and thus had remained in his original 'poore living' for upwards of forty years. He describes himself as 'a poore labourer in the Lord's vineyard, and a simple watchman in his house.' He also speaks of 'the poore cottage' in which he resided (Ep. to *Nineveh*). His works are now extremely rare.

Another WILLIAM ATTERSOLL, probably his son, proceeded A.B. 1611, A.M. 1615 at Peterhouse; and a third of the same names proceeded A.B. 1672 at Catherine Hall. In all likelihood the former was the William Attersoll of Calamy, whose name is simply entered under 'Hoadley (East), Sussex,' as among the ejected of 1662, and so, too, in

Palmer's 'Nonconformist's Memorial' (iii. 320).

**ATTWOOD, THOMAS** (1765-1838), musician, born in London, 23 Nov. 1765, was the son of a coal merchant. When nine years old he was admitted as a chorister to the Chapel Royal, where he attracted the attention of the Prince of Wales (George IV), who invited him to Buckingham House, and was so pleased by his pianoforte playing and musical talent that in 1783 he sent him to Naples to study under Cinque and Latilla. From Naples Attwood went (1785) to Vienna, where he studied under Mozart, who expressed a favourable opinion of his talent. He left Vienna in company with the Storaces in February 1787. Shortly after his return to London he was appointed music master to the Duchess of York; he also subsequently occupied the same post with the Duchess of Cumberland and the Princess of Wales. In the following year (1792) he produced a musical afterpiece, 'The Prisoner,' at the Opera House, where the Drury Lane company was then performing. This was the first of several similar pieces he composed; in all his writings for the stage, after the fashion of the time, he eked out his own music by considerable interpolations from the works of other composers, particularly those of Mozart and Cherubini. In 1793 Attwood married Mary, the only child of Matthew Denton, of Stotfold, Bedfordshire. His eldest son, a lieutenant in the army, was assassinated at Madrid in October 1821; another son, after a distinguished career at Cambridge, became in 1837 rector of Framlingham, Suffolk. In 1796, on the death of John Jones, Attwood was appointed organist and vicar choral of St. Paul's, and in June of the same year he succeeded Dr. Dupuis as composer to the Chapel Royal. For the coronation of George IV (19 July 1821) Attwood wrote an anthem, 'I was glad.' In the same year the king appointed him organist of the chapel in the Pavilion, Brighton. He wrote an anthem, 'O Lord, grant the King,' for the coronation of William IV, and had begun another for the coronation of Queen Victoria when he was interrupted by his last illness. On the death of Stafford Smith (1836) he was appointed organist to the Chapel Royal, a post he did not live long to occupy. He was taken ill soon after Christmas 1837, and, preferring some peculiar mode of treating his

complaint, neglected the proper remedies, and died at his house, 17 Cheyne Walk, on 24 March 1838. He was buried in St. Paul's on 31 March. Besides the works mentioned, Attwood wrote other anthems, some chamber music, many songs, glees, and pianoforte pieces. His music is melodious and graceful, as would be expected from a pupil of Mozart, but it is deficient in individuality and force. During the latter part of his life he made the acquaintance of Mendelssohn, who often stayed with the English composer at his house at Norwood.

[Biog. Dict. S. D. U. K.; Add. MS. 31587; Gent. Mag. for 1821; Annual Register for 1838; Kelly's Reminiscences, i. (1826); Grove's Dictionary, i.] W. B. S.

**ATWATER, WILLIAM** (1440-1521), bishop of Lincoln, was, according to his epitaph, born about 1440. Wood connects his parentage with Davington, in Somersetshire; but no such place is known. A family of the name was, however, resident near Downton, in Wiltshire, and a Philemon Attwater and a William Attwater held property in the neighbourhood in the eighteenth century (HOARE'S *Wiltshire*, sub 'Downton,' iii. 61). Wood also states that Atwater was educated at Magdalen College, Oxford, where he was first demy and afterwards fellow. His name does not appear in the college registers, which only date from the latest years of the fifteenth century, but it is probable that he was a fellow in 1480 (BLOXAM'S *Magdalen College Registers*, iv. 27 n.). He was doubtless tutor at Magdalen when Thomas Wolsey was studying there, and thus formed an acquaintance that proved of service to him. In 1492-3 Atwater took the degree of D.D., and in 1497 became for the first time vice-chancellor of the university. Three years later he was reappointed to the office, which he held in conjunction with others till 1502. In 1500 the post of chancellor of the university, vacated by the death of Archbishop Morton, was temporarily filled by him. William Smith, bishop of Lincoln, one of the founders of Brasenose College, on succeeding Morton as chancellor, continued Atwater in the vice-chancellorship, and highly commended his 'merits and diligence.' He effectually aided the bishop in reforming academical discipline. But Atwater did not derive all his income from university work; he held an unusually large number of ecclesiastical benefices. He was appointed on 19 Dec. 1489 to the living of Hawkrigge, in Wiltshire, and subsequently held, among many other small benefices, that of Ditcheat, in Somersetshire. The deanery of the Chapel

Royal was conferred on him in 1502. On 21 June 1504 he became canon of Windsor and registrar of the order of the Garter. From 1506 to 1512 he was chancellor of the cathedral of Lincoln, a dignity bestowed on him by his friend William Smith, the bishop; on 30 Oct. 1512 he exchanged the chancellorship for a prebend in the cathedral. On 5 Sept. 1509 he was appointed dean of Salisbury, having become prebendary of Ruscomb in Salisbury cathedral on 20 July, and was granted a coat of arms. For a short time, between 1509 and 1512, he was archdeacon of Lewes. In Browne-Willis's '*Cathedrals*' Atwater is stated to have been fellow of Eton. From 3 June 1514 till 18 Nov. following he held the archdeaconry of Huntingdon. His elevation to the bishopric of Lincoln, in September 1514, in succession to Wolsey, whose patronage had doubtless secured him many of his honours, closes the long list of his preferments. He was consecrated at Lambeth 12 Nov. 1514. He resigned the canonry of Windsor on 22 Oct. 1514, but he continued in the deanery of the Chapel Royal. On 15 Nov. 1515 he took part in the formal reception by Wolsey at Westminster of the cardinal's hat.

Atwater died at Wooburn, Buckinghamshire, 4 Feb. 1520-1, and was buried in Lincoln Cathedral. A brass above his grave stated that he was then eighty-one years old. Among the state papers is an autograph letter (11 Nov. 1516) from Atwater to Pope Leo X, praying for the appointment of a suffragan bishop at an annuity of 200 ducats. An entry in Henry VIII's accounts for 1 Oct. 1514 shows that the king lent Atwater 600*l*. A license to import one hundred tuns of Gascon wine was granted to Atwater 1 Dec. 1513. A popular book, printed by Pynson in 1519 and reprinted by Wynkyn de Worde, entitled '*Vulgaria viri doctissimi Guil. Hornmanni Caesarisburgensis*,' was dedicated to Atwater in highly flattering terms.

Bliss), i. 3, 6, 9; Le Neve's *Fasti*; Letters and Papers of the Reign of Henry VIII, 1512-1516; Churton's *Lives of the Founders of Brasenose College*, pp. 156, 360, 496; Ames's *Typograph. Antiq.* (ed. Herbert and Dibdin), ii. 286-7, 479-82.] S. L.

**ATWELL, ATTAWEL**, or **ATTEWELL, HUGH** (d. 1621), actor, was one of the 'Children of her Majesty's Revels,' who is known to have taken part in the first representation of Ben Jonson's '*Epicoene*' in 1609. From a funeral elegy by William Rowley, upon the death of Hugh Atwell, 'servant of Prince Charles,' on Sept. 25, 1621, he has been

accounted an actor of some note. In the 'Alleyne Papers' Atwell's name is mentioned as the witness of a loan from Philip Henslowe to Robert Daborne of twenty shillings in 1613. Atwell's name also appears as one of Alleyne's company, applying to him for an advance of money. Another player of the same surname in Henslowe's company, George Attwell, has been regarded as the father of Hugh Atwell.

[The Alleyne Papers, 1843; Collier's Annals of the Stage, 1831.] D. C.

ATWOOD, GEORGE (1746-1807), a distinguished mathematician, was born in 1746, entered Westminster School in 1759, and was elected to a scholarship at Trinity College, Cambridge, in 1765. He graduated B.A. in 1769 as third wrangler and first Smith's prizeman, became subsequently a fellow and tutor of his college, took a degree of M.A. in 1772, and was chosen fellow of the Royal Society in 1776. His lectures were remarkable both for the fluent ease of their delivery, and for the ingenuity of their experimental illustrations, and exercised much influence on the scientific studies of the university. Amongst his auditors and admirers was William Pitt, who bestowed upon him, on leaving Cambridge in 1784, a sinecure place as one of the patent searchers of the customs, with a salary of 500*l.* a year. This, however, was only an indirect mode of remunerating financial services of a very arduous kind, all the calculations connected with the revenue being executed by him until failing health forbade the intense application said to have been its cause. He died at his house in Westminster, in July 1807, at the age of 61, and was buried in St. Margaret's Church. As a writer he was less gifted than as a lecturer. His treatises, though marked by considerable ability, are deficient both in power and elegance, and are now completely superseded. In accuracy of calculation he could scarcely be surpassed, and he possessed musical as well as mathematical accomplishments.

He wrote: 1. 'A Description of the Experiments intended to illustrate a Course of Lectures on the Principles of Natural Philosophy,' London, 1776. 2. 'A Treatise on the Rectilinear Motion and Rotation of Bodies, with a Description of Original Experiments relative to the Subject,' Cambridge, 1784, in which occurs (p. 298) the first description of the ingenious apparatus since so well known as 'Atwood's Machine,' for exhibiting and verifying the accelerative action of gravity. 3. 'An Analysis of a Course of Lectures on the Principles of Natural Philosophy,' London,

1784, still of interest as illustrating the state of science at Cambridge a century ago. 4. 'A Dissertation on the Construction and Properties of Arches,' 1801, with a supplement, 1804, written at the request of a committee of the House of Commons, then engaged in considering Telford's plan for replacing London Bridge with a one-arched iron construction. 5. 'A general Theory for the Mensuration of the Angle subtended by two Objects,' *Phil. Trans.* vol. lxxi., 1781. 6. 'Investigations founded on the Theory of Motion for determining the Times of Vibration of Watch Balances,' *Phil. Trans.* vol. lxxxiv., 1794. 7. 'The Construction and Analysis of Geometrical Propositions determining the Positions assumed by homogeneous Bodies which float freely, and at rest, on a Fluid's Surface,' *Phil. Trans.* vol. lxxxvi., 1796, honoured with the Copley medal (1796). 8. 'A Disquisition on the Stability of Ships,' *Phil. Trans.* vol. lxxxviii., 1798.

[Gent. Mag. lxxvii. pt. ii. 690; Hutton's Phil. and Math. Dict. (1815), i. 189; De Morgan in Biog. Dict. Soc. D. U. K. iv. 44.] A. M. C.

ATWOOD, PETER (1643-1712), Dominican friar, was a native of Warwickshire, joined the order in 1678, and was ordained priest five years later. He was several times cast into prison, and at length was condemned to death on account of his sacerdotal character. The hurdle was actually at the gate of the gaol to convey him to Tyburn when Charles II sent him a reprieve. Father Atwood, who governed his brethren as provincial from 1698 to 1706, died in London, 12 Aug. 1712.

[Oliver's Hist. of the Catholic Religion in Cornwall, 450.] T. C.

ATWOOD, THOMAS (d. 1793), chief judge of the island of Dominica, and afterwards of the Bahamas, died in the King's Bench prison, at an advanced age, broken down with misfortunes, on 27 May 1793. He is the reputed author of the 'History of the Island of Dominica,' published in 1791, and of a pamphlet published in 1790 entitled 'Observations on the True Method of Treatment and Usage of the Negro Slaves in the British West India Islands.'

[Gent. Mag. lxxiii. 576, 669.] T. F. H.

ATWOOD, WILLIAM (d. 1705?), political writer, chief justice of New York, was an English barrister, and the author of a large number of controversial pamphlets on political questions during the last two decades of the seventeenth century and the early years of the eighteenth. In politics

he was a staunch whig, and a resolute upholder of the rights of parliament and the people against the pretensions of Filmer, Brady, and the extreme Tories and high-churchmen. As a disputant, he is rather clumsy and ineffective; but his constitutional theories are grounded upon a considerable knowledge of early charters and other documents, and of the older writers of English history, in which he seems to have been unusually well read. Among his works are: 'Jus Anglorum ab Antiquo,' 1681; 'The Fundamental Constitution of the English Government,' 1690; 'The Antiquity and Justice of an Oath of Abjuration,' 1694; 'The History and Reasons of the Dependency of Ireland,' &c., 1698. In August 1701 he arrived in New York, where he had been appointed chief justice and judge of the court of admiralty. He was almost immediately involved in violent quarrels with some of the inhabitants, and afterwards with Lord Cornbury, the governor. He was accused of gross corruption and maladministration, and was finally (June 1702) suspended from his employments by Lord Cornbury, and compelled to escape from the colony. On his return to England he published a statement of his 'Case' (London, 1703), in which he endeavoured to prove that his difficulties in the colony were due to his rigorous administration of English law, especially in its application to maritime and commercial matters; but he met with no redress, and the lords commissioners of trade and plantations endorsed Lord Cornbury's action. In 1704 he published 'The Superiority and Direct Dominion of the Imperial Crown of England over the Crown and Kingdom of Scotland,' and in 1705 'The Scotch Patriot unmask'd.' Both these pamphlets excited great indignation in Scotland, and were ordered by the Scotch parliament to be burnt by the common hangman. The year of Atwood's death is uncertain. He appears to have published nothing later than 1705.

[Bishop Nicolson, English Historical Library, 1736, p. 193; Boyer, Annals of Queen Anne, iv. 52; O'Callaghan, New York Colonial Documents, iv. 971, 1010, v. 105-8, &c.; The Case of William Atwood, Lond. 1703, fol.]

S. J. L.

**AUBERT, ALEXANDER** (1730-1805), astronomer, was born at Austin Friars, London, 11 May 1730. The appearance of the magnificent comet of 1744 gave him, then a schoolboy at Geneva, a permanent bias towards astronomy; he diligently prepared, however, for a mercantile career in counting-houses at Geneva, Leghorn, and

Genoa; visited Rome in the jubilee year (1750), and, returning to London in 1751, was, in the following year, taken into partnership by his father. In 1753 he became a director, and some years later governor, of the London Assurance Company. He was elected a fellow of the Royal Society in 1772, and of the Society of Antiquaries in 1784, receiving moreover, in 1793, a diploma of admission to the St. Petersburg Academy of Sciences. The transit of Venus, of 3 June 1769, was observed by him at Austin Friars (*Phil. Trans.* lix. 378), and that of Mercury, 4 May 1786 (*Phil. Trans.* lxxvii. 47) at an observatory built by him at Loampit Hill, near Deptford, and furnished with the best instruments by Short, Bird, Ramsden, and Dollond. Except that of Count Brühl, it was at that period the only well-equipped private establishment of the kind in England. In 1788 he purchased Highbury House, Islington, for 6,000 guineas, and erected on the grounds, with the assistance of his friend Smeaton, the celebrated engineer, a new observatory on improved plans of his own. His mechanical knowledge caused him to be appointed chairman of the trustees for the completion of Ramesgate harbour, and his energy contributed materially to the ultimate success of Smeaton's designs. In 1792 Aubert headed a society for the suppression of sedition, and in 1797 he organised, and was appointed lieutenant-colonel of, the 'Loyal Islington Volunteers.' While staying in the house of Mr. John Lloyd, of Wygfair, St. Asaph, he was struck with apoplexy, and died 19 Oct. 1805, at the age of 75, esteemed both in scientific and commercial circles. His valuable astronomical library and instruments were sold and dispersed after his death. Amongst the latter were a Dollond 46-inch achromatic, aperture 3½ inches, and the one Cassegrain reflector constructed by Short, of 24 inches focus and 6 aperture, known among opticians as 'Short's Dumpty.' Both had been originally made for Topham Beauclerk. Two slight papers by Aubert appeared in the 'Philosophical Transactions,' viz., 'A New Method of finding Time by Equal Altitudes' (lxvi. 92-8), and 'An Account of the Meteors of 18 Aug. and 4 Oct. 1783' (lxxiv. 112-15).

[Europ. Mag. xxxiv. 291, xxxvi. 79; Gent. Mag. lxxv. 982; Lysons's Environs of London (1795), iii. 135; Lewis's History of Islington (1842), 185; Kitchiner's Practical Observations on Telescopes (3rd ed. 1818), pp. 16, 108; Watt's Bib. Brit. i. 54.] A. M. C.

**AUBIGNY, SEIGNEURS OF.** [See STUART.]

AUBREY, JOHN (1626-1697), antiquary, was born at Easton Pierse, or Percy, in the parish of Kington in Wiltshire, on 12 March 1625-6, and not on 3 Nov. as stated by some of his biographers. His father, Richard Aubrey, was a gentleman of fortune, possessed of estates in Wiltshire, Herefordshire, and Wales. Young Aubrey was a sickly boy, and received the first part of his education privately under the Rev. Robert Latimer, vicar of Leigh Delamere near Malmesbury, the preceptor of Hobbes. He afterwards went to Blandford grammar school, and in May 1642 was entered a gentleman commoner at Trinity College, Oxford. While yet an undergraduate he evinced his antiquarian tastes by contributing a plate of Osney Abbey to Dugdale's 'Monasticon.' In 1643 he was driven from the university by small-pox and civil war, and for three years led a sad life in the country. In 1646 he became a student at the Middle Temple, but was never called to the bar, and returned from time to time to Oxford, where he declares he enjoyed the greatest felicity of his life. He was also frequently at home upon his father's business, and in 1649 brought to light the extraordinary megalithic remains at Avebury, which had been unheeded till then. In 1652, on his father's death, he inherited the family estates, and along with them numerous lawsuits, which, combined with his careless and extravagant habits of living, eventually reduced him to poverty. 'Several love and lawe suits,' he notes of the year 1656. He must, nevertheless, have kept up his literary and scientific interests, for he belonged to the club of 'Commonwealth Men,' founded on the principles of Harrington, of which he has left an entertaining description, and in May 1663 he was elected a fellow of the Royal Society. In 1662 he sold his Herefordshire property. In 1665 'I made my first address (in an ill hour) to Joane Sumner.' His biographers, previous to Mr. Britton, have not unnaturally concluded that he espoused this lady, but the register of his death and passages in his autobiographical notes prove that this cannot have been the case. Instead of going to the altar she went to law with him, and 'all my business and affairs ran kin kam.' He nevertheless gained several causes, but in 1670 was compelled to sell his remaining landed property. 'From 1670 to this very day,' he notes, 'I have enjoyed a happy delitescency.' The term is emphasised by the entry for the following year, 'Danger of arrests.' In 1677 he was obliged to part with his books, but this year seems to have been the term of his misfortunes. Having

lost everything, he was no longer disquieted by lawsuits; and his good humour made him a welcome guest in many families, especially that of 'the Earl of Thanet, with whom I was delitescent near a year,' and of 'Mr. Edmund Wyld, with whom I most commonly take my diet and sweet otiums.' To these protectors may be added Sir William Petty, Hobbes, Ashmole, and Lady Long, of Draycott, in Wilts, with whom he frequently resided during his latter years. When not thus enacting the part of a highly accomplished Will Wimble, he spent his time in country excursions, collecting materials for his antiquarian works. He had in 1671 received a patent empowering him to make antiquarian surveys under the crown, and had perambulated Surrey in 1673, forming copious topographical collections. He had also since 1659 been more or less engaged on a similar undertaking for North Wilts, and in 1685 'tumultuariously stitched up' his notes on the natural history of that county. He also composed, by order of Charles II, as is said, an unpublished discourse on Stonehenge and other ancient stone monuments, which he regarded as druidical. In 1667 he had made the acquaintance of Anthony à Wood, and aided him materially in his 'Antiquities of Oxford,' published in 1674. His correspondence with Wood was continued until, in 1680, he sent the latter his 'Minutes of Lives,' with a highly characteristic letter. Wood made great use of his information, which continued to be furnished until the publication of the 'Athenæ Oxonienses' in 1690. Unfortunately one of Aubrey's notes, reflecting upon Lord Chancellor Clarendon, caused Wood to be visited by a prosecution; and this seems to have occasioned an estrangement, and to have prompted the unfavourable character which Wood has left of his disinterested if not always judicious ally. Aubrey continued to occupy himself with his history of Wiltshire, but, feeling that he should not live to finish the work, in 1695 imparted his papers to Tanner, afterwards Bishop of St. Asaph. In 1696 he issued the only book he ever printed himself, the 'Miscellanies,' a highly entertaining collection of ghost stories and other anecdotes of the supernatural. In June 1697 he died at Oxford, on his way from London to Draycott, and was buried in the church of St. Mary Magdalene.

Aubrey left a mass of manuscript material behind him, which long remained unpublished. His 'Perambulation of Surrey' was incorporated in Rawlinson's 'Natural History and Antiquities of Surrey,' printed in 1719, which is indeed substantially Aubrey's

work. Part of his Wiltshire collections was used by Tanner for Bishop Gibson's edition of Camden. Aubrey's own manuscript was presented by the writer to the Ashmolean Library. It was in two volumes, one of which was borrowed by his brother and lost. Portions of the other were privately printed by Sir Thomas Phillips in 1821 and 1838, but the edition, which is far from correct, was never completed. The work was finally edited for the Wiltshire Topographical Society by the Rev. J. S. Jackson (Devizes, 1862). 'The Natural History of Wilts,' abstracted by the author from his larger work, was left by him in two manuscripts, one at Oxford, the other in the library of the Royal Society. The portions immediately concerning Wiltshire were edited for the Wiltshire Topographical Society by Mr. John Britton. The 'Minutes of Lives,' given to Wood, were first published in a collection entitled 'Letters written by Eminent Persons in the Seventeenth and Eighteenth Centuries' (London, 1813). The most recent edition of the 'Miscellanies' is that in Russell Smith's Library of Old Authors, in 1857. Aubrey also wrote a life of Hobbes, which formed the groundwork of Blackburn's Latin biography. The manuscript of his 'Monumenta Britannica' is in the Bodleian. His 'Architectonica Sacra,' 'Idea of Education of Young Gentlemen,' and other works of less importance, are extant in the Ashmolean Library or in private hands. His 'Remains of Gentilism and Judaism' is preserved among the Lansdowne MSS. in the British Museum. Extracts from it have been given in Brand's 'Popular Antiquities' and Thoms's 'Anecdotes and Traditions,' and the entire text, with White Kennet's additions, was issued by the Folk-lore Society in 1880.

Aubrey was the very type of the man who is no man's enemy but his own. He possessed every virtue usually associated with an easy careless temper, and an industry in his own pursuits which would have done credit to one of robuster mould. 'My head,' he says, 'was always working, never idle, and even travelling did glean some observations, some whereof are to be valued.' They assuredly are, and many, especially those on the alteration of manners in his time, exhibit real shrewdness. He was well aware of his failings, and it is impossible not to sympathise with his regret for the abolition of the monasteries which would have afforded him a congenial refuge; and his verdict that 'if ever I had been good for anything, 'twould have been a painter.' His buoyant cheerfulness defied calamity, and preserved his self-respect under the hard trial of dependence. His character as an antiquary has been un-

worthily traduced by Anthony à Wood, but fully vindicated by his recent editors and biographers. He certainly is devoid of literary talent, except as a retailer of anecdotes; his head teems with particulars which he lacks the faculty to reduce to order or combine into a whole. As a gossip, however, he is a kind of immature Boswell; and we are infinitely beholden to him for the minute but vivid traits of Bacon, Milton, Raleigh, Hobbes, and other great men preserved in his 'Minutes of Lives.' His 'Natural History of Wilts' is full of quaint lore, and one need not believe in spirits to enjoy his 'Miscellanies.' Half the charm is in the simple credulity of the narrator, who seems, nevertheless, to have inclined to the philosophy of his friend Hobbes.

[Aubrey left two papers of autobiographical memoranda. Every circumstance respecting him has been collected and carefully investigated in the excellent biography by J. Britton (London, 1845), the only work of authority. The best criticism upon his life and writings is an admirable essay by Professor Masson in vol. xxiv. of the British Quarterly Review.] R. G.

AUBREY, WILLIAM, LL.D. (1529-1595), an eminent civilian and grandfather of the antiquary, John Aubrey, was born at Cantre [Cantref], Brecknockshire, in or about 1529, and was educated at Oxford, where he graduated B.C.L. in 1549. He became fellow of All Souls, was appointed principal of New Inn Hall in 1550, and professor of civil law in 1553. It appears that he discharged the duties of his professorship by deputies; for William Mowse filled the chair in 1554. In 1559 he resigned in favour of John Griffith (RYMER's *Fœdera*, xv. 503). Having taken the degree of D.C.L. (1554), Aubrey was admitted an advocate in the court of Arches, and was judge-advocate in the St. Quentin expedition. Archbishop Grindal made him auditor and vicar-general in spirituals for the province of Canterbury, and in 1577, during Grindal's sequestration, he was one of the civilians chosen to carry on the visitation. He was afterwards chancellor to Archbishop Whitgift, member of the Council of Marches for Wales, master in chancery, and master of requests in ordinary. He was M.P. for Carmarthen boroughs in 1554, Brecon 1558, Hindon, 1559, Arundel 1562, and Taunton 1592. He died on 23 July 1595, leaving 3 sons and 6 daughters. In Dugdale's 'Hist. of St. Paul's Cathedral' is a drawing of Aubrey's monument and effigy in St. Paul's. His grandson the antiquary writes: 'I have his original picture. He had a delicate, quick, lively, and piercing black eye, a severe eye brow, and a fresh complexion. The figure in his monument

at St. Paul's is not like him—it is too big' (*Letters from the Bodleian*, 1813, ii. 219).

Some letters of Aubrey's are printed in Strype's 'Life of Grindal.' Two of his judgments are preserved among the Lansdowne MSS. (lxviii. lxix.) A letter to John Dee, in criticism of his 'Sovereignty of the Sea,' is printed in vol. ii. pp. 214–18 of 'Letters from the Bodleian,' 1813. The original letter, with transcripts by Dee and Ashmole, is among the Ashmolean MSS. (1789, 33). The Tanner MSS. in the Bodleian contain 'Tractatus duo in causa matrimonii domine Katherinæ Grey et comitis Hertfordiæ, per Gul. Aubrey et Hen. Jones,' and a letter of Aubrey's to Grindal 'On the Abuses in the Ecclesiastical Courts.' Among the Ashmolean MSS. (1788, 132–3) is preserved Ashmole's transcript of a 'Letter from Dr. W. Aubrey to Dr. Dee upon his perusal of the British Monarchy.' Kew, 28 July, 1577.

[Wood's Fasti, ed. Bliss, i. 127, 143; Strype's Grindal; Strype's Crammer; Dugdale's History of St. Paul's Cathedral; Black's Catalogue of Ashmolean MSS.; Catalogue of Tanner MSS.; Letters from the Bodleian Library, 1813, ii. 207–21, where an account of Aubrey is printed from a manuscript (supposed to be) in the writing of his son-in-law, Sir Daniel Dun, supplemented by notes of John Aubrey, the antiquary.]  
A. H. B.

**AUCHER, JOHN, D.D.** (1619–1700), royalist divine, was son of Sir Anthony Aucher, knight, of Hautsbourne in Kent. He was nominated to a Canterbury scholarship in Corpus Christi College, Cambridge, by Archbishop Laud in 1634, but after taking the degree of B.A. he removed to Peterhouse for a fellowship, where he commenced M.A. in 1641. He was ejected from his fellowship on account of his loyalty, and during the Commonwealth he wrote two treatises against the dominant party, which, however, were not printed till long afterwards. At the Restoration he was created D.D. by royal mandate, and further rewarded with a prebend in the church of Canterbury (1660). He also held the rectory of Allhallows in Lombard Street, London, for many years (1662–85). Dr. Aucher died at Canterbury on 12 March 1700–1, and was buried in the cathedral.

His works are: 1. 'The Personal Reign of Christ upon Earth,' 1642, 4to. 2. A treatise against the 'Engagement.' 3. 'The Arraignment of Rebellion, or the irresistibility of sovereign powers vindicated and maintained in reply to a letter,' London, 1684, 4to; reprinted London, 1718, 8vo.

**AUCHINLECK, LORD.** [See BOSWELL.]

**AUCHINOUL, LORD.** [See BELLENDEN.]

**AUCHMUTY, SIR SAMUEL, G.C.B.** (1756–1822), general, was born at New York in 1756. His grandfather, a distinguished Scotch lawyer, had established himself at Boston in the reign of William III, and his father, after being educated at Harvard and Oxford, had become rector of the principal Church of England church in New York. When the colonies declared war, Dr. Auchmuty and his brother, who was judge of the high court of admiralty at Boston, at once declared for the king, and young Samuel was present with the 45th regiment as a volunteer at the battles of Brooklyn and White Plains. The need of rewarding the loyal colonists caused to be given to young Auchmuty in 1777 an ensigncy, and in 1778 a lieutenancy in the 45th without purchase. On the conclusion of peace he went to England with his regiment, but soon found it impossible to live on his lieutenant's pay, or to expect any promotion in England; so in 1783 he exchanged into the 52nd regiment, then under orders for India, and was at once made adjutant. He saw service in the last war with Hyder Ali, and was promoted captain in the 75th regiment for his services in 1788. Lord Cornwallis perceived his aptitude for Indian warfare, and made him a brigade-major in 1790, in which capacity he served in the campaigns of 1790 and 1791 against Tippoo Sultan, and with Baird's division at the siege of Seringapatam in 1792. Lord Cornwallis was so pleased with his conduct that he took him to Calcutta, made him deputy-quartermaster-general to the king's troops there, and soon afterwards major by brevet in 1794. Sir Robert Abercromby, the successor of Cornwallis as commander-in-chief, found him equally useful, and made him lieutenant-colonel by brevet in 1795. He acted as Sir Robert's military secretary for three years, and, after serving with him in the short campaign against the Rohillas, went home with him in 1797. He had left England a poor lieutenant, and now returned after fourteen years' service a lieutenant-colonel, with two powerful patrons in Cornwallis and Sir Robert Abercromby. He was promoted brevet-colonel and lieutenant-

colonel of the 10th regiment in 1800, and ordered at once to the Cape; there he took command of a mixed force, which was sent to the Red Sea to co-operate with the army coming from India under Sir David Baird to assist Sir Ralph Abercromby in subduing the French in Egypt. Baird had learned his merit at Seringapatam, and on his arrival made him adjutant-general of his whole army. It was now that he first gained popular reputation; Baird's march across the desert and passage down the Nile read like a story of romance, and was enjoyed accordingly by the English people, and the general's chief lieutenants, notably Beresford and Auchmuty, became popular heroes. After the capture of Alexandria, Colonel Auchmuty was for a short time adjutant-general of the whole army in Egypt, and on his return to England in 1803 was knighted. From 1803 to 1806 he was commandant in the Isle of Thanet, and in 1806 was ordered to command the reinforcements for South America.

The English expedition to Buenos Ayres in 1806 had been suggested to Sir Home Riggs Popham [q.v.] when at the Cape by the report of an American merchantman that the inhabitants of Monte Video and Buenos Ayres were discontented with their Spanish government, and Sir Home Popham recognised that the seizure of a rich city like Buenos Ayres would open a new channel for trade. He made an easy conquest with the help of a small force under Colonel Beresford, which he had borrowed from Baird, and sent home a glowing account of his new possession. People and ministers were alike delighted, and Sir Samuel Auchmuty was made a brigadier-general, and ordered to reinforce Beresford as advanced guard of a still larger reinforcement. On reaching the river Plate he found matters very different from what he had expected. The Spaniards had arisen, and their militia had reoccupied Buenos Ayres, and captured Beresford and his small force. Sir Samuel disembarked; but found it impossible to retake Buenos Ayres, or to remain encamped in safety on the banks of the river with only 4,800 men. He decided therefore to attack the city of Monte Video, which, though strongly fortified, was much smaller than Buenos Ayres, and succeeded in storming it, after a desperate defence, with a loss of 600 men, or one-eighth of his whole army. When the news of his success reached England, he was voted the thanks of Parliament, and the news of the capture of Buenos Ayres was confidently expected. But General Whitelocke, who superseded him, had not his military ability. He prepared, indeed, to take Buenos Ayres, but

instead of one or at most two strong attacks on the important points, he divided his force into five columns, each too weak to make a real impression. Nevertheless, two of the columns, including Auchmuty's, did what they were ordered; but on hearing that two more had capitulated, General Whitelocke made terms with the Spanish commandant, Liniers, to leave South America and give up Monte Video. On his return he was tried by court martial and cashiered, but Auchmuty, who had done well what he was ordered, was marked out for further advancement.

In 1808 he was promoted major-general, and made colonel of the 103rd regiment, and in 1810 appointed commander-in-chief at Madras. At this time Lord Minto was governor-general of India, and had a fixed intention to seize all the French possessions in Asia, and also those of their allies, the Dutch, in order to secure safe communication with England, and to be the only European power in Asia. He had therefore sent General John Abercromby to take the Mauritius in 1810, and in 1811 ordered Sir Samuel Auchmuty to organise a force for the capture of Java. The governor-general himself accompanied the expedition, which reached Java on 4 Aug. and occupied Batavia on 8 Aug. Gen. Janssens, the Dutch governor, had given up the capital as indefensible, and had retired to a strong position at Cornelis, which he had fortified. This position Auchmuty attacked on 28 Aug., but the Dutch made a stubborn resistance, and were only defeated by a gallant charge of Major-general Rollo Gillespie, who got behind the position, and was the hero of the day. The last resistance of the Dutch was overcome at Samarang on 8 Sept., after which General Janssens surrendered, and in October Lord Minto and Auchmuty returned to India. For these services he received a second time the thanks of parliament, became knight of the Bath, and colonel of the 78th regiment. In 1813 he handed over his command to John Abercromby. On his return to England he was promoted lieutenant-general, and was made G.C.B. (1815), but the peace of 1815 ended his active service. After being unemployed some years, Auchmuty was in 1821 appointed to succeed Beckwith as commander-in-chief in Ireland, and was sworn of the Irish privy council. He did not long enjoy this high command; for he fell off his horse dead on 11 Aug. 1822, in Phoenix Park, and was buried in Christchurch Cathedral. Sir Samuel Auchmuty was an extremely able Indian officer, and had served with distinction in every quarter of the globe but Europe; his great merit is shown by the high rank which he, the son of

a loyal and therefore ruined American colonist, without money or political influence, had managed to attain.

[For General Auchmuty's services see the Royal Military Calendar, 3rd edition, 1820. For his Egyptian campaign see Sir R. Wilson's History of the Campaign in Egypt, 1803; Hook's Life of Sir David Baird; and more particularly the Count de Noe's *Mémoires relatifs à l'Expédition Anglaise partie du Bengale en 1800 pour aller combattre en Egypte l'Armée de l'Orient*, Paris, 1826. For the capture of Monte Video see the despatches in the Annual Register; Whitelocke's Court Martial; and the Memoir of Sir S. F. Whittingham. The despatches on the capture of Java are printed at length in the Royal Military Calendar; and see also Lady Minto's Lord Minto in India.] H. M. S.

**AUCKLAND, EARLS OF.** [See EDEN.]

**AUDELAY.** [See AWDELAY.]

**AUDINET, PHILIP (1766-1837)**, line-engraver, was descended from a French family which came over to England in consequence of the revocation of the Edict of Nantes. He was born in Soho, London, in 1766, and, after having served his apprenticeship to John Hall, was employed to engrave the portraits for Harrison's 'Biographical Magazine' and other works. He also engraved 'Lear with the dead body of Cordelia,' after Fuseli, for Bell's 'British Theatre,' and several portraits after pictures by Danloux, a French painter who resided in England during the time of the revolution in France. Among his later works are portraits of Sir Benjamin Hobhouse, Bart., and Sir William Domville, Bart., lord mayor of London, after William Owen, and an excellent engraving of Barry's unfinished portrait of Dr. Johnson, as well as the illustrations designed by Samuel Wale for the edition of Walton's 'Angler' published in 1808. There is one plate in mezzotinto by him, a portrait of his brother, S. Audinet, a watchmaker. It is said to have been done for improvement when the artist was a boy, and to be the only impression that was taken off the plate. Audinet died in London 18 Dec. 1837, and was buried in the church of St. Giles-in-the-Fields.

**AUDLEY, BARONS.** [See TOUCHET.]

**AUDLEY, EDMUND (d. 1524)**, bishop of Rochester, was the son of James, Lord Audley, by Eleanor his wife. He was educated at Lincoln College, Oxford, and

took the degree of B.A. in 1463. It is presumed, though no record is found of the fact, that he afterwards took the degree of M.A. also. In 1464 he was collated to the prebend of Colwall in Hereford Cathedral, and three years later to that of Iwern in Salisbury. In 1472 he was made a canon of Windsor. In the same year he received the prebend of Farrendon in Lincoln Cathedral, in 1474 that of Gaia Minor in Lichfield and in 1475 that of Codeworth in Wells. On Christmas day in the same year he was made archdeacon of the East Riding of Yorkshire, and in 1479 archdeacon of Essex. These substantial preferments he does not seem to have found at all incompatible with each other; and though we find that he resigned the rectory of Bursted Parva in Essex on 9 April 1471, he had no difficulty in accepting another prebend, that of Givendale in York, on 18 Oct. 1478. In 1480 he was made bishop of Rochester, when he resigned his two archdeaconries and most of his other preferments. In 1492 he was translated to Hereford, and in 1502 to Salisbury. About the time of this last preferment he was also made chancellor of the order of the Garter—an office which in the sixteenth century Dr. Seth Ward endeavoured to unite, or, as he put it, to restore, to the see of Salisbury, for which he maintained it was intended when given to Bishop Audley.

This catalogue of his honours and church preferments really comprises almost all we know about the man; and it may be remarked that whereas his two last bishoprics are supposed to have been given him for the fidelity of his family to the house of Lancaster, all his previous benefices, including the bishopric of Rochester, were bestowed upon him during the reign of Edward IV. It will be asked, what then was his claim to distinction? The answer is that although not an author he was a patron of letters, and was complimented as such by the university of Oxford for having bestowed a prebend in Salisbury on Dr. Edward Powell (afterwards a martyr at Smithfield for denying Henry VIII's supremacy) who had written a book against Luther. He was a benefactor to Lincoln College, Oxford, to which he gave, in 1518, 400*l.* to purchase lands. He also bestowed upon it the patronage of a chantry in Salisbury Cathedral. He seems, moreover, to have been a contributor to the erection of a stone pulpit in St. Mary's Church at Oxford, at the bottom of which, according to Wood, his arms were seen carved along with those of Cardinal Morton and Pitz-James, bishop of London. But of this pulpit even Anthony à Wood, writing in the seven-

teenth century, speaks in the past tense, and what became of it we are not informed. Godwin says that Bishop Audley also gave the organs to St. Mary's Church; but this is doubted by Anthony a Wood. In 1509 he gave a donation of 200 marks to Chichele's chest at Oxford, which had been robbed. It further appears that he was a legatee and executor of King Henry VII, and one of the trustees for the foundation of the Savoy Hospital (*Calendar of Henry VIII*, i. 776, 3292); that in 1516 he obtained from Henry VIII a license to found and endow two chantries, one in his own cathedral and one in Hereford (*ib.* ii. 2660); and that in 1521 he suppressed the nunnery of Bromehall in his diocese on account of the misconduct of its inmates, for which he received a letter of thanks from the king (*ib.* iii. 1863). He died at Ramsbury in Wilts on 23 Aug. 1524, and was buried in a chapel erected by himself in his own cathedral of Salisbury in honour of the Assumption of the Virgin Mary.

AUDLEY, ALDITHEL, or ALDITHELEY, HENRY DE (d. 1246), a royalist baron, was son of Adam de Alditheley, who held Alditheley (Staff.) from the Verdons in 1186 (*Pipe Roll* 32, 33 Hen. II.). He began his career as constable to Hugh de Lacy (whose first wife was a Verdon) when Earl of Ulster, and, on Hugh's disgrace (1214), attached himself to Ranulph, the great royalist Earl of Chester, and was rewarded by the crown with a forfeited estate (1215-16). He served as sheriff of Shropshire and Staffordshire 1216-1221, as deputy for the Earl of Chester, from whom he obtained large grants of lands (*Cart.* 11 Hen. III. p. 1, m. 6). On acquiring Heleigh Castle he made it his chief seat, but was entrusted by the crown, as a lord-marcher, with the constableness of several castles on the Welsh borders from 1223 to his death, which took place shortly before 11 Nov. 1246, when his son did homage (*Fin.* 31 Hen. III. m. 12).

[Dugdale's *Baronage* (1675), i. 746; Eytton's *Shropshire* (1858), vii. 183-5.] J. H. R.

AUDLEY, HUGH (d. 1662), money-lender, was admitted student of the Inner Temple in 1603 and was called to the bar in 1611. He amassed a large fortune by frugal living and hard dealings. In 1605 he possessed only 200*l.*, and died in November 1662 worth 400,000*l.* He held a lucra-

tive post in the court of wards, and is said to have lost not less than 100,000*l.* by the disestablishment of the court at the time of the civil wars. At his elbow he usually had some devotional book, especially when he expected clients, and he was very regular in his attendance at church. The expensive habits of the clergy caused him some anxiety, and he would often sigh for the simplicity of living that prevailed in the days of his youth. He was always willing to advance money to improvident young gallants; he was, indeed, a most heartless bloodsucker. Occasionally he met with checks and reverses, but in the lofty language of his biographer, he lived 'a life of intricacies and misteries, wherein he walked as in a maze, and went on as in a labyrinth with the clue of a resolved mind, which made plaine to him all the rough passages he met with; he, with a round and solid mind, fashioned his own fate, fixed and unmoveable in the great tumults and stir of business, the hard rocks in the midst of the waves.' Audley Street, in west London, which runs through land owned by him, was named after him.

[The Way to be Rich according to the Practice of the Great Audley, 1662; D'Israeli's *Curiosities of Literature*.] A. H. B.

AUDLEY, ALDITHEL, or ALDITHELEY, JAMES DE, knight (d. 1272), a royalist baron, was son and heir of Henry de Audley [q.v.], and, like him, a lord-marcher. In 1257 he accompanied Richard, king of the Romans, to his coronation at Aachen (MATT. PARIS), sailing on 29 April (RYMER) and returning to England in the autumn to take part in the Welsh campaign (1257-1260). In the following year (1258) he was one of the royalist members of the council of fifteen nominated by the Provisions of Oxford, and witnessed, as 'James of Aldithel,' their confirmation by the king (18 Oct.). He also, with his brother-in-law, Peter de Montfort [see MONTFORT, PETER DE], was appointed commissioner to treat with Llewelyn (18 Aug.), and two years later (44 Hen. III.) he acted as an itinerant justice. On Llewelyn of Wales attacking Mortimer, a royalist marcher, Audley joined Prince Edward at Hereford, 9 Jan. 1263 (Claus. 47 Hen. III. m. 5 dors.) to resist the invasion. But the barons, coming to Llewelyn's assistance, dispersed the royalist forces, and seized on his castles and estates. He is wrongly said by Dugdale and Foss to have been made 'justice of Ireland' in this year, but in December he was one of the royalist sureties in the appeal to Louis of France. At the time of the battle of Lewes (May 1264) he was in

arms for the king on the Welsh marches (MATTHEW PARIS), and he was one of the first to rise against the government of Simon de Montfort (*Ypodigma Neustrie*). On Gloucester embracing the royal cause, early in 1265, Audley joined him with the other marchers, and took part in the campaign of Evesham and the overthrow of the baronial party. He appears to have gone on a pilgrimage to Galicia in 1268, and also, it is stated, to Palestine in 1270; but though his name occurs among the 'Crucesignati' of 21 May 1270, it is clear that he never went, for he was appointed justiciary of Ireland a few months later, his name first occurring in connection with that office 5 Sept. 1270 (*Rot. Pat.* 54 Hen. III. m. 4). During his tenure of the post he led several expeditions against 'the Irish rebels,' but died by 'breaking his neck' about 11 June 1272 (when he is last mentioned as justiciary), and was succeeded by his son James, who did homage 29 July 1272.

[Dugdale's Baronage (1675), i. 747; Foss's Judges (1848), ii. 212; Eytton's Shropshire (1858), vii. 185-8; Chancery Misc. Rolls, No. 28, Rot. 1, 2.] J. H. R.

AUDLEY, or AUDELEY, JAMES DE (1316?-1386), one of the original knights or founders of the order of the Garter, was, according to the best authorities, the eldest son of Sir James Audeley, of Stretton Audeley, Oxon, who served in the expedition to Gascony in 1324 and to Scotland in 1327, and Eva, daughter of Sir John Clavering, and widow, first, of Thomas de Audeley and, secondly, of Sir Thomas Ufford. In 1346 letters of protection were granted him to proceed beyond the seas upon an expedition to France in the retinue of Edward III. and the Black Prince. In 1350 he took part in the naval battle with the Spaniards off Sluys. After the expiration of the truce in 1354, the Black Prince advanced on Bordeaux, accompanied by Sir James Audeley and his brother, Sir Peter. At this time Sir James was in constant attendance on the prince; he distinguished himself by many brave exploits, particularly in the taking of Chastiel Sacra by assault, and at the battle of Poitiers on 19 Sept. 1356. According to Froissart, Sir James had made a vow that if ever he was engaged in any battle in company with the king or any of his sons, he 'would be the foremost in the attack and the best combatant on his side, or die in the attempt.' Having obtained the prince's permission, he posted himself with his four esquires in front of the English army. In his eagerness for the fray he advanced so far that he engaged

the Lord Arnold d'Audrehen, marshal of France, whom he severely wounded, and whose battalion was finally routed. So energetic was Sir James, that Froissart says of him that 'he never stopped to make any one his prisoner that day, but was the whole time employed in fighting and following the enemy.' He was severely wounded in the body, head, and face, but, covered with blood as he was, he continued to fight as long as he was able. At last, overcome with exhaustion, he was carried out of the battle by his four esquires.

Upon the Black Prince inquiring for him after the fighting had ceased, he was taken on a litter to the royal tent. There the prince told him that he had been the bravest knight on his side, and granted him an annuity of 500 marks. On his return to his own tent, Sir James made over the royal gift to his four esquires (Dutton of Dutton, Delves of Doddington, Foulhurst of Crewe, and Hawkestone of Wrinchill). Hearing of this generous conduct, the Black Prince confirmed the grant to the esquires, and granted to Sir James a further pension of 600 marks. In 1359 Sir James was one of the principal commanders of a fresh expedition to France. In the next year he carried the fortress of Chaven, in Brittany, by assault, and was present with the king when the treaty of peace was signed at Calais. During the expedition of the Black Prince into Spain, in the year 1367, Sir James was appointed governor of Aquitaine. In 1369 we find him filling the important office of great seneschal of Poitou.

After taking part with the Earl of Cambridge in the capture of the town of La Roche-sur-Yon in that year, he went to reside at Fontenay-le-Comte, where, in the words of Froissart, 'he was attacked with so severe a disorder that it ended his life.' His obsequies were performed in the city of Poitiers, and were attended by the prince in person. On the foundation of the order of the Garter in 1344, Sir James was instituted as one of the 'first founders,' as they were described on their plates of arms in St. George's Chapel, Windsor. His stall was the eleventh on the prince's side; his plate of arms, though in existence in 1569, has long since disappeared. Sir Thomas Granson succeeded to the stall which became vacant on Audeley's death in 1386.

**AUDLEY, THOMAS, BARON AUDLEY OF WALDEN** (1488-1544), lord chancellor, was of an Essex family, perhaps connected with the Lords Audley of an earlier date. He studied at Cambridge, apparently interesting himself in Buckingham College, which was founded in 1519. In 1542, two years before his death, he reconstituted this foundation, changing its name by royal licence to 'the college of St. Mary Magdalene.' Magdalene College, Cambridge, thus reckons him as its founder. On leaving Cambridge he came to London, and joined the Inner Temple, where he was autumn reader in 1526. Meanwhile he had been admitted a Burgess of Colchester in 1516, and was appointed town clerk there. He was on the commission of the peace for Essex as early as 1521 (BREWER, *Cal. Henry VIII.*, iii. 1081, 12 Nov.), and in commissions for levying the subsidy at Colchester in 1523 and 1524 (*ib.* pp. 1367, 1458, and iv. 236). It is said that he was steward to the Duke of Suffolk, and that the way he discharged the duties of that office first recommended him to the king's notice. In 1523 he was returned to parliament; and in 1525 he had become a man of so much weight that, when it was thought necessary to make a private search for suspicious characters in London, and the work was committed to men like the Dukes of Norfolk and Suffolk, Lord Edmund Howard, and the principal residents in the different suburbs, we find Audley's name suggested with some others to assist in examining the district from Temple Bar to Charing Cross (*ib.* iv. 1082). The same year he was appointed a member of the Princess Mary's council, then newly established in the marches of Wales (MADDER, *Privy Purse Expenses of the Princess Mary*, introd. xxx). A little later he was appointed attorney of the duchy of Lancaster, and was candidate for the office of common serjeant of the city of London (*Calendar of Henry VIII.*, iv. 2639). In 1527 he was groom of the chamber, and an annuity of 20*l.* was granted to him on 10 July out of the subsidy and ulnage of cloth in Bristol and Gloucester (*ib.* p. 3324). Soon afterwards he was a member of Cardinal Wolsey's household (*ib.* p. 1331). On the fall of his master in 1529, he attained further advancement. Sir Thomas More was made lord chancellor in the room of the cardinal, and Audley was made chancellor of the duchy of Lancaster in the room of Sir Thomas More. In 1529 he was elected M.P. for Essex, and was chosen speaker of the House of Commons in succession to More when

parliament met in November. On being elected and sent up to the House of Lords, in which the king that day was present, he made an eloquent oration in which he 'disabled himself' with conventional modesty for the high office imposed upon him, and besought the king to cause the commons to return to their house and choose another speaker. This sort of excuse was a time-honoured form, and its refusal was equally a matter of course. 'The king,' says Hall, 'by the mouth of the lord chancellor, answered that were he disabled himself in wit and learning, his own ornate oration there made testified the contrary; and as touching his discretion and other qualities, the king himself had well known him and his doings, sith he was in his service, to be both wise and discreet; and so for an able man he accepted him, and for the speaker he him admitted.'

It must be observed that this was the parliament by whose aid Henry VIII ultimately separated himself and his kingdom from all allegiance to the see of Rome. Its sittings continued, with several prorogations, over a period of six years and a half; and it is clear that from the first the Commons were encouraged to attack the clergy and urge complaints against them. In the House of Lords, Fisher, Bishop of Rochester, took notice of the character of their proceedings. 'My lords,' he said, 'you see daily what bills come hither from the Common house, and all is to the destruction of the church. For God's sake, see what a realm the kingdom of Bohemia was, and when the church went down, then fell the glory of the kingdom. Now with the Commons is nothing but "Down with the church!" And all this, meseemeth, is for lack of faith only.' But the words only furnished the Lower House with another grievance, and a deputation of the Commons, with Audley as speaker at their head, waited on the king in his palace at Westminster, complaining that they who had been elected as the wisest men in their several constituencies should be reproached as little better than Turks or infidels. The king (at whose secret prompting, beyond a doubt, this remonstrance was really made) assumed a tone of moderation in his reply, saying he would send for the bishop and report to them how he explained his words; after which he summoned Fisher to his presence, along with the Archbishop of Canterbury and six other bishops, to give an account of his language in the House of Peers. The bishop really had nothing to retract, as his brother prelates bore witness along with him that he had imputed lack of faith not to the

Commons, but to the Bohemians only. The warning, however, was significant.

Audley's professional advancement at this time scarcely kept pace with his political distinction. It was just two years after his election as speaker that we find him called to the degree of serjeant-at-law, and a day or two later, on 14 Nov. 1531, he was appointed a king's serjeant (DUGDALE, *Origines*, 83). He received, however, from the crown, on 2 March 1531, a grant of lands in Colchester and Mile End in Essex (*Calendar of Henry VIII*, v. 166, 1); and next year he attained all at once a degree of professional eminence which his antecedents scarcely seemed to justify. An incident related by Hall the chronicler will perhaps enable us to comprehend why this promotion was conferred on him.

During the prorogued session of parliament held in April 1532, a motion was made in the House of Commons by a member named Temse that the king, who had now for some months separated from Queen Katharine, though he had not yet obtained his divorce, should be urged to take back his queen and avoid the grave dangers that might arise from the bastardising of his only daughter Mary. This was a degree of independence that Henry did not expect of his faithful Commons, though their remonstrances on other subjects very often suited his purposes well enough. On the last day of April he sent for Audley, the speaker, and some others, and reminded them in the first place how they had exhibited last year a bill of grievances against the clergy, which he had delivered to his spiritual subjects to make answer to, and how he had just received their reply, which he delivered into Audley's hands, intimating that he thought himself it would scarcely satisfy them. 'But,' said the king, 'you be a great sort of wise men. I doubt not but you will look circumspectly on the matter, and we will be indifferent between you.' Having thus, with a pretence of neutrality, assured them of his support against the clergy, he went on to express his astonishment that one of their House should have ventured to speak of his separation from the queen, a matter which it was not their province to determine, seeing that it touched his conscience. He added that he wished with all his heart that he could find the marriage good, but he had received the decisions of many universities that it was invalid and detestable in the sight of God; that he had not been moved by a wanton appetite at forty-one years of age to abandon the queen for the sake of some one else; but that he felt it a positive duty to part company with

her. For nowhere but in Spain and Portugal had a man been known to marry two sisters, and as for the marriage with a brother's wife, it was so abhorred among all christian nations, that he had never heard of any christian doing so except himself. This disgraceful piece of hypocrisy Audley was commissioned to report to the House of Commons as the sincere grounds of the king's conduct, and he did so as in duty bound.

Before the session ended he was sent for again to come before the king, along with twelve of his own house and eight peers, to whom the king made an address, declaring that he had discovered that the clergy were but half his subjects. They had taken an oath, indeed, to him, but they had taken an oath to the pope as well, which was quite inconsistent with their allegiance to him. This matter he wished the Commons to take carefully into consideration, and Audley accordingly caused the two oaths to be read in parliament, thus preparing the way for the Act of Supremacy, which was passed two years later.

This conference with the king was on 11 May 1532. On the 16th of the same month Sir Thomas More, not liking the king's proceedings, was allowed to resign the office of lord chancellor, and surrendered the great seal into the king's own keeping. Four days later Henry delivered it to Audley with instructions to discharge all the duties of a lord chancellor, though he was only to be called, for the present, keeper of the great seal. That same day the king made him a knight, and on 5 June following, being the first day of Trinity term, he took his oath in the court of Chancery as keeper of the great seal. His powers were more formally set forth in a commission dated 5 Oct. following; but in the beginning of next year it was found advisable to give him the name as well as the duties of lord chancellor, and he was appointed to that office on 26 Jan. 1533 (*ib.* v. 1075, 1295, 1499 (9), vi. 78).

The name of lord chancellor, apparently, had been withheld from him at first in order that he might still act as speaker of the House of Commons; but now Humphrey Wingfield was chosen speaker in his place, and Audley took his seat upon the woolsack in the House of Lords. During the time he was lord keeper the king ordered the old great seal (in which the lettering was very much worn) to be destroyed and a new one to be made.

From this time his whole career is that of a submissive instrument in the hands of Henry VIII and his great minister Cromwell. Sickly in his physical constitution,

for he complains even at this time of the stone, of a feeble heart and stomach, and of intermittent fever (*ib.* vi. 2, 976, 1049, 1063), his moral constitution, apparently, was not more robust, and he could not maintain the expenses of his new position without a good deal of begging. He was in debt as keeper of the great seal, and he complained of poverty as chancellor (*ib.* 2, 927). As some relief he was allowed, in the quaint language of Fuller, to 'carve for himself the first cut' of the monastic property, the priory of Christchurch in the city of London, which was suppressed some years before the general suppression and given to him by patent (*ib.* vii. 419 (28), 587 (10), 1601 (35)). But it was not quite such 'a dainty morsel' as the historian insinuates, being in fact only surrendered by the prior because it was very much in debt. Nor was the office of chancellor otherwise greatly honoured in Audley's tenure, especially considering who was his predecessor. The lord chancellor, according to the legal theory, is the keeper of the sovereign's conscience, and what the custody of such a conscience as that of Henry VIII involved there could be no doubt, even from the time of his appointment. The first thing he had to do was to sanction what More could not sanction—the divorce from Katharine of Arragon and the marriage with Anne Boleyn; then to assist next year (1534) in procuring a new Act of Succession, and taking the oaths of the Lords and Commons and of the king's subjects generally in conformity therewith (*ib.* vii. 392, 434). Next he was commissioned, along with Cromwell, to examine his predecessor, Sir Thomas More, whom the court was endeavouring to implicate in the follies and treason of the Nun of Kent (*ib.* 296). Then, when that failed, he had to examine him touching his refusal to take the oath of succession (*ib.* 575). It must not be supposed that he was void of humanity. His conversations with More's daughter, Lady Alington, seem to show that he was simply a man of low moral tone, who would have saved More if he could, but wondered why any man should entertain such scruples. 'In good faith,' he said satirically, 'I am very glad that I have no learning but in a few of *Æsop's* fables,' insinuating that too much learning only gave rise to moral scruples that men would be far better without. And the two fables he immediately after related to Lady Alington with a laugh were distinctly designed to illustrate these principles—that when fools are stronger than wise men it is better to go with fools, and that life is vastly simplified by suiting your conscience to your convenience.

What were his feelings next year when the play developed into a tragedy it is unnecessary to inquire. On 15 June 1535 he presided at the trial of Bishop Fisher, who like More had refused the oath; and on 1 July he presided at that of More himself. His conduct in both these trials is universally reprobated. He was even ready to have passed sentence upon More without addressing the usual question to the prisoner beforehand. In 1536 he conducted Anne Boleyn a prisoner to the Tower, and her supposed accomplices were tried before him, while she herself was brought before the court of the lord high steward and found guilty by a jury of peers. That same year he opened a new parliament with a speech showing the necessity of a fresh Act of Succession and the repeal of some former statutes connected with the marriage of Anne Boleyn. Next year he tried the Lincolnshire rebels at Easter, and the Yorkshire rebels—Aske, Sir Robert Constable, Sir Francis Bigot, and others—on 16 May. Never was so much criminal jurisdiction committed to a lord chancellor. On 29 Nov. 1538 he was created a peer by the name of Baron Audley of Walden, apparently for the express purpose that he might fill the office of lord high steward at the trial of the Marquis of Exeter and other lords, whose chief guilt was being either of the blood royal or in some way connected with Cardinal Pole. In reward for services like these a few more of the suppressed monasteries were granted to him at the general dissolution, among which, at his own very earnest suit, was the abbey of Walden in Essex. It is not true, as stated by Dugdale and carelessly repeated by others, that he asked for this expressly on the ground that he had incurred infamy in the king's service. The words used in his letter to Cromwell are 'damage and injury;' but what sort of injuries he could have incurred beyond the expenses of a prominent position in the state, we are left free to speculate. Walden became his country seat as Christchurch had been converted into his town house. At Walden he constructed a tomb for himself during his own life, and his grandson, Thomas Howard, earl of Suffolk, built the mansion of Audley End, which is now the seat of Lord Braybrooke.

On 28 April 1539, at the opening of a new parliament, Audley as chancellor made an oration in presence of the king and the assembled lords; and on 5 May he conveyed to the peers a message from the king declaring his majesty's desire that measures should be taken as soon as possible for the abolition of differences of opinion concerning

the christian religion. The bloody 'Act of the Six Articles' was the result. Next year, on 24 April, Audley was made a knight of the Garter, and within less than three months after it became his duty to carry through parliament an act for the attainder of Cromwell, earl of Essex, the hitherto powerful minister, on whom he had been for eight years dependent, and another for the dissolution of the king's marriage with Anne of Cleves. In 1541 he was again appointed lord steward for the trial of a peer—Lord Dacres of the South, who confessed a homicide he had committed while hunting in Kent, and was accordingly hanged. In December of the same year he passed judgment on the paramour of Queen Katharine Howard, the queen's own case being reserved for the parliament which met in January following, which the lord chancellor opened with a very long speech.

In the spring of 1542 a remarkable case involving the privileges of the House of Commons was brought before the lord chancellor. George Ferrers, member for Plymouth, was arrested in London on some private suit in which judgment was passed against him, and he was committed to the Counter. The Commons sent their serjeant-at-arms to fetch him out of prison; but he was resisted, and a scuffle took place in the streets with the sheriffs' officers. The house, on this, refused to attend to other business till their member was delivered, and desired a conference with the lords. The lord chancellor declared it a flagrant contempt, and left the punishment to the House of Commons, on which the sheriffs and their officers were committed to the Tower by the speaker's warrant. It was a precedent of some importance in parliamentary history. Yet even here the conduct of Audley was governed simply by the convenience of the court, which required a subsidy of the House of Commons; for it seems to have been the opinion of good authorities that the commitment was strictly legal, and the privilege unjust.

Nothing more is known of the public life of Audley. He may have opened the session of 1543, and even that of January 1544; but in all probability he was prevented, at least as regards the latter, by increasing infirmity. On 21 April in that year he sent the great seal to the king, praying his majesty to accept his resignation of an office which he was now unable to discharge from mere physical weakness, and on the 30th of the same month he breathed his last. His remains were deposited in the magnificent tomb which he had erected for himself at Saffron Walden, and a doggerel epitaph engraved upon it is

believed to have been his own composition also. Beneath the verses is given the date of his death, which is said to have been in the thirteenth year of his chancellorship and the fifty-sixth of his age (WEEVER, *Fun. Mon.* 624).

In person he is said to have been tall and majestic—the sort of man Henry VIII loved to see at his court. He was twice married, but left no son to succeed him. His first wife was a Suffolk lady, daughter of Sir Thomas Barnardiston, by whom he had no children. His second, whom he married in April 1538, was Elizabeth, daughter of Thomas Grey, marquis of Dorset. By her he had two daughters, of whom the elder, Mary, died unmarried; the second, Margaret, married, first, a son of Dudley, duke of Northumberland, and afterwards Thomas, duke of Norfolk, who was beheaded in the time of Queen Elizabeth. The nobleman who built Audley End was a son of this duke of Norfolk and of Margaret Audley.

[Wriothesley's Chronicle; Hall's Chronicle; Dugdale's Baronage; Lloyd's State Worthies, 72 (a rather doubtful authority, being mainly an encomium which has the effect of a satire); Biographia Britannica; Campbell's Lord Chancellors; Foss's Judges.] J. G.

**AUFRERE, ANTHONY (1756-1833)**, antiquary, of Old Foulsham Hall, Norfolk, born in 1756, was the eldest son of Anthony Aufrere, of Hoveton Hall, Norfolk, who died in 1814. His mother was Anna, only daughter of John Norris, of Wotton, in the same county, and sister to John Norris, founder of the Norrisian professorship at Cambridge. On 19 Feb. 1791 he married Matilda, youngest daughter of General James Lockhart, of Lee and Carnwath, by whom he had a son and daughter, the former marrying the youngest daughter of a Hamburg merchant, named Whertman, and the latter George Barclay, a merchant of New York. To Anthony Aufrere, who had a great taste for literature, the task of editing the 'Lockhart Letters' (1817, 2 vols. 4to) was entrusted by his brother-in-law, Charles Count Lockhart, three years before his death, which took place in August 1802. These letters contain much curious correspondence between the ancestors of the Lockhart family and the confidential supporters of the Pretender, previous to and during the rebellions of 1715 and 1745, the publication of which was delayed for more than half a century, in order that every one concerned in it might be dead before it became public property. In early life Anthony Aufrere showed a great aptitude for learning foreign languages, and among

the works he translated was 'A Tribute to the Memory of Ulric von Hütten, from the German of Goethe,' 1789. The 'Tribute' was however really by Herder, and appeared under the title 'Denkmal Ulrichs von Hutten' in the 'Teutscher Merkur' for July 1776, being reprinted in a spurious edition of Goethe's works in 1779; it is now found in Herder's 'Werke' (ed. Hempl, xv. 355). In 1795 he published a translation of 'Travels through various Provinces of the Kingdom of Naples,' 1789, from the German of Salis; and in 1822 'A Narrative of an Expedition from Tripoli to the Western Frontier of Egypt, from the Italian of Della Cella. A small work which excited much attention was his 'Warning to Britons against French Perfidy and Cruelty; or a Short Account of the Treacherous and Inhuman Conduct of the French Officers and Soldiers towards the Peasants of Suabia, during the Invasion of Germany in 1796, selected from well-authenticated German publications, with an address to the people of Great Britain by the translator,' 1798. He was also a frequent contributor to the 'Gentleman's Magazine,' under the pseudonym of 'Viator A.' He died at Pisa on 29 Nov. 1833, aged 76.

[Gent. Mag. 1816, lxxxvi. 381, 1834, n. s. i. 555; Ann. Reg. 1834, lxxvi. 247; Brit. Mus. Cat.; the Lockhart Papers, 1817, Preface; Annual Biog. and Obit. 1835, xix. 386.] T. F. T. D.

AUGUSTA SOPHIA (1768-1840), princess, daughter of George III and his sixth child, was born at Buckingham House, London, 8 Nov. 1768. The public reception on her birth took place on Sunday, 13 Nov., when two young girls, discovered carrying away the cups in which their caudle had been served, and secreting cake, were reprimanded on their knees (*George III, his Court and Family*, vol. i. p. 317). Princess Augusta is several times mentioned in Mme. d'Arblay's diary; she was sprightly enough in her manner to endure considerable banter from 'Mr. Turbulent' 1 March 1787, and to be called 'la Coquette corrigée' by him, on her supposed attachment to the Prince Royal of Denmark, then visiting at the castle (*ibid.* pp. 281 et seq.). She was partner to her brother, the Duke of York, in the historical country dance on the evening of the day, 1 June, 1789, when the duke had fought the duel with Colonel Lennox, and the Prince of Wales had resented the colonel's presence amongst his sisters by breaking up the ball (*Annual Register*, 1827, p. 438). She accompanied the king and queen later in the month to Weymouth, joining in the chorus of 'God save the King' at Lyndhurst (*Diary of Royal Tour*, 1789). In 1810 she was in

attendance on her father, helping him to take exercise at Windsor. In 1816, 2 May, she was at Carlton House at the marriage of her niece, the Princess Charlotte. In May 1818 she gave 50% to the National Society for the Education of the Poor. On 15 July 1819, she played and sang some of her own musical compositions to Mme. d'Arblay (*Diary*, vol. vii. p. 270). In 1820 she was again at Windsor attending to her father, whose death in that year was the occasion of her being supplied with residences of her own at Frogmore, and at Clarence House, St. James's. In this position of head of an establishment the princess showed the same pleasantness and patience she had shown in her parents' homes; and died at Clarence House 22 Sept. 1840 in her 72nd year (*Annual Register*, 1840, p. 176). She was buried at Windsor 2 Oct.

[Gent. Mag. lxxxvi. i. 462; lxxxvii. i. 559; ii. 270, 333, 334; lxxxviii. i. 462.] J. H.

AUGUSTINE, St. (d. 604), was the first archbishop of Canterbury. A famous story tells how the Roman deacon Gregory was attracted by the sight of some fair-haired boys exposed for sale in the slave-market of Rome, and vowed to convert these Angles into angels. Pope Gregory I carried out the design which he had formed, and sent to England a body of monks headed by Augustine, of whom we only know that he was prior of Gregory's monastery of St. Andrew in Rome. Augustine does not seem to have had much of the missionary spirit. He had not gone far before he returned to the pope, with a request from his comrades that they should not be compelled to undertake so dangerous a journey. Gregory I sent back Augustine with words of exhortation and encouragement. He had already secured for his missionaries a safe-conduct from the Frankish rulers of Gaul; and Ethelbert, king of Kent, had married a Frankish wife, Bertha, daughter of Charibert, king of Paris. Thus Augustine was not called upon to go into an entirely unknown land, nor one where christianity was unheard of. Bertha was a christian, and on her marriage had stipulated that she should remain so. She brought with her as chaplain Liudhard, bishop of Senlis, and was allowed to use for christian services the ruined church of St. Martin outside Canterbury, which survived from Roman times (Bede, *H. E.* i. 26).

Thus Augustine came to England neither unexpected nor unbefriended. He and his company of forty monks landed in Thanet, and announced their arrival to Ethelbert. After a little consideration Ethelbert crossed to

Thanet, and summoned the missionaries to his presence. They found him seated in the open air for fear of magical arts. They advanced to meet him in procession, bearing a silver cross and a picture of the Crucifixion, and chanting the litany. Augustine, by means of an interpreter, preached to the king, who answered, 'Your words are fair, but of doubtful meaning; I cannot forsake what I have so long believed. But as you have come from far we will not molest you; you may preach, and gain as many as you can to your religion.' Ethelbert gave a worthy example of good sense and tolerance. He allowed Augustine to come to Canterbury, which the monks entered in procession, chanting the litany.

They worshipped with the queen in St. Martin's church, and the influence of their self-denying life rapidly attracted followers. When Ethelbert saw that there was little opposition to christianity amongst his people, he also was converted. The old churches were rebuilt, and numbers of the Kentish men were baptised. Now that success was assured to the mission, Augustine went to Arles, and was consecrated 'Bishop of the English.' In Canterbury he founded the monastery of Christchurch, on the site of an old Roman basilica, which he restored. This foundation of Augustine's was destroyed by fire in 1067, and the present cathedral was begun by Lanfranc in 1070. The other foundation of Augustine was the monastery of St. Peter and St. Paul, the patron saints of Rome. This, the modern St. Augustine's, was built outside the walls of Canterbury. It would seem that Augustine wished to keep separate his episcopal seat and the seat of the monastic system on which his missionary work was founded. Augustine does not seem to have been a man of great energy or decision. The traditions of his monastic training had sunk deeply into his mind. He was beset by small difficulties of organisation, and referred to the pope for instructions. His inquiries of the pope and Gregory's answers (BEDE, *H. E.* i. 27) present the picture of a painstaking official, who had great trouble in adapting his former principles to the altered circumstances in which he was placed.

Augustine would have rested content with the conversion of the Kentish kingdom; but Gregory I had greater schemes. In 601 he sent Augustine the pallium, together with a supply of sacred vessels, vestments, relics, and books. He unfolded a complete plan for the ecclesiastical organisation of England. Augustine was to be bishop of London and head of the southern province, and was to have under him twelve suffragans. He was,

as soon as possible, to send a bishop to York, who should likewise appoint twelve suffragans, and was to be of equal dignity with the bishop of London. With these letters Gregory I sent a new body of missionaries, and a series of instructions to Augustine which are marked with extreme sympathy for missionary difficulties (BEDE, *H. E.* i. 30). At the same time he urged Ethelbert to use his influence in spreading christianity amongst the other English kingdoms.

Ethelbert and Augustine both considered that the best mode for the spread of christianity in England was to unite the Kentish church with the church that still existed in the west of Britain. Aided by Ethelbert, Augustine crossed the territory of the West Saxons to the borders of the Hwiccas, and summoned the Welsh clergy to a conference at a place called, in Bede's time, Augustine's Oak, which is generally identified with Aust on the Severn (BEDE, *H. E.* ii. 2). The Welsh church differed from Roman usage in the date of the celebration of Easter, the ritual used at baptism, and a few other points of detail. The first discussion led to no agreement; even a miracle wrought by Augustine failed to convince the obstinate Britons. Before coming to a second conference they agreed to be guided by a sign as to the acceptance of Augustine's teaching. If he rose to greet them, they would listen to him with humility; if he remained seated, they would regard it as an indication of haughtiness, and would refuse to be led by him. When they arrived Augustine did not rise. True to their intention, they refused to listen to him. The conference broke up with a solemn warning from Augustine that they who would not join with brethren should fall before enemies, that those who would not preach life to the English should suffer death at their hands.

After the failure of this attempt at union with the Welsh, Augustine moved Ethelbert to allow him to extend his missionary enterprises. In 604 he sent Justus, as bishop of Rochester, over the Kentish kingdom, west of the Medway, and Mellitus to preach to the East Saxons. Mellitus was so successful in converting king Sabert and his people that Ethelbert built the church of St. Paul. The organisation of the missions of Mellitus and Justus seems to have been the last act of Augustine. He died on 26 May 604 (WHARTON, *Anglia Sacra*).

Nothing that we know of Augustine leads us to rank him as a remarkable man. Bede tells many traits of Aidan and Cuthbert which fill us with respect for their character. In the case of Augustine he only mentions

the miracles whereby he established his prestige. Augustine's questions to Pope Gregory I show a small mind busied about trifles. Even the point by which the Welsh clergy judged his character shows a decided want of tact and conciliatory power. Augustine succeeded in the conversion of Kent, because everything was prepared to assure his success. He was a zealous monk, and the exhibition of monastic life was effective amongst the English. The greatest credit to Augustine is that Gregory I chose him for his work, and that he diligently carried out Gregory's directions and sought his advice. We cannot rank him higher than a capable official of the Roman church.

[The authority for Augustine is Bede's *Historia Ecclesiastica*, bk. i. ch. 23-bk. ii. ch. 3. Bede incorporates the letters of Pope Gregory, which may also be found in *Gregorii Epistolæ*, Op. ii. The *Acta Sanctorum*, 26 May, contains a Life of Augustine by Gocelin, an Augustinian monk (circa 1090), which adds little to Bede. Of modern writers, Bright, *Early Church History*; and Green, *The Making of England*.]

M. C.

**AUGUSTUS FREDERICK**, DUKE OF SUSSEX (1778-1843), sixth son and ninth child of King George III and Queen Charlotte, was born at Buckingham Palace 27 Jan. 1778. He was made K.G. in 1786. From the time he entered the university of Göttingen until 1804 he mostly resided abroad, on account of delicate health. Probably his lengthened sojourn on the Continent tended to foster his intellectual tastes, and undoubtedly the opportunity it afforded for diversified social intercourse assisted to liberalise his sentiments and to impart a genial facility to his manner. While resident in Rome in the winter of 1792, Prince Augustus made the acquaintance of Lady Augusta Murray, second daughter of the fourth Earl of Dunmore, and after four months' intimacy offered her his hand. The lady, who was some years older than the prince, at first declined the proposal, from regard to his interests; but on 21 March, 1793, they pledged eternal constancy to each other in a solemn written engagement. This was followed on 4 April by a marriage ceremony, performed by a clergyman of the Church of England named Gunn. To guard against the possibility of objections to the marriage from the fact that it had taken place in Roman jurisdiction, the ceremony was repeated at St. George's, Hanover Square, on 5 Dec. following, under the disguised names of Augustus Frederick and Augusta Murray. Shortly after the birth of a son on 13 January, 1794, news of the mar-

riage reached the king, who, in accordance with the regulations of the Royal Marriage Act of 1772 (12 George III, c. 11), declared it void in August 1794. There were two children born of the marriage, Augustus Frederick, 13 Jan. 1794, and Ellen Augusta, 11 Aug. 1801, who married Sir Thomas Wilde, afterwards Lord Truro, and Lord Chancellor of England. They took the surname of d'Este, which belonged to common Italian ancestors of the father and mother, for Lady Augusta Murray was also of royal descent. For some years the prince ignored the decision of the court, but ultimately he acquiesced, and even in 1809 applied for the custody of his children, because he had heard that their mother was bringing them up in the idea that 'they were princes and princesses.' In 1806 Lady Augusta received royal license to assume the name of D'Ameland instead of Murray. The son, Sir Augustus Frederick d'Este, made various efforts to get his claims recognised, and in 1831 filed a Bill in chancery, 'to prove the marriage good and valid' (see *Papers elucidating the Claims of Sir Augustus d'Este*, K. C. H., 1831, and *A Letter to a Noble Lord explanatory of a Bill in the Court of Chancery*, 1831).

It was not till 1801 that Prince Augustus was raised to the peerage by the title of Baron Arklow, Earl of Inverness and Duke of Sussex. His adoption of liberal political views estranged him from his father and the court, and excluded him from lucrative employments similar to those enjoyed by the other royal dukes. Indeed, he had incurred the resentment of his father for political contumacy as early as his seventh year, when 'he was by order of the king locked up in his nursery, and sent supperless to bed, for wearing Admiral Keppel's election colours' (EARL OF ALBEMARLE, *Fifty Years of my Life*, vol. ii. p. 103). The Duke of Sussex gave an energetic support to all the progressive political policy of his time, including the abolition of the slave trade, catholic emancipation, the removal of the civil disabilities of Jews and dissenters, the abolition of the corn laws, and parliamentary reform. His interest in the advancement of art and science was also genuine and enlightened, and he readily lent his influence to promote schemes of benevolence. In his later years he was in great request as chairman at anniversary dinners. When his eldest brother became Prince Regent in 1811, he succeeded him as grand master of the freemasons. He was elected president of the Society of Arts in 1816, and from 30 Nov. 1830 to 30 Nov. 1838, was president of the Royal Society. In the latter capacity he gave brilliant receptions in his

apartments at Kensington Palace to men of science, but the expense they incurred induced him to resign the presidentship, as he preferred to employ the money in making additions to his library. This collection, which amounted in all to over 50,000 volumes, included about 1,000 editions of the Bible, and many Hebrew and other ancient manuscripts, the duke being specially interested in the study of Hebrew and of biblical subjects. The Duke of Sussex contracted a second marriage with Lady Cecilia, ninth daughter of the Earl of Arran, and widow of Sir George Buggin. In 1840 the lady was created Duchess of Inverness. There was no issue by the marriage, and the duke died from erysipelas 21 April 1848. By his will he directed that his remains should not be interred with the royal family at Windsor, but in the public cemetery at Kensal Green. As was the case with his brothers, there was in his character a strong vein of eccentricity and waywardness; but this was tempered by intentions which, on the whole, were well meant, by liberal and benevolent sympathies, and by genuine intellectual tastes. Most of the addresses delivered by the Duke of Sussex as president of the Royal Society have been published in pamphlet form, as has also his speech on the Roman Catholic Relief Bill in 1829.

**AULDBAR, LORD.** [See LYON.]

**AUNGERVILLE, RICHARD.** [See BURY, RICHARD DE.]

**AURELIUS, ABRAHAM (1575-1632),** pastor of the French protestant church in London, was a son of John Baptist Aurelius, also a protestant minister, probably in London, where Abraham was born. He studied at Leyden, in the Low Countries, and took his degree there in 1596. In 1613, on the occasion of the marriage of Frederick V, count palatine, and Elizabeth, daughter of James I, he published a Latin Epithalamium. He died in the beginning of 1632, whilst his Latin paraphrase on the Book of Job was in the press; the dedication of the work to Albert Joachim, Belgian ambassador at the Court of St. James, bears his signature, but the paraphrase itself is preceded by some Latin verses in praise of the deceased pastor.

[A. Aurelius, Theses logicæ de medio demonstrationis; In nuptias Frederici, &c.; Jobus, sive de patientia liber, poetica metaphrasi explicatus (1632); Brit. Mus. Catal.] H. V. L.

**AUST, SARAH (1744-1811),** topographical writer, is known as an authoress by the name of 'The Hon. Mrs. Murray, of Kensington.' Her first husband was the Hon. William Murray, brother of the Earl of Dunmore; but after his death, in 1786, she married, for the second time, Mr. George Aust. She died at the age of sixty-seven, at Noel House, Kensington, on 5 Nov. 1811. Mrs. Aust published in 1799 'A Companion and Useful Guide to the Beauties of Scotland, to the Lakes of Westmoreland, Cumberland, and Lancashire, and to the Curiosities in the District of Craven, in the West Riding of Yorkshire; to which is added a more particular Description of Scotland, especially that part of it called the Highlands.' The book is written in a lively style, and gives a graphic picture of the modes of locomotion of the time, besides sketching in some detail the social condition of the northern peasantry. A second edition, in which greater attention was paid to the Hebrides and the islands round Scotland, appeared in 1803, and a third in 1810. In the latter an appendix treated 'of the new roads in Scotland, and of a beautiful cavern lately discovered in the Isle of Skye.'

[Gent. Mag. lxxx. part ii. 586; Watt's Bibliotheca Britannica.] S. L.

**AUSTEN, SIR FRANCIS WILLIAM (1774-1865),** admiral of the fleet, son of the Rev. George Austen, rector of Steventon, in Hampshire, and brother of Jane Austen, was born on 23 April 1774. In April 1786 he entered the Royal Naval Academy, and in December 1788 joined the *Perseverance* frigate, and served in her in the East Indies. In December 1792 he was made a lieutenant, and after six years of active service was, on 3 Feb. 1799, made a commander. In 1801 he was posted, and in 1805 was flag-captain to Rear-Admiral Louis on board the *Canopus*, in the fleet under Sir John Duckworth, and at the battle of St. Domingo, 6 Feb. 1806. From 1807 to 1809, he commanded the *St. Albans*, of 64 guns, and in her made at least two voyages to the East Indies in charge of convoy: in the last of which, in 1809, his success in arranging a dispute with the Chinese was honoured with the approval of the admiralty, and substantially recognised by the East India Company with a present of 1,000*l.* In December 1810 he became for some months flag-

captain to Lord Gambier, then commanding the home fleet, and was afterwards, 1811-14, in the *Elephant*, in the North Sea and Baltic. He was colonel of marines from 1825 to 1830; attained the rank of rear-admiral in July 1830; vice-admiral, June 1838; admiral, August 1848; and admiral of the fleet, 27 April 1863. From December 1844 to June 1848, he was commander-in-chief in the West Indies. In February 1837 he was made K.C.B.; G.C.B. in May 1860; rear-admiral of the United Kingdom, 5 June 1862; vice-admiral of the United Kingdom, 11 Dec. 1862; and he died on 10 Aug. 1865.

[O'Byrne's Naval Biographical Dictionary; Gent. Mag. 1866, ii. 510.] J. K. L.

AUSTEN, JANE (1775-1817), novelist, was born at Steventon, near Basingstoke, 16 Dec. 1775. Her father, George Austen, was rector of Deane and Steventon. He was married in 1764 to her mother, Cassandra, youngest daughter of the Rev. Thos. Leigh, and niece of Theophilus Leigh, for more than fifty years master of Balliol. Jane was the youngest of seven children. Her brothers were James (died 1819); Edward, who inherited the property and took the name of his second cousin, Mr. Knight; Henry, a clergyman (died 1850); Francis William, and Charles; the two last became admirals, Francis dying in 1865, aged 91 [see AUSTEN, FRANCIS WILLIAM], and Charles in 1832, aged 73. Her sister, Cassandra, who died unmarried in 1845, was three years older than herself. For the first twenty-five years of her life, Jane Austen lived with her family at Steventon. We are told that she took part in some private theatricals given in a barn in summer, and the dining-room in winter, between her thirteenth and sixteenth years, and occasionally visited Bath, where her uncle, Dr. Cooper, vicar of Sonning, lived for some years with his family. Her father took pupils to increase a modest income; and Jane learned French, a little Italian, could sing a few simple old songs in a sweet voice, and was remarkably dexterous with her needle, and 'especially great in satin-stitch.' She read standard literature; was familiar with the 'Spectator'; minutely acquainted with Richardson; fond of Johnson and Cooper, and specially devoted to Crabbe, of whom she used to say that if she ever married at all, she could fancy being Mrs. Crabbe. In later years she was charmed with Scott's poetry, and admired the first Waverley novels. In 1801 the family moved to Bath, living first at 4 Sydney Terrace, and afterwards at Green Park Buildings. She spent some weeks at Lyme in 1804; and

upon her father's death in February 1805, his widow and daughters, after a few months in lodgings, moved to Castle Square, Southampton, whence Jane visited Kent and Bath. In 1809 they settled in a cottage at Chawton, about a mile from Alton, on the property of her brother, Mr. Knight. There she spent the rest of her life, with occasional visits to London, till her health, which had given symptoms of decline in 1816, broke down. In May 1817 she moved to Winchester, to be near Mr. Lyford, a doctor of reputation. She took lodgings in College Street, where she was nursed by her sister and attended by her two brothers, who were clergymen in the neighbourhood. She died quietly 18 July 1817, and was buried in the centre of the north aisle of Winchester Cathedral. The grave is marked by a slab of black marble. Jane is described as tall, slender, and remarkably graceful; she was a clear brunette with a rich colour, hazel eyes, fine features, and curling brown hair. Her domestic relations were delightful, and she was specially attractive to children. A vague record is preserved of an attachment for a gentleman whom she met at the seaside, and who soon afterwards died suddenly. But there is no indication of any serious disturbance of her habitual serenity.

Jane began to write stories in her childhood. Many had been written before she was sixteen. They were good-humoured nonsense; and one of them—a burlesque 'comedy'—is given in her memoir. She began 'Pride and Prejudice' in October 1796, and finished it in August 1797, having already written something similar to 'Sense and Sensibility' called 'Eleanor and Marianne.' 'Northanger Abbey' was written in 1798, but not prepared for the press until 1803. At Bath, about 1804, she began a story, never finished, called 'The Watsons.' In the first year at Chawton she prepared for the press 'Sense and Sensibility,' begun in November 1797, and 'Pride and Prejudice.' Between February 1811 and August 1816 she wrote 'Mansfield Park,' 'Emma,' and 'Persuasion.' She then began, but never finished, another nameless story. Besides these she wrote another story, called 'Lady Susan,' which, like 'Sense and Sensibility,' when first composed, was in the form of letters. Her father offered 'Pride and Prejudice' to Cadell on 1 Nov. 1797; but the proposal was rejected by return of post, without an inspection of the manuscript. 'Northanger Abbey' was sold to a publisher in Bath for 10*l.* in 1803. He did not venture to print it, and was glad to take back his money and return the manuscript to one of

her brothers a few years later, not knowing, till the bargain was complete, that the writer was also the author of four popular novels. 'Sense and Sensibility' appeared in 1811; 'Pride and Prejudice' in 1813; 'Mansfield Park' in 1814; 'Emma' in 1816; 'Northanger Abbey' and 'Persuasion' in 1818 (posthumously). She received 150*l.* from the sale of 'Sense and Sensibility'; and under 700*l.* up to the time of her death from the four then published. Egerton was the publisher of the first, and Murray of the last three. They were published anonymously, though the authorship was an open secret to her friends. It was first made public in a short biographical notice prefixed to the two posthumous novels in 1818. Miss Austen's genius received little recognition during her life. In 1815 she was nursing her brother in London, when the Prince Regent, hearing of her visit through one of his physicians, sent his chaplain, Mr. Clarke, to wait upon her, to show her Carlton House, and to give her permission, of which she took advantage, to dedicate her next novel ('Emma') to him: Mr. Clarke recommended her to describe an accomplished clergyman, who should resemble Beattie's minstrel and the vicar of Wakefield; and, upon Miss Austen's declaring her incompetence for such a task, suggested that a 'romance, illustrative of the august house of Cobourg would just now be very interesting.' Miss Austen politely ridiculed this brilliant suggestion. No writer ever understood better the precise limits of her own powers. She speaks of the 'little bit (two inches wide) of ivory on which I work with so fine a brush as produces little effect after much labour.' All critics agree to the unequalled fineness of her literary tact; no author ever lived, as G. H. Lewes told Miss Bronte (Mrs. GASKELL's *Life of Charlotte Bronte*, ch. xvi.), with a nicer sense of proportioning means to ends. Given the end, the lifelike portraiture of the social aspects with which alone she was familiar, the execution is flawless. The unconscious charm of the domestic atmosphere of the stories, and the delicate substatistical humour which pervades them, have won her the admiration, even to fanaticism, of innumerable readers. Miss Bronte acknowledged the statement quoted from Lewes, but would not admit his further assertion that Miss Austen was also amongst the greatest artists or portrayers of human character. She was, Miss Bronte admitted, shrewd and observant, but devoid of poetry or sentiment. Such criticism applies to the limits of her sphere, not to her perfection within it. Miss Austen was first reviewed in the 'Quarterly' for October 1815, and

afterwards (by Whately) in the same review for January 1821. Amongst her admirers were Warren Hastings, Southey, Coleridge, Sir Jas. Mackintosh, Lord Holland, Sydney Smith, and Sir Henry Holland. G. H. Lewes says that he would rather have written 'Pride and Prejudice,' or 'Tom Jones,' than any of the Waverley novels. Lord Macaulay declares (art. on Mme. d'Arbly) that she approaches Shakespeare nearer than any of our writers in drawing character; and he once proposed to edit her works with a memoir to raise funds for a monument. Sir Walter Scott declared (diary for 14 March 1826) Miss Austen's talent to be 'the most wonderful he had ever met with:' 'The big how-wow strain I can do myself like any now going; but the exquisite touch which renders ordinary common-place things and characters interesting from the truth of the description and the sentiment is denied to me. What a pity such a gifted creature died so young!' Her first biographer in 1818 had only ventured to say that some readers ventured to place her books beside those of Miss Burney and Miss Edgeworth.

[Memoir of Jane Austen, by her nephew, J. E. Austen Leigh, London. This contains some letters and a few fragments of verse and other trifles. To the second edition, 1871, are added 'Lady Susan' and the imperfect 'The Watsons,' Letters of Jane Austen, edited by Lord Brabourne (1884), is a collection of letters to her sister Cassandra from 1796 to 1816. They are trivial, and give no new facts.] L. S.

AUSTEN, RALPH (d. 1676), writer on gardening, was, according to Anthony à Wood, a native of Staffordshire, and became a student of Magdalen College, Oxford. On 7 April 1680 he was chosen a university proctor, and he spent the remainder of his life in Oxford, devoting most of his time to gardening and the raising of fruit-trees. In 1647 he became deputy-registrary to the visitors, and subsequently registrary in his own right. According to Wood he was, in 1652, admitted into the public library to find materials for a book he was then meditating. In the following year he published 'A Treatise on Fruit-trees, showing the manner of grafting, setting, pruning, and ordering of them in all respects,' and along with it a voluminous pamphlet on the 'Spiritual Use of an Orchard.' It was in all probability to find materials for the latter book that he desired admission to the university; for in his preface to the 'Treatise on Fruit-trees' he states that he 'had set himself to the practice of this work about twenty years, endeavouring to find out things of use and profit by practice and experience,

that he might speak upon better and surer grounds than some others who have written on this subject.' A second edition of the 'Treatise,' with additions and improvements, appeared in 1657. Wood states that its sale was hindered by its association with the treatise on the 'Spiritual Use of an Orchard,' 'which being all divinity, and nothing therein of the practice part of gardening, many refused to buy it;' but both Johnson and Watt mention editions in 1662 and 1667. The treatise on the 'Spiritual Use of an Orchard' was reprinted separately at London in 1847. In 1658 Austen published 'Observations on some parts of Sir Francis Bacon's *Naturall History* as it concerns Fruit-trees, Fruits, and Flowers.' Possibly through some misreading of the title-page, this work has been attributed by some to a Francis Austen, and there is apparently no foundation for the statement that it was published originally in 1631 and again in 1657. According to Wood, Austen was the author of 'A Dialogue or Familiar Discourse and Conference between the Husbandman and Fruiterer in his Nurseries, Orchards, and Gardens,' published in 1676 and 1679, and containing much of the substance of his earlier treatise. Watt erroneously attributes to Ralph Austen two books by John Austen. A work by a Ralph Austen appeared at London in 1676, entitled 'The Strong Man Armed;' but the fact that it was published at London, not at Oxford, and that it is entirely controversial, and contains no reference to gardening, militates against the supposition that its author was identical with the subject of the present notice. According to Wood, Austen died in his house in the parish of St. Peter-le-Bailey, Oxford, and was buried in the church belonging thereunto, in the aisle adjoining the south side of the chancel, 26 Oct. 1676, after he had been a practiser in gardening and planting trees fifty years.

T. F. H.

**AUSTIN, CHARLES** (1799-1874), lawyer, the second son of Jonathan Austin, of Creeting Mill, in the county of Suffolk, was born in 1799. He was educated at Bury St. Edmunds grammar school. He was for a time apprenticed to a surgeon at Norwich, but disliking that occupation he quitted it,

and was sent to Cambridge, entering at Jesus College. In 1822 he won, much to the amazement of his friends who knew his heterodox opinions, the Hulsean prize for an essay on Christian evidence. In 1824 he graduated B.A. The late Mr. John Stuart Mill, in his 'Autobiography,' has described the immense influence exercised by Austin over his contemporaries at Cambridge in terms which might seem exaggerated but for the concurrent testimony of others. 'The impression he gave,' writes Mr. Mill, 'was that of boundless strength, together with talents which, combined with much force of will and character, seemed capable of dominating the world.' An ardent, brilliant, and paradoxical exponent of the doctrines of Bentham at a time when utilitarianism had the zest of novelty, a militant radical of a type new at Cambridge, he won admiration in debates at the union and in conversation with his most distinguished rivals. It is recorded as one proof of his influence that the opinions which Macaulay brought from his Clapham home were modified by converse with Austin. Austin was one of a brilliant group, including Macaulay, Praed, Moultrie, Lord Belper, Romilly, Buller, and Cockburn; and none of these young men who rose to distinction gave more promise than Charles Austin. Moultrie, who has sketched that group in his poem, 'The Dream of Life,' describes Austin as

A pale spare man of high and massive brow,  
Already furrowed with deep lines of thought  
And speculative effort—grave, sedate,  
And (if the looks may indicate the age)  
Our senior some few years'. No keener wit,  
No intellect more subtle, none more bold,  
Was found in all our host.
